When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the left side of the corpse, with a gourd or bottle. The object of the Kuki inroads on the plains was not plunder, for which they have never been known to show any desire; but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajas that their incursions occur. The Kuki smoke dry the dead bodies of the rajas. His body is kept in this state for two months before burial, in order that his family and clan may still have the satisfaction of having him before them. Should a raja fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancings, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kuki raja by the Nimzai Naga raće. This is considered in the light of sacrifice to appease the manes of the deceased chief. The Kuki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence.

In the spring of 1871, they made several inroads into Assam, for the purpose, as was alleged, of obtaining heads for the manes of a chief's daughter.

Puthen is their chief deity, he is benevolent; and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and diviner, is not hereditary, and his office is not coveted from fear of the initiatory rites.—*Cole.; J. H. Reynold's Embassy of* 1864, *B. A. S. J.; Buttler's Travels in Assam; Aitcheson's Treaties; Dalton's Ethnol.*

KUKI. The Zakha and Kuki clans of the Afridi tribe hold the entire Khaibar pass from Jamrud to Lundi Kotal, and are able to defy all the other sections combined. These turbulent hillmen break the most solemn engagement.

KUKRI. This Gurkha sword has a short handle and an incurvated blade, widening at the middle, and drawing to a point at the end.

KUL, Hind., of Lower Himalaya, a watercourse; a lake. Kulahu and Kuli, land watered from a kul or canal.

KUL. Karn. One who pays revenue to Government.

KULA. Sansk. A family, a race, a tribe. Properly the got of a Hindu is his tribe, and Kula is the race. But Kula among the Rajputs means a tribe, and corresponds to the Afghan Khel. Gotra or Kula mean a family, and existed amongst Kshatriya, Vaisya as well as Brahmans. Gotra depends on a real or imaginary community of blood, and then corresponds to what we call families. Kula forms various compound words, as Kula-deva, household deity; Kulacharya, a family priest; Kulina, of a good family.

No Hindu house is supposed to be without its Kula-deva or tutelary divinity, but the notion attached to this character is now very far from precise. The deity who is the object of hereditary or family worship, the Kula-deva, is always Siva, or Vishnu, or Durga, or other principal personage of the Hindu mythology; but the Griha-deva or household god rarely bears any distinct appellation. In Bengal, the domestic god is sometimes the saligram, sometimes the tulsi plant, sometimes a basket with a little rice in it, and sometimes a water jar, to any of which a brief adoration is daily addressed, most usually by the females of the family. Occasionally small images of Lakshmi or Chandi fulfil the office, or, should a snake appear, it is worshipped as the guardian of the dwelling. In general, in former times, the household deities were regarded as the unseen spirits of ill, the ghosts and goblins who hovered about every spot, and claimed some particular sites as their own. At the close of all ceremonies, offerings were made to them in the open air, to keep them in good humour, by scattering a little rice with a short formula. Thus, at the end of the daily ceremony, the householder is enjoined by Menu—3,90 'to throw up his oblation (bali) in the open air to all the gods, to those who walk by day and those who walk by night.' In this light the household god corresponds better with the genii locorum than with the lares or penates of antiquity.—*Wilson's Hind. Th.*

KULAB, a hill state north of Badakhshan; its chief claims a Grecian origin.

KU-LA-DAN, a river of Arakan, in British Burma. Supposed to rise in the neighbourhood of the Blue Mountain, a peak in the Yoma range. After a course generally north and south, it falls into the Bay of Bengal at Akyab town, where it is called by Europeans the Arakan river. It is also written Koladyn.—*Imp. Gaz.*

KULAH. Burm. A native of India. Any foreigner. Qu. Kala. See Kling.

KULAM, also Cullam. Tam. A tank, a reservoir.—*W.*

KULA-PARVATA, in the [illegible] of the ancient Hindus, are seven mountain chains of S. India. Of these are the Mahendra of Orissa; Malaya of Malabar, in the southern part of the

Western Ghats; Sahya in the northern part; the Suktimat—? doubtful; the Riksha in Gondwana; the Vindhya in the eastern part of that range; and the Paripatru or Pariyatra in the northern part of the range.

KULASAIKERA. Arya Chakravarti is found in Ceylonese history as the name of a warrior who commanded an army sent by the Kulasaikera, who is called king of the Pandiyans, or people of the Madura country, which invaded Ceylon in 1314. The same title re-appears as if belonging to the same individual in or about 1371, when he is stated to have erected forts at Colombo, Negombo, and Chilaw, and, after reducing the northern division of Ceylon, to have fixed the seat of government at Jaffnapatam. He is mentioned as the first Pandiyan king, the patron of Agastya.—*Yule, Cathay*, ii. p. 422.

KULBURGA, a town in the Hyderabad territories, which was the capital of the first Muhammadan dynasty in the Dekhan, founded in the beginning of the 14th century by Ala-ud-Din Husn Gangawi Bahmani. The seat of government was subsequently transferred to Beder. Both of these places have magnificent domed tombs. Syud Muhammad Gessu Daraz, a holy man, known as Banda Nawaz, is interred here.

Kulburga was centrical to the great body of the empire. The state fell to pieces with its own weight, and out of it were formed the kingdoms of Bijapur, Golconda, Berar, and Ahmadnaggur; each of these subsisted with a considerable degree of power, until the Moghul conquest; and the two first preserved their independency until the time of Aurangzeb. The five monarchs of these kingdoms, like the Cæsars and Ptolemies, had each of them a name or title common to the dynasty to which he belonged, and which was derived from the respective founders. Thus the kings of Kulburga were styled Bahmani; those of Bijapur were styled Adal-Shahi; those of Golconda, Kutub-Shahi; and those of Ahmadnaggur and Berar, Nizam Shah Bhairi and Imad Shahi. Their histories are to be found in Ferishta, Khafi Khan, and the Tarikh-i-Shahāb-ud-Din, Kazi of Ahmadnaggur.—*Rennell's Memoir*, p. 79; *Orme's Historical Fragments*, p. 36; *Elphin.*

KULDJA, a town in Central Asia, at which was signed a treaty between the Russians and Chinese, 12th-24th February 1881. According to the 16th article, the Chinese Government agreed to 'diminish proportionately to the value the export duty on some kinds of tea of inferior quality' exported to Russia by land.

KULEAH. Pers. A robe exactly similar to, but worn over, an al-khaliq.

KULI, Tam.; Kuri, Maleal. A measure one foot square.—*W.*

KULI. Turk. A slave. Nadir means wonderful, and is used as an epithet to describe the Almighty. The name of Nadir Kuli therefore signified the slave of the wonderful, or of God. When he was promoted by the favour of Shah Tamasp to the dignity of a khan, he took the name of that monarch, and was called Tamasp Kuli Khan; but on reaching the throne he styled himself Nadir Shah, resuming his original name of Nadir.—*Malcolm's Persia*, ii. p. 46.

KULIN, a race of Brahmans in Bengal who are deemed by other Brahmans to be of very pure descent, and in consequence many are anxious to wed their daughters to them. As a result, the Kulin men are great polygamists, and in the middle of the 19th century a pamphlet gave the following amongst others:—

	Age.	Wives.
Bhola Nath Bannerjee, . .	55	80
Bhugwan Chatterjee, . .	64	72
Purna Chunder Mookerjee, .	55	62
Mordu Sudu Mookerjee, . .	40	56
Tituram Ganguly, . . .	70	55
Ram Moy Mookerjee, . .	50	52
Boido Nath Mookerjee, . .	60	50
Shama Churn Chatterjee, .	60	50
Nobo Coomar Bannerjee, .	52	50
Ishan Chunder Bannerjee, .	52	44
Jodu Nath Bannerjee, . .	47	41
Shib Chunder Mookerjee, .	45	40

Pandit Iswara Chandra Vidyasagar wrote a pamphlet in Bengali, entitled 'Polygamy—Should it be abolished or not?' Most of these marriages are sought after by the relations of the girls, to keep up the honour of their families; and the children of these marriages invariably remain with their mothers, and are maintained by the wives' relations: in many cases a Kulina father does not know his own children. Kulina women in Mr. Ward's time furnished a large number of the common women of Calcutta. The children of Kulina women, born while in their own father's house, are never owned by these husbands. In the year 1815, some Hindus proposed to petition the British Government to prohibit Kulin Brahmans marrying so many wives. The Kulin tribe take the suffix honorific names of Mookerjee, Chatterjee, Bannerjee, Ganguly. The Hindus of Calcutta, styled Ghose, Bose, Dutt, and Mitra, are Sudra tribes who accompanied the Kulin Brahmans into Bengal.

Shib Chunder Bose tells us (p. 232) that Oodhoy Chunder, a Brahman of Bagnapara, had 65 wives, of whom he had 41 sons and 25 daughters; Ramkinkur, a Brahman of Kushda, had 72 wives, 32 sons, and 27 daughters; Vishnu Ram, a Brahman of Gundalpara, had 60 wives, 25 sons, and 15 daughters; Gouri Churn, a Brahman of Tribani, had 45 wives, 32 sons, and 16 daughters; Rama Kant'h, a Brahman of Bhusdarani, had 82 wives, 18 sons, and 26 daughters. He died in 1810 at the age of 85, but married his last wife only three months before his death.—*Ward*, iii. pp. 181, 268.

KULK, in Khorasan, a fine goat's wool. Goat's hair enters extensively into the coarser woollen manufactures of Khorasan; beneath the coarser external hair of these animals, a wool called kulk is obtained, little inferior to the fine wool of Tibet, and from which various articles of clothing are made.—*Fraser's Khorasan*, p. 390.

KULKARNI. Mahr. A village accountant. The Kulkarni and Karnam of the Dekhan and south of India is the Patwari of Hindustan and the Tallati of Gujerat.

KULLA. Hind. Heaps of grain threshed in the open field, preparatory to being divided and housed.—*Rajasthan*, ii. p. 63.

KULLAH. Pers. Literally a hat; applied by the Afghans to crowned heads, also to hat-wearing natives of Europe. The use of the kullah of black lambskin is universal among the Persians. Kullah-zarra, a chain-armour cap or head-piece. Zarra-baktar is armour. Kullah-ark, Chin., is an embroidered cap.—*Ouseley's Tr.* i. p. 208.

KULLEN, a predatory race in Puducottah, Madura, etc. Their name is also written Kallan, and plural Kallar. See Kollar.

KULLORA and Talpur are Sind tribes which furnished its last two dynasties. The Kullora trace their descent from the Abbasside khalifs, and the Talpuri from Mahomed, but both seem to be Baluch. The Talpuri (Tal or Tar, Borassus flabelliformis or palmyra, and Pura, a town) amount to one-fourth the population of Hyderabad, which they call Lohri or Little Sind. There are none in the t'hul. The Kullora dynasty ruled in Sind in the 18th century, and their descendants are still residing at Hajipur in the Dehra Ghazi Khan district.

KULLU, a valley and revenue subdivision of the Kangra district of the Panjab, lying between lat. 31° 20′ and 32° 26′ N., and between long. 76° 58′ 30″ and 77° 49′ 45″ E.

Kullu or Kulu, in the N.W. Himalaya, consists of the mountain basin of the Beas and the west bank of the Sutlej. Sultanpur, its capital, is elevated 4584 feet. The chain bounding the Sutlej on the west is considerably higher than that on its east bank, and is crossed into Suket by the Jalauri pass, elevated 12,000 feet. The province of Chamba bounds it on the west, and the physical features of Kulu and Chamba are similar. The poorer Kulu people wear only a blanket wound around the waist, and one end flung across the shoulders and pinned across the chest; men and women often dress alike, but the long hair of the women is plaited in one tress. The natives of Bashahir, Sukeit-Mundi, and Kulu in the Kohistan of Jalandhar, have all sallow complexions, and seem all of the same race. In the hills of Kulu and Kangra are the Gujari and Guddi races, who cultivate little, and keep herds of buffaloes, and flocks of sheep and goats. They claim certain beats of the forests as their warisi, or ancestral property, subject to the payment of pasturage tolls. The forests of the lower hills are apportioned out among the Guddi or shepherds of the Snowy Range, who in the winter season bring down their flocks to graze. In the same manner the Gujar with their buffaloes take up divisions on a hill-side, and carefully respect their mutual boundaries. A kingdom of Kulu, too, is placed by Hiwen Thsang at 700 li, or 117 miles, to the N.E. of Jalandhar. Gold is found in Kulu. Native gold-washers earn two or three annas a day by extracting from the river sand a very fine dust. The chief castes are Kanet and Dagi. Polyandry still prevails in Seoraj, but has almost died out elsewhere. It consists of a community amongst brothers of wives and all their goods, and they regard their women as farm labourers.

About Subathu one sometimes sees infants wrapped up like little mummies, and laid in such a position that a small rill of water falls on their heads. These infants are usually watched by some elderly female whilst their mothers are employed in the fields. The natives believe that this ordeal strengthens the children and renders them hardy, and that it cures dysentery and various other diseases. But the common object is to keep them asleep, and this is found to be a most effectual means of so doing. The Kulu people dread the evil eye, and have recourse to witch-finders, who feign the power of discovering evil spirits, which wander over the mountains in the tangible form of witches. If a cow or other living creature die, its death is attributed to some evil eye, and a witch-finder is employed to discover it. This impostor having selected some old woman who had no means of propitiating him by gifts, placed his victim in the centre of a group, whilst all interested in the case sat around her in a circle. He then danced round the poor creature, and ultimately nodded his head towards her, whereupon all the lookers-on did the same, which coincidence was deemed a sufficient proof of guilt. Formerly she was subsequently condemned to be burnt to death. But since that district became a British province, and these inhuman proceedings have not been allowed to take place, they declare the victim of their superstitious credulity an outcaste, and refuse her the commonest necessaries of life; thus she is abandoned to her fate, and would probably starve to death, but for the timely gift of a goat or a sheep by some one of her relatives to the witch-finder, who forthwith fastens the guilt on some other person, in the hope of extorting in a similar manner from the relatives of the last accused. — *Cleghorn's Panjab Report*, p. 89; *H. J. et T.* p. 203. See Ladakh.

KULLUKA, an ancient commentator on the Institutes of Menu.

KULLUR or Belaspore. Its Rajput rulers had estates on both sides of the Sutlej, but the sunnud given to raja Muher Chund in 1815 confirmed to him the eastern portion only. In acknowledgment of services during the mutinies in 1857, the raja received a dress of honour of Rs. 5000 value, and a salute of seven guns. The revenue of this State is not less than Rs. 70,000. The population amounts to 66,848.

KUL TEAK, a scarce variety of the teak tree in the Wynad, about Sultan's Battery. It is considered superior to the common teak.— *M'Ivor, M.E.*

KULTI or Kullu. Tam. Gram or horse gram, Dolichos biflorus or D. uniflorus. D. biflorus, the two-flowered bean, is grown in fields after the rains, and chiefly used for cattle; when given to horses, it must first be boiled; they soon become very fond of it, and keep in as good condition as upon any other grain. The Bengal gram or chenna is the Cicer arietinum.

KULUMB, the name of several towns in the south of India. One of these is Colombo, the seat of government in Ceylon, which has a population of 40,000 people. It seems to have been selected by the Dutch from the proximity of the cinnamon gardens, for it has no other recommendation. It was visited by the Portuguese in 1505. It capitulated on the 16th February 1796. It is on the west coast of the island, in lat. 6° 56′ N., and long. 79° 53′ E., and exports largely to Europe. Colombo is mentioned in Singhalese historical annals so early as A.D. 496; the name is said to signify a seaport. This and Covelong, south of Madras, and Quilon of the western coast, are all the same name, Kulumb.—*Horsburgh; Sirr.*

KULUNG. Hind. The kulm fowl of the Bombay side of India is the Grus cinerea, the European crane. It visits India in great flocks in winter, but wholly disappears in the breeding season. It is also called the karranch.

KULZUM represents the ancient χλυσμα,

situate at the northern extremity of a bay, in lat. 28° 50′ N., and long. 63° 20′ E., according to Ptolemy. But, says Hamd Allah Cazvini, the Sea of Kulzum is likewise called Bahr Ahmar or the Red Sea. Hameir or Hamyar is bestowed by the Persian geographer on another gulf. Natives of India regard the Bahr-i-Kulzum as the Caspian Sea.—*Ouseley's Travels*, i. p. 28.

KUM, in lat. 34° 45′ N., and long. 50° 29′ E., a town in Irak-i-Ajam or Persia, 80 miles on the road from Teheran to Isfahan. The tomb of Fatima, the sister of the Imam Raza, is there; and it is the most celebrated of the sanctuaries of Persia. With Muhammadans it is a favourite place of burial. See Asylums; Bast.

KUMALA, the son of Asoka. A legend regarding him proves the antiquity of the practice of placing eyes on the outside of Buddhist temples. In a former birth, Kumala is said to have plucked the eyes from a chaitya, for which he was punished by the loss of his own in the next birth; and because he then presented a pair of golden eyes to a chaitya, he was afterwards born as the son of Asoka, with eyes beautiful as those of the Kumala bird, from which circumstance he obtained his name.

KUMAON, a district in the N.W. Provinces of British India, including Kumaon proper, Kali Kumaon, and the Bhabar; it lies between lat. 28° 55′ and 30° 50′ 30″ N., and between long. 78° 52′ and 80° 56′ 15″ E.; its area is 6000 square miles, and population, in 1872, 433,314 persons. Kumaon district consists, first, of the sub-Himalayan ranges, and, secondly, of the Bhabar or waterless forest, averaging from 10 to 15 miles in breadth, which stretches between the mountains and the Terai. The original Khasiya, or inhabitants of Khasdes, mentioned by the Hindu lawgiver Menu some 2500 years ago, were Hindus, and identical with the modern tribe of Khasiya. The Dom rank as the lowest of the Khasiya, and until the British occupation they were the predial slaves of the landholders. Every crag and summit has its local deity and shrine, at which kids are offered in sacrifice; at the larger temples at river junctions, buffaloes are similarly slaughtered. The obnoxious custom of polyandry is here unknown, but polygamy is frequent. The Bhabar or southern portion is about 10 to 15 miles broad. It consists of the loose alluvial detritus of the lower hills. It is of considerable elevation, with a total absence of running water, but is bounded on the south by a line of springs which mark the northern boundary of the Terai district. Up to 1850, the Bhabar was an almost impenetrable forest, given up to wild animals, and is still mostly unreclaimed jungle. Elephants are found in the Bhabar and in the forests bordering on the Siwalik Hills. The mura fly is very troublesome in the months of April and May. Limestone, sandstone, slate, gneiss, and granite constitute the principal geological formations of the district. The majority of the Hindus belong to the tribe of Khasiyas, identified by some with the inhabitants of the Khassya Hills in Assam. The crests of the watershed range which separates the Indus and Sutlej systems, is in general very great; the Niti pass is 16,570 feet above the sea, the Mana pass is 18,760 feet, the Juhar or Milam pass, 17,270, and that of the Lanpya Dhura pass in Byans, 18,000. The elevation of the Terai varies from 600 to 1000 feet. The first mountain range rises 4300 feet. and the second 7700 feet. Srinuggur, in a valley on the banks of the Alaknanda, is 1500 feet. The mountains of the outer ranges rise to 7000 feet in many places, and in the interior attain to 10,000 feet; while still farther north many rise to 20,000, and a few above 24,000 feet, and Nandadevi 25,750 feet. The highest mountain west of Nepal is in this province. The loftiest, as elsewhere in the Himalaya, are never on the axis of the chain, but are still farther north, and its great elevation may be judged of from the heights of the passes over it. Of these, proceeding from the eastward, may be mentioned the

	Feet.		Feet.		Feet.
Lanpya,	18,000	Niti,	16,570	Naini Tal,	6,500
Lakhur,	18,400	Mana,	18,760	Bhim Tal,	4,000
Balch,	17,700	Almora,	5,500		

The vegetation of Kumaon includes fully 2000 flowering plants.

Kumaon and Garhwal furnish gold, copper, iron, lead, sulphur, borax, soapstone, silijit or native sulphate of alumina, gypsum, graphite, lignite, asbestos. The Pakhri copper mine is in Pargana Nagpur in Garhwal, also at Rai in Gangoli, at Siri in Barabisi, and at Sor.

Kumaon porters carry their loads on their heads; those of Garhwal on their backs.—*Imp. Gaz.*

KUMARA is the Hindu god of war, and is supposed to be the analogue of Mars, the Roman god of war. Kumara was the son of Janavi (Juno), as Mars was the son of Juno, and like as the Roman Mars was produced by the agency of Vulcan, so was Kumara by the Hindu regent of fire. Kumara has the peacock as his companion, and this bird was likewise sacred to Juno; and as the Grecian goddess is fabled to have had her car drawn by peacocks, so Kumara (the evil-striker) has a peacock for his steed.—*Tod's Rajasthan*, i. p. 596. See Ku.

KUMARA. SANSK. A youth, a young boy, a prince, vernacularly Kunwar, or Kuar, or Coour. Kumari, vernacularly Kunwar, a maiden, a young girl, a princess; a name of the goddess Durga, to whom, as a maiden, a temple has been erected at the extreme south of the Peninsula, at the cape known to Europe as Comorin. The author of the Periplus states that at the town of Komar, where there is a fort and a harbour, people came to bathe and purify themselves, for it is related that a goddess was once accustomed to bathe there monthly. Cape Comorin formerly ranked as one of the five sacred bathing places, and the monthly bathing in honour of the goddess Durga or Parvati is still continued, but the number of visitors to it is now very small.

KUMARA, four or five mind-born sons of Brahma. They declined to create progeny, and remained pure and innocent.—*D.*

KUMARAKURU TESIKAR, author of several poems, of which Nitineri Vila-Kham is the best. Two juvenile compositions, Tirumutur Kalivenpa and Minaksi Pillai, TAM., are also well known. He was born at Strivy-guntam, in Tinnevelly, in the 17th century, and is said to have died in Benares.

KUMARA SAMBHAVA, a poem by Kalidasa in 16 cantos, parts of which have been translated by Stenzler into Latin, and by Griffiths into English.—*D.*

KUMARI, of Mysore and Canara, is the Punam

of Malabar, the Punakad of Salem, the Chena of Ceylon, Dhya in Central India, Jhum in Bengal, Kil in the Himalaya, and the Tungya of Burma. It is a rude system of culture, followed in all the countries wherein secluded tribes and others clear parts of the forest. The Kumari cultivators earn a cheap but wretched subsistence, and live in miserable huts. The Irular and Kurumbar races on the Neilgherries, the Malai also on the Shevaroys, the Punam cultivators in Malabar, the Kumari cultivators of Canara, and the Karen in Burma, all endeavour to obtain a precarious subsistence by scattering grain after burning the jungle, and thus avoid, to them, the irksome restraints of civilised life. A hill side is always selected, and at the close of the year a space is cleared. The wood is left to dry till the following March or April, and then burned. The ground is then sown with Italian millet, Panicum Italicum, as also with rice, Oryza sativa. In Canara, the seed is generally sown in the ashes on the fall of the first rain, without the soil being touched by a plough. It is fenced and weeded, and the crop gathered towards the end of the year. A small crop is taken off the ground in the second year, and sometimes in the third, after which the spot is deserted for 7, 10, or 12 years, until the jungle grows sufficiently high to tempt the tribe to renew the process. In Ceylon, the Chena lasts two years, and includes the culture of chillies, yams, sweet potatoes, cotton, hemp, etc. About the middle of the 19th century, in Bekal, the most southern taluk of Canara, 25,746, or one-sixth of the rural population, were engaged in it, but north of that taluk it was carried on by the jungle tribes of Malai Kader and Mahratai to the number of 59,500. Kumari was then prohibited in Mysore, and under great restriction in the Bombay Presidency; and the Madras Government, in 1860, prohibited it in Government forests, without special permission, which they commanded to be given sparingly, and never in timber spots. Mr. Cannan, a coffee planter of Wynad, says that in a spot thus treated, only wood re-grows unfit for any building purposes, and he had never been able to get coffee to grow on it.—*Dr. Cleghorn in Reports to the Madras Government*, 1858, *etc.; Cleghorn, Forests and Gardens of India*, p. 126.

KUMARILA BHATTA, a controversial Brahman of eminence, who is supposed to have lived at the end of the 7th century of the Christian era. Dowson says he was styled also Bhattacharya, also Kumarila Swami, a celebrated teacher of the Mimansa philosophy, and opponent of the Buddhists, whom he is said to have extirpated by argument and force. He was prior to Sankaracharya, in whose presence he is said to have burned himself.

KUMBHA, also Kumbi and Kumbhi, Careya arborea, *Roxb.* Its fibre is employed in the Himalaya as slow match for matchlocks.

KUMBHAKA. SANSK. Part of the Brahmanical ritual for obtaining control of the external senses. It consists of a suspension of breathing by closing both nostrils.

KUMBHAKARNA, a brother of Ravana, king of Ceylon, of gigantic stature. He fell in battle, killed by Rama.

KUMBHUPATIA, a sect of Hindu dissenters, lately founded in the Sumbulpur district, and known as Kumbhupatia, from the fact that its followers wear ropes of bark round their waists. They allege that their religion was revealed to 64 persons in 1864 by a god incarnate, whom they style Alekhswamy,—that is, the Lord,—whose attributes cannot be described in writing. They believe in Hindu deities, but do not respect images, saying that it is impossible to represent a Supreme Being whom no one has ever seen. They are subdivided into three classes, two of which renounce the world and make no distinction of caste, while the third lead a family life. Their habits are said to be very filthy, and they take no medicine in illness, but rely solely on divine help. In 1883, a party of 12 men and 15 women forced their way into the sacred temple of Jaganath at Puri. They were naked, but for the bark ropes worn round the waists. They had come from the Central Provinces, and boldly avowed their intention of burning the Jaganath idol, in order to show the unregenerate Hindus the futility of their religion. As there were a thousand other pilgrims about the temple, the attack on the idol never got beyond a scrimmage, in which one of the fanatics was killed. The rest were seized, and punished with three months' rigorous imprisonment. Kumbhupatia are spread throughout 30 villages in the Central Provinces. They were converted by a mendicant who appeared amongst them in the year 1864, and revealed himself as the incarnate god Alekhswamy from the Himalayan heights. He died a short time afterwards, leaving 64 chief disciples, who with their followers now worship him as a god. They do not believe in images, or in medicine, the only physic they take being a little earth and water. Their habits are filthy but ascetic, and they are pledged to a rigid celibacy, which has led to a split in the sect. One of the chief disciples was too intimate with one of his female devotees, but he told his scandalized followers that she was going to give birth to Arjun, 'who would root out all unbelievers.' The child was a girl, and many of his followers left him on her birth. He convinced the rest that it would be this girl's duty to destroy all unbelievers by means of her charms; but as soon as they were easier in mind the girl died, and many more of his followers departed; the residue being able to believe everything regarding him with greater fervency than ever. He erected an altar, over which he and his wife sat in the morning. His followers worshipped them, and moved round the altar until the time for their morning meal arrived, when their feet were washed with milk, which was afterwards drunk by their adherents. The rest of the sect have taken another master, and if they break any of the sect rules, tell a lie, or commit a crime, they are forthwith excommunicated. A criminal class called Pan have been converted to the Kumbhupatian religion, and crime has been considerably reduced.

KUMB-KA-MELA. HIND. A sacred fair at Hardwar, held every twelfth year. See Mela.

KUMBOH, a Sudra caste of the Panjab, numerous at Lahore.

KUM FA, the Chinese tutelary goddess of women and children, the Venus genetrix of the Chinese. She was a native of Canton, and lived during the reign of Ching Hwa, who ascended the throne A.D. 1465. She was, as a young girl, a constant attendant on all the neighbouring temples, and is said to have had the power of

communing with departed spirits. Becoming tired of the world, she committed suicide by drowning. When her body rose to the surface, and was placed in a coffin, a sandal-wood statue of her was burned, but was replaced by one of clay. Her principal temple is in the Ho-nan suburb of Canton. Her votaries are principally wives who wish to become mothers. She has 20 attendants.

Shay-Tseih is the Chinese god of the land and grain.

Fung-Fo-Shan are the wind and fire gods of the Chinese.—*Gray*, p. 163.

KUM FEROZ RIVER, across which Amir Azan Delemi built the Band-i-Amir or Bendamir. Aras is a modern name of the ancient Araxes, the Awerma of the Puranas, now called Kum Feroz. It laves the foot of the rock Istakhr. The snowy Ardegan mountains are the same with those which presented so formidable a barrier to Alexander's progress, and by whose slopes he descended into Persia in his advance on Persepolis. Towards the north of Armenia runs the Araxes, with its numerous tributaries. This river, which at its commencement, owing to its many affluents, bears the Persian appellation of Hazara, springs from the side of Bin Gol, or mountain of a Thousand Lakes, about 30 miles south of Erzerum, and nearly in the centre of the space between the eastern and western branches of the Euphrates. Its course, from its first spring near Jabal Seihan, is almost N.E. for 145 miles through Armenia, when it turns eastward, being then near the frontier of Kars; this proximity continues for 110 miles. The sources of the Aras and those of the north branch of the Euphrates are about 10 miles from one another. According to Pliny, those sources are in the same mountain, and 600 paces asunder. In modern times, the north-eastern districts, along the banks of the Araxes, intervening between Azerbijan and Georgia, have been in general subject to the sovereigns of Persia.

KUMHAR is a potter. It is a name derived from the Sanskrit Kumbhakara,—Kumbha meaning a water jar. The potter caste manufacture all kinds of earthen vessels, whether for domestic or general use. These are made by the hand, and often display considerable ingenuity.

KU-MI, also Ka-mi, a race in Arakan, in lat. 21° N., and long. 93° E., in the valley of the Koladyn river, which disembogues at Akyab. They assert that they once dwelt on the hills now held by the Khyen. The Ku-mi of Arakan chiefly inhabit the Koladyn and its feeders. The Khy-oung-tha and Khu-mi or Kum-wi (properly Ku-mi) of the middle basin of the Koladyn belong to the Burman family. Their language has been partially examined by Captain Latter, who says it is evidently cognate to the Rakhaing form of the Burman. The majority of its words, however, are non-Burman. The Ku-mi are fair, with small features, are divided into 27 clans, and the estimated number of the people is about 12,000. Of this tribe there are two divisions, called by themselves Ka-mi and Ku-mi, and by the Arakanese Awa Ku-mi and Aphya Ku-mi.

KUMIRAH, a variety of the elephant in Kachar.

KUMIS. TARTAR. Ma-ju-tsiu, CHIN. The ordinary drink of the Tartars, a spirit made of mares' milk. Mares' milk has 17 per cent. of solid matter and 8 per cent. of sugar of milk, which renders it very liable to undergo alcoholic fermentation. They pour the milk into a large leathern vessel, and when they have got a considerable quantity, beat it till it begins to ferment like new wine. When it becomes quite sour, they beat it again violently, and then draw off the buttery part. The fermented whey makes a brisk sort of liquor, with an agreeable acid flavour, very intoxicating to those not much accustomed to it. The Tartars also make, from goats' milk, a kind of butter, which they boil and keep for winter use in goats' skins, and though they put no salt in it, it never spoils. After they have taken off the butter, they boil the curd again to make cheese, which they dry in the sun, and which is as hard as iron; these cheeses they put into sacks for the winter store, and when the supply of milk becomes scanty, they put this hard, sour curd into a leathern vessel, pour hot water upon it, and beat it till it liquefies; and with this acid drink they have to content themselves during the time of year so severely felt by the pastoral nations. The Tartars live chiefly on their flocks and the produce of the chase.—*Huc's Christianity*, i. p. 209; *Smith's Chin. Mat. Med.*

KUMMALAR, in the Malealam country, an artificer. The Ainkudi Kummalar of Malabar are the five artisan castes,—the Ashari or carpenter, the Mushari or brazier, the Tattan or goldsmith, the Perning-Kollen or blacksmith, and the Tol Kollen or tanner. These five castes follow the custom of marrying one girl among three or four brothers, and this custom is followed in some parts of Malabar by the Iduver, Juver, or Teer, toddy-drawers. Kookel Keloo, a Nair, a district munsiff in Malabar (No. 48 of the Madras Literary Society's Journal of 1859, pp. 52), says the Iyuver or Teeyer (toddy-drawers) are a section of the servile class of people who, during the time of the Brahmans and Perumals, came to Malabar from Ceylon to earn their livelihood. It cannot, however, be accounted for, how they in many parts, though not throughout the whole of Malabar, came to adopt the beastly custom of the Kummalar of the country, of a single girl being married to three and four brothers; and likewise, in some parts of the country, where this sad custom is not so generally prevalent among them, the practice of taking their deceased brothers' widows for wives, as the Musalman Moplah do. It is only in the taluks of Nidungnad, Kuttanad, Chowghat, and some parts of Vettutnad, and a few adjoining spots in South Malabar alone, that a woman among the Nair is kept at the same time by two or three different men, who are, though, never brothers. It is, however, very possible that the Teeyer may have taken the idea from this latter error, and themselves fallen into the other and more shameful one; or perhaps they observe the custom, as they in general are, as a document in its beginning shows, sprung from Kummalar or the Kummalar from them, through their then frequent intermarriages. The document calls them also Iyuvahaiyer, a word equally low and contemptuous in Malabar, and of the same meaning as the word Kummalar. 'Moreover, amongst the Nair of the whole of North Malabar (that is to say, from part of Cooroombranad as far as Mangalore), though sometimes unchaste practices occur in their families, yet I can most confidently

assert that the above abominable custom of one woman being kept by two or three men at the same time, never in ancient or modern time was once known. A Nair there will, though, occasionally marry two or three women in succession, if the first or second prove barren, or all the children born die, or from any other like cause or domestic difference. Many of the Teeyer also of that part of the country do, in some measure, follow the custom of the Nair; but the Teyette (Teeyer women) of the remaining Teeyer there are notorious harlots, and become the concubines of strangers of any caste or religion, and this without the least prejudice to their own caste, or any loss of esteem in society; on the other hand, any such act proved against any females of the other castes, subjects the person to excommunication from caste, banishment from society, and all religious advantages. The Teeyer females of South Malabar do not, though, so readily as those of the north, yield themselves to this disgraceful practice. Owing to the very great number of castes, and the peculiar and different manners and customs in various parts of the country, the superficial inquiries of most foreigners have led them into error, and in their works they generally ascribe the same pernicious practices to all castes and parts of the country indiscriminately.'

'However, the Nair, Teeyer, and, indeed, all the other numerous castes of Malabar (including the Cochin and Travancore countries, these being indeed the most striking in this respect), are in some way or other in a greater or less degree of error; and reformation therefore is indeed much needed among them all. It is, though, very lamentable to find them dormant in their original state of depression, and not seeking for reformation, rather growing blindly proud of their vain and different castes and privileges, and ready to run any risk, even that of hazarding their lives, only to preserve their castes.'—*Madras Lit. Soc. Journal*, pp. 52-54 of 1859.

KUMMERBAND: HIND. A sash, a waistbelt, a girder of the loins.

KUMMUNGAR, in Bengal, a bone-setter.

KUMPIL is a place of sacred resort amongst the Jains, where they annually bury an image of one of their Tirthankara, and has been immemorially established among them as a holy city.

KUM-QUAT. CHIN. Citrus Japonica; fruit about the size of an oval gooseberry, with a sweet rind and sharp acid pulp. Preserved in sugar, according to the Chinese method, it is excellent. Groves of the Kum-quat are common on all the hill sides of Chusan. The bush grows from three to six feet high, and when covered with its orange-coloured fruit is a very pretty object.

KUM-RUDI, men who have adopted the Chinese system of secluding themselves from the rest of the world.—*De Bode's Travels*, p. 22.

KUMULULU, a place 35 miles S.W. from Shivelliputtun, and 70 miles from Cape Comorin, has an unfinished Hindu rock temple of great elegance. It is supposed to have been erected to mark the triumph of Siva over Mahavira.—*Fergusson.*

KUMUT, or bark cloth from the river Baram, supposed to be from a species of Artocarpus, is worn by the Kyan race when mourning their dead.—*Royle, Fib. Pl.* p. 341.

KUN or Khon, a tribe of the headwaters of the Koladyn river, beyond the Arakan boundary. The dialects of the Lung-Khe and Shendu have special affinities with the Kyan, Khy-eng, and Ku-mi. The Kun language also pertains to this group.

KUNA, a Pandiya king of the 9th century, who was a follower of Samanal doctrines, which are supposed to mean those of the Jaina or Buddhist sect.

KUNAVIRA PANDITAR was born near Chingleput. He wrote two treatises in poetry, one called Neminatam, and the other entitled Venpapattiyal.

KUNAWAR is a subdivision of Bashahir State in the Panjab. It is a rugged, mountainous country, and lies between lat. 31° 16′ and 32° 3′ N., and long. 77° 33′ to 79° 2′ E.; area, 21,000 sq. m.; pop. 10,000. It is bounded on the N. by Spiti, on the E. by Chinese territory, on the S. by Bashahir and Garhwal, and on the W. by Kullu.

Kunawar is usually divided into Upper and Lower Kunawar, and includes the upper part of the Sutlej basin. In Lower Kunawar the population consists of mixed Tibetan and Hindu races, the Turanian element preponderating in the north, while the southern region is inhabited by people of Aryan type. In physique, the Kunawari are tall, athletic, well made, and dark skinned; while their character stands high for hospitality, truthfulness, and honesty. Alone among the neighbouring hill tribes, they successfully resisted the Gurkha invasion, and so completely baffled the enemy by breaking down bridges, that the Gurkhas entered into a convention by which, in return for a tribute of £750 per annum, they agreed to leave the valley unmolested. The religion of the Kunawar people shows the same mixed origin as the ethnical peculiarities. The northern villages profess Buddhism of the Tibetan model; in the south, Hinduism prevails; while the middle region shades off gradually from one faith into the other, producing grotesque mixtures of ceremonial and belief. At Kanum, half-way across the tract, the Tibetan sacred books are in use, and the Lama priests are there, but the Hindu veneration for kine still exists, and the distinctions of caste survive; while at Hangrang, on the northern frontier, Buddhism assumes the pure Tibetan form.

The Tartar husbandmen have a custom similar to those of Scotch farmers, who plait the first corn cut three-fold, and fix it over the chimney-piece till next harvest, when it is renewed. The Tartars use three ears of barley, which they paste outside above the door. Polyandry is general in Kunawar from the higher classes to the lowest Chamars, one family having one wife, the elder brother being the more special husband. It is called Kūrpa. Polyandry prevails also in Chinese Tartary and in the hilly tracts towards the plains. Besides this drawback on the increase of the population, there is another peculiar to Chinese Tartary and the adjoining countries; that is, celibacy, which is professed by numbers of the inhabitants; and in some villages the monks or lamas and nuns form almost half the population.

At all the elevated passes there are a number of square piles of stones, called Shughar, upon which passengers usually place a piece of quartz, or attach rags to poles, which are fixed in the

middle. There are also several Shughar on the neighbouring heights, sacred to the deota or spirits of the mountains, who are supposed to inhabit the loftiest and most inaccessible points, especially where there is much snow. The Shughar at the passes are erected by travellers, but those on the higher peaks are commonly made at the expense of some wealthy pilgrim not much accustomed to the mountains, who has succeeded in crossing a pass, which is reckoned an arduous undertaking by an inhabitant of the plains.

The Tartars are called by the Kunawar inhabitants of the lower parts, Zhad, Bhoteah or Bhutani, and their country is often named Bhot and Bhutan; the Tartars are very different in appearance and manners from the inhabitants of Lower Kunawar; all those of Bashahir were formerly under the Chinese. The Tartars of Kunawar are not so stout as those farther to the eastward, and have less of the Chinese features, are muscular, well made, and tall. The people are fond of dancing and singing, and they have several annual festivals, which they celebrate with a degree of joy scarcely known amongst other Asiatic nations. The greatest festival is called Mentiko, which prevails throughout the whole of Kunawar; it is held in the beginning of September; its origin is not known. All the people who are able to move leave their villages, and ascend the nearest hill; they proceed slowly, making a circuit of several days, and this is a time of the greatest festivity. They adorn themselves with garlands and flowers, and sing and dance to the sound of music, which is much more melodious than the tunes of Hindustan. They have all sorts of amusements, run foot and horse races, when the ground will admit of it, perform feats of agility, feast, and drink.

The language shades off, like the religion, from the Tibetan in the north to Sanskritic dialects on the Indian side. In Lower Kunawar, the preponderating language is Hindi, and is called Milchan, but the Bhot preponderates in Upper Kunawar. The Lubrung or Kanum and the Lidung or Lippa are varieties of the Milchan. In Sungnam, the word Theburskud is used to designate all variations from the regular form of speech. The fleshy and stone fruits of Kunawar are the grape, apricot, peach, apple, walnut, and mulberry. Sungnam is famous for its apples, Akpa for grapes, and Pangi for walnuts. From Kanum to Miru ridge, in Upper Kunawar, are to be found the Cedrus deodara, Pinus Gerardiana, P. excelsa, Abies Smithiana, Abies Webbiana, Juniperus excelsa, Populus alba, Juglans regia, Corylus colurna, Armeniaca vulgaris, Pyrus malus, Cerasus puddum, Quercus ilex, and Salix alba.—*Cleghorn, Panj. Report*, p. 58; *Imp. Gaz.*

KUNAWEZ. HIND. A Bokhara and Persian fabric of plain shot silk, with a thread, say of green one way, and red the other; it is the same, but a finer fabric, than the Dariyai dhupchān.

KUNBI, a Mahratta race engaged in cultivation. They are also the main body of the cultivating population of Gujerat, where they are the chief owners of the soil; and, though quiet and unpretending, are a robust, sturdy, independent agricultural people. Throughout the Mahratta country, Berar, Nagpur, and Kandesh, they are the principal agriculturists. Mr. Campbell considers them (pp. 93, 94, 95) to be quite Aryan in their features, institutions, and manners, though their institutions are less democratic than those of the Jat and Rajput, and, in the Mahratta villages, they have at their head a potail. Few of the Kunbi ever enlist as soldiers. Sivaji and his descendants and some of his chiefs were, however, of this race, but their followers were drawn from the mawals of the Western Ghats, and latterly their armies were composed of the soldiers of fortune of every race. The Mahratta chiefs sprang from the people of Satara and Poona, but Holkar was of the shepherd, and the Gaekwar was of the cowherd caste; while the Peshwa family, who put the descendants of Sivaji aside, were Konkani Brahmans. Sivaji is also said to have been of Rajput descent.

The Kunbi of the Hyderabad dominions are wholly illiterate. Indeed, till 1870, no attempt had been made to educate the people of the Hyderabad territories. Though education is making enormous strides in Berar and in British Maharashtra, there was no proper school met with in all the Editor's journeys from 1866 to 1869, amounting to about 9000 miles, and only occasionally a few lads were to be seen, children of foreigners, learning, in a verandah, the elements of the Hindi or Mahrati. In that eastern part of the Mahratta country, the knowledge of reading or writing of any tongue was almost unknown. The Arjawna Kunbi reside in Western India. They are subdivided into a number of classes, many of whom do not eat together, or intermarry. The Kunbi, in Berar, allot themselves into eleven classes—

Mali.	Haldi Mali.	Sagar.	Vindesa.
Full Mali.	Wanjeri.	Atole.	Pazni.
Jerat Mali.	Gantadi.	Telale.	

The 1881 Census Report gave different appellations for these, and stated 5,388,487 as the number of Kunbi in India.

With the exception of the Haldi Mali and Pazni, they have Roti vya whar amongst each other, but not Beti vya whar, *i.e.* they eat with each other, but do not intermarry. The Berar Kunbi and Mali eat flesh, drink liquor in moderation, and their widows may all re-marry if they choose, except those of the deshmukh, who follow the high-caste custom. The Kunbi form the stock of the people of the N.W. parts of the Hyderabad territory and in the Hyderabad assigned districts. Kunbi women are stout, coarse, and robust. This term, throughout the Mahratta country and Central India, is applied exclusively to the cultivating class of Hindu Sudra. It is derived from the Mahratta word Kunbawa, which means agricultural tillage.

Koeri, Kurmi, and Kunbi are great agricultural classes. Many other castes, Kamma, Kapu, Vallala, Wakkali, are employed in the cultivation of the soil. Indeed, every Hindu, however humble his station, likes to have his plot of ground, which himself or his wife and children, or other relations, or in default of them, some of his friends, may cultivate. Property in land is considered by the people generally, of every rank and caste, to be the safest and most satisfactory mode of investing money, little or much, notwithstanding the heavy tax upon the soil. Koeri, Kurmi, and Kunbi are agriculturists by profession, and perhaps, least of all the castes, have suffered themselves to be diverted from their own proper occupation.

Koeri, Kurmi, and Kunbi are very laborious in

their habits; on which account, and also for their general peaceableness, they have secured the respect of all the other castes. While they are engaged in the cultivation of the land, the main distinction between them—for they are quite separate as tribes—is, that a considerable number of the Koeri are vegetable gardeners. They have immense gardens in the vicinity of cities and towns, which are supplied by them with various kinds of vegetables. The Koeri are the principal growers of poppy, and producers of opium, both in Benares and Behar. The 1881 census returned 1,207,951 Koeri.—*Sherring's Tribes.*

KUNCHI, also Muthi. HIND. A handful; the first is applied to grain in the stalk at harvest time; the other to such edibles in merchandise as sugar, raisins, etc., collectively termed Keranoh. Kunchi means also any small quantity; it is the Saxon, a puckle, the right of taking a handful at harvest, granted to holy men.

KUNCHI-TAGAR. KARN. A tribe of agriculturists in Mysore claiming to be pure Sudra.

KUNCHNI. HIND. A dancing girl, properly Kānchni. Kunchni ka Taifah, a band of dancing girls.

KUND or Ghoont is a hill breed of horses of the Himalaya mountains, generally small, strongly made, hard-mouthed, and sometimes almost unmanageable. In ascending hill faces, or passing along the declivities of mountains, it is best to let them have their own way, for in an intricate passage they often show more sagacity than the rider. Their common pace is a kind of amble, and they stop every now and then to breathe, when no application of the whip will move them. They are sure-footed, and sometimes halt at the edge of a precipice, to the terror of the rider. They are not so quick in ascending hills as the low-country horses, but they descend with double the speed, and endure great fatigue. The ghoont animal seldom carries any burden but a man; they are bred chiefly for sale. They have two breeds, one a small ghoont, never above 12 hands high, peculiar to the country; and the other a large breed, from 13 to 13½ hands high, is bought from the Chinese, and usually comes from Chumutri. For a Chinese ghoont two years old, they give a Spiti ghoont four years old. All are equally hardy, and are kept out the whole winter, except the yearlings, which are housed. During winter the ghoont live on the roots of the stunted bushes, and are very expert at scraping the snow from off them with their fore feet. The breed of ghoont might be improved with a little care. Many are killed during winter by wolves and leopards.—*Powell's Handbook; Captain Gerard's Kunawar.*

KUNDA, Kund, or Khand. HIND. A pit, a hollow, a lake, a natural reservoir. Sita Kund is a sacred pool near Monghyr; Brahma-Kund is at the source of the Brahmaputra. Also a large earthenware pot.

KUNDA-GOLAK is a term applied to the adulterous offspring of a Brahman man and woman, but it is applied to Brahmans of a low order. Kunda and Golaka are distinct words, the first being a bastard, the second the child of a widow.—*Wilson.*

KUNDALU. HIND. A nettle of the Himalaya; its fibres are made into rope, also snow sandals.

KUNDA MOUNTAINS, in the Neilgherry district, in lat. 11° 9′ to 11° 21′ 40″ N., and long. 76° 27′ 50″ to 76° 46′ E., are the western wall of the Neilgherry plateau rising abruptly from Malabar. Avalanche peak, 8502 feet, and Makurti, 8402 feet. The Bhawani river rises in this range.

KUNDO-DHARA. SANSK. The umbrella-bearer of the Hindu god Iswara.

KUNDUZ, when visited by Dr. Lord about 1836, was a territory on the east of Balkh, ruled by a Mir. Colonel MacGregor names as districts Kunduz, Khulm, Baglan, Ghori, Doshi, Kalagac, Khosht, Khinjan, Indarab, Chal, Tashkurgan, and others, as parts of Afghan-Turkestan. It is a region of incessant change. Its river rises in about lat. 34° 52′ N., long. 67° 10′ E., is about 300 miles long, runs into the Amu or Jihun river. It receives the Indarab, 65; and Kanah-i-bad, 90 miles. Kunduz has varied greatly. It is surrounded on all sides by hills, and is so very insalubrious that the proverb runs, If you wish to die, go to Kunduz. The chief, Murad Beg, ill-treated Moorcroft, and robbed him of money and effects to the extent of 23,000 rupees. In 1830, he had occupied all the valley of the Oxus, and ruled all the countries immediately north of the Hindu Kush. It lies in a valley among the hills running from E. to W. about 30 miles, and from N. to S. about 40 miles, and the great mountain, the Hindu Kush, is visible.

KUNET, a race who form nearly two-thirds of the population of the hill tracts between the rivers Beas and Tons. The name of Kunawar is derived from them. They are the ancient Kuninda or Kulinda of the Kulindrine district of Ptolemy, which that writer places between the Vepasis and Ganges. The Kunet form 58 per cent. in Kullu, 67 per cent. in the states round about Simla, and 62 per cent. in Kunawar. They are very numerous in Sirmore and Bashahir, and considerable numbers in Ambala, Karnal, and Ludhiana, with a few in the Dehli and Hoshiarpur districts.—*Cunningham*, p. 17.

KUNG, a Chinese family, lineal descendants of Confucius, whose surname was Kung; the oldest and highest European families sink into insignificance before it. The great ancestor of the Kung, Kung Fu Tze or Confucius, was born 551 B.C., and died in the year 479 B.C., at the age of 72 or 73. During his lifetime the country now known as China was parcelled out into a number of independent states and commonwealths. He was the son of the chief minister at the court of the king of Loo, and was himself of royal descent. He rose to the dignity of minister of that kingdom, and by lectures on ethics gained many disciples, but later he resigned civil employ, and devoted himself to those works on philosophy which up to the present day regulate both the government and the religion of the State. He collected also the earliest documents relating to the history of his people and country, the popular songs and sacred hymns, the chronological emblems, and their explanations (Bunsen's God in History, i. p. 259). Confucius must have been almost contemporary with Pythagoras, Thales, Socrates, Solon, Buddha, and Herodotus, but the principles inculcated by the Chinese philosopher far outvie those promulgated by the sages of ancient Greece. See Confucius.

KUNGGUN. HIND. A bracelet. Kunggun kholna, a Muhammadan ceremony.

KUNGI. HIND. Wheat blight or red rust.

KUNG-QUA. CHIN. A resting-place for travellers, or rather for officers of government in Loo-Choo. The Kung-qua corresponds very nearly to the Turkish khan, except that, being used only by persons of some consideration, it is far more neat and elegant in every respect. The house resembles a private dwelling of the better class. Kung means a palace; Kung Tsoi Chong, temporary resting-places for the dead.

KUNGU. HIND. A kind of rouge in great request among the ladies of Sind, who keep it in a little ornamented box.—*Burton's Scinde*, p. 392.

KUNGUR, Kunjur, or Chungur, a wandering, houseless race in the Panjab, probably the same as the Chinganeh of Turkey, the Italian Zingaro, the Spanish Gitano, and the English gypsy. About Dehli, the race is called Kunjur, a word which in the Panjab implies a courtesan dancing girl.

KUNIGAL, in the Tumkur district of Mysore, in lat. 13° 1′ 40″ N., and long. 77° 4′ 10″ E., has a horse-breeding establishment.

KUNJANA is the name given by Muhammadans in the Southern Mahratta country to a migratory tribe, who style themselves Raj-yogni. They are of ordinary stature, dark-featured, and not well-favoured, and state that they came originally from Bhopal about A.D. 1700. They encamp without the walls of cities, and have no definite period of residence. The men play on musical instruments, and the women combine the art of dancing to fascinate the spectators. They call themselves Hindus, and say they worship the Brahmanical deities; but they wear clothes like the Muhammadans, and never have Brahmans to preside at their festivals. They also eat the cow, but never eat the hog. They bury their dead, and they place offerings of rice to the manes of the dead, and draw the most favourable omen of the state of the deceased by the offerings being eaten by a crow.

KUNJI, Ganji, or Conji. HIND. A porridge or caudle made by boiling wheat, rice, etc. In the south of India, a usual term for food; also starch.

KUNJU. HIND. Red powder made by steeping turmeric root in an alkali, used in India for the forehead marks of the Hindus.

KUNKAR. HIND. Nodular, tufaceous, travertine-like deposits of carbonate of lime. It is formed in all soils by the action of springs, like the travertines of Italy. In some places it is a pure carbonate of lime; in others it is a concreted limestone or pisolite; these kinds are used for road-making.

It is a Hindustani word, meaning nodule. There are two varieties, the red and the white; the red differs from the white solely in containing a large proportion of peroxide of iron; the white consists of carbonate of lime, silica, alumina, and sometimes magnesia and protoxide of iron. Kunkar is also deposited by calcareous waters abounding in infusorial animalculæ; the waters of the annual inundations are rich in lime, and all the facts that have come under observation appear to indicate that this is the source of the kunkar deposit, which is seen in a different form in the Italian travertine, and the crescentic nodules of the Isle of Sheppey and of Boulogne. Kunkar is mostly nodular,—always fresh water and recent,—in most cases in the act of being formed under our eyes. It is sometimes found in thick stratified beds like the travertine near Rome, and seems in this case to have been formed by calcareous springs. More generally it is met with in clay or alluvial soil, in the shape of small pieces from the size of peas or filberts to that of the hand. In the blue clay which stretches along the Indian shores, it is found in vast abundance, generally assuming the most fantastic forms; indeed, it abounds in every rice field and open soil all over the country. The more recent varieties seem to be formed by the agency of the rains. When the earth abounds with vegetation, the tepid waters are charged with fixed air, and dissolve the lime prevailing in the soil everywhere around, the mineral being again thrown down as the advancing season dispels the excess of gas. It in this state absorbs the clayey matter around, and cements it into kunkar. This is collected by the lime-burner, placed with firewood in small-sized conical kilns, and burnt in the usual way. It contains 72 of carbonate of lime, 15 of sand, and 11 of clay and oxide of iron; but usually about 70 per cent. of carbonate of lime, about 2½ per cent. of carbonate of magnesia, a trace of oxide of iron, and 10 to 20 per cent. of sand and clay. Mixed with half its weight of river sand, it makes an excellent mortar; burnt in pieces of a cubic inch or so in size, and then powdered without slaking, it forms a first-rate water cement, setting in a few minutes, and becoming as hard as stone. The finer varieties of kunkar are burnt with charcoal all throughout the country, in neat pigmy-looking kilns, 2½ feet high and about as much in diameter at the base. These hold about a cubic foot of material, or about 36 lbs. of charcoal and kunkar in equal parts. When burnt and slaked, it is then made up into bricks, which are sold in the bazar for the purpose of whitewashing. The ordinary Indian cement is chunam in its various forms. The only Indian building materials which differ materially from those of the rest of the world are laterite, concrete, and kunkar. — *Col. Sykes, Lond. Geol. Trans.*, 1836; *Dr. Buist; O'Shaughnessy.*

KUNR-BOJI, also Kund-mandla, HIND., in Benares and the Doab, the day on which the seed-sowing is completed,—held as a holiday; the remnant of the seed-corn is made into a cake, which is partaken of in the field, and in part distributed to Brahmans and beggars.

KUNTA. HIND. A mace or spear, which formed one of the insignia of royalty of the Chalukya dynasty when ruling at Kalian.

KUNTA in Coorg, Gunta in the Dekhan, a pond, a small tank.

KUNTAN. MAHR. A pander, a pimp. A caste said to be sprung from a Vaisya father and a Brahman mother, whose office is attendance on the women's apartments, and providing dancing girls and courtesans.—*Wilson's Glossary.*

KUNTHA. HIND. A necklace or rosary of large beads made of silver, crystal, or the earth of Karbala.

KUNTI, also called Pritha, also Parshni, was the daughter of the Yadava prince Sura, king of the Surasenas, whose capital was Mathura, on the Yamuna. She was sister of Vasudeva, but was given by her father to his childless cousin, Kuntibhoja, by whom she was brought up. Hindu mythology says that in her maidenhood she showed such attention to the sage Durvasas; that he gave her a charm by which she could have a child by any god she wished. She in-

voked the sun, and Karna was born, without any detriment to her virginity, but Karna was nevertheless exposed on the banks of the Yamuna. Subsequently she married Pandu, to whom she bore three sons, Yudishthra, Bhima, and Arjuna, who were called Pandavas. After the end of the great war, she retired into the forest with Dhritarashtra and his wife Gandhari, and they all perished in a forest fire.—*D.*

KUN-YAM, the Chinese goddess of mercy, is worshipped with great pomp on her natal day, the 19th day of the second month. She was a Buddhist nun who was canonized, and women and children frequent her temples and burn incence pastilles; she is also much worshipped during the Tsing-Hing or worshipping of Graves. Her temples are very numerous.

KUP. Sind. Mud wells, mud volcanoes. See Ram Chandar; Volcano.

KUPASI or Kapasi, a plant remarkable for the under surface in its leaves being covered with a cotton-like tomentum. The people in the Himalaya use it as tinder. It is also spun into thread, and woven into cloth, of which bags are made. The string, until examined, looks as if formed of fibre. A coarse kind of blanket, called kurki, is said to be made of this substance by the hill people north of Dehra.—*Royle, Fib. Pl.* p. 301.

KUPPAM, Coopa, Cupa, Tam., as in Manjacupam, the name by which Cuddalore is known to the natives. It is a Tamil word, signifying a small village, one occupied by humble people or by fishermen.

KUPPA-MANI. Tam. Acalypha, Indica, with which cats are so enchanted, that they play with it as they would with a captured mouse, throwing it into the air, watching to see if it will move.—*Tennent*, p. 33; *Voigt.*

KUPPARTHALA, a Panjab chiefship with a raja of the Sikh sect. The raja who died about A.D. 1876? was burned on the banks of the Godavery, near Nasik. The coffin was taken along a private road to the usual place of cremation on the banks of the Godavery, conveyed over the river ford to a special site, where the funeral pile was erected. A number of gold coins were scattered on the way; and the young raja and his brother, lads of twenty and eighteen, followed the corpse barefooted; and, after going through necessary religious ablutions, the former himself lighted the pyre. The deceased, prior to cremation, was wrapped in most gorgeous and expensive shawls and kinkobs, his jewels were left on him, and all consumed with the body in the flames. The ashes and bones were afterwards collected, the former deposited in the Government treasury, to be shortly and finally deposited under a fountain about to be erected on the banks of the river; and the bones were deposited in a basin in the river set apart for the reception of such.

KUPPHUL. Hind. A salt of soda obtained from the waters of the lake of Lunar, used in fixing the red dyes of cloth.

KUR, the Persian form of Cyrus.

KUR. A Hindu practice for extorting a debt was called erecting a kur, meaning a circular pile of wood, which was prepared ready for conflagration. Upon this, sometimes a cow, and sometimes an old woman, was placed by the constructors of the pile, and the whole was consumed together. The object of this practice was to extort payment of a debt, or to intimidate the officers of Government or others from importunate demands, as the effect of the sacrifice was supposed to involve in great sin the person whose conduct forced the constructor of the kur to this expedient.

In January 1880, the thakur of Sandwar had sent his vakeel to the village of Upni, near Bikanir, to collect the village revenues. The Siddhs of Upni refused to pay the usual malba, a small tax levied to defray village expenses. They got together other Siddhs from the neighbouring villages to the number of 150; and the whole body began to 'sit dharna,' and threatened to bury themselves alive unless they were exempted from paying the tax. The thakur consulted with the tahsildar of Gujangarh, who tried to persuade the men to go to Bikanir and prefer any complaint there which they had to make. The Siddhs refused, and as the thakur still declined to give in to their demand, they actually buried alive two of their number,—an old man of 75, and an old woman of 65. The raj officials and the lumberdars of the village tried to prevent the murder; but the Siddhs drew their swords, and carried out their purpose.—*Mrs. Ellwood; Cole. Myth. Hind.* p. 148.

KUR. Hind. A remission in rent in favour of high-caste cultivators, to enable them to employ a ploughman.

KUR or Kar, a term in use amongst the Mahratta and Nair races. Many of the principal Mahratta families derive their name from a compound formed from that of the village where they were born, and the substantive Kur, which signifies an inhabitant, as Nimbal-Kur, Pattun-Kur, etc. Kur, in Maleali, means a class, a party. The people of Malabar, from the rajas and Brahmans to the lowest races, are divided into classes,—the Chevara-Kur, the fighting or ruling class; and the Panniyur-Kur, the civil and labouring class. Their usages differ materially, and the distinctions are carefully preserved.—*Malcolm's Central India*, i. p. 142; *Wilson's Glossary.*

KUR, Kurku, or Muasi, are a tribe of Kolarian race, who occupy Nimar, the Gawilgarh Hills of Berar, Kalibhit, the western Satpura, northwards towards Indore, and to the N.W. and W. of the Mahadeva Hills. They are not Gond, but a branch of the Kol family. The Kurku and Gond keep themselves separate, and they each have a separate language. There are 28,709 of Kurku in Berar. There are about 4000 of them in Woon and Amraóti. Along with the Andh, Gond, and Kolamb, they occupy the Mailghat and the southern skirts of its hills. They resemble each other in appearance, though they each speak a different tongue, and in their features they differ from the villagers. The Kurku have their headquarters on and around the Nerbadda hills, and extend westward through Baitul and Hoshangabad as far as Berhampur and Asirgarh. The Gond eat cow's flesh at most of their festivals, whilst the Kurku hold such a practice an abomination. Some of the Kurku hold parwanahs from the Moghul emperors, in which they are styled Rajputs. Their common word for man is Kurako, which is simply the plural of Kur or Kura (in Munda, a boy), and we have thus a term equally near the Koraku and Korwa of Sirguja, and the Kur of Gawilgarh. The close relationship of the

Kur and Santal, and their separation from the Dravidian, may be illustrated by a few examples:

English.	Kuri.	Santali or Kol.	Gond dialects.	Tamil.	Telugu.
Dog	Sita, Chita	Seta	Nei	Nay	Kukka
Ear	Lutur	Lutur	Kavi	Kadu	Chaoo
Hair	Op, Up	Up	Meir	Mayir	Yentekalu
Nose	Mu	Mu	Muku	Mukku	Mukku
Belly	Lai	Lai	Pir	Wairu	Karpu
Fire	Singal	Singel	Narpu	Nerappu	Neppu
Water	Da	Da	Tanni	Tannir	Niru
House	Ura	Ora	Ron	Vidu	Illu

Man	Koro	——	Manwai	Manidan	Manshi
Two	Barku	Bara	Rand	Irandu	Randu
Three	Apkor	Apia	Mund	Mundru	Muru

KURAB. PERS. This is seen when looking on a plain covered with haze or mist, but not reflected as the mirage. It constitutes, however, that deceptive appearance for which the Persians have various names, such as Kurab, Kavir, Namayash-i-Ab, Serab, etc.—*Ouseley's Travels*, i. p. 270.

KURACHEE LIGHTHOUSE, on Manora point, in lat. 24° 47′ 20″ N., and long. 66° 58′ E. From Kurachee, iron steamboats ran on the Indus to Multan, calling at Beacon, Tatta, Hyderabad. Prior to the conquest of Sind, it was an insignificant fishing town, but is now of importance as the terminus of the Sind railway and the seaport of Sind, in 1881 with 73,560 inhabitants. See Karachi.

KURAL, a celebrated poetical production in Tamil, treating of morals, by Tiruvalluvar, regarded by all Tamilians as the finest composition of which the Tamil can boast. It appears to be not only the best but the oldest Tamil work of any extent which is now in existence. Its date seems not later than the 9th century A.D. There is no trace in the Kural of the mysticism of the modern Puranic system; of Bhakti, or exclusive enthusiastic faith in any one deity of the Hindu pantheon; of exclusive attachment to any of the sects into which Hinduism has been divided since the era of Sankara; or even of acquaintance with the existence of any such sects. From the indistinctness and undeveloped character of the Jaina element which is contained in it, it seems probable that in Tiruvalluvar's age and country Jainism was rather an esoteric ethical school, than an independent objective system of religion, and was only in the process of development out of the older Hinduism. Certain poetical compositions are attributed to Auvaiyar, the matron, a reputed sister of Tiruvalluvar, of which some at least do not belong to so early a period. It teaches a monotheism, and the later Buddhists or Jainas acknowledged an Adibuddha or Adivara, called sometimes Adidevan or primordial god. Its form is exquisitely poetic.

Tiruvalluvar means divine soothsayer. Kural signifies short or condensed. It is divided into three parts, treating of virtue, wealth, and pleasure. It contains 133 chapters of ten distichs each, resembling the Sanskrit Sutras, the first line containing four feet, and the second line three. Ten commentaries have been written by native scholars upon the Kural, of which that by the Brahman Parimelalaga is considered the best. The Rev. H. Bower says, 'The work is superior to the Institutes of Menu, and is worthy of the divine Plato himself.' Beschi translated it into Latin, and Dr. Graul into German; T. W. Ellis, Esq., translated portions of it into English. The Rev. W. H. Drew translated 63 chapters, with occasional notes and an index verborum. The following is the first chapter as translated by Mr. Ellis:—

'As ranked in every alphabet, the first,
The self-same vowel, stands, so in all worlds
Th' eternal God is chief.

What is the fruit that human knowledge gives,
If at the feet of him who is pure knowledge
Due reverence be not paid?

They who adore his sacred feet, whose grace
Gladdens with sudden thrill the fervent heart,
High o'er the earth shall soar to endless joy.

To him whom no affection moves nor hate,
Those constant in obedience, from all ill,
In this world and the next, are free.

Those who delight with fervent mind to praise
The true and only Lord of heaven and earth,
No false ideas of right and wrong can cloud.

Those who pursue the path of his true law,
Who is of sensual organs void, in heaven
Shall dwell in never-ending bliss.

The anxious mind against corroding thought
No refuge hath, save at the sacred feet
Of him to whom no likeness is.

Hard is the transit of this sea of vice,
Save by that Being's gracious aid, who is
Himself a sea of virtue.

Of virtue void, as is the palsied sense,
The head must be, that bows not at his feet
Whose eight-fold attributes pervade the world.

Of those who swim the wide extended sea
Of mortal birth, none ever can escape,
But they who to the feet of God adhere.'

—*Murdoch's Catalogue.* See Tiruvallavar.

KURALEA. KARN. A shepherd race, who manufacture coarse woollens.

KURAM district is the valley of the river Kuram, about 60 miles long, and breadth from 3 to 10 miles. The scenery is fine, and in some places grand, the Safed Koh forming a magnificent background to a picture of quiet beauty. The Kuram river runs through green fields and sunny orchards, and numerous villages dot the plain. The principal spur from the Safed Koh range is the Peiwar ridge, which runs south and divides into two branches, one of which is parallel to the Kuram. The number of fighting men of the Kuram tribes have been thus estimated—Mingal, 8000; Jaji, 800; Bangash, 5620; Turi, 5000.

Thall is about 2500 feet, Kuram is nearly 4800, and the pass of the Peiwar is 8500 over sea-level. Of the peaks about Peiwar that of Karaia is 15,400 feet, while that of Sikuram is 15,600 in height. The Kuram plains are in summer totally devoid of water, and in winter are covered with snow. Along the base of the Safed Koh range numerous valleys debouch upon the plain; these are extremely fertile. The oriental plane, the walnut, and the amlok grow to a great size; and orchards contain the apple, apricot, plum, quince, and grape. The soil yields two crops during the year, the first being barley, wheat, and clover; the second rice, maize, and one of the millets. On the slopes of the mountains the limit of forest is usually reached at 11,000 feet; in some favoured spots single trees of Pinus excelsa and Abies Webbiana not unfrequently exist up to 12,000. A dense forest occupies the ridges of the Peiwar-

kotal, consisting chiefly of deodar, with Abies Smithiana and Pinus excelsa. On its spurs this forest growth completely disappears at 11,000 feet, and is replaced with flat masses of the common juniper. This disappears at 12,000 feet, leaving the summits of the peak perfectly bare, unless where a boulder affords shelter to some alpine plant. Some of the exceptionally large trees measured as follows:—Plane, circumference, 33 feet; walnut, 17 feet; deodar, 21 feet; celtis, 16 feet; oak, 13 feet; a variety of the black poplar, 10 feet 6 inches. For light, pine splinters are used; and in lieu of vegetable oils for food, the melted fat of the tail of the large-tailed sheep is consumed. A very handsome new clematis, with flowers of a pale lemon colour, and from 3 inches to 5 inches in diameter, called after General Roberts, and a new yellow rose, are among the many new species found.

KURAO. The practice, which is also known to the eastward by the name of Uorhuree, in the Dekhan by Butt'hhee, and in other provinces by the name of Dhureecha, is followed among the Jat races, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brothers' widows; but among the Jat of Dehli even this is not prohibited. Ranjit Singh went some steps further. He took by Kurao a lady betrothed to his father, Maha Singh; he also took Dya Koonwur and Rutun Koonwur, the widows of Sahel Singh, the chief of Gujerat, his own uncle-in-law.

It is optional with the Jat widow to take either the eldest (Jeth) or the youngest, who is generally preferred and deemed most suitable. Should she determine to relinquish worldly ideas, and to reside chaste in her father-in-law's house, she may adopt this course, but such instances are very rare, particularly in the case of young females, and are not to be looked for in a society and amongst tribes notorious for the laxity of their morals and for the degeneracy of their conceptions.

In default of surviving brothers, and in accordance with acknowledged usage, the widow is at the disposal of her father-in-law's family. From the moment she has quitted the paternal roof, she is considered to have been assigned as the property of another, and ceases to have a free will.

The Jews followed this custom, and in Egypt it was permitted for a childless widow to cohabit with a brother of the deceased husband. When the laws of Menu were enacted, Kurao appears to have been a recognised institution. But, as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten according to law on the wife of a man deceased, or impotent, or disordered, after due authority given to her, is called the lawful son of the wife (ix. 176).—*Elliot; History of the Panjab.*

KURBA. The coal-bearing or Damuda beds of Kurba extend for about 40 miles to the eastward, as far as Rabkub in Udaipur (Oodeypore). They also extend far to the south-east towards Gangpur, and to the northwards towards Sirguja. Main Pat and the neighbouring hills, and all the country on the road from Main Pat through Chandargarh and Jashpur to Ranchi, consist of metamorphic rocks, with the exception of a cap of trap and laterite on Main Pat.

KURBAJ. ARAB. A switch of dried and twisted hippopotamus hide, the ferule, horsewhip, and cat-o'-nine-tails of Egypt.—*Burton's Mecca*, i. p. 30.

KURBAN. ARAB. A sacrifice. Mark vii. 11 has, 'But ye say, If a man shall say to his father or mother, It is Corban, (that is to say, a gift,) by whatsoever thou mightest be profited by me; he shall be free.' This word is often used by men or women addressing a superior, in which case it means merely, I am your sacrifice. The word has allusion to an approaching to God, and means a sacrifice, a victim, an offering, an oblation, for which also we have the Greek Καρπωμα. The other words in the Arabic, Sadqa, Fida, and Tassaduq, mark the continuance of the sacrificial rite. Sadqa, properly Sadaqa, means alms, propitiatory offerings, and sacrifice. The words are continued into Hindustani, in Sadqe-jana or Sadqe-hona, to become a sacrifice for the welfare of another; and Sadqe-karna, to sacrifice for the welfare of another. Muhammadans of India have two great Kurban or religious festivals,—the Bakr-Eed, called also Eed-us-Zoha, also Eed-i-Kurban, which is held on the 10th Zu-ul-Haj, in commemoration of the offering up of Ishmael by Abraham. The other is the Eed-ul-Fitr or Ramzan-ki-Eed, held on the 1st of Shawal, at the close of the Ramzan fast. Three lesser Eed are the Akhiri Char Shambah, on the last Wednesday of Safar, when Mahomed in his last illness felt a little better, and bathed for the last time; the Shab-i-Barat, or night of recording, is another, and it is held on the 16th Shaban. Other Musalman religious festivals are Maharram, Bariwafat, Miraj-i-Muhammad, Charaghan-i-Zandah Shah Madar, Charaghan-i-Banda Nawaz, Pir-i-Dastagair, and Urus-i-Kadar-wali.

KURBANA WANLU, or Buljera wanlu, TEL., amongst the Teling races are migratory grain and salt merchants, like the Binjara race.

KURCHI-WANLU. TEL. People in Southern India who are engaged in mat-making, basket-weavers, also makers of house mats of palm leaves.

KURDISTAN, the country of the Kurd, is a district in the east of Persia, though the Kurd are also found in the west of Persia, in Asia Minor and Syria. Its limits comprise the greatest part of the territory of the Kurd or Carduchi. This extensive tract is divided into four districts, two of which are Kermanshah and Ardelan. Lower Kurdistan is the name given to that part of the pashalik of Baghdad which lies to the N.E. of the Tigris, and which comprised the chief part of Assyria, and seems to be the land of Kir spoken of in the Second Book of Kings and in the prophet Amos. The people consist of two distinct races, the one consisting of the Kurd tribes, who are Sunni Muhammadans, pastoral and shepherd nomades; the other, termed Gooran, who are villagers, and among whom are the Kuldi and Nestorian Christians and Jews. There are some within the Persian, others within the Turkish boundary. The Sekkir, Nür-ud-Din, Shinki, Bulbassi, Mikri, Bahdinian, and other

tribes are under the prince of Amadiyah and Rowanduz. The Lak Feili and Bakhtiari tribes dwell south of Kermanshah. Kurdistan is a high table-land, surmounted by rugged and lofty mountains. Lake Van, situated on the northern edge of the region which contains the larger proportion of the Kurdish race, is 5200 feet above the level of the Mediterranean. Sir Henry Layard, in passing from Mosul to Van in the month of August, found snow on several of the passes which he crossed, 10,000 feet in height above the sea. The Toura Jelu he estimated to be not under, if not above, 15,000 feet high. Near Lake Van and to the south of that lake several peaks rise much above the line of perpetual snow. Kurdistan air is pure and bracing; the winters are severe, as snow falls to a great depth, and in some districts remains on the ground undisturbed for from four to five months of the year. The mountains of Kurdistan lie along the eastern edge and across the northern end of Mesopotamia. To have full and firm possession of these mountains is to command that immense plain from the sources of the Tigris and Euphrates to the Persian Gulf; nor could the conquest of the interior of Asiatic Turkey be accomplished so long as an enemy held possession of those mountains. While the military expeditions of the Medes and Persians, the Greeks and Romans, the Saracens, Russians, and Turks, have swept around or over those mountains, the Kurds have still clung to them as the Swiss have clung to their native Alps.

Mr. George Rawlinson, M.A., after mentioning the different tribes that have occupied the high table-land mentioned above, says: 'Of these various tribes, the one of greatest name and note —which may be traced uninterruptedly from the time of Xenophon to the present day, and which has apparently absorbed almost all the others— is that which ancient writers designate under the slightly-varied appellations of Carduchi, Gordiari, and Cyrtii, and which still holds the greater portion of the region between Armenia and Luristan, under the well-known name of Kurds. The country assigned to this race in ancient times is usually the rugged tract east of the Tigris, extending from the neighbourhood of Sert and Bittis (in long. 42°) to the vicinity of Rowanduz (in long. 42° 50').' At the present time, however, the Kurds extend over and are scattered through a far wider region than that assigned to them by the ancient writers; tens of thousands of them are now found even west of the Euphrates, and as far south as the southern slopes of the Taurus mountains in the region of Adiaman; the streets of Erzerum, far to the north, are often crowded by these semi-savage freebooters. Millingen (p. 152) estimated the number of the whole Kurdish nation at five millions. The Persian Kurds are estimated at 600,000 souls. The Shadilu, Kara Cherchulu, and Yezidi clans in Khorasan are descendants of 4000 families whom Shah Ismail brought from Kurdistan to check the inroads of the Turkomans. They have increased to over 50,000, and are formidable alike for their numbers and for their bravery. They are predatory. Kurds have spread into the khanate of Bokhara, and eastwards into Afghanistan and Cutch Gandava. The Kurd are distributed over the western part of Asia much after the manner of the Armenians; and there are whole tracts of country where the Kurd and Armenian villages alternate. The nucleus, however, of the Kurd family lies south of Armenia, along the mountain ridge which separates Asiatic Turkey from Persia. There are also a few of the Kurd within the Russian frontier. Some pay allegiance to both Persia and Turkey, but there are more which are independent of both. Some are well within the Turkish, others as well within the Persian, frontier. They all speak the Persian language, but their feelings of nationality are local and tribal rather than general. Their habits are rude and predatory. They are hardy, brave, rapacious.

History has recorded their presence for 2000 years on the lofty plateau on the eastern border of Asiatic Turkey, between Armenia on the north and the fertile province of Mosul on the west. Doubtless, however, they had held their savage highlands for innumerable generations before the Retreat of the Ten Thousand. As now under the Turk, so through the periods of Assyrian and Median as well as of Persian supremacy, they had seen spread out at their feet the accumulations of peace and wealth, tempting their love of plunder. Well acquainted with the mountains among which they dwell, they can readily retreat where cavalry and artillery cannot reach them, and where, behind rocks and on lofty peaks, they are a full match for any trained soldiers who dare follow them. Before Kurdistan was subdued by the Turkish and Persian Governments, Beys or chiefs were the feudal rulers of the country; their authority was based partly on hereditary descent, and partly on personal influence and character. Obedience to their commands, though voluntary, was nearly absolute. Since the subjugation of the provinces of Kurdistan, many of these Beys and their descendants have retained great influence with their followers. During the war between Turkey and Russia, as well as during the Crimean war, the Turkish Government negotiated directly with the Beys for their services, including a stipulated number of irregular cavalry. It was found, however, that such troops, indifferent as to the main results of the contest, and eager only for the spoils of battle, were easily panic-stricken, yet ever ready to violate the rules of civilised warfare by shooting defenceless prisoners who had laid down their arms. Kurds have to-day very much the same characteristics that they had 2500 years ago; their manner of life is much the same now as then. They are now taking more to agriculture, but they are chiefly engaged in sheep farming and cattle-breeding. With their sheep, the proportion of male and female births is three-fifths and two-fifths respectively. They dislike manual labour; they are treacherous; like the Indians, they are fond of roving about from one part of the country to another; like them, also, they are slow to adapt themselves to the restraints and discipline of a regularly-organized government. Several hundred determined men would be enough to hold many of the passes of the Kurdish mountains, and put a stop to commercial intercourse. Past experience has proved that the military expeditions of the Turks against the Kurds have generally been very barren of results. The difficulties of transport are very great; the summers are short, the winters long and terribly severe, and the physical

features of the country such that an enemy can readily avoid an invading army.

Nomade Kurd tribes occasionally occupy the elevated valley of Dasht-i-be-Daulat, N.W. of Mustung, at the head of the Bolan pass. On the west of Saharawan, the country is held by pastoral tribes, the Sirpherra, and their branch the Rodani Kurd of the Dasht-i-be-Daulat; Sherwani of Khad, and the Raisani of Dolai and Khanak. The Dasht-i-be-Daulat, in the northern part of Saharawan and west of the Bolan Hills, is about 15 miles in length and breadth. In spring it is covered with lovely flowers and grasses, and is then dotted with the toman of the Kurd, who retire to Merv after the harvest of autumn, and then predatory bands of Kaka roam over the ground and attack travellers. The Kurd possess the Dasht-i-be-Daulat and Merv, also Tikari in Cutch Gandava. The Kurd of the Dasht-i-be-Daulat are surmised to have come from the west in the train of some conqueror, and settled where they now are.

Mikri Kurd occupy the S. part of Azerbijan. They are brave horsemen, and on one occasion they drove the whole Russian cavalry off the field. The Kurds who inhabit the district of Khorasan from Nishabur up towards Astrabad along the northern frontier of Iran, had long been established in this locality, and always constituted a principal portion of the forces of Khorasan.

In their wide distribution, the Kurd speak the Kurmanji between Mosul and Asia Minor and the Zoza; the Baluchi, the Lur dialects, viz. Bashiari and Feili; those of the Tats in the S.E. of the Caucasus, and of the Iron or Assetes in the same neighbourhood.—*Rawlinson; MacGregor*, iv. p. 381; *Arminius Vambery of Bokhara*, p. 77; *Sayce*, ii. p. 83.

KURDLAH, a small fort in the Dekhan, near which a battle was fought between the Mahrattas, 11,000 strong with guns, and the Nizam, 82,350 strong and 192 guns, in which the army of the latter was utterly defeated.

KUREH, PERS., plural of Kurrah, means circles or districts of a country.

KURHURBARI, in the valley of the Barakar, a tributary of the Damuda, famed for its coal-fields. See Coal.

KURI. CAN. A sheep. Kuraba, a shepherd.

KURI. CAN. A fish-trap basket made on the same principle as the mouse-trap, with narrowing entrance and springy bamboo spikes projecting inwards so as to prevent return; on the same principle as the mouth of the purse in a trawl-net. On this plan they are made of all sizes and of many shapes. The small ones used to catch the fry in the rice-fields are about a foot long, and are made of finely-split and closely-twined bamboo; while those used in the rivers are sometimes the same, and sometimes as much as 10 or 12 feet in length, and more elaborately constructed. These traps are called cruives.

KURIA MURIA, a group of barren islands in lat. 17° 27′ N., and long. 55° 36′ E., on S. coast of Arabia, in Kuriyan Muriyan Bay, five in number,—Hasiki, Sodah, Kirzaut or Rodondo, Hullaniyah, and Kibliyah. They were ceded to the British by the Imam of Muscat, for the purpose of laying the Red Sea and Indian telegraph cable, and for the guano. Hasiki is in lat. 17° 27′ 15″ N., and long. 55° 36′ E.—*Findlay.*

KURILE ARCHIPELAGO is on the east of Asia. It is a chain of small islands, 900 miles long, extending from Cape Lopataka, the southern promontory of Kamtschatka, in a south-west direction, to the Isle of Jesso or Yezo. They are 22 in number, and were first visited by the Russians in 1713. These islands are all mountainous, and in several of them are volcanoes and hot springs. They are partly under Russia, partly under Japan.

The Kurilian or Aino race occupy the mouth of the Saghalin and the southern extremity of Kamtschatka, on the mainland, and all the islands between Kamtschatka and Japan. The peninsula of Tarakai is Kurilian. In the island of Karafto, Kamoi is their chief deity. The Aino are the aboriginal race of Yezo, whose severe treatment by the Japanese has led them to other countries. They also occupy the southern part of the island of Saghalin, which is in possession of the Japanese. The Aino are of short stature, with broad faces of the Mongol type. They are a timid race, their limbs are hairy, they have bushy beards and long tangled hair, large heads, and clumsy figures; the expression of their faces is that of good nature cumbered with stupidity.

The Kurilians are courteous and hospitable to each other, though averse to strangers; and are chiefly employed in hunting, catching birds, and taking sea animals and whales. They carry on a traffic with the Japanese, who bring utensils of metal and wood, sabres, stuffs, tobacco, trinkets, and small wares, for which they receive whale blubber, skins, fur, and eagles' feathers for arrows. According to M. Rosney, their language is dissimilar to Japanese, and that spoken in the Kuriles and in the island of Yezo are also different from Japanese.—*Rev. Mr. Adams*, p. 240. See Japan.

KURJA of the Panjab, camel bags of woollen or goats' hair stuff, often prettily ornamented.

KURKIHAR, about three miles to the north-east of Punawa, is the largest place between the cities of Gaya and Bihar. The remains at Kurkihar consist of several ruined mounds, in which numerous statues and small votive topes of dark-blue stone have been found.—*B. A. S. J.* p. 32, 1864.

KURKUTCHA, a range of mountains which separates the valley of Kabul from the plain of Jalalabad, and connects the Hindu Kush with the Safed Koh. The altitude of the range varies from 1000 to 2000 feet above Kābul, and the highest part, in lat. 34° 25′ N., and long. 69° 30′ E., is 8000 feet above the sea. There are four routes over this range, practicable only for man and horse. At Lataband pass 4000 British troops were destroyed in their retreat in 1842. Cold is intense during winter, the frost splitting the rocks into huge fragments.

KURMA, in Hindu mythology, was the second grand avatara of Vishnu, in the form of a tortoise, and evidently refers, like the first, the matsya or fish avatar, to the flood. For the purpose of restoring to man some of the comforts and conveniences that were lost in the flood, Vishnu is fabled to have become incarnate again in the form of a tortoise, in which shape he sustained the mountain Mandara, placed on his back to serve as an axis, wherewith the gods and asura—the vast serpent Vasuki serving as a rope—churned the ocean for the recovery of the amrita, or

beverage of immortality. And the result of the operation, and that which chiefly distinguished this avatara, was the obtainment of fourteen articles, usually called fourteen gems or chaturdesa ratna, in common language chauda ratni, viz. 1. The Moon, Chandra; 2. Sri or Lakshmi, the goddess of fortune and beauty; 3. Sura, wine, or Suradevi, the goddess of wine; 4. Uchisrava, an eight-headed horse; 5. Kustubha, a jewel of inestimable value; 6. Parijata, a tree that spontaneously yielded everything desired; 7. Surabhi, a cow similarly bountiful; 8. Dhanwantara, a physician; 9. Iravati, elephant of Indra, with three probosci; 10. Shank, a shell conferring victory on whoever should sound it; 11. Danusha, an unerring bow; 12. Bikh, poison or drugs; 13. Rhemba, the Apsara, a beautiful and amiable woman; 14. Amrita, the beverage of immortality. In the churning, the gods stood at the tail of the serpent Vasuki, and the asura at the head. After obtaining these fourteen gifts, there broke out a violent contest between the gods and the asura.

Avatara means in the Hindi tongue descent or incarnation, and is usually employed by the Hindus to designate the ten incarnations of Vishnu, usually thus arranged and named: 1. Matsya or fish; 2. Kurma or tortoise; 3. Varaha or boar; 4. Narasingha or man-lion; 5. Vamana or dwarf; 6. Parasu Rama, the name of a favoured person in whom the deity became incarnate; 7. Rama, the same; 8. Krishna, the same; 9. Budha, the same; 10. Kalki or horse. Of these, nine are past; the tenth is yet to come.

KURMA PURANA, a poem of 17,000 stanzas. It gives the relation of an avatara of Vishnu, the great portion inculcating the worship of Siva and Durga.—*D.*

KURMI, cultivators dwelling north of the Kunbi, but to the south of the Rajput and Jat. They form the bulk of the population in the part of Manbhum near the Damuda river; in considerable numbers in all the central and eastern parts of the North-West Provinces or in Hindustan generally, who there attend to the finer garden style of cultivation much more than the Jat and Rajput; but, like the Jat race, Kunbi and Kurmi are assisted by their industrious women, who have passed into a proverb for industry:

'Bhale jat Kunbin ki K'hurpi hat'h
K'het nirawen apne pi ke sat'h.'

They have villages of their own, and are also spread in detached families or groups. Mr. Campbell considers Kurmi to be identical with the Kunbi, and to occupy from lat. 16° to 23° or 24° N., and from the western frontiers of Gujerat, countries watered by the Wainganga, the Middle Ganga, and upper streams of the Nerbadda. But in the valley of the Ganges they are looked down upon as mere humble tillers of the soil. They are more numerous towards the Jubbulpur and Saugor territories, where they mingle with the Lodhi. Thence westwards, as on both sides of the Nerbadda, in Malwa, where they meet the Jat, and throughout the southern borders of Hindustan, there are numerous Kurmi who speak Hindi. Those in Hindustan are darker and less good-looking than Brahmans and Rajputs; but Mr. Campbell states (pp. 93, 94) that they are quite Aryan in their features, institutions, and manners.

Sir H. Elliot says seven subdivisions are usually enumerated, as Khariband, Patanya, Ghorcharha, Jaiswar, Kanoujia, Kewat, and Jhunia. These do not eat together or intermarry. The Khariband and Patanya abound in the Central Doab and Oudh; the Ghorcharha are more to the west; the Jaiswar in Saugor and Bundelkhand; the Kanoujia in the lower tracts of the Doab; the Kewat to the E. of Benares; and the Jhunia west of the Upper Jumna.

The best agriculturists of the Central Provinces are decidedly the Kurmi, found mostly in rich black soil tracts. It is a common saying that no Kurmi can exist where he is unable to raise rabi crops. They are a most peaceable set of men, and have always been remarkable for their loyalty to the ruling power. They are very tenacious of their ancestral holdings, and seldom alienate rights in land unless under the greatest pressure of circumstances. The real secret of their unfailing success in agricultural pursuits generally does not appear to lie so much in their reputed superior skill, as in the fact of women as well as men engaging equally in field work; while the women of several other agricultural classes are precluded, by prejudice or custom, from assisting the male population in their labours. Scarcely inferior to the Kurmi as agriculturists, are the Lodhi, who, however, are the opposite of the former in natural temperament, being turbulent, revengeful, and ever ready to join in any disturbance. They make good soldiers, and are generally excellent sportsmen. Others engaged in husbandry are Jat, Koeri, Kach'hi, and Lodhi.

Both among Kurmi and Lodhi there is no distinction between a mistress and wife, provided always that the former is of the same caste as the husband, or, better still, the widow of an elder brother or cousin, however far removed. The children born from such connections are on an equal footing as regards inheritance of property, whether personal, real, or ancestral, with those born from regular married wives. A Kurmi who sells himself into slavery (not an uncommon thing even now) is said to become a Dhanuk. The Kurmi, Kunbi, Jat, and Rajput are the chief territorial tribes of Northern India. Kurmi, Kach'hi, and Murao are the best agriculturists in the N.W. Provinces. The agricultural and gardening tribes of the Panjab, Hindustan, Central India, and Maharashtra number about 20,000,000, viz. Jat, 2,630,994; Kach'hi, 2,258,769; Koeri, 1,207,951; Lodhi, 1,305,391; Kunbi, 5,388,487; Kurmi, 4,065,475; and in the south of India are the Kamma, Kapu, Reddi, Nack, Vellalar, and Wakkaliga.

KURMSAQ. PERS. As an expression of contempt, the word Sag, signifying a dog, is generally applied to Christians by the Persians; and among themselves, as equally contemptuous, Kurmsaq is in very frequent use. Ouseley suspects that Sag and Kurmsaq are the Sacæ and Khor-Sa-kæ mentioned by Solinus, those barbarous words being probably Latinized from an imperfect apprehension of their sounds. The Persians in their language, according to this author, call the Scythians Sacæ, and in return the Scythians call them Chor-saci. Scythas, Persæ lingua sua Sacas dicunt, et invicem Scythæ Persas Chorsacos nominant.—*Solin Polyhist.* xlix. *in Ouseley's Travels*, ii. p. 542.

KURNAH. Apamea, daughter of Artabazus, the Persian, was married to Seleucus, who gave her name to three towns. Kurnah, one of these three Apamea, is situated at the confluence of the rivers Euphrates and Tigris, and although now dwindled into a petty town, it was formerly a place of consequence. It is on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. At this spot some oriental traditions have fixed the Garden of Eden. It commands the mouths of both the Tigris and Euphrates, and looks directly down the Shat-ul-Arab river. Suaib, a station with a fort of the same name, is opposite to Kurnah, on the eastern bank of the Euphrates, and near Sahal. After the junction of the two streams, which for some distance are clearly discernible from each other (the waters of the Euphrates being much the clearer), a striking change takes place in the character of the scenery. On entering the Tigris from the south, the belt of date trees almost immediately terminates, patches of cultivation show themselves more frequently, and the country (though still a dead level) has a fertile and less desert look. About 100 miles above Kurnah, on the right bank of the river, stands the tomb of the prophet-scribe Ezra, a pretty mosque of tesselated brickwork, surmounted by a green cupola.—*Townsend's Outram and Havelock*, p. 308; *Malcolm's Persia*, ii. p. 141; *Skinner's Overland Journey*, ii. p. 266; *Mignan's Travels*, p. 290.

KURNISH. Arab. A humble form of salutation.

KURNOOL, a walled town on a tongue of land between the right bank of the Tumbudra river and left bank of the Hindri, in lat. 15° 48′ N., and long. 78° E., 900 feet above the sea, the junction of the Hindri and Tumbudra occurring to its south-east. Kurnool was held by a Pathan chief. Lying between the Ceded Districts and the Hyderabad territory, it was surrendered to the East Indian Company on 15th December 1815, but on the 18th October 1839 was again taken possession of, and on the same day a battle was fought at Zorapore, three miles off, the nawab of Kurnool captured, and the territory annexed. The chiefs were a violent and illiterate race. Khizr Khan, to whom, in 1651, Aurangzeb granted the jaghir, was assassinated by his son Daoud Khan. Himmut Bahadur Khan, in December 1750, during the battle of Ginji, treacherously slew his leader, Nasir Jang. In 1823, while Muzaffar Khan was being conveyed to Kurnool by Mr. A. D. Campbell, and while yet in British territory, he murdered his young wife with shocking cruelty. In 1839, his brother, Alif Khan, bought and made large quantities of warlike stores, and, refusing to obey the British authorities, an army advanced on Kurnool, in the battle at Zorapore took prisoner the nawab, who was afterwards assassinated at Trichinopoly by a follower. Kurnool province is now a small collectorate of the Madras Presidency to the north of Cuddapah.

KURRAH. Hind. A circular enclosure in which Brahmans were accustomed to place a woman, whom they threatened to burn if the servants of Government preferred a charge. See Kur.

KURRAL, a Muhammadan tribe of the Hazara, who claim descent from Alexander. Kurral, Dhund, Tanaoli, Alpial, Awan, and Gukkar, tribes north of the Salt Range, are described by Mr. (Sir George) Campbell as the finest and handsomest men in India, perhaps in the world. They profess Muhammadanism, and have fanciful Muhammadan genealogies, but are wholly Indian in their language, manners, habits, and constitutions. Their language is Panjabi. They have no connection with the Pathan races, and they claim none with the Jat and Rajput, the Dilzak alone claiming to be of Hindustan origin. Their features would seem to show that they have kindred with the Kashmiri, or with the pre-Hindu congeners of the earlier Indians found in the hills far west; but their language and character, their dress and the architecture of their houses, would indicate that they are nearly allied to the Panjabi. The Dhund are a very handsome race; and the Tanaoli dwell to the north in the outer range of the Himalaya, and about the Indus near Torbela, but they are not considered to be brave or trustworthy. The Awan of the lower lands, and the Dhund, etc., of the higher lands, have democratic village institutions.—*Campbell*, p. 97.

KURREA of the Southern Mahratta country, armed retainers who convoy treasure, like the Angria of Bombay.

KURRIMIA ZEYLANICA. *Arn.*

Palang, ...	Singh.	Alareya-gass, .	Singh.
Hura-kandu, . .	,,		

A large tree of Ceylon; one variety grows in the warm, moister parts of the island, another variety in the central province, up to an elevation of 5000 feet.—*Thw.* i. p. 72.

KURSAN. In Central India, cultivators are termed Kursan, a name which distinguishes them as a specific class from ryots, which is a more general term, including all ranks. — *Malcolm's Central India*, ii. p. 25.

KURSEONG, not far from Darjiling, of which it is a subdivision. Its climate is equable, and the mists which are of such frequent occurrence at Darjiling and the higher altitudes are rare. It is 4500 feet above the sea, and is within two hours' march of the plains by the old road, and the new cart-road from Silliguri to Darjiling passes through the heart of the station. Kurseong is in many respects a more suitable locality for troops than Senchal. Senchal is 9100 feet high, and the change from such an elevation to the plains has been found in more than one instance hurtful to the health of the men.

KURU, father of Santanu, great-grandfather of the heroes who are famed in the Mahabharata. He became an ascetic on the banks of the holy lake S. of Thaneswar. He was the ancestor both of the blind Dhritarashtra and Pandu, who were thus both designated Kaurava as their patronymic, though this term is usually applied to the sons of Dhritarashtra.

KURUBA. Karn. A shepherd race in the south of the Peninsula of India, who also weave woollen kamli or blankets. The shepherds of the Canarese-speaking districts arrange themselves into three classes, viz.—

Hala Kuruba, who do not weave blankets.
Hande Kuruba, a shepherd of a higher rank.
Mesa Kuruba, one of an inferior condition.

In the S. of Mysore their towns take the appellation of Hande.—*W.*

KURU BISTAN, a custom amongst the Jaguri Hazara of lending their wives to strangers for a night or a week.

KURUK or Kourk, a coarse brown cloth, half woven and half felted, forming the ordinary winter dress of the Afghan. The best are made at Denzi, but those of Karabagh are very good. During the British occupation it was a favourite article of dress both with officers and men. The manufacture of the barik is from an exceedingly fine and silky wool which grows on the belly of the camel. Nothing can be softer or warmer than the barik, and, if better made, they would be preferable to every other kind of cloth. As the nomades never dye the raw material, the barik is of the same colour as the camel. The price varies from 10s. to £4 a piece.—*Ferrier's Journ.* pp. 192-240. See Kulk.

KURUK. HIND. The practice of secluding and guarding the Muhammadan women.

KURU-KSHETRA, a holy tract and place of Hindu pilgrimage in the Amballa district of the Panjab, embracing the country lying around the town of Thaneswar as a centre. The name derives its origin from Kuru, father of Santanu, great-grandfather of the heroes who figure in the Mahabharata. Kuru became an ascetic upon the banks of the holy lake south of Thaneswar. The Imperial Gazetteer says that in popular belief the Kuru-kshetra embraces 360 places of pilgrimage, and extends as far as the town of Jind, 64 miles from Thaneswar. Whatever be the precise extent of the sacred tract, it is certain that the strip of country between the Saraswati (Sarsuti) and the Ghaggar (the Saraswati and Drishadvati of the Sanskrit epics) formed the earliest settlement of the Aryan colonists in India, and the Kuru-kshetra and the river Saraswati still attract numerous worshippers. The towns of Thaneswar and Pihoia are the chief centres of pilgrimage, but minor shrines line the bank of the river for many miles. At Thaneswar, as many as 100,000 persons still assemble on the occasion of an eclipse, and treble that number bathe annually in a tank filled from the Saraswati. The great conflict between the Pandava and the Kaurava is described in the Mahabharata as having been fought out in the surrounding country; and the Mahabharata keeps alive the memory of all the most famous scenes in the minds of Hindu votaries, who regard the Kuru-kshetra as the Holy Land of their religion.

The great lake of Kuru-kshetra is an oblong sheet of water 3546 feet in length from east to west, and 1900 feet in breadth. It is mentioned by Abu Rihan, who records, on the authority of Varaha Mihira, that during eclipses of the moon the waters of all other tanks visit the tank at Thaneswar, so that the bather in this tank at the moment of eclipse obtains the additional merit of bathing in all the other tanks at the same time.

The battle of Kuru-kshetra was a memorable event in the history of the Lunar race. It was fought about B.C. 1367, between the Pandu and the Kuru of Hastinapura, two branches of the race; and, after a series of single combats through a space of eighteen days, the Kuru were completely defeated, their leader Duryodhana had been slain, and Yudishthra then retired to Dwaraka with Krishna, his principal adviser. Bunsen estimates B.C. 1606 or 1486 as the first year of the Kaurava, and B.C. 1107 or 987 as the last year, as the close of the great war, after the battle of Kuru-kshetra. They were all blood relations, some of them nearly allied to each other, and connected by intermarriages.

The commanders-in-chief whom the Kuru lost were Bhishma, slain on the 10th day, Drona on the 5th, Karna on the 2d, and Salya on the first, respective days of their commands. It is this war of succession which is described in the great Sanskrit poem the Mahabharata. One of the last incidents of this battle occurred on the night of the 18th day, when Aswatthaman entered the Pandava camp, and killed the sons of the Pandava, whose heads he brought to Duryodhana. A series of single combats had chiefly marked this war; each chief or warrior had challenged opponents, in the daytime, in the presence of the armies, and the act of Aswatthaman was so contrary to the usage of the war, that Kripa remonstrated with Aswatthaman against his doing it, but, along with Kritavarmam, accompanied Aswatthaman to the gate of the Pandava camp, and held the gate during the midnight butchery. The ultimate fate of Aswatthaman is uncertain, but he seems to have been pursued and killed by Bhima. This battlefield of the Kuru is near Thaneswar, between Kurnal and Sirhind, is generally identified with the field of Paniput to the north-west of Dehli, and the locality is deemed holy. It was a war to the knife between near kinsmen to gain possession of lands of which the Kuru had long held possession to the exclusion of the Pandu.

Yudishthra, Baldeva, and Krishna afterwards retired with the wreck of this ill-fated struggle to Dwaraka, but the two former had soon to lament the death of Krishna, who was slain by one of the aboriginal tribes of Bhils, against whom, from their shattered condition, they were unable to contend. After this event, Yudishthra, with Baldeva and a few followers, entirely withdrew from India, and, emigrating northwards by Sind to the Himalayan mountains, are there abandoned by Hindu traditional history, and are supposed to have perished in the snows. Herodotus describes the ruinous passion for play amongst the Scythic hordes, and which may have been carried west by Odin into Scandinavia and Germany. Tacitus tells us that the Germans, like the Pandu, staked even personal liberty, and were sold as slaves by the winner.

The life of Krishna forms a second memorable part of the history of the Lunar race, as he has been deified throughout Hindu India, and is regarded as an incarnation of Vishnu.—*Tod's Rajasthan*, i. p. 50; *Bunsen*, iii.; *Wheeler's Mahabharata*, p. 567; *Hardy's Eastern Monachism*, p. 438; *Imp. Gaz.* v.; *Cunningham, Ancient Geog. of India*, p. 334.

KURUMBAR or Kurubar. CAN. A shepherd, from Kuru, a sheep; a shepherd race who occupy the elevated plateau in the centre of the Peninsula of India. They are an ancient people, the earliest known occupants of Dravida Desam, the modern Carnatic, and Coromandel. They seem to have established numerous petty principalities over the whole Peninsula, which were ultimately absorbed in the Chola empire. Numerous sites attributed to this race, and still called Kurumbar Kot, are to be met with. Small communities of the Kurumbar tribe to this day wander with their flocks, and

occupy the less accessible hills and forests of many parts of the Peninsula.

Arcot town, about 65 miles W. from Madras, takes its name from two Tamil words, Arakada, the jungle on the river Palar. It is the Arkatou Basileon of the Greeks, and the capital of the nomade Sorai (Σωραι), and once formed the centre of the Chola kingdom, the whole of the neighbouring territory for several centuries after the Christian era having been occupied by wandering Kurumbar.

On the Neilgherry Hills, above the Irular, at heights varying from 1000 to 2000 feet, in the clefts of the mountains and little openings in the woods, with which at this elevation they are girt, live a race calling themselves Kurumbar. They occupy the highest range bordering on the Neilgherries. The Toda do not consider the Irular as forming a part of the inhabitants of the hills, but they allow this designation to the Kurumbar, whom they call Curb, and from them they receive certain services.

The Kurumbar of the Wynad forests have two sections,—the Jani and the Mulli; and Gurchea, Panuiar, and Puliar races live along with them. The Jani Kurumbar live entirely in the forest; they are the only axe-men, and without them it would be difficult to work a forest, and the wood-contractor and planter alike employ them. They are very docile, quick of imitation, and slavishly submissive to their Mudali or headman. This individual, like a patriarch of old, exercises undisputed power over his own family, numerically containing about twenty or thirty beings. Those employed by the coffee planters are a little civilised, appreciating the comforts of life in a slight degree higher than their more savage brethren. They erect rude huts for the habitation of themselves and family.

Mr. Campbell (p. 31) described the Kurumbar, Irular, Puliar, and Veder as in the lowest stage of life, mere men of the woods, of very diminutive stature, with thickly-matted locks and supple limbs, living under trees, in caverns, or in the rudest wigwams, keeping sheep or collecting forest produce, very stupid, but also very mild and inoffensive, though reputed as sorcerers and believers in demons. But such a character is only applicable to the secluded families who have been forced into the forests and mountains. The Kurumbar who herd their vast flocks from the Godavery to Cape Comorin, are tall, slender, graceful men, with skins blackened by their food and the great heat; and, travelling over all the swelling lands of the interior, these self-reliant men are to be seen engaged in their lonely avocation. They wear only a coarse blanket or kamli. They appear to be a wholly different race from the Idayan or pastoral branch of the Tamil-speaking people, who take the honorific appellation of Pillay or son, to distinguish them from the Vallalar, who are styled Mudali or first man. The nomade shepherd is called Kurumbar-Idaan.—*Wilson's Gloss.; Capt. Harkness, Neilgherry Hills; Mr. G. Campbell; Rennell's Memoir*, part xxi. pp. 265-328.

KURUMBAR, a forest race on the skirts of the Neilgherry Hills, on their western flanks. They are very much dreaded by all the tribes of the Neilgherries, excepting the Todas, and are supposed to be necromancers, and each Badaga village has its own Kurumbar to keep off the evil eye of other Kurumbars. It is further believed that deaths are only caused by Kurumbar influence, and under this superstitious belief Kurumbars have several times been sacrificed. At the close of the year 1874, Kurumbars were massacred at Kotagiri, and on the 30th April 1882 there was another massacre, about 15 miles east of Kotagiri. The son of the Badaga headman of Elmnaad village (northern boundary of Todanaad) had fallen sick and died. The village priest being consulted, the cause of the death was attributed to the evil eye and magic of the unfortunate Kurumbar, who was straightway seized and put to death, and his body burnt on the same funeral pyre, and with the ashes of the headman's son, as a sacrifice. One life not being considered sufficient to appease the wrath of the gods, a party was sent to fetch his wife and three children, who were hunted down to a village at the foot of the hills near Segur, there secured, and brought to the burning place, where they also were brutally murdered and cast into the flames.

The chief of the Irular stated that on the evening of the 30th April 1882, two Todas and a Badaga were seen going towards the missing Kurumbar's house, which was about twenty-five yards from his, and that on the same night he was roused from sleep by cries of murder proceeding from the Kurumbar's hut, which caused such a panic among the villagers, that they all deserted their homes, and sought refuge in a neighbouring jungle, where they hid themselves for two days. Returning to the village on the third day, they found the Kurumbar's house empty, and all his cattle missing.

KURUMINGA. Singh. The Butocera rubus, a beetle of the south of India, which penetrates the trunk of the cocoanut tree near the ground, and there deposits its eggs. Its grubs, when hatched, eat their way upwards through the centre of the tree to the top, where they pierce the young leaf-buds, and do incredible damage.—*Tennent's Ceylon.*

KURUMNASSA, a river of Bengal. An ancient raja having had the misfortune to slay a Brahman, the murderer was purified by a saint, who collected water from countless streams, and united them in the spring from which the river now issues. The river, so polluted, has to be crossed or forded in the dry season by every Hindu from Bengal, Behar, or Cuttack on his pilgrimage to Benares, and a stone bridge, to prevent pilgrims from dipping their feet in the accursed stream, was built by the liberality of a pious Hindu in the early days of the grand trunk road to Benares. The significance of the name is that the river absolutely blotted out all good deeds acquired by a pilgrimage to the holy city. Karma is deed in Sanskrit, and Nāsha is annihilation or destruction.

KURUN. Mahr. Land reserved for hay or grass.

KURUT. When well made this is excellent, though unknown in Europe. In Persia it is called Kesht or Kaishk, and is thus prepared. Some butter milk is boiled in a very large saucepan, by which means the watery particles escape in the form of steam, and the solid ones are deposited at the bottom of the vessel. When sufficiently thickened, the mass is divided and

made into little balls about the size of a pigeon's egg, which are dried in the sun, and will keep for years. When required, these balls of concentrated butter are continuously stirred in hot water, and in a metal dish, till completely dissolved; the epicures add a quarter of a pound of fresh butter, which gives the sauce an exquisite flavour. It is poured over the bread, maize, or meat which it is intended to season. Elphinstone says it is made of dried curds pressed into hard lumps. It is scraped down and mixed with milk, and in this state Afghans of all ranks are very fond of it, but it is sour, and to Europeans very unpalatable. — *Ferrier's Journeys*, p. 279; *Elphinstone, Caubul*, p. 261.

KURU VARNAKA, people of the forests in the upper part of the Panjab.

KUS, the ancient Cos or Apollinopolis Parva, between Keneh and Luxor, described by Ibn Batuta (i. p. 106) as in his day a large and flourishing town, with fine bazars, mosques, and colleges, the residence of the viceroys of the Thebaid.—*Yule, Cathay*, ii. p. 400.

KUSA, one of the twin sons of Rama and Sita, the other twin being Lava. After the death of Rama, his sons ruled over the Southern and Northern Kosala, and Kusa built Kusa-sthali or Kusa-vati in the Vindhya.—*D.*

KUSA. SANSK.

Kush, Kusha, . BENG. | Darbha, . . SANSK.

Kusa grass is the Poa cynosuroides, deemed sacred by the Hindus. It is used in their religious ceremonies, being strewed upon the altar, or held by the Brahmans in their hands whilst repeating the ritual; it is placed on the ground with its tips to the east, as a seat for the idols when offerings are made to them. In the Avenejana ceremony in the Srad'ha, the funeral cake is placed on kusa grass, and before offering it, water in which white flowers and sandal paste are immersed, is poured on the cake. Care must be taken not to confound Darbha with Durbha, which is Cynodon dactylon. A dying Hindu, when no hopes of his surviving remain, should be laid on a bed of kusa grass (Poa cynosuroides) in the open air, his head sprinkled with water drawn from the Ganges, and smeared with clay brought from the same river. A salagrama stone should be placed near him, holy strains from the Veda should be chanted aloud, and leaves of holy basil scattered over his head.—*Wils. Gloss.*

KUSAGARAPURA, the old capital of Magadha, also called Girivraja and Rajagriha, now Purana Rajgir.

KUSAILOO, also Kusaili. HIND. The bark of a small tree, wild about Ajmir; is tasteless; given to lying-in women to clear the blood and increase milk.

KUSBUL. HIND. Aplotaxis fastuosa, the shepherd's tinder, is found in the Sutlej valley between Rampur and Sungnam at an elevation of 7000 to 9000 feet. The tomentum on the under surface of the leaves is employed by the hill people as tinder.—*Cleghorn's Report*, p. 67.

KUSH or Cush, a term familiar to readers of Scripture (Genesis ii. 13, also x. 6–8, and 1 Chronicles i. 10) as the name of the eldest son of Ham (Charma); and before the flood, of a country encompassed by the Gihon, the second river of Paradise. The name seems to have descended to Noah's progeny, who took it for themselves, and gave it to countries. There was an African Kush, and the Cushan of Habakkuk iii. 7 is another. The Hamitic Kushites appear to have spread along tracts from the Upper Nile to the Euphrates and Tigris. In the history of India, Kush or Cush, the second son of Rama, gave his name to the Kushwaha or Cutchwaha princes of Nirwar and Amber, though the tortoise is supposed to be a source of this name. The country of which Ayodhya (now Oudh) was the capital, and Rama monarch, is termed Koshula in the geographical writings of the Hindus, supposed by Colonel Tod to be from Koshulya, the mother of Rama; and in the archives of the rana of Mewar, the first emigrant from the north, is styled Koshula-putra, son of Koshula.

KUSH, or Koh-i-Kush, or Hindu Kush is the term applied to a lofty peak in the range of mountains continuous with the Himalaya, west of the Indus, and also to the range itself. The only part of the range covered with perpetual snow is the Koh-i-Baba between Kābul and Bamian. The Hindu Kush peak is visible from Kābul, and is entirely covered with snow, and also from Kunduz, distant 150 miles. In its perpetual snow is a creature called the snow-worm, which perishes if removed below the snow line. The highest pass does not exceed 12,400 feet. Many parts are devoid of wood and even of verdure. There grows merely a stunted furze, used as firewood, called Kullah-i-Hazara or Hazara cap.

The countries north of the Hindu Kush, which lie in the valley of the Oxus and its tributary rivers, from Balkh upwards, have no general designation. Eastwards of that city lies Kunduz, and it has Badakhshan farther eastward. To the north of this territory are the hill states of Wakkan, Shughnan, Darwaz, Kulab, and Hissar, whose people claim a descent from Alexander the Great. To the eastwards of Badakhshan lies the plain of Pamir, inhabited by the Kirghiz; and beyond the Belut Tagh mountains are Chitral, Gilgit, and Iskardo, that extend towards Kashmir. South of Badakhshan is the country of the Siah-Posh Kafir, who occupy a great part of the range of Hindu Kush and a portion of Belut Tagh. On the west it has Indarab and Khost, also in Balkh, and the Kohistan of Kābul, and on the east it extends for a great distance towards the north of Kashmir.

KUSHIDA. HIND. Embroidered muslin.

KUSHKAH. HIND. Boiled rice, properly Khushkah. Grains of ground rice in curds is the material for the primitive tika, which is applied on the foreheads of Hindus.

KUSHTA. PERS. Metallic compounds used as medicines, the principal being Kushta sikka, Kushta jast, Kushta tamba or mis, and Kushta loha. These preparations are made by native hakims; they are compound bodies (murakkabat), though called by the name of a simple constituent, taking their name from the metal which forms their basis. To prepare the Kushta sikka, or carbonate of lead, one tola of lead is placed in an iron pan, with the juice of the Euphorbia, or the kesu or dhak flowers (Butea frondosa). The Kushta jast is oxide of zinc; the Kushta tamba is arsenite of copper. The Kushta loha, an oxide of iron, is also called Khubs-ul-hadid, or Zafran-ul-hadid.—*Powell's Handbook.* See Medicine.

KUSHTIGAR, or Phailwan. PERS. Wrestlers,

athletes, throughout Southern Asia, who whirl overhead ponderous wooden clubs called mil, also magdar, instruments of a favourite but very laborious exercise, regularly taught by an ustad or teacher, who instructs in 360 band or forms.—*Ouseley's Travels*, i. pp. 234, 236.

KUSI or Koosy, a river of Northern Bengal, rising among the Nepal Himalayas, in lat. 28° 25′ N., and long. 86° 11′ E. It first takes a course south-west for about 60 miles, then south and south-east for 160 more, during which it receives on its left bank its two great tributaries, the Aran and Tambar. It joins the Ganges after a course of 325 miles. The Kusi is remarkable for the rapidity of its stream, the dangerous and uncertain nature of its bed, but chiefly for its constant westerly attrition. According to a Hindu legend, Kausiki is the daughter of Kusik, raja of Gadhi, a Kshatriya, but was married to a Brahman. She bore a son, who became a soldier, and Kausika was changed to a river.

KUSIMA and Usima, small volcanic islands in the Archipelago of Japan, situated in the neighbourhood of Cape Sangir.

KUSINAGARA or Kusinara. Near this town was the scene of Buddha's death, at the age of 80, in a grove of sal trees. It is the modern Khassya. At the time of Hiwen Thsang's visit, the walls were in ruins, and the place was almost deserted, but the brick foundations of the old capital occupied a circuit of about 12 li, or 2 miles. The only name now associated with the ruins near Khassya is that of Matha Kuar, or the Dead Prince. —*Cunningham.*

KUS KUSA. Arab. One of the numerous kinds of what the Italians generally call Pasta. The material is wheaten or barley flour rolled into small round grains. In Barbary it is cooked by steaming, and served up with hard-boiled eggs and mutton, sprinkled with red pepper. The Bedouin Maghrabi Arabs merely boil it.

KUSSOWLEE is in lat. 30° 53′ 13″ N., long. 77° E., 45 miles distant from Amballa, and 32 from Simla; its height is 6322 feet; there is no table-land, and the peaks are rather steep. It is on the crest of a ridge which overlooks the Kalka valley; the inner slope is covered from the summit to perhaps 1000 feet below it, with an open forest of the Pinus longifolia. The climate temperate and agreeable, unless during the rainy season, when dense fogs make it gloomy and depressing.

KUSSUB. Arab. Penance, a term used in the science of exorcism.

KUSSUR-KA-GHAR. Hind. Literally fractional house, a term used in forming magic squares.

KUSTI, the zonar worn by the Parsees.

KUSUMBA, a term used by the Rajputs to designate opium. Kusumba, in Sind, is the name given in good society to a solution of opium, which the natives extensively use. In Cutch it means a Rajput practice of drinking a solution of opium from each other's hands, to stanch feuds. In times of peace and ease, the Rajput leads an indolent and monotonous life. After a midday siesta, the chief rises, washes his hands and face, and prepares for the great business of the day, the distribution of the red cup, Kusumba or opium. He calls together his friends into the public hall, or perhaps retires with them to a garden-house. Opium is produced, which is pounded in a brass vessel and mixed with water. It is then strained into a dish with a spout, from which it is poured into the chief's hand. One after the other the guests now come up, each protesting that kusumba is wholly repugnant to his taste, and very injurious to his health, but, after a little pressing, first one and then another touches the chief's hand in two or three places, muttering the names of Dev, friends, or others, and drains the draught. Each, after drinking, washes the chief's hand in a dish of water which a servant offers, and wipes it dry with his own scarf; he then makes way for his neighbour.—*Rasamala, Hindu Annals*, ii. p. 261; *Burton's Scinde*, ii. 143.

KUSUNDA, Chepang, Chetang, and Haiyu are four small uncivilised Bhot tribes who reside amid the dense forests of the central region of Nepal, to the westward of the great valley. They have no apparent affinity with the civilised races of the country, but live in huts made of the branches of trees, on wild fruits and the produce of the chase. The Chepang are slight, with large bellies. Mr. Hodgson says they are of Moghul descent. Their language is akin to the Lhopa. The Chepang, Haiyu, and Kusunda seem to belong to the Rawut group of frontier populations. They are named by Mr. Hodgson the Durre, Denwar, and Brahmo, which Mr. Latham believes to be the same as Tharu, Dhungur, and possibly Rawi. They occupy the districts where the soil is moist, the air hot, and the effluvia miasmatic.—*Latham.* See India.

KUSUST'HULLI DWARAKA, the capital of Krishna. The Bhagavat Gita states its founder was Anirt, brother of Ikshwaku.

KUSWUR. Hind. The flower from which is made the yellow kuswur dye used in Hindu marriages. To use it on the day of battle, is among the Hindus deemed a sacred pledge to conquer or die. Volunteers are often invited to assume the yellow dress, which implies desperation in any undertaking. Amongst Rajputs, it was a not unfrequent usage to imitate the Hindu saints and warriors, and dye their garments with yellow, the hymeneal colour, which indicated that they went to battle as to a bridal feast, and were determined to die or to live exulting conquerors.—*Malcolm's Central India*, i. p. 358.

KUT, also Uplate and Putchuck. Hind. The root of the Aucklandia costus. A bitter aromatic tonic, used in fever; the roots have a pleasant smell, and are used as perfumes. It is chiefly exported to China, where it is used as an incense. In India it is used medicinally.—*Powell's Handbook*, i. p. 356.

KUTAIBA, conqueror of Bokhara in the first century of the Hijira. The descendants of the Arab conquerors now number about 60,000 souls, chiefly in Samarcand, Vafkend, and Vardanzai. They are shepherds, and sell postins.—*C. As.*

KUTCH, the breeches of the Sikhs, the adoption of which is of as much importance to a Sikh boy as was the investiture with the toga virilis to a Roman youth.

KUTCHERRY. Hind. An office, a court or place of public business.

KUTCH GANDAVA, a champaign district of Baluchistan, a depressed level plain. See Kach Gandava; Kalat.

KUTCHURA. Hind. Large quantities of arrowroot are prepared from different species of Curcuma,—C. angustifolia, C. leucorrhiza, and C. montana, from Travancore. It is a regular article of export.

KUTH-LAH. HIND. A great black chubby fish of Northern India, with large scales, and a very big mouth without teeth. It has been known to attain a size weighing two Bengal maunds, which are equal to 164 lbs. This fish does not take a hook. The Ro-hoo and the Mir-gah resemble each other in size and habits; they are very much like the salmon, but have tiny little mouths with no teeth. The Ro-hoo in season has very pretty red fins, and both have ash-coloured backs, with silvery bellies; they attain to the weight of 20 lbs., and afford the angler excellent sport at bottom-fishing, sometimes engaging him for an hour before he can attempt to land his fish. The Kheel-bause is a pretty little dark ash-coloured fish, with a small toothless mouth, and has a whisker on either side of it. This fish also affords the angler good sport, and is found of 5 or 6 lbs. in weight. These are all plentiful in Calcutta and Lower Bengal, and, while young, could be easily exported.

KUTHUMI, a Hindu sage, born at Badarikashrama, and who lived at Gandhara. His father, Narayana, was a philosopher, and his son Kutsana wrote a tract on the Rules of Poetry. Kuthumi taught the immortality of the soul, and that happiness and misery are the inseparable companions of works of merit and demerit.—*Ward*, iv. p. 41.

KUTIRA or Katira, a gum greatly resembling gum-tragacanth, yielded by the trunk of the Cochlospermum gossypium. It is used by native practitioners as a demulcent and emollient; but, under the same name and of very similar properties, is often sold the gum of several species of Sterculia, Butea, and of Bombax pentandrum, Huttian ka gond, etc.—*O'Sh.*

KUTPUR, a town on the southern coast of Kattyawar, the ancient Kunu-kavati, said to have been built by Kunuk Sen, the great progenitor of the Choura race. Kunu-kavati was overwhelmed by an encroachment of the sea or storm-wave, the same occurrence, doubtless, that separated Perim, Shial Bate, etc., from the mainland. At Shial Bate the ruins are remarkably good. Wulleh seems to have been destroyed in the same manner.

KUTTINI. HIND. A silk fabric used by the Muhammadans of S. India, both men and women, for trousers,

KUTTIRIPPA. MALEAL. Living with a Nair princess or queen as her husband.

KUTUA, HIND., also called Bungka Kutua. An aquatic beetle which eats rice plants. It is said to make a leaf-boat, which it paddles from plant to plant.—*Ell.*

KUTUB MINAR at old Dehli was erected from the pillars and other parts of Jaina temples, and many of them retain the sculptured figures. In 1794, though its capital was then ruined, it was 250 feet 11 inches in height. Its present height is 238 feet 1 inch, deducting the modern pavilion. It has four ornamental balconies, respectively at 97, 148, 188, and 214 feet from the ground, between which are richly-sculptured raised belts containing inscriptions. It is lower by 30 feet than the Campanile at Florence. It is a tower of victory, a Jaya Sthamba. The dates of the ruins in old Dehli are from 1196 to 1235. The inner court was enclosed by Shahab-ud-Din. The central range of arches was built by Kutub-ud-Din; the wings by Altamsh, whose tomb is beyond the northern range. The base of this minar is a polygon of twenty-four sides, altogether measuring 417 feet. The shaft is of a circular form, and tapers regularly from the base to the summit. It is divided into five storeys, round each of which runs a bold projecting balcony, supported upon large and richly-carved stone brackets, having balustrades that give to the pillar a most ornamental effect. The exterior of the basement storey is fluted alternately into twenty-seven angular and semicircular faces. Up to the third storey the minar is built of fine red sandstone. From the third balcony to the fifth, the building is composed chiefly of white Jeypore marble. The Hindu architect has not failed to record his undertaking without the usual Hindu invocation, Sri Viswakarma prasade rachita, 'built under the auspices of Viswakarma,' the celestial architect of the Hindus. The object is at once apparent to the spectator, that of a Mazinah for the Muazzan to call the faithful to prayers. About A.D. 1830, it suffered a little from an earthquake, but under the directions of the British Government it was repaired. Ibn Batuta was certainly misinformed as to the date and builder of the Kutub. He ascribes it to Sultan Muiz-ud-Din, otherwise called Kaikobad, grandson of Balban (A.D. 1286-1290). But the real date is nearly a century older. It was begun by Kutub-ud-Din Aibek, when governing for Shahab-ud-Din of Ghazni (otherwise Muhammad bin Sam, A.D. 1193-1206), and completed by Altamsh (1207-1236). Ibn Batuta ascribes the rival structure to Kutub-ud-Din Khilji (Mubarik Shah, 1316-1320), and in this also Colonel Yule thinks he is wrong. The iron pillar at the Kutub, in the centre of its court-yard, stands 22 feet above ground, and extends 20 inches under ground; total, 23 feet 8 inches. Its diameter at the base is 16 feet 4 inches, and at the capital it is 12·05 inches. There is no date on it, but Mr. Fergusson says (p. 506) that Mr. Prinsep supposed an inscription on it to be of the 3d or 4th century; Dr. Bhau Daji supposed the 6th century. It is forged iron. An inscription on it says it was dedicated to Vishnu; but its real purpose was a pillar of victory to record the defeat of the Balhikas near the seven mouths of the Sindhu or Indus. Behind the N.W. corner of the mosque is the tomb of Altamsh.—*Tod's Travels*, pp. 108-327; *Col. R. Maclagan, R.E., in Yule, Cathay*, ii. p. 434; *French Tour; Elphinstone.* See Architecture; Dehli.

KUTUB SHAHI, a dynasty of kings of the 16th and 17th centuries, ruling in Golconda and Hyderabad in the Dekhan.

Sultan Kuli, .	A.D. 1512	Muhammad, .	A.D. 1580
Jamshid, . .	,, 1543	Muhammad, .	,, 1611
Subhan Kuli,	,, 1550	Abdullah, . .	,, 1626
Ibrahim, . .	,, 1550	Abdul Husain,	,, 1673

Sultan Kuli was descended from the chiefs of the Karakonilu tribe of Kurds, and appears to have been born near Diarbikr. The tribe to which he belonged having been subdued by Mir Husain, and subjected to the Akunelu tribe of which that chief was head, Sultan Kuli, to save his life, fled from Diarbikr in company with his uncle, and, after many difficulties and dangers, found his way to Beder, at which place Sultan Muhammad Lashkari Bahmani of Beder and Gulburga then held his court. Ferishta, in his history of the Bahmani dynasty, states that Sultan Kuli in the first instance obtained employment at the

Bahmani court as one of the Turki ghulam in personal attendance upon the king; but this appears to be denied by the author of the Tow-arikh-i-Kutub Shahi, who asserts that Sultan Kuli was from the first employed in a situation befitting his rank and family, and from his talents and courage early rose to the command of the Beder armies and the government of the province of Telingana. On the decadence of the Bahmani dynasty, during the latter part of the reign of Muhammad II., when the government had been virtually usurped by the minister Kasim Burid, Sultan Kuli seized the province of Telingana, and some years afterwards took the title of Kutub Shah; this latter event occurred in A.D. 1520 or thereabouts, and the Kutub Shahi dynasty existed in Telingana under this name for a period of nearly 200 years. The last ruler is commonly known by the name of Thannah Shah. Another account describes the founder of this dynasty, Sultan Kuli, as the son of Amir Kuli, a Turkoman chief, who claimed to be a lineal descendant of the prophet Noah, through his son Japheth. He was born in the town of Hamadan, and when a youth accompanied his paternal uncle to Beder, then the seat of government of the Bahmani kings, about the close of the reign of Sultan Muhammad Shah Lashkari Bahmani, and there got the title of Kutub-ul-Mulk, *i.e.* the Polar Star of the State; to it was attached as a jaghir the town of Golconda and the surrounding villages. He was afterwards promoted to the command of all the troops in that vicinity. On the decadence of the Bahmani power, Kutub-ul-Mulk threw off its control in 1512, though, according to some historians, he did not assume the title of an independent sovereign for some years subsequently, probably about 1520. The limits of the territory contained within his dominions are described by the author of the Hadikat-ul-Alam, as extending from Chanda in the north to the Carnatic, and from the seashore of Orissa, Vizagapatam, and Masulipatam, to Beder and the Bijapur territories on the west. After a reign of 31 years, Sultan Kuli was murdered by a Turki slave at Golconda, at the instigation of his son Jamshid, A.D. 1543, A.H. 950. He was murdered in the mosque situated inside the town, and was in the act of directing the masons to break open a door to escape assassination, when the man employed by his son stabbed him. He died at the age of 90 years, and was succeeded by his son Yar Kuli Jamshid Khan, who had murdered his elder brother Malik Kutub-ud-Din during their father's lifetime. Jamshid died of cancer, having been guilty of the assassination of his father and brother and the death of many individuals, ordered for execution in moments of passion and pain. He is said to have lost the tip of his nose and a great part of his cheek by a sabre cut in battle. He was succeeded by his son Subhan Kuli, a boy of ten years of age, who reigned for a period of seven months. The weakness of the government, and the contentions existing between the reigning sovereign and his uncle, Daulat Kuli, whose cause had been espoused by Jagdeo Rao, raja of Warangal, induced Ibrahim to leave the Bijanagar court for Golconda, which he reached and succeeded in establishing himself in 1557, and, after a reign of 23 years, he died in the year A.D 1580, A.H. 988, and lies buried in one of the tombs of Golconda. The two last figures of the above date only are visible. He was succeeded by his son, Sultan Muhammad Kuli Kutub Shah.

KUTUB-ud-DIN AIBEK, a slave of Shahab-ud-Din, who gave him the government of Dehli. In A.D. 1206, on the death of his master, Muhammad Gori, Kutub-ud-Din, retained possession of Hindustan till his death, A.D. 1210. He was the first of the Turki slaves who attained sovereignty, and furnished a succession of rulers to Hindustan. Kutub-ud-Din in 1210, after a reign of four years, was succeeded by his son Aram, who was within a year displaced, in 1211, by Altamsh, a slave and son-in-law of Kutub-ud-Din. Bakhtiar, general of Kutub-ud-Din Aibek, in A.D. 1201, had conquered Behar, and in 1203 conquered Bengal, but was defeated and driven back from Bhutan and Assam. Altamsh ruled Hindustan 25 years, and in that time subdued the fortress of Rintambore in Rajputana, captured Gwalior and Mandu, and conquered Ujjain. It was in his reign that Chengiz Khan ruled in Western Asia. He destroyed the temple of Mohakal, which a Vikramaditya had erected at the beginning of the Christian era. Altamsh died in 1236. His son Rukn-ud-Din reigned six months and was deposed, and then his daughter Sultana Razia, who ruled ably for three and a half years, and in 1239 was defeated and put to death. She was followed by Moiz-ud-Din Bahram, 1239; Ala-ud-Din Masaud, 1241; Nasir-ud-Din, 1246; Ghaias-ud-Din, 1266; Kai Kobad, 1286, and the slave dynasty ended with his murder, A.D. 1288.

Kutub-ud-Din's name is preserved at his capital by the Kutub mosque, with its graceful colonnade of richly-sculptured Hindu pillars, and by the Kutub Minar, which raises its tapering shaft, encrusted with chapters from the Koran, high above the ruins of old Dehli. Kutub-ud-Din had started life as a Turki slave, and several of his successors rose by valour or intrigue from the same low condition to the throne. His dynasty is accordingly known as that of the Slave Kings. Under them India became for the first time the seat of resident Muhammadan sovereigns.

The Moghuls are said to have burst through Tibet into N.E. Bengal in 1245; and during the next 44 years repeatedly swept down the Afghan passes into the Panjab (1244-88).—*Imp. Gaz.*

KUTUNG. HIND. A seeding of the bamboo. A man who has seen two kutung is a very old man.

KUTWAR, a class of cultivators found in small numbers in various districts, especially to the north of the Jumna. They are also employed as watchmen.—*Sherring's Hindu Tribes*, p. 327.

KUVERA, the Hindu god of wealth, and the regent of the north. This deity was a son of Viswasrava, and a brother of Ravan, who was overcome by Rama. He is also called Paulastya. He is represented as a magnificent personage residing in the splendid palace of Alaca, or borne through the sky on the heads of four figures, in a radiant car, called pushpaca, which was given to him by Brahma. In each of two of his hands he holds a closed flower of the lotus, and has on his head a richly-ornamented crown. His sakti is Kuveri. The Guhyaca are servants of Kuvera, and into such beings the dark souls of men, addicted in this world to selfish gratification, transmigrate. According to Hindu mythology, Indra is the regent of showers and of the east wind; Varuna,

regent of the west; Vahni, of the south-east; Kuvera, of the north; Yama, of the south; Isa or Isani, of the north-east; Nairit, of the south-west. Vayu, in Hindu poetry, is the north-west wind.—*Cole. Myth. Hind.* p. 111; *Moor*, p. 108.

KUVERA or Kabir, in the middle of the 19th century, a Koli? of Sarsa or Sarasa, near the Anaud station of the Bombay and Baroda Railway, who claimed to have received a portion of the Supreme Being. His followers called themselves Hari Jana, but were known as the Kabir Bhakta.

KUVIR or Kabir is the salt desert lands which predominate in Khorasan; and salt abounds in many districts, to which the desert does not reach. This salt desert penetrates through the inhabited isthmus extending between Herat and Mashed, into the mountainous districts of Kohistan and Hazara, where we are informed there is much salt and brackish water. There is a great deal of kuvir or salt desert all through the steppes of Kharezm and the desert lying between the Oxus and Caspian Sea.—*Fraser's Khorasan*, p. 253.

KUVIRAJU. SANSK. From Kuvi, a poet, and Raja, a king. The kuviraj of Bengal are physicians.

KWANG-TUNG, the Chinese province known in Europe as Canton. It has an area of 97,000 square miles, and a population of about 19,000,000. It is traversed by the river Lung. Its chief towns are Canton and Hong-Kong.

Kwang-Tung-Chi, a general account of Kwang-tung, is a Chinese work usually stitched in 140 Chinese volumes. Its officers are:—Tsung-tu, the governor-general; Fu-tal, the governor; Fan-tal, the superintendent of finance; Nie-tal, the provincial judge; Chi-fu, Chi-le-chou, and Chi-le-tung-chi, prefects; Tung-chi, sub, and Tung-pan, deputy sub-prefects; Chi-chou and Chi-hsien, district magistrates; Ching-le and Chau-mo, secretaries. Ghai-kwan, superintendent of customs in China, is the superintendent of the maritime customs of Yue. There is also a superintendent of customs for Kwang-tung. The prefect of Kwang-chou is the chief local authority of a territory equalling in extent the kingdom of Holland, and containing a much larger population. His Yaman is the first court of appeal from fourteen others, each resembling in their power British courts of assize.—*Meadow's Desultory Notes*, p. 8.

KWAN-SE, a province of China, bounded on the north by Ho-nan and an irregular chain of lofty mountains, on the south and east by Kwan-tung, on the west by Yunnan. Its surface is estimated at 87,000 square miles, and its population is between 7 and 8 millions. Kwy-ling-fu is its capital. This province contains 11 cities of the first class, 25 of the second class, and 170 of the third class.

KWAN-TE, a distinguished Chinese general who lived in the third year of the Christian era. He was canonized 800 years after his death, and has now a state temple in every considerable city, and in almost every house morning and evening adoration is paid to him. He is regarded as the protector of the peace of the empire and its multitudinous families. He is represented with a red horse, and the horse is at the state temple of Kwan-tang.—*Gray*, p. 143.

KWAN-WA-SHIH. CHIN. A fabulous stone, described as large enough to be made into a knife, brilliant, and able to cut precious stones with ease.

KWAN-YIN. CHIN. The Quan-won of the Japanese, is the Chinese goddess of mercy. The principal seat of her worship is at the island of Pooto. There are in the island many small caves dedicated to the use of hermits; several of them have figures of Buddha.

Dr. Edkins relates that he paid a visit to a mandarin, who showed him, 'in the innermost of his apartments up-stairs, what seems to have been the most sacred thing to him that the house contained. It was the shrine and image of Kwan-yin, (the Buddhist) goddess of mercy. On the table beside it was a copy of the book of prayers used in the worship of this divinity. . . . . Before the image sticks of incense were burning, which had been fresh lighted that morning.' On one occasion also, Yeh, the celebrated governor of Canton, and a stern Confucianist, in a report to the emperor describing a victory gained by his troops over a body of rebels, stated that, at a critical juncture of the battle, a large figure of Kwan-yin had been seen beckoning to the soldiers from the sky,—a sight which so inspirited them that they gained an easy victory over their enemies. It is the Hindu Avalokiteswara.

KWEI. CHIN. Rubruquis, speaking of certain envoys of a Corean nation whom he saw at the court of Kara-korum, says, 'The principal envoy had in his hand a tablet of polished ivory, about a cubit long by a palm broad, and whenever he addressed the Khan or any other great personage, he kept his eyes fixed on this tablet, looking neither right nor left, as if he read there what he had to say.' The use of this tablet, called Kwei, was a very ancient Chinese etiquette. It is mentioned in Demailla's version of the Chinese annals in connection with Yu, one of the most notable worthies of ancient China, who is said to have flourished B.C. 2286.—*Rubruquis*, p. 290, *quoted in Yule's Cathay*, i. p. 142.

KWOH-TSZE-KIEN, the Chinese Imperial Academy of Learning. Like the Han Lin, it is composed of titled literary dignitaries. It is in the N.E. angle of Pekin, near the temple of Confucius. The Pi-yung, or Imperial College of Antiquity, is in the centre of the quadrangle.—*Mayer, Chinese Govt.*

KWONG-FUN, or cosmetic powder of China, used by ladies to whiten their faces. It is finely powdered marble, levigated, and is also used to give a whitish gloss to rice.

KYABOCA WOOD, or Amboyna wood, appears to be the excrescence or burr of some large tree, sawn off in slabs from 2 to 4 feet long, 4 to 24 inches wide, and 2 to 8 inches thick. It resembles the burr of the yew tree, is tolerably hard, and full of small curls and knots; the colour is from orange to chestnut-brown, and sometimes red-brown. It is a very ornamental wood, and is made into small boxes and writing-desks, and other ornamental works. Prof. Reinwardt, of Leyden, says it is the burr of the Pterospermum Indicum; but others, that of Pterocarpus draco. It is from the Moluccas, the island of Borneo, Amboyna, etc. The wood itself is of the same colour as the burr, or rather lighter, and in grain resembles plain mahogany. The root of the cocoanut tree, says Colonel Lloyd, is so similar when dry and seasoned to the 'bird's-eye' part of the wood here termed kyaboca, that no difference can be perceived; the cocoa has a

tortuous and silky fracture, almost like indurated asbestos. The kyaboca and lingoa wood of commerce are supposed to be the produce of the same tree. Of late years its estimation seems to have decreased in Europe, but it is still much valued by the Chinese. It is brought from Ceram, New Guinea, and the Aru Islands of the Moluccas. In Singapore it is sold by weight. Very large slabs are obtainable from the lower part of the tree by taking advantage of the burrs or lateral growths. They are thus sometimes as large as 9 feet in diameter. It is very durable, takes a considerable polish, is very abundant, and may be had in any quantity.—*M. E. Juries' Reports of* 1851; *Col. G. A. Lloyd; Holtz.*

KYAIK-HTI-YO, in British Burma, a peak 3650 feet high, on the crest of the main dividing range between the rivers Tsit-toung and Salwin. On a huge egg-shaped boulder a pagoda has been built, actually overhanging by nearly one-half. A hair of Buddha or Gautama is enshrined in it. See Monastery.

KYAN, a tribe in Borneo of about 100,000 souls, who occupy the country from the south of the kingdom of Brunai, away into the interior. They strongly resemble the Dyak. Mr. Dalton states that the Kyan amongst whom he lived amounted to 270,000 souls, and that they were greatly addicted to head-hunting. This people, differing, however, in various customs, are found on the great rivers Banjar, Pasir, and Coti, and probably on all the rivers of the eastern coast. On the north and northern parts of the island, they are found in the interior on the Bintulu, Barram, Rejang, and other great rivers, as far west as the country of the Sarebas Dyak, but they only occupy the inland parts at a great distance from the coast, always having between it and them other tribes, and frequently Malayan states. The Kyan of the rivers Banjar, Coti, and Pasir appear to have been always subject to the European or Malayan power, which held the mouths of their respective streams. But the Kyan of the north-west have been feared by the inhabitants of the Malayan towns of the coast; and the chiefs of Hoya, Mocha, Egan, and Serekei eagerly sought alliances with their barbarous neighbours. Their country is divided into little states, each of which contains many villages. In some parts of it, gold and diamonds are found. On the Banjar river the people wash for these commodities, as do the Dyak of Suntang, in the interior of the western branch of the Batang Lupar river.

The houses of the Kyans are built, like those of the Sea Dyaks, in one long terrace, with the verandah fronting its whole length, the posts being always of the very hardest wood, and the roof of planks of the same material. They are allowed by all their enemies, and others who have known them, to possess personal courage in a much higher degree than any of the other tribes inhabiting the island. Their bodies are tattooed of a blue colour in various patterns; but images of the sun, moon, and stars are amongst the most frequent.

It is reported that some of the tribes on the Barram and Bintulu rivers do not tattoo the persons of the males, and that the practice is here confined to the women, who thus discolour their arms and legs only. The Kenawit Dyaks, whose country borders that of the Kyans, also practise tattooing, as do the Orang Tatow, who live near the Bintulu river, and more towards the coast than the Kyans. In dress and person the Kyans much resemble the Dyaks, the women wearing the small bedang, and the men the chawat. The dress of the Kyan women of the Bintulu river is reported to consist of two cloths, a little longer than the bedang, which are tied on opposite sides of the person, the one covering lapping over the other; but their dresses from the Rejang are made like the bedang. The jacket of the Kyan women is not loose, like that of the Dyaks, but fits closely to the person, and is longer than the cotton ones of the hill tribes; it is also frequently made of the pine-apple fibre. In war, the dress of the men differs much from the Dyaks of other denominations. The jackets they wear on these occasions are made of the skins of beasts; those of the panther and the bear are the most esteemed, but those of goats and dogs are sometimes substituted in a scarcity of the others. The broad part of the skin forms the back part of the jacket, the edges of which are bound with wide strips of red cloth. Bunches of feathers of the rhinoceros hornbill, which seems to be the war bird of all their tribes, depend from little strings of beads fastened to the skin, and dangle in the breeze as they move about. Their head-dresses in war are also peculiar to these people, and unknown to the other inhabitants of the island. They are of various descriptions, but the favourite ones are caps made in the fashion of a man's face caricatured in those which represent the faces of animals. The weapons of the men are the sumpitan or blow-pipe. Mr. Dalton informs us that head-hunting was practised to a frightful extent, and that desolating wars were constantly carried on for the purpose of obtaining these ghastly trophies. On the death of a person, it is said that a head had to be procured previous to his burial. The manners of the young females resemble those of the Sea Dyak; but adultery after marriage is punished by death to the man, who, under whatever circumstances the criminal action takes place, is always considered the guilty and responsible party concerned. *Journ. Indian Archip.*

KYANAN. BURM. On the low lands near the sea-coast of Tenasserim there grows this large tree, of which canoes are occasionally made, and is much used for sandals, house-posts, musket-stocks, and spear-handles. The wood is red, but turns black on being prepared with petroleum. The tree has pinnate leaves, with two pairs of oval leathery leaflets, and is a leguminous tree.—*Dr. Mason; Captain Dance; Cal. Cat. Ex.*, 1862.

KYANG, the Equus hemionus, *Pallas*. Mr. Drew mentions (p. 310) having seen in the Rukshu district of Ladakh, 100 kyang at one view, and 300 during one day's journey.—*Drew, The Northern Barrier.*

KYAN-PHO. BURM. A tree of Moulmein; a strong wood, good for building purposes.—*Cal. Cat. Ex.*, 1862.

KYBARTHA. Amongst the Hindus of Bengal, the Gaoli are the most numerous; after them, the Brahman and Kaist races, are the Bagdi, an aboriginal people, and the cultivators called Kybartha. The last named at the census of 1881 numbered 2,137,540.

KYD, GENERAL, an officer of the Bengal

Engineers, esteemed by the subahdar of Bengal, to whom the subahdar presented a garden on the right bank of the Hoogly river, about four miles down the river from the city of Calcutta. He was a man of refined taste and scientific acquirements, and especially delighted in horticultural and agricultural amusements. He laid out the ground, and in 1793 he recommended the Bengal Government to occupy it as a public Botanical Garden, which he tendered as a free gift. It was accepted, and Dr. Roxburgh of Madras was appointed its first superintendent. He died soon after, and a monument of marble, by Bacon, was erected to his memory opposite the principal river entrance to the garden.

KYDIA, a genus of plants occurring in Southern Asia. Several of the family it belongs to abound in mucilage; and as a Guazuma is employed in South America in clarifying sugar, so a Kydia is in India. Dr. Wight, in Icones, gives K. calycina, fraterna, pulverulenta, and Roxburghiana. The genus occurs especially in the Pegu and Tounghoo districts. K. axillaris, *Thw.*, a middle-sized tree near Badulla, in Ceylon, growing at an elevation of about 2000 feet.—*Roxb.*; *M'Clelland*: *Voigt.*

KYDIA CALYCINA. *Roxb.* K. fraterna, *R.*

Bo-ke-mai-za, . .	BURM.	Pola, Puli, . . .	PANJ.
Putta-pulow, .	KAMAON.	Pandiki, ...	TEL.
Pula, Pulli, . .	PANJ.	Potari, ...	„

This is a middle-sized tree, about 20 feet high and 2 feet in girth, pretty common along the Western Ghats, in the valleys of the Circar mountains, in Mysore, and on the slopes of the Neilgherries, and plentiful throughout the Pegu forests, more especially in the Pegu and Tounghoo districts, in Kamaon and Garhwal, and in many parts of the Siwalik tract up to 3000 feet. The bark is mucilaginous, and is employed in Northern India to clarify sugar. The small saplings are used, from their great strength and elasticity, by the natives for making bhangi sticks, but it is large enough to afford timber of 3 or 4 feet girth. Its wood is white-coloured, and adapted for house-building, charcoal, and fuel, and, being light and elastic, is made into oars, and used on the rafts floated down the Ganges. This tree grows rapidly in the outer valleys, but is not common west of the Sutlej.—*Roxb.* iii. p. 188; *Useful Plants.*

KYEE-ZEE. BURM. A large one-headed metal drum. It is the standard of wealth among the Karen.—*Forbes.*

KYLAS, also written Kailas and Kailasa, a rock-cut Brahmanical temple at Ellora, in the province of Dowlatabad. The finest Brahmanical caves, properly so called, are at Ellora and Elephanta, though some good ones exist also on the island of Salsette and at Mahabalipur. In form, many of them are copies of, and a good deal resemble, the Buddhist vihara. But the arrangement of the pillars and position of the sanctuary are different from the Buddhist. They are never surrounded by cells as all vihara are, and their walls are invariably covered or meant to be covered with sculpture, while the vihara are almost as invariably decorated by paintings, except the sanctuary. The subjects of the sculpture of course always set the question at rest. Another class of caves consists of rock-cut models of structural Brahmanical temples. To this class belong the far-famed Kylas at Ellora, the Saivite temple at Doomnar, and the Ruth at Mahabalipur. This last is cut out of isolated blocks of granite.

The Kylas temple is surmised by Mr. Fergusson to have been excavated by the southern Dravidians, either the Chera or Chola, during the eclipse of the Chalukya dynasty. The Indra Subha group at Ellora should perhaps form another class, but whether they are Brahmanical or Jaina is undecided.—*Fergusson.* See Architecture; Kailas.

KYLASA, a mountain in the Himalaya, north of the Manasa lake, called also Gana-parvata and Raja-tadri. It is the heaven of Siva. He is usually represented with his bride, the mysterious Durga, by his side. It is also Kuvera's abode. See Kailas.

KYLASA, a hill in the Vizagapatam district in Madras, in lat. 17° 47′ N., and long. 83° 22′ E., rising to 1758 feet above the sea. It was resorted to as a sanatorium.

KYLLINGIA MONOCEPHALA, *Linn.*, of Sind, Dekhan, the Konkans, and common at Ajmir in low grounds. The root is sweet-scented, used and named as zedoary, nirbishee.—*Gen. Med. Top.* p. 174.

KYMORE, a mountain range in Shahabad, of limestone which always shows itself in the valley of the river Sone, as far at least as Mungeysur peak in Mirzapur, and it crops up at Rhotas, forming a sloping base to the precipitous sandstone rock. Below the mountain limestone is one of a bluish-grey colour mixed with occasional crystals of calc-spar; this is admirably suited for lithography. Below the latter, in Kymore, is a limestone of a hard, tenacious composition, admirably suited for building. The sandstones of the Kymore range at Chunar and Mirzapur are used as flagstones, and for ornamental purposes.

KYOUK-PHYU contains numerous mud volcanoes, from which gas is frequently discharged. The largest is in Cheduba Island. Earth-oil wells exist in several places; the deepest well is 48 feet. The oil is sold at 5 rupees the bottle. Population about 150,000 souls, Arakanese, Burmese, and Khyeng. The district, 4309 square miles, is in lat. 18° 55′ and 19° 22′ N., and between long. 93° 25′ and 94° E.

KYOUNG. BURM. A Buddhist monastery. All Burmese boys enter the monasteries as novices for the purpose of learning to read and write; they must at least be eight years of age. See Monastery.

L

L is the twelfth letter in the English alphabet, and by grammarians is usually denominated a semi-vowel or a liquid. In the English language it has only one sound, as in like, canal, but in other languages is found interchangeable with r, n, m, d, i, u, and z. Letters with the sound of l are in use in all the written tongues of the East Indies; but in the Vedas and in the Mahrati and other languages of the south of British India, l has a rather harsher sound, and in some parts of the Tamil country, medial l has the sound of cerebral r, and that of a cerebal l when final. In other parts of the Tamil region, l has the sound of lr, and in others again of zh. L and zh are

therefore frequently confounded. The languages of Southern India have a sound correctly expressed by zh, but taken by the untutored ear to be l, and written l even by scholars; thus Tamil is properly Tamizh, Tuluva is Tuz-huva; Pāllām, fruit, is also pronounced Pāzhām. In non-Aryan speech l sometimes takes the place of zh, sy, s, and j or other sibilant. L is used in China in the place of the letter r. L does not exist in Zend. In Japan d, and in New Zealand r, are substituted for l. Of all letters, l and r are the most subject to metasthesis, and after them the nasals.—*Farrar's Families of Speech; Dr. W. W. Hunter; Wilson's Glossary.*

LA, also Ka-La, of the Karens, a soul or spirit; in Karen belief, every animal, plant, everything, spears, knives, arrows, stones, have their individual spirits. When the Ka-La departs, the thing dies or is destroyed. Besides his Ka-La, every man has a 'tso' spirit attendant on him.

LAB. HIND. Nursery beds for raising poppy, tobacco, or rice.

LABADA. HIND. A dressing-gown.

LABAN, of Java, a yellowish, hard wood, employed for the handles of axes and various utensils.

LABANAKHYA, a salt spring of great sanctity in Chittagong district, Bengal, situated three miles north of the sacred site of Sitakund. Visited by large numbers of pilgrims.—*Imp. Gaz.*

LABANNA, a not very numerous Hindu tribe in the central division of the Panjab, are farmers, traders, and carriers; never soldiers. They wear beards.

LABBAT-TUARIKH, a history of Asia by Kazvini.

LABBAY, a Muhammadan race in large numbers on the eastern coast, chiefly between Pulicat on the north and Negapatam on the south, their headquarters being at Nagor, near Negapatam, the burial-place of their patron saint, Nagor Miran Sahib, to whose shrine numerous pilgrimages are made by the tribe. The prevailing belief is that, like the Moplah of the western coast, they are descendants of Arab merchants and the women of the south of India. They are Muhammadans, and practise circumcision. Physically, they are good-looking, tall, well made, and robust, are sometimes inclined to obesity, of light complexion and well-developed limbs, not unlike the Moplah of the western coast in their general configuration. The cranium is singularly and strikingly small; the eyes are slightly oblique, and not wanting in expression; cheek-bones prominent; lower jaw large and heavy; beard in some instances full and long, but in most cases decidedly sparse. They generally wear the loongi, a cloth loosely wrapped round the waist and extending below the knees; they also wear bright-coloured jackets, occasionally turbands; the most frequent head-gear being a skull-cap, fitting closely to a shaved head. They live freely on animals and vegetables, making use of all kinds of flesh meats, saving pork, for which Muhammadans have a religious abhorrence. Their language is Tamil, though some talk a little Hindustani. They are exceedingly industrious and enterprising in their habits and pursuits, there being hardly a trade or calling in which they do not try to succeed. They make persevering fishermen and good boatmen. They are lapidaries, weavers, dyers, mat-makers, jewellers, gardeners, bazarmen, grocers, boat-makers, boat and ship owners, and merchants, and as regards the leather and horn trade, they excel as merchants. There are few classes of natives in Southern India who, in energy, industry, and perseverance, can compete with the Labbay. The Labbay of Tinnevelly are said to be descendants of Arab traders, who settled in the sea-coast towns some three or four centuries ago, and formed connections with the lower caste Tamil women.

The Labbay have obtained this tribal designation from their use, in conversation, of the Arabic word Labek, meaning I beg your pardon, or the plait-il of the French. They speak Tamil, into which they have translated the Koran. In Travancore they are called Methan and Jonagar. The former word means a convert, and the latter seems to mean a foreigner, but is also said to be Jonakan, a dialectal variation of the Grecian Yavana. The title is prefixed to their names. In Madras, in 1870, only four or five of their women could read the Koran, but they are all good sempstresses and mat-weavers.—*Drs. Bilderbeck and Wilson in Mad. Govt. Pro.* See Labek.

LABDANUM or Ladanum.

Ciste ladenifere, . . FR. | Ladanum, . . . LAT.

This gum-resin was considered by old writers cephalic, pectoral, and nervine, but is now only used in the preparation of certain plasters. It is known to the Muhammadan medical practitioners of India, and has a place in the Materia Medica of the Arabs amongst their Munzigat (Suppurantia). It is the Λήδανον of the Greeks and the Ladun of the Arabs. It is first mentioned by Herodotus (iii. p. 112) as procured in Arabia, and used by the Arabs for fumigation. The word is Arabic with a greek termination, and the Greeks used Λήδος to indicate the shrub which produced the ladanum. Labdanum resin is exuded by the leaves and branches of Cistus creticus, *L.*, and other species of the Levant. During the prevalence of plague, it is largely collected as a medicine, etc., by whipping the plants with long thongs attached to a rake-like frame, the resin adhering to the leathern straps.—*Ains. Mat. Med.*

LA BEHMEN, in Bombay, the dried roots of two varieties of a composite plant, chiefly obtained from Kābul. Used by the natives of India as a tonic in debility, in doses of 4 drachms; also in impotence as a deobstruent. Price 8 annas per lb. Not at present used in European medicine, but was formerly employed as an aromatic stimulant.—*Cat. Ex.*, 1862.

LABEK or Lebek. ARAB. A conversational expression equivalent to I beg your pardon, or the French plait-il? In Arabia and with the Labbay Muhammadans of Southern India, when any one is called, he replies Lebek! or Allah! which answers to the English sir! Originally it was the name of the deity worshipped at Baal-Lebek (Balbec). There is a prayer attributed to Ali, son of Abu Taleb,—O Lebek! O Lebek! thou art his lord; be merciful, therefore, unto the most humble servant, whose refuge thou art!

LABEO, a genus of fishes in the south of Asia, largely used as food. Amongst them L. calbasu, L. gonius; L. angra, Morala, HIND., of the Ganges, Irawadi, Sitang; L. calbasu, kalbans, rivers of India; L. rohita or rohi of Burma. They furnish sport to the angler. Fish-baits used in Bengal are cinnamon bark, fenugreek seed, oil-

cake, cotton, gingelly, mustard, Nigella sativa, and Melilotus parviflora seeds, the stems of Kaempfera galanga and of Acorus calamus, boiled rice, chaff, pupæ of large silk-worm moth, earth-worms, prawns, cockroaches. See Mahsir.

LABIATÆ, a name given by Jussieu to an order of plants, called by Lindley Lamiaceæ.

LABILLARDIERE. Naturalist on board the French ship which, with her companion ship *L'Esperance*, went in search of La Perouse in 1791.

LABLAB CULTRATUM. *D.C.*

Kosopulla, . .	Sansk.	Tella chikur-kaia, .	,,

Six varieties of this very useful plant are cultivated in the cold season all over India, in gardens and about native houses, forming cool arbours, and furnishing an excellent pulse for curries; the pods of the plant used as vegetable, entire when young; when full-grown, only the seeds are used. The varieties are,—Falcatum majus, F. minus, Gladiatum flore albo, G. flore purpureo, macrocarpum, and rectum. L. vulgaris and L. cultratus are cultivated in the rainy season in gardens, and may be considered the analogues of the French and kidney beans of European gardens. The legumes are large, scimitar-shaped, flat, and compressed, tubercularly muricated along the sutures, and having the seeds separated from one another by transverse partitions.—*Roxb.*

Red variety—Yerra chikkudu kaya, ,,

This is sown in the fields in rows, and is eaten both boiled or put into curries; when young, the legume is eaten pod and all; when full-grown, the seeds only are boiled and used. It is about five inches long; prefers a rich black soil that cannot be flooded by rains. It is a coarse but wholesome pulse, much eaten by the poorer classes in India. It is grown along with ragi, and is used in food along with ragi. It does not keep well, unless great care is taken in packing it in parcels, or in fact, as some of the ryots do in placing a veray in the heart of the ragi in caves, when it will keep good for some years. Cattle are generally fed on the grain when dry. It has seven varieties,—albiflorum, annapa, dumetorum, purpurascens, purpureum, rubriflorum, and sepiarium; all but dumetorum cultivated for food. When the testa are removed, the cotyledons are preserved for curries. Its composition in 100 parts is as under:

LABOURDONNAIS, in the middle of the 18th century, governor of the French possessions in the Indian Ocean. He conducted an expedition to the shores of India, and took Madras.

LABUAN, an island about 10 miles long and from 2 to 5 broad, ceded to the British in 1846. It has the harbour of Victoria on its south. The island is 6 miles off the N.W. coast of Borneo. The dependent islets all lie to the south. The measures of which the whole island is composed are alternating clays and sandstones. Coal occurs in several places, and is of very good quality, and has dispersed through its substance masses of imperfect amber, sometimes light-yellow and very transparent, sometimes approaching to black, and in a semi-carbonized state, but always extremely friable and brittle; when burnt, it diffuses the fragrant smell of recent resin, and is in a sufficiently perfect state to be collected by the workmen and used with fresh dammer in making torches. In some seams of coal on the river Bintulu, to the south of Brune, Mr. Burns mentioned that almost half the seam consists of this substance, which is there commonly dug and used by the inhabitants as dammer. Specimens of coal from Ritch, on the east coast of Sumatra, near the Indrageri, contain much of this substance. Hard nodular masses of brown iron ore occur in Labuan. The whole surface soil of the island and the beds of most of the streams are more or less covered with scattered masses of this substance. It is also found on the mainland, and is the ore from which the Kadyan and Murat, native tribes in the neighbourhood of Brune, manufacture their iron. Labuan is one of the smallest of all British colonies.

Lac is obtained from incrustations made by an insect (Coccus lacca), similar to the cochineal (Coccus cacti), on the branches and twigs of the Acacia Arabica, A. concinna, Aleurites laccifera, Anona squamosa, Butea frondosa, Carissa spinarum, Celtis, *sp.*, Croton draco, C. lacciferum, C. sanguiferum, Dicrostachys cinerea, Erythrina Indica, E. monosperma, Feronia elephantum, Ficus Indica, F. infectoria, Gyrocarpus Asiaticus, Inga dulcis, Mimosa cinerea, Rhamnus jujuba, Schleichera trijuga, Terminalia tomentosa, Urostigma religiosum, U. elastica, Vatica laccifera, Vismia laccifera? V. micrantha? Zizyphus jujuba.

The Coccus genus of insects belongs to the order Hemiptera. The species known in the south and east of Asia are the C. cacti or cochineal insect; the C. lacca that yields the lac of commerce; C. maniparus of Arabia, which punctures the Tamarix gallica, and causes the exudation of the Arabian manna; and C. Sinensis of China, that secretes a wax from which candles are made. When the females of the C. lacca have fixed themselves to a part of the branch of the trees on which they feed, a pellucid and glutinous substance begins to exude from the margins of the body, and in the end covers the whole insect as with a cell of this substance, which, when hardened by exposure to

The name lac or laksha is derived from the word signifying a hundred thousand, from the great number of the insects which swarm over the tree.

It is the female insect of the Coccus lacca that produces the resin and the dye. This is a small, round, red-coloured, flat insect, having 12 abdominal rings, and a bifurcated tail. The male is much larger than the female, and is furnished with wings. It is stated that no more than about one male to 5000 females is to be met with. The female insect is said to be destroyed in the process of producing her young ones, for the eggs become hatched beneath the mother insect within the concrete resin globule, and escape by boring through the mother's back. At first, the young brood, having made its escape, clusters on the twigs of the trees, and very shortly afterwards the incrustation of lac begins to be formed over and round them, covering the twigs. The bubble-like exudations are all close together, and hollow and cellular inside. About the end of March the lac-resin exudation is complete, and the female insects within are glued down by it to the tree. The oval body of the insect becomes of a deep-red colour. If at this stage a little piece of the lac incrustation on a twig be broken off, the insect is perceived as a little bag of red liquid (which yields the dye), and the place where the wood of the twig has been punctured bears a snow-white mark, as if the place had been touched with a point of chalk. On removing an entire piece of lac incrustation from the twig, the bark underneath is observed to be covered with these little white dots, one in every cell and one under every insect; under the microscope they clearly appear to be specks of a semi-crystalline saline efflorescence at the place punctured by the insect.

The proper stage to collect the lac (if intended to produce dye) is when the insect is in the stage of being like a soft red sac. At a later stage it lays its eggs under its body, which is glued down by the resin; when, therefore, the eggs are hatched, they have no means of egress save by eating through the body of the mother, which they do, feeding the while on the red colouring matter contained in her body, which is thus consumed.

When the lac is first gathered, it is picked off the twigs with the insects and all on it. In this state it is called 'kacha' or 'kham lakh.' This lac is treated with water, and thus the colouring matter is extracted. The clarified kind of lac is called 'chapra-lakh,' or shell-lac, chapra, a shell.

LACCADIVA or Laccadives, an archipelago off the coast of Malabar, extending from lat. 8° 30′ N. to the parallel of lat. 13° 52′ N., and from long. 71° to 73° 40′ E. Most of the islands are low, and surrounded by steep coral reefs. The inhabitants call them the Lakhera-deevh. Ptolemy mentions them as the Dimurce Insulæ, but Ammianus Marcellus, in the 4th century, styles them merely Divi; the Arabs and Persians call them Debajat. They were re-discovered in 1499 by Vasco da Gama, and afterwards plundered by the Portuguese. They were then subject to the Muhammadan chiefs of Cannanore, some of them afterwards were under the Beder queens of Bednore, and latterly under the Beebee of Cannanore and the British, and between the last two they are now apportioned. They were visited in 1844-45 by Mr. (Sir) W. Robinson, and in 1867 by Mr. Sewell; 8 or 10 islands are more or less inhabited, and each with 2 to 3 miles of superficial area. They are all about 15 to 20 miles apart, separated by great channels, but none of the islands are more than 10 to 15 feet above the sea-level. The people in 1871 were 13,495 in number. They are of Malcala origin, but are Muhammadans, and adhere to the Alya Santana, or decensus ab utero, though some of the islands are adopting the filial law of inheritance. They are poor, quiet, and inoffensive, make good pilots. They produce the cocoanut palm and coir, jagari and a few pulses; a few cattle, sweet potato, and betel-nut. The castor-oil and arnotto plants are grown; tortoise-shell, holothuria or sea-slug, shells, and shark fins are collected.

The islanders subsist mostly on cocoanuts and fish, and their chief trade is in cocoanuts, coir, cocoanut oil, jagari, mats, and coral. Their boats vary from 1 to 15 tons burden, and they visit the western coast of India from Goa to Cochin. They are taught Arabic and Baltite (a dialect of the Malcali) in the mosques by the priests. The largest island is about 7 miles long and 2¼ broad, and there are many navigable channels between the islands, the largest of which is the Mamaic or the Nine-degree channel. They pay tribute to the British Government. The islands are very difficult to find in thick, squally weather, as scarcely any of them rise more than 6 feet from the surface of the water. When first coming in sight, the cocoanut trees, with which they are thickly covered, have the appearance of growing out of the sea, and, as a rule, no bottom is found at 100 fathoms close up to the beach.

The language of the Laccadive group is Malealam, which is, however, written in the Arabic character; that of Minikoi is Mahl, with a mixture of corrupt Malealam. The headmen and pilots of most of the islands know a little Arabic; and the male inhabitants can generally both read and write. The inhabitants are bold seamen and expert boat-builders.

Each of the islands is situated on an extensive coral shoal, with an area of from 2 to 3 square miles. Beneath this crust is loose wet sand; and by breaking the crust and removing a few spadefuls of sand, to allow the water to accumulate, a pool of fresh water may be obtained in any part. The water in these wells is quite fresh, and always abundant; but it is affected by the tide,—rises and falls several inches,—and is said to be not very wholesome.

The islands under S. Canara are Amin-Divi, Chetlat, Kadamat, Kiltan, and Bitra (uninhabited); and the Cannanore islands under the Beebee of Cannanore are Agathi, Kavarathi, Antrot, Kalpini, Minikoi, and Sukeli (uninhabited).

More than one-sixth of the adult male population of Minikoi perished in a cyclone in 1867.—*Johnston, Gazetteer; Imp. Gaz.; Mr. William Robertson's Report; Mr. Sewell's Report.*

LAC DYE or Lac Lake consists of the colouring matter extracted from the stick-lac, by treating the crushed lac with water to dissolve the colouring matter, evaporating the coloured fluid to dryness, when the residue is formed into little cakes, two inches square and half an inch thick; these are of various qualities, and are marked with different letters, by which the quality is recognised.

They are used as red dyes for some purposes, instead of cochineal. Lac dye was formerly largely manufactured in Bengal, and exported to England, but the aniline dyes have nearly superseded the lac dye. Dr. Flynn prepared it by boiling coarsely powdered Rangoon stick-lac in several portions of water, until it ceased to yield any colouring matter; a small quantity of alum was then added to the filtered solution; after a few minutes, a small quantity of Liqr. potassæ was used to throw down the alumina with the colouring matter, the fluid at the same time being constantly agitated. The precipitate was allowed to settle for a day, the fluid then drawn off, and the sediment pressed into cakes, and dried in the shade. Dr. M'Leod, of Madras, prepared a superior lac dye by digesting stick-lac in a slightly alkaline cold decoction of the leaves of Memecylon tinctorium, and the solution being applied to woollen cloth, after preparation with a mordant formed of a saturated solution of tin in muriatic acid, produced a brilliant scarlet dye.—*M. E. J. R.; Powell.*

LACE.

Kanton, ...	Dut.	Renda (gold or silver),	
Dentelle, ...	Fr.		Malay.
Spitzen, ...	Ger.	Krushewo, . . .	Rus.
Merletti, Pizzi,	It.	Encajes, ...	Sp.

Lace is a term applied to two very distinct products, one consisting of gold and silver wire, or even silk thread, woven into ribands for embroidering hats and uniforms; the other is a transparent network, in which the threads of the weft are twisted round those of the warp. It may be made of silk, flax, or cotton, or even of gold and silver thread, and has usually a pattern worked upon it, either during the process of making the lace, or with a needle, after this has been completed. Much lace is made by machinery, but the highly esteemed genuine articles are made by hand. Lace-knitting is considered to be a German invention; but lace worked by the needle is of far older date, and was probably an eastern invention, though it does not appear to have been known or practised in India. Lace is, however, made in the territories of the raja of Travancore; and the Madras Central Committee, in their final report, stated that the lace of Nagercoil, though knit by natives of the country, was equal to the best French lace. This lace, when seen at the Great Exhibition, was much admired, and some said that it must have been made in France. Samples of six different kinds were sent. The broad black lace on wire ground, and the broad white and fine lace on Brussels ground, and of the nature of Bedfordshire lace, were highly approved of; the broad being thought worth 4s. and the narrow worth 2s. a yard.—*M'Culloch's Dictionary; M. E. J. R.; Royle's Arts, etc., of India*, p. 503.

LACE BARK TREE, the Lagetta lintearia of the West Indies, so called from the lace-like layer of the inner bark, which may be readily separated from considerable lengths of the stem by beating and macerating. The lace is worked up into fancy articles. This might be introduced into India. See Daphne.

LACERTIDÆ, a family of reptiles known as land lizards. The following genera and species occur in India:—

Tachydromus sex-lineatus, *Daud*, Rangoon, Archipelago.
T. meridionalis, *Gunth.*, Cochin-China, China.
T. septentrionalis, *Gunth.*, Ningpo.
Cabrita Leschenaultii, *Milne-Edwards*, Coromandel, Panjab.
Ophiops Jerdoni, *Blyth*, Mhow.
Acanthodactylus cantoris, *Gunth.*, Ramnuggur.

Under the family name Lacertians, Cuvier arranged — 1st. The monitors and their subdivisions, namely, the monitors properly so called, including the Ouarans of the Arabs (Varanus), etc., the dragons (Crocodilurus of Spix, Ada of Gray), and the Sauvegardes (monitor of Fitzinger and Ameiva); 2d. The lizards properly so called. The second group comprises, according to Cuvier, the genera Lacerta, Algyra, and Tachydromus; but these are now arranged under other families.

Lacerta scincus, *Linn.*, is still used by the eastern doctors in leprosy.—*Dr. Honig.* p. 342.

LACQUER, a varnish either for wood or for brass, made with shell-lac and spirits of wine. Hard wood lacquer may be in the proportion of 2 lbs. of lac to the gallon. Another recipe is 1 lb. of seed-lac and 1 lb. of white rosin to a gallon of spirits of wine. For brass, the proportions are ½ lb. of pale shell-lac to 1 gallon of spirit. It should be made without heat, but simply by agitation for five or six hours. It should then be left until the thicker portions have subsided, when the clear lacquer must be poured off, or if not sufficiently clear it must be filtered through paper. It darkens by exposure to light, so that paper should be pasted round the bottle to exclude it. A pale-yellow lacquer may be prepared from 1 oz. of gamboge and 2 oz. of Cape aloes, powdered and mixed with 1 lb. of shell-lac. For a full yellow, ½ lb. of turmeric and 2 oz. of gamboge; for a red lacquer, ½ lb. of dragon's blood and 1 lb. of annotto. The colour, however, is modified by that of the lac employed. Lacquers may also be coloured by dissolving the colouring matters in spirits of wine, and adding the proper proportions of these to the pale lacquer, according to the tint required. Mr. A. Ross prepared lacquer with 4 oz. of shell-lac and ¼ oz. of gamboge, dissolved by agitation in 24 ounces of pyro-acetic ether. The clear liquor is decanted, and when required for use is mixed with eight times its volume of spirits of wine. Hard wood lacquer is applied nearly in the same manner as French polish. In lacquering brass, the work must be cleansed from grease and oil, and, if convenient, heated to the temperature of boiling water, when the spirit evaporates, and the varnish attaches itself more firmly to the metal, producing a brilliant effect. If heat cannot be applied, the air should be dry and warm. The lacquering should follow immediately after the work is polished, otherwise it will become tarnished, and prevent the lacquer from adhering.

LACQUER WARE. Three different processes are usually confounded under this term. The one prevailing in Burma is with the balsamic juices of trees, and was well known to Dampier in 1638, as he says, 'The lac of Tonquin is a sort of gummy juice which drains out of the bodies or limbs of trees, and the articles lacquered are cabinets, desks, etc.' Some chemical change no doubt takes place on exposure of these juices to the air. This kind of lacquered ware was much appreciated in the 18th century. Another kind of lacquer work is rather of the nature of papier-mache, covered with one or more layers of lac

varnish. This is the case with the lacquered boxes from Kashmir and Lahore, so remarkable for the beauty and elegance of their patterns.

The lacquered ware of China owes its lustrous colouring to a composition of lamp-black and the clarified juice obtained from a species of sumach, called Rhus vernix or R. vernicia. Wood oils are obtained from other plants of the same family, and the different qualities of lacquered ware are owing to the use of these various ingredients. The body of the ware is wood partially smoothed, or pasteboard, upon which two or three coats of a composition of lime, paper, and gum are first laid, and thoroughly dried and rubbed. The surface of the wood is also hardened by rubbing coarse clay upon it, and afterwards scraping it off when dry. Two coatings of lamp-black and wood oil, or, in the finer articles, of lamp-black and varnish, are laid upon the prepared wood, and, after drying, the clear varnish is brushed on, one coating after another, with the utmost care, in close and darkened rooms, allowing it to dry well between the several coats. The articles are then laid by to be painted and gilded according to the fancy of customers; after which a last coating is given them. The varnish is brought to market in brownish cakes, and reduced to its proper fluidity by boiling; it is applied to many purposes of both a varnish and paint, when it is commonly mixed with a red or brown colour. A beautiful fabric of lacquered ware is made by inlaying the nacre of fresh and salt water shells in a rough mosaic of flowers, animals, etc., into the composition, and then varnishing it. Another kind, highly prized by the Chinese, is made by covering the wood with a coating of red varnish three or four lines in thickness, and then carving figures upon it in relief. The great labour necessary to produce this ware renders it expensive. A common substitute for the Rhus varnish is the oils of the Dryandra, Jatropha, Croton, and other members of the Euphorbiaceous family, expressed from their seeds by cylinders and pestles. The oil, after pressing, according to De Guignes, is boiled with Spanish white in the proportion of one ounce to half a pound of oil; as it begins to thicken, it is taken off and poured into close vessels. It dissolves in turpentine, and is used as a varnish, either clear or mixed with different colours; it defends wood-work from injury for a long time, and forms a good painter's oil. Boiled with iron rust, it forms a reddish-brown varnish. In order to prevent its penetrating into the wood when used clear, and to increase the lustre, a priming of lime and hog's blood simmered together into a paste is previously laid on.

The beautiful lacquer ware made near Nankin is considered far superior to that which is made in Kwang-tung and the other provinces. The process of the manufacture of a table, which has a landscape with figures delineated on the top in gold, may be thus described. The timber being first put together, and rendered perfectly smooth, is covered with transparent paper, besmeared with pork fat. As soon as this paper is quite dry, it is covered with a paste made from a peculiar clay. When this substance has become completely dry and hard, it is rubbed down with a whetstone, to remove all inequalities of surface; as soon as this process is complete, the lacquer is laid on, then allowed to dry and harden, when the process is again repeated three or four times, the lacquer being allowed to become completely dry and hard between each several coating. The intended landscape is traced on the top of the table by throwing a fine white powder over paper on which the landscape has been traced by means of small perforations, thus forming the outline of the picture; a minute instrument, somewhat resembling a style, is drawn carefully over the perforations, by this means tracing the landscape on the surface of the table. The picture is then besmeared with a compound of size and red paint; the gold, first reduced to a powder, is then applied; the raised appearance of the figures being produced by means of a preparation of gum combined with other ingredients. The picture is allowed to become perfectly dry, when, if requisite, another coat of the lacquer or varnish is then added. To prepare this lacquer ware in perfection requires a lengthened period; and a Chinese manufacturer mentioned that to produce a fine specimen, elaborately painted, six months ought to elapse between the commencement and the termination of the work, thus affording time for each coat of lacquer to become thoroughly hardened before another is applied.

Of all the works of art in which the Japanese excel the Chinese, the lacquer is the most striking. Some of that now made is very fine, but not to be compared with the real old lacquer, which is very rare, and is hardly ever brought into the market, except when some old family is in much distress for want of money; they then bring pieces of antique lacquer (which is as highly esteemed by them as family plate with Europeans) to be sold at Yedo or Yokohama. There are on some of the noblemen's estates, manufactories of lacquer, celebrated for their excellence, and from which their owners derive great wealth. Articles made there are always marked with the crest or crests of the owner of the estate, so that ware which is much sought after, such as Prince Satsuma's lacquer, may at once be recognised by seeing his crest upon each piece. Old Japanese lacquer is, like good lace, inimitable; but an experienced connoisseur can at a glance pronounce upon its merits and reality. It is very difficult now to meet with a good old specimen; the market is stocked full of modern work, made expressly for Europe; now and then, however, a Daimio very hard up, or a courtesan in temporary embarrassment, sends secretly from Yedo a choice piece for sale, and it is astonishing to find the enormous price it will realize. Twenty, forty, sixty sovereigns or more are given for an old box not a foot square; but the sale is tacitly interdicted; indeed, it is almost as disgraceful for a Japanese to part with old lacquer ware, as it is for an English gentleman to dispose of his family plate. Very great prices were marked on several small articles in the Health Exhibition of 1884. Sir Rutherford Alcock mentions £100 as a sum asked of him in Japan for a box 6 inches square; and Lady Parkes told him that in Tokio fine specimens were bringing their weight in gold. The lacquer ware of the period A.D. 910 to 1650, known as Jiddi mono, are very highly esteemed (pp. 32, 33).

There are many kinds of varnish known to the Japanese. The best lac is supposed to be the sap or juice of the Rhus vernicifera. The bark of this tree, on being cut, yields a white milk,

which becomes black on exposure to the air; the leaves, petals, and nearly every part of the tree yield also the same liquid. As one of the ingredients in its preparation, the oil of the Bignonia tomentosa is employed. If secret there was, it seems lost to us and themselves, for the modern lac is such a wretched imitation of the ancient, that it is very difficult to admit that the same composition could have produced the two qualities. Ordinary lac has the consistency of treacle, and much the same colour; the first coating is thin and yellowish, the second of a brownish tinge, and the last a bright mahogany.

In Japan, the woods on which lacquer is applied, are Abies tsuga, Buna, Chamæcyparis obtusa, Ch. pisifera, Cyptomeria Japonica, Cercidiphyllum Japonicum, Hi-me-ko-ma-tsu, Ginko biloba, I'go, Ka-rin, Magnolia hypolema, Morus, *sp.*, Pinus densiflora, Planeria Japonica, Powlownia imperialis, Prunus pseudo-cerasus, Shi-tan, Shoji, Ta-ga-ya-san, Thujopsis dolubrata.

The lacquer ware of Benares is good. Two kinds of resin are used; one called ral or rala is sold at eight annas the seer, and is said to be brought from Mirzapur to Benares. The fine lacquer is made of a resin called gaharba, for a seer of which one rupee and two annas are paid.

Colour-sticks for lacquer ware are used in the Panjab by the Kharati, or wood-turner, to colour his ware when the turning process is complete. The stick consists of shell-lac, melted down with a certain proportion of wax and sulphur, and coloured by various simple or compound colours. They are applied by the hand. The operator holds the colour-stick against the turned wood object while revolving rapidly; the heat produced by the friction melts the lac and the colour is deposited on the surface of the wood. The skill and fancy of the operator directs him either in laying on a uniform layer of colour, or else putting it on in little spots or touches, by allowing the colour-stick only very lightly to touch the revolving wood, thus producing either a smooth uniform colour, or the pretty mottled appearance so often observed in lacquered ware. Two or three different colour-sticks are often applied, giving the whole a marbled appearance of great beauty. The colour thus applied is spread, fined, and polished, by pressing the edge against the turned object while revolving. The final polish is given by a rag with a little oil. The principal colours are of lac, crimson, orpiment, red lead, green, made of orpiment and Prussian blue, dark blue, indigo or Prussian black, white, brown, or gold colour, light blue or ultramarine.—*Hodgson's Nagasaki; Sirr's China; Powell's Handbook; Sir R. Alcock; Tomlinson; Royle's Arts of India; M. E. J. R.; Williams' Middle Kingdom; Morrison's Comp. Descrip.; Consul John J. Quin in Par. Pap.*, 1882.

LACTUCA SATIVA. *Linn.* Garden lettuce.
Choff, ... Egypt. | Kahu, ... Hind.

The lettuce is a garden vegetable, inodorous, of scarcely sensible taste, or slightly bitter. At the flowering time it contains a milky juice, which has acquired some celebrity under the name of Lactucarium or Thiridace. Its seed, called Khaska-bij, is in Hindu medicine regarded as a very cold remedy. It is used by natives of India as a demulcent only.

L. scariola, *Linn.*, is the wild plant; L. virosa, *Linn.*, is a biennial. All yield lactucarium or lettuce opium. The Ku-chih-kau of the Chinese is obtained by cutting off the tips of the full-grown lettuce, collecting the milky juice which exudes, and inspissating it by a moderate heat. It is said to produce sleep without determining narcotism, to prove seductive without any previous stimulation, and to afford an excellent substitute for opium in many cases in which the latter drug is inadmissible.—*O'Sh.; Powell's Handbook; Dr. Stewart.*

LADAKH is called La tag in the Tibetan, Ka-chan-pa or Snowland, Mar-yul, Redland or Lowland. Ladakh anciently was called Kiechha by the Chinese, and is still called by them Kha-pa-chan or Kha-chan, Abounding in Snow or Snowland; the people as Kha-pa-chan-pa or Kha-chan-pa, men of the Snowy Land; and Kha-chan-yul is Snowland. Ladakh is part of one of the three outlying governorships under the maharaja of Kashmir (Cashmere), the other two being Baltistan and Gilgit. It may be described as comprising the valley of the Indus, and also of most of its tributaries, from lat. 32° to 35° N., and from long. 75° 29′ to 79° 29′ E. The different districts of Central Ladakh, Rupshu, and Nubra, besides the bleak and almost uninhabited plateaux of the Kouen Lun and Linzhithang plains, together make up the province. The area of Ladakh, including Zanskar and some other districts which do not belong to the maharaja of Kashmir, is about 30,000 square miles. Mr. F. Drew ascertained the maharaja's population at the census of 1873 as 20,621; the 168,000 given by Cunningham, the 165,000 of Moorcroft (1822), and the estimate of 200,000 furnished by Dr. Bellew in 1873, apply to the more extended area. Ladakh lies at the back of the great central range of the Himalayas, and is one of the loftiest of the inhabited regions of the globe. The valleys and plateaux vary between 9000 and 17,000 feet, while many of the peaks attain altitudes of 25,000 feet. The chief rivers of Ladakh are the Indus, and its tributaries, the Shayok, Nubra, Chanchengmo, and Zanskar. There are several salt lakes, the more important of which are the Pang Kong and Cho-moriri. The climate is characterized by remarkable extremes, burning heat during the day being succeeded by piercing cold at night.

The earliest mention of Ladakh is probably to be found in the description of Kie-chha by the Chinese Pilgrim Fa Hian (A.D. 300). It appears to be referred to again in the Akhassa Regio of Pliny, and in the Mo-lo-pho or San-pho-lo of Hiwen Thsang (middle of the 7th century).

In the valley of the Upper Indus, that is in Ladakh and Little Tibet, the prevailing race is the Bhot subdivision of the great Tartar variety of the human race. Lower down that classical stream, in Gilgit and Chulas, the remains of the old and secluded Dardu and Dungher races are still to be found; but both in Iskardo and in Gilgit itself there is some mixture of Turkoman tribes from the wilds of Pamir and Kashgar. The Ladakh people are of a cheerful disposition, and often may be heard humming simple tunes. At Leh itself, and among the wandering Tartar tribes, the women dress with woollen or variegated petticoats, and tanned sheep or goat skins as mantles. Their principal ornament is a head-band hanging like a long

tail, and studded all down with large turquoises; this is called berak, and often, even with common people, worth Rs. 20 or 30. Nearly all Ladakh is of the Buddhist faith. The valley of Leh or Ladakh proper, Zanskar, Hembaks or Dras, Suru and Purik, Spiti, Nubra, Janski, Rong, Rupshu, and Hanle are all Buddhist, and is Bhot along the banks of the Chandra and Bhaga, but Hindu after their junction. In Ladakh, the nuns and monks bear a large proportion to the population. To the north of the Ladakh country, the people of Yarkand and Khotan speak Turki. To the west, beyond Balti, the people of Astor, Gilgit, and Hunza Nager speak different dialects of Dardu, while the Kashmiri have their own peculiar language. To the south, the people of Chamba, Kulu, and Bishahar speak a dialect of Hindi, and to the east and south-east, the people of Rudok, Chang Thang, and Gnari speak Tibetan only.

The *Dard* race, lying along the Indus to the westward of Ladakh, speak three distinct dialects. They use the Persian character in writing Dardu, the three dialects of which are called Shina, Khajuna, and Arniya. The *Shina* dialect is spoken by the peoples of Astor, Gilgit, and lower down in Chulas, Darel, Kohli, and Palas on both banks of the Indus; the *Khajuna*, by the people of Hunza and Nager, and the *Arniya* in Yasan and Chitral. Astor has an area of 1600 square miles, on the left bank of the Indus. Gilgit, in Tibetan Gyilgyid, has an area of 2500 square miles on the right bank of the Indus. Dard or Durd are supposed by Vigne to be the Dadicæ (Δαδίχαι) of Herodotus, and the people who now occupy the country called Dardu.

The richer people of Ladakh have more than one wife, but the prevailing custom is polyandry, and is usually in the form of a community of brothers with their one wife.

Ladakh is agricultural, but enjoys a transit trade, and much labour has been expended in constructing roads through Kashmir, Jummoo, Kulu, Lahoul,—leading to the Panjab, Kabul, Lhassa, Chinese Tartary, Khotan, Yarkand, Little Tibet, and Balti. All these follow the lines of rivers, cross passes 18,000 feet high, and over rivers by ferries, by inflated skins and suspension bridges. Three varieties of the sheep and three of the goat are domesticated in Ladakh, and sheep and the domesticated yak are used for carrying loads. The Dso, hybrid between the yak and cow, is a beast of burden. The great article of trade in Ladakh is the shawl-wool from the further provinces. The route to Amritsar via Ladakh is that which brings the trade of Yarkand and Eastern Turkestan. There is also a route from Amritsar, Jalandhar, or Ludhiana, via Nurpur, Mandi, and Kulu, to the same places. At stated times caravans from Yarkand arrive with brick-tea, shawl-wool, China silks, ponies, etc., which are exchanged for grain, English calicoes, and the like; so that Leh is but a market-place for Kashmir and Yarkand merchants. — *Latham's Ethnology; Cunningham's Ladakh; Adams; Cleghorn's Reports; Mrs. Hervey's Tartary; Powell; Hooker and Thomson; Imp. Gaz.*

LADDU. HIND. A sweetmeat made of sugar, milk, and flour, rolled into the form of balls. Laddu is of two kinds, one called Bundi ka; the other is Sada, plain or Maida ka-laddu.

LADRONES. PORT. A term applied by the Portuguese to the Chinese pirates, who commenced to gain power by the close of the 18th century. The Ladrones of the Archipelago consisted wholly of the inhabitants of the free Muhammadan states in Sumatra, Lingin, Borneo, Magindano, and Sulu, the natives who remained uncontaminated by the doctrines of the Arabs never being known to engage in the like pursuits. Europeans who were unfortunate enough to fall into their hands were generally murdered, while the natives who composed the crews of the captured vessels were sold for slaves.—*Mr. G. W. Earl*, p. 42.

LADRONES, a group of islands in the Canton river, also islands in the eastern verge of the Archipelago. Of the former, the Grand Ladrone is the outermost island of the Canton river, in lat. 21° 55′ N., and long. 113° 43′ 45″ E. It is called by the Chinese Ty-man-shan. It is a steep, bold island. The Little Ladrone, or Po-ching Han of the Chinese, is separated from the west side of the Grand Ladrone by a narrow passage.

Ladrones, in the Pacific Ocean, eleven in number. The bread-fruit tree is cultivated here in abundance; and the natives are of a pleasing aspect, and well made. Lat. 11° 22′ N., long. 14° 6′ E. The Ladrones were the first islands seen by Magellan. Entering the utmost eastern confines of the Archipelago, Magellan discovered the Ladrones, or Isles of Thieves. They have since been named the Mariannes, but still deserve their original appellation, as the people of the surrounding groups stand in dread of their predatory inhabitants. On one of the Meiaco-shimah isles walls have been raised and pierced with loopholes, as a defence against these roving banditti of the sea. From these Magellan sailed to the Philippines, where, in the island of Mactan near Zebu, he was killed, as also was Barbosa. Magellan's companions then visited Timor in 1522, and returned to Lisbon, making the first circumnavigation of the globe. The Ladrones lie about four hundred leagues east of the Philippines.—*Bikmore; St. John's Ind. Arch.; Sir E. Belcher*, i. p. 84; *Horsburgh*.

LADY-BIRD of N. India, a species of Coccinella, very injurious to plants. See Insects.

LAF, a fish of the Seychelles; the spines on its back are said to be hollow, and to contain a poisonous fluid.

LAG, HIND., means to, or near to, connection, continuity. Lagan, a place where a boat is fastened. Lāgān, MAHR., a marriage. Lagna, the rising of a sign in the zodiac. Lagga is the habet of the Roman populace, signifying that something, man or animal, has been struck.

LAGENARIA VULGARIS. *Serr.*

Cucurbita lagenaria, *Linn.*, Bottle gourd.

Charrah, .	ARAB.	White pumpkin,	ENG.
Kodu, Lau, .	BENG.	Kaddu, . .	HIND.
Hu-lu, . .	CHIN.	Tomra kaddu,	
Quara tauvil, .	EGYPT.	Labo ambon,	MALAY.
Quara m'davar,		Bella shora,	MALEAL.
Dubha dibhe, .		Soriai-kaj, ...	TAM.
Calabash,	ENG.	Sorakaia, ...	TEL.

The bottle gourd, from Lagena, a bottle, is commonly cultivated by the natives, to whom it is of some importance as food; but is seldom eaten by Europeans, being very coarse. In Tenasserim, the bottle gourd grows luxuriantly, and several varieties may be seen. In China, its soft downy herbage is sometimes eaten. Its long fruit bulges

at the further end, and into very odd shapes. It is there made into calabashes, floats, dishes, beggars' platters, musical instruments, and receptacles for drugs. The long white gourds are hollowed out, and made into buoys for rafts for crossing rivers. The large round kind are used for making a kind of stringed instrument like a sitar, called in Tamil Kinnayri, and are hence termed Kinnayri soriai-kai. A longer and narrow sort are employed in making the wind instruments, called in Tamil Maghadi, with which the snake-men (Pamu pudarer, TAM.) entice snakes from their holes. In China the dried bottle gourds are tied to the backs of children on board the boats to assist them in floating if they should unluckily fall overboard. The dried outer rind of the fruit is hard, and is used as a bottle, called the fakir's bottle. In its wild state, this plant, or a variety of it, produces a poisonous fruit; and Dr. Royle states that a very intelligent native doctor informed him that cases of poisoning have occurred from eating the bitter pulp. Some sailors also are said to have died from drinking beer that had been standing in a flask made from one of those gourds. Don says that the poor people among the Arabians eat the edible kind boiled with vinegar, or fill the shells with rice and meat, and so make a kind of pudding of it. The pulp of the fruit is often employed in poultices; it is bitter and purgative, and may be used instead of colocynth. The seeds, Doodee seed, yield a bland oil, and they are given in headaches.—*Jaffrey; Mason; O'Sh.; Powell; Eng. Cyc.; Dr. J. Stewart; Roxb.; Voigt, Useful Plants; Smith, M.M.C.*

LAGERSTRŒMIA, a genus of plants of the natural family of Lythraceæ, growing in the Peninsula of India, along the foot of the Himalaya, in the northern parts of India, and from the Malaya Archipelago into China and Japan. The species are highly ornamental, and in China by far the most beautiful plants met with on the low ground are different species of this genus. L. hypoleuca, *Kurz*, is a timber tree of the Andamans; L. villosa, *Wall.*, a timber tree of Tounghoo. The whole of the species may be propagated by seed or cuttings in any garden soil.—*Roxb.; Eng. Cyc.; Fortune's Wanderings; Williams' Middle Kingdom; Riddell; Mason.*

LAGERSTRŒMIA GRANDIFLORA. *Roxb.*
Dua-banga, HIND. In the Terai, east of Siligori, Bombax, Erythrina, and the Lagerstrœmia grandiflora were found by Dr. Hooker in full flower, and, with the profusion of Bauhinia, rendered the tree jungle gay; the two former are leafless when flowering. The Dua-banga is the pride of these forests. Its trunk, from 8 to 15 feet in girth, is generally forked from the base, and the long pendulous branches which clothe the trunk for 100 feet are thickly leafy, and terminated by racemes of immense white flowers, which, especially when in bud, smell most disagreeably of asafœtida. —*Roxb.* ii. p. 503; *Hooker, H. Jour.* i. p. 401.

LAGERSTRŒMIA INDICA. *Linn.*

Velaga globosa, *Gærtn.*	Lagerstrœmia alba.
Pyen-ma, . . . BURM.	Telanga cheena, . TAM.
China henna, . . HIND.	

There are three varieties—(*a*) rosea, (*b*) lilacina, and (*c*) alba—of this small, pretty shrub, which is common in gardens in Moulmein, and of easy cultivation. It has one of the most beautiful flowers in Indian gardens, grows to the height of seven or eight feet; the flowers hang in bunches at the extremity of the branches, and are of a beautiful lilac colour. The white flowering variety grows easily from cuttings at the commencement and during the rains.—*Drs. Roxb., Mason, Ains., Riddell, Voigt.*

LAGERSTRŒMIA LANCEOLATA. *Wall.*

Sokutia, ... GUJ.	Bondara, . . . MAHR.
Boda, Bondaga, . HIND.	

An erect tree with oblong lanceolate leaves; flowers small, white, appearing in April and May; common in the Bombay Presidency, found in Mysore and at Courtallum, and cultivated in the Lal Bagh gardens at Bangalore.—*Riddell; Beddome.*

LAGERSTRŒMIA MACROCARPA. *Roxb.*
Pyen-ma, BURM. In Amherst, its timber used for house posts, carts, boats, paddles, oars, etc. It is a capital wood, and would answer for all the purposes of common sal; specific gravity, 0·920. —*Cat. Ex.*, 1851.

LAGERSTRŒMIA MICROCARPA. *W. Ic.*

Bolandur, Billinandi, CAN.	Ventek, Veveyla, . TAM.

This has often been confounded with L. parviflora, *Roxb.* It is a very handsome tree, abundant in all the western forests of the Madras Presidency. It flowers in the hot weather, and its seed ripens in the rains. The wood is light-coloured, straight fibred, and elastic; it is very much used for building purposes, flooring, rafters, etc., and also in dockyards. If left in the forests exposed it very soon rots, and is rapidly attacked by white ants. It makes capital coffee cases.—*Beddome, Fl. Sylv.*

LAGERSTRŒMIA PARVIFLORA. *Roxb.*

Ben-teak, ANGLO-HIND.	Wundi-mana, . . MAHR.
Bakli, Dhan, Dhaura, ,,	Belli-nundi, Nanah, ,,
Tsam-be-lay, . . BURM.	Bellinger, . . MALEAL.
Ven-taku, . . . CAN.	Cutcha-catta maram, TAM.
Bondara, . . . MAHR.	Chinna nagi, . . TEL.

A handsome tree, very common in the Northern Circars and on the Nullamallays of the Kurnool district, but also, though rarely, in the Seegoor forests; found in Bombay, Bengal, and Burma. The wood is whitish or light-brown, close-grained, straight fibred, and elastic; it is much used for building purposes, beams, and rafters, and for boat timber, ploughs, axe-handles, etc. In Meerut it is in great request for buggy shafts. It grows to 90 and 100 feet long, and from 12 inches to 3 feet in diameter; it is perfectly straight and without branches, excepting at its top; the leaves are small and very thick. The wood is not so durable as the poon; it is very much lighter in colour, and in this respect much resembles the American red oak. It is tough, and valued for its qualities in withstanding water. In the Nullamallay it has a light-brown, compact, hard, serviceable wood, and used generally. As a wood of British Burma, it is not much used. A cubic foot weighs 40 lbs. It sells there at 8 annas per cubic foot, is yellowish, elastic, and tough, and is valued for agricultural implements, etc. In the N.W. Provinces it is reckoned one of the best woods for buggy shafts, etc.—*Roxb.; Voigt; M'Ivor; Drs. Gibson, Wight, Brandis, Mason, and J. L. Stewart; Captain Beddome, Fl. Sylv.; Mr. Latham.*

LAGERSTRŒMIA PUBESCENS. *Wall.* Laizah, BURM. A very large tree of British Burma, stem not always perfectly round, and inclined to form buttresses; timber valued for bows and spear-

handles, also used for canoes and cart-wheels. A cubic foot weighs 53 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 100 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis; Cal. Cat. Ex.*, 1862.

LAGERSTRŒMIA REGINÆ. *Roxb.*

L. flos reginæ, *Retz.* | Adambea glabra, *Lam.*

Arjuno, ...	Beng.	Taman, ...	Mahr.

Challa, Hali dasul,	Can.	Mooroota, . . .	Singh.
Jarool, ...	Hind.	Kadali, ...	Tam.

This is a large tree of Ceylon, the Peninsula of India, Coimbatore, Canara, Sunda, in the mountains north-east of Bengal, in the Jaintia Hills, in Pegu and Tenasserim, Amherst, Tavoy, and the Mergui Archipelago, and when in flower is most conspicuous. In full blossom in the morning, a tree looks as if mantled with roses, but the flowers change through the day to a beautiful purple, making it appear at evening, if seen from a short distance, like a bower of English lilacs. It is not uncommon in the warm, moister parts of the western and southern parts of Ceylon, up to an elevation of 1500 feet. In Canara and Sunda, it grows near the banks of rivers, and reaches a large size. It is common in the jungles below the ghats, south of the Savitree river, but is hardly found north of that, and never in the inland Bombay jungles. In Ceylon its wood is used for water casks and buildings; in Coimbatore and in Hyderabad this tree is more celebrated for its large handsome flowers than for its timber, which last, however, is used for common purposes. Its timber from the Bombay forests is reckoned rather good, and is used, being generally crooked, for the knees, etc., of native boats. In the Madras Gun Carriage Manufactory it is used for light field cheeks, felloes, cart naves, framing and boards of waggons, limbers, platform carts, ammunition box boards, and heavy field cheeks. — *Roxb.* ii. p. 505; *Voigt; Thw.; M'Cl.; Riddell; Wight; Brandis; Mason; Gibson; Mendis; Captain Dance; Major Benson; Col. Maitland; Hooker's Him. Jour.*

LAGHAR, or Hobby, and her mate the Jaghar, Falco jugger, *Gray*, is the only long-winged hawk generally used in Sind. She is large and black-eyed, with yellow legs, black claws, and a tail of a cinereous white colour. She is a native of Sind, moults during the hot months from April to October, and builds in ruined walls and old mimosa trees. The laghar is flown at quail, partridge, curlew, bastard-bustard, and hares; the best sport is undoubtedly afforded by crows, only she is addicted to carrying the quarry, and is very likely to be killed by her angry enemies. Carrying is the technical word for walking off with the wounded bird.—*Burton's Falconry*, p. 13.

LAGHARI, a subordinate branch of the Talpur family. The Laghari of the Dehra Ghazi Khan plain dwell south of the Khosa, extending from Viddore to Gungehur, between Choti Bala and Harrand. They joined Lieutenant Edwardes' camp in his advance against the dewan Mulraj. The Laghari claim to be able to trace their pedigree up to their departure from Arabia. They have 55 sub-sections, of whom a large number reside in the hills.

LAGHU KAUMUDI, an edition of Panini's Grammar, edited by Varada Raja. It was also edited and translated by Dr. Ballantyne in 1849, as a Sanskrit and English Grammar.

LAGOMYS BADIUS. On entering Tibet, Dr. Hooker found the ground burrowed by innumerable marmots, foxes, and the Goomchen, or tailless rat, Lagomys badius. Other tailless rats, as L. Hodgsonii, are plentiful, and L. Roylei, common on the Kashmir ranges. One or both may be the Pharaoh's mouse mentioned by Marco Polo. The lagomys is said to be eaten by certain tribes in Tartary. L. Curzoniæ, *Hodgson*, is of Sikkim, Tibet, Ladakh, and countries beyond the Snowy Range.—*Hooker, Him. Jour.* ii. p. 156; *Adams.*

LAGOMYS ROYLEI. *Ogilby.*

L. Nepalensis, *Hodgson.* | L. Hodgsonii, *Blyth.*

It is the Rang-duni and Rang-runt of Kanawar. The Himalayan mouse hare occurs in the Himalaya up to 14,000 feet. They are said to hibernate.

LAGOMYS RUFESCENS. *Gray.* A little quadruped found on the mountains of Afghanistan, and perhaps onward to the Hindu Kush, but which is very unlikely to inhabit the Indian side of the passes.—*Cal. Rev.*

LAGOON. Shallow salt-water lagoons, known as backwaters, run around the shores of the Bay of Bengal and of the Arabian Sea, some of them from twenty to fifty miles long; they afford great facilities for a safe inland traffic along the coast-line, the violence of the monsoons, and the few sheltered harbours on the eastern coast of the Peninsula, rendering navigation perilous at all times and often impossible. On the E. coast of the Peninsula the Emore or Pulicat and Kolar lakes are the largest, and a large lagoon runs along the coast-line of the Travancore state. The lagoons of the coast of India are quite dissimilar from those of the coral islands. In the latter, the surf beating loud and heavy along the margin of the reef, presents a strange contrast to the prospect beyond,—the white coral beach, the massy foliage, and the embosomed lake, with its tiny islets. The colour of the coral lagoon water is often as blue as the ocean; although about fifteen or twenty fathoms deep, yet shades of green and yellow are intermingled where patches of sand or coral knolls are near the surface, and the green is a delicate apple shade, quite unlike the usual muddy tint of shallow waters. 'These garlands of verdure seem to stand on the brims of cups, Seven miles east of Clermont Tonnere, the lead ran out to eleven hundred and forty-five fathoms (six thousand eight hundred and seventy feet) without reaching bottom. Within three-quarters of a mile of the southern point of this island, the lead had another throw, and, after running out for a while, brought up for an instant at three hundred and fifty fathoms, and then dropped off again, and descended to six hundred fathoms without reaching bottom. The atoll lagoons are generally shallow, though in the larger islands sounding gave twenty to thirty-five, and even fifty and sixty fathoms.'

The lake of Kolar, in the Kistna and Godavery districts of Madras, is a marine lagoon. In the rains it is a fine lake; in the dry season a large part of the area is half mud. In the intervals of the dry and wet seasons it is a swamp. Naturally it abounds in fish and water-fowl, and in a very dry year the remains of old villages are to be seen, with large quantities of charcoal and charred beams. A succession of lagoons or backwaters,

connected by navigable canals, extends along the Malabar coast. The extreme length is nearly 200 miles from Changhat to Trivandrum; but between the latter place and Quilon there rises a high promontory of land about 6 miles in breadth, which is being cut through to make the line of water communication complete. The total area of these lakes is 227½ square miles in Travancore, Cochin, and British territory. A strip of land from seven to about half a mile wide separates these backwaters from the sea; but at Chetwai, Kodangalur, Cochin, Kagankulam, Iveka, and Paravur are outlets by which the rivers enter the sea. The whole commerce of the country is carried on these waters. Most of the boats are formed of a single teak, angely, or cotton tree, the trunk of which is hollowed out. The ordinary size is about 20 feet by 2½ feet. The boats for carrying rice to a distance are larger, and have a deck or roof.—*Gosse's Nat. Hist.* p. 94; *Cheever's Sandwich Islands.* See Coral; Polype.

LAGUNARIA PATERSONII, *B.M.* (Hibiscus Patersonii, *D.C.*), grows in Norfolk Island. It is the white oak or white wood tree, and grows to 16 or 20 feet high. It has a pretty appearance in a garden or shrubbery. Its wood is spongy, but is used for knees of boats.—*G. Bennett*, p. 343.

LAHAD. Arab. In Muhammadan sepulture the grave is dug as usual, and at the bottom, at one side, a niche called Lahad is made, into which the body is placed. Lahad-churna, lit. filling the grave, is a Muhammadan ceremony.—*Wils.*

LAHANGA. Hind. A Muhammadan woman's petticoat of silk or cotton.

LAHANZA. Hind. A green and blue dyed cloth of Lucknow.

LAHARI, also known as Lahori or Larry Bandar, stands on the Pitti branch of the Indus river. The delta of the Indus has varied in breadth from 60 to 90 miles from east to west, and the Pitti is only one of twenty or more channels leading to the ocean; the old or recent mouths of the river appear and disappear with the continuous changes of the main channel.

LAHARIYA, agricultural Brahmans in the North-Western Provinces of India.

LAHAURA-HA-NOCHE, a dialect spoken by the Kakar.

LAHEJ, a sovereignty on a large sandy plain north of Aden. It is watered by a hill torrent. Al-Howta is the only place meriting the name of a town. The population is chiefly agricultural, and consists of true Arabs,—Khadami, Hijri, and Muwalladi. The Khadami and Hijri are of African descent. The Muwalladi are a mixed race, the offspring of an Arab and a Sowahilee slave. Sorghum vulgare is the principal food plant, and of it they obtain two or three crops a year.—*Captain Prideaux, The Arab Tribes.*

LAHERA, about Benares, a tribe of earthenware varnishers. They also have donkeys, with which they carry house-building materials.

LAHM. Arab. The dried flesh of sharks, used by all the races in the S.E. coast of Arabia.

LAHN. Hind. Lees of wine added to the molasses to promote fermentation in distilling.

LAHNA. Hind. Species of Sueda used for camel fodder, also for soda burning.

LAHORE, a large city in the Panjab, in lat. 31° 34′ 5″ N., and long. 74° 21′ E., gives its name to a revenue district of that province. Its population in 1881 numbered 149,369, chiefly Muhammadans and Hindus, with a small number of Sikhs. Situated on the high road from Afghanistan, Lahore has been visited by every invader of India, from Alexander downwards. It long formed the centre of a democratic confederation, which successfully opposed the Muhammadan invasions. It next became the capital of the Ghazni rulers; later, it was the capital of the Moghuls, followed by Ranjit Singh, until the Panjab territory was annexed to the British Government on the 16th December 1845. Lahore was occupied by the British 22d February 1846, and the treaty of Lahore was dated 9th March 1846.

Lahore has been the capital of the Panjab for nearly 900 years. It is said to have been founded by Lava or Lo, son of Rama, after whom it was named Lohawar. Both Jai Pal and his son Anand Pal, the successive antagonists of Mahmud, are called rajas of Lahore by Ferishta. This Hindu dynasty was subverted in A.D. 1031, when Lahore became the residence of a Muhammadan governor under the king of Ghazni. Upwards of a century later, in A.D. 1152, when Bahram was driven from Ghazni by the Afghans of Ghor, his son Khusru established himself at Lahore. But this new kingdom lasted for only two generations, until A.D. 1186, when the sovereignty of the Ghaznavi was finally extinguished by the capture and imprisonment of Khusru Malik, the last of his race. Milton notices Lahore as one of the towns in the far east, when indicating the various nationalities, thus—

> 'From Samarchand by Oxus, Temir's throne,
> To Agra and Lahore of Great Mogul,
> Down to the Golden Chersonese,
> And utmost Indian Isle Taprobane.'

Lahore is surrounded by a wall which was 25 feet high, but it has been lowered to 16 feet. It has several gates.

The Jat form the leading agricultural community. Half of them follow Hinduism, and the other half are Muhammadans. Besides the usual numbers of bakers, barbers, blacksmiths, goldsmiths, carpenters, and washermen, etc., are to be seen the Akali, Arain, Arore, Bhabra, Bhat, Brahman, Changar, Dogar, Gil, Gilgo or Kumhar, Hujra or Bava, Jat, Kahar, Kalal, Kakazai, Kharol, Khatu, Kumbo, Labana, Mullah, Phailwan, Rajput, Sansi, Sikh, Mazhabi Sikh, and Sudh. The manufacture of armour—swords, guns, and the like—once had its grand centre at Lahore, but when the Sikh rule passed away, the demand ceased. The artisans went into the Gujerat and Gujranwalla districts, where they now, instead of Sikh armour, inlay caskets and studs, vases, paper-cutters, letter weights, and other fancy articles.

In the neighbourhood of Lahore are many large and delightful gardens; the fruit trees, flowering shrubs and plants, are, however, those common in Hindustan. About three miles north-east of Lahore is the once delightful garden of Shalimar. The marble tanks and fountains are still there. Jahangir erected the Khābgāh or sleeping palace, the Moti Masjid or pearl mosque, and the tomb of Anarkalli. The tomb of Anarkalli is a huge mausoleum. He was a favourite of Jahangir, but was seen to smile to one of the zanana, and was bricked up in a cell. Aurangzeb built the Jama Masjid. It has white marble domes and simple

minarets. During Jahangir's reign, the Sikh guru, Arjun Mall, compiler of the Adi Granth, died in prison at Lahore, and his humble shrine stands between the Moghul palace and the mausoleum of Ranjit Singh. Jahangir's mausoleum at Shahdarra is one of the chief architectural structures in Lahore. It is of red sandstone and marble, is very extensive and beautiful, with mosaics of a quadrangular form, and with a minaret 70 feet high at each corner. The tombs of Jahangir's wife, Nur Jahan, and of her brother, Asof Khan, have been stripped of their marble facings and coloured enamels by the Sikhs. The Saman Burj contains an exquisite pavilion, inlaid with flowers wrought in precious stones, which derives its name of the Naulakha from its original cost of 9 lakhs, together with the Shesh Mahal. Ranjit Singh's mausoleum is a mixed work of Hindu and Muhammadan architecture. The mosque of Aurangzeb, with its plain white marble domes and simple minarets, the mausoleum of Ranjit Singh, with its rounded roof and projecting balconies, and the desecrated façade of the Moghul palace, stand side by side in front of an open grassy plain, exhibiting one of the grandest coups-d'œil to be seen in India.—*Cunningham's India; Masson's Journeys; Cunningham's Panjab; Powell's Handbook; Adams; Imp. Gaz.*

LAHOUL or Lahul is a subdivision of Kangra district, Panjab, lying between lat. 32° 8′ and 32° 59′ N., and long. 76° 49′ and 77° 46′ 30″ E., and comprising the valley between the Chamba mountains on the north-west and the Kanzam range on the south-east. Area, 2199 sq. miles. It is bounded on the north-west by Chamba, on the north-east by the Rupshu subdivision of Ladakh, on the south-west by Kangra and Kulu, and on the south-east by Spiti. At Tandi the sister streams Chandra and Bhaga unite to form the great river Chenab, which flows immediately into Chamba on its way to the Panjab plain. The Kanet, who form the mass of the population, have a mixed Indian and Mongolian origin. The thakurs form the gentry of the valley, which ruled until a recent period. They are pure Bhotiyas or Tibetans by blood, but affect a Rajput ancestry. The people are Buddhist, but have castes, and abstain from beef. Numerous monasteries stud the hills, the largest being that of Guru Gantal, at the point of confluence of the Chandra and Bhaga. Polyandry is customary. The Lahuli bear a good character as peaceable and honest mountaineers, but are much addicted to drunkenness and unchastity.

The Lahouli are a totally distinct race from the people of Kulu or the Chamba Guddi range. The Lahouli are a short, sturdy set of men, very ugly, and filthily dirty. The women are decidedly plain. The costume of both sexes consists of a pair of loose woollen drawers, with a frock of the same material, whilst a wrapper is also often wound around the body, being thrown over the shoulder, and fastened by a brass clasp in front. Their dress, generally of a black colour, is of a kind of plaid, and their caps are of the same. The women wear their hair either in long plaits fastened at the back of the head with a profusion of red wool and coloured threads, or comb it back off the forehead, tying it in a lump behind, and adorning it in a similar manner. Around the flat circular caps are strung large white shells like cowries, glass beads, and pieces of amber. Around their neck both men and women wear amulets of mother-of-pearl, pieces of amber, turquoises, and other precious stones. Each man has hanging to his belt a tinder pouch and a brass instrument for striking fire, with many other nondescript implements. They spend six months of each year in Kulu on account of the severity of the winter season in Lahoul. The greater part of that time they pass in dancing and drinking. On their jubilees they set off fireworks, and make a tremendous noise, whilst the women dance. These exhibitions do not terminate until they are all too drunk to continue them. The tree which gives character to the district is Juniperus excelsa or pencil cedar, the Shukpa of Lahoul, and Lewar of Kanawar. It forms small forests, especially on the southern slope of the hills, at an elevation of 9000 to 12,000 feet.—*Mrs. Hervey's Tartary; Powell's Handbook; Hooker and Thomson's Fl. Ind.; Cleghorn, Panj. Rep.; Thomson's Travels; Jacquemont's Tr.; Imp. Gaz.*

LAIIOUL i o la kouti illa ba illah il ali o il azeem, No repentance, virtue, or power except by God the high and the great,—a Muhammadan invocation.

LAHW-ul-MAHFUZ, in Muhammadan belief, is that tablet on which the Koran was written. Imam-ul-Mubin, the clear prototype, is the tablet on which the actions of men are written.

LAILAH. ARAB. A night.

Alif-Lailah-o-Lailah, the Thousand and One Nights, the Arabian Nights.

Lailat-ul-Juhni, the 23d night of the month Ramazan, esteemed fortunate for those who pray.

Lailat-ul-Kadr, the night of power or of the divine decrees. On this night the Koran is said to have been sent down to Mahomed. Moreover, the gate of heaven being then opened, prayer is held to be certain of success. The Lailat-ul-Kadr occurs on one of the last ten nights of Ramadan, generally supposed to be the 27th of the month, not, as supposed by Sale, between the 23d and 24th.

Ramazan, in Egypt, Arabia, and Turkey, pronounced Ramadan, is the 9th month of the Muhammadan year, during which Mahomed enjoined a rigid fast from sunrise till the appearance of the stars, and abstaining from all conjugal duty, the sick, the traveller, the soldier in the field, and others, being obliged to fast a complete month when their health and circumstances allow. Most Muhammadans regard the night of the 27th of this month as the Lailat-ul-Kadr or night of power; they believe that the Koran began to descend from heaven. They continue through the night fervently in prayer, believing that the petitions then made to the Omnipotent will be favourably received.

Lailat-ul-Miaraj, ARAB., the night of Mahomed's ascent to heaven, observed as an annual festival by devout Muhammadans on the 15th, 16th, or 27th of the month Rajab.

Lailat-ul-Mubarak, the blessed night.

Lail-wa-Nahār, night and day.

LAILAN-SHAH, supposed to be the same with Pururava or Aila, and with Ninus and Nilan.

LA ILLAHA IL LULLAHO Muhammad-ur-Rasul Ullahay, There is no deity except God, and Muhammad is the prophet (or messenger)

of God. This is the first part of the Muhammadan creed; but the same words occur in the Muhammadan azan or call to prayers, viz. Allah-ho-Akbar! Allah-ho-Akbar! Ush-ud-do-un, la-il-la-ha, il-ul-la-ho; Ush-ud-do-un, la-il-la-ha, il-ul-la-ho. O Ush-ud-do-un, Muhammad-ur-Rasul Ullahay, Hy-ul-us-salwat! Hy-ul-us-salwat. Hy-ul-ul-fullah! Hy-ul-ul-fallah. Us-sul-la-to Khair-un-min-nun-nowm. Allah-ho-Akbar! Allah-ho-Akbar! La-illa-ha illul-la-ho! The translation of this azan by which the Muhammadan muazzan, five times daily, calls Muhammadans to prayers, is, God is great! God is great! I bear witness there is no other deity but God; I bear witness there is no other deity but God, and I bear witness that Muhammad is the prophet of God. Come, enliven your prayers; Come, enliven your prayers. Come for refuge to the asylum; Come for refuge to the asylum. Prayer is preferable to sleep; Prayer is preferable to sleep. God is great; God is great. There is no deity but God.

Prayer is better than sleep is only added to the morning call, and not repeated in the other four summons.

LAING, SAMUEL, a member of Parliament, succeeded, in 1861, on Mr. Wilson's death, to the office of Finance Minister in India, and Indian history should not utter his name without praise. Possessed of vast abilities, a home-bred fundamental knowledge of finance, cautious in manner, and ready in argument and writing, he gave great satisfaction in India, but Sir Charles Wood's letters induced him to resign. By submission, Mr. Laing might have served India longer; but by independence he really served it most.—*Thurlow*, p. 19.

LAIRI. Hind. An inferior ruby or garnet, or even pink topaz or amethyst.

LAJAR BASTRO. Beng. Literally a garment of modesty, a silk cloth spread over the heads of a betrothed couple.

LAKA, a dye of Sumatra, said to be from Tanarius major, *Rumph.*

LAKADONG, a village in the Jaintia Hills, on a small plateau, 2350 feet above the sea, around which coal was discovered in 1843, and has been profitably worked since then.

LAKALO, a silver ingot used in large payments by the Bhot.

LAKE, EDWARD, author of Journals of the Sieges of the Madras Army in the years 1817, 1818, and 1819, with a volume of plates.

LAKE. Lord Lake, a British officer, born 1772. He was commanding-in-chief in India. He commanded the grand army, 10,500 strong, in the Mahratta war of 1803. On the 30th August 1803 he defeated the troops of Sindia under General Perron, at Alighur, and on the 4th September he stormed and carried the fort. On the 11th September he fought the battle of Dehli, and released the emperor Shah Alam, whose eyes had been put out by Ghulam Kadar, and who had been, since 1771, a prisoner of the Mahrattas. He took Agra on the 18th October 1803; on the 31st October he fought the battle of Laswari, and he took Deeg on the morning of the 24th December 1804. He defeated Holkar at Farrakhabad, 17th November 1804. He failed before Bhurtpur in 1805. He was created a viscount 4th November 1807. His British and native troops put down the Mahratta armies, showing themselves more perfect than the enemy in Parthian forms of warfare.

LAKES.

Tal, Cho, T'so, . . Bhot.	Jhil, ... Hind.
Ing, ... Burm.	Danau, Tasek, . Malay.

Throughout British India there are few natural lakes, most of them only fit for purposes of irrigation; the largest natural waters in the country are equalled, and in many cases surpassed, by the magnificent tanks which have been formed in several places by throwing embankments across great valleys. Valuable marine lagoons or backwaters, however, occur along all the eastern and western coasts of the Peninsula of India, and there are large jhils near the river banks of the Ganges and Brahmaputra. For the most part they are not very deep, and their surface is very variable. Artificial lakes or tanks are numerous throughout the country, and testify the importance attached to them by the natives. In the Himalaya, also, there are but very few lakes. The Vullar lake in Kashmir (5126 feet), and the Chinar lake, near Srinuggur, at about the same height, suffice to exhaust the category of those deserving mention. Of those in Kamaon, Naini Tal is 6409 feet (6520?) above the sea, and has a circumference of 2¼ miles. Bhim Tal is 4500 feet; Nankuchiya is 4000 feet; and Malwa Tal, 3400. In September 1880, a landslip at Naini Tal destroyed many Europeans and natives.

Glacier lakes, which are accumulations of water formed by one glacier obstructing the outlet of a higher one, are of frequent formation. At times the wall of ice breaks away before the pressure of the swollen waters, when the lower lands become suddenly inundated, and the torrent rushes on with uninterrupted violence for miles, exercising a marked influence even down to the lower parts of the rivers. Two of the most elevated glacier lakes known are the Deo Tal, in Garhwal (17,745 feet), and the Namtso or Yunam, in Lahul (15,570 feet). The following are lakes of Western Tibet and Turkestan:—

Aksae Chin, .	16,620 ft.	Tso Moriri, .	15,130 ft.
Tso Gyagar, .	15,693 ,,	Nima Kar, .	15,100 ,,
Tso Kar, or Khauri Talau,	15,684	Hanle, . . .	14,600 ,,
		Tso Gam, . .	14,580 ,,
Mure Tso, . .	15,517	Tso Rul, . . .	14,400 ,,
Kiuk Kiol, . .	15,460	Tso Mitbal, . .	14,167 ,,
Mansaraur, or Tso Mapan, .	15,250 ,,	Upper Tsomognalari, . . .	14,050
Rakus Tal, or Tso Lanag, .	15,250 ,,	Lower Tsomognalari, . . .	14,010

Nearly all the trans-Himalaya lakes seem to contain salts of various description.

Ab-Istada, literally standing water, between Hamoon and the Kabul river, is a receptacle for the waters of Afghanistan. It varies greatly in size at different seasons.

Aral Lake is in the western part of Central Asia. Its surface is 117 feet higher than the Caspian.

Ala-Kul and *Balkhash Lakes* probably at no distant period formed one common water basin, and during spring inundations, Ala-Kul, according to the testimony of the Kirghiz, communicates indirectly with that of Balkhash by a marshy, saline belt of land. This belt forms, in Mr. Semenof's opinion, the natural boundary of the Kirghiz steppe, beyond which Central Asia commences, together with a new soil and new flora and fauna.

Baikal Lake, in Mongolia, is an expansion of the Angura river. Its length is nearly 400 miles (according to Bell, 300 miles), with 45 miles of average breadth from north to south. It has steamboats plying on it. Its seal and sturgeon fisheries are valuable, and also the oil of the fish called the golomynka, the Callionymus Baicalensis. Mountains encompass the lake entirely. The river Selingue falls into it from the S.W., and here the lake is about 50 miles broad; the Pacur-ku-simo from the S.E., and the Gong-ko-la (Upper Angura) from the N.E. Towards the N.E. end of the lake is an island called Oleao-han (Olchon), about 50 li in breadth, and 200 or more in length. This island is frequented by families of the wandering tribes of the Mongols and the Pu-la-te (Buraty of Bell), and they bring hither with them their horses. Baikal lake is 1715 feet above the level of the sea; Selinghinsk, 1779 feet; and Kiakhta, 2400 feet. A fish called omully, in shape and taste resembling a herring, but broader and larger, comes in vast shoals from the Baikal, in autumn, up the river Selingue to spawn. These fish advance up the river about 10 miles a day, and the people catch as many as they need either for present use or winter provisions.

Dobsoon-noor, or the Salt Lake, is celebrated over all the west of Mongolia. It furnishes salt, not only to the neighbouring Tartars, but to several provinces of the Chinese empire. The Dobsoon-noor is less a lake than a vast reservoir of mineral salt mixed with nitrous efflorescence. The latter is of a faint white, and friable between the fingers; it is easily distinguishable from the salt, which is of a greyish tint, and with a shining and crystalline fracture. The lake is nearly 10 miles in circumference, and here and there are yourtes inhabited by the Mongols, who are occupied with the salt trade; they have also Chinese partners, for Chinese take part in every kind of trade or industry. The manipulation to which the salt is subjected requires little labour or science. It consists of nothing more than picking up the pieces, laying them in heaps, and covering them with potter's clay, and the salt sufficiently purifies itself.

Lake Fife, an artificial lake formed by throwing a dam across the Mutha river, 10 miles from Poona.

Mareotis Lake, to the westward and southward of Alexandria, in N.E. Africa, is about 150 miles in circumference. According to Strabo, in B.C. 223, when Alexandria was founded, it was a lake filled by several canals from the Nile, and kept full for the purposes of navigation. In the time of Pliny it was a marsh; but at the close of the 18th century it was dry land with 300 villages, and was said to have been the most fertile portion of the Delta. From the necessities of war, the barrier was then cut through, and the sea admitted, since which time it has formed a lagoon, diluted by the Nile at the periods of flood.

Munchur Lake, in Sind, extends from the foot of the hills in the north, and is lost on the low lands to the eastward. When swollen by the inundation of the Indus, it is an enormous expanse of water, about 20 miles long and 10 miles broad, and covering an area probably of about 180 square miles. It has been described by Orlebar, Postans, and Knight.

Pulicat Lake is a marine lagoon, skirting the Bay of Bengal, north of Madras, in the Nellore collectorate.

Kunkeraoli Lake, also called the Rajsamund, is a great national work, 25 miles north of Udaipur, the capital of Mewar, and is situated on the declivity of the plain about 2 miles from the base of the Aravalli. A small perennial stream, called the Gumti or 'serpentine,' flowing from these mountains, was arrested in its course, and confined by an immense embankment, made to form the lake called after himself, Rajsamund, or 'royal sea.' The bund or dam forms an irregular segment of a circle, embracing an extent of nearly 3 miles, and encircling the waters on every side except the space between the north-west and north-east points. This barrier, which confines a sheet of water of great depth, about 12 miles in circumference, is entirely of white marble, with a flight of steps of the same material throughout this extent, from the summit to the water's edge; the whole buttressed by an enormous rampart of earth, which, had the projector lived, would have been planted with trees to form a promenade. On the south side are the town and fortress built by the rana, and bearing his name, Rajnuggur; and upon the embankment stands the temple of Kunkeraoli, the shrine of one of the seven forms (sarup) of Krishna. The whole is ornamented with sculpture of tolerable execution for the age, and a genealogical sketch of the founder's family is inscribed in conspicuous characters. £1,150,000 sterling, contributed by the rana, his chiefs and opulent subjects, was expended on this work, of which the material was from the adjacent quarries. But, magnificent, costly, and useful as it is, it derives its chief beauty from the benevolent motive to which it owes its birth,—to alleviate the miseries of a starving population, and make their employment conducive to national benefit during one of those awful visitations of providence. Kirit Sagar and Madan Sagar are ancient artificial lakes, near the town of Mahoba.

Sambhar Salt Lake, in lat. 26° 53′ N., and long. 73° 57′ E., is 20 miles long and 1¼ broad.

Taroba, a lake of the Central Provinces, 14 miles E. of Segaon.

Colair Lake is a marine lagoon in the Northern Circars of Madras Presidency.

Lake Debur is in Udaipur.

Lonar Lake, about 2 miles in circumference, is a body of water low down in the crater of an extinct volcano. It is among the Shiel Hills in the Dekhan, in lat. 20° N., and long. 76° 30′ E. It yields carbonate and muriate of soda.

Oodi-Sagur Lake. The Bairis river issues from the Oodi-Sagur lake of Rajputana, and passes within a mile of Chitore. Here are two grand reservoirs within 6 miles of each other, viz. the Peshola, or internal lake, having an elevation of 80 feet above the external one; and the Oodi-Sagur, whose outlet forms the Bairis. The Peshola may be called the parent of the other, although it is partly fed by the minor lake at the villa of Suhailea-ki-bari. Both are from 12 to 14 miles in circumference, in some places 35 feet deep, and, being fed by the perennial streams from the Aravalli, they contain a constant supply of water. From the external lake to Chitore, the fall is so slight that few locks would be required; and the soil being a yielding one

throughout, the expense of the undertaking would be moderate.

Ooroomiah Lake is 100 miles long by 30 broad. Several large towns are in the immediate vicinity of the lake, as Tabreez, with a population of 100,000, and Ooroomiah, with 40,000.

Pangong Lakes in Tibet are a series east of Noh. Lake Tengrinor or Namchu is 15,000 or 16,000 feet above the sea. Dangra-Yum-Cho is 45 miles long and 25 miles broad; and Kyaring-cho, 40 miles by 8 to 12 broad.

Tso Gam, in Eastern Ladakh, in Tibet, is a salt lake, 14,580 feet above the sea, and in lat. 33° 10′ N., and long. 78° 34′ E.

Manasarowara, or Tso Mapan, is a salt lake, lat. 30° 8′ N., long. 81° 53′ E., in Gnari Khorsum, about 15,250 feet above the sea.

Tso Mitbal, in Pangkong, in Tibet, is a salt lake, in lat. 33° 25′ N., and long. 78° 40′ E., and is 14,167 feet above the sea.

Tso Moynalari, in Pangkong, in Western Tibet, is a salt lake, in lat. 33° 39′ 48″ N., and long. 78° 38′ 30″ E., and 14,010 feet above the sea. It is about 120 miles long from E. to W.

Tso Moriri, in Rupchu, in Western Tibet, is in lat. 32° 45′ 24″ N., and long. 78° 16′ 36″ E., and 15,130 feet above the sea.

Lake Van is 4000 feet above the sea-level, and has an area of 1200 square miles.

Chonto Dong Lake, in Tibet, is 20 miles long and 16 broad, and is 14,700 feet above the sea.

Issyk-Kul Lake is amongst the mountains bordering between Central Asia and China.

Kashmir Lake is near the capital. Its shores have an unrivalled loveliness. The gardens on the northern aspect have been there from the time of Jahangir, and to the south is the Takht-i-Suliman, with the fort of Srinuggur on its summit. The lake is everywhere shallow, its water of a brilliant blue colour and great purity, with numerous long water plants and grasses waving beneath the surface, and on its surface are numerous rahd or floating gardens, consisting of wood rafts fixed by poles and covered with earth, and cultivated with flowers.

Yamdok-cho is the famous ring lake of Palti, shown on D'Anville's map. Pandit Nain Singh, C.I.E., who visited it in 1866, reported the water to be perfectly fresh. He was told by a man who had made the circuit of the lake for 'neko' (that is, the making a journey for cleansing from sin and sloth), that the circuit of the lake took 15 days. The lake may be put down as having a circumference of 100 miles. The great iron chain bridge over the Sanpo river, between the Yamdok-cho and Lhassa, is called Chazumtuka, the small monastery at the south entrance to the bridge is called Chazumchori. The bridge is formed of four iron chains, two on each side. From the chains are suspenders of rope carrying the footway, which only allows of one passenger crossing at a time. During the rains the bridge is not in use on account of its northern end being separated from the shore by a wide stretch of water; then the river is crossed in boats. The neighbouring villages support the monastery and maintain the bridge as payment of their revenue. The chains are stretched very tight, and are fastened off by wrapping round huge bollards of wood built into the masonry of the piers. The width between the piers is 300 paces. The chains are formed of loops of iron a foot long, the diameter of the iron rod forming the loops is only one inch.

Yunnan-fu Lake, in China, is 6380 feet above the sea.—*Buist's Catalogue; Col. Dixon; Lond. As. Trans.* iii. 181; *As. Journ.* xvii. 372; *Tod's Rajasthan*, i. 389, ii. 627; *Russians in Central Asia; Capt. Valikhanof and M. Vemukof; Strachey.*

LAKH. HIND. A hundred thousand, a vaguely great number; a multitude, as expressed by our word millions, is expressed by the Hindi term lakh-kror. The Tibetans, to express a multitude, use 84,000; khrag-khrig, a hundred thousand millions; the Chinese, wan, or 10,000.

LAKH. HIND. Lac, adopted from the word lakh, a hundred thousand, from the multitude of insects that congregate together. It is sold in the form of chapra-lakh, shell-lac, fused-lac, dana or seed-lac, and kham-lac or lac gathered in a crude state. Lakhi, HIND., a leather dyed red with lakh at Nurpur, etc.

LAKHA, by assassination, mounted the throne of Chitore in S. 1439 (A.D. 1373). His first success was the entire subjugation of the mountainous region of Mairwara, and the destruction of its chief stronghold, Beratgarh, where he erected Bedpore. Lakha rana has the merit of having first worked the tin and silver mines of Jawura, in the tract wrested by Khaitsi from the Bhils of Chuppun. It is said the 'seven metals (haft-dhat)' were formerly abundant; but this appears figurative. There is no evidence for the gold, though silver, tin, copper, lead, and antimony were yielded in abundance (the first two from the same matrix), but the tin that has been extracted for many years past yields but a small portion of silver. Lakha rana defeated the Sankla Rajputs of Nagarchal, at Amber.—*Rajasthan*, i. p. 274.

LAKHIMPUR, a British district of 11,500 square miles, occupying the extreme eastern portion of the province of Assam; situated on both banks of the Brahmaputra, and lying between lat. 26° 51′ and 27° 54′ N., and between long. 93° 49′ and 96° 4′ E. The district is bounded north by the Daphla, Miri, Abor, and Mishmi Hills; east by the Mishmi and Singpho Hills; south by the watershed of the Patkai range and the Lohit branch of the Brahmaputra; west by the districts of Darrang and Sibsagar, the latter district being separated by the Maramornai river. The Brahmaputra flows through the district for a distance of 400 miles. As far as Dibrugarh it is navigable.

The most numerous tribe is the Ahom, the former rulers of the country. Next come the kindred Chutias, the Doms, a tribe of peculiar exclusiveness in Assam, and the Koc'chs. There are tribes of Shan descent, who have forced their way across the hills from the south, represented by the Khamti and Singpho; a group of Indo-Chinese origin, comprising the Mishmi, Abor, Miri, Daphla, and Aka, who occupy the slopes and spurs of the Himalayas along the north of the district. The cultivation and manufacture of tea is conducted by European capital and under European supervision.—*Imp. Gaz.*

LA-KHIRAJ. ARAB. Rent-free land, free from rent or public taxes.

LAKHNOUTI is the city of Gaur, called by Humayun, Jannatabad, and supposed by some to be the Gangia Regia of Ptolemy. It stood on the left bank of the Ganges, about 25 miles below Rajmahal.—*Cal. Rev.*, 1871; *Rennell*, p. 55.

LAKSHMANA, son of king Dasaratha by his wife Su-Mita. He was twin-brother of Satrughua, and the half-brother and especial friend of Rama Chandra.

LAKSHMI, the Hindu goddess of prosperity, is called also Sri, Padma, Hira, Indira, Jaladhi-ja (ocean born), Chanchala or Lola (the fickle, as goddess of fortune), Loka-mata, mother of the world, and other names, which are mentioned below. There are several legends as to her origin. The Taittiriya Sanhita describes Lakshmi and Sri as two wives of Aditya. The Satapatha Brahmana describes Sri as issuing forth from Prajapati. The Ramayana legend makes her spring from the froth of the ocean, like Aphrodite, in full beauty, with a lotus in her hand, when it was churned by the Asuras and the gods, hence called Kshirabdhi-tanaya, daughter of the sea of milk. According to the Puranas, she was the daughter of Bhrigu and Khyate, and she was the wife of Rama in all his incarnations. These legends are all comparatively modern, for though in the Rig Veda the word Lakshmi occurs, it is not as a goddess personifying good fortune, though in a kindred signification.

As the consort or sakti of Vishnu, she is painted yellow, sitting on the lotus or water-lily, and holding in her hand sometimes the kamala or lotus, at others the shell, or the club of Vishnu. At her birth she was so beautiful that all the gods became enamoured of her, but Vishnu at length obtained her. She is the Hindu-Ceres, or goddess of abundance; Sri or Sris, goddess of prosperity. She is called Padma or Kamala, from the lotus or nymphæa being sacred to her; also Varahi (as the energy of Vishnu in the Varaha avatar); Ada Maya, the mother of the world; Narayani, Vidguani, etc. She is described as the daughter of Bhrigu; but in consequence of the curse of Durvasa upon Indra, she abandoned the three worlds, and concealed herself in the sea of milk, so that the earth no longer enjoyed the blessing of abundance and prosperity. She is said to have been born from the churning of the ocean, rising from the waters radiant with beauty.

> 'Queen of the gods, she leapt to land,
> A lotus in her perfect hand;
> And fondly, of the lotus sprung,
> To lotus-bearing Vishnu clung.
> Her, gods above and men below,
> As beauty's queen and fortune know.'

One of her names by Amara Sinha is Kshirabdhi-tanaya, daughter of the milky sea. When as Rembha, the sea-born goddess of beauty, she sprang as one of the fourteen gems from the ocean, she then assumes the character of the Venus Aphrodites of the Greeks, who, as Hesiod and Homer sing, arose from the sea, ascended to Olympus, and captivated all the gods.

The followers of Vishnu esteem Lakshmi as the mother of the world, and then call her Ada Maya; and such Vaishnavas as are saktas, that is, adorers of the female energy or nature active, worship her exclusively as the symbol of the Eternal Being.

The name of this goddess is given to the last stalks of grain which the Hindus, as the Scotch, carry home from the field and preserve until next harvest; and with all who desire that prosperity attend their Lakshmi, of whom the Roman prototype is Ceres, it receives their adoration.

In the Belgaum province, until the early part of the 19th century, Maha Lakshmi was regarded as the goddess on whom the productiveness of the land depended, and every twelfth year a great Jatra was held in her honour, at which buffaloes, goats, and fowls were sacrificed, and their blood mixed with boiled rice, a portion of which was sprinkled over every field to secure its fertility. The Dher killed the buffalo, but the Patels sacrificed the smaller animals.

The Mahratta cultivators are still attentive to her worship, and when the rabi crops are well above the ground, they proceed to their fields, where they place five stones around a tree, on which they set spots of vermilion and some wheaten flour; they worship these as the Panch-Pandu. In the evening they take a few stalks of sorghum, with a lamp surrounded by a cloth, to their homes, which they regard as their Lakshmi. It is an interesting sight to see the wives of the cultivators each returning to her home with her lit-up basket of sorghum. The ceremonial is performed on the 28th day of the moon, Amas, which in 1867 fell on Christmas day. The Hindus have other things which they adopt as their Lakshmi, or luck-token. One that is greatly valued is rarely obtained. Snakes when in congress rise upright almost on the tips of their tails, and a Hindu will touch them with a handkerchief, which he carefully preserves at home.

In Rajputana, in one festival, Lakshmi is depicted by the type of riches, evidently the beneficent Ana Purna in another garb, and the agricultural community place a corn-measure, filled with grain and adorned with flowers, as her representative; or if they adorn her effigies, they are those of Padma, the water-nymph, with a lotus in one hand and the pashu (or fillet for the head) in the other. As Lakshmi was produced at 'the churning of the ocean,' and hence called one of the fourteen gems, she is confounded with Rembha, chief of the Apsara, the Venus of the Hindus. Though both were created from the froth (sara) of the waters (ap or up), they are as distinct as the representations of riches and beauty can be. Lakshmi became the wife of Vishnu or Kaniya, and is represented at the feet of his marine couch when he is floating on the chaotic waters.

In some parts of Northern India, Lakshmi is a personification of the luni-solar year, in the same manner as Durga is that of the solar one; but this allegory is rejected by the pandits of the Karnatic, who likewise deny that she lends occasionally her name to the moon, and even to Jupiter. Amongst the Rajputs, Gouri seems to be the analogue of Ceres, and the festival of the Ahairea or Muhurat ka Shikar—the slaying of the wild boar—is in honour of Gouri or Ceres.

Lakshmi has no temples, but, being goddess of abundance and good fortune, she is assiduously courted, and is not likely to fall into neglect. She is worshipped on the full moon of Aswin (September—October), by bankers and merchants especially. A ceremony in her honour is performed by a bride and bridegroom when the bride has been brought to her husband's house.

Gaja-Lakshmi, in the Kailasa temple at Ellora, is represented with a lotus in her hand, and four attendant elephants, who are pouring water over her. Like Aphrodite, she sprang from the froth of the ocean (when it was churned), in full

beauty, with a lotus in her hand.—*Fergusson and Burgess*, p. 458; *W.*

LAKSHMI DEVI, a learned woman, who wrote the Vivada Chandra, a law book of the Benares school.

LAKSHMI-VRICSHA, in Hindu mythology, a tree of gold, produced from the churning of the ocean.

LA LA or Lalla. 'PERS. A clerk, a writer, a copyist; also used as an address, equal to Mr., Sir, as Lala-ji. It is added to the names of the Kayasth race of clerks and accountants, and is allowed to the race generally as an honorary designation. It is also the form of address to Hindu schoolmasters.—*W.*

LALA-KHU, literally tulip disposition; in Baluchistan, an expression of endearment, synonymous with darling, pet, etc. Lala-Rukh, tulip checked, frequently used in Persian poetry. Khakani prettily says—

> 'Lala rūkhā, saman barā, sarv-i-rawān ki-esti?
> Sang dilā, sitam-garā, afat-i-jān ki-esti?'

LALAM or Lalmi. PUKHTO. Land dependent on rain for its cultivation.

LAL BAGH. HIND., PERS. Ruby garden, a country house or pleasure garden. Many of the Muhammadan rulers of India had such gardens; there is one at Ahmadnaggur and another at Bangalore.

LAL-BEG, a designation of the Muhammadan sweepers.

LAL DAS, a Meo of Ulwar, who lived S. 1597, A.D. 1540. He founded the Lal Dasi sect of monotheists. He lived for many years at Dhaoli Dhub, and at Bandoli, and at Todi in Gurgaon. He had a son and a daughter; one infant son was buried at Bandoli. He died A.D. 1618?

LAL-GURU, the familiar name of the rakshasha Aronakarat, worshipped by the Bhangi race of Northern India.

LALI or Leli, a tribe who inhabit the high glens on the north side of the Safed Koh range.

LALITADITYA, a celebrated king of Kashmir, who took the city of Kanouj, carried his conquests to the far south, and returned by Dwaraka or Gujerat and the Western Sea.

LALITA-VISTARA, a legendary life of Buddha, compiled 1400 years after he died. It is one of the most popular books of the Buddhists, and is part of the Buddhist canon. It describes the four drives of Buddha. His coachman was Chandaka (Sanan, BURM.). It was translated by Foucaud, and printed in the Bibliotheca Indica. See Joannes Damascenus.

LALITPUR, a British district in the Lieutenant-Governorship of the North-Western Provinces, lying between lat. 24° 9′ 30″ and 25° 14′ N., and between long. 78° 12′ 20″ and 79° 2′ 15″ E. Area, 1947 square miles; pop. in 1872, 212,661 persons. Lalitpur is the southern district of the Jhansi division. The earliest inhabitants of Lalitpur whom tradition commemorates were the aboriginal tribe of Gonds. At present the more numerous tribes are Chamar, Lodh., Kach'hi, Ahir, and Gond; about 10,000 Sahariyas, scattered all over the district in the thickly-wooded tracts. The latter are a very degraded type of humanity, subsisting till lately on the produce of the jungle, and popularly described as more like monkeys than men.—*Imp. Gaz.*

LALLEMANTIA IBERICA is the Gundschit Sivah of Kerman. It is grown from Suria to N. Persia, and attains a height of 1½ to 2½ feet. A plant will give 2500 seeds, from which a pure oil is obtained, suitable for culinary purposes.

LALLY. Count Lally Tollendal, a French officer, arrived in India in 1758 as commander-in-chief in the French possessions. His father was Sir Gerard O'Lally, an Irishman, who, having defended Limerick, took service with the French. He formed the Irish Brigade, and his son Thomas Arthur, at the age of one (1702) was a private in the French army, and at the age of forty-three (1745), at Fontenoy, his charge and that of his brigade, the command of which he had inherited from a grand-uncle, Count Dillon, decided the day, which had been won by the stolid, immoveable English advance. Lally served in Russia with credit, and under Marshal Saxe, who regarded him as a future Marechal de France, and on the 31st December 1756, when 54, he was appointed commander-in-chief of the French possessions in the east; he was in the vigour of his powers, and a perfect disciplinarian; but he at once reversed the policy of Dupleix, whose whole policy had been a policy of conciliation. But with Lally, Brahmans were compelled to carry the loads their caste forbade them to touch, and were yoked with the Pariah and Sudra to draw carts. When de Leyrit and the Council remonstrated, they were treated as accomplices who had been bribed. When before Madras his officers shrank from an assault out of hate for him, and at last, deserted by his fleet, with a mutiny in his army, and an object of active hatred to every officer under his command, he was compelled to raise Bussy to the active command. After the battle of Wandiwash, in which Colonel, afterwards Sir, Eyre Coote, totally defeated him, he was compelled, with mutinous troops and hostile population, to defend Pondicherry. But all resources having been exhausted, and having but four ounces of rice left for distribution to each soldier, he was compelled to surrender at discretion (16th January 1761). The inhabitants had subsisted for a long time upon their elephants, horses, camels, etc.; a dog sold for 24 rupees. He returned to France, and, on an investigation, was condemned on two charges,—insolence to his majesty's other officers, which was true, treason to his majesty, which was false,—was taken in a dungeart to his execution, and died exclaiming, 'Tell my judges that God has given me grace to pardon them; if I were to see them again, I might no longer have the forbearance to do it.'—*The Career of Count Lally, a Lecture by Major G. B. Malleson, Calcutta.*

LAL MITTEE, HIND., red earth, is a term applied to ordinary soil and to murum; murum being a term indiscriminately applied to decomposing trap, soft, sedimentary rock, or anything which is too hard for agricultural, and too soft for building purposes. Red earth is found lying immediately over greenstone, or some similar variety of friable trap.—*Carter's Geolog. Papers*, p. 185.

LAL SHAHBAZ, a Muhammadan saint, whose shrine at Sehwan is a place of pilgrimage. His tomb is enclosed in a quadrangular edifice, covered with a dome and lantern, said to have been built A.D. 1356. It has beautiful encaustic tiles, with Arabic inscriptions. Mirza Jani of the

Tarkhan dynasty, A.D. 1639, built a still larger tomb to this saint. A gate and balustrade of hammered silver was added to it by Mir Karam Ali Khan Talpur, who also crowned the domes with silver spires.

LAMA, correctly b'lama, is the Tibetan word for a superior, and applied to monks. The Dalai Lama, literally ocean superior, is the highest in rank of the Tibetan Lamas. He resides at Yulsung or Lhassa. He is viewed as an incarnation of the Dlyano Bodhi-satwa Chenresi, who is supposed to effect his re-embodiment by a beam of light which issues from his body and enters the individual whom he selects for his re-descent. The honorific title of Lama (b'lama) strictly belongs only to the superiors of convents, but is applied also to ordained priests. The Tibetan priests are ordained to celibacy; but as they live under the same roof with nuns, this prohibition is probably not followed out. The Khanpo is a head Lama, and these are the superiors of the larger monasteries. The Dalai Lamas are selected by the clergy, but, since 1792, the Chinese Government influences the election, to obtain the sons of families known for their loyalty. In Bhutan the Khanpo have made themselves almost independent of the Dalai Lamas, and the ruler of Bhutan, the Dharma Rinpoche or Dharma raja, yields but a loose obedience. Lamas are very numerous at Lhassa and its vicinity; Dr. Campbell gives a list of 12 principal monasteries, inhabited by a total of 18,500 Lamas. In Ladakh there are about 12,000 Lamas in a population of 158,000. There has been some misapprehension regarding the Buddha and Bodhi-satwa, the regeneration of the Grand Lama being considered by some as an exceptional case of a Buddha returning amongst mankind. Mr. Hodgson (pp. 137, 138) truly calls the divine Lamas of Tibet, Arhanta, but he believes that a very gross superstition has wrested the just notion of the character to its own use, and so created the immortal mortals, or present palpable divinities of Tibet. Fra Orazio says that 'Lama sempre sara coll' istessa anima del medesime (jany-c' iub) oppure in altri corpi.' Remusat was not aware of this fact when he stated, 'Les Lamas du Tibet se considerent eux-mêmes comme autant de divinités (Bouddhas) incarnées pour le salut des hommes.' But the explanation which Major Cunningham received in Ladakh, which is the same as that obtained by Fra Orazio in Lhassa, is simple and convincing. The Grand Lama is only a regenerated Bod'hi-satwa, who refrains from accepting Buddhahood that he may continue to be born again and again for the benefit of mankind; for a Buddha cannot possibly be regenerated, and hence the famous epithets of Sathagata, thus gone, and Sugata, well gone, or gone for ever. The ordinary monk or priest in Tibet is the Gylong, above whom are the Lama or presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10, and receives instruction accordingly. At 15, he becomes a Tohba, and at 24 a Gylong, provided his acquirements be satisfactory.

There are two sects, the Gyllupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry.

Tepa is the Lama Yeungjing, the private guru or high priest of the Grand Lama. He is also appointed by order of the emperor, and is sometimes an avatari Lama, but not always. His office is to teach and train the Grand Lama in childhood and youth, and lead him, if he can, afterwards. He is indeed an important personage in the Buddhist world, being no less than the keeper of the Grand Lama's conscience. The nomination to this post being in the hands of the emperor, furnishes an interesting clue to the extent of the imperial power over the church of Tibet.

The Che Kap Kemu Lama is a churchman of great influence in the government. He appears to represent the Grand Lama in the council of state and in the deliberations of the Shapi. He may be called secretary or minister for the church; and the Shapi may, correctly enough, be called the financial, judicial, revenue, and home secretaries or ministers.

The Tibetan treasury is managed by two officers named Jhassa; both are Lamas, and act conjointly, although one of them is treasurer on behalf of the Grand Lama, and the other on behalf of the Noume-hen, or temporal estate. They are assisted by two sub-treasurers, styled Shangjotes. Four officers, designated Da-pun, are the commanders of the Tibetan troops, and act as civil and political commissioners on occasions of frontier or other disturbances; they are Tibetans, and not Lamas. The ordinary course of official promotion is from a Da-pun to a Shapi; of equal rank to the Da-pun is the Che-pun, who is, however, a civil officer, and acts in all departments as deputy to the Shapi. Shate Shapi was the energetic commander-in-chief of the Tibetan army which opposed the Nepalese under Jung Bahadur. The Shapi is often employed as commissioner on deputations in civil affairs, either judicial or fiscal, and all the cases sent up by the police for trial before the Shapi are forwarded through this officer. All appointments to the offices above noted require the confirmation of the emperor.

A religious exercise or penance, much practised by the Buddhist, is that of going round the convent, prostrating himself at every step. Sometimes an immense number of devotees will be going through their act of devotion at the same time, one after the other, and they will include all the neighbouring buildings in their prostrations. The feat must be performed all at once, without any interruption, even that of stopping for a few moments to take nourishment; and the prostrations must be perfect, that is to say, the body must be extended its whole length, and the forehead must touch the earth, while the arms are stretched out in front, and the hands joined. Before rising, also, the pilgrim must describe a circle with two rams' horns, which he holds in his hands. Some content themselves with taking a walk round the convent, rolling all the while between their fingers the beads of their long chaplet, or giving a rotatory movement to a kind of praying mill, which turns with incredible rapidity. This instrument is called a Chu-kor, that is, turning prayer; and it is common enough to see these fixed in the bed of a running stream, as they are then set in motion by the water, and go on praying night and day, to the special

benefit of the person who has placed them there. The Tartars also suspend these convenient implements over their domestic hearths, that they may be put in motion by the current of cool air from the opening of the tent, and so twirl for the peace and prosperity of the family. Another machine which the Buddhists make use of to simplify their devotional activity is that of a large barrel turning on an axis. It is made of thick pasteboard, fabricated of innumerable sheets of paper pasted one on another, and upon which are written in Tibetan character the prayers most in fashion. Those who have not sufficient zeal or sufficient strength to place on their backs an immense load of books, and prostrate themselves at every step in the mud, adopt this easier method, and the devout can then eat, drink, and sleep at their ease, while the complaisant machine does all their praying for them.

Kablai Khan was first of the Mongol Khakans to adopt Buddhism as the state religion. The Mongols called the Buddhist priests Lama, and in January 1261 Kablai Khan promoted a young man called Mati Dhwadsha to the title Pakba Lama, or supreme holy Lama. He was born at Sazghia in Tibet, and belonged to one of its best families, that of the Tsukoan, who had for more than six centuries furnished ministers to the kings of Tibet and other western princes. By his wisdom, etc., he won the confidence of Kablai Khan, who not only made him Grand Lama, but also temporal sovereign of Tibet, with the title of 'King of the Great and Precious Law and Institutor of the Empire.' Such was the origin of the Grand Lama. Lamaism in China is a state religion.

The manes of the dead Lamas are revered in several ways, but only of the soverign Lamas are the mortal remains preserved entire. So soon as life leaves the body, it is seated upright, with the legs folded in front, the instep resting on each thigh, and the sides of the feet turned upwards. The right hand is rested with its back on the thigh, with the thumb bent across the palm. The left arm is bent and held close to the body, the hand being open and the thumb touching the point of the shoulder this is the attitude of abstracted meditation. They are deposited entire in shrines prepared for their remains, which are deposited in monuments, ever afterwards regarded as sacred, and visited with religious awe. The bodies of the inferior Lama are usually burnt, and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony, —some are carried to lofty eminences, where they are left to be devoured by ravens, kites, and other carnivorous animals. But they also have places surrounded by walls, where the dead are placed. The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lama. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road. In Spiti, in the North-West Himalaya, when a person dies, the body is sometimes buried, or burnt, or thrown into the river, or cut into small pieces and burnt; admonitions are made over the body to the departed spirit, such as, 'Do not trouble yourself, you cannot enter it (meaning the dead body); in summer it quickly becomes corrupt, in winter it freezes and is too cold for you.'— *Howorth's Hist. of the Mongols*, p. 220; *Fytche*, i. p. 328; *Fra Orazio in Nouv. Jour. Asiat.* xiv. p. 408; *Jour. des Savantes*, May 1831, p. 263; *Turner; Cunningham's Bhilsa Topes; Lubbock's Orig. of Civil.; Huc's Journey; Timkowski's Journey; Moorcroft's Travels.*

LAMAU or Lummun, a trading race who formerly brought slaves to Bombay. Lamu was long a centre of the African slave trade, and the former importers of slaves into British India were called the Lamau.

LAMB. A vegetable curiosity known as the Tartarian Lamb was thus apostrophized by Dr. Darwin:—

'Cradled in snow, and fanned by Arctic air,
Shines, gentle Barometz! thy golden hair;
Rooted in earth each cloven hoof descends,
And round and round her flexile neck she bends;
Crops the grey coral-moss and hoary thyme,
Or laps with rosy tongue the melting rime;
Eyes with mute tenderness her distant dam,
Or seems to bleat, a Vegetable Lamb.'

The plant about which these fables had gathered is referred to the fern genus Cibotium, formerly to Aspidium. The rhizoma of Aspidium barometz presents a rude resemblance to an animal. It is covered with a silky down, and when cut into has a soft inside, with a reddish, flesh-coloured appearance, sufficient to account for the origin of the fables with regard to its animal nature.— *Yule, Cathay*, i. p. 145.

LAMBADI, Lambani, Lambari, or Binjara, are chiefly migratory grain merchants, spread all over India, from the Panjab to Cape Comorin. The Binjara style themselves Gohur. The Lambari are carriers. In some districts they are addicted to thieving and robbery, and are believed to practise infanticide, human sacrifices, secret murders, witchcraft, sorcery. Their religion is a mixture of Hinduism and Muhammadanism, and their priests control the bands. Their dress, language, habits, and customs are peculiar. They are sworn to secrecy as to their habits, manners, doings, and ceremonies, and do not let strangers into their secrets. The Lambari grain carriers pursue all the avocations of the Binjara, with whom, however, they do not eat or intermarry. The Binjara of Berar is a notorious plunderer. In the rainy season they make gunny cloths, and engage in field labour. Their language is said to be intermediate between the Hindi of Marwar and the Mahrati. The Lambadi speak a dialect of the Hindi..

LAMBAR or Lambardar, in Northern India, the village headman, who collects the revenue from the proprietors of his village, and pays it into the tahsil; he is a sort of middleman between the officials of Government and the body of proprietors and rent-payers; he is called in Hazara, etc., Mustajir; and in other parts, as also generally before British rule in the Panjab, Mukaddam. It is an Anglo-Indian word from number and dar, and in Bengal is a farmer who settles with the Government. In the Mahratta country this task is taken by the potail.

LAMB-DOR. HIND. Cord from fibre of Calotropis gigantea.

LAMBODURA, a name of the Hindu god Ganesa, from SANSK., Lumba, long, and Udara, the belly.

LAMB-SKINS.

Peaux de agneaux,	FR.	Anakbiri kulit, .	MALAY.
Lammsfelle, . . .	GER.	Pielles de corderos, .	SP.
Pilli agnelline, . . .	IT.		

Lamb-skins are very extensively used with the hair on in Afghanistan, Hazara, Kafiristan, N.W. Himalaya, Tartary, in Tibet, China, Persia, as articles of dress for the head and for mantles. Lamb-skins are used in Persia and Tibet dressed with the wool and made into caps. Lamb-skins sell at Leh for one rupee each; lambs are much cheaper if bought alive. Lamb-skins are imported into Britain from the north of Italy, Sicily, and Spain, and are dressed white or coloured for gloves. The skins of goats and kids form the best kinds of light leather. The chief supply of the best kid-skins is from Switzerland and Tuscany, whence they are shipped, chiefly at Leghorn.

LAMBTON, COLONEL, a British officer who commenced the Trigonometrical Survey of India, continued by Sir George Everest, Sir Andrew Waugh, and others. Colonel Lambton was Surveyor-General of India, and is buried near Hinganghat. He wrote on the Measurement of an Arc on the Meridian in As. Res. xiii. p. 1, ibid., 1816, xii. p. 285; Method for extending a Geographical Survey across the Peninsula of India, ibid., 1801, vii. p. 312; Measurement of an Arc on the Meridian on the Coromandel Coast, ibid., 1805, viii. p. 137, ibid., 1816, xii. p. 1; Account of Trigonometrical Operations across India, connecting Fort St. George and Mangalore, ibid., 1808, x. p. 290.—*Dr. Buist's Cat.*

LAMECH, Laghman, Lamghan, or Lanpo district is noted by Hiwen Thsang as being 600 li, or just 100 miles, to the east of Kapisene. The modern name is only an abbreviation of Lampaka, formed by the elision of the labial. It is also called Laghman by the simple transposition of the middle consonants, which is a common practice in the east, and is a rule in the Celtic grammar. The credulous Muhammadans derive the name from the patriarch Lamech, whose tomb they affirm still exists in Lamghan. It is noticed by Baber and by Abul Fazl.—*Cunningham, Ancient India*, p. 42.

LAMELLICORNIA, the chafer group of beetles; antennæ short, terminating in a club formed of a number of moveable layers. They feed on plants or dung. See Insects.

LAMINARIA, or Tangles, a genus of the Fucaceæ. L. bulbosa, *Ag.*, and L. digitata, *Lam.*, are deep-sea plants, but their fronds are thrown up on the Sind beach. Laminaria saccharina, *Lam.*, is the sweet tangle, the Gillur ka patta, HIND., and Hai-tai of the Chinese. It is used in scrofula and in syphilitic eruptions, is officinal at Lahore and in Kashmir. The fronds are procured from Tibet, where they are reported to grow in a salt lake, but some maintain that they are brought from the Caspian Sea. This plant, the edible sugar sea-beet, is one of the algæ, and probably grows in all the salt lakes of High Asia, also it is probably brought from the sea through China. It is imported from Yarkand and viâ Kashmir. It contains much iodine, and acts as an alterative in scrofulous affections and enlargement of the thryroid gland or goitre (gillar or gal), a common disease in many parts of the Himalaya. If washed and hung up, a saccharine substance exudes. It consists of long ribbon-like pieces. Dr. Cayley states that 16 seers of this were imported from Yarkand to Leh in 1867. This and L. digitata furnish to the Chinese size, jelly, and many excellent dishes of food. Laminarian horn is prepared from L. buccinaris, *Ag.*, of the Cape of Good Hope. L. saccharina is highly esteemed in Japan, where it is extensively used as an article of diet, being first washed in cold water and then boiled in milk or broth.

Several species of Laminaria, Rhodomenia, Iridæa, etc., are included under the Chinese names Hai-tai, Hai-wan, and Kwan-pu, the last being the tangle.—*Honigberger; Powell's Handbook*, i. p. 384; *Dr. J. L. Stewart; Simmonds' Comml. Product*, p. 379; *Smith, M. M. Ch.* See Seaweed.

LAMMAY. BURM. In Amherst, a timber used for house posts; it is a red, light, but useful timber, like sandal-wood, and is free from attacks of insects.—*Captain Dance.*

LAMMERGEYER, or Bearded Vulture, the Gypaetus barbatus, is without doubt the Roc of Arabian Nights and the Nisser mentioned by Bruce in his Travels in Abyssinia. — *Adams.* See Birds.

LAMP.

Dipa, ...	BENG.	Lampadu, . . .	RUS.
Lampe, . . .	FR., GER.	Dwipa, . .	SANSK., TEL.
Charagh, . . .	HIND.	Lampara, ...	SP.
Lucerna, ...	IT.	Vallak, ...	TAM.

Lamps are formed of various materials and shapes, arranged for burning materials readily fluid at ordinary temperatures, in order to produce light. Muhammadans, like the Jews, light a lamp in honour of persons, and Hindus follow this custom.

A feast of lamps was held by the Egyptians in honour of the goddess of war. They held these solemn festivals in honour of Minerva at Sais. We may deduce the origin of this grand oriental festival from that common mother-country in Central Asia, whence the Dewali, or festival of lamps, radiated to remote China, the Nile, the Ganges, and the shores of the Tigris; and the lamps and fireworks of the Shab-i-Barat of the Muhammadans of Islam is but the feast of lamps of the Hindus. In all these there is a mixture of the attributes of Ceres and Proserpine, of Plutus and Pluto. Lakshmi partakes of the attributes of both the first, while Kuvera, who is conjoined with her, is Plutus, as Yama is Pluto, the infernal judge. The consecrated lamps and the libations of oil are all dedicated to him; and, in Rajputana, 'torches and flaming brands are likewise kindled and consecrated, to burn the bodies of kinsmen who may be dead in battle in a foreign land, and light them through the shades of death to the mansion of Yama.'

The Hindus have a feast of lamps, Dipawali, at the same period of the year as that of the Jews, in honour of Kartikeya or Skanda, the god of war; and the Rajputs, in honour of Lakshmi. The Parsee religionists have a feast of lamps. The Chinese have a feast of lanterns, on which occasion are many inscriptions on the lanterns;

a usual invocation is Tien-ti, San-shiai, Vaulin Chin-tsai; Oh! heaven, earth, the three limits, and thousand intelligences, hail!

The Dipdan is a lamp suspended from a tree for ten days after the death of a relative, to light the spirit on its way to Yamapuri, the city of Yama, the judge of the dead.

Every Hindu temple of any pretensions has a st'hamba, or pillar of stone or wood for lamps.—*Roberts*, p. 17; *Faulkner; Wilson's Gloss.*

LAMP-BLACK.

Kohl, ...	ARAB.	Arang-para, . .	MALAY.
Noir de fumée, . .	FR.	Kajal, Siahi, . .	PERS.
Kienruss, ...	GER.	Negro de humo, . .	SP.
Kajal, ...	HIND.	Mai, ...	TAM.
Nero di fumo, . . .	IT.	Katike, ...	TEL.

In Europe, lamp-black is obtained by burning the impurities left in the precipitation of tar and pitch, and collecting the deposit in the form of soot. The finest kind is procured by collecting the smoke from an oil-lamp. It is used in the arts, particularly in the manufacture of printer's ink. The Muhammadan women of Arabia, Egypt, Persia, and India stain their eyelashes with it. Muhammadan men use antimony for this purpose.—*M'Culloch; Herklots.*

LAMPEAN or Laban, a wood of Java, light but durable, and affords materials for the handles of the spears or pikes borne by the natives.

LAMP-OIL.

Charagh ka tel, . HIND. | Vallak yennai, . TAM.

The kind of oil used in different parts of the world for burning in lamps varies with the sources of supply, and these are numerous. In India, cocoanut, castor, poppy, sesamum, and ground-nut oils are in use; on the eastern and southern coasts of the Mediterranean and in China, oil of sesamum seed; and in tropical countries, cocoanut oil (which at the temperature of Britain is a white solid, like tallow) is burnt, often in lamps made of the shell of the cocoanut and of bamboo. Much of the lamp-oil used in China is expressed from the seeds of Camellia oleifera, cultivated for the purpose, as is also a shrub, Croton sebiferum, from the fruit of which a solid oil is obtained by expression. The cocoanut and poppy oils have double the illuminating power of castor, gingelly, and earth-nut. Petroleum and naphtha are used in localities which produce them.

LAMPONG, a district of Sumatra, of about 12,926 square English miles, bounded on the south by the Indian Sea and the Straits of Sunda, and on the east by Java; the rivers Masuji and Pisang bound it on the north and west. In the year 1882 the population comprised 77 Europeans, 125,401 natives, 246 Chinese, 18 Arabs, and 14 others.

LAMPYRIDES, a tribe of the Malacodermous Coleoptera, including the glow-worm and fire-fly. Fire-fly is the name given to species of Elater and Lampyris, of the order Coleoptera, and to the Fulgora of the tropics. F. laternaria is of S. America, F. candelaria of S.E. Asia. The latter resort to moist places. The Lampyris fire-fly is the Mouche lumineuse of the French. The Romans styled the luminous insects by the common names Noctiluca and Luciola. Glow-worms are common in all parts of India. The glow-worm of Ceylon is the female of a Lampyris, and attains a size of nearly 3 inches. Mr. Morren reported that he found phosphorous in glow-worms, as well as a system of prisms in transparent lenses above the luminous matter. The fire-fly is a little luminous beetle, a species of Lampyris. The lower part of its body has some apparatus for emitting a bright phosphorescent light. Usually it is emitted in flashes at intervals of a second, and it is interesting to guess where the creature in its flight will next show itself. But occasionally the light is continuous. A splendid species of Lampyris was observed by Mr. Adams at Sarawak; when placed around the finger, it resembled a superb diamond ring. See Insects.

LAM-YIP, CHIN. (blue leaf), with alum and sulphate of copper, are used for dyeing green.—*Von Mueller.*

LANA, HIND., of the Panjab, salsolaceous plants used for camel feeding and burning for sajji, barilla. The chief of these are—

Baggi lana, also Chhoti lane, Suæda fruticosa.
Kuti lana, Withania coagulans.
Shori lana, Anabasis multiflora.
Gora lana, Anabasis multiflora, also Caroxylon fœtidum.
Metra lana, Anabasis multiflora.
Moti lana, Caroxylon fœtidum.
Peshak lana, Suæda fruticosa.
Lanebar is Orthanthera viminea.

LANAULI, in lat. 18° 45′ N., and long. 73° 26′ E., in the Dekhan, east of the Bhor ghat. The mean height of the village is 2307 feet.

LANCA, in Hindu cosmogony, one of the four imaginary cities which are supposed to lie under the equator at 90° distance from each other, viz. 1st, Yavacoti; 2d, Lanca; 3d, Romaca; and 4th, Siddhapuri. Bornacoti is stated to be the third, but the pandits have rejected that spelling. Lanca is considered by all manner of Indian astronomers to lie under the first meridian, to which all computations should be referred; though several, and particularly the Telugu people, refer to that of Rameswara. Towards the north, and under the same meridian as Lanca, the Sastra states that there are two other cities and a great mountain, viz. Avanti (supposed to be the same as Ujani or Oogein), Rohitaca, the mountain; and Sannihita sarah, which in former, or rather fabulous times, were the seats of colleges and observatories. The meridian of Lanca lies in 75° 53′ 15″ (5h. 3m. 33s.) east of Greenwich; and 73° 33′ (4h. 54m. 12s.) east of Paris.—*Warren, Kala Sanhita.*

LANCASTER, CAPTAIN SIR JAMES, sailed from Torbay on the 2d May 1601, with a fleet of four ships and a victualler, for India. He was general of the fleet in the first voyage made on account of the East India Company. The pilot was Captain John Davis. The commander of the next fleet was Captain (Sir Henry) Middleton, to Bantam and the Moluccas. They only visited the eastern islands, and brought home ladings of pepper. Captain Keeling commanded in the third voyage in 1606-1607. He went first to Surat, where he landed Mr. Finch to form a factory, and sent Captain Hawkins, his second in command, on an embassy to the Great Moghul. Then followed Sharpey's unlucky voyage and shipwreck on the shoals of Cambay, and Sares' remarkable voyage to Japan. Mr. John Davis of Limehouse, who made five voyages, condensed the observations of these navigators into Rules for the East India Navigations.

Captain Sir James Lancaster advocated the N.W. passage to India, which led to Hudson's

famous voyage. His name is preserved in Lancaster Sound, in Baffin's Bay. The voyage of Sir Henry Middleton to Bantam and the Molucca Islands was printed for Walter Burre in 1606.—*Harris' Voyages.*

LANCAVA. This group of islands, off the Malay coast, consists of three large and many smaller, extending nearly N.W. and S.E., from lat. 6° 8′ N. They are high, bold islands, particularly Lancava, the centre one, which has on it a high peaked hill. The Laddas, which form the east and south parts of the group, are high barren islands.

LANCE-WOOD, a commercial name, in use in most countries to indicate a light elastic wood. The lance-wood of Tenasserim is from a tree which produces a timber possessing the properties of lance-wood. It is not uncommon in the Tenasserim provinces, but it belongs to the dog-bane tribe, and is not at all related to Guatteria virgata, the lance-wood of commerce. The Meenaban or Pavetta Indica? one of the Cinchonaceæ, is called Moulmein lance-wood, but it is not equal to lance-wood in elasticity, and beyond being useful for handles of tools, and such purposes, Major Benson thinks its qualities have been generally overrated; besides, it is susceptible to the attacks of insects. The Guatteria virgata of Jamaica is much valued as a lance-wood on account of its exceeding even ash in lightness, strength, and elasticity. It is chiefly used for shafts of carriages. Lance-wood of Australia is the Backhousia Australis, a myrtaceous tree. Lance-wood of Moulmein is from a tree found all over the province, which yields a wood that the residents at Moulmein sometimes call lance-wood tree. The Karen make bows of it, but prefer Cassia fistula. Dr. Mason never met with the tree in flower, but thinks it a species of Dalbergia, one of the Apocynaceæ, though it may possibly be a Cassia.—*Dr. Mason; Faulkner.*

LAND. According to Menu, cultivated land is the property of him who cut away the wood, or who cleared and tilled it, and this ordinance is binding on all the Hindu race, which no international wars or conquests has overturned. At present, in British India,—

Oudh has great zamindars, almost complete owners, with few subordinate rights; tenant-right was found non-existent, but has since been conceded to old proprietors, a limited class.

The *N.W. Provinces* has moderate proprietors; the old ryots have fixity of tenure at a fair rent.

The *Panjab*, very small and very numerous proprietors; old ryots have a measure of fixity of tenure at fair rates.

In *Bengal* are great zamindars, whose rights are limited. Numerous sub-proprietors of several grades under them, with ancient ryots who have fixed tenure and fixed rents, and other old ryots who have fixity of tenure at a fair rent, variable from time to time.

The *Central Provinces* has moderate proprietors with ancient ryots, who are sub-proprietors of their holdings at rents fixed for the term of each settlement. Other old ryots have fixity of tenure at a fair rent. Ryots are complete proprietors of the soil, subject only to payment of revenue.

Sir William Muir says that the British found the lands of India owned or managed in three different ways, viz. *a.* ryot occupancy or proprietorship; *b.* official zamindarship; and *c.* village proprietorship.

The first of these signifies that the ryot is the hereditary occupant or holder of his own individual holding. The last, village proprietorship, signifies that one or more persons, or a body of co-parceners, possess proprietary right over all the land (including waste) contained within the boundary of their village or estate; village proprietors may be either talukdars, zamindars, or pattidars, or members of a proprietary or cultivating brotherhood. In a general sense, it may be stated that on the British obtaining possession of the empire of India, they found ryot proprietorship prevailing in the south of India, official zamindarship in Bengal, and village proprietorship in the N.W. Provinces. The zamindar of Bengal was nothing more than a manager; or, if he laid claim to the ownership, the title was shared between him and the ryot. It is far otherwise in the N.W. Provinces and in Oudh. In both of these the village landlord, whether talukdar or zamindar, is owner of the soil. The cultivating ryot was distinctly regarded as cultivating the lands of another. He appears nowhere to have claimed the right of occupying the fields he cultivated longer than he cultivated them.

Among the *Mahratta* communities, the whole land of a village is designated Sewar, being contained within the village sew or boundary; Wawur, cultivated or arable land; Tika, a parcel, a field; Shet, a field; and Purtim, a field of convenient length; Mullai, garden or meadow land; Kurun, preserved grass land; Gairan, pasture land; Gutkoli or T'hul, or field of an extinct family.

Menu, on the principle that the state is the sole owner of the entire land of the country, says there is to be a lord of a single village, a lord of ten, a lord of one hundred, and a lord of a thousand towns, all to be appointed by the king. Each is to report all offences, etc., to his immediate superior. The compensation for a lord of one town is the provisions and other articles to which the king is entitled from that town; that of a lord of ten villages, two ploughs of land; the lord of a hundred villages is to have the land of a small village; and of a thousand, that of a small town.

All ancient legislators, especially Moses, grounded the success of their ordinances concerning virtue, justice, and morality upon securing hereditary estates, or at least landed property, to the greatest possible number of citizens.

The most prominent feature of the tenure of land throughout the Peninsula is that the soil is everywhere held by small farmers not ranking above labourers. When the British became masters of the country, they retained this system, but gradually moderated the revenue demand. Later on they attempted to establish landlords in some parts of India, in the hope that they would perform the functions of English and Scotch landlords, but this hope has not been realized, and the people have been worse rack-rented under this plan than under the native governments. In other parts of the country they made the peasantry proprietors, who, not understanding the boon, sold themselves to usurers, so that their last state has become worse than the first. According to the ancient Indian practice, an area of land is often

named after the quantity of seed required to sow it, or the quantity it will produce, and of course the actual area differs according to the opinion of the person who makes the estimate. Where linear definition is given, mention is made of rods or ropes, of so many cubits, but the cubit is undefined, and areas of the same denomination are derived from different multiples of the rod or rope. Of the more definite terms, the bigha prevails in Bengal and the N.W. Provinces. In Bengal it is 1600 square yards, and in the N.W. Provinces it is 3025 square yards. In the Bombay Presidency it is not authoritatively defined, but averages about ⅝ of an acre. The term is quite unknown in the Madras Presidency, where the authorized measure is the cawnie of 57,600 square feet, or 1·3223 acre; there are also other local land measures defined, but presenting great differences one from the other, as the chain of 3·64 acres, the seed-cottah of 1·62 acre, the vaylie of 6·6 acres, and the bullah of 3·82 acres.—*Elphinstone, Hist. of India*, ii. p. 39; *Niebuhr*. See Weights and Measures.

LANDA. HIND. A style of writing used by village shopkeepers, etc.

LANDH. PUSHTU. Mutton dried like pemmican by the people of Shall. The Baluch call it Khaddit.

LANDOLPHIA FLORIDA, *Benth.*, the African rubber tree, also L. Owenieusis, are the best known, but there are other species. The stems attain a diameter of six or eight inches a few feet from the ground. The sweet acidulous pulp of the fruit is eaten by the people.

LANDOUR, a sanitary station in the Dehra Doon district, in lat. 30° 27′ 30″ N., long. 78° 8′ 30″ E. It is on a ridge, bounding Dehra Doon on the north; it is 3 miles distant from Mussoori, is 7459 feet above the sea, and 1041 miles from Calcutta. In the ascent from Rajpur, at the foot of the hills, to Landour, the traveller passes through a vegetation which graduates insensibly from the tropical into that of temperate regions. The Doon contains numerous forms which are strictly tropical, such as, among forest trees, the Acacia elata, which extends up along the Terai from the banks of the Irawadi; the sal or Shorea robusta, and species of Pterospermum, etc.; while the slopes of Mussoori and Landour are covered with forests of oak and rhododendron, together with the other temperate forms generally associated with them. Dr. Murray attempted in 1843-44 to employ the sulphuretted and chalybeate springs in the valley below Landour for the benefit of the invalids at that sanatorium, but the situation of the springs, at the bottom of a hot and confined though picturesque valley, was an obstacle to success.

LANDSE, the term applied by the Singhalese to anything European. It is a corruption of Hollandishche, Dutch.—*Tennent's Christianity in Ceylon*, p. 108.

LANE, EDWARD WILLIAM, an Arabic scholar, was the third son of Theophilus Lane, a prebendary of Hereford, and of Sophia Gardiner, a niece of the artist Gainsborough. He was born in 1801, and died in 1876. He visited Egypt first in 1825, and stayed there for a time, spent partly in Cairo, and partly among the tombs at Thebes, with a view to the writing of his Description of Egypt, which was never published. The publishers shrank from the expense which its illustrations would entail, and Lane would not consent to the appearance of the work in an incomplete form. His second visit to Egypt was in 1833. Its chief object was the perfecting of his Manners and Customs of the Modern Egyptians, his first published work, which appeared in 1836. About a year after his arrival in Cairo, the plague destroyed about 75,000 of the inhabitants, and he went to Thebes, and took up his abode in a tomb from January till the end of June 1835. On his return to England, he published his Modern Egyptians, and in 1838 his translation of the Thousand and One Nights. From 1842 the Arabic-English Dictionary began to claim his exclusive devotion. In that year he made his last voyage to Egypt, where he remained for seven years, preparing the groundwork of his labours and collecting manuscripts. The pecuniary part of the work of publishing the Arabic Lexicon was undertaken by Lord Prudhoe, afterwards fourth Duke of Northumberland. With the exception of his short volume of Selections from the Koran, issued in 1843, and of one or two monographs upon points of Arabic scholarship, for the remaining thirty-four years of his life he worked at nothing else but his Lexicon, of which the first part appeared in 1863, the fifth in 1874, and the sixth part, almost completed at the time of his death, has since been published by Mr. Poole.

LANGA, Loongi, or Lahanga, a piece of cloth used by the men of several Indian races as a lower garment, applied like an unsewed petticoat. Where the loongi is not worn, paijama or trousers take their place. These are sometimes worn loose, as in Oudh and Bengal; and elsewhere as tight as they can be made. The cutting out of women's tight trousers is no easy matter, for they have several gores on the inside of the thigh, and are contrived so that they are flexible, however tight, and do not hinder the wearer from sitting cross-legged. With the trousers, which are tied at the waist, are worn the angia or choli bodice, the kurtni or shirt, and the do-patta or scarf.

LANGAHA, a tribe following Muhammadanism, proselytes from the Solanki Rajputs, one of the four Agnicula races. The Solanki gotra acharya, or genealogical creed, claims Lokote as their settlement. Their use of the word Pathān by no means precludes their being Hindus.

LANGAN TREE, Nephelium longanum. Its fruit is imported into England from China.

LANGAR, HIND.; Langaru, TEL. Anchor. Langar ki rassi, HIND., cable. Langar Nikalna, HIND., literally to take out an anchor, is a ceremonial performance of a vow by Muhammadan men and women, usually given effect to on the fifth k'hun, *i.e.* the fourth day of the Maharram. Wealthy Muhammadans take out an anchor annually, whether for a vow or not. It is quite a sight to see that of the nawab of Hyderabad.

LANGAR KHANA. HIND. An almshouse.

LANGAR KHEL, a section of the Manzai branch of the Alizai Mahsud Waziri. They have 1000 to 1500 fighting men. They reside chiefly on the Badr Algad or Uch Kwara. The nawabs of Tank are allied with them.

LANGEH, a bee of Borneo, and one of smaller size called Nuang, produce valuable honey. They generally place their nests underneath the larger branches, and the Dyaks, to remove the honey and honeycomb, ascend the trees by means of a rail of bamboos.

LANGHA, musicians in Sind. These are of two kinds: 1. the Kalwat or respectable singers; 2. the Langha or Mirasi, the bards of the country.

The Langhan or Mirasi are of Jat or Sindi extraction, and are considered a vile race. The Kalwat are respectable singers. There are some charming Sindi poems, amongst them is that of Sasani and Punha, the history of whose love and death much resembles that of Romeo and Juliet.

Luri, bards or troubadours, who attach themselves to high Baluch families in Baluchistan and Sind. They are musicians, tinkers, vagabonds, and fortune-tellers. They are in troops, with a chief in each. They profess Muhammadanism, but are really pagans.—*Burton's Scinde*, p. 302.

LANGOTA or Langoti. HIND. A cloth passed between the thighs, and fastened to a string before and behind. Langoti-dost, a friend from infancy, from the days when they wore the langoti.

LANGUAGES in Eastern and Southern Asia are numerous. Along the low level tract bordering the ocean, from the Red Sea to the southernmost point of the Malay Peninsula, we find vernacular, the Arabic, Turkish, Kurdish, Syriac, Persian, Jataki, Sindi, Gujerati, Mahrati, Hindustani, Konkani, Canarese, Tulu, Malealam, Tamil, Telugu, Uriya, Bengali, Rakhui, Burmese, Siamese, Chinese, Javanese, and Malay, a number truly perplexing to traders on the seaboard.

Two hundred years ago (A.D. 1634), a master mariner, Master Richard Kynge, said, 'And in this founde wee oftimes much trouble and vexation, with moreover losses, both of precious time and lucre. Fyrste, that wee could never aske in Indian tongues for such herbes, or fruites, wodes, barks, or gummes, as wee knew full well, by experience in sundrye other partes, to bee wholesomme (many of our crewe lying sicke at the tyme), or savorye, or usefulle to trafficke withall. Nexte, that when anye were shewne us, we coulde in noe-wise tell, from ⁹ names given to them by ⁹ Gentooes, whether or noe ⁹ like were already knowne in European countryes; and yett these parts doe myghtylie abound with herbes and woodes of sovraigne virtew.'

The diversity thus alluded to is continued into the Archipelago, but it is not peculiar to the littoral tract, nor to the islands of the East Indies, the races, tribes, and nations of all the old world being kept apart from one another by the dissimilarities in their spoken and written tongues. This condition has received the attention of many learned men, and amongst the philosophers of the 19th century much of the fame of not a few rests on the results from their linguistic studies. One such result has been the discovery of certain affinities in the various known languages, which admits of their being arranged into families, branches, and groups, but the learned investigators have not decided on a common grouping.

Dr. Prichard has suggested four groups or dynasties, three of which are confined to Europe and Asia, a fourth being common to Africa and those parts of Asia which are near that continent. The first of his four groups, the Indo-European, is sometimes termed Indo-Germanic, and by later writers Aryan or Iranian. He considers that the Indo-European languages and nations may be further subdivided, and he styles his first subdivision the Eastern group, which by many writers has been termed exclusively the Aryan family of tongues. It includes all the idioms of the ancient Medes and Persians, who named themselves Arii, and their country Eeriene or Iran, and likewise the Sanskrit, with all the Prakrits, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the cuneiform inscriptions was written. This dialect was so near the Sanskrit that the inscriptions in it have been interpreted through the medium of that language.

Chevalier Bunsen's terms differ from those of Dr. Prichard. He classes one group as the great Asiatic-European stock of languages, which he subdivides into eight families, viz. Celt, Thracian or Illyrian, Armenian, Asiatic-Iranian, Hellenico-Italic, Sclavonic, Lithuanian tribes, and Teutonic. His fourth or Asiatic-Iranian, or the Iranian stock as represented in Asia, he again subdivides into—

a. The nations of *Iran Proper*, or the Aryan stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zendavesta; the younger Pehlavi of the Sassanians and the Pazend, the mother of the present or modern Persian tongue. The Pushtu or language of the Afghans, he says, belongs to the same branch.

b. The second subdivision embraces the Iranian languages of India, represented by the Sanskrit and her daughters.

His *Semitic* stock of languages he constructs from the following nations, who form another compact mass, and represent one physiologically and historically connected family: the Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who spread their language, through their colonization, as that of the Carthaginians; the Aramaic tribes, or the historical nations of Aram, Syria, Mesopotamia, and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east; finally, the Arabians, whose language is connected (through the Himyaritic) with the Æthiopic, the ancient (now the sacred) language of Abyssinia.

Dr. Haug divides the Iranian languages into East or Bactrian, and West or Median and Persian.

The *Iranian* family of language seems to be called Aryan by Mr. Farrar; it is the Indo-European and Indo-Germanic of some philologists; Pictet and Burnous called it Aryan, from the Sanskrit word Arya, meaning noble; Rask called it Japhetic. According to Mr. Farrar, it has eight divisions, viz. Hindu, Persian, Greek, Latin, Lithuanian, Sclavonic, Teutonic, Celtic. Of these it is uncertain whether Celtic or Sanskrit represents the older phase. But it is known that all of them are the daughters of a primeval form of language which has now ceased to exist, but which was spoken by a yet undivided race at a time when Sanskrit and Greek had as yet only implicit existence.

Professor Steinthal, in his Charakteristik der hauptsächlichsten Typen des Sprachbaues, has proposed to arrange all languages into two great classes, viz. cultivated languages and uncultivated languages, and each of these he would subdivide into two classes, viz. the isolating and the inflecting. Taking the uncultivated first, under the isolating class he proposed to place the Trans-Gangetic, and under the inflecting he would place three divisions — (1) the Polynesian, which ex-

presses all the minor modifications of the meaning, all distinctions of declension and conjugation, by reduplications and prefixes; (2) the Ural-Altaic (which Farrar calls the Alatyan), which expresses them by annexing separate words after the root; and (3) the American, which expresses them by amalgamation. The cultivated languages are similarly subdivided — (1) into the isolating, represented by Chinese; (2) into the inflectional, under which head he places (i.) the Egyptian, which achieves a sort of inflection by a loose addition of grammatical elements; (ii.) the Semitic, by internal modification of the root; and (iii.) the Aryan, throughout which the formal elements have been reduced to mere conventional suffixes, such, for instance, as the letter s, which is an all but universal sign for the plural number.

Professor Max Muller arranges all languages, exclusive of Chinese and the dialects of America and Africa, into three grammatical families, the Semitic, the Aryan, and the Turanian.

The whole of what is called the *Turanian* family of speech consists of terminational or agglutinative languages, and this Turanian family comprises in reality all languages spoken in Asia and Europe, and not included under the Aryan and Semitic families, with the exception of Chinese and its cognate dialects. The term Turanian is used in opposition to Aryan, and is applied to the nomadic races of Asia, as opposed to the agricultural or Aryan races. The Turanian family of languages has two great divisions, the Northern and the Southern. The Northern is sometimes called the Ural-Altaic or Ugro-Tataric, and it is divided into five sections.

It is, however, more than probable that the Mongol, the Manchu, and Tungusan belong to one great stock, that the Turkoman, as well as the Tshude, Fin, Laplander, and Magyar (Hungarians) present another stock closely united, and that both these families are originally connected with each other.

Turkish is a Turanian dialect. Its grammar is purely Tataric or Turanian, and the Turks possessed a small literature and narrow civilisation before they were converted to Muhammadanism; but as the language of Mahomed was Arabic, this, together with the Koran, and their law and religion, the Turks learned from the Arabs. Arabic became to the Turks what Latin was to the Germans during the middle ages; and there is hardly a word in the higher intellectual terminology of Arabic that might not be used, more or less naturally, by a writer in Turkish. But the Arabs, again, at the very outset of their career of conquest and conversion, had been, in science, art, literature, and polite manners, the pupils of the Persians, whom they had conquered; they stood to them in the same relation as the Romans stood to the Greeks. Now, the Persians speak a language which is a branch of the Indo-European or Aryan family of speech. A large infusion of Persian words thus found its way into Arabic, and through Arabic into Turkish, and the result is that the Turkish language, as spoken by the higher ranks at Constantinople, is so overgrown with Persian and Arabic words, that an uneducated Turk from the country understands but little of the so-called Osmanli, though its grammar is exactly the same as the grammar which he uses in his Tataric utterance.

The different Turkic dialects, of which the Osmanli is one, occupy one of the largest linguistic areas, extending from the Lena and the Polar Sea down to the Adriatic.

The languages of the South and East of Asia have been investigated by many distinguished philologists. Professor Sayce (ii. p. 33) arranges those of the east of Africa and of Eastern and Southern Asia under the headings Bushman, Hottentot, Kafir, Nubian, Nile, Hamitic, Semitic, Aryan, Turanian, Dravidian, Kolarian, Tibeto-Burman, Thai, Mon-Anam, Khasi, Chinese, Korean, Malayo-Polynesian, Malayo-Javanese, Papuan, and Aino.

Recently, also, Mr. R. N. Cust has classified the languages of the East Indies into eight families, subdividing his Aryan family into two groups, his Tibeto-Burman family into eight, and his Malayan family into ten groups, as under:—

Family.	Branch or Group.	No. of Languages.	No. of Dialects
i. Aryan—			
	a. Iranic, . .	2	8
	b. Indic, . . .	14	125
		—16	—133
ii. Dravidian, ...		14	30
iii. Kolarian, ...		10	5
iv. Tibeto-Burman—			
	a. Nepal, . .	13	16
	b. Sikkim, . .	1	1
	c. Assam, . .	16	23
	d. Munipur, Chittagong, . .	24	8
	e. Burma, . .	9	10
	f. Trans-Himalayan,	8	23

		— 88	— 44
		243	296

Dr. W. W. Hunter, in his Dictionary of the non-Aryan Languages of India and High Asia, classes them as under:—

1. *Reflecting types.* —Arabic, Sanskrit.
2. *Compounding types.* — Bask, Finnic, Magyar, Turkish, Circassian, Georgian, Mongolian, Manchu, Javanese Ngoko, Javanese Krama, Malay.
3. *Isolating types.* — Chinese of Nankin, Amoy, Pekin, Shanghai, and Canton, Amoy colloquial, Japanese.

? Brahui.

4. *Chinese Frontier and Tibet.* — Gyami, Gyarung, Takpa, Manyak, Thochu, Sokpa, Horpa, Tibetan written and spoken.
5. *Nepal (West to East).*—Serpa, Sunwar, Gurung, Murmi, Magar, Thaksya, Pakhya, Newar, Limbu.
6. *Kiranti Group, East Nepal.*—Kiranti, Rodong, Rungchenbung, Chingtangya, Nachhereng, Waling, Yakha, Chourasya, Kulungya, Thulungya, Bahingya, Lohorong, Limbichhong, Balali, Sang-pang, Dumi, Khaling, Dungmali.
7. *Broken Tribes of Nepal.*—Darhi, Denwar, Pahri, Chepang, Bhramu, Vayu, Kuswar, Kusunda, Tharu.

Lepcha (Sikkim).

Bhutani or Lhopa.

8. *N.E. Bengal.* — Bodo, Dhimal, Koch'h, Garo, Kachari.

9. *Eastern Frontier of Bengal.*—Munipuri, Mithan Naga, Tablung Naga, Khari Naga, Angami Naga, Namsang Naga, Nowgong Naga, Tengsa Naga, Abor Miri, Sibsagor Miri, Deoria Chutia, Singhpo.

10. *Arakan and Burma.* — Burman written and spoken, Khyeng or Shou, Kami, Kumi, Mru or Toung, Sak.

11. *Siam and Tenasserim.*—Talain or Mon, Sgau Karen, Pwo Karen, Toung-thu, Shan, Annamitic, Siamese, Ahom, Khamti, Laos.

12. *Central India.* — Ho (Kol), Kol (Singbhum), Santali, Bhumij, Uraon, Mundala, Rajmahali, Gondi, Gayeti, Rutluk, Naikude, Kolami, Madi, Madia, Kuri, Keikadi, Khond, Savara, Gadaba, Yerukala, Chentsu.

13. *Southern India.*—Tamil ancient and modern, Malealam ancient and modern, Telugu, Karnataka ancient and modern, Tuluva, Kurgi, Toduva or Toda, Kota, Badaga, Kurumba, Irular, Singhalese.

Mr. E. L. Brandreth, in volume x. of the Royal Asiatic Society's Journal, has given the following classification of the non-Aryan languages of India, and Dr. Hunter has adopted it at page 183 of volume iv. of the Imperial Gazetteer.

Dravidian Group. — Tamil, Telugu, Canarese, Malealam, Tulu, Kodaga, Toda, Kota, the dialects of the Mahadeo, Raj, and Maria Gonds, Naikudi, Kolami, Kandh or Ku, Uraon or Dhangar, Maló or Rajmahali, Kaikudi, Yerkala.

Kolarian Group.—Santali, Mundari, Ho or Larka Kol, Bhumij, Korwa, Kharria, Juang, Kuri, Kurku, Mehto, Savara.

Tibeto-Burman Group—

i. Kachari or Bodo, Mech and Hojai, Garo, Pani-Koch, Deori-Chutia, Tipura or Mrung.
ii. Tibetan or Bhutia, Sarpa, Lhopa or Bhutani, Changlo, Twang.
iii. Gurung, Murmi, Thaksya, Newar, Pahri, Magar.
iv. Lepcha.
v. Dafla, Miri, Abor, Bhutia of Lo.
vi. Aka.
vii. Dialects of the Mishmi, Chulikata, Taying or Digaru, Mijhu.
viii. Dhimal.
ix. Dialects of Kanawar, Milchan, Tibarskad, and Sumchu.
x. Kiranti, Limbu, Sunwar, Bramu, Chepang, Vayu, Kusunda.
xi. Dialects of the Naga clans, Namsang or Jaipuria, Bonpara or Joboka, Mi-than, Ta-blung, and Mulung, Khari, Naugong, Tengsa, Lhota, Angami, Rengma, Arung, Kucha, Liyang or Kareng, and Maram.
xii. Miri.
xiii. Singpho, Jili.
xiv. Burmese.
xv. Kuki dialects, Thado, Lushai, Hallami, Khyeng, Manipuri, Maring, Khoibu, Ku-pui, Tangkhul, Luhupa, Khungui, Phadang, Champhung, Kupome, Takaimi, Andro and Sengmai, Chairel, Anal and Namfu.
xvi. Kumi, Kami, Mru, Banjogi or Lung-khe, Pankho, Shendu or Poi, Sak, Kyau.
xvii. Karen dialects, viz. Skau, Bghai, Karenni, Pwo, Taru, Mop-gha, Kay or Gaikho, Toung-thu, Lisan.
xviii. Gyarung, Takpa, Manyak, Thochu, and Horpa.
xix. Khasi.
xx. Tai, Thai or Siamese, Lao, Shan, Ahom, Khamti, Aiton, Tao-Mow or Chinese Shan.
xxi. Mon-Anam, Mon, Kambojan, Anamese, and Paloung.

The classifications of Dr. Hunter and Mr. Brandreth were restricted to the non-Aryan tongues. Our present acquaintance with the languages and dialects of British India, west of the Bay of Bengal, permits their classification as follows:—

Gaura or Sanskritoid, viz.:—

Bengali
- *a.* Tirhuti or Mathala or Maithili.
- *b.* Assamese proper.

Hindi—
- *a.* Hindustani or Urdu.
- *b.* Brij Bhasha.
- *c.* Rangri Bhasha.
- *d.* Bhojpuri.
- *e.* Panjabi.
- *f.* Multani.
- *g.* Jataki.
- *h.* Kashmiri.
- *i.* Nepal court language.
- *j.* Sindi.
- *k.* Tharreli.
- *l.* Takkarani ji Boli.
- *m.* Harnoti.
- *n.* Mairwari.

Gujerati—
- *a.* Kachi.

Mahrati—
- *a.* Konkani.

Uriya.

Dravida, viz.:—

a. Cultivated.

Tamil or Dravida proper.	Malealam.
Telugu or Telinga.	Tulu.
Karnata, Kannadi, or Canarese.	Kodaga of Coorg.
	Singhalese.

b. Uncultivated.

Peninsula of India.	Central India.
Toda.	Bhuiya.
Kotah.	Bhuiher.
Gond.	Binjhia or Binjwar.
Kond, Kandh, or Ku.	Kaur, or Kaurai, or Kauravа, or Raj Kaur.
Irular.	Koch'h.
Yenadi.	Mal.
Korava.	Maló, Paharia, or Rajmahali.
Kurumbar.	Oraon.
Veddah.	Rautia.

Kolarian Tribes—

Asur or Agariah.	Kawar.
Bhil.	Kharriah or Delki.
Bhilalah.	Kharwar or Khyrwar.
Bhui.	Kisan, or Nageswar, or Naksia.
Bhuiher.	Kol.
Bhumia.	Kora.
Bhumij of Manbhum.	Korwa of Sirguja.
Bhunjia.	Kur, Korku, or Muasi.
Binjwar.	Mair.
Birhor of Chutia Nagpur.	Manji.
Boyar.	Mehtu or Mehto.
Bygah.	Mina.
Cheru or Cherwa, a broken tribe.	Munda.
Dhangar.	Nahur.
Gudba.	Santal.
Ho of Singbhum.	Saont.
Juang.	Savara.

The Cheru, Kharwar, Kisan, and Saont of Chutia Nagpur have lost their own language. The Cheru, Bhuiher, Boyar, Kaur, Kharwar, Kisan, Mair, Nagbansi, and Parbeya are broken tribes, and have become Hinduized.

Dravidian languages are spoken by about 46 millions of people in India and Ceylon. Six of their languages are cultivated, and three writing characters are used. The numbers speaking them have been estimated as under:—

Telugu,	15,500,000	Uriya and hill languages,	640,000
Tamil,	16,000,000	Gond,	500,000
Canarese,	6,000,000	Khond and Ku,	130,000
Kodaga of Coorg,		Toda,	300
Malealam,	4,226,533	Kotah,	1,000
Tulu,	29,763		

Amongst the nations of Eastern and Southern Asia, their vernacular and sacred languages furnish examples of all the forms indicated by the philosophers of Europe.

Mr. F. Jagor (Travels, 1875, p. 69) quotes from a work of Barentes the names of 27 distinct languages officially recognised in the Philippines, besides which there are dialects innumerable spoken both by the Malayan and Negrito wild tribes.

In illustration of the tongues spoken, this is Our Lord's Prayer in nine of the languages of Southern Asia.

ARABIC.	HINDUSTANI.	PERSIAN.	ENGLISH.	ASSAMESE.	BENGALI.	GUJERATI.	CANARESE.	TAMIL.	TELUGU.
9. **Abunálází fissamawati leatta qaddasa ismoka.**	9. Ai hamare Bap, jo bihisht men hai, Tera nam muqaddas ho.	9. Ai Pidr-i-mayan ki dar bihisht hasti, nàm-i-Tu muqaddas bad.	9. Our Father which art in heaven: Hallowed be Thy name.	9. He ámár swargat thoká pitri; Tomár nám púja hauk.	9. He ámárder swargastha pitah; Tomár nám púja hauk.	9. O akasmana hamára báp, Taháru náma puvitra munayè.	9. Paraloka dalli iruva namma tandaye, Ninna namuu parishudhawagili.	9. Swargatil irukira yengal Pitavé; Umudaya per parishudamai-ànanga paduvadága.	9. **Swargamulo undé ma Tandri ni peru parishud; hamu cheya badunu-gaka.**
10. **Latáti malakútoka latakun mashiatoka kama fissamai o-ál-álarzi.**	10. Teri badshahat áwe. Teri marzi, jaisi bihisht men járí hai, dunyá men bhí barawe.	10. Bádsháhat-i-Tu biaíd, Marzí-i-Tu dar dunyà járí shawad, hamchunán ki dar bihisht jàrì ast.	10. Thy kingdom come. Thy will be done in earth, as it is in heaven.	10. Tomár ráji-ya hauk; Jene swargat tenekui prithibit o tomár issha pur hauk.	10. Tomár rájiche hauk; tomár ichchha swargete-jeman, temani prithibíteo saphal hauk.	10. Taharu raj ávé. Jama akasmo Thuma parthvé par Tahare itcha thayé.	10. Ninna rajiavu bar'li. Ninna bhaktaū paraloka dalli agūva prakārā bhumia malliū āgūli.	10. Umudaya irájiam varuvadága; umudaya shittam paramanda latillé sharapadukiradupola, bumi ileyum shaiapaduva dága	10. **Ni rajiamu watsunugaka; ni chittamu swargamandu cheyabade tattu bhu-locammandunu cheyabadunugaka.**
11. **Khubzona kafafuna áte nalyoma.**	11. Hamárí rozíne ki roti áj ham kode.	11. Nán-i-rozina-i-ma mara imroz bidih.	11. Give us this day our daily bread.	11. Aji ámár khábar beháni ámák diá.	11. Amárder prayojaniya áhárádya deo.	11. Hamárá nitna rotla, aj amné apa.	11. Namma anudinada roti yennu ihotu namagi kudu.	11. Inraiku engalāgā ratai engaluku tarum.	11. **Ma nitispu aharamu nedu, maku immu.**
12. **Wagfirlana khatayana kama naghfero nahnu leman akhtailaina.**	12. Aur jis tarah ham apne baqidaron ko bakhsti hain, Tú apne dain ham ko bakhsh de.	12. Wa hamchunan ki máyàn baqidarán-i-kheshra mibakhshem gunaha-i-ma-bibaksh.	12. And forgive us our debts, as we forgive our debtors.	12. Aru jenekui ámár dhórnáhontok ámi hohun, tenekui ámár dhar era.	12. Ar ámrá jeman ápan aparádhidigake khyamá kari, tadrup tumio ámárder aparádh khyamá karo.	12. Né jama hamné hamára dava daroné mafu karíachá. Thuma Tu hamára dava hamné máf kar.	12. Navu nammanu saligararigé biduva prakārā. Namma salaganu namagi biddu.	12. Engal kadináligalúkú nán gal manippadupola devarir engal kadangalai manitarúlúm.	12. **Ma aparādhulānu mēmu manninchē lágu ma aparadhamulanu manninchu-mu.**
13. **O-lá-tadkhulna fittajaribe lakin najena min ish sharire. Liân us-sûltânátá, o-ul-kudrátá, o-ul-já-lala ábadan lákâ. Amín.**	13. Aur hamko ázmáish men na dál: balki burái se bachá; kyunki, bádsháhat, aur qudrat, aur jalál hamesha Tere hí hain. Amin.	13. Wa máyánrà dar ázmáish maafgan balki az badí najat bidih: zerá ki bádsháhat wa qudrat, wa jalál dáim ba Tu ast. Amin.	13. And lead us not into temptation, but deliver us from evil: for Thine is the kingdom, and the power, and the glory, for ever. Amen.	13. Aru ámák perikhyaloi ninibá. kintu ápadar parà ámák rakhyá kara. Rajatto, áru mahimá, aru prabhao ei kakalo hadai tomar. Amen.	13. Ebang ámárdigake parikhyáte ániona; kintu minda haite rakhyá kara. Rajattwa, o gaurab, o parákram e sakali sadákále toniár. Amen.	13. Né hamné paritchamo nal pána hamne bhundayethi Chodava kemké raj Thutha parkármo Thutha mahima sarvakal suthi Thuhar-anehi. Amin.	13. Nammānū shodhana yelli dakirajiavū balakāri, mahimāyū yendendagū ninnashi. Amin.	13. Nangal shoda nail pravèsiádapadi thaidu, timáyil nindru engalai irachitu kolium. Irajiamum vala maiyum, magimaiyum, Umaké enrenraikum Unda irukindrana. Aman.	13. **Mammuna sodha maloki tisukapokā, kidunu nchi mammuna lappinchumu; yendukanté, rajiamunnu paralramunnu maha twa munnu yellappatikinni nivi yumnavi. Aman.**

The 1881 Census Report of British India enumerates 115 Asiatic languages spoken in British India, not including the recognised dialects of several of the current tongues; and there were 28 non-Asiatic tongues recorded, but the languages of 22,626,486 of the population were not distinguished.

Mr. Wallace (ii. p. 292), an accurate observer, who resided for many years in different islands, enumerates the languages spoken in the islands of the Eastern Archipelago, as under:—

1. Malay, at Singapore.
2. Javanese, at Java.
3. Sassak, at Lombok. Indigenes of Lombok, a pure Malay race, profess Muhammadanism.
4. Macassar, at S. Celebes, near Macassar; Muhammadans.
5. Bugis, in large part of Celebes; Muhammadans.
6. Bouton, at Boutony, a large island S. of Celebes.
7. Salayer, at Salayer, a smaller island S. of Celebes.
8. Tomore, at E. Peninsula of Celebes; pagans. The people speaking these five languages of Celebes are of pure Malayan type, and all but the Tomore race are equal in civilisation to the true Malays.

9, 10. Tomohon and Langowen, at plateau of Minahassa.

11, 12. Ratahan and Belang, at S.E. coast of Minahassa.

13. Tanawanko, at W. coast of Minahassa.
14. Kema, at E. coast of Minahassa.
15. Bantek, at a suburb of Menado.
16. Menado, at chief town.
17. Bolang hitam, on N.W. coast between Menado and Licoupang. These nine languages (9 to 17), with many others, are spoken in the N.W. Peninsula of Celebes, by the people called Alfuro. These languages are falling into disuse, and Malay is becoming the general medium of communication. Most of the people are being converted to Christianity.
18. Sanguir islands and Siau; the inhabitants resemble the people of Menado.
19. Salibabo islands also called Talaut.
20. Sulu islands, E. of Celebes, Malays of the Moluccas type; Muhammadans.

21, 22, 23. Cajeli, Wayapo, Massaratty, three villages on the E. side of Bouru. These people are allied to the natives of Ceram; Cajeli people are Muhammadans.

24. Amblau island, S.E. of Bouru; Muhammadans.
25. Ternate, the most northern island of the Moluccas. Inhabitants somewhat mixed with indigenes of Gilolo.
26. Tidore, the next island of the Moluccas. Inhabitants undistinguishable from those of Ternate.
27. Kaioa islands, at N. of Batchian.
28. Batchian; Muhammadans; inhabitants like the preceding.
29. Gani, at a village on the S. Peninsula of Gilolo. Moluccan Malays, Muhammadans.

30, 31. Sahoe and Galela, at villages in N. Gilolo. Inhabitants called Alfuro. They are indigenes of Polynesian type, but brown skins and Papuan hair and features; pagans.

32. Liang, at villages on the N. coast of Amboyna. Of mixed Malay and Polynesian type, they are Muhammadans or Christians.
33. Morella and Mamalla, at villages in N.W. coast of Amboyna.
34. Batumerah, at a suburb of Amboyna. Inhabitants of the Molucca Malay type; Muhammadans.
35. Lariki, Asilulu, Wakasihu, in W. Amboyna; Muhammadans from Ternate.
36. Saparua island, at E. of Amboyna. Inhabitants of the brown Polynesian type, and speaking the same language as those of Ceram, opposite.

37, 38. Awaiya and Camarian, at villages on the S. of Ceram. Indigenes of Polynesian type, now Christians.

39, 40. Teluti and Hoya, Ahtiago and Tobo, at villages on the S. coast of Ceram. Mixed brown Papuan or Polynesian and Malay type; Muhammadans.

41. Ahtiago, indigenes, inland from Ahtiago. Alfuro of brown Papuan or Polynesian type; pagans.
42. Gah, at E. Ceram, Alfuro of Ceram.
43. Wahai, at N. coast of Ceram. Inhabitants of mixed race, speak several dialects of this language; Muhammadans.
44. Goram, at small islands E. of Ceram. Of mixed race; Muhammadans.
45. Matabello, at small islands S.E. of Ceram. Brown Papuan or Polynesian race; pagans.

46. Teor, at small islands S.E. of Matabello. Brown Papuan or Polynesian race; pagans.
47. Ke islands, on the W. of the Aru islands, true black Papuans; pagans.
48. Aru islands, W. of N. Guinea; true Papuans.
49. Mysol coast, N. of Ceram, semi-civilised Papuans, with mixture of Moluccan Malays.
50. Mysol interior, true Papuans; pagans.
51. Dorey, at N. coast of N. Guinea, true Papuans; pagans.
52, 53, 54. Teto, Vaiqueno in E. Timor, Brissi in W. Timor. Intermediate between the true and the brown Papuans; pagans.
55, 56. Savu and Rotti. Islands west of Timor, of mixed race, with apparently much of the Hindu type.
57, 58. Allor and Solor. Islands between Flores and Timor, inhabitants of dark Papuan type.
59. Baju, a roaming tribe of fishermen of Malayan type, all over the Archipelago.

Professor Keane enumerates 112 Australasian tribes and languages, when he gives the names of many islands and districts and races in Australasia:—

Adane, Luçon.
Agutaino, Philippines.
Alaguetes, Luçon.
Aloma, N. Guinea.
Anamaropu, N. Guinea.
Apayao, Luçon.
Arfak, N. Guinea.
Asahan, Sumatra.
Baju Laut, Celebes.
Basisi, Malacca.
Battak, Sumatra.
Batu-mera, Amboyna.
Belon, E. Timor.
Betsi-misaraca, E. Madagascar.
Betsileo, Hova nation.
Bicol, Philippines.
Bila, Malacca Negrito.
Bilong, N. Celebes, Minahassa.
Bima, E. Sumbawa, Malays.
Bisaya, Dyak tribe, meaning tattooed.
Bola ango, N. Celebes, Papuans.
Boni, Celebes.
Botango, Minahassa, N. Celebes.
Brajerak, all the S.E. Australian tribes.
Bugis or Wuji, Celebes.
Burik, wild, Philippines.
Calinga, Luçon.
Chimarro, Luçon, Leyte, Samar.
Dadaya, uncivilised Tagala people.
Dedelo, N. Guinea.
Dorey, N. coast of N. Guinea.
Doumajal, Mindoro.
Dyak, Borneo.
Ende, Floris.
Favor-long, Formosa.
Gaddan, the Tagala nation, Luçon.
Gah, Ceram, Papuans.
Galela, Tabellor, Galelor, N.W. Gilolo.
Galeteng Papuans, Floris, Sunda.
Gani, Gilolo.
Garontalo, Minahassa Malays.
Gilolo, Halmahera, and Kaha-lamo Papuans.
Guimanes, Luçon.
Hongotes, Philippine mountains.
Hotontalo, Minahassa.
Hova or Ibara, dominant in Madagascar.
Ibalao, Luçon.
Ibanag, Philippines.
Idayan, Philippines.
Ifugao, Luçon.
Igorotte, Philippines.
Ikolu, N. Guinea.
Illanos, a piratical race, now in Brunai, Borneo.
Ilocano, Luçon.
Ilongote, Luçon.
Isinayes, Luçon.
Itaneg or Tinguianes, Luçon.
Itanes, Luçon.
Jakun, Malay Peninsula.
Javanese, Java.
Juru, Malacca.
Kanak, the South Sea islanders, from the Maori Tanata, meaning man.
Kapatsi, N. Guinea.
Karus, N. Guinea.
Kawi, ancient Javanese.
Kayan, Borneo.
Keao, a Dyak tribe.
Kedah, Malacca.
Kema, N. Celebes.
Kio, Papuans, Floris.
Koiari, Koitapu, Papuans, N. Guinea.
Konga, Papuans, Floris, Sunda.
Korinchi, Malays, W. Sumatra.
Kubu, Malay tribes, centre of Sumatra.
Kulkalija, Papuans, N. Guinea on its east.
Kulo, N. Guinea tribe.
Kupan, Timor Papuans.
Lampung, Malay, S.W. Sumatra.
Letti, Papuans, Serwatti Islands.
Lubu, tribe of Central Sumatra.
Madang, Dyaks, E. Borneo.
Madurese, Malays, Madura.
Maiva, N. Guinea.
Malaneg, a Tagala tribe, Philippines.
Malay, Archipelago.
Mallikolo, N. Hebrides.
Malo, Dyak, Borneo.
Mamamanua, Philippines, Negrito.
Manatoto, Timor, Papuans.
Mandar, Celebes.
Mandaya, Malays, Philippines.
Mangarai, Floris, Papuans.
Mangkassa (Macassar), of S. Peninsula of Celebes and on Salayur Island; akin to the Wugi.
Manguianes, Malay tribes of Mindoro.
Manobo, Malay tribes, Mindanao.
Maora (indigenes) or Ngapui, dominant in N. Zealand.
Marhuna, Ceram Papuans.
Maros, Maruiva, natives of Hog and Banyak Islands, on W. coast of Sumatra.
Mentawi or Mantawi, calling themselves Tchagelalegat, Malays of Nassau, Pora, and Pagai Islands on W. coast of Sumatra.
Millanawi, Sarawak.
Mincopi, Andamans.
Mintira, Malacca.
Miriam, Papuans, Torres Straits.
Motu, N. Guinea Papuans.
Murong, Borneo, Dyak.
Murut-Idaan, Dyak of Borneo.
Myfor, Papuans of N. Guinea, Myfor, Mansonam Islands, Dorey, and Amberbaki; akin to the Arfak and Biak islanders.
Naman, N. Guinea Papuans.
Nancowri, Nicobars.
Negrito; Aëta, Philippines; Simang, Malacca; Mincopi of Andamans.
Oelo, interior of Sumatra.
Orang Binua, of Malacca; Orang Hindi, of Waigiou; Orang Kling, natives of India; Orang Kubu, of Sumatra; Orang Laut, seafaring tribes; Orang Malaya, pure Malays; Orang Salat, the Orang Laut of the Straits; Orang Sirani, descendants of Portuguese; Orang Utan, uncivilised men; Orang Gunong, hill tribes; Orang Darat, landsmen; Orang Sakai, Malacca Negritos.
Palavar, New Guinea Papuans.
Pampango, Tagala.
Panayano, Bisayan nation.
Pangasinan, Tagala.
Papaka, N. Guinea tribe.
Papuan, N. Guinea and islands.
Parigi, Papuans, Minahassa.
Quaibo, N. Guinea Papuans.
Rejang, Malays, Sumatra.
Roka, Floris and Sunda Papuans.
Roro, Papuans, Yule Island, N. Guinea.
Sahoe, Gilolo Papuans.
Sakalava, N. Madagascar.
Sakaran, Borneo, Dyaks.
Sampit, Borneo Dyak.
Sarawi, Passuma, Malays, Sumatra.
Sasak or Sassak, Lombok natives.
Shom-Baeng, Nicobars.
Siak, Malays, E. Sumatra.
Sideia, a Formosa tribe.
Silông, Mergui islanders.
Simang, Malacca Negrito.
Suflin, a Luçon tribe.
Sundanese, Malays of Sunda.
Tagala, Luçon and Mindoro.
Talacaogo, a Mindanao tribe.
Tanguiyan, Tagala tribes.
Toula, N. Guinea tribes.

The Languages of India.—One of the most interesting chapters in Mr. Plowden's report on the census of British India is that relating to the statistics of language. From this we find that English is spoken as their native language by 202,920 persons, and Portuguese by 10,523. Of the latter, however, only 147 were born in Portugal, and of the former Mr. Plowden says it is believed that not more than 150,000 are pure British. The remainder embraces a certain number of Eurasians, who may vary from individuals approaching so closely to Europeans as not to be distinguishable from them, or again may approach so closely to natives in appearance as otherwise to be undistinguishable from them. The other European tongues are the languages of a comparatively small number of people. For instance, French is the language of only 1510 persons; German, of 1471; Italian, of 804; Swedish, of 310; Spanish, of 126; Dutch, of 114; Norwegian, of 375; Danish, of 189; Russian, of 112; Greek, of 193; Hungarian, of 12; Finnish, of 7; Roumanian, of 6; Polish, of 4; Flemish, of 3; Swiss, of 2; and Sclavonic, of 1. Welsh, which is, unaccountably, not included in Mr. Plowden's list of cultivated dialects, is spoken by 205; Scotch, by 124; Gaelic, by 149; Irish, by 158; and Celtic, by 2 persons. The French-speaking section of the community

mountaineers. Mr. Masson says that by means of Hindi he made himself understood throughout the whole of the Kohistan, and it will thus be seen that the term is used to bring under one common designation the various dialects of a language essentially one, but which has received no great cultivation in any of its forms. According to the Brahman pandits of Benares, there are hundreds of dialects equally entitled to the name. The Brij Basha (or Bhaka, as it is pronounced on the Ganges) and the Panjabi are the two most cultivated varieties of it, but the Panjabi passes into Multani, which a good philologist has shown to be a corrupted form of Panjabi; whilst Jataki, again, farther to the south, is a corrupted form of Multani; Sindi, according to Lieutenant Burton, is a perfectly distinct dialect, though directly derived from Sanskrit. When the Mahrattas extended their conquests into Hindustan, they found Hindi everywhere prevalent, from the limits of the desert to the frontiers of Bundelkhand; and finding it different from their own tongue, they called it contemptuously Rangri Basha, quasi-barbarous jargon. Sir John Malcolm extends the Rangri Bhaka as far west as the Indus, and east as far as the frontier of Bundelkhand, where, as in all the country to the Indus, from the western frontier of Bengal, dialects of Hindi prevail. The Marwari and other dialects of Rajputana are varieties of Hindi introduced by the Rajput races.

The Bible has been translated into Hindi, the Nagari and Kaithi characters being used.

The *Gujerati*, a Sanskritoid language, is spoken throughout that peninsula, and has been adopted by the Parsee religionists.

Konkani has three dialects, a northern, a southern in Goa territory, and a third used by a particular class of the inhabitants of S. Canara.

Malealam extends from Cape Comorin to the Chandragiri river, or, more strictly, perhaps, to Nileshwar (Nileswara), where a Nair raja, conquered by Hyder, formerly ruled. Mr. Cust (p. 70) tells us that it is peculiarly related to and geographically intermixed with the Tamil. A dialect of it is spoken on the western slopes of the Animallay Hills by wild forest tribes, and a remarkable one by the Mappilla or Moplah race of the western coast, and the inhabitants of the Laccadive Islands, with an adapted Arabic character, used by all educated Mappilla Muhammadans, except those who retain Vatteluttu or old Tamil-Malealam character. This dialect must have been formed a thousand years ago; it has a literature of its own, and sub-dialects.

The *Tula* or Tuluva, although of the same derivation as the Malealam, is a distinct tongue, but much intermixed with others, especially the Canarese. Tulu uses the Canarese character. It is destitute of a literature, but is the most highly developed of the Dravidian family of tongues.

Malealam and Tulu are considered by Dr. Caldwell to be in gradual course of extinction. The people speaking the Tulu shrink from contact with foreigners, even from people of their own race, retreating from the great roads, cities, and bazars as eagerly as the Tamil flocks to them; and the Maleala-speaking race are to be found isolated with their families in their high walled parambu, even in parts where the lines and centres of communication are entirely occupied by the more enterprising Tamil people, whose language, too, seems gradually pushing the Maleala aside.

Xerxes, son of Darius, king of Persia, issued orders to the rulers of the 127 provinces of his empire, to each in the vernacular and peculiar character of his respective district. But of these characters there are remnants only of the Hebrew, Samaritan, Phœnician, Greek of Ionia, the old Bactrian of the Avesta, the Demotic of Egypt, the three languages of the tablets of Behistun, the languages of Akkad and Susa, and possibly that of the Asoka inscription at Kapurdigiri. All the others have perished. Dr. W. W. Hunter says that from inscriptions on rocks, pillars, and copper plates the Indian alphabets can be traced back to the third century B.C. Mr. R. N. Cust says (p. 19) that all the characters used in writing the languages of the East Indies can be traced back to the Asoka inscriptions, and through them to the Phœnician alphabet, and thence backwards to the hieratic ideographs of the old kingdom of Egypt, and thence to the venerable hieroglyphics of the 4th dynasty. The solitary exception is the Chinese character used in Annam.

The various characters used in the inscriptions found on ancient sculptures in Southern Asia and India may be briefly summarized as under:—

Allahabad Lat.	Pali, old, of the Burmese.
Allahabad Gupta.	Pali, modern.
Amraoti.	Palmyrene.
Aramæan.	Panjabi.
Aryan or Bactrian.	Parthian.
Bengali.	Phœnician of M. de Leynes.
Bhilsa.	Phœnician, Numismatic, of M. de Leynes.
Chaldæo-Pehlavi or Parthian.	Punic of M. de Leynes.
Deva-Nagari.	Sah Kings of Saurashtra.
Gujerat copper plate.	Semitic.
Gujerati modern alphabet.	Sinaitic.
Kistna.	Syriac, 5th century.
Kufic.	Syriac, modern.
Kutila.	Telinga.
Lat, or Indian Pali.	Tibetan.
Nerbadda.	Western Caves.
Pehlavi modern alphabet.	Zend.
Pehlavi, Sassanian.	

Mr. H. T. Prinsep gives the following list of transitions of the Indian alphabet from the time of Asoka, with some of the most marked local varieties at present in use, viz. those used in the sculptures of

Asoka's edicts of the 3d century B.C.	Nerbadda.
Western Caves.	Kistna.
Sah inscription, Girnar.	Telinga, modern.
Gupta inscription, Allahabad.	Tibetan, modern.
Valabhi plates from Gujerat.	Square Pali.
Kutila inscription of the 10th century A.D. at Bareilly.	Gujerati.
	Panjabi.
	Kashmiri.
	Bengali.
	Deva-Nagari.

And he gives the following ten modifications of the Sanskrit alphabet from B.C. 543 to A.D. 1200, viz.:—

Fifth century B.C., rise of Buddhism.
Uncertain, Western Caves.
Third century B.C., Sanskrit inscriptions of Asoka, Junagarh.
Second century A.D., Gujerat dated plates.
Fifth century A.D., Allahabad inscriptions of the Gupta dynasty.
Seventh century A.D., Tibetan alphabet formed from Sanskrit.
Ninth century A.D., Kutila inscriptions from Bareilly, A.D. 992.

Eleventh century A.D., Bengali alphabet as now modified Adisur, A.D. 1065.
Modern Deva-Nagari alphabet.
Old Pali alphabet of the Burmese, compared with A.D. 200.

The writing characters in use in the East Indies are undergoing absorption, but are numerous. Several learned men have proposed to substitute the Roman and italic forms for those in use in the native tongues. Professor H. H. Wilson in his Glossary expresses the opinion that the English alphabet had enabled him to represent the letters of 9 alphabets of 13 different languages of British India. But by diacritic points and marks, and by compounding letters, he increased the English alphabet from 26 letters to 70 of his characters, 19 of the English letters having 2 to 6 forms, viz. b, c, e, i, j, o, p, and u each 2; g, h, and l each 3; d and k each 4; a, r, s, t, and z each 5; while n has no less than 6 forms; and he has even recommended additions to these.

The *Arabic*, of all the ancient Semitic languages, is the only one that has retained its original abode, in Arabia proper, while it has also spread itself on all sides into the districts of other tongues. Others are wholly extinct, as the Phœnician, or they exist in a degenerate form as the Aramæan among the Syrian Christians in Mesopotamia and Kurdistan; the Ethiopic in the newer Abyssinian dialects (Tigre and Amharic), and the Hebrew amongst a portion of the Jews. Letters of the Arabic alphabet are arranged as solar and lunar,—huruf-shamsiyah and huruf-kamariyah. The former are 13 in number. The Arab alphabet is ill suited for producing Aryan sounds; it is altogether without such useful letters as p, ch, zh, and g, so that f and b is used for the Aryan p and for the Roman f, and the Arabic use of the letter w is often doubtful. The living dialects of the Himyaritic, or Southern Arabic, are the Ekhili and Mahrah. The Arabic characters, and those known as the Niskh, are usually employed for the Arabic, Persian, and Urdu or Hindustani. These characters represent consonants and long vowels, with diacritic marks for short vowel sounds.

When Sind was annexed to British territory in 1842, twelve or thirteen written characters were found to be in use, some of them differing widely from others. Gurmukhi is a written character in which the sacred books of the Sikh religionists was written, and is still used by the Sikhs for their private correspondence, their signet rings, and sacred books. It is a variety of the Indian character. Thakuri is in use in the Kangra district. It is a modification of the Nagari character. Lundi, a written character in use with mercantile firms in the Panjab; it is a modification of the Nagari character. Sanskrit, Hindi, and Mahrati are written in the Deva-Nagari character; Bengali, Gujerati, Uriya, Telugu, Karnata or Kannadi or Canarese, Malealam, and Tamil have each their own distinct character. The Canarese and Telugu characters, upwards of fifty in number, are almost identical, and they, as also the Malealam, consist almost exclusively of portions of circles; but in the Deva-Nagari, the Bengali, Uriya, and Tamil, straight lines prevail, modified in many by portions of circles.

The *Chinese* form of writing, as used in printed books, the Kiai-shu of the present day (allowing for certain improvements added under the Sung dynasty about the tenth century), dates from the fourth century of the Christian era. It is composed of 103 different elements or strokes, the position of which was an imitation of the more rounded and thicker writing, called Li-shu, modified by the rapidity of execution, which had become possible through improvements in the writing paper and hair-pencil. The Li-shu in the days of the Tsin dynasty had been devised through the necessity for a uniform system throughout the empire. This, again, had been preceded by the Siao-chuen character, composed of meagre and monotonous strokes such as were adapted to the materials then in use, viz. a bamboo written on with a stylus. This, again, was an official modification, originating in the same desire for uniformity which had been attempted in the reign of the great Shi-Hoang of the Tsin. The Siao-chuen had been modified from the ancient mode of writing called Ta-chuen, in which great variations had developed themselves among the different states which had once been subject to the ancient dominion of the Choeu; but from these successive official changes came a great number of alterations in the elements of the characters, intended to make them answer more exactly to their signification, as shaped by the ideas then dominant, and by the systematic interpretation more or less in vogue; the addition in compound characters of a considerable number of determinative ideographic elements without affecting the sound, all leaving their stamp on the composition of the characters in use. In this undertaking the written character was reconstructed as one of hieroglyphics. This has aided the spread of the Chinese power, and facilitated its maintenance over a vast area, but it has at the same time been a clog, so far as its action could go, upon its development, in the sense in which this expression is understood among the higher races, to whose progress the possession of an alphabet has contributed so immensely.

Archipelago.—Notwithstanding the numerous languages there, the written characters are only eight, or at most nine, in number. The Javanese alphabet, like all others in the Archipelago, is written from left to right, each letter is distinct and unconnected, and the writing is perpendicular and not slanting. It is the character used for the Javanese proper, the Sunda, the Bali, and it is believed the Lombok; and including Palembang in Sumatra, it is current among twelve millions of population. But in prior times, other characters to the extent of twelve in number have prevailed in Java.

In Sumatra, beginning from the west, the first evidence of a native written character is among the Bataks, and it is singular that a nation of cannibals should possess the knowledge of letters. There was assuredly nothing of the kind in Europe or continental Asia until long after men had ceased to eat each other. The form of the Batak letters is horizontal.

The Korinchi alphabet, among the people of this name in Sumatra, who border on Menangkabau, has twenty-nine characters, and consists of horizontal or slightly raised scratchings.—*Journal of the Indian Archipelago; Mr. Hodgson, Mr. Robinson, Mr. Samwells in Journal of Asiatic Society of Bengal; Dr. Latham, Dr.*

LANGUR. Singh. Large monkeys of Ceylon and S. India. Presbytes entellus, the Bengal langur, the Hanuman of the Hindus; P. schistaceus, Himalayan langur; P. priamus, the Madras langur; P. Johnii, the Malabar langur; P. jubatus, the Neilgherry langur. See Mammalia.

LANIADÆ, a family of birds, including the shrikes or butcher-birds. It comprises the subfamilies Lanianæ, Malo-conotinæ, Dicrurinæ, Artaminæ, and Campephaginæ. The harsh chatterings of a very common kind of shrike, Lanius superciliosus, in Indian gardens, are the earliest intimations of coming change of season. The species of Lanius are L. arenarius, L. cristatus, L. erythronotus, L. Hardwickii, L. lahtora, L. nigriceps, and L. tephronotus.

LANKA. Hind. An island, a name of Ceylon, also of the islets of the Godavery. Lanka tobacco is grown on the islets, in the delta of the Godavery, in the alluvial silts deposited from the river floods and out of the influences of the sea freshes.

In the Hindu story of Rama, the residence of the giant Ravana, supposed to be the modern Ceylon. In Hindu cosmogony, Borna Coti is an imaginary city, supposed to lie under the equator at 90° from Lanka. From a note in the English translation of Abul Fazl's Ayin Akbari (Calcutta edition, iii. p. 36), we learn that there are many reasons for concluding the Ceylon Lanka to have been part of the Taprobane of the ancients.—*Ouseley's Travels*, i. p. 33.

LAN-KEET or Long-eet, literally dragon's cave or den, an uninhabited island in the Canton river, in lat. 22° 41′ N.

LAN-PO or Lamghan. Sansk. Lampaka, Ptolemy's Lambatæ, and modern Lamghan.

LANSEH. Malay. A small oval fruit, of a whitish-brown colour, which, being deprived of its thin outer coat, divides into five cloves, of which the kernels are covered with a fleshy pulp, subacid, and agreeable to the taste. The skin contains a clammy juice, extremely bitter, and, if not stripped with care, it is apt to communicate its quality to the pulp. M. Corréa de Serra, in les Annales du Mus. d'Hist. Nat. x. p. 157, pl. 7, gave a description of the Lansium domesticum, from specimens of the fruit preserved in the collection of Sir Joseph Banks. The chupak, ayer-ayer, duku, and rambutan are other prized fruits of the Straits Settlements. The last named, rambe, Malay, is the Nephelium lappaceum.—*Marsden's Hist. of Sumatra*, p. 101.

LANSIUM ANIMALLAYANUM. *Bedd.* A handsome, good-sized tree, common in the dense moist forests of the Animallays (particularly in the Anagoondy shola) at an elevation of about 2000 feet, also in Malabar at the foot of the Neilgherries; it flowers early in April, and fruit ripens in July; the succulent aril in the latter is greedily eaten by monkeys and birds. It is the only species of the genus found in the Peninsula; one species occurs in the Himalayas, and a third in Java.—*Beddome, Fl. Syl.* p. 131.

LANSIUM AQUEUM. *Jack.* The Ayer-Ayer, Malay, is a fruit so nearly resembling the lansch in most particulars, that Dr. Jack, hesitating to rank it as a species, mentions it as a permanent and well-marked variety under the name *var.* β L. aqueum. The fruit of the ayer-ayer is rounder, and the pulp more watery, and dissolves more completely in the mouth than the lanseh. Both are highly esteemed by the Malays, and are equally agreeable to the European palate. The juicy envelope of the seeds is the part eaten, and the taste is cooling and pleasant.—*Linnæan Transactions*, iv. p. 114; *Eng. Cyc.*

LANSIUM DOMESTICUM. — ?

Var. a. Langsat, Malay, Jav., shape globular.
Var. b. Duku, Malay, Jav., shape oblong.

Langsab, Langsat, . . . Malay.

Europeans regard its fruit as next to the mangosteen. It is about the size of a pigeon's egg, having a tough white skin with a bitter taste, and the edible part is the pulpy semi-transparent envelope of the seed. To the same genus belong the duku, also the lansch, langsat, or langsab, for in all these forms the word is written, the rambe and the ayer-ayer. The duku is the most esteemed of them, and to the European palate is the best of the native fruits of the Archipelago, after the mangosteen. The natives class it after the durian and mangosteen. Mr. Hogg states this plant to be a native of the Antilles? The species seems, however, to be indigenous in the western portion of the Archipelago, but to have been introduced into the Philippines, where the lansch is cultivated.—*Crawfurd's Dict.* p. 125; *Hogg's Veg. Kingdom*, p. 171.

LANTANA, a genus of plants belonging to the natural order Verbenaceæ or vervains.

L. nivea, *var.* mutabilis, is a straggling shrub in the neighbourhood of Moulmein. The flowers are yellow when they first open out, but afterwards change to a rose colour.—*Mason.*

L. Indica, *Roxb.*, a shrubby, erect plant of all India.—*J. A. Murray.*

L. selloviana, a large shrub, producing pink,

yellow, orange-coloured heads of flowers; they blossom at all seasons, and are found in most gardens in India. The leaves have the scent of black currants; the berries are eaten.—*Riddell.*

LANTERN FEAST. The feast of lanterns, amongst the Chinese, takes place on the first full moon of the new year, or the 15th day of the 8th month. It affords opportunity for a display of ingenuity and taste in the construction and mechanism of a variety of lanterns made of silk, varnish, horn, paper, and glass, some of which are supplied with moving figures of men galloping on horseback, fighting, or performing various feats, together with representations of birds, beasts, and other living creatures, all in full motion. The moving principle in these is formed by a horizontal wheel, turned by the draught of air created by the heat of the lamp, and the circular motion is communicated in various directions by means of fine threads attached to the moveable figures.—*Davies.* See Dewali; Dipa mala; Lakshmi.

LANTOA or Ty-ho, in the Canton river, an island 14 miles long and 5 miles broad, is near Canton, and its S. or S.W. point is in lat. 22° 12′ N., and long. 113° 51′ E., the N.E. point being in lat. 22° 21′ N., and long. 114° 2′ 22″ E. On its north point is the Cap-sing-moon or Throat passage.

LANTSAN, a river in the west of China. To its west is a country inhabited by the numerous tribes of Yatezu, Mooquor, Moso, and Leisu. These tribes live in small villages, each under its own headman; the whole tribe being ruled by one chief, who holds the Chinese rank of Bluebutton, and is a tributary of the Chinese Government, having authority in all cases except those involving life and death, which are referred to the nearest Chinese mandarin. The whole of these tribes inhabit a strip of country lying between the Kinchar Kiang and Lantsan river; they are peaceable and industrious, cultivating peas, tobacco, opium, and scanty crops of cotton; they also collect gold, both by washing the sands of the Lantsan Kiang, and by mining in the hill-sides. Each tribe pays a tithe to its chief, who in turn pays two-thirds of his share as tribute to the Chinese Government. The costume of the women is fantastic but graceful; it consists of a head-dress of red cloth, closely braided with cowrie shells, for which the Moso women occasionally substitute a very becoming little cap or hood of red and black cloth, with pendent tassel, a short loose jacket with long wide sleeves, and buttoned up the front, and a kilt-like petticoat of home-made cotton stuff, reaching from the waist to the knee, and made in longitudinal plaits or gathers. The road from the Jeddo range of mountains near Ta-tsian-lu, up to the banks of the Lantsan river, crosses range after range of mountains, all running from the north-east to south-west, and the great snowy ranges lying on each bank of the Lantsan and Nou-Kiang rivers are a continuation of the great ranges, which, rising to the north of the Tibetan town of Tsiamdo, must form at their conjunction with the Himalaya what is believed to be the chief barrier to direct communication between Bathang and Lhassa.

LANTZA. Tib. Ranja in Nepal, a system of letters used in writing or engraving the Sanskrit language. It is used by the Buddhists of Nepal proper, who call it Ranja. It is the Nepalese form of the Deva-Nagari. It is the common extant vehicle of those original Sanskrit works of which the Tibetan books are translations.

LANUN or Illanun, a piratical race occupying stations in the Archipelago. They have been repeatedly displaced by the expeditions against the pirates.

LAO. Hind. A run, a fetch of water, from Lana, to bring. An ordinary mode of raising water from wells by leather buckets raised by bullocks. Lao-charsa, the rope and bucket apparatus for drawing water from wells in districts where the Persian wheel is not used.

LAOS are a people of the Thai or Siamese group, the most civilised of whom occupy the valley of the Menam and its feeders. They dwell in Zimmay, also on the Menam, between lat. 19° and 22° N., due north of Siam proper, and due west of the Burmese frontier, with Laphun and Lakhon, two small territories, attached.

The Laos races are divided into two very distinct sections, those who tattoo their bodies, the Thaung Dari or black bellies, and those who do not, the Thaung Khao or white bellies. The tattooed or black bellies occupy the districts of Xieng Mai, Laphun, Lakhon, Muang Phre, and Muang Nan. The non-tattooed (white-bellied) live in the districts of Muang Lom and Muang Luang and Phra-Bang.

Laos inhabit also the valley of the Mei-kong from lat. 13° to 21° N., and are thinly scattered over the mountainous countries which extend between that valley and the confines of Tonkin and Kamboja.

The Laos country has undergone great changes. About the 12th century of the Christian era, the Laos were a powerful and conquering people in the upper portion of the basin of the Irawadi, where their capital was at Mo-gaung (Muang-gaung or Mung Khong), and whence, in A.D. 1224, they sent an expedition which subjugated Assam, and established Ahom rule. Their native country, own territory, being a portion of the basins of the Mei-kong and the Menam, including Yunnan. About the same time they took possession of a higher portion of the upper basin of the Mili, where their chief seat was at Khamti, whence the name by which this branch is still known. At present the Laos people, under the names of Shan and Khamti, are found in Upper Assam, and scattered over a large portion of the northern half of the basin of the Irawadi, nearly to the confluence of the Khyen-dwen with the principal stream. Scattered villages are even found in Arakan; on the eastern side they are scattered along the Saluen as far as lat. 18° N. The whole of the Menam basin is in their hands, with the exception of a small part of the right side near its head; and they also occupy a large portion of the basin of the Mei-kong. The eastern tribes are known as Lo-Lo, Lau, and Thai.

In the basin of the Irawadi, the Shan are intermixed with the Tibeto-Burman tribes amongst whom they have intruded, but in large portions of it they are the principal population, and, in the N.E. corner of the empire, the Khamti may be considered as independent. It is probable that the Siamese, with the tribes of the Upper Menam and of the Mei-kong, are directly connected with those of Yunnan, and are not offshoots from the colony of Muang-gaung. The Siamese

have advanced more than half-way down the Malay Peninsula, and but for the check given to them towards the close of the 18th century by the establishment of Penang as a British settlement, their sway would now have embraced Perak, and probably have extended to the confines of Malacca. The northern clans almost everywhere retain their independence, although owning a nominal allegiance, and in some instances paying tribute to Burma, to China, or to Siam, those on the frontiers of Yunnan propitiating both the Golden Foot and the Son of Heaven by an acknowledgment of fealty, and some sending a triennial offering to the latter.

The Laos people on the borders of China differ little from the Chinese of Yunnan, and their stock was probably the same. Where they are in contact with the older races, they have considerably altered. In the valley of the Menam, their height is about 1½ inches less than the average Chinese; but as the average stature of the French is the same (5 feet 3 inches), the Siamese may still be considered as of the middle size.

The Laos people are partly under Burmese, partly under Siamese rule, and those of Burma are known as the Lu; or Thai, or Shan.

When the French mission moved up the valley of the Mei-kong in 1869, there were four tributary kingdoms or governors of the Laos. In the year 1828 Laos had been laid waste, Vien-chan, its capital, was utterly destroyed, and its people exterminated or deported by an army of Siamese. Its king was taken to Bankok, where he died, and all his relatives were in a degraded position (De Carne, p. 131). The manners, customs, and languages of Siam and Laos are similar.

Their language is the same as that of the Siamese. The alphabet more resembles that of Kambogia than that of Siam; they use rice, and distil and use a liquor from it.

The arts of mining and smelting ore are understood by the northern Lao tribes and the Shan races of Yunnan. The Laos pugilists have a metal cestus for their hands. M. de la Loubere says the Siamese nation was a colony from Laos. The Phi-phrai and the Phi-lok are their wood demons. The Thevada are their tutelary deities.

Mr. Logan in Journal of the Indian Archipelago; Latham's Ethnology; De Carne's Travels in Indo-China; Moor's Indian Archipelago.

LAOU TSZE was born B.C. 604, and died B.C. 520, at the age of 84; Confucius, Kung-fu-tze, was born B.C. 551, and died in B.C. 479, at the age of 72; thus they were contemporaries. Confucius visited Laou Tsze at the court of Chow. The parents of Laou Tsze were probably very poor, his father, according to one account, being a peasant who had remained unmarried up to his seventieth year, and then married a peasant woman of forty. Laou Tsze, through his learning and abilities, obtained employment at the court of Chow, but eventually withdrew to retirement among the hills of his native country on the eastern borders of Ho-nan, where he devoted his whole time and energies to philosophical research, and there produced his celebrated book the Taou-Tih-King. The ethical doctrines of this book exalt virtue as the chief good, and are based on metaphysical speculations. The Taou-Tih-King, the book of virtue and reason, contains his religious philosophy. It was translated into French by M. Stanislas Julien.

His followers are known as Taou-tsze or Taouists. The word Taou means, in the first place, a way, and then a principle, and is used to signify the supreme principle of the universe. The meaning which Laou Tsze gave to Taou is obscure; and as Taouism exists in China, his metaphysical explanations are disguised in gross superstitions, and his ethical doctrines are indolent indifferentism.

Laou Tsze himself is now the third in a trinity of persons in whom Taou has assumed personality, called in the writings of the sect Shang-Te, and worshipped as the three pure ones; and they assert that he left heaven and became incarnate as the sage of Chow. They are alchemists. The priests of the sect of Taou are numerous, and constitute nearly all the followers. Some are celibates and hermits. They worship the sun, moon, and stars. There are Taouist nunneries; their nuns do not shave their heads.—*Archdeacon Gray's China*, 96.

LA PEROUSE, a navigator and explorer of France, who was wrecked on Vanikoro Island, and he and all his people were destroyed by the natives.

LAPIDATION is an ancient practice still common in some eastern countries, and is a token of hate. Yet in some parts of Arabia, stones are thrown at tombs as a compliment to the tenant. And in the Somali country, the places where it is said holy men sat, receive the same doubtful homage.—*Burton's Mecca*, iii. p. 341.

LAPIS-ARMENUS. P'ien-ts'ing, CHIN. Armenian stone; an azure mineral, brought in flattish pieces to China from Hainan Island. When roasted and powdered, it becomes the powder blue (Liu, CHIN.) of Chinese commerce. It is supposed to be a smaltine or arsenuiret of cobalt. Lapis-armenus is, however, mentioned by Duhalde as a white translucent stone, found in Yunnan and Sze-chuen.—*Smith.*

LAPIS-LAZULI, azure stone.

Lin li, Ho tsi, . . CHIN.	Lazwardi, . . . MALAY.
Lajaward, Lajburd, HIND.	

Lapis-lazuli is a complex combination of silicate and sulphate of aluminum. It is found in Persia, Baluchistan, China, Siberia, Bucharia, and Chili, and varies in price from 10s. to 15s. the ounce. It is found in the ruby mines of Badakhshan, also in the mountains at the source of the Koultouk, a little river which flows into the Baikal Lake, where it is detached from the rock by heating the rock with fire, and then dashing cold water on it. It is said to be found massive, with iron pyrites, amongst the Ajmir Hills, especially the Nag-pahar range; but this is probably a copper ore. This stone is sold by all the attars or druggists of India, both as a medicine and as a pigment. Firgamu, in Badakhshan, stands at the head of the fertile portion of the Kokcha valley, which south of this takes the name of Koran. Beyond Firgamu, the mountains rise directly from the bed of the river. Where the deposits of lapis-lazuli occur, the valley of the Kokcha is about 200 yards wide. The formation is of black and white limestone, unstratified, though plentifully veined with wavy lines. Under the spot to be quarried a fire is kindled, and its flame, fed by dry furze, is made to flicker over the surface. When the rock has become sufficiently soft, flake after flake is knocked off by hammering, till the mineral is discovered. Deep grooves are then picked out round the lapis-

lazuli, into which crowbars are inserted, and the stone and part of its matrix are detached. The workmen enumerate three varieties, viz. the neeli or indigo-coloured, the asmani or light-blue, and the sabzi or green, and their relative value is in the order they are mentioned. The richest colours are found in the darkest rock, and the nearer the river the greater is said to be the purity of the stone. The mines have been known from a very early period. Its chief use is for affording ultramarine, a beautiful pigment, highly valued by painters. The colour of this stone is a fine azure blue, having little lustre, but susceptible of a fine polish. The Chinese are supposed to use it in painting upon copper and on their porcelain. The Chinese Buddhists regard this mineral as one of the seven precious things. By exposure to heat and moisture, it loses its beautiful azure, and assumes sometimes a black, sometimes a chalky appearance. It is used in native medicine for mixing with jalap powders, and in other compounds; it is not taken alone.—*Emmanuel; Gen. Med. Top.* p. 162; *Morrison, Comp. Desc.; T. W. Atkinson's Siberia*, p. 596; *Wood's Source of the Oxus*, p. 264; *Powell's Handbook*, p. 65; *Smith's Mat. Med. of China; MacGregor*, p. 188.

LAPLAND. The Laplander or Lapp race is one of the most diminutive of the Mongolian group of the human family. The Lapp mode of divination is to put a shoulder-blade in the fire, and then foretell the future by the arrangement of the cracks. The same custom exists among the Mongol and Tungus of Siberia and the Bedouin. The lines vary of course greatly, still there are certain principal cracks which usually occur. The Chipeyan of North America also make their magic drawings on shoulder-blades, which they then throw into the fire.

LAPORTEA CRENULATA. *Gaud., Roxb.*

Urtica crenulata, *Roxb.* Dendrocnide crenulata, *Miq.*
U. Javanensis, *Gaud.*
L. gigantea, *Gaud.*

Fever nettle, . . ENG. Maoosa-gass, SINGH.
Devil nettle, . . . ,,

This dreadfully stinging tree or large shrub is only too common in most of the western coast moist forests of the Peninsula up to 5000 feet. It also grows in Ceylon, Bengal, and Java. Lescheault de la Tour, describing the effect of gathering Urtica crenulata in the Botanic Garden at Calcutta, says:—'One of the leaves slightly touched the first three fingers of my left hand; at the time I only perceived a slight pricking, to which I paid no attention. This was at seven in the morning. The pain continued to increase; in an hour it had become intolerable; it seemed as if some one was rubbing my fingers with a hot iron. Nevertheless there was no remarkable appearance, neither swelling, nor pustule, nor inflammation. The pain rapidly spread along the arm as far as the armpit. I was then seized with frequent sneezing, and with a copious running at the nose, as if I had caught a violent cold in the head. About noon I experienced a painful contraction of the back of the jaws, which made me fear an attack of tetanus. I then went to bed, hoping that repose would alleviate my sufferings, but it did not abate; on the contrary, it continued nearly the whole of the following night, but I lost the contraction of the jaws about seven in the evening. The next morning the pain began to leave me, and I fell asleep. I continued to suffer for two days, and the pain returned in full force when I put my hand into water. I did not finally lose it for nine days.' A similar circumstance occurred with precisely the same symptoms to a workman in the Calcutta Garden. This man described the sensation when water was applied to the stung part, to be as if boiling oil was poured over him. In cutting boundary lines, exploring forests, botanizing, etc., Colonel Beddome has been very often stung by this plant both on the hands and face, but never found the effects so violent as described by Leschenault; they are, however, bad enough, the pain being felt more or less for several days, and always being intensified by the application of water. With natives the sting often brings on fever, and the plant is known to coffee-planters as the fever nettle and the devil nettle.—*Beddome, Fl. Sylv.; Thw. En. Pl. Zeyl.* p. 259.

LAPORTEA TERMINALIS, *W. Ic.*, grows in the Central Province of Ceylon at an elevation of 4000 to 6000 feet.—*Thw. Zeyl.* p. 259.

LAPWINGS are birds of the family Charadridæ, of the sub-family Vânellinæ, and of the genera Vanellus, Chetusia, Lobivanellus, Sarciophorus, and Hoplopterus. The crested lapwing, Vanellus cristatus, the English peewit, occurs throughout a great part of Europe and Asia. It breeds in the Panjab.

The little brown-coloured lapwing, Chetusia leucura, is rare in most parts of India, and most probably migratory in the Panjab. It is said to be common in Afghanistan, where, according to Mr. Blyth, it is known by the name of Chizi. The call of the spur-winged lapwing, Lobivanellus goensis, is peculiar. This unsettled water-sprite often flies about at night, startling the unwary with its cry of Did dee doo it, did did did dee doo it. Like the European lapwing, it assails all who intrude on its haunts. It has horny spurs on the wings. Dr. Jerdon names V. cristatus, Chetusia gregaria, Ch. leucura, Ch. inornata, Lobivanellus goensis, Sarciophorus bilobus, Hoplopterus ventralis.

Whoever has unhooded the falcon at a lapwing, or even scared one from her nest, need not be told of its peculiarly distressing scream, as if appealing to sympathy. Tradition relates that a lapwing was scared from her nest as the rival armies of the Kuru and Pandu joined in battle, when the compassionate Krishna, taking from an elephant's neck a war-bell (vira gunt'ha), covered the nest, in order to protect it. When the majority of the feudal nobles of Marwar became self-exiled, to avoid the almost demoniac fury of their sovereign after his alliance with the British Government, Anar Singh, the chief of Ahore, a fine specimen of the Rahtor Rajput, brave, intelligent, and amiable, was one day lamenting, that while all India was enjoying tranquillity under the shield of Britain, they alone were suffering from the caprice of a tyrant; concluding a powerful appeal to Colonel Tod's personal interposition with the foregoing allegory, and observing on the beauty of the office of mediator. 'You are all-powerful,' added he, 'and we may be of little account in the grand scale of affairs, but Krishna condescended to protect even the lapwing's egg in the midst of battle.' Colonel Tod replied in the same strain, 'Would to God, Thakur

Sahib, I had the vira gunt'ha to protect you.'—*Tod's Rajasthan*, i. p. 524; *Adams; Jerdon.* See Birds.

LAQUIS of the Bisaya, a variety of the manilla hemp plant; the fibres of the original abaca are termed Lamot by the Bisaya. Rumphius states that the Malay name is Pissang utan; that it is called in Amboyna, Kula abbaal; in Ternate, Fana; and in Mindanao, Coffo, as also the cloth made from it. He distinguishes the Mindanao kind from that of Amboyna.—*Royle, Fib. Pl.*

LAR. HIND. A necklace of several threads or rows; Sat-lăr, 7 rows, etc.; also a strand of untwisted rope.

LAR, the local name of the southern portion of the province of Sind, from Hyderabad to the sea, where the people speak the Lari dialect of Sindi.

LAR, a river, rises not far from the town of Barkhan, in the country of the Ketrani or Khuttiani in Baluchistan. It flows westward, and joins the Narra in the Murree Hills, south of Sibi.

LAR, the Λαρικέ of Ptolemy, the Lata of Sanskrit writers, a country comprising Kandesh and part of Gujerat about the Mhye river.

Ptolemy and the Periplus mention Gujerat under the term Larice, and Biruni and Abulfada place Somnath and even Tana in or on the borders of the province of Lar. The merchant Sulaiman calls the Gulf of Cambay and the seas which wash the Malabar coast, the seas of Lar; and Masudi says that at Saimur, Subara, Tana, and other towns, a language called Lariya is spoken. The Charita enumerates Lardes, or country of the Lar, amongst the eighteen regions dependent on Anhilwara, but, for some fault, Komar-pal chased the tribe of Lar from the country. Ibn-Said says that he had met with authorities which placed the famous temple of Somnath in the country of Lar. Lardes seems to have at one time included the modern collectorates of Surat, Broach, Kaira, and parts of Baroda territory; and the name probably embraced a wider or narrower region according as the power of the Lar race varied. It is very doubtful whether the Indus ever did disembogue so far to the east as the Gulf of Cutch. The remains of this ancient tribe are now only to be discovered in Rajputana in the third or mercantile caste, forming one of the eighty-four great families residing in Maru, and following the Jain faith. In Maiker of Berar is a race named Lar, who seem to be a broken portion of a considerable tribe, the Lar of North-Western India. They are returned as a Hindu people of Maiker. They are named Lour in Amraoti, and are there 3485 in number. The Lar are weavers of cloths of silk in Berar. Lari are pieces of twisted metal, which Tavernier found to be current as coin on the Malabar coast, and Thunberg saw them in Ceylon. They had their name from the province of Lar.—*Elliot's History of India*, i. p. 378; *Tod's Travels*, p. 187.

LARCH TREES occur in Europe and Asia. In the latter continent, the Larix Griffithii, *H. f. et Th.*, is of Nepal and Sikkim, and L. Sibirica, *Led.*, is of Russia, Siberia, and the Ural Altai mountains. The bark contains a good deal of tannin, mucilage, and some resin, and is sometimes used as a substitute for oak bark, for tanning the inferior sheep skins, known as basils.

Larix Griffithii, *H. f. et Th.*, is the sah or Himalayan larch. It splits well, and is the most durable of any of the genus; but the planks are small, soft, and white. It is a timber tree of Chumbi in Tibet, N. of Darjiling.—*Hook.* ii. p. 45.

LARD.

Chu-yu, Hwa-yu, .	CHIN.	Sur ki charbi, . .	HIND.
Chu-pan-yu, . .	,,	Dukkur-ki-charbi,	,,

The fat of the omentum and mesentery of the pig, the melted fat of the domestic pig. Lard is employed in the formation of ointments, plasters, liniments, for other medicinal purposes, and also in cookery.—*Waterston; Faulkner.*

LARD-STONE, Kw'ai-hwoh-shih, CHIN., is a magnesian mineral resembling steatite.

LAREK or Larrak, 8 miles S.S.W. of Hormuz, at the entrance of the Persian Gulf. It is a small barren island 5½ miles long and 4 broad, about 15 miles in circumference. Larek is supposed by a learned writer to be the Organa of Arrian rather than Hormuz, which it nearly equals in size. Niebuhr has written its name Larej.—*Kinneir's Geographical Memoir*, p. 13.

LARES of the ancient Romans were two deities of inferior power, who presided over households. They were the sons of Mercury by Lara. The offerings of the Romans to their lares and manes resembled the Hindu offerings to the pitri. In S. 750 (A.D. 694), when the Assurs blockaded Ajmir, Lot, the infant son of Manika Rae, was playing on the battlements, and was killed by an arrow. He has ever since been worshipped amongst the lares and penates of the Chauhans; and as he had on a silver chain anklet at the time, this ornament is forbid to the children of the race. In all these Rajput families there is a putra (adolescens) amongst the penates, always one who has come to an untimely end, and is chiefly worshipped by females; having a strong resemblance to the rites in honour of Adonis.—*Rajasthan*, i. p. 246.

LARI, a tribe who exclusively hold Nermuk, but reside also at Mustung and Shall, with other tribes. Kuhak is occupied by the Muhammad Shahi, Nermuk by the Lari Brahui, Lup by the Kalui Rind, Kishan by the Sherwani. See Kalat.

LARISTAN bounds part of the frontier of Fars to the south. Laristan is the ancient kingdom of Lar. Gilam and Siras are on the coast of Laristan. Gilam appears to be the Ila of Arrian, but we can scarcely suppose it the Ghilan which Hamd Alla Kazvini enumerates among the islands of the gulf, subject to the Persian Government.—*Ouseley's Travels*, i. p. 174; *Nearchus*, p. 375.

LARKA-KOL. HIND. The name of a mountain tribe in Ch'hattisgarhi. See Ho; Kol.

LARKANA or Larkhana, 40 miles from Shikarpur, in Sind, is a large, populous, and commercial town, in lat. 27° 33′ N., and long. 68° 15′ E. It gives its name to a sub-district of the Shikarpur collectorate in Upper Sind. The people are chiefly Muhammadans,—the Chandia, Jamali, Abra, and Jat. It is from the first that this part of the country obtained the name of Chanduka or Chandko. The Jamali are a Baluch race living on the borders of the desert; the Abra inhabit the south-west of Larkana; the Jats are all over the sub-district, and are cultivators and cattle-breeders. It is subject to floods or lets, which at times cause great destruction to life and property. Dyeing forms an important industry. The exports comprise grain of sorts, wool, cotton,

and other agricultural products.—*Imp. Gaz.; Masson's Journeys*, i. p. 460.

LARKHANI, in the early part of the 19th century, a community of robbers; their name in Rajputana, like Pindari and Kazak, was held to be synonymous with freebooter; they could then muster 500 horse, and their raids were rather formidable. Larkhan conquered an appanage, Dantah Ramgarh, on the frontiers of Marwar, then a dependency of Sambur. Besides this district, they had the tuppa of Nosul, and altogether about eighty townships, including some held of the rajas of Marwar and Bikanir, to secure their abstinence from plunder within their bounds.—*Tod's Rajasthan*, ii. p. 427

LARKS are singing birds of Europe and Asia, of the sub-family Alaudinæ. They have been arranged by Jerdon into the bush larks, true larks, and long-billed or desert larks.

Mirafra Assamica, Bengal bush lark.
M. affinis, Madras bush lark.
M. erythroptero, red-winged lark.
M. cantilans, *Jerdon*.
M. Horsfieldii, of Australia.
M. Javanica, of Java.
Ammimanes phœnicura, rufous-tailed finch lark.
A. lusitanica, pale rufous finch lark.
Pyrrhulauda grisea, black-bellied finch lark.
Calandrella trachydactyla, short-toed social lark.
Alauda raytal, Indian sand lark.
A. triborhyncha, Himalayan skylark.
A. gulgula, Indian skylark.
A. Malabarica, Malabar skylark.
Otocoris penicillata, horned lark.
O. longirostis, long-billed horned lark.
Spizalauda deva, small-crested horned lark.
Galerida cristata, large-crested lark.
Certhilauda desertorum, desert lark.

Alauda gulgula is the common lark of the plains of India and of Bengal. A. Malabarica may be somewhat inferior to the European skylark, so far as regards variety in the notes, but the difference is so very little, that the two birds could not be distinguished by the voice alone, nor by the mode of flight.

Alauda triborhyncha, *Hódg.*, of the lower region, scarcely differs from the skylark of Europe, but it seldom mounts so high or remains so long on wing. It is a summer visitor only, possibly migrating to the lowland valleys in winter. A Kashmir boatman would consider his establishment incomplete without the Afghan lark, Melanocorypha torquata, said to frequent the valley of Kashmir in winter. The sweet notes of these songsters, issuing from the boats as they pass up and down the river, are very enchanting. In all the desert parts of Sind, the crested calandre lark, the Charndol, Galerida cristata, is plentiful. It is not unlike the skylark, is generally met with in flocks during the cold months, and is the most abundant lark on the plains of Upper India and table-land of the Peninsula. It is of rare occurrence in Britain. The song of this bird, also its mode of delivery of it in the air, are not very unlike that of the skylark, although it does not soar so high.

Larks are often domesticated in S.E. Asia. In China, the Acridotheres cristellatus, the Shantung lark, has great facility in learning sounds, and will bark, mew, crow, cough, and sneeze, sometimes talk, and a single bird will fetch £6. The Acridotheres will imitate the human voice accurately. In China, a starling is often domesticated; it is lively, good-natured, and easily tamed. They also tame the fork-tailed parus, the Leiothrix luteus of Scopoli. It is in form and habit like the robin of Britain, is pretty, olive green, black forked tail, with wing primaries bright yellow and red. It turns summersaults on its perch. They have a short, loud song. Canaries are sold in many shops of Japan. The grackle, Gracula religiosa, called the Mina, is largely domesticated. The partridge, the shrike, are also largely domesticated. The hoopoe is to be seen occasionally.—*Blyth; Adams.*

LA ROQUE, author of a Voyage to Arabia the Happy, by the way of the Eastern Ocean and the Straits of the Red Sea, performed by the French for the first time in A.D. 1708, 1709, and 1710; also of a Journey in 1711, 1712, and 1713, from Mocha to the Court of the King of Yemen.

LARUS BRUNNICEPHALUS. *Jerdon.* Indian hooded gull. L. fuscus, lesser black-backed gull, of the Atlantic, Mediterranean, Red Sea, Indian Ocean, Cape of Good Hope, N. Zealand, Kābul (Burnes), Bay of Bengal. Xema ridibunda, or Larus ridibundus, is the black-headed gull of Europe, Asia, N. Africa; not rare in India, but less common than the nearly allined X. brunnicephalus. X. brunnicephala, *Jerdon*, the brown-headed gull, and the Kroikocephalus ichthyætus, *Pallas*, the great black-headed gull of all Asia. —*Jerdon.*

LARVA, a caterpillar. In China, the dried larvæ of flies, Wuh-kuh-ch'ung, CHIN., are given to children ill with marasmus. See Insects.

LAS. TIB. In Tibetan Buddhism, actions on which the destiny of human beings depend.

LAS, HIND., of Jhelum district, inferior land.

LAS, a section of Baluchistan bordering the Arabian Sea. Its ruler is styled the Jam. Las is separated from Lower Sind and the Indus delta by the Hala mountains.

It is a small maritime province, 100 miles long and 80 miles broad, and bounded on the north by the hills of Jhalawan, and east and west by high mountains. On the north is the Wuth State, and on the south the Indian Ocean. Major Preedy gives the names of nine tribes of this province, as the Bhoora, Goonga, Guddore, Hungaryah, Mandra, Roonja, Shaikh, Sabra, and Jamote; but Colonel Goldsmid enumerates nineteen, viz.—

Jamote.	Goonga.	Guddra.	Bodhur.
Sabra and Achra.	Boona.	Mussoor.	Manga.
Guddore.	Moondrance.	Baradia.	Waora.
Angaryo.	Sheikh.	Meree.	Zor.
Roonjha.	Mussona.	Dhira.	

The Guddra, Guddon, or Guddo, settled in Las, are an Arab tribe, there probably since the first occupation of Mekran and Sind by Muhammadans. They have characteristics similar to those of the Jokya, Numria, and Jutt, etc. Beyla is its capital, and is north of Sonmeance, its principal seaport. In winter the climate is cool and dry, but the summer heats are great. It produces grain, and is occupied by the Lassi division of the Lumri or Numri tribe. They have about twelve divisions or clans, one of which, the Jamhut, furnishes their chief or jam. They claim to trace their origin to Samar, who founded Samarcand, and acknowledge a consanguinity to the Bhatta of Jeysulmir. The Lumri are an active,

hardy, pastoral people; their wealth consists in flocks of goats, with fewer buffaloes and camels. They despise agriculture; wild Lumri are found grazing on the rocky banks of the Hab river. Their language varies little from that current in Sind. They manufacture coarse fabrics from the wool of their goats and camels. The Lumri eats meat almost raw, and is greatly addicted to the use of opium. Las has only two or three places for receipt of custom. Near one of these, Bela, are found coins, trinkets, and funereal jars. Sonmeanee contains numerous of the Mehman sect, and part of the fixed population of Bela is called Jaghdal. Hormara, a sterile district, with a port of same name, is subject to Las. Near Jabl Malan is a tribe called Gujur; at Garuki, the Sangur tribe; and at Hormara, in Mekran, with four hundred houses, is a tribe of this name. The Hormara tribe say they came originally from Sind. Persani, west of Hormara, is a small port of two hundred houses.—*Findlay.* See Baluchistan; Kalat.

LASCAR. Anglo-Pers. A seaman; a non-combatant in the army, from Lashkar, Pers., army; a public follower of the ordnance or camp equipage department.

LASH, a small province adjoining that of Herat, to the north of Seistan, and south of Furra, one of the governments under Herat. Lash itself is a place of considerable strength in those parts, being a fort on a scarped hill or rock, which resisted all Kamran's endeavours to take it.—*Burnes' Par. Pap. E. India*, p. 134.

LASIANTHERA APICAULIS. *Thw.*

Stenmorus, *Blume.* | Urandra, *Thw.*
Urukamn, . . . Singh.

A very large tree of Ceylon, growing in damp forests at 1000 to 3000 feet elevation. —*Beddome, Fl. Sylv.*

LASSEN, a learned German philologist of the 19th century, author of Commentatio Geographica atque Historica de Pentaponia Indica, Bonn 1827; Die Altpersischen, Keil 1836; Die Taprobane Insula, Bonnæ 1842; Indische Alterthum Skunde, Indian Antiquities, 4 vols., 1847 to 1861. Lassen drew up a fairly complete alphabet of 39 characters of the cuneiform inscriptions, and translated those with which at that time Europe was acquainted.

LASURA. Hind. Cordia latifolia and C. myxa fruits, the Sebesten of old writers, sweetish and highly mucilaginous fruit. Leaves used as fodder for cattle, and as plates or trenchers. Fruit edible and in great request. - *Powell's Handbook.*

LASWARI, a village in the Ulwar (Alwar) State of Rajputana, in lat. 27° 33′ 30″ N., and long. 76° 54′ 45″ E. It is famous in Indian history as the scene of a great battle, won by Lord Lake, on the 1st November 1803, which destroyed the Mahratta power in India. The engagement was the severest in which the E. I. Company's troops had ever been engaged, not excepting that of Assaye. It was even reported that one-half their number was left on the field, killed or wounded. On the British side the casualties amounted to 824, one-fourth of which belonged to the 76th regiment, who bore the brunt of the action. An armed force of 9000, trained by Europeans and well armed, but from whom the European officers had been withdrawn, were defeated by 7000 under Lake, only one regiment of which was English, the opposed forces, with this exception, being fellow-countrymen. Laswari is the best example of a battle fought by a purely Mahratta army against a force of combined European and native troops, the latter led by British officers. It proves, as the actions on the Sutlej and in the Panjab proved subsequently, that native soldiers will fight splendidly, even against Europeans; that they only require to be led. Side by side with British troops, and opposed to an enemy whom those British troops are eager to encounter, they would vie with their British comrades. At Laswari, fighting against the British without European officers to lead them, they displayed, writes the historian and eye-witness, Major Thorn, a firmness of resolution and contempt of death, which would not fail to command the admiration of their opponents.—*Imp. Gaz.*

LAT. Hind., Sansk. An obelisk, a pillar, a staff, a column, a monolith. The Lat pillars of North-Western India have been made famous in the world from having engraved on them ancient characters, now known as the Lat character, first deciphered by Mr. James Prinsep. At Allahabad is one of the famed Lat obelisks or pillars, a monolith containing a Gupta inscription on its surface. The more ancient engraving on this stone, and for whose exhibition we may conclude the pillar to have been expressly fashioned, consists, however, of a counterpart of the edicts of Asoka, which appear severally on the Lat at Dehli, the rocks of Girnar on the western coast, and Dhauli in Cuttack, in addition to the transcript in the Semitic character on the rock at Kapurdigiri. The inscription contains 26 verses, which give a survey of the political divisions of India at the time, contain the names and titles of very many of the reigning families, and, extending beyond the boundaries of India, the regions of the great king of Persia, and the hordes of the Huns and Scythians. Though the capital of the Lunar princes had been removed to Hastinapur, and though Menu or the Mahabharat makes no allusion to the name of Allahabad, still its importance in the third century before Christ is established beyond a doubt by this column of Asoka.

The *Bhitari Lat* is a pillar in the Ghazipur district, bearing the same royal names and genealogy as on that of Allahabad.

The *Dehli Lat* is known as the pillar of Feroz, also the Golden Lat, from the gilt pinnacle or ball (Kalasa) placed over it by Feroz Taghalaq, who reigned at Dehli from A.D. 1351 (A.H. 752) till 1388 (A.H. 790). This is the most remarkable of all the objects in the Kotila, as well as the monument of highest antiquity in all Dehli. Till modern European scholars read and expounded its inscriptions, much erroneous opinion had prevailed about this pillar. It was the club of Bhim Sena of the Hindus, the walking-stick of the old emperor Feroz of the Muhammadans, and the pillar of Alexander the Great, in memory of his victory over Porus, with Greek inscriptions, of Tom Coryate and the other early English travellers, until, after the lapse of centuries, it once more became appreciable to the last generation as one of the edict columns of Asoka. The pillar that is now just outside the Dehli gate of the city, was originally on the west bank of the Jumna, in the district of Salora, not far from

Khizerabad, which is at the foot of the Siwalik mountains, 90 cos from Dehli. But the original site of the pillar is supposed by Cunningham to have been somewhere near the ancient capital of Shrughna, described by Hiwen Thsang as possessing a large vihar, and a grand stupa of Asoka's time containing relics of Buddha. The pillar is stated to have been conveyed by land on a truck to Khizerabad, from whence it was floated down to Ferozabad or New Dehli. This removal took place about the year 1356, by the orders of Feroz Shah, as is said, to confound the Hindus, who had boasted of its immoveable fixity in the earth. Underneath the pillar had been found a large square stone, which also was transported and placed in the same position as before, when the pillar was put up in the courtyard of the palace of Feroz. In the face of this circumstantial account, which a contemporary writer has left of the removal of the pillar, it can by no means be taken for the same that the bard Chand speaks of 'as telling the fame of the Chauhan.' This must have been some other column that stood at Negumbode, and has disappeared from causes not known now to anybody. The head of the Feroz Lat is now bare; there is now no ornamentation of black and white stonework surrounded by a gilt pinnacle, from which, no doubt, it received its name of Minar Zarin, or golden pillar; but this gilt pinnacle was still in its place in A.D. 1611, when William Finch entered Dehli, as he describes the stone pillar of Bimsa, which, after passing through three several storeys, rises 24 feet above them all, having on the top a globe surmounted by a crescent.

The pillar is a single shaft of pale pinkish sandstone, being of the usual height of all Asoka's pillars, 42 feet 7 inches, of which the upper portion, 35 feet in length, has received a very high polish, while the remainder is left quite rough. It seems that all the pillars of that monarch were made to his particular order of a certain specified length. The weight is rather more than 27 tons. The numerous pillars of Asoka, all of one size, but of a variety of stones, arising from the respective rocks from which they were quarried, exhibit an unequal workmanship which may help to throw some light on the state of sculptural art amongst the ancient Hindus in different parts of India. There are two principal inscriptions on Feroz Shah's pillar, besides several minor records of pilgrims and travellers from the first centuries of the Christian era down to the present time. The oldest inscriptions for which the pillar was originally erected, comprise the well-known edicts of Asoka, which were promulgated in the middle of the third century B.C. in the ancient Páli. The alphabetical characters, which are of the oldest form that has yet been found in India, are most clearly and beautifully cut, and there are only a few letters of the whole record lost by the peeling off of the surface of the stone. The inscription ends with a short sentence, in which king Asoka directs the setting up these monoliths in different parts of India as follows: 'Let this religious edict be engraved on stone pillars (Sila sthamba) and stone tablets (Sila phalaka), that it may endure for ever.' The record consists of four distinct inscriptions on the four sides of the column facing the cardinal points, and of one long inscription immediately below, which goes completely round the pillar. The last ten lines of the eastern face, as well as the whole of the continuous inscription round the shaft, are peculiar to the Dehli pillar. The second inscription is that which records the victories of the Chauhan prince, Visala Deva (Beesildeo), whose power extended 'from Himadri to Vyndhia.' This record of the fame of the Chauhan consists of two separate portions, the shorter one being placed immediately above Asoka's edicts, and the longer one immediately below them. But, as both are dated in the same year, viz. S. 1220, or A.D. 1163, and refer to the same prince, they may be considered as forming only one inscription.

The inscription is in a more recent character below, and is in Sanskrit, to the effect that raja Vigrah or Visala Deva had in A.D. 1169? caused this pillar to be inscribed afresh, to declare that the said raja, who reigned over the Sikambari, had subdued all the regions between the Himavat and Vindhya.

This monolith, like the kindred pillar at Allahabad, was in the first instance exclusively devoted to the exhibition of a counterpart text of the edicts of Asoka, but succeeding generations have taken advantage of the ready prepared monument to supplement a record of their own prowess. Of the two stone pillars at Dehli, one was moved down, as has been said, from near Khizerabad, at the foot of the Himalaya; the other was taken from Mirat.

Iron Pillar at Dehli.—In the centre of the mosque, says Colonel Yule, there is to be seen an enormous metal pillar. The height of the pillar above ground is 22 feet, and its greatest diameter a little more than 16 inches. The pillar was considered by James Prinsep to date from the third or fourth century. The inscription on it has no date, but is scarcely earlier than A.D. 800. Many letters agree with the Kanouj Nagari, but the general aspect is more modern. It concludes with an invocation to Vishnu. It mentions also prince Dhava, a usurper, at Hastinapur. The inscription is punched upon the pillar, and the only thing remarkable in it is the mention of the Bactrians, called Vahlika, being still in Sind. From the compound letters used, the inscription must be long after the fifth century.

Nigumbode.—A column is alluded to by Chand, as telling the fame of the Chauhan, and he says it was placed at Nigumbode, a place of pilgrimage on the Jumna, a few miles below Dehli. It has disappeared.

Benares.—One of Asoka's edict columns is erected at Benares. It is of stone, with many carvings and inscriptions. All Asoka's columns appear to be of the same height, 42 feet 7 inches, inclusive of the part underground. The one at Benares and the other at Allahabad measure exactly the same altitude. The columns were erected only in large, populous, and opulent cities.

Ghazipur.—A Buddhist pillar at Ghazipur has an inscription on it in Sanskrit, not pure nor easily intelligible. This inscription, like one of Allahabad, is intruded on a Buddhist column, and is subsequent to it, as it carries on the Gupta family from Samudra to the boy Mahendra. Chandragupta 2d and Kumara Gupta followed the Vishnu worship, but Skanda Gupta attached himself to the

opposite doctrines, now so prevalent, of the mysterious and sanguinary Tantra. Skanda Gupta was dispossessed of his kingdom, for a time, by a treacherous minister. This was the case when the Chinese traveller Hiwen Thsang reached Behar, in the seventh century, and he may refer to the event mentioned in the inscription; but he calls the king by a name construed to be Siladitya, and no king of this name reigned in Behar, nor nearer than in Gujerat. The Gupta, probably, succeeded the Buddhist kings of Behar. The absence of the insertion of the Tantra in the Allahabad inscription, and their insertion here, would seem to indicate the period of the origin of this worship. The character used is the same as Allahabad No. 2, or Kanouj Nagari, with numerous mis-spellings. The date is subsequent to Allahabad No. 2; and, Dr. Mill says, not earlier than Charlemagne in Europe, A.D. 800, if the Gupta be those of the Purana. Moreover, the mention of the sectarial worship of the Bhagavata and Tantra makes the date comparatively modern; Indra, Varuna, Yama, Krishna, Siva, Sita, the Tantra, Devaki, the mother of Krishna, Rudra, are mentioned, and loads of forest timber are collected for the completion of sacrifices for Indra, Varuna, and Yama only, and not for Siva or Vishnu. The kings or princes mentioned are the great king, Gupta; his son, do., Ghatot Kacha; do., King of kings, Chandragupta; do., King of kings, Samudra Gupta; do., Chandragupta 2d; do., Kumara Gupta; do., Skanda Gupta, a minor; Mahendra Gupta?

Mr. Carleylle found unfinished monoliths of sandstone on hills in Rupbas in the Bharatpur State; one of them 33½ feet, another 22½ feet.

Dhauli in Cuttack.—Inscriptions in the Lat character were discovered here by Lieut. Kittoe. The character used in the inscriptions in the Lat character are those of Allahabad and intermediate between these two; also a character at Balibhi, and the parallelogram-headed character of Seoni.

Asoka's pillars in Orissa are of sandstone.

At *Junir* there are two inscriptions, one on the Nanch ghat is in keeping with the inscriptions on the Dehli pillar and Girnar rock.

The *Girnar* inscription was supposed by Mr. J. Prinsep to be Pali.

Lat Character.—It was a remark of Colonel Tod, Let us master the characters on the columns of Indraprestha, Prayag, and Mewar, on the rocks of Junágarh, at Bijoli, and on the Aravalli, and in the Jain temples scattered over India, and then we shall be able to turn our regard to Indian history. This was effected by Mr. James Prinsep, who made the observation that the language of the Lat inscriptions differs from every existing written idiom, and is, as it were, intermediate between the Sanskrit and the Pali. The nouns and particles in general follow the Pali structure. The verbs are more frequently nearer to the Sanskrit forms; but in neither, any more than in grammatical Pali, is there any great dissimilarity from Sanskrit. That on the Bhilsa monument is in the Gupta class of inscriptions. Numerals were first supposed to be discovered by Mr. James Prinsep on the Bhilsa monument. In the Buddhist pillar inscriptions, the dates were uniformly expressed at full length.

Lat, an early Pali alphabetical character, so called from the pillars whereon it is used, is the same as Aryan, but larger, inscribed on rocks at Kapurdigiri in Afghanistan, in the parallel Semitic writing, and at Cuttack, at Dehli on a pillar, also on pillars at Allahabad, Bettia, Multiah, and Radhia, in the true Pali, of Indian origin. One Dehli pillar, square, on each face is a framed inscription. Another pillar, facing cardinal points, near Dehli, is called Pillar of Feroz, the reading of which somewhat differs from that of the others. Though resembling the Girnar inscription in general purport, these inscriptions differ considerably in the structure of certain sentences. The Dehli inscription seems to have been directed to a more refined people.

Pillar of Feroz, so called because it stands on the summit of a large building supposed to have been erected by Feroz Shah, who reigned in Dehli between A.D. 1351 and 1388. Feroz pillar, 37 feet high, is a single stone, hard and round. Its circumference where it joins the building is 10½ feet. It has an ancient Lat inscription, and one with a more recent character below in Sanskrit, as noticed above.

Lat Inscriptions.—Asoka's *first* edict prohibits the sacrifice of animals for food or in sacrifice, and enjoins moral virtues.

The *second* edict provides medical aid throughout his dominions; orders planting of trees, and wells to be dug, along the sides of roads.

The *third* edict is in the twelfth year of Piyadasi's inauguration, and enjoins a quinquennial humiliation.

The *fourth* edict of the twelfth year of Piyadasi compares the past condition of his country with that then existing.

The *fifth* edict records the appointments of ministers of religion or missionaries.

The *sixth* edict appoints *patiredaka*, custodes morum, also criminal magistrates.

The *seventh* edict contains the king's desire to reconcile diversities of religious opinions.

The *eighth* edict contrasts the carnal enjoyments of former rajas with the harmless amusements of the king,—visits to holy people, almsgiving, respect to elders, etc.

The *ninth* edict continues the thread of a moral discourse, the Dharma Mangalam, happiness of virtue, benevolence, reverence, charity.

The *tenth* edict comments on Yaso va Kiti va, the glory of renown, founded on the vain and transitory deeds of this world, and the higher objects of life.

The *eleventh* edict, at Dhauli and Girnar, upholds that the imparting of Dharma is the chiefest of charitable donations.

The *twelfth* edict is addressed to all unbelievers with entreaty.

The *fourteenth* is summary of the preceding, and is complete in itself.

LAT and Manat, mentioned in the Koran, tradition says, are the names of the idols of Bamian. Lat, Uzzah, and Minat were demigods of the Koresh tribe in the time of Mahomed.—*Mohun Lal's Travels*, p. 90; *Palgrave*.

LATA, or Larike, the ancient names of the country about the mouth of the Nerbadda on the Gulf of Cambay. See Lar.

LATAKIAH, a seaport town of Syria, the ancient Laodicea, 70 miles from Tripoli. In 1822 it was destroyed by an earthquake.

LATANIER, a plant of China, which has spread throughout the East Indies.

LATERITE. Cabook, SINGH. A clay iron ore peculiar to India. It covers the western coast almost continuously, and for the most part up to the very foot of the ghats, from near Bombay to Ceylon. It is found in detached beds along the Coromandel coast, near Madras and Nellore, Rajamundry, and Samulcottah, extending into Cuttack. It caps the loftiest summits of the Eastern and Western Ghats, and some of the isolated peaks in the table-land in the interior. A small patch of it is to be seen in Berar on the left bank of a river, eleven miles N. of Amraoti, on the road to Ellichpur, and it covers all the country around Beder. It occurs in the Southern Mahratta country, Mysore, Salem, Coimbatore, South Arcot, the Carnatic, and Tanjore. It is found in Malwa, and in many parts of Bengal and Ceylon. It fringes the shores of Burma, Malacca, and Siam, and appears on the coast of Singapore and Sumatra. It is found in boulders and rolled masses all along the Malabar coast from Bombay north to Gogo in the Gulf of Cambay. Beyond the region of the formation itself, pieces of it have been met with three hundred feet under the surface, in the blue clay beds at Calcutta, as also in similar beds of lesser thickness in Bombay, and close by Cambay and Kurachee; so that the formation at one time was probably much more extensive than at present. Its colour is of a red irony or brick-dust hue, sometimes deepened into dark-red. It is marked with whitish stains, and is occasionally cellular or perforated with tubiform holes. It rarely if ever contains either crystals or organic remains, is never stratified or columnar, and generally spreads out in vast sheets over the surface of the plutonic or volcanic rocks. When the upper surface is cleared away, the rock below is found soft and easily cut into blocks of any form. It quickly hardens and darkens in hue by exposure to the air, and is then not at all liable to decomposition or injury from the weather. The Arcade Inquisition at Goa is built of it, also St. Mary's Church, Madras, and the old fortress of Malacca. It is called by the natives, from its worm-eaten appearance, Kire-ka-patthar, or Silika-patthar. The Tamilar call it Chori kullu and Vettic kullu, and on the Malabar coast it is termed Stika kullu. There are two strong objections to supposing laterites to be the decomposed rock over which they lie; first, because were such the case, we ought to observe at the foot of a laterite hill a gradual blending of the laterite into the secondary greenstone, but such has never presented itself. — *Carter's Geological Papers on Western India*, p. 77; *Cole on Laterite, in Madras Journal Lit. and Soc.; Newbold in Asiatic Society's Transactions.*

LATES CALCARIFER, a fish of the southern seas, the Begti or Cockup of Europeans.

LATES HEPTADACTYLUS. *Lacepede.*

Perca maxima, *Sonnerat.*	Pandoo menoo, *Russell.*
Holocentre heptadactyle, *Lacepede.*	Coius vacti, *Ham.*
	Lates nobilis, *Cuv. and Val.*

This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore, and Madras. It yields little isinglass, owing to the thinness of the air-vessel. That of a fish when dried weighs upwards of one ounce. At Penang this kind sells at the rate of 25 to 30 dollars per pikul. L. nobilis is a fish much esteemed in Calcutta. It is the Ikan siyakup of the Malays.

LATHE. Indian carpenters use a lathe, consisting of two rough upright supports mortised into two bars, one of which is fixed while the other may be adjusted by sliding along two slips of wood or bamboo, to which it is then fixed by moveable wedges; a boy having in his two hands the ends of a cord passed round the work to be turned, causes it to revolve as in the pole lathe. When the work cannot be so fitted, the lathe used by brass-smiths is had recourse to; in this a kind of rough wooden mandrel, with a broad face smeared with lac for fixing objects to be wrought, works between a back centre as in the carpenter's lathe and a collar shaped, the collar being formed of a plank sawn down the middle and embracing the mandrel, which is turned to fit.—*Rohde, MSS.*

LATHI. HIND. A staff, a club. Lathial or Lathiwal, a clubman armed with a bludgeon.

LATHS or Shingles.

Du latten, Lattes, . FR.	Correnti, ... IT.
Latten, ... GER.	Slegii, ... RUS.

These are largely used in Burma for the tiling of houses, in lieu of slates.

LATHYRUS, a genus of plants, many of them handsome when in flower, but requiring sticks or trellis-work to support them. L. cicera of Spain has poisonous seeds. L. inconspicuus, *Linn.*, is a plant of Sind. L. pratensis, *Linn.*, is the meadow pea of temperate climates; L. silvestris and L. tuberosus can be utilized for fodder plants. L. odoratus, sweet-pea. The seed should be sown after the rains, at the commencement of the cold season, in pots. It is very seldom that they blossom in India.—*Riddell.*

LATHYRUS APHACA.

Chuna, Bura chuna, HIND.	Jangli matar, . . HIND.

Its ripe seeds when largely eaten are narcotic; when ground are said to be harmless.

LATHYRUS SATIVUS. *L.*

Teora, ... BENG.	Kisari, ... HIND.
Gilban, ... EGYPT.	Mattar, Chural, . ,,
Vetch, Chickling do., ENG.	Karas, Karil, . LADAKH.
Lang, ... GUJ.	Masang, ... PERS.

Cultivated in many parts of India, but, being very rich in nitrogenous matter, requires to be largely diluted, and it is not considered a wholesome food either for man or beast. It is often cultivated in the plains of the Panjab as a cold-weather field crop for its pulse, and is grown to 12,000 feet in Tibet. The grain is grey-coloured, with minute specks of black, also a thin line of black passes all round the seed as if to separate it into two halves. It is used as a pulse, being made into dal, but is hard and indigestible. Its composition in 100 is

Moisture, ...	10·10	Fatty or oily matter,	0·95
Nitrogenous matter,	31·50	Mineral constituents,	
Starchy matter,	54·26	ash, ...	3·19

Like L. cicera, its continuous use induces paralysis both in man and animals. Dr. Thomson observed at Saspola at least thirty people, of all ages, from a full-grown man to an infant, and of both sexes indifferently, who had been attacked with paralysis within the previous two years, and he attributed it to this plant. The palsy was confined to the lower extremities, and differed much in degree. The sufferers were in other respects the most healthy and good-looking portion of the inhabitants.—*Ainslie; Stewart; Thomson's Tr.* p. 391.

LATRODECTES LAGUBRIS, a spider called Kara-Kurt by the Kirghiz. It is about the size of the finger-nail; it is very poisonous, and it is said can kill a man and animals. It can jump several feet; it lives in the grass.—*Schuyler*, ii. p. 123. See Spider.

LATTICE LEAF, the Ouvirandra fenestralis of Madagascar, might beneficially be introduced into India. The interstices between the veins of the leaf are open, instead of being filled with cellular tissue as in ordinary leaves, hence its lace or lattice-like appearance. The fleshy root, when cooked, yields a farinaceous substance resembling the yam; hence its native name, Ouvirandrano, literally yam of the water.—*Mr. Ellis, Madagascar.*

LAUGHING JACKASS or Feathered Jackass, a bird of Australia. It has a peculiar gurgling call like laughter.

LAUGHING KINGFISHER, Dacelo gigantea of Australia, seldom approaches the water, but lives in the dry scrub, and feeds like birds of prey upon insects, reptiles, and small mammals; is excessively adroit in catching mice, and will wait, as patiently as a cat, at a hole whence it expects one to emerge. His note strangely resembles a rude powerful laugh, and may be often heard far. The regularity with which this laughter rings through the Australian forest at certain hours of the day has given it the name of the Settlers' Clock.

LAURACEÆ. *Lindl.* The cinnamon tribe of plants, comprising about 17 genera and 86 species, viz. daphnidium, litsæa, tetranthera, cylicodaphne, actinodaphne, cryptocarya, beilschmiedia, machilus, alseodaphne, camphora, cinnamomum, haasia, apolonias, aperula, phœbe, hernandia, lindera, laurus. The most important economically are the species of alseodaphne, beilschmiedia, cinnamomum, daphnidium, laurus, litsæa, machilus, and tetranthera.

LAUREL, a term applied to various plants. Laurus nobilis, *Linn.*, the sweet bay of Italy, is the laurel of poets; Cerasus laurocerasus is the common laurel of English shrubberies; and the Portuguese laurel is C. Lusitania, and the name is given in India to the variegated croton.

Laurus nobilis, *Linn.*

Hub-ul-ghar (berry), ARAB.	Warrior's laurel, . ENG.
Sweet bay, . . . ENG.	Zafnee, ... PERS.

Its berries are used in medicine in India, with the Greek name Daphne corrupted into Zaknee and Zafnee.—*Royle; O'Sh.*

LAVA and Kusa, twin sons of Rama and Sita, born after Rama had repudiated Sita, and brought up in the hermitage of Valmiki. Kusa built Kusa-sthali on the brow of the Vindhya, the capital of Kosala. Kusa and Lava were the first rhapsodists, and to this day Kusilava, their combined name, means a reciter of poems. Kusa's eldest son, Kusamba, founded Kusambi, the modern Kanouj. According to a legend relating to them, Rama, previous to sacrificing a horse, had sent it off, but Kusa and Lava seized and held it till Rama came and recognised his two sons. Lava was famed for his strength and his skill as an archer.

LAVA, a volcanic product, is very abundant at Aden. In the Rajmahal Hills are several outpourings of lava which have taken place at different epochs, and numerous thermal springs close to these hills still proclaim the existence of subterranean fires. The lake of Loonar, about two miles in circumference, is a body of water low down in the crater of an extinct volcano, and farther west the site of the Aden cantonment is also the crater of an extinct volcano. On the east, twenty miles north of Chittagong, is Sita Kund, a hot spring, the gaseous exhalations on the surface of which may be inflamed by the application of fire. Volcanic fire has frequently broken out from the bosom of the ocean opposite Cheduba Island, in lat. 19° N.; and a few miles south of Pondicherry, in A.D. 1757, a sub-marine eruption also took place. The volcanic fire near Cheduba, as was described by an eye-witness, in 1846 rose into the air as a brilliant column of fire, illuminating the sea for miles. From the south-eastern point of Java, in lat. 9° S., and long. 114° E., to Chittagong, a distance of 3000 miles, are twenty-seven known active volcanoes and twenty-nine extinct ones.

LAVAJAH, timber, short round logs of timber in the Madras market, from 12 to 16 feet in length, 2 to 3½ feet square.

LAVAL. Francis Pyrard de Laval went to India in 1601. He was detained in the Maldives for several years, and about 1609–11 he was in Goa, where he found Italians, Germans, Flemings, and Frenchmen, and men from all parts of Asia. He found there also three Englishmen, prisoners of the Portuguese, whom he describes as a proud-looking set, who, though in chains, took every opportunity of showing their contempt for the French and other foreigners around them.

LAVENDER.

Lavendel, DA., DU., G., SW.	Lavandula, LAT., SP.
Lavande, ... FR.	Alfazema, . . . PORT.
Ustakhudas, . . HIND.	Unyetshnayatrava, RUS.
Lavendola, Spigo, . IT.	Espliego, ... SP.

Twelve species of lavender have been described, only two of which are of much interest, viz. the common lavender, Lavandula vera, and French lavender, L. spica. The former yields the fragrant oil of lavender used in perfumery, its solution in spirits of wine forming what is called lavender water, and the latter oil of spike, used by painters on porcelain, and in the preparation of varnishes for artists. English oil of lavender is prepared chiefly at Mitcham in Surrey, where the plant is extensively cultivated for the purpose. It is in highest perfection when about a year old. At first it is nearly colourless, but gradually acquires a pale amber tint. Lavender water is the distilled water of lavender flowers.

Lavandula spica, *D.C.* Sita-ki-pungeri, DUKH. This native of Europe grows to great perfection on the Neilgherry Hills. The bush there has a strong aromatic scent, but seldom survives more than two years. The volatile oil is limpid, very transparent, yellowish-white; four parts contain nearly two of camphor. Often adulterated with the oil of turpentine, and of a species of lavender of superior aromatic power, though more acrid. Oil much used by porcelain painters, and called 'oil of spike.'

Lavandula stœchas, *W.*

Æsta-kudus, . . ARAB.	Osta-kudus, . . ARAB.
Oostakhudus, . „	French lavender, . ENG.

This is much prized by the Arabs, as an expectorant and antispasmodic. It is imported into Bombay from the Persian Gulf, and is used medicinally by the natives of India.—*O'Sh.* p. 489; *Faulkner.*

LAW, MONSIEUR, a descendant of John Law,

of Lauriston, who started the South Sea Company. Monsieur Law, in 1748, defended Ariacopang, and subsequently commanded the French troops with Chanda Sahib at Trichinopoly. His command was not advantageous to the French interests. He delivered up Chanda Sahib to Monaji Rao, and on the 3d June capitulated, and surrendered himself and all his troops and stores to Major Lawrence.—*Orme.*

LAW.

Adalat, Sharra, . . ARAB. | Dharma, Dhamma, SANSK.
Dad, Smriti, . . HIND. |

The laws by which British India is now ruled are the successive development of legislative action by circular orders, by regulations, by Acts, and by legislative councils. In the earliest practice of the English East India Company, its civil servants were ruled by letter writing. Warren Hastings, the first Governor-General, promulgated rules and published laws in the shape of regulations, but Lord Cornwallis was the father of Indian legislation. He put the perpetual settlement regulation into regular sections and clauses; he established civil and criminal tribunals in their several grades, police superintendence, rules for the salt and customs departments, and all the various agencies indicating that the East India Company was assuming its imperial position. This mode of creating laws continued through the administrations of Lord Minto, the Marquess of Hastings, Lord Amherst, and Lord William Bentinck, largely aided by the Boards of Revenue, the Boards of Customs, Salt, and Opium, the Judges of Sessions, and the Sadr Adālat Court, whose suggestions, in letters and minutes, were submitted to the Secretary to Government in the Home Department, who, with the aid of a member of the Council, laid the matter before the Governor-General. A draft was then published in the official Gazette, and finally passed, with such alterations and additions as the press and public bodies may have suggested. Many of these regulations were lengthy and cumbrous, but they were framed by men thoroughly conversant with the habits and languages of the native community, fearless of responsibility, and early taught to rule the varied races of India with the equity and vigour which orientals value. There had been a local legislature at Madras and one at Bombay; but at the renewal of the charter in 1833, these were abolished, and the regulations became 'Acts of the Governor-General in Council.' Also, the India cabinet had consisted of the Governor-General, a military and two civilian members; but in 1833 a legal member was added, the most prominent of whom have been Macaulay, Amos, Charles Cameron, and Bethune.

At the last renewal of the E. I. Co.'s charter in 1853, a Legislative Council was formed distinct from the Executive Council, its members being the cabinet, with the addition of members for Bengal, Bombay, Madras, the N.W. Provinces, and two judges of the old Supreme Court. This form lasted through seven years, during which a Penal Code, a Code of Civil and Criminal Procedure, a Rent Act, and other important measures were passed; but during Viscount Canning's administration, and the period of office of Lord Halifax as Secretary of State for India, the legislatures of Bombay and Madras were re-established, and eminent officials and merchants, and Hindus and Muhammadan rajas and nawabs, were selected for seats in Council, to represent all classes of the empire. The judges ceased to be members of the Legislative Councils, and these then assumed the representative character which they still retain. The members when speaking do not rise from their seats. The Anglo-Indian Legislature, before acting, has ever been careful to ascertain the opinions of all local functionaries conversant with the questions under consideration. In the High Courts at Calcutta, Bombay, and Madras, European as well as native judges sit, and there may be mentioned Rama Prasad Roy, the first native judge of the High Court; Shambunath Pandit, Dwarkanath Mitra, and Anukul Chandra Mukarji, three native judges of the Calcutta High Court, and Mutusami Iyer at Madras.

The great lawgiver of the Hindus is supposed to have lived at some time subsequent to B.C. 1400. The book of Institutes that bears his name, called the Manava Dharmasastra, seems to have been a compilation from the various laws in force throughout a part of Northern India and of existing law-books or Dharmasastras. Since his time there have been numerous glossaries, digests of text-books, and commentaries, forming the authorities for the five schools of Bengal, Mithila, Benares, Mahratta, and Dravira. Menu's Institutes were translated by Sir William Jones.

After the Institutes of Menu come the Codes of Yajnavalkya and Parasara. Raghunandana, who is the author of a complete digest for Bengal, lived in the 16th century. The Vivada Bhangarnava, a code of Hindu law, according to the *Bengal* school, by Jagan-natha Tarkalankara, written at the end of the 18th century.

The *Mithala* school has the Vivada Chintamani by Vachaspati Misra, who also wrote the Vyavahara Chintamani.

The *Benares* school has three law-books, the Vivada Chandra, by Lakhima Devi; the Vivada Ratnakara, by Chandeswara; and the Vivada Tandava, by Ratnakara.

Smarta Bhattacharya wrote the Vyavahara Tatwa, a modern work on law, according to the Bengal school of Raghunandana.

The Vyavahara Mayukha is a Mahratta law-book, by Nilakantha Bhatta. It was translated by Major Borrodale.

In the Telingana portion of the south of India, the work that is deemed authoritative in the Hindu law of inheritance is the Saraswati Vilasa, a code of laws which raja Pratapa Rudra Deva, a ruler in Orissa, caused to be written in the early years of the 16th century. The title means the recreations of the goddess of learning. It is in Sanskrit, and it purports to embrace the whole range of the religious, moral, and civil laws of the Hindus. It continues to be of some authority to the northward of the Pennar river, but even there it is in a great measure supplanted by the commentary of Vijianeswara, the prevailing authority in Southern India. The Saraswati Vilasa seems to have most in common with the Mitakshara. Yimuta Vahana's Digest, the authority generally followed in Bengal, does not seem to to be anywhere referred to.

The trial scene in the Mrichchhakati is regarded as a true scene in an ancient Hindu court of justice in Northern India.

In the south of India the Mitakshara is the

received authority with the British courts, and Mr. Justice Innes is of opinion that the rules of Hindu law are fairly represented in the Mitakshara and other such works.

Learned British lawyers have had their thoughts directed to a possible codification of the Hindu civil law, and with that object Mr. Justice Cunningham, in 1877, framed a digest to help forward what seemed to him a great desideratum for the country. The difficulty, however, that is encountered arises from the fact that the Hindu population consists of numerous races, who through thousands of years have each been following their own social customs. Dr. W. W. Hunter plainly says that the codes of Menu and Yajnavalkya, on which all the later law-books and commentaries profess to depend, only recorded the usages of certain Brahmanical centres in the north, and perhaps did not fairly record even them.

All *Muhammadan* law is founded on the Koran, and is inseparably bound up with the religion of Islam. But the commentaries upon their religion and law which have been produced by their two great sects, the Sunni and the Shiah, are almost innumerable. The Sunni have four distinct schools of jurisprudence, the Shafai, Maliki, Hanbali, and Hanifi, each named after its founder, the most important being that founded by Abu Hanifa, born A.D. 699. This learned doctor had a true judicial mind, and gave great scope to reason in his interpretation of the maxims of the Koran. His teachings prevail in India. In the early years of British rule in India their Muhammadan law was administered both in civil and criminal cases. But there has been framed for all India a criminal code, famed for its justice, humanity, and comprehensiveness; and their civil law is still in force, and under an Act passed in 1864 the judges decide cases upon their own knowledge and judgment.

Two great disciples were Abu Hanifa and Abu Yusuf. The latter was the friend of Harun-ur-Rashid, and is stated to have earned in one night fees of £18,000 to £25,000.

India has the best code of penal law in the world, and many chapters of the civil law have been similarly consolidated, with excellent general results, by Macaulay and the eminent jurists by whom he has been succeeded. The courts of first instance are entirely manned by native judges, who sit without juries, and have unlimited jurisdiction, without distinction of creed or colour. A native judge has a seat on the bench of every one of the four High Courts constituted in the various provinces, which hear causes criminal and civil with scarcely any appellate control at all.

The British lawyers who have been most distinguished in India are Colebrooke, Ellis, Sir William Jones, Sir Francis Macnaghten, Sir Edward Ryan, Sir Thomas Strange, Sir Lawrence Peel, Sir James Colville, Sir Barnes Peacock. —*Rumsey's Law of Inheritance; Foulkes, Hindu Law of Inheritance; Nelson's Prospectus of Hindu Law; Maine's Early Law and Custom; Cunningham's Digest of Hindu Law; Dowson.*

LAWA, a tribe, in lat. 21° 20′ N., west of the Mei-kong river, and dwelling along with the Karen, in the mountainous tract due east of Kalagouk Island at the source of the Sesa Wat river, in lat. 15° 30′ N., and long. 99° E., and others in lat. 18° 20′ N., and long. 28° 40′ E., at the sources of the Meping river which unites with the Menam river. A body of savage Lawa dwell east of the Salwin river, in lat. 22° N., and long. 98° 40′ E., with the wild Kakui, Shan, and Nutsa on the east. A Lawa population also dwell on the watershed between the Irawadi and Menam, on the frontier of Siam and Ava. Dr. Latham considers the word to be the same as Lao, Lau, or Laos.—*Latham's Eth.* See India.

LAWANG or Kulit Lawang. MALAY. The clove bark of commerce. According to Crawfurd (p. 215), this is the bark of the Cinnamomum sinto, and takes its name from having a clove flavour. It is a product of Borneo, and an object of export to China.

LAWRENCE. Sir Henry Lawrence, an officer of the Bengal army who was employed in 1842 as Political Agent, in 1853 as Resident at Ajmir, in 1857 as Resident at Oudh. He was besieged in Lucknow during the mutiny, was defeated at Chinhut 30th June 1857, and on the 4th July he died from a gunshot wound. The Lawrence Asylums, a series of educational institutions for European children, were endowed by him.

John Laird Mair Lawrence, Baron Lawrence, a Bengal civil servant who rose to be Governor-General and Viceroy of India. He was Chief Commissioner in the Panjab during the revolt and rebellion of 1857. By his energy he saved the Panjab, and contributed materially to uphold British supremacy in India. He had, in 1856, been created a K.C.B. for his work in the Panjab, in 1857 he was promoted to the dignity of G.C.B. for his services on the outbreak of the mutiny. In 1858 he was further honoured by being created a baronet and a member of the Privy Council, and on the institution of the Order of the Star of India was created a K.C.S.I. The Court of Directors of the East India Company granted him a life pension of £2000 a year, which, under a special Act of Parliament, he continued to enjoy, together with his full salary, when he became Viceroy of India. He succeeded Lord Elgin in that post, 12th January 1864, and held it for the usual period of five years. In April 1869 he was created Baron Lawrence of the Panjab, and of Grately, in the county of Southampton. After his final return from India, on the formation of the London School Board in 1870 he was chosen to be its chairman, and he held the post till November 1873, when he resigned. He opposed the Afghan policy of the Government, which was a distinct departure from that which he had carried out in India, and which had been described by the phrase of 'masterly inactivity.' Born 4th March 1811, died in London 1880.

Lord Canning says, in a minute on the services of officers during the mutiny and rebellion, 'Of what is due to Sir John Lawrence himself no man is ignorant. Through him Dehli fell, and the Panjab, no longer a weakness, became a source of strength. But for him, the hold of England over Upper India would have had to be recovered at a cost of English blood and treasure which defies calculation. It is difficult to exaggerate the value of such ability, vigilance, and energy at such a time.'

Major Lawrence, an officer of the English East India Company, who from the year 1746 was engaged in the wars in support of the claims of Anwar-ud-Din Khan to the musnud of the Carnatic, against Dupleix, who supported Muzaffar

Jang. He was in Fort St. David in June 1748, when he successfully opposed an attempt by Dupleix to take Cuddalore; but in August he was taken prisoner. The following year, however, he commanded the division sent against Tanjore, and took Devicottah, and returned to Britain in October 1750. In 1752 he fought along with Clive against the French at Trichinopoly, took Elmiserum, and sent Clive to Samiaveram, and received the surrender of Monsieur Law. In 1752, after the death of Chanda Sahib, the garrison of Ginji surrendered to Major Lawrence without resistance. In September 1752 he marched on Wandiwash, which was ransomed. On the 9th May 1753, the united forces of the French and Mahrattas, who had entrenched themselves on the banks of the Pennar, within sight of Trivady, attacked Lawrence, but were repulsed. They continued to harass the British force until the 1st April, when Lawrence, while marching from Fort St. David to Trivady, was furiously attacked by the Mahrattas, who were with difficulty overcome. A few hours later, when near Trivady, he fell in with the French army, and entirely defeated them. For several months in 1754 he bravely defended Trichinopoly against the French, and received the commission of Lieut.-Col. of the British army, with a sword from the East India Company, but he felt aggrieved at being superseded by Lieut.-Col. Adlercron to the general command of the British troops in India.—*Orme.*

LAWRIE, W. F. B., an officer of the Madras Artillery from 1842, author of Notes on Pondicherry, or the French in India; the Moghul Empire in India; Orissa and the Temple of Jaganath; Narrative of the War in Burma, 1853–54.

The henna shrub is the camphire of the English Bible, and the cypress shrub of the Greeks and Romans. It is held in esteem by the Arabs, the Turks, and Indian and Persian Muhammadans. The colouring of the flowers is soft, and fragrance delightful; hedges formed of it are common in all India. The distilled water of the flowers is used as a perfume. The extract of the flowers, leaves, and shoots is used by the hakims in lepra, and in obstinate cutaneous diseases, half a teaspoonful being given twice in 24 hours. Muhammadan women in India, Persia, Arabia, and Barbary use the shoots, triturated with rice gruel or water, in staining the nails, palms of the hands, and soles of the feet of a red colour. In all these countries the manes and tails of the horses are stained red in the same manner. The essential oil of the petals is priced at Rs. 2 per tola. Ispund, the seeds of this plant, are burnt as a charm with benjamin, or with mustard seed and patchouli, Pogostemon patchouli. Its wood is strong, and suited for tool handles, tent pegs, etc. Moore alludes to it when he says—

'Some bring leaves of henna to imbue
The fingers' ends of a bright roseate hue,
So bright, that in the mirror's depth they seem
Like tips of coral branches in the stream.'

This use of the leaves is as old as the Egyptian mummies.

LAYARD, Sir HENRY AUSTEN, author of Description of Khuzistan. He made the discovery of the ruins of Nineveh, and sent to the British Museum many sculptures and clay books. He was afterwards employed as Ambassador at Constantinople.

LAZ, a fine, bold race, born warriors, exercised to the use of weapons, more especially firearms, from an early age, and are thus unerring marksmen. They are not so handsome in feature as their Georgian neighbours, and are of darker complexion; but their physique is much finer, and they are far more industrious. They excel as fishermen, and the boldest and most skilful mariners of the Black Sea coast are of this race. In agriculture they are not very successful, but as mechanics their work is good, and they are more to be relied upon than the Georgians, who have greater skill. Before the 1878 war, large numbers of them were in the habit of crossing over to work in the Russian towns of Trans-Caucasia after they had sown their fields, invariably returning in time for the harvest.

LE. CHIN. A long measure, equal nearly to ½d of a mile.

LE. TIB. A low stone wall, put up in the grazing grounds of the N.W. Himalayas, to shelter from the wind. The word is supposed to give its aid to the formation of names and places, as Han-le.

Lead, the saturn of the ancients, is one of the most anciently known of the metals. It is found chiefly as sulphuret or galena, but a little in a metallic state also, as an oxide, and combined with several acids. It is a soft and flexible metal, of a pale livid grey colour, easily malleable, but slightly tenacious, and not sonorous. It is of common and extensive use in the arts. Alloyed with tin in different proportions, it forms solder and pewter, and with antimony it constitutes type metal. Combined with oxygen, it forms massicot, a protoxide of a pale-yellow colour. Litharge also a semi-crystalline protoxide, obtained in separating silver from lead ores, enters largely into the composition of flint glass. Minium or red lead, deutoxide, extensively used as a paint, and also in the manufacture of flint glass. The carbonate of lead, or white lead, is a dense white powder, commonly employed as a pigment. The chromate of lead, of a beautiful yellow colour, is also much used as a pigment; and the acetate, or sugar of lead, is employed for various purposes.

Galena is the richest ore of lead, and from which that metal is chiefly obtained. As met with in commerce, it is in heavy, shining, black or bluish lead-coloured cubical masses, having a great resemblance to the sulphuret of antimony.

The old lead mines of Kohel lie near the Red Sea, a day's journey N. by E. from Jabal Zubara

about lat. 24° 40′ N. Not far distant are the ead mines of Jabal Rassas, lit. mountain of lead. The mines are situated about 1¼ miles from the W. shore of the Red Sea, and the ores,—galena nd carbonate of lead, occur in an argillo-siliceous chist, associated with small quantities of sulphur nd iron,—a poor carbonate.

Lead ore is also found in Oman and at Ras-ul-ad in Arabia, also in the mountains of Baluchis-n, where the nomade Brahui pick it up from ie surface soil. Lead mines exist at Kappar in ie hills contiguous to Baghwan and Khozdar. ead occurs at Raie, Chendak, Kerrage, Patal, hunpore, and Jak. At Dessouly, about 55 cos east Srinuggur, is a lead mine of considerable value.

Lead is worked at Jamu, and large quantities of galena are imported from Kábul and Kandahar, under the name of Surma (antimony), from which natives of India do not distinguish it, and, being reserved for medicinal purposes, finds its way only to the druggists.

A mine near Sabáthu, in the Simla district, worked by a mining company, yielded 40 tons of ore monthly, and gave 16 to 72 per cent. of lead.

There is a lead mine at Baljawar, a day's journey north of the Oxus, so rich in the ore that the people who work at it for two months, earn sufficient for a year's subsistence.

In a defile close to Bamian there are 10 or 12 lead mines.

There are also lead mines at Lara, Leedang, Pokso, and some other places; they are very productive, but the lead is reckoned inferior to that of Sirmur and Jounsar. It sells at two or two and a half pounds per rupee.

In the Panjab lead is found in the districts of Kangra.

Lead and copper ores occur in the Ceded Districts; galena lead ore at Coilguntla in the Dhone taluk, 30 miles S. of Kurnool; also at Sidhout and Badwail, and near Jungumrazpilly, in the Nullamallay Hills, 29 miles north-east of Cuddápah; the last-named substances occur in the sandstone formation.

In Dhone, galena in very large blocks was obtained; one piece measured about 18 inches in diameter, and weighed upwards of 3 cwt. This ore was tried at the mint, and at the Madrás School of Arts for glazing pottery; it was found to succeed better when reduced to the form of minium, and then ground with felspar and an alkali. Examination of the Kurnool ore proved it to contain upwards of 1 per cent. of silver, or 374 ounces in the ton, the quantity of lead and silver together being only 45 per cent., which was occasioned by there being a considerable quantity of gangue disseminated through the portion examined. A further specimen of this unwashed ore was analyzed by Dr. Scott in 1859, and when fused with carbonate of soda and nitrate of potash, produced about 60 per cent. of metallic lead. The resulting lead, on being cupelled, furnished a bead of silver weighing 1·18 grs., which is equivalent to 96·64 oz. in the ton of ore, or 165·76 oz. in the ton of metal. Malagah and Dorochet had found that when sulphide of silver is associated with the sulphides of other metals, it is always unequally distributed.

Mr. Blanford examined a promising lead vein at Chicholi, near Raipur.

Lead is found in several places in the Burmese territories, but is chiefly brought from the Shan States. It is used all over Burma for musket bullets, in refining silver, and as small change in the bazars. Its price varies from 5 to 8 tikals the viss. Lead is found in abundance in the Shan States, and is extracted from galena. It is also imported from Yunnan.

Lead ore of the richest kind, and containing a large quantity of silver, is obtained in the province of Mergui.

In the valley of the Salwin there is a rich vein of argentiferous galena. A specimen that Dr. Morton sent to England for analysis contained lead, sulphur, silver, gold (traces), lime, magnesia, iron, silica, carbonic acid.

In a small hand-specimen of ore from Martaban, the amount of silver was found to vary in different portions of it, the percentage of lead being about 75. In the first trial the silver was found to amount to about 70 ounces to the ton of ore; but in the second to not less than 300 ounces in the ton, or a little less than 1 per cent.

Lead ore is found in Amherst, at Tounghoo, in Maingay Island, and in the Pahpoon district; the latter yielding 50 per cent. of lead and 31 ounces of silver to the ton.

The primary ranges in S.E. Asia and the Indian Archipelago are all more or less metalliferous.

Lead mines are worked in that part of the Malaya range which traverses the kingdom of Ava; and copper mines have been opened in the Annam or Cochin-Chinese range, the produce of which is equal in quality to South American copper, but inferior to that of Japan.

Iron is smelted from the native ores on the western side of the Annam range.

The tin of the Malay Peninsula, Banca, and Billiton, and the gold of the Peninsula, Borneo, and Celebes, are all collected from the detritus in which the projected metal has been deposited. Lead and antimony ores are found in the Cambodian range to the north of Kampot.

In China a mine of the zinkenite lead ore occurs 15 miles from Chefoo; the ore contains 38 per cent. of antimony.

Galena occurs in China, in Che-kiang, Foh-kien, and Sze-chuen.

Acetate of lead, Yuen-shwang, BURMESE, is made by the Chinese by mixing up an amalgam of 14 parts of lead and 1 part of mercury, and exposing sheets of it to the fumes of vinegar in covered jars for some time.

Black lead or plumbago is an iron ore found in Ceylon, in Travancore, also in the Northern Circars at Vizianagram. It is sold for antimony in the bazars.

Carbonate of lead, called also sub-carbonate of lead, white lead, or cerussa, is used as a white paint.

Chromate of lead, Valayati peori, is a precipitate produced by the addition of bichromate of potash to a solution of acetate of lead. It is the chrome yellow of artists' colourmen, and called peori from its resemblance to the Hardwari peori or Indian yellow.

Red lead.

This is largely used in India and China for

painting, glass-making, and decoration. It is manufactured in Kiang-si in China. In the Madras Presidency it is used both as a pigment and a drier by moochees. Hindus use it for religious purposes, smearing it on their idols, etc., putting it on their rupees at certain seasons for good luck; and in numerous places in the Peninsula it is to be seen smeared on stones to convert them into 'dev' or objects of worship.

Semivitrified oxide of lead.

Mih-to-sang, . . .	Chin.	Murdar singh, . .	Hind.
Litharge, . .	Eng., Fr.	Lithargyrum, . .	Lat.
Blei-oxyd, . . .	Ger.	Murdara-singy, . .	Tel.

When lead continues to be exposed to a current of heated air, the surface of the metal becomes rapidly covered with a scaly powder of a sulphur-yellow colour. This is the protoxide of lead, and, being skimmed off, is known in commerce by the name of massicot. When the heat is continued to a bright red, some metallic lead is separated, the oxide is fused, though imperfectly, and on cooling becomes an aggregated mass, which readily separates into crystalline scales of a greyish-red colour. These form the litharge of commerce, which varies in colour, and is called gold litharge when of a red colour, owing to the presence of a little red lead, but silver litharge when lighter coloured. These are frequently obtained in the process of refining gold and silver by means of lead, and in separating the silver from argentiferous lead. The litharge of commerce is liable to contain a little iron, also copper, carbonate of lead, silica and other earths. Litharge is employed for making diacetate of lead, and by combining with oil to form the lead plaster. It is used as a drier in painting, but only seldom, the red lead being preferred by moochees; it is, however, suitable for rendering drying oil for varnishes.

White carbonate of lead.

Carbonate de plomb, .	Fr.		

This is a manufacture used as a white paint. When exposed it rapidly decomposes the oil with which it is mixed, or it changes from the presence of hydrate of lead or adulterating additions. Oxides of lead are avoided in all outside work in India.

Yellow oxide of lead is the Hwang-tan of the Chinese, and massicot of the English.—*Newbold; Powell; Turner's Embassy; M. E. J. R.; Ains.; Oldham in Yule's Embassy; Gerard's Koonawar; Cat. Exhib.*, 1862; *Mason's Tenasserim; Smith's Mat. Med.; Rohde, MSS.; Birdwood, Bombay Products; Royle, Mat. Med.*

LEAF INSECT. One of those of Ceylon, the true leaf insect, is the Phyllium siccifolium. It eats leaves, and those of the jambo in particular. The Phyllium psyche, common in the East Indies, is called the walking leaf. It seems, indeed, to be a bunch of leaves endowed with life. A writer of the 17th century gravely related that 'these little animals change into a green and tender plant which is about two hands'-breadth. The feet are fixed into the ground first; from those, when necessary, humidity is attracted, roots grow out, and strike into the ground; thus they change by degrees, and in a short time become a perfect plant, while the upper part remains as before, living and moveable. After some time the animal is gradually converted into a plant.' The edges of the wings seem torn and ragged, and, moreover, stained with dirty brown, as if from incipient decay. Upon close inspection, the jagged margin and the stained spots that imitate decay, are observed to be as carefully executed as the ocelli that ornament the gayest butterfly. The leaf insect moults its skin three times, each time making a gradual advance towards its perfect form. The third time the full-grown wings and antennæ are produced. After each moulting the body of the animal is soft and tender, and in a few minutes expands to a larger size. In the course of half an hour its body and wings acquire their proper firmness, and the insect is prepared to enter upon its appointed course of life. Looking at this curious insect, it is impossible not to feel what must be the goodness and superintending love of a Being who with such minute care protects and provides for a creature apparently so humble and so insignificant. The twig-like leaf insect is a species of Phasma. The Mantis religiosa, or the soothsayer, le precheur and le prie Dieu of the French, is a predacious insect-devourer, catching butterflies and other insects with its formidably armed fore legs, and then devouring its captives. Hooker, in his Himalayan Journal, mentions that the predacious mantis was erroneously supposed by the natives to feed on leaves.

From the Phasma type have been produced the narrow, green or yellow, wingless Bacilli; when clinging to a plant they stretch out rigidly their elongated limbs, so as to assume the appearance of a slender plant.

The flattened and rugged lobed, mossy-looking Prisopi and Creonyli, when the wings are folded, cannot be distinguished from a piece of lichen-covered bark. — *Churchman's Family Magazine.* See Insects; Mantis; Phasma; Phyllium.

LEAF OF A TREE.

Warq, . .	Arab.	Yelu, ...	Maleal.

Yelayu, .	Can.	Puttrum, .	Sansk.
Feuille, .	. Fr.	Hoja, . .	. Sp.
Blatt, . .	Ger.	Ellai, . .	Tam.
Pattah, .	. Hind.	Aku, .	Tel.
Foglia, .	It.	Yaprak,	Turk.
Pan, ...	Mahr.		

The first invented drinking cup or eating vessel seems to have been made from the leaf (pat) of particular trees, such as the palasa (Butea frondosa) and barr (Ficus Indica). The word pat seems to occur in the Roman patera and the Greek or Saxon pot. The leaves of the palm trees are used for writing on in all the south of India, in Ceylon, in Burma, and in Malayana and the Archipelago; and pattah, a leaf, means a lease.—*Tod's Rajasthan*, i. p. 333.

LEAF ROT. Koleroga, Can. The name given to a diseased condition of the leaves of the coffee plant, caused by an epiphyte growing and developing upon the leaf, to which it is superficially attached. The most serious of the diseases under which the coffee plantations in Ceylon have so long been suffering, is the red rust or leaf disease, Hemileia vastatrix. It is a true endophyte, developing in the tissues of the leaf, and expanding outwards, as is the case with the red rust of corn and grasses. Mr. Graham Anderson

says (Treatise, p. 2) the leaf disease is a fungoid disease originating in, or at least affecting the cellular tissue, and causing a fungoid efflorescence or eruption on the leaf. Whereas the leaf rot is a fungoid deposit from without, assisted by the impaired condition of the system of the plant. Under the microscope, leaf disease is found to consist of innumerable minute fungi, which are forced out of the pores of the leaf; whereas the tenacious fungoid web, which in 'rot' completely creeps over the lower surface of the leaves, is evidently a mildew deposit caused by atmospheric action, coupled with a passive submission of the leaf to the insidious attack, owing to the vital energy of the plant being impaired. The leaves of the coffee plants have been covered with spots of apparent dust, which, spreading from leaf to leaf, from branch to branch, and from tree to tree, has ravaged large areas of country, until the plantations, instead of presenting a bright deep green colour, have assumed a dark orange hue; the health of the trees has suffered, and the production of berries deteriorated both in quality and quantity. Picking off the diseased leaves, sponging with a solution of Condy's fluid, and an emulsion of kerosene oil. After many remedies, such as paraffin, dilute sulphuric acid, etc., had been used in vain, the experiment of dusting the leaves with finely-powdered sulphur was tried, with extraordinary success. The fumigation of the trees, by placing a large umbrella or tent-like structure over and round them, and burning sulphur within the closed space, has been almost equally efficacious, though naturally more cumbersome and difficult of application. Trees so treated are reported to have quickly assumed a healthy appearance, and if these effects are permanent there is every probability of the disease being stamped out. Whether the same remedy will at the same time kill the spider, the white grub, and other insect pests which have combined in their attacks on the coffee plantations, remains to be seen. See Coffee; Insects.

LEAF-VOWS. At Bangalore, when any female, barren or not, fulfils a vow to the Annumomia goodi, she covers herself with margosa leaves over her dress, but not over her naked person. There are other temples where a similar practice prevails, in Baitmangalam, Malwyal, Atikappa, Yelcharka, Sorab, and Manjarabad.

Charmo, Chamra, . HIND.	Cuero, ... SP.
Cuojo, ... IT.	Lader, ... SW.
Corium, ... LAT.	Tol, ... TAM.
Kulit, Balulang, MALAY.	Meshin, Sakhtiyan, TURK.

The skins of animals removed from the body are in their fresh state tough, flexible, and elastic, and seem, at first view, to be well adapted for clothing; but in drying they shrink, become horny, pervious to water, and, on exposure to moisture, putrid and offensive. But if the skin be separated from fleshy and fatty matters, and then be put into a solution of certain vegetables containing tannin, the skin separates the whole of the tannin from the liquid, and becomes hard, insoluble in water, almost impenetrable by it, and incapable of putrefaction. The subsequent operation of currying renders it pliable and more waterproof. Similar but less decided changes are produced upon a skin by impregnating it with alum, and also with oil or grease. The object of these processes being to render soft and flexible that which would otherwise be hard and unyielding, the skin thus transformed was called by the Saxon races lith, lithe, or lither, that is, soft or yielding, whence the English term leather. The word tan, and the French tanner, are from the low Latin, Tanare. There is a large and constant demand for leather as an article of clothing. It enters into the construction of various engines and machines, supplies harness for horses, linings for carriages, and covers for books. Leather is a chemical combination of skin with the astringent vegetable principle called tannin or tannic acid. The Hindus have long been acquainted with, though it is doubtful whether they have ever made leather of very superior quality. Leather of very excellent quality used to be made at the British farm at Hunsur in Mysore, likewise in Calcutta, and native shields are not to be surpassed. Nevertheless the manufacture of leather generally is by no means so thriving as it might be, considering the great abundance of tanning materials at command in the East Indies. This is perhaps owing to the very low position of the artisans, Madiga, Chakili, or Chamar.

Goat skins, sheep skins, buffalo and bullock hides, are much used, and are generally procurable; but currying being the province of the shoemaker's wife, while manufacturing it for the market belongs to the husband, inferiority of Indian leather may be ascribed to want of skill on the part of the currier, and to the use of quicklime. There is no better tanning material than oak bark, but Indian divi divi, catechu, Cassia auriculata bark, gambier, etc., produce their effects more rapidly, and the leather so manufactured is said to be nearly as durable. The native tanner does not leave his hides to soak in the pits containing his bark infusion, but, having sewed up a quantity of bark in the skin (made into a kind of bag), he exposes it to a constant stream of water, which forces the astringent matter into the pores of the hide very rapidly; but to make the process still more rapid, the hide is taken out, wrung, and re-filled every four or five days. A hide can be ready in this way in about a month, but the leather is less strong, durable, and pliable than English leather. The currying process also is often entirely omitted, and when performed it is generally on a minute scale, and very inefficiently.

Great Britain annually imports hides and skins to the value of about five millions sterling, and leather and leather gloves of value five or six millions. The value of the imports into India and exports from India of leather and manufactures of leather have been as under:—

	Imports.		Exports.
1880-81,	Rs. 13,75,829	1882-83,	Rs. 19,58,873
1881-82,	16,95,900		

The value of the hides and skins—

	Imports.		Exports.
1880-81,	Rs. 7,27,314	1880-81,	Rs. 3,73,35,653
1881-82,	6,94,866	1881-82,	3,94,87,924
1882-83,	7,23,342	1882-83,	4,44,40,967

The Government possesses a large leather factory at Cawnpur, which turns out saddlery, etc., of excellent quality.

Russia leather, Balghar, occasionally comes to

Peshawur. A kind of leather having a metallic lustre, called Kimsana, is imported also from the north-west; also a beautiful leather, used in the manufacture of the bright blue-green shoes of Kashmir and Peshawur, which is called Kimmookht. This is not made in the Panjab. Peshawur sword scabbards are often covered with a black leather, looking like morocco; it is probably an imitation. Russia leather is said to be made of horse's skin; it is thick but pliant, and of most grateful fragrance. Skins are very much valued for the preservation of merchandise, as insects will not attack them.—*Imp. Gaz.; Royle, Arts and Manufactures of India; Heyne's Tracts; Madras Exhibition Juries' Reports; Powell's Handbook.*

LEATHER WORKERS.

Sanigar, ...	CAN.	Chakili, ...	TAM.
Chamar, Dhor, . .	HIND.	Madiga, ...	TEL.
Mhang, . . .	MAHR.		

Leather workers, throughout British India, Japan, and China are regarded as unclean races. In Berar the workers in leather assert that they consist of 12½ castes, amongst whom are the Dhor, who are tanners, make water-bottles, buckets, and water-sacks, the budla, pakhal, and mashak. The Bandela and Kullar Chamar are both tanners and shoemakers. The Mahratta Chamar is a shoemaker; the Pardesi Chamar, a cobbler; the Mang Chamar make sandals. The Muhammadan Chamar is a bookbinder. The Katai Chamar make shoes and sandals, and labour in the fields at seed and harvest times. They are identical in personal appearance with the Chuckler (Chakili) of the very south of India. The Chamar of Aurangabad worship Mariamma and Sitla. They marry when under age amongst themselves, proceeding on foot to the goddess Sitla, whose shrine they circumambulate five times. The expense is about 100 rupees. They burn their dead. The 1881 census gave 2,333,121 as the number of Chamar, Sakkili, Madiga, and Mhang in India.

LEAVEN.

Khamir, AR., HIND., PERS.		Tsiu-miu, . . .	CHIN.
Shin-kiuh, Kiuh, .	CHIN.	Tsiu-kian, . . .	,,

Tsiu-kian of the Chinese is the residuum left after distilling spirits of wine. Tsiu-miu are cakes of barley meal, or mixed with bean meal, hung up by the Chinese till they become mouldy; and Shin-kiuh or sacred leaven is a coarsely-ground grain, mixed with the juice of Artemisia and other plants, and kept till it becomes mouldy. The leaven used in the south-east of Asia generally is fermented juice of the palms. Yeast is rarely obtainable.

LEBANON or Jabl Libnan, an extensive mountain system chiefly belonging to central Syria, but thrown off towards the south from the great chain of Mount Taurus and the lofty table-land of Anatolia, and, under various names and aspects, extending along and beyond the E. coast of the Mediterranean to the N. shore of the Red Sea. The Alma-Tagh or Amanus is a spur of the Southern Taurus. On the banks of the Nahr-ul-Kabir (Great River), the chain takes the name of Jabl-Nosairi or Ansari. The Anti-Libanus is a prolongation of the chain which skirts the valley of the Orontes on the east side. Under the name of Jabl-us-Sharkh, it runs parallel to the Lebanon along the east side of the valley of Balbec, with a breadth in some parts of 20 miles. Lebanon is inhabited by a variety of tribes, who from time immemorial have found a refuge in its fastnesses.

The *Ansari* occupy a lower branch of the Libanus, and their clans are the Shamsi, who worship the sun, the Kalbi, and Mokladi. An nasr-ut-tair, meaning a soaring eagle, is a mystical term of the Ansariyeh, signifying the sun. The Ansariyeh celebrate with great solemnity the two festivals of the vernal and autumnal equinox.

The *Maronites*, founded in the 6th century by St. Maronius, in religious matters acknowledge the supremacy of Rome, though its clergy maintain the right of electing their own bishops or patriarchs, and of entering into the married state.

The *Mutawali* are found in the plain of the Boccah (between the Libanus and the Anti-Libanus), the sides of the Anti-Libanus, and the lower part of the Southern Libanus, extending to the N.E. of Sour or Tyre, but they form only an inconsiderable portion of the population of this part of Syria.

Druse.—From the neighbourhood of Beirout to the heights above Sidon, we come to the country of the Druse. They are idolators. One of their objects of worship is said to be the image of a calf. The Druse occupy the whole of the southern range of the Lebanon chain, the western slope of Anti-Lebanon, and Jabl-us-Sharkh, where they hold exclusive possession of 40 towns and villages, and with the Maronites share 200 more. 80 villages in other parts of Lebanon are also peopled by them. They owe their origin to a Persian, Muhammad-bin-Ismail-ud-Darāzi, who settled in Egypt A.D. 1017, but was driven out of the country, and took refuge in the Wadi-ut-Taim, where he propagated his doctrine; but this was afterwards modified by Hamza, whom the Druse venerate as their real founder. The Druse are tolerant in religious matters, and some of them conform outwardly to the religious observances of those with whom they may be associated. They are a brave and honest race, practising the virtues of hospitality, but never forgetting an injury.

Politically and in its administration the Lebanon is as distinct from the rest of Syria as if it were a European province. The change was brought about by the Great Powers after the massacres of 1860, when they jointly framed a constitution and named a governor, who holds his post for ten years under their guarantee, and not subject to dismissal by the Porte. Before that date the Lebanon had continually been a source of anxiety, alike to the Imperial Government and to friendly interested powers, from the almost ceaseless conflicts between the various sects.—*Catafago.*

LEBIADÆ, a family of the Coleoptera, of rare occurrence in the east. L. unicolor is from the Himalaya; Aploa is found at Poona; Orthogonius is common to Africa and Asia, the gigantic species, however, predominate in the latter country. See Insects.

LEBIDIEROPSIS ORBICULARIS. *Mull.* A timber tree of Chanda.

LECANIUM COFFEÆ, *Walker*, of the order Hemiptera, the coffee bug of Ceylon, for some years devastated some of the plantations of Ceylon. They are greedily devoured by the large red ant, Formica smaragdina, *Fab.*, and an

attempt was made to eradicate the bug by the introduction of the ant, but their attacks on the coolies' bare skins prevented the full success of the experiment. Lecanium coffeæ establishes itself on the young shoots and buds, which it covers with a noisome incrustation of scales, enclosing its larvæ, from the pernicious influence of which the fruit shrivels and drops off. It is a Coccus, and a number of brownish wart-like bodies may be seen studding the young shoots and occasionally the margins on the under side of the leaves. Each of these warts is a transformed female, containing a large number of eggs (700), which are hatched within it. When the young ones come out of their nest, they may be observed running about on the plant, looking like wood-lice; but shortly after being hatched the males seek the under side of the leaves, while the females prefer the young shoots as their place of abode. The larvæ of the males undergo transformation into pupæ beneath their own skins, and their wings are horizontal, and their possession of wings may possibly explain the comparatively rare presence of the male on the bushes. The female retains her powers of locomotion until nearly her full size, and it is about this time that her impregnation takes place. The pest does not produce great injury until it has been two or three years on an estate; but at length the scales on the plants become numerous, the clusters of berries assume a black, sooty look, and a great number of them fall off before they are mature. The young shoots have a disgusting look, from the number of yellow pustular bodies forming on them, the leaves get shrivelled, and on many trees not a single berry forms. The coffee bug first appeared in 1843 on the Lupallu Galla estate, and it or a closely allied species has been observed on the Citrus acida, Psidium pomiferum, Myrtus Zeylanica, Rosa Indica, Carcya arborea, Vitex negundo, and other plants, and most abundantly on the coffee bushes in moist places. It reappears though eradicated, and is easily conveyed on clothes, and from one place to another. Dr. Gardner, whom Sir J. E. Tennent quotes, is of opinion that all remedies have failed, and that it must wear itself out as other blights do. The male of the brown or scaly bug, Lecanium coffeæ, is of a clear, light pinkish-brown colour, slightly hairy and very pretty. It is more delicate than the male Pseudococcus. The females when young are yellowish, marked with grey or light brown, and old individuals are light brown with a dark margin. It affects cold, damp, and close localities 3000 feet in height, and the propagation, as in the white bug, is continuous. The brown bug is much infected with parasites, amongst which the most common are eight minute Hymenoptera (wasps), with brilliant colours; but a mite, the Acarus translucens, and the larvæ of the Chilocorus circumdatus, a kind of lady-bird, also feed on the bug. In the larva state, the male and female brown bug are not distinguishable. The number of eggs produced by a female brown bug is about 700. Those of the white bug are not so numerous, but their propagation in Ceylon is continuous throughout the year, and this explains their great abundance compared with cold countries, where the produce is one generation of young annually. The brown bug, particularly the full-grown female, is largely infested with parasites, which thus greatly help the planter. Indeed, it is a question whether coffee-planting could be carried on without their aid in the destruction of the bug. The black bug is Lecanium nigrum, but the female only is known. In colour it is from yellowish-grey to deep-brown, and almost black in age, and of a shield-like shape. It occurs alone, but also intermixed with the brown bug, but it is much less abundant, and therefore not demanding the planter's attention. Its occupation of a coffee or any other tree gives rise to the appearance of a glutinous saccharine substance, which has received the name of honey-dew. This is either a secretion of the bug or the extravasated sap which flows from the wounded tree, or probably a combination of both. A fungus, or two fungi, the Syncladium Nietneri and Triposporium Gardneri, seem to depend on this for vegetation, as the honey-dew and the fungus disappear with the bug.—*Sir J. E. The leech genera, Bdella, Hæmadipsa, Sanguisuga, belong to the family Hirudinidæ of the class Annelidæ, and contain the true medicinal leeches, which are procurable in all the stagnant waters of India. Sanguisuga *Ægyptiaca* is the leech of Proverbs xxx. 15. S. medicinalis, *Savigny*, the speckled leech, occurs also in China. Leeches are of both aquatic and terrestrial habits. Hirudo tagalla, also called H. Ceylonica, lives in the thickets and woods of the Philippine Islands, and also up to 11,000 feet above the sea in the Himalayas. Hæmadipsa Ceylonica occurs in Ceylon, H. Boscii in the Archipelago. Hirudo sanguisorba is the paddy-field leech of Ceylon, and Hæmopsis paludum is the cattle leech of that island. There are said to be leeches one foot long in the province of Shan-tung in China. The leech zone of Malabar is from 1000 to 5000 feet above the sea. In the wet season travelling in the forests is very unpleasant. There are no leeches, mosquitoes, or peepsas in Tibet, and maggots or flies are never seen there. There are no bees or wasps in Dingcham or Tibet. The Planaria occurs near Madras. Leeches and their effects must have been known from the earliest times; they were early employed by the Hindus and Arabs, and six kinds of useful and six of venomous leeches are mentioned by Susruta and Avicenna.

Dr. Carter, in a memorandum on the Leeches of Western India, mentions as the difference between the Matheran and common leech, that the common leech is about one inch in length, of an olive-green colour, has seven lines down its back, but no black spots; twelve eyes, arranged quadrilaterally, an uneven lip, with its centre notched, and is aquatic. The Matheran leech is about three-quarters of an inch long, of a light reddish-brown colour; has a black line down its back, and is covered over with black spots; ten eyes arranged in a semicircle, a smooth lip, with centre projecting, and is terrestrial. He has remarked that a species of Matheran leech appears to be common throughout the jungles in the western part of India, as well as in the islands of Ceylon and Madagascar, and is so abundant, active, and voracious, that it becomes a considerable obstacle to those who have to pass through localities infested by them, not only extracting a large quantity of blood, but often producing irritable and festering ulcers.

The numbers of these annelids in moist warm parts of the world are immense. Dr. Hooker mentions that, when travelling in Sikkim, between Singhtam and Chakung, wading through deep mud or climbing over rocks, leeches swarmed in incredible numbers in the streams and damp grass, and in the bushes. They got into his hair, hung on his eyelids, and crawled up his legs and down his back. He repeatedly took upwards of 100 from his legs, where the small ones used to collect in clusters on the instep, and the sores they produced were not healed for five months. He thinks snuff or tobacco applied to the feet the best means of preventing their attacks. He thinks that the extraordinary abundance of these annelids in Sikkim may cause the death of many animals. Some marked murrains have followed very wet seasons, when the leeches appear in incredible numbers; and the disease in the cattle, described to him by the Lepcha as in the stomach, in no way differs from what leeches would produce. It is a well-known fact that these creatures have lived for days in the fauces, nares, and stomachs of the human subject, causing dreadful sufferings and death. He has seen the cattle feeding in places where the leeches so abounded that 50 or 60 were frequently together on his ankles; and ponies are almost maddened by their biting the fetlocks. It is said that cattle are frequently affected by their adhering to their throats when drinking. Mr. Rohde recommended salt to the ryots as a remedy, and thinks an addition of salt to the bran mash usually given, an effectual remedy. In the dry climate of the W. Dekhan a caste of Hindus rear leeches for hospital use. The full-grown leech of Madras and Bengal will draw six drachms, but those employed in Bombay scarcely a drachm.

The leeches used in the Calcutta hospitals are caught in tanks and jhils in the direction of Baraset, by persons who allow them to fasten on the naked skin. In the Upper Provinces a superior kind of leech is used, called the Shakuabadi jonk, caught in the tanks about Shakuabad in the Agra district. The Panjab leeches are the next best, and are procured in abundance about Patiala in the Sirhind district. The Shakuabad leech will generally bear three applications, and it is the only description of leech that will do so. The animal is of a light olive-green colour, and marked with two bright yellow stripes on the sides. The common wild leech of the Upper Provinces is called Dabri; but for hospital purposes it is very inferior to those mentioned. In Europe, leeches are kept in pans with a little soft water, the vessels being covered with canvas to admit the air. In India they are placed in common earthen vessels with moist clay. In Southern India they are found in almost all pools which are not dry in summer, and in which the water is good, and is not impregnated with salts.

LEEDES, Newberry, Storey, and Fitch, four adventurous merchants, who, twenty years after the E.I. Company obtained its first royal charter, were commissioned by the Turkey Company to visit India and ascertain what openings for British enterprise existed there. They traversed Syria, descended the Tigris to Bussora, and thence took shipping to Ormuz and Hindustan. One entered the service of the emperor Akbar, another died in the Panjab, a third became a monk at Goa, and the fourth, Ralph Fitch, after wandering to Siam and Malacca, halted at Ceylon and Colombo on the 5th March 1589, and was probably the first

Englishman who ever beheld the island.—*Sir J. E. Tennent's Ceylon.* See Fitch.

LEEKS, the Allium porrum of Linnæus. The native inhabitants of Tenasserim are as much attached to leeks as the Israelites were to the leeks and onions of Egypt, and they abound in their gardens. The seed may be sown at the commencement of the rains, or after, in beds, broadcast. When about six inches high, they require transplanting into large beds or rows, at least one foot apart; they go to seed in the course of six months, and grow very well in all parts of the Dekhan. Menu, however, says garlic, onions, leeks, and mushrooms, no twice-born man must eat, and all vegetables raised in dung.—*Mason; Riddell; Menu*, ch. v. par. 5.

LEEZAN, a village of scattered houses on the side of a hill which slopes down to the river Zab. A mountain stream empties itself into the river at the foot of the village, which it separates from the church. During the massacre of the Nestorians by the Kurds, the inhabitants of Leezan took refuge upon a platform on the rock above the church, where they defied all the attempts of Beda Khan Bey to dislodge them. But, being at last starved out, they capitulated, on the understanding that they were to surrender their arms and property, and their lives to be spared. The Kurds, on being admitted to the platform, and having taken the arms, commenced an indiscriminate slaughter. Few persons throughout the entire valley escaped this terrible massacre.

LEFT-HAND CASTE.

Edagai, Eddayai,	KARN.	Idangai, Idam,	TAM.
Edagai kula, .		Idakai, . . .	

The Vaishnava Hindus in the south of India speak of themselves as of the right or left hand. The Karnatic enumeration of the left-hand castes furnishes nine, viz.:—

1. Panchala or artisans.
   - *a.* Kammaranu, blacksmith.
   - *b.* Badage, carpenter.
   - *c.* Kansagar, brazier.
   - *d.* Kallurtiga, stonecutter.
   - *e.* Akasale, goldsmith.
2. Beri-sethi, traders.
3. Devangada, weavers.
4. Ganigar, oil-makers.
5. Gollur, money-carriers.
6, 7. Paliwan and Palawan, cultivators.
8. Beda, hunters, fowlers.
9. Madiga, tanners, curriers, and shoemakers.

Much animosity and many quarrels occurred between the right and left hand sects, the cause of which, or the points of difference, the disputants themselves are generally unable to state. Professor H. H. Wilson, in his Hindu Sects, implies that there exists in N. India a sectarian Hindu division into right and left hand sects, and that the left-hand sect are worshippers of the sakti or female powers of the Hindu deities. He says that when the worship of any goddess is performed in a public manner, and agreeably to the Vedic or Puranic ritual, it does not comprehend the impure practices which are attributed to a different division of the adorers of Sakti, and which are particularly prescribed to the followers of that system. In this form it is termed the Dakshina or right-hand form of worship, to distinguish it from the Vami or Vamachari, the left-hand worshippers, or those who adopt a ritual contrary to that which is usual, and to what, indeed, they dare publicly avow. They worship, he says, Devi, Lakshmi, Saraswati, the Matri, the Nayika, the Yogini; and even the fiend-like Dakini and Sakini are admitted to a share of homage. Siva with the two hands is an object of veneration, especially in the form of Bhairava, with which modification of the deity it is the object of the worshipper to identify himself. The worship of the Vamachari is derived from a portion of the Tantras. It resolves itself into various subjects, apparently into different sects, of which that of the Kaula or Kulina is declared to be pre-eminent. The object of the worship is, by the reverence of Devi or Sakti, who is one with Siva, to obtain supernatural powers in this life, and to be identified after death with Siva and Sakti. All the forms of worship require the use of some or all of the five Mukara,—flesh, fish, wine, women, and mystical gesticulations are the five-fold Mukara which takes away all sin. But such a sect of Sakti worshippers are wholly unknown in the south of the Peninsula of India, in which the enmity between the right and left hand castes is bitter, and which in Madras was only restrained by the energy of Mr. Edward Elliot, the chief magistrate, between 1820 and 1860.—*Wilson's Hindu Sects.*

LEGASPI, in 1564, in the reign of Philip II. of Spain, with five ships and 400 seamen, went from Spain as governor of the Philippines, and ultimately fixed himself on Zebu, which for some time was the central seat of Spanish power.

LEGGADA, a genus of mammals of the family Muridæ.

Leggada Jerdoni, *Blyth*, lives at 12,000 feet in the Himalaya.

Leggada lepida, *Jerdon.*

Leggada booduga, *Gray.*		Mus lepida, *Elliot.*	
Chitta burkani, . .	TEL.	Chitta ganda, . .	TEL.
Chitta yelka, . . .	,,		

A pretty little mouse which lives in pairs in the red soil of S. India. It is preyed on by the jay or Indian rollers, and is used as a bait to catch that bird, with bird-lime.

Leggada platythrix, *Jerd.*

Kal-illi, ... CAN. | Kal yelu, Gijeli gadu, TEL.

The brown mouse of S. India, lives in burrows of moderate depth. The burrow leads to a chamber containing a number of small pebbles or sticks, on which the mouse sits, the thick, close hair of its belly protecting it against the cold and roughness of the stones. It is monogamous, nocturnal, and a vegetable eater.

Leggada spinulosa, *Blyth*, occurs throughout India.—*Jerdon.*

LEGISLATIVE COUNCILS, for making laws for British India, sit at each of the presidency towns. On the 16th January 1862, the Governor-General in Council, under the authority vested in him by the Act 24 and 25 Vict. cap. 67, sec. 16, appointed Saturday the 18th of January 1862, and the Council Chamber in the Government House at Calcutta, for the first meeting of the Council of the Governal-General, for the purpose of making laws and regulations under the provisions of the Act. On the 17th January 1862, there was issued the proclamation that the provisions of the Act touching the making of laws and regulations for the peace and good government of the presidencies of Fort St. George and Bombay were extended to the Bengal division of the presidency of Fort William, from the 18th of January 1862.

LEGUMINOSÆ is a name of the Fabaceæ or bean tribe, *q.v.* Leguminous and cruciferous

plants occupy the largest part of the Chinese kitchen garden; many sorts of peas and beans are cultivated, and the pods and seeds of two species of dolichos are eaten, and the beans of another species made into soy by boiling and powdering the kernels and then fermenting them with yeast, and mixing other ingredients, according to the taste of the maker or purchaser. Peas and beans form important objects of culture, and the condiment called soy (a word derived from the Japanese Soya) is prepared chiefly from a species of dolichos. One of the commonest modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum or turmeric. The common Chinese eat few meals without the addition of one form or other of the bean-curd or bean-jelly. The soy was at one time largely used as a condiment in the several countries of Europe, but has been displaced for others. See Fabaceæ.

LEH, a chief town in Ladakh, is situated about three miles from the northern bank of the Indus, at an elevation of 11,538 feet above sea-level. Lat. 34° 10′ N., long. 77° 40′ E.; estimated population, 4000. Leh stands in a small plain, between the river and a chain of mountains; a wall with conical and square towers surrounds the town, and runs up to the crest of the range. It is the entrepôt for the trade between the Panjab and Chinese Tartary, being the principal mart for the shawl-wool imported from the latter country. In summer, caravans from distant regions meet at Leh. It is the rendezvous for merchants travelling to and from Yarkand; and the variety of tribes then to be found in it is particularly great. The level of the Indus at Leh is 10,723 feet. The town occupies the slope, and surrounds the base of a low spur, on the left or east side of the valley, while the centre and right side are occupied by extensive tracts of cultivation, the fields rising in terraces one above another, and watered by little rills drawn from a stream which descends in the centre of the valley. Along the road by which the town is approached, there is a mani, extending for more than half a mile. It consists of two parallel walls, 12 or 15 feet apart, and nearly 6 feet high, the intervals between which are filled up with stones and rubbish, and the whole covered with a sloping roof, which rises at a gentle angle to the central ridge, midway between the two walls.

A considerable number of Kashmirians are domesticated at Leh, and a mixed race has originated from them and the women of the country, termed Argand. The Kashmiri and their descendants are engaged in commerce, and the lower orders are butchers, cooks, and petty retailers. There are also some Turani merchants; and in the lands of Chushut, a colony of Balti Muhammadans is established, addicted to intoxicants. The Kashmirians here, as well as everywhere else, are notorious for every kind of profligacy; and where they abound the people of the country are tainted by similar vices. The women of Ladakh, in consequence of their great proportionate number, find it difficult to obtain subsistence, and besides domestic occupations and wool-picking, in which they are very expert, they are the principal labourers in the fields. They are a very lively, good-humoured race, and scolding and railing are almost unknown amongst them.—*Magnetic Survey of India; Rob. Schl.; Mrs. Hervey's Tartary; Thomson's Tr.; Imp. Gaz.; Latham; Cunningham; Moorfoot's Tr.* p. 321.

LE'HPET. Burm. Pickled tea.

LEIP-BYA, Burm., literally a butterfly, is a term applied to the soul. It is the psyche of the Greeks, the life, the perceptive principle. The Burmans regard the Leip-bya in man as that principle of his nature which perceives, but not that of which moral actions are predicated. They believe that the Leip-bya may be temporarily separated from the body, as when startled the body becomes unconscious. In deep sleep it leaves the body and roams far and wide. A sleeping wife dreams of her absent husband; their two butterfly souls have met.

LEITNER, GOTTLIEB WILLIAM, M.A., Ph.D., LL.D., born at Pesth, October 14, 1840. He was First-class Interpreter to the British commissariat department during the war with Russia in 1855; was Lecturer at King's College, London, in 1859, in Arabic, Turkish, and Modern Greek; in 1861 was Professor of Arabic with Muhammadan Law, and founded the oriental section. He was appointed to the Panjab University College in 1864; he founded the association styled the Anjuman-i-Panjab, for social, political, and educational reforms; and he originated journals in English, Arabic, Urdu, etc. At the Imperial Assemblage at Dehli on the 1st January 1877, the Viceroy, Lord Lytton, referred to his 'successful services in the cause of education as an honour to India and to all of us.'

His published writings comprise works on the Theory and Practice of Education; Philosophical Grammar of Arabic; Sinin-ul-Islam; The Races of Turkey: Vocabulary and Grammar of the Dardu Languages, with Dialogues; Results of a Tour in Dardistan, Kashmir, Little Tibet, Ladakh, Zanskar; History of Dardistan, Songs, Legends, etc.; Græco-Buddhistic Discoveries; on a National University for the Panjab; and Adventures of a Siah-Posh Kafir.—*Panjab Gazette, Men of the Time.*

LELAH. Malay. A small brass canister swivel gun, carrying ½ lb. shot, manufactured by the Achinese at Palembang.—*Low's Sarawak*, p. 220.

LEMA, a pass in the Western Himalaya. A tract in which the bottoms of the valleys are from 15,000 to 15,500 feet, and the mountain summits from 16,000 to 17,000 feet above the level of the sea.—*Thomson's Trs.* p. 151.

LEMNACEÆ. *Schleiden.* The duck-weed tribe of plants, of which L. cruciata, L. obcordata, L. orbiculata occur in India. Lemna gibba, *Tatarinov.* Shwui-p'ing, Chin. The duck-weed of China, used medicinally, is deemed cooling, diuretic, antiscorbutic, astringent, and alterative. It is used in skin affections and to wash sore eyes, carbuncles, syphilitic sores. The dried plant is burnt to destroy mosquitoes. Lemna minor, the common duck-weed, grows in the Sikkim Himalaya.—*Smith, Mat. Med. Chin.; Hooker*, i. p. 306.

LEMON.

Citrus limonum, *Risso and Poit.*; C. medica, *Roxb.*

Lemu,	Ar., Hind., Pers.	Limoni,	It.
Korna-nebu,	Beng.	Limbo,	Pers.
Ning-mung,	Chin.	Limoes,	Port.
Limoenen,	Dut.	Limonu,	Rus.
Limons,	Fr.	Limones,	Sp.
Limonen,	Ger.		

This is the fruit of a largely-cultivated tree, which grows wild in the Garo Hills and at the

foot of the Himalaya. Its fragrant white flowers are tinged with red. Its rind and juice are used medicinally and dietetically.—*Roxb.*

Lemonade, a refreshing drink made with water and the expressed juice of the acid lime.

Lemon juice.

Ning-mung-chih,	CHIN.	Limbu-ka-ras,	HIND.
Jus de limon,	FR.	Agro o sugo de limone,	IT.
Zitronen saft,	GER.	Jugo de limon,	SP.

The expressed juice of limes or lemons. It is an approved specific in the prevention and cure of scurvy; a powerful and agreeable antiseptic, as well as an ingredient in many pleasant refrigerant drinks.—*Faulkner.*

Lemon peel.

Lames d'ecorce de citron,	FR.	Limbu-ka-chal,	HIND.
		Limbu-ka-chilta,	,,
Zitron enshalen,	GER.	Scorze de limone,	IT.
Limonschellen,	,,	Courtezas de citra,	SP.

The rind of the lemon is a bitter aromatic, and is frequently employed in stomachic tinctures, and for making preserves and liqueurs; it also yields an essential oil, which is much used in perfumery. —*M'Culloch.*

LEMON GRASS, Camel's hay; Sweet rush.

Ask'hur,	ARAB.	Malatrinakam,	SANSK.
Gundho-bena,	BENG., GUJ.	Kamachi-pillu,	TAM.
Gund-bel, Olacha,	HIND.	Wassina-pillu,	,,
Siri,	JAV.	Cavatum-pillu,	,,
Gowr-gah,	PERS.	Kamachi kasuvu,	TEL.

The English name is given to Andropogon citratum, A. schœnanthus, and other allied species, sweet-smelling, bitterish, aromatic grasses, having long, striated, scabrous leaves. They furnish by distillation the fragrant essential oils called lemon-grass oil and citronelle oil. The grasses are frequently substituted for tea, and the white succulent centre of the leaf-bearing culms is often put into curries to give them an agreeable flavour. The plants are cultivated in gardens, but grow wild, and large tracts of waste land in India and Ceylon are covered with them. They flourish in any good soil, are propagated by slips from the root, and only require watering. A. schœnanthus is cultivated all over the Tenasserim provinces, and a decoction made from the leaves is deemed of much efficacy in colic and similar complaints.

Lemon-grass oil.

Camachie pilla tylum, TAM. | Camachi kasavu yennai, TEL.

This oil is obtained by distillation from the Andropogon schœnanthus grass. It is much used as a rubefacient for rheumatic affections, as well as in perfumery, for which purposes it is said to be largely exported from Travancore and Ceylon. When newly made it is of a light straw colour, but age changes it to a deep red. Another oil, also called lemon-grass oil, or citronelle, is the produce of Andropogon citratum, and is made in Travancore and Ceylon. In Madura are three grasses, named Poathapil, Seegompil, and Comatchipil. To make the oil, the grass is cut in pieces a span long (the little roots excepted), and the pieces are put into earthen pans. Their subsequent exposure to the warmth of fire extracts the oil.—*Riddell; Mason.*

LEMURIA. Naturalists suppose that a continent formerly extended from Madagascar to Ceylon, India, and the Malay Islands. Others suppose only the former existence of several large islands, all the areas around which have subsided. In 1874 (R. G. Soc.), Mr. H. F. Blanford, from the similarity of fossil plants and reptiles, formed the opinion that India and S. Africa had been connected by a continent, and remained so connected, with some short intervals, from the Permian to the end of the Miocene period; and Mr. Woodward expressed his satisfaction with this further evidence, derived from the fossil flora of the Mezozoic series of India, in corroboration of the view taken as to the former existence of a now submerged continent.—*Forbes; A. R. Wallace*, p. 398.

LEMURIDÆ, a family of mammals, the lemurs, mostly of Madagascar, one genus of Africa and two or three in India and Malayana. The lemurs constitute a distinct group of quadrumanous animals. They live almost entirely in trees, and are most active at night. The fur of the lemurs is soft, dense, and woolly. Their nostrils, unlike those of either group of monkeys, have a curved opening, and the tail is never prehensile. The extremities of the lemurs differ remarkably from those of the monkeys, in having a long, sharp, curved claw on the first finger of the hinder pair, and generally in the broad, flat character of the nails of the other fingers. The form of the face is somewhat fox-like in the prolongation of the muzzle, and affords a physiognomical character which will be readily recognised.

Nycticebus tardigradus, *Jerdon.*

Stenops Javanicus, *Auctor.* | N. Bengalensis, *Geoff.*

Lajja banar,	BENG.	Slow-paced lemur,	ENG.
Lajjawoti banar,		Sharmindah billi,	HIND.

Found in Bengal, Rangpur, and Dacca.

N. Javanicus, *Blyth*, of Java.

Loris gracilis, *Jerd.*, Lemur Ceylonicus, *Fischer.*

The slender lemur,	ENG.	Tevangar,	TAM.
Sloth of Madras,	,,	Dewantsi pilli,	TEL.

Found in Ceylon and Southern India.

Tarsium, a genus of Java.

Galeopithecus volans, *Shaw*

Lemur volans, *Linn.*		Cato-simius volans, *Camelli.*	
Vespertilio admirabilis, *Bont.*		Colugo, *Griff.*	
Flying macaco,	ENG.	Flying cat,	ENG.
Flying lemur,	,,	Gendoo,	JAV.
Flying fox,	,,	Kubung,	MALAY.

This is the only species of the genus. It inhabits India, Burma, Penang, the Malay Peninsula, Siam, Sumatra, Java, and Borneo.

G. marmoratus, Philippensis, Ternatensis, rufus, undatus, and Temminckii are considered by Shaw and others to be varieties. It is nocturnal, lives on young fruits and leaves, and does very great injury to gardens and plantations. As evening approaches they quit their shady retreat, and are to be seen in considerable numbers making oblique leaps from one tree to another. The membrane or expansile skin by which it is enabled to leap, like the flying squirrel, is continued on each side from the neck to the fore feet, thence to the hind feet, again to the tip of the tail, and to the roots of the claws.—*Horsfield's Mammalia; Jerdon.*

LENCHA. TIB. Common salt. Three sorts of salt are known in the commerce of the Himalaya and Tibet,—Sercha, white and best; Chama, reddish and good; Pencha, yellowish and bad, contains soda or magnesia and earthy matter. All the salt consumed in Eastern Tibet is the produce of lakes or mines situated to the north of the Yaru river, or comes from Lache, a district lying between Digarchi and Ladakh, which is traversed

by the Yaru. But there are people who assert that it is also dug out of the ground. The salt-producing districts are rugged and inaccessible. Men and sheep only can reach the deposits, and the elevation prevents their being worked, except for the warmer half of the year, April to November. Thousands of sheep are employed in carrying the salt from the deposits to places accessible to yaks. These latter animals carry it all over Tibet in loads up to 160 lbs. Sheep in open places will carry 20 to 24 lbs.

LEN-DEN, also Lewa Dewi. HIND. Buying and selling, trading, traffic.

LENE. MAHR. The cave temples of Ellora and Ajunta, from Lena, a picture; also called Verola.

LENGA. HIND. A thick plaited skirt of a woman's dress.

LENT is a periodical abstaining rite in the religions of Christians, Muhammadans, and Burmese. With the first of these, the abstinence is only from certain diet articles, for a period of forty days. Muhammadans, for a lunar month, called Ramadan or Ramzan, between sunrise and sundown, fast and are continent, and Burmese have a lenten period of nearly three months' duration. See Monastery; Myenmo.

LENTIL.

Buro-musoor,	BENG.	Linsen, ...	GER.
P'ien-tau, .	CHIN.	Masur, Masur dhal,	HIND.
Lentil, Tare,	ENG.	Dhal, dhol, . . .	,,
Lentilles, .	. FR.	Linti, ...	IT.

The lentils of Genesis xxv. 34 are from the Ervum lens of botanists, a leguminous plant, one of the oldest food plants of which there is any record. Ever since the time of Esau they have been eaten in the east. In Egypt and Syria they are parched in a frying-pan and sold in the shops, and considered by the natives as the best food for those who are on long journeys. Its composition in 100 parts has been found to be in samples from

	Calcutta bazar.		Bombay bazar.	
Moisture, . . .	12·70	11·40	10·72	12·50
Nitrogenous matter, .	24·57	26·18	25·20	24·65
Starchy matter, . .	59·43	59·43	59·96	59·34
Fatty or oily matter, .	1·01	1·00	1·92	1·14
Mineral constituents (ash),	2·29	1·99	2·20	2·37

Lentils, like all the other leguminous fruits, contain a large quantity of nitrogenized matters. Einhoff found that 3840 parts of lentils contained 1260 parts of starch and 1433 parts of a matter analogous to animal matter. Dr. Playfair found that 100 parts of lentils contained 33 parts of albumen or gluten, and 48 parts of starch, etc.; whilst the same quantity of peas contained 29 parts of albumen, and of beans 31 parts. Lentils constitute one of the most highly nutritious foods in nature. There are three varieties known in France and Germany,—the small brown, which is the lightest flavoured and the best for soups; the yellowish, which is a little larger and the next best; and the lentil of Provence, which is almost as large as a pea, with luxuriant straw, and might be cultivated as food for cattle. In its cultivation the lentil requires a dry, warm soil; it should be sown later than the pea, at the rate of a bushel or a bushel and a half to the acre. It ripens earlier than the pea, and requires the same treatment and harvesting. The produce of the lentil in grain is about a fourth less than that of the tare, and the straw is not more than a third as much. The straw is, however, considered very nourishing, and is used for feeding calves and lambs. The Ervum lens was largely advertised in London about the year 1840, under the term Ervalenta, afterwards as Revalenta. On analysis, Warton's Ervalenta was found to consist of a mixture of the French or German lentil, ground and reduced to powder, including portions of the shells or husk, and of a substance very closely resembling in its microscopic characters, maize or Indian corn meal. The French lentil, either whole or ground, is of a yellowish colour, and has the taste of peas. It has been stated that the farina of Durra, etc., has been discovered in either Ervalenta or Revalenta. Durra is the Sorghum vulgare of some other writers. Its meal resembles that of Indian corn. The two following are receipts for lentil flour:—

Red Arabian lentil flour, . .	2 lbs.	Salt, Mix into a uniform powder.	3 oz.
Barley flour,	1 lb.		
		or	
Pea flour, . . .	2 lbs.	Salt, . . .	3 oz.
Indian corn flour, .	1 lb.	Mix as before.	

—*Eng. Cyc.; Powell*, i. p. 340; *Roxb.; Voigt; Ainslie; Hassal.*

LEO, the lion, the Felis leo of Linnæus, the Asiatic lion, occurs in India. It was called by Smee the Felis Gujerattensis, and the people call it the Sher, the Babbar-sher, the Untia-bag or camel-coloured tiger, also Singha and Shingal. Its length is from 8½ to 9½ feet, and its height 3½ feet. The Asiatic and African lion is identical, and is found in the N.W. of India from Gujerat and Cutch to Hurriana, Gwalior, and Saugor.

LEO AFRICANUS, a Moor of Granada. He was named after Leo, having abjured the Muhammadan religion during the pontificate. He wrote a description of Africa in Arabic and Latin, and died in 1556.

LEONOTIS LEONURUS, the scarlet dandelion, a beautiful small scarlet flower, native of the Cape, and now common in all Indian gardens; blossoms throughout the year.—*Riddell.*

LEONTODON TARAXACUM, the dandelion; found in the Sutlej valley between Rampur and Sungnam at an elevation of 6000 to 10,000 feet. —*Cleghorn's Panjab Report*, p. 68.

LEONURUS SINENSIS.

Ch'un-gwei, . . . CHIN. | Yih-mu-ts'au, . . CHIN.

It grows all over China, especially in Hankow. It is dried, and used medicinally, as a tonic, alterative, vulnerary, and general remedy in puerperal and menstrual ailments. Leonurus tataricus, the Tartarian mother-wort, is a shrubby plant, grown from seed, and cultivated in some gardens. —*Riddell; Smith, Chin. Mat. Med.*

LEOPARD.

Pau, Ching, . . . CHIN. | Shi-tsze sim, . TUNGUS.

Several distinct species of leopard are known.

Felis leopardus, *Schreb.*, the leopard or cheeta of India.
F. pardus, the pard or panther or gorbacha of the Dekhan.
F. diardi, *Desm.*, clouded leopard of India and Malayana.
F. jubata, maned leopard or hunting leopard of India.
F. melas, *Peron*, black cheeta of India and Malayana.
F. pardochrous, *Hodgs.*, of Nepal and Tibet.
F. Horsfieldii, *Gray*, of Darjiling.
F. Javanensis, *Desm.*, of Sumatra, Borneo, Java.
F. Sumatranus, *Horsf.*, of Sumatra.

Latterly, naturalists have regarded the F.

leopardus and F. pardus as varieties of the same animal; and Horsfield and Jerdon say the black leopard, F. melas, *Peron et Lesueur*, is now uniformly admitted to be a black variety of F. pardus. Most Indian sportsmen, however, regard them as distinct, though black and yellow cubs are said to have been seen following a female yellow leopard, and the black leopard is of a more vicious temper.

Panther. — There is undoubtedly in British India a large and a small leopard, the larger variety being commonly called the panther.

F. pardus, *Hodgs.*		F. leopardus, *Temm.*	
Tendwa of . .	BOWRI.	Adnara, ...	HIND.
Honiga, ...	CAN.	Asnea, ...	MAHR.

Bay-hira of .	HIMALAYA.	Chinna puli, . .	TEL.
Tahir-hay, . . .	,,	Sik, ...	TIB.
Chita, Chita bag, .	HIND.		

It is found throughout India, in the more open country, near low hills and ravines. It is from 4 to 5 feet long, tail 2¾ to 3½, total about 6¾ to 8½ feet. They destroy deer, occasionally kill and carry off cattle and ponies, not unfrequently carry off children, also old women. Sir Walter Elliot says an instance occurred of four men being killed by one before it could be destroyed.

Leopard, or smaller variety.

Felis leopardus, *Hodgs.* F. longicaudata, *Valen.*		F. pardus, *Temm.*	
Bibla of . . .	BOWRI.	Bibla-bagh, . . .	MAHR.
Gorbacha, . . .	DUKH.	Ghur-hay, . . .	SIMLA.
Borbacha, . . .	,,	Dhir-hay, . . .	,,

This is smaller than the other, with a round bull-dog head. It seizes on dogs, sheep, goats, deer, monkeys, peafowl. It is more abundant in forest countries, in Malabar, Wynad, Gumsur, in the woody parts of the Himalaya and Malay Peninsula. It is stealthy, not unfrequently attacks man, and has been known to carry off men who were watching grain at night.

Black leopard.

F. melas, *Peron.*	F. perniger, *Hodgson.*

It is found throughout British India, but sparingly in a forest country. It is of a uniform dull-black colour. On one occasion, when shifting the tigers and leopards of the Government Central Museum from one cage to another, a black leopard leaped violently against the doorway, which it forced open, and escaped into the garden, creeping close to the low hedge. It was followed up for about fifty yards, but it turned on the Editor, who backed and leaped to the top of a wall five feet high, followed by the black leopard, which sprang from the ground, but was caught in the leap by a blow on the head, from which it fell at the foot of the wall stunned. It was restored to its den, and recovered from its insensibility on the following day, but on the twelfth day it was killed by a panther in the same den. It had a vile temper.

Felis jubata, *Linn.*, hunting leopard.

F. guttata.		F. venatica.	
Chircha, Chirtsa, .	CAN.	Yuz, Hindustani of the trainers.	
Siwungi, ...	,,		
Cheeta, ...	DUKH.		

They are caught in the Southern Mahratta district, and are trained to kill the Antelope cervicapra. They are taught always to single out the buck, which is generally the last in the herd. The huntsmen are unwilling to slip until they get the herd to run across them, when they drive on the cart and unhood the cheeta.

The leopards and panthers have been variously named by naturalists. L. Chinensis, *Gray*, L. Ellioti, *Gray*, L. Reevesii, *Gray*, and L. inconspicuus, *Gray*, are synonyms of Felis Bengalensis, *Desmoulins*. And F. pardochrous, *Hodgs.*, L. dosul, *Hodgs.*, is Felis marmorata, *Martin*, *Blyth*. L. Sumatranus, *Gray*, is F. leopardus Sumatranus, *Horsf.*; L. varius, *Gray*, is F. pardus, *Linn.*; L. viverrinus, *Gray*, is F. leopardus viverrinus, *Bennett*. The panther and the leopard are used in Chinese heraldry.—*Smith; Jerdon's Mammals; Adams; Horsfield's Catalogue, E.I.C. Museum; Tennent's Ceylon*, pp. 25-29.

LEPCHA, a Mongolian tribe forming a large part of the population of Sikkim. The country of Sikkim and Darjiling is the land of the Lepcha, a Bhot race who are hemmed in between the Newar and other Nepal tribes, and the Lhopa of Bhutan, the Lepcha area being barely 60 miles in breadth. His physiognomy is markedly Mongolian, stature short, from 4 feet 5 inches to 5 feet; face broad and flat, nose depressed, eye oblique, chin beardless, skin sallow and olive, with a little moustache on the lips; broad chest and strong armed, but small-boned legs, with small wrists, hands, and feet. The Lepcha is honest, timid, and peaceful, with mild and frank features. The Lepcha throws over him loosely a cotton cloak striped with blue, white, and red, and uses an upper garment with sleeves in the cold weather; a broad umbrella-shaped hat of leaves, and a pent-house of leaves in the rains. The women dress in silk skirt and petticoat, with a sleeveless woollen cloak. The Lepcha man carries a long, heavy, and straight knife, serving for all purposes to which a knife can be applied. They drink the Murwa, the fermented juice of the Eleusine coracana, which gives a drink, acidulous, refreshing, and slightly intoxicating, and not unlike hock or sauterne in its flavour. Their songs and the music of their bamboo flute is monotonous. They marry before maturity, the brides being purchased by money or service. The Lepcha, like many other races, kindle a fire by the friction of sticks. Mountain spinach, fern tops, fungi, and nettles are used as food. Their ailments, small-pox, goitre, remittent fevers, and rheumatism. Their language assimilates to the Tibetan. Some of the Lepcha tribes call their country Dijong. Amongst themselves they divide into two tribes, the Rong, also Arrat, and Kham-ba. The Rong has no tradition of immigration; but the Kham-ba appear to have come about 200 years ago from Kham, a province of Tibet on the borders of China. The present Sikkim raja is a Kham-ba. The Lepcha have no caste distinctions, but they speak of themselves as belonging to one or other of the following sections:—

Burphoong phoocho.		Sundyang.	Lucksom.
Udding	,,	Sugoot.	Therim.
Thurjokh	,,	Tung yeld.	Songme.

Captain J. D. Herbert, when writing of the Lepcha race, says that they are the same people whom he had seen at Nialang, at Jahnabbi, at Shipchi on the Sutlej, in Hangarang, and at Lari in Ladakh.

Chastity in adult girls previous to marriage is not very rigidly insisted on. The Lepcha bury their dead, as is the custom generally of the Buddhists.

The house of the Lepcha is generally square, roomy, and comfortable, built on posts, with a stage in front of the door, and low-eaved thatch of bamboo stems, split and laid flat. The walls are of bamboo wattle-work. In all respects it resembles the Bhoteah house. The Limbu and Murmi build smaller houses, often on the ground, but more frequently raised; the roof is of grass thatch, or occasionally of a species of bamboo-work matting.—*Dalton, Ethnol. of Bengal*, p. 102; *Hooker, Him. Journal; Dr. Thomson in Eth. Soc. Journ.; Beng. As. Soc. Jour.* No. xxix. p. 20; *Capt. Herbert; Latham's Ethnology.*

LEPER LEPER, a canoe of Amboyna, dug out of a single tree, with raised sides.—*Bikmore.*

LEPIDIUM LATIFOLIUM. *L.* Gon-yuch, LADAKH. Grows in Ladakh, 10,000 to 14,000 feet; is browsed by sheep and goats, little by the yak.

LEPIDIUM SATIVUM. *Linn.* Garden cress.

Sa-mung-ni, . .	BURM.	Ahreo, ...	SIND.
Halim, Tara-tezak,	HIND.	Adala vitala, . .	TEL.

This is grown in many parts of India. Its small ovoid, reddish mucilaginous seeds are used medicinally by the natives of India as a laxative and antiscorbutic, and by the native physicians as a gentle stimulant. An oil has been extracted in India, as well as in Europe. The seed is of an agreeable warm taste. Bruised and mixed with lime-juice, it is deemed useful for checking local inflammation. Taken whole in half-drachm doses, it answers as a gentle and warm aperient.—*Roxb.; Voigt; Ainslie; O'Sh.; Birdwood; Exhib.*, 1862.

LEPIDOSIREN, a curious reptile of Africa and South America, placed midway between the reptiles and fishes, and has gills and true lungs. It has the habit on the approach of drought of burying itself several feet deep into the mud of the ponds in which it usually dwells. It does not appear to possess the power of travelling. The Hydrargyræ of Carolina leave the drying pools and seek the nearest water, in a straight line, though at a considerable distance; and Sir R. Schomburgh tells us that certain species of Dora (called by the people the Hassar) in Guiana have the same habit, and are occasionally met with in such numbers in their travels that the negroes fill baskets with them. If they fail in finding water, they are said to burrow in the soft mud, and pass the dry season in torpidity like the Lepidosiren.—*Gosse*, p. 122.

LEPIRONIA MUCRONATA. *Cl. Richard.* A rush of all the S. and E. of Asia, cultivated in China, like rice, for mat-making. It rises to 7 feet, and propagates by sprouts from its perennial roots. The stems are beaten flat, to fit them to be woven as mats, bags, mat sails, or floor matting.—*Von Mueller.*

LEPISMA. This tiny silver insect has six legs, filiform antennæ, and abdomen terminated by three elongated setæ, two of which are placed nearly at right angles to the central ones. This is one of two genera of insects which infest books in India, and which are usually regarded as accomplices in the work of destruction, but which, on the contrary, pursue and greedily feed on the larvæ of the death-watch, and the numerous acari and soft-bodied insects, which are believed to be the chief depredators that prey upon books. Another of these maligned genera is a tiny tailless scorpion (Chelifer), of which three species have been noticed in Ceylon, the Ch. librorum, *Temp.*; Ch. oblongum, *Temp.*; and Ch. acaroides, *Hermann*, the last of which it is believed had been introduced from Europe in Dutch and Portuguese books. Of the Lepisma, the fish-insect genus, so called by Fabricius from its fish-like silvery scales, only two species have been described, viz. the L. niveo-fasciatus and L. niger, *Temp.* One of larger size is remarkable for the whiteness of the pearly scales, from which its name is derived; these, contrasted with the dark hue of the other parts and its tripartite tail, attract the eye as the insect darts rapidly along. Like the Chelifer, it shuns the light, hiding in chinks till sunset, but is actively engaged during the night, feasting on the acari and soft-bodied insects which assail books and papers. Linnæus states that the European species was brought in sugar ships from America. The Chelifer found in Ceylon has been brought thither from Europe.—*Tennent's Ceylon*, p. 476.

LEPROSY, a disease which attacks the human race in Europe, Asia, and Africa. It appears on the skin of the body in various forms, but European medical men regard it as a constitutional ailment. Their number in all India in 1881 was 131,968, of whom 98,982 were males, 785 were under five years of age, 100,991 Hindus, and 24,376 Muhammadans:—

Coorg, ...	43	Mysore, ...	533

The disease is not ordinarily deemed contagious, and the welfare of the community does not demand the complete segregation of those afflicted with it. But leprosy causes much suffering, and it fosters mendicancy; also from the most ancient times, in all countries, their presence amongst their respective communities has been objected to, and they have been placed in outlying localities. According to Manetho, as quoted by Josephus, the Egyptian king Menephthah, son of the great Rameses, collected together all the lepers, and located them in the quarries in Lower Egypt, on the edge of the Arabian desert, but subsequently mitigated their lot, and placed them in the deserted town of Avaris. These outcasts, however, sided with the people of Palestine who rose in a religious war against animal-worship, and Menephthah fled to Ethiopia.

Lepers are numerous in China, and are only allowed rope-selling as a trade. Numbers of those not actually suffering from the disease, but subject to it, stand at the corner of every street in Canton, with coils of rope and hanks of cord for sale. The term Lizard, still applied to that part of old towns in which a rope-walk is situated, is supposed to be a corruption of Lazare, the lepers' quarter. The Lizard Point in Cornwall, and Lezardieux, a village in Brittany, are supposed to take their names from the lepers.

Dr. Bhau Daji of Bombay, who died about the year 1873, was very successful in treating tubercular leprosy, it was supposed with the Chaulmoogra oil from the Gynocardia odorata.

The Puranas relate that Janamejaya was sorely

afflicted with leprosy as a punishment for having killed some serpents. Hindus believe that a man who may have killed a serpent in his former life is sure to be attacked with leprosy. The leper is regarded by Hindus as a loathsome, unclean being. After his death, his remains must be buried, and cannot be burnt without certain peculiar rites. Also, now, at the close of the 19th century, a man who has not been blessed with offspring, and whose doom is sealed if he do not beget a son, considers that the serpent has denied him children, and thus barred his entrance to the gates of heaven. The disease of sore eyes is also attributed to the serpent's wrath. The worship of the serpent is therefore essential to lepers, the sore-eyed, and the childless, who, to appease the wrath of the serpent, perform many costly ceremonies of Sarpa Sampaskara and Nagamandal. For the former of these ceremonies, a day is selected, either the 5th, 6th, 15th, or 30th of the month. The family priest is summoned as the director of the ceremony. The childless sinner has first to take a bath, and next to dress himself in silk or linen garments. A spot in the house is chosen, and the family priest, sprinkling grains of rice, drives away any devil that may have been lurking there. He takes his seat with the performer on two wooden stools. He gets some rice or wheat finely pulverized, and, kneading the dough, makes a figure of the serpent. The holy Mantra are then said to give the figure animation, and transform it, to all intents and purposes, into a live serpent. It is then offered milk and sugar. The image receives the worship common to other gods. After the worship, the Mantra snatch away from the figure the life just imparted, for they are said to have the power of giving life and of taking it away again. After the serpent is dead, the sinner assumes the signs of mourning, which consist in shaving off his beard and moustaches. Then he carries the figure on his head, and, having reached the bank of a river, he reverentially places it upon a pile. The figure is carefully fenced in with chips of sandal or jack wood, and camphor and melted butter are poured over it. The pile is then kindled with the fire which the performer brings with him from his house. He previously enters into a vow with the fire that it shall be solely used for the cremation of the serpent-god. The fire reduces the mass to ashes, which are carried to the river, and put into the water. The performer is considered unholy, and cannot be touched for three days. On the fourth day, the funeral of the serpent-god or Sampaskara ends with an entertainment to eight unmarried youths, below the age of twenty. They are considered to represent eight serpents, and are treated with the utmost respect. The performer rests satisfied for a time that the ceremony will produce the desired effect. But if such be not his good fortune, he then resorts to the other ceremony, Nagamandal. On one of the days named the leper gives a grand feast to a number of his caste-men and unmarried youths. The evening comes, and one of the Deckayavara or musicians, duly summoned for the purpose, scatters on the spot already selected some bruised rice, and inscribes the figure of a huge serpent in a large circle. The figure is worshipped, and then the musicians perform their part. They are the children of the Deva-dasa or temple women. Their band generally consists of two pipes and several drums. They dress themselves for the occasion in women's clothes, and put on various jewels. The chief man among them pretends that he can represent the deity, and, going to and fro, reels about expressing the approbation of the deity by uttering some words, which are attended to as if they proceeded from the mouth of the deity itself. The musicians produce a variety of discordant sounds. While the drummers tap with their fingers on each side of the drum, their head, shoulders, and every muscle of their body are in motion. The musicians, the drummers, the observers of the ceremony, and the representative of the deity keep going round the circle throughout the night, singing songs at one time in praise, at another in depreciation of the deity. To keep up their strength, the drummers have frequent recourse to the toddy bottle, and soon become intoxicated. As the night passes away, the ceremony is over.

One of the severe remedies to which the leper and the childless expose themselves is as follows:—On the 6th day of every month, he entertains a number of unmarried youths at dinner. Though fasting the previous day, he does not himself partake of food in their company. After dinner, and before the leaves whereon the guests had taken it have been removed, he enthusiastically rolls himself over them. The next part of the ceremony is to cleanse himself in a bath, and for the remainder of the day he cannot take any food that contains salt. A rich Sudra of low birth is not allowed to observe any of these rites. But the compassionate priest comes to his aid, and offers him his services by observing them on his behalf. After they are over, the priest takes some water in his hand and pours it into that of the Sudra. This process is said to transfer every merit of the ceremony to the Sudra, while the priest holds himself liable for all the defects in the observance.

Mr. Apothecary Phillips has published pamphlets on the Gurjun oil treatment, and professes to have a radical cure of anæsthetic and tubercular leprosy. A medical officer with large experience in the disease, writing of Gurjun oil, says: 'I have no faith in any specific, nor indeed is it in the nature of things to find a specific for this fell disease.' Combined with other remedies, such as iron, arsenic, etc., which generally help to form the so-called specifics, the treatment is only palliative but never curative.—*Bunsen, Egypt's Place in Universal History*, ii. pp. 500, 563, iii. pp. 188, 195.

LEPTADENIA JACQUEMONTIANA. *D. C.* Kip, SIND. This is employed in Sind along with Periploca aphyllum, for making into ropes and bands used for wells, as water does not rot them. Leptadenia reticulata, *W. and A.*, Pala-tige, TEL., is used as a vegetable. Leptadenia spartea, another species of the genus yielding a fibre.—*Royle, Fib. Pl.* p. 306.

LEPTOCEPHALIDÆ, a family of fishes of the Asiatic seas, from the Leptocephalus or Glass Eel genus. There have been 18 species described.

LEPTOCERIDÆ, a family of insects, in which is the caddis-worm genus Setodes.

LEPTONYCHIA MOACURROIDES. *Bedd.* An elegant small tree inhabiting the western coast forests of the Madras Presidency, 1000 to

3000 feet elevation, met with on the Carcur ghats in the Wynad, on the Coimbatore Hills, and on the Tinnevelly ghats.—*Beddome, Fl. Sylv.* p. 114.

LEPTOPTILOS ARGALA. *Linn.*

Ciconia nudifrons, *Jerd.*	Argala migratoria, *Hodg.*
C. marabou, *Temm.*	Ardea dubia, *Gmel.*
Chaniari-dhauk, . BENG.	Hargeyla, . . . HIND.
Adjutant, . . . ENG.	Dusta, ... ,,
Gigantic stork, . . ,,	Garur of . . . PURNIAH.
Hargela, Hurgela, HIND.	Pini-gala-konga, . TEL.

The adjutant bird is migratory. It is rare in the south of India, though it occurs in Hyderabad and Mysore, but it is common in Bengal, N. and N.E. India, Burma, and the Malay Peninsula. The adult birds make their appearance as soon as the rains set in, and becoming in fine plumage towards the close of the rains, depart at that time to breed in the eastern portion of the Sunderbans, in Moulmein, in the Tenasserim provinces upon lofty trees, and along the eastern coast of the Bay of Bengal upon trees and rocks. It is a bold, familiar bird, eats all sorts of animal refuse, frogs, fish, and dead bodies. Though called a gigantic crane, it is not a crane. The three ordinary Indian cranes are Grus antigone, Gr. cinerea, and Gr. virgo. Grus leucogeranus occurs rarely in the N.W. Provinces. The words Crane and Grus, and the Hindustani names of the three common Indian species, Saras, Karranch, and Kakarra, all have reference to the loud trumpeting of these birds, which have a curious internal conformation resembling that of the trumpeter swans; whereas the storks are voiceless birds, having actually no vocal muscles, and can make no sound, but by clattering their mandibles together, which they do pretty loudly.—*Jerdon's Birds; Z. in Indian Field.*

LEPTOPTILOS CRUMENIFERUS. *Cuv.* A bird of tropical Africa, furnishes the marabout feathers of that continent; the L. argila and L. Javanicus, those of India.—*Jerdon; Z. in Indian Field; Simmonds' Dictionary.*

Chandiari, . . . ,, .	Bang-gor of . PURNIAH.
Madanchur, . . . ,,	Nutha-cootee-narai, TAM.
Moduntiki, . . . ,,	Dodal-konga, . . TEL.
Small adjutant, . ENG.	Dodal-gatti-gadu, . ,,
Hair-crested stork, ,,	

The Tamil name of the small grey and black stork, Leptoptilos Javanica, is Nutha-cootee-narai, literally shell-fish (Ampullaria) picking crane. They have nests two feet in diameter, and contain three eggs or young. The eggs are of a dirty white colour, of the same shape, but not quite so large, as those of the turkey. The young when fully feathered are in prime condition. Their flesh is eaten by Muhammadans and Pariahs. The bird keeps entirely to marshy fields, edges of tanks, etc.; it never approaches towns. Some half a dozen or more of these birds may often be seen in the morning sunning themselves with outstretched wings in the dry fields. They only differ from the adjutant, or Leptoptilos argala, in size and colour. These nest early, and the young are firm on the wing in the month of February. They are found throughout Asia, feed on fish, frogs, crabs, and locusts. A pair of these birds were purchased by a detachment of the 74th Highlanders, who in June 1877 were stationed at Penang. The birds stood about three feet in height. They were never kept in confinement, and from the very first were allowed to roam over a large open expanse of ground. They never seemed inclined to stray far, and very seldom ever attempted to fly. They would spend more than half the day standing motionless opposite each other, bill to bill, and with both their wings outspread. They were coarse feeders, and neither quality nor quantity seemed to trouble them much; one of them on an occasion gulped down one by one as fast as they could be thrown to it, 32 small fishes, each about six inches in length, and evidently was ready for more. After they had been with the regiment about a month, one of them began to look downcast. One morning it remained basking in the sun for several hours, with outspread wings. Later in the day it lay down on the grass, with its eyed closed, and evidently very sick, and by it stood its brother, apparently quite unconcerned. Like this they remained until late in the afternoon, when the healthy bird was seen to put his head on one side, and, looking curiously at his sick comrade, proceeded to stir him up with his beak, without making him move; and on going to look, he was found to be dead. A post-mortem examination was immediately held, and in the poor bird's stomach were found the legs and claws of a large fowl, quite undigested, which were the apparent cause of the intense inflammation. While the investigation was going on, the surviving bird evidently regarded it with much interest, and as great lumps of muscle were stripped off his comrade's bones he gobbled them up. Having thus got a good meal, he at length stalked demurely away, satisfied with his afternoon's performance.

LEPTOSPERMUM SCOPARIUM, the Kaetatowa or Manu Ra of New Zealand, a tree of the myrtle family, grows on the mountains to a height of 25 or 30 feet. Its hard, heavy wood is used for war-clubs, paddles, and articles requiring strength and durability.—*G. Bennett*, p. 416.

LEPURANDA SACCIDORA. *Nimmo.*

Antiaris saccidora, *Dalz.*	Araya anjely, MALEAL.
Chundul, ... HIND.	Navil maram, . TAM.

This stately forest tree is indigenous on the west side of India, in the ravines at Kandalla, and in the jungles near Coorg, where people manufacture sacks from the bark by a very simple process. A branch is cut, corresponding to the length and diameter of the sack wanted. It is soaked a little, and then beaten with clubs until the inner bark separates from the wood. This done, the sack formed of the bark is turned inside out and pulled down, until the wood is sawed off, with the exception of a small piece left to form the bottom of the sack, and which is carefully left untouched. These sacks, called Kurumbur bags or sacks, are in general use among the villagers for carrying rice, and are sold for about six annas each. This is very common, and the most gigantic of all the trees in the Wynad jungles; wood not much used.—*Royle, Fib. Pl.; M'Ivor.*

LEPUS, the hare, is of the family Leporidæ. There are five species known to inhabit the East Indies,—L. ruficaudatus, the common Indian hare; L. nigricollis, the black-naped hare; L. hispidus, the hispid hare; L. Peguensis of Burma, and L. pallipes of Tibet. Hares are unknown in Arakan and in the Tenasserim provinces, also throughout

the Malayan Peninsula and Archipelago, with the exception of Lepus nigricollis, *F. Cuv.*, in Java, which has most probably been introduced from South India or Ceylon, as it doubtless likewise has in the Mauritius; but several notices occur of hares in the Indo-Chinese countries, even in Cochin-China the species being as yet undetermined.

Lepus Ægypticus, Egyptian hare, is found in Egypt.

Lepus cuniculus, *Linn.*, rabbit, coney.

Konyn, Konin, . .	Belg.	Coelho, ...	Port.
Kanine, ...	Dan.	Conejo, ...	Sp.
Konyn, Konin, . .	Dut.	Kanin, ...	Sw.
Kaninchen, . . .	Ger.	Cwningen, . .	Welsh.
Coniglio, ...	It.		

The rabbit begins to breed at the age of six months, and produces several broods in a year, generally from five to seven or eight at a time. The young are blind at their birth, and nearly naked. The fur of the rabbit is in considerable demand, particularly for the hat trade; and, at one time the silver-haired varieties, or silver-sprigs, fetched three shillings a piece, for ornamental linings to cloaks.

Lepus hispidus, *Pearson.*

Caprolagus hispidus, *Bl.* | Hispid hare, . . . Eng.

The great sal forest at the base of the sub-Himalaya and of their offsets, from Gorakhpur to Tiperah, also at Siligori in the Terai, is the peculiar and exclusive habitat of the hispid hare, which never ventures into the open plains on the one hand, or into the mountains on the other; and hence it is but little known, deep cover and deadly malaria contributing alike to its obscurity. As the black-necked hare or L. nigricollis is the single species of the Dekhan, and the redtail, L. ruficaudata, of Hindustan and Bengal, so is the hispid of the vast sub-Himalayan forest; and it is remarkable that the mountains beyond the forest, even up to the perpetual snows, have no peculiar species. The sal forest hare feeds chiefly on roots and the bark of trees, a circumstance as remarkably in harmony with the extraordinary rodent power of its structure as are its small eyes and ears, weighty body, and short, strong legs, with what has been just stated relative to the rest of its habits. The whole forms a beautiful instance of adaptation without the slightest change of organism If anything, the male is rather the larger and darker. The male measures 19½ inches from snout to vent. The female is 19 inches long and 5¼ lbs. Both have a girth behind the shoulder of 12 inches. Compared with the common species, these animals are conspicuously of darker hue and heavier make, but not larger. They have heavier heads, much shorter ears, smaller eyes, shorter tails, limbs shorter, stronger and less unequal,—in that respect like a rabbit;—and, lastly, their mystaccal tufts are much less, and their fur much harsher. The profile of the head is less curved in the hispid than in the common species, the nails somewhat larger, and the digits slightly different in gradation, the thumb in particular being less withdrawn, and the little finger more so, from the front, in hispidus. The ears both in male and female considerably exceed one-half of the length of the head, and are broader as well as shorter than in L. ruficaudatus or L. timidus; and it is remarkable that the tail in the male is shorter than in the female,—in both more so than in L. timidus. The teats are six, two pectoral and four ventral.

Lepus macrotus inhabits the Himalaya and Nepal. It is larger than the black-necked hare, L. nigricollis, of the Indian plains.

Lepus nigricollis, *F. Cuv.*, *Bly.*, *Ell.*

L. melanauchen, *Temm.*

Malla, ...	Can.	Sassa, ...	Mahr.
Black-naped hare, .	Eng.	Musal, ...	Tam.
Khar-gosh, . . .	Hind.	Kundeli, ...	Tel.

This is the hare of Ceylon, of the Peninsula of India, of Sind, the Panjab, and of Java.

Lepus oiostolus, *Hodgs.* L. Tibetanus, *Waterh.* The blue, woolly, or alpine hare of Tibet and Nepal is considered by Major Cunningham to be the L. pallipes of Hodgson. There was, says Dr. Hooker (ii. p. 157), much short grass about the land, on which large antelopes, Chiru (Antilope Hodgsonii), and deer, Goa (Procapra picticaudata, *Hodgson*), were feeding. There were also many slate-coloured hares with white rumps (L. oiostolus), with marmots and tailless rats. He found the horns of the Chiru on the south side of the Donkia pass, but he never saw a live one except in Tibet. The Procapra is as described by Mr. Hodgson. Dr. Adams says of the alpine hare, L. oiostolus, that it was common among the fallen boulders, and along the long bottoms and sides of the valleys leading towards the Pugha lake. This species very much resembles the alpine hare of Europe.

Lepus pallipes, *Hodgson*; L. tollai, *Pallas*, *Gray*. White-foot hare, Ri-bong, Tib., occurs in Ladakh and Tibet.

Lepus Peguensis, *Blyth*, is very similar to the L. ruficaudatus, *Is. Geoffroy*, of Bengal. It occurs in all Upper India, Assam, and Upper Burma. Tail black above, as in the generality of the genus. Upper parts same colour as Bengal hare, but the belly abruptly white.

Lepus ruficaudatus, *Geoff.*, *Blyth.*

Molol, ...	Gondi.	Lamma, ...	,,

This hare is found from the Himalaya and the Panjab to the Godavery, Malabar, and Assam.

Lepus Sinensis, *Gray*, of Hardwicke's Illustrations of Indian Zoology, is known only by that figure. The skull closely resembles that of L. ruficaudatus, *Is. Geoff.* (the common Bengal hare); the general structure of L. Sinensis and L. ruficaudatus would appear to be quite similar, but the colouring is remarkably different, being a mixture of deep tawny or rufo-fulvous with much black on the upper parts, and the under parts whitish. The paws are black underneath, mingled with some tawny along the lower surface of the tarsus; the latter being almost pure white externally, and thus forming a remarkable and striking contrast with the hue of the lower surface. Tail black above and at the tip, whitish below towards its base. On the sides towards the belly the fur much resembles both in colour and texture that of the entire upper parts of L. ruficaudatus; but on the back the fulvous hue is very much deeper, and the admixture of black is much greater, the short soft under-fur is deep buff or fulvous, whereas in L. ruficaudatus the same is whitish or rather almost pure white.—*Adams; Mr. Blyth in Beng. As. Soc. Journ.*, 1846, 1847, 1852;

British Museum Catalogue; Eng. Cyc.; Jerdon's Mammals.

LERA. HIND. A coarse brown gum, imperfectly soluble, used in calico printing.

LESCHENAULT DE LA TOUR, a French botanist, who accompanied Baudin's voyage to the Moluccas, Java, and Sumatra. He appears to have been appointed director of the botanic garden at Pondicherry, and to have investigated some of the southern provinces of the Peninsula; the plants he collected seem, however, to be chiefly from the Neilgherries, and are principally published by De Candolle in his Prodromus Systematis Naturalis Vegetabilium.

LESGHI, an agricultural race of about 18,000 families who occupy Daghestan in Caucasia. They speak a peculiar dialect; one of the seven Caucasian nations, between the Black Sea and the Caspian. They are supposed to be descended from the tribe of mountaineers known to ancient geographers under the name of Lesgæ or Ligyes. They are alike remarkable for their valour and turbulence. They are now subject to Russia. The Lesghi kamri is a broad two-edged knife.—*MacGregor; Malcolm*, ii. p. 125.

LESPIDEZA STRIATA, *Hooker and Arnott*, the Japan clover of China and Japan, grows readily on dry soil, and the cattle like it. It is much valued in N. America as a grass for cattle.—*Von Mueller.*

LESSEPS. Ferdinand de Lesseps, a native of France, who planned the formation of the Suez Canal, between Port Said on the Mediterranean and Suez on the Red Sea. A great engineer.

LET-HTA, a small tribe in the Karen-ne country, who so call themselves, but are designated Goung-dho by the Burmese. They occupy the country to the N.W. of Mobyay, called the twelve hills of Levay Loung. They have a bachelor hall and a spinster hall at opposite ends of their villages. They have an intense sensitiveness; and if one of them be accused of any evil act by several of the community, he will retire to some secluded spot, dig his grave, and strangle himself.

LET-PHET. BURM. Pickled tea. It is prepared from the Elæodendron Persicum. The leaves are brought from native Burma, and are kept constantly moist. When to be used they are mixed with a little salt, oil, fried garlic, green ginger, and parched sesamum seeds. Let-phet-dhok are small packets of the pickled tea which form part of every Burman ceremonial, and are sent as invitations instead of notes or letters.

LETSOMIA NERVOSA. *Roxb.*

Argyreia speciosa, *Choisy.*

Bich-tarik, . . . BENG. | Elephant creeper, . ENG.
Googuli, . . . DEKHAN. | Sumandar soh, . HIND.

A woody twining perennial plant of Arabia, Sind, and all India. Its leaves are useful as a maturant and discutient, and are rubbed on the skin in cutaneous affections.—*Murray.*

LETSOMIA SETOSA, a large red-flowered creeper of the convolvulus tribe, is seen in Tenasserim during the rainy season on almost every hedge.—*Mason.*

LETTI, a high island of considerable extent, in lat. 8° 11′ S., and long. 127° 45′ E., 18 miles E. by N. from Pulo Jackee, in the Arafura Sea. The S.W. islands of the E. Archipelago are the Baba, Sermatta, Letti, Roma, Wetta, and Lamma groups. The Baba people are known to have destroyed an English trading vessel. Each family preserves on a scaffold of their dwelling the head of one of their ancestors.

LETTUCE, Lactuca sativa.

Peh-ku, Sang-tsai,	CHIN.	Kaboo, .	GUJ., HIND.
Lattuo, Salat, . .	DAN.	Lattuga, ...	IT.
Laktuk, . .	DAN., SW.	Alface, ...	PORT.
Laitue, ...	FR.	Latuk, ...	RUS.
Lattich, ...	GER.	Lechuga, ...	SP.

The most esteemed sorts of lettuce are the cabbage, red and brown cos-lettuce. For early salading, the seed may be sown at the commencement of the rains, although neither are in perfection until the cold season. They are mostly raised in small beds, and then transplanted into others at about one foot apart, or on ridges around other vegetables; they do not require any particular care. The ground should be light and rich, and when the plants are of a sufficient size they should be tied up, and this may be done with shreds of plantain-leaf or twine.—*Riddell.*

LEUCAS ASPERA. *Spreng.*

Phlomis esculentum.		Kulkusa, . . .	BENG.
Choto, ...	BENG.	Thumbay keeva, .	TAM.

A small annual weed with white flowers; appears during the rains; the leaves are used as greens mixed with others.—*Jaffrey.*

LEUCAS CEPHALOTES. *Spreng.*

Phlomis cephalotes, *Roxb.*

Chatra, ... HIND. | Tummi, ... TEL.

The leaves are eaten; the flowers are sacred to Siva, and are offered in his temple. But there are many species to which the term Tummi is indiscriminately applied.

LEUCAS ZEYLANICA. *R. Br.* The plant is used as a stimulant, sialogogue.

LEUCISCUS RASBORA, *Buch. Ham.*, of Penang, numerous in rivulets and in rice fields when they are flooded.

LEUCORYX, Oryx leucoryx, of N.E. and W. Africa, from the Gambia to Abyssinia. In S. Africa it is replaced by the Gemsbok (Oryx gazella). In Dongola and on the coasts of the Red Sea a third beautiful species of this form occurs, the Beisa; and in Arabia a fourth species, described and figured under the name of Oryx beatrix.

LEUCOSPERMUM, an interesting genus of plants, with entire downy or hairy leaves, and terminal heads of yellow flowers.—*Riddell.*

LEVISTICUM.

Tang-kwei,	CHIN.	Ta-kung	CHIN.
Ch'uen-kung,		Fuh-kung,	

Species of Levisticum are used in China, like sumbul root and valerian plants.—*Smith.*

LEWES UERTOMENES, a learned gentleman of Rome, who in A.D. 1503 gave an account of Cambay, and of its quartzose minerals.

LEYDEN, DR. JOHN, a celebrated linguist, antiquary, and poet; born 1775; entered the Madras Medical Service in 1802; became Professor of Hindustani, College, Fort William, 1806; accompanied Lord Minto to Java in 1809, where he died. Author of Translation of the Memoirs of the Emperor Baber, Lond. 1826, 4to; On the Indo-Chinese Languages, in As. Res. x. p. 158; On the Rosheniah Sect, ibid. xi. p. 363.—*Dr. Buist's Cat.*

LEZAM. HIND. An iron bow with chain, used for gymnastic exercises in the Talimkhana or gymnasium of India.

LHA. Tib. Gód. Lhamó, goddess.

LHASSA. To the Lhassan kingdom of Great Tibet is applied the name of Kha-chan-pa or Snow-land. Lhassa is the seat of the great priest of the eastern Buddhists. Its houses are large, and are fresh whitewashed and painted every year, so as to present a gay appearance. In the city of Lhassa, and over the whole of Tibet, Geawa Remboochi or the Grand Lama is nominally the supreme authority in temporal and spiritual affairs. His residence is in Patala Goompa, which is on the north side of Lhassa. M. Huc says that Lhassa in the Tibetan language means Land of Spirits. The Mongolians, on the same authority, call this city Monche-dhot, *i.e.* Eternal Sanctuary. The Chebu Lama gives the following interpretation:—L'ha means God; Sa, abode or resting place; hence it is the city of God, or the Eternal City. There are two resident envoys from China, called Ampas, stationed at Lhassa; subordinate to them are two great Chinese officers, designated Daloo-he. Their rank and occupation are those of general officers. Next to these are two Phopun, who act as paymasters of the troops, and perform the duties of British Adjutant and Quartermaster-Generals. They also are Chinese. One of the Daloo-he and one of the Phopun are generally stationed at Digarchi. These officers constitute the general staff of the army in Tibet. Next in rank are three Chonghar. They are Chinese, and military commanders; one is generally stationed at Digarchi and another at Tingri, near the Nepal frontier of Tibet. Below these are three Tingpun, non-commissioned officers,—also Chinese. There are no other Chinese military officers in Tibet. The usual number of Chinese troops, all Manchu Tartars, in Tibet, did not exceed 4000 men. Stationed at Lhassa, 2000; Digarchi, 1000; Giangtechi, 500; Tingri, 500. The Chinese functionaries in Tibet are political and military officers only. All the civil appointments are held by Tibetans. The local temporal government of Tibet is headed by the Grand Lama, who is entirely guided in all political and military affairs. — *Prinsep's Tibet.*

LHOPA, a quarrelsome and cruel but not brave race of Eastern Tibet and Nepal. They have invariably black hair, which is cut close to the head. The eye is small, black, with long pointed corners, as though stretched and extended by artificial means. Their eyelashes are so thin as to be scarcely preceptible; and the eyebrow is but slightly shaded. Below the eyes is the broadest part of the face, which is rather flat and narrow from the cheek-bones to the chin. Many are more than six feet high, and, taken altogether, they have a complexion not so dark by several shades as that of the European Portuguese. They make paper from the bark of a tree called deah, steeped in a ley of wood-ashes, drained, beaten to a pulp, cleansed, and formed into sheets. This is done by spreading it over a frame of reeds. These the manufacturer dips into the water which contains the pulp, until he has covered the surfaces. Then he raises them perpendicularly, and has nothing further to do beyond the drying and pressing. They are industrious agriculturists, and skilful in artificial irrigation. Lho-pa-to or Bhutan people are Buddhists of the sect called in Tibet Bruk-pa (vulgarly Duk-pa), which they adopted in the 17th century. The four valleys of Bhutan are called Thet-yul, Thim-yul, Patro or Pato, and the middle district.

LI. The ancient Chinese philosopher Li or Licius flourished in the latter half of the 5th century B.C., or about 100 years after Confucius. His writings seem to indicate a protest against the purely secular wisdom of the latter sage, and to represent those more religious and imaginative elements of the national thought which afterwards led to the diffusion of Buddhism. His theory of the universe appears substantially pantheistic, and offers considerable affinity to the Indian in its practical conclusions, though resting rather on an empirical than a metaphysical basis. Licius would also seem to have been considerably influenced by Lao-tsze; the existence and efficacy of magic, at all events, appear to be taken for granted by him. On the whole, his writings may probably be taken as a fair example of the Chinese mind alike in its strength and weakness. Childish absurdity, as at least it appears to us, alternates with shrewd homely sagacity; and in their independence of foreign influence they afford an interesting proof of the tendency of the awakened intellect in all ages and countries to occupy itself with the same problems, with a remarkable correspondence in the results ultimately attained. His aphorisms are for the most part cast into the form of apologues or anecdotes, some quaint and ingenious, others at the first aspect puerile or extravagant. Licius is full of interesting incidental illustrations of Chinese manners and customs, indicating the progress which civilisation had made in his time. Medicine, architecture, and music seem to have attained a considerable degree of development,—the latter especially was almost as highly regarded as in contemporary Greece. True intellectual progress has been arrested in China since Licius' time, and the nation has even retrograded in several respects.

LI, a Chinese copper coin; ten to a candareen. 10 li, 1 candareen; 100 li, 1 mas; 1000 li, 1 tael; 1 tael about 5s.

LI, a Chinese measure of length, about one-sixth of a British mile, or 293 yards.

LI, a Chinese word of very extensive meaning, sometimes rendered reason, courtesy, propriety, good breeding. The saying is, Li and Wen (learning) make up the whole sum of human excellencies.—*Bowring.*

LI. Many non-Aryan peoples of India take their tribal designations from the word for 'man' in their respective dialects, and the term mi (man), with some prefixed or supposed syllable, supplies the basis of the race name to not less than forty ascertained tribes. Thus Du-mi, Ka-mi, Ku-mi, Anga-mi Naga, Mi-than Naga. And if we recognise the non-Aryan phonetic displacements of m and 'l and of l and r, the list can be greatly increased. Thus, in the Sak, lu; Toung, mru; Murmi, mi; Thaksya, mli; and the root li affords the generic term Homo, man, to a whole series of tribal names. Thus Ma-li, the people of Rajmahal; Bala-li, Dhima-li, Santa-li, Banga-li, meaning the people of Bala, Banga, and so forth. Li is thus often added to specific names for man to form names for aboriginal tribes. In Santali, li furnishes the nomenclature connected with the propagation of our species, such as lai, laih, etc., and appears in li dih, a child; le-daka or lad ko, children; Khi li, a generation of men (ho-li), and

the hitherto unexplained terms, Che-la, Che-li (= Khi-li = holi), for son and daughter, used by all the semi-aboriginal castes of Lower Bengal. The root ko, with the generic affix li, is met with in all periods of history, and in all India. The Mahabharata and Vishnu Purana speak of Ko-li tribes in connection with Mikala, Dravida, Kirata, and others, and the Aitareya Brahmana speaks of the Koli as Dasya. Among a section of the non-Aryan races of India, or aborigines, as Dr. Hunter styles them, the root ho, shortening in some to hu and ha, or interchanging into ko, ku, and ka, furnishes the specific word for man amongst the Kol tribes of Central India, and is one of the oldest and most widely spread roots for man. In the Sanskrit play the Mrichha kati, go-ho is man; among the Kur, near Ellichpur, it is ho ko; amongst the Siamese it is khon or kun, which is the same form as it takes amongst Khond.—*Dr. W. W. Hunter on the Non-Aryan Languages of India*, p. 22.

LIANG. A tchokhi, in Chinese thsian, pronounced tchin in the Mongol, is a small round brass coin with a square hole in the centre; the reign during which it was struck is marked on the reverse. Five hundred tchokhi are strung together upon a ribbon. All the way to Pekin, Timkowski received 1150 tchokhi for a liang or lan.—*Timkowski's Pekin*, i. p. 274.

LIBADA, properly Labada. ARAB., HIND. A caftan of chintz quilted with cotton, the winter dress of the people about Almorah.

LIBATION. Amongst the Hindus, the Argha offering to an idol, a Brahman, a bridegroom at the marriage ceremony, or to any venerable person, and in farming operations. It consists chiefly of fruit and flowers, or water, or milk and honey; and when the first bundle of corn is brought home from the threshing-floor and deposited, cultivators of the N.W. Provinces make a libation of water, offered between the threshold and the spot where it is so deposited.

Libations of the Hindus are offered to the gods, the rishi or sages, and progenitors, with the parts of the hand severally sacred to each. The offerer bathes, puts on clean clothes, and scatters water thrice to gratify the gods; as many times to please the rishi, and once to Prajāpati; he must also make three libations to satisfy the progenitors. —*Wilson; Carnegy.* See Argha.

LIBER. The inner bark of a plant is a layer consisting of woody tissue, cellular substance, and vessels of the latex, forming a compact zone immediately applied to the wood. The woody tissue of which it is composed quickly becomes thick-sided, by the addition of internal ligneous strata, the consequence of which is that such tissue in this part is more tough than elsewhere. Hence it is usually from the liber that are extracted the fibres employed in making cordage or linen thread; this at least is its source in hemp, flax, the lime tree, the lace bark, and the many other exogens which furnish fibres; but in endogens, which have no liber, as the cocoanut, it is the ordinary woody bundles of the leaves, stem, and husks of the fruit from which the fibres used for ropes is procured. It is said that certain exogens, such as Menispermaceæ, have no liber. In many plants a new layer of liber is formed annually, contemporaneously with a new layer of wood, but this is by no means universal; on the contrary, the oak and the elm increase their liber slowly and irregularly. — *Eng. Cyc., quoting Comptes Rendus*, v. p. 393.

LIBOCEDRUS DECURRENS, a tree of N.W. America, which grows associated with the Sequoia (Wellingtonia) gigantea. It attains a height of over 200 feet. Its timber is much sought after by farmers for rails and fencing timbers. It might be introduced into N.W. India.

LICHEN ODORIFERUS. *Royle.* Borrera ashneh is a product of the Himalaya, and officinal at Lahore. The hakims administer it in disorders of the stomach, dyspepsia, vomiting, pain in the liver or womb, induration in the uterus, amenorrhœa, calculi, and nocturnal spermatic discharges. L. stapelioides mentioned by Griffith, and the lichen of Masson, is the Boucerosia aucheri.—*Dr. Honigberger*, p. 299.

LICHEN ROTUNDATUS. *Rottl.*

Hinna-i-koreish, . ARAB.	Kull pashi, . . . TAM.
Pathar-ka-phul, . DUKH.	Ratipanchi, . . . TEL.

This is a dried rock moss which the Tamil practitioners suppose to possess a cooling quality, and prepare a liniment with it accordingly. —*Ains. Mat. Med.* p. 86.

LICHENS possess two distinct characters; several are nutritious, some bitter, and some yield to ammoniacal solutions a variety of brilliant colours, and are much used as dye-stuffs.

Lichen bread is used in Finland in times of scarcity. They are perennials, spreading in the form of a crust over rocks, trees, or the surface of the earth. On the Kunda Hills of the Neilgherry Hills, all the rocks are covered by lichens. Of lichens, the Stricta orygonosse and several other species give a beautiful pink dye; Parmelia periolata and P. Nepalense yield a yellow dye; P. borreri, a deep brown dye.

Ramalina farinacea is used for food. R. vulpina yields a fine deep yellow dye; and the following are plentiful on the Kundas, viz. Cetraria glauca, Cetraria, *sp.*, Parmelia periolata, Lecanora tartarea, Gyrophora deusta, Cladonia rangiferina.

Rocella fusiformis, a dye lichen of Ceylon, was sent to the 1851 Exhibition, and there valued at £380 the ton. Parmelia periolata, a dye lichen of Ceylon and the Neilgherry Hills, was sent to the Exhibition of 1851, and was valued then at £195 to £225 per ton. Other dye plants are Lecanora atra, L. hæmatomma, L. parella, *Ach.*, and L. tartarea, *Ach.*

Alectoria jubata, the Keh-Kieo of Ramree, is a gelatinous lichen, and is eaten with rice by the natives.

Several lichens grow on the top of the Donkia pass, as Cladonia vermicularis, the yellow Lecidea geographica, and the orange L. miniata, also some barren mosses. At 18,300 feet, Dr. Hooker found on one stone only, a fine Scotch lichen, a species of Gyrophora, the 'tripe de roche' of arctic voyagers, and the food of the Canadian hunters; it is also abundant on the Scotch alps. Parmelia Kamtschadalis, *Esch.*, occurs in the Panjab bazars. It is used as a dye and as a stimulant to digestion in disorders of the stomach and womb, and in cases of calculus. Its vernacular name is chalchalira, also ashneh. The chief lichens employed in the manufacture of orchil and cudbear are the Angola weed, Ramalina furfuracea, and Mauritius weed, Rocella fusiformis, which, however, comes also from Madagascar, Lima, and Valparaiso, and

then bears the distinctive commercial name of the port of shipment.

Rocella tinctoria, from Tenasserim and other parts of India, had been introduced by the E.I. Company. R. tinctoria and R. fusiformis furnish the orchil or orchilla weed of commerce, which is sometimes sold as a moist pulp, but usually in the form of dry cakes, known under the name of litmus; it produces a fine purple colour. The English imports are derived chiefly from the Canary, Azores, and Cape de Verd Islands. Rock orchilla was shown at the Exhibition of 1851; from the Berlingen Isles, from Angola, Madeira, and the Cape de Verds. Orchilla weed is very plentiful about the shores of the islands of New Zealand, some was sent from thence to that Exhibition; but from a want of knowledge as to the time at which it should be gathered, and the mode of preparing it for the market, it had not yet become a saleable commodity. The rich varieties of lichens on the rocks and plains of Australia have not been tested as they ought to be. Iceland moss (Cetraria Islandica, *Hoff.*) is chemically allied to starch; it swells in water, and when boiled gelatinizes on cooling. It is used by invalids.

The Cladonia rangiferina, *Hoff.*, is the reindeer moss, that animal using it as its winter food.—*Hooker, Him. Jour.* ii. p. 130; *O'Sh.* p. 671; *Dr. J. L. Stewart*, p. 269.

LICH'H. Hind. The payment in kind for the land in the Panjab.

LICHHAVI, a tribe of the Vriji. There were ancient kings of Nepal, Tibet, and Ladakh of this race.

LICHI or Leechee or Li-tchi, the Nephelium litchi, is a shady and large tree, some 40 feet high, ornamental, and bears the fruit of that name; it is a delicious fruit, as large as a good-sized plum. It produces a very large quantity of fruit, and there is not the least injury to be feared from a free use of it. In that respect it is like the mango. The fruit is dried in India. Fu-chu-fu, in Foh-kien in China, is noted for this fruit, and the trade in them in a dried state is extensive.—*Bonynge, America; Vegetable Kingdom.*.

LICTORS of the king of Burma are generally, if not always, convicts whose sentence has been commuted. Often the pain of death is changed to perpetual infamy; the criminal is then branded on the face, his offence is written in indelible characters on his breast, and he is doomed to act as a satellite or executioner.—*Yule*, p. 93.

LICUALA, a genus of palms of the tribe Coryphinæ of Martius, Corypheæ of Lindley, and so named by Rumphius, from the Macassar name of the species, L. spinosa, figured by him in Herb. Amboin. i. t. 9, and which is found in the islands of Macassar and Celebes. L. peltata is described by Dr. Roxburgh as a native of the mountainous and woody parts near Chittagong, which separates that province from the Burma territories. Both species are small, with palmate, somewhat fan-shaped leaves, but of little use. Rumphius describes the narrow leaves of this tree as being formed into pipes for smoking tobacco, while the broader are employed for wrapping up fruit, and for other domestic uses. This genus of palms is confined to the tropical parts of Asia, and composed of about a dozen species.

The species of Licuala are shrubby, sometimes stemless, palms of the East Indies as well as the islands of the Eastern Archipelago. The stem in many is marked with rings, and sometimes rough with the persistent indurated petioles of fallen leaves. The leaves are pinnately fan-shaped, with the petioles armed towards the margins with horny conical or often hooked prickles.

Licuala acutifida, *Griffith.*, are the Plass tikoos, Malay; the walking-sticks called Penang lawyers are the stems of this small palm. It is a miniature palm, inhabiting Penang, and attaining generally only 3 or 5 feet, and in exceptional cases from 15 to 20 feet in height.

Licuala dentifida, *Martius*, grows in Penang; its Malay name also is Plass tikoos. Its stems also afford the Penang lawyer walking-stick. These are prepared by scraping with glass and polishing; each stem is well scraped, by which the epidermis is altogether removed; care must be taken not to take away much more, as the inside is like the substance of a rattan. It is on this account that the smaller thinner sticks are so much sought for, and are so rare. The sticks are then straightened by fire. No other process is used. The plant seems to be confined within narrow geographical limits; it is not known, as Griffiths believed, about Malacca, where its place seems to be supplied by several other closely-allied species. Martius, however, states it is to be found throughout the Malayan Peninsula. Griffiths had an impression that under this species, as given by Martius, two distinct palms will be found; for though the description by Martius agrees well with Griffiths' Penang specimens, yet the drawing of the spadix represents the parts nearly of the same size as in L. spinosa. L. pumila, *Blume*, appears only distinguished from this by the broader equal teeth of the pinnules (the intermediate ones of which are the broadest), being described as 16 to 21 lines broad, and 6 to 8 toothed, while the two innermost ones are said to be only an inch broad.

Licuala glabra, *Griffiths*, is a miniature palm, the trunk being from 3 to 5 feet high, and rather more slender than that of the preceding. The petiole, the rete, and the ligula are much the same as those of the preceding. It grows solitary on Gunong Miring, an offset of Mount Ophir. Flowers in February. Its Malayan name is Plass gunong. Griffiths first met with this species on Mount Ophir; he subsequently received specimens from the same locality. It is closely allied to the preceding Penang lawyer, from which, indeed, the leaves are scarcely distinguishable, except by the broad sinuses of the lobes, and their more obtuse points. The smooth inflorescence and flowers, however, at once distinguish it both from that species and L. pumila of Blume. Griffiths was not aware of its stem being used for walking-sticks.

Licuala peltata, *Roxb.* Chitta-pat or Chattah-pat, Assam., is one of the finest of the genus. It inhabits all the woody mountains to the eastward of Bengal in Sikkim, as well as the base of the Himalaya, below Darjiling, Rangpur, Assam, and the Andamans; and its large peltate orbicular leaves, though coarser than Toka-pat of Assam, are used for making chattas or umbrellas, punkahs or hats. Nevertheless the demand for them is very great, scarcely a single ploughman, cow-

keeper, or coolie being without his jhapi or chatta, umbrella-hat, made of chatta-pat. Other species are L. longipes, *Griff.*, L. paludosa, *Gr.*, L. spinosa, *Gr.*, and L. triphylla, *Gr.*, but are of no economic importance.—*Roxb.* ii. p. 179; *Seeman; Hooker; Griffith.*

LIE-TEA, a commercial term for inferior adulterated tea.

LIEUN. BURM. In Amherst, a most valuable compact wood, homogeneous and very heavy, of deep-brown colour and fine grain, and exempt from attacks of insects; used for house posts and rafters.—*Dance.*

LIEU PEI, in A.D. 221, by the aid of Chu-ko-liang and Kwan-yun-chang, made himself emperor of Western China. Chu-ko-liang was the wisest of counsellors, and Kwan-yun-chang the most loyal of heroes. These men have been honoured by subsequent dynasties.—*Dr. Edkins.*

LIGHTHOUSES.

In the *Red Sea*, the lights—

LIGHTNING.

Barq, ... ARAB. | Skimshek, . . . TURK.
Bijli, ... HIND.

Sheet-lightning is an electric phenomenon very common in India; it is unaccompanied by thunder, or is too distant to be heard. When it appears, the whole sky, but particularly the horizon, is suddenly illuminated with a flickering flash. The zigzag appearance is often observed. Philosophers differ much as to its cause. Matteucci supposes it to be produced either during evaporation, or evolved (according to Pouillat's theory) in the process of vegetation; or generated by chemical action in the great laboratory of nature, the earth, and accumulated in the lower strata of the air in consequence of the ground being an imperfect conductor. Arago and Kamtz, however, consider sheet-lightning as reflections of distant thunder-storms. Saussure observed sheet-lightning in the direction of Geneva, from the Hospice du Grimsel, on the 10th and 11th of July 1783; while at the same time a terrific thunder-storm raged at Geneva. Howard, from Tottenham, near London, on July 31, 1813, saw sheet-lightning towards the south-east, while the sky was bespangled with stars, not a cloud floating in the air; at the same time a thunder-storm raged at Hastings, and in France from Calais to Dunkirk. Arago supports his opinion, that the phenomenon is reflected lightning, by the following illustration. In 1803, when observations were being made for determining the longitude, M. de Zach, on the Brocken, used a few ounces of gunpowder as a signal, the flash of which was visible from the Klenlenberg, sixty leagues off, although these mountains are invisible from each other.—*Cosmos; Curiosities of Science; Collingwood.*

LIGHTNING CONDUCTORS. The most important ancient notice of the relations between lightning and conducting metals is that of Ctesias, in his Indica, cap. iv. p. 190. He possessed two iron swords, presents from the king Artaxerxes Mnemon and from his mother Parasytis, which, when planted in the earth, averted clouds, hail, and strokes of lightning. He states that he had himself seen the operation, for the king had twice made the experiment before his eyes. The H'tee or Tee placed on the summit of each Buddhist pagoda seems to be a lightning conductor.—*Humboldt.*

LIGN-ALOES, Eagle-wood, Aloes-wood.

Agaru, Agur, SANSK., HD.

Lign-aloes is mentioned in Numbers xxiv. 6, Psalms xlv. 8, Proverbs vii. 17, Canticles iv. 14. It is obtained from the Aquilaria agallocha, *Roxb.*, the Ophiospermum of Loureiro, a large evergreen tree. The wood of the sound tree is light, pale, and very slightly odorous, and is used to scent clothes. A very high artificial value is placed on the better qualities of its resinous product by the natives of the east, the best quality being worth about £14 to £30 the pikul of 133⅓ lbs. The wood of the tree contains a quantity of an odoriferous oleo-resin, which, when heated, undergoes a sort of imperfect fusion, and exhales a fragrant and very agreeable odour. There are several kinds in

Borneo, called generally by the natives Kayu garu, but produced apparently by diseases in the tree, the scented and resinous parts not being procurable until the tree has been cut down and decayed. The garu has long been an article of considerable export from Borneo and the other islands to Arabia and China, where it is burned as incense. The Aquilaria agallocha, *Roxb.*, is something like the cedrela tree. It grows in Persia, Sylhet, Assam, the Laos country, Cochin-China, Cambodia, in China, in Kiung-Chan (Hainan Island), in Shanking-fu and Lien-Chan-fu in the Canton province. The wood, when boiled, produces several substances, to which the Chinese apply separate names. If part of the tree rot while growing or at any time after being felled, a dark resinous aromatic substance exudes in the heart-wood, which is the eagle-wood perfume under notice.—*Simmonds*, p. 439; *Low's Sarawak; Smith's Chin. Mat. Med.* See Aloes-wood; Aquilaria; Eagle-wood.

LIGNIN. When fine sawdust is boiled, first in alcohol, then in water, next in a weak solution of potash, afterwards in dilute muriatic acid, and lastly, several times in distilled water, so as completely to remove all the soluble portions, the substance which remains when dried at 212° is called lignin; it forms the skeleton of plants and the basis of their structure. It varies in texture from delicate pith to the hard shells of seeds; it forms the bulk of such manufactured products as linen, cotton, and paper, and the washed and bleached fibre of hemp or flax is a good example of it. Pure lignin has a specific gravity of 1·5; it is white, tasteless, and is not soluble in water, alcohol, ether, or oils.—*Tomlinson.*

LIGNITE is a fossil wood, somewhat carbonized, but displaying its wooden texture. In structure it is intermediate between peat and coal, and comprises jet, moor coal, bovey coal, brown coal, and basaltic coal. It occurs in Sumbulpur, Talchere, Rajmahal, Chittagong, amongst the hills up the Kurnfuli river in Assam, and, underlying the clay, in the recent strata all along the sea-coast from Cutch to Singapore. On the banks of a small tributary of the Tenasserim, in about 10 degrees of latitude north of Tavoy, trunks of trees changed to lignite may be seen in the stiff clay, and near them the trunks of other trees completely silicified, and turned to stone. There is a great variety in this wood coal, both in its appearance and chemical analysis. Dr. Morton described specimens of lignite collected by the commander of the surveying vessel on the coast below Amherst. Mr. O'Riley, near the headwaters of the Ataran river, found two separate lines of lignite in a coarse sandstone conglomerate, with shale and a semi-indurated blue clay containing limestone pebbles. This lignite is highly pyritous, its decomposition affording a copious deposit of sulphate of iron which covers the exposed surface with a dirty-coloured efflorescence. Some of the specimens taken from the deposit retain their original characteristics, do not fracture, and may be sawn through in sections across the grain, the same as wood imperfectly carbonized. Other deposits of wood less charged than the foregoing are found in the banks of the rivers Dahgyaine and Gyaine, some 20 to 30 miles to the N.E. of Moulmein, covered with the same blue clay, but none possess any useful quality as a combustible material.—*Dr. Mason.*

LIGNUM COLUBRINUM, the wood of Strychnos colubrinum, supposed to be an antidote against the poison of venomous snakes, as well as a cure for intermittent fevers. It is also produced by Strychnos ligustrina. S. ticute yields the Upas ticute and Tiettek of the Javanese, which is an aqueous extract of the bark. S. toxifera yields the Woorali or Ourari poison of Guiana. S. pseudoquina is employed in Brazil as a substitute for chinchona bark, and the seeds of S. potatorum, *Roxb.*, the nirmulee of the Hindus, are employed by them to clear muddy water.—*Faulkner; Hogg's Vegetable Kingdom.*

LIGNUM VITÆ of Pegu is the Melanorrhœa usitatissima, *Wall.*

Lignum vitæ (Guaiacum officinale, *L.*), of the West Indies, grows slowly, but attains a great size. The wood is remarkable for the singular brownish-green of the heart-wood, and its extreme hardness and toughness, which adapt it for pestles, mortars, rulers, etc. It yields a green resin used in medicine, which is obtained either from incisions in the trunk, or by heating the wood broken up into fragments.

LIGOR, in Siamese, Muang Lakhôn, is also called Na-khon-si Thamarat. It was founded four centuries ago by the king of Ayodhya. Ligor is in lat. 8° 20′ N., and long. 99° 25′ E., and is a seaport of the Malay Peninsula. Its chief trade is in tin, rice, and pepper. It has 150,000 souls, of whom three-fourths are Siamese.

LIGORA. ASSAM. A female servant granted to officers of state.

LIGUSTICUM AJOWAN. *Roxb.*

Ajwan, ... HIND.	Brahmadurbha, SANSK.
Yavanika, ... SANSK.	

Cultivated all over India. The seeds and those of L. diffusum are highly carminative, promote the secretions, good in dyspepsia; much used in all mesalihs; 8 seers for 1 rupee. This is one of the most useful and at the same time grateful of the umbelliferous tribe. It is much cultivated in Bengal during the cold season. Ligusticum diffusum, *Roxb.*, Junglee-ajowan, HIND., is found wild in the vicinity of Calcutta during the cold, and the beginning of the hot, season; it delights in shady, moist places.—*Roxb.*

LIGUSTRUM, a genus of plants belonging to the natural order Oleaceæ. The species are shrubs or low trees, natives of Europe and Asia, have a fleshy fruit, the berry containing two membranous one-seeded nuts. The genus has bitter and astringent leaves, and coloured berries, used in dyeing wines. A bluish colour which they yield is very much admired. Dr. Wight gives Ligustrum intermedia, macrophylla, and ramiflora. L. bracteolatum, *Don.*, and L. Nepalense, *Wall.*, occur in Nepal, and L. lucidum, *Ait.*, in China, L. glabrum is the tung-ts'ing of the Chinese. L. Sinense has lanceolate tomentose leaves, white flowers, and very small brown berries. It is a native of China, near Canton. L. spicatum has elliptic acute leaves, hairy beneath, as well as the branchlets. It is an evergreen shrub, native of Nepal, on mountains, growing from 6 to 8 feet in height.

LIGUSTRUM JAPONICUM. *Tourne.*

L. lanceolatum, *Hb*, *Lam.* L. spicatum, *D. Don.*
L. Nepalense, *Wall.*, *Roxb.*

A plant of Nepal, China, and Japan, with oblong ovate grooved leaves and white flowers, growing to the height of 6 or 8 feet. Japan privet is a valuable hedge plant, which grows well under trees.—*Voigt; Von Mueller; Eng. Cyc.*

LIGUSTRUM LUCIDUM. *Ait.*

Lah-shu, . . . CHIN. | Tung-ts'ing, . . CHIN.

A handsome evergreen tree of China, with ovate pointed leaves, profuse white flowers with panicled cymes, and bearing a black capsular fruit. The Chinese term tung-ts'ing is applied to several plants on which the vegetable wax insect congregates, as L. Japonicum and L. obtusifolium, both of which, with Rhus succedaneum, are also in China called Nu-ching. Another wax insect tree is the Ligustrum ibota of the province of Sze-chuen. But L. lucidum principally harbours the insect. Its fruit and bark are used by the Chinese in the form of tincture, and its leaves are applied to swellings and sores. In the Keenchang district, the Ligustrum lucidum thrives in abundance, and on its twigs in the spring of the year countless flies swarm like a brown film. The branches soon become covered with a white, soapy incrustation, that increases in volume until the commencement of the fall of the year, when the sprays are cut off and immersed in boiling water. The viscid substance rises to the surface, and is skimmed off, melted, and allowed to cool in deep pans. It was accidentally discovered that, by transporting the insects from their native district to Keating Fu, in the north of the province, their capability of discharging wax was largely augmented, which was availed of by the Sze-chuen traders. The period between mornin, and evening is chosen for conveyance, because many hours of sunlight would precipitate the hatching. This should take place only after the females have been attached to the trees. Arrived at their destination, six or more of the mothers are tied, wrapped in a palm leaf, to a ligustrum. A few days later the young flies are swarming on the twigs, where they fulfil their mission by the month of August. Then they perish in the caldrons, where the results of their brief existence are collected. It is said that this peculiar industry requires the exercise of great care, forethought, and experience.—*Voigt; Smith*, p. 229.

LIKHAWAT, HIND., from Likhna, HIND., to write; a written document, a handwriting.

LILAC. In India several plants are known as lilacs. The Syringa Persica is the true Persian lilac; the Melia azederach is the Persian lilac of the English in India; Melia sempervirens, W., is the West Indian lilac of English writers.

LILAM or Nilam, in the sea-coast towns of India, means an auction sale. They are both from the Portuguese Leilao, auction sale.—*Wilson.*

LILASTHAN, in Hindu mythology, a place near the Hradaucita where Samirama resided with Lileswara.—*As. Res.* iv. p. 370.

LILAVATI, the title of that chapter of Bhaskar Acharya's Siddhanta Siromani which treats of Mensuration and geometry. It has been printed and has been translated by Colebrooke and Dr. Taylor. Lilavati and Bija Ganita, by Bhaskara Charya, are the best Hindu books on algebra and arithmetic.

LILESA, also Lileswara, sprung from Balcswara, is identical with Ninus.—*As. Res.* iv. p. 376.

LILIACEÆ. *D. C.* The lily tribe of plants, comprising, in the East Indies, about 20 gen. and 66 sp. Liliaceous plants grow all over the world. Many of the tulip section are ornamental, but the roots of Methonica superba are considered to be a virulent poison. The Aloeæ yield valuable fibres from species of Sanseviera and Aloes; also the medicinal aloes, the flowering hyacinth and other ornamental plants, are found in the Asphodeleæ, as also the useful squill, leek, onion, garlic, rocambole, shallot, and chives.

LILIES OF THE FIELD, alluded to by Jesus, Messiah, are supposed to be the Amaryllis lutea, also supposed to be the Chalcedonian or scarlet Martagon lily, formerly known as the lily of Byzantium. The plains westward of the lake of Gennesareth which surround the Mount of Beatitudes, are covered at different seasons of the year with liliaceous flowers of many kinds, nearly all of which are brightly coloured. The Chalcedonian lily was in blossom at the season that the sermon on the mount was spoken.

LILIUM CANDIDUM. Peh-hoh, CHIN. In China the bulbs, the unopened flower-buds, and the flowers of this and of L. tigrinum are used medicinally. L. Wallichianum, *Roem. et Sch.*, is a plant of Naini Tal.—*Smith's Chin. M. M.*

LILLAH. ARAB. For the sake of God; out of charity, gratuitously. Lillahi, for God; Lillahi l'Azim, for the love of the great God. Lillahi'l-hamd-wa-al-manat, to God be praise and glory.

LILY-FLOWERS.

Kin-chin-tsai, . . CHIN.	Hwang-hwa-tsai, . CHIN.

Hæmerocallis graminea and Lilium bulbiferum, and a reddish variety of the orange lily, are largely raised in the Chinese province of Shan-tung, for their flowers, which are collected and dried for use in China, and for export, as all Chinese use them medicinally, and as a relish with meat dishes. —*Smith, M. M. C.*

LILY OF THE VALLEY, a common name for the Convallaria majalis.

LIMBU, called by the Lepcha, Chung, a partly Buddhist, partly Brahmanical border race between Nepál and Sikkim, a branch of the Kiranti or Kirati; and a hardy, hard-working people. They engage in the cultivation of grain, and feed cows, pigs, and poultry; their huts are made of split bamboo, and the roofs of leaves of the wild ginger and cardamom, guyed down with rattans. They drink to excess. The Limbu near Darjiling eat their sacrifices, dedicating, as they forcibly express it, 'the life-breath' to the gods, the flesh to ourselves. According to Dr. Campbell, the Limbu tongue is more pleasing to the ear than the Lepcha, being labial and palatal. The Limbu, Sunwar, and Chepang possess a small Mongolian type, strongest in the Limbu, and their language is referable to either the Tibetan or Indian standard. The Rong, the Khampa or Kamba, and the Limbu, are people from different parts of Tibet. All these people have powerful frames, but are idle.—*Latham; Lubbock, Orig. of Civ.; Dr. Campbell*, p. 148; *Dalton's Ethn.* p. 102.

LIME, Quicklime, Caustic lime.

Ahaq, ...	ARAB.	Tur, ...	MALAY.
H'ton-phiu, . . .	BURM.	Nureh, . . .	PERS.
Shih-hwui, . . .	CHIN.	Iswest, . . .	RUS.

Calcina, Calce, . . .	IT.	Chunambu . .	TAM.
Calx, Calx recensusta,	LAT.	Kirech, . .	TURK.

Lime is an English term applied alike to quicklime or freshly-burned limestone, to the same when it has been slaked, and when mixed with sand in the form of mortar. Lime, in its pure form, is a greyish-white, earthy-looking mass, moderately hard, brittle, sp. gr. 2·3 to 3·03, having an acrid alkaline taste, corroding animal substances. It is made by burning limestones of various kinds, also by burning shells of the mussel, cockle, oyster, Unio ampullaria. When fresh burnt, it absorbs both moisture and carbonic acid from the air. It will abstract water from most bodies, and is hence often employed as a drying substance. White Carrara marble, calcareous spar, chalk, shells, nodular limestone, or kankar, all yield good lime. With heat sufficiently great, the carbonic acid is expelled, and about 56 per cent. of lime left in a caustic state, and tolerably pure; but if shells have been employed, mixed with a little phosphate of lime and oxide of iron. Water being added, lime cracks and falls to powder; the rest is a hydrate of lime.

The farmers of the south of India manure the fields on which Sea Island cotton is grown with a compost of shells and mud saturated with sea-water.—*Royle.*

Lime, slaked.

Hydrate of lime, .	ENG.	Kapur mati, . .	MALAY.
Calcis hydras, . .	LAT.		

The slaked lime is obtained by pouring water over quicklime. It is used for making mortar, by mixing it with sand, also after watery dilution as a whitewash; in this form it is deemed to possess great purificatory power; and in British India it is applied annually to buildings, but oftener when necessary.

Lime, carbonate of.

Kwang-fen, . .	CHIN.	Valaiti chuna,	HIND.
Craie, ...	FR.	Chuna, .	,,
Carbonate de chaux,	,,	Calcis carbonas,	LAT.
Kohlensaures kalk,	GER.		

Carbonate of lime assumes, in nature, several forms,—chalk, marble, limestone, calc-spar, kankar, and in most of its varieties is useful in the arts and manufactures.

Lime fruit. Bergamotte lime, acid lime.

Citrus bergamia, *Risso.* | C. acida, *Roxb.*
C. limetta, *var.*, *D. C.*

Korna nebu, Nebu,	BENG.	Jaruk tipis, . .	MALAY.
Tan-pu-lo, . . .	CHIN.	Jaruk nipis, . . .	,,
Chan-po-lo, . . .	,,	Jambira, . . .	SANSK.
Cay tanh-yen,	COCH.-CHIN.	Dehi, ...	SINGH.
Khatta nimbu, . .	HIND.	Elimitcham pallam,	TAM.
Limbu, Nimbu, .	,,	Nemma-pandu, . .	TEL.

This fruit grows on a shrub or small tree. The rind of the fruit is of a pale-yellow colour the pulp within is very acid. It is largely used in cookery, and the expressed juice known as lime-juice is preserved and used on board ship as an antiscorbutic; also used to make lemonade. Dried limes are used by dyers in some parts of India to fasten and improve colours. There are eight varieties of this nimbu fruit,—the pati, kaghazi, gora, China-gora, Kamurali, Rungpur, and taba nimbu of Bengal, and the Arabian lime of Muscat. It is grown throughout India, in Assam, the Sunda Islands, and Moluccas.—*M'Culloch; Faulkner.*

Lime, sweet lime, Citrus limetta, *Risso and Poit.*
C. hystrix, *D.C.*

Shouk-cho, . .	BURM.	Mitha nimbu, . .	HIND.

The sweet lime grows to the size of a large orange. The juice of the fruit is very grateful to persons with fever, although rather tasteless. It is easily propagated by seed. It will grow also from cuttings. The young shoots make a very good stock for orange grafts.

LIMESTONE occurs abundantly in many parts of the E. Indies, in the form of nodular masses, also as a compact stone and granular as marble, rarely as chalk. There is much granular marble in the Tinnevelly district in the south of the

Peninsula of India, both pure white and veined. The marble rocks of the Nerbadda river, below Jubbulpur, are also famed, and marble is found and largely worked in Burma. Chalk is rare in India, but a nodular limestone called kankar occurs in the black soil throughout British India. Compact limestone occupies great districts,—much of the valleys of the Godavery, Kistna, Tumbudra, Gutparba, Malparba, and Bhima rivers. The great Buddhist st'hupa of Amraoti is of this marble. Between one and two hundred pieces of its sculptures were sent to England by the Editor, and are arranged against the wall of the great stair of the British Museum. The carvings are minute. Mr. Fergusson noticed them in his Tree and Serpent Worship. A limestone underlies the whole of the Kymore range in Shahabad, and it also shows itself along the valley of the Sone as far at least as Mungeysur peak in Mirzapore. In some parts, as in Rohtas, it crops up boldly to 200 or 300 feet, forming a sloping base to the precipitous sandstone rock. There appear to be three well-defined strata, viz. an upper one of a yellowish-blue mixed with disintegrated sandstone, iron pyrites, and chalk, all in thin plates. Below that again, a more bluish-grey limestone, with occasional calc-spar crystals, is found, but generally of the same nature as the German lithographic stone. Under the aforesaid strata lies a very dense bluish-grey limestone mixed with veins of calc-spar. It is not used by native lime-burners, as being intractable. This is the lowest stratum, and would be an almost indestructible building or flooring stone, from its great hardness. Much harder than granite, and approaching to porphyry, it may be had in large blocks, and, if sawn into slabs, would be a very handsome building stone, bluish-grey with white streaks, and, moreover, it would probably make a superior kind of lime. Immense quantities of lime are made from the quarries of the western bank of the Sone, and exported down the Sone and the Ganges as far as Monghyr. Perhaps 300,000 to 400,000 tons are made annually, and the material is inexhaustible. The same limestone rock crops out on the northern face of the range, with intervals, between the Sone river and Mirzapore, and again, especially in the singular and interesting limestone cáverns of Gupteswar, in the valley of the Durgowtee river, at Beetree Band, in Khawah Koh, at Mussai, on the Sooreh river, and near Mirzapore. The cost of the lime at these quarries varies from 6 to 16 rupees per 100 maunds, or, say, 5s. to 14s. per ton.

Close to Jubbulpur is a range of low hills within a circumference of about 10 miles, interspersed with masses of limestone both above and below the surface. In burning it for lime, the stone is broken into fragments of 6 to 12 inches in size, then piled like a dome over a hole of about 9 feet diameter dug in the ground, and a passage left for introducing the fuel. This kiln is kept burning continually for the whole of the day, and the lime removed on the following morning. The fuel is used in the proportion of 40 maunds to every 75 maunds of limestone, and the yield is about 50 maunds of well-burnt lime.

White saccharine marble occurs on the banks of the Nerbadda, at Bhera Ghat, near Jubbulpur, on the line of the railway to Bombay. It has been used in a limited degree at Jubbulpur, sometimes to make lime, and other times for metalling roads. It is made up into images by natives, but does not take a good polish. But a block was sent to the Paris Exhibition of 1855, and pronounced to be equal to Italian marble for statuary purposes.

The marble of which the images of Gautama are formed is a granular limestone, but are usually called alabaster images. It is a primitive limestone abundant near Ava. All the limestone of the Tenasserim provinces belongs to the older secondary formation. The limestone of Tavoy has a sp. gr. of 2·7, and is a perfectly pure, semi-crystalline carbonate of lime, akin to statuary marble. It is well adapted to act as a flux in the smelting of iron. The limestone of Mergui has a sp. gr. of 2·7; it is a pure calcareous carbonate.—*Cal. Cat. Ex.*, 1862; *Mason's Tenasserim; Edward Balfour in Government Central Museum Records.*

LIMONIA, a genus of plants of the order Citraceæ.

L. acidissima, *Linn.*, all the E. Indies.
L. alata, *Hb. Madr, Wight, Ill.*, Ceylon, Neilgherries.
L. alternans, *Wall.*, Pegu.
L. angulata, *W. and A.*, Moluccas.
L. caudata, *Wall.*, Khassya Hills.
L. grata, *Wall.*, — ?
L. laureola, *D. C., Wall.*, Nepal.
L. missionis, *Wall., W. Ic.*, Tanjore.

The leaves of some of the Limonia are fragrant, the small fruits of L. acidissima are very acid. L. laureola is the only plant of this family found on the tops of cold mountains. The people of the Himalaya, remarking its highly fragrant leaves, fancy that it is by feeding on them that the musk-deer acquires its strong and peculiar flavour.—*Roxb.; Wallich, Pl. As. Rar.* t. 245; *Voigt.*

L. crenulata, *Roxb.*

Jeru kat narigam, MALEAL. | Torelaga, ... TEL.

Grows at the falls of Gokak; common on sandstone hills at Padshapur, in the forests of the Godavery, at Hardwar, Monghyr, and Assam. It is a shrub with pinnate leaves and winged petioles; its flowers are small, white, and fragrant; its fruit small, size of a pea, is an article of commerce with the Arabs, used as a tonic. Wood very hard, and worthy of attention.—*Riddell; Graham; Voigt.*

LIMONIA ALATA. *Wight, Ill.*

Kat yellu mitcha, . TAM. | Adivi nimma, . . TEL.

Tree small, but its wood is remarkably close-grained, hard, and heavy. It is pale-yellow or straw-coloured, and if procurable of adequate size would be very valuable. Is found in the Southern Ghat forests of the Bombay Presidency, above and below, but it is not a common tree.—*Drs. Wight, Gibson.*

LIMONIA ANGULATA. *W. and A.* Citrus angulata, *Willde.*, of the Moluccas and Sunderbans, with small white fragrant flowers.

LIMONIA CARNOSA. *M'Clelland.* Taushouk, BURM. The small fruit of this tree, not larger than a nut, is a favourite spice, known in the bazars of Bengal under the name of Keklani. It is only found in the Pegu district.—*M'Clelland.*

LIMONITE, Wu-meng-i, CHIN., was formerly used medicinally by the Chinese; it is a perhydrous oxide of iron.

LIMOSA, a genus of birds known as godwits, of the order of Grallatores or Waders, family

Scolopacidæ. L. melanura, the black-tailed godwit of Europe, Asia, N. Africa, Australia, is very common in India. L. rufa, bar-tailed godwit, of Europe, Asia, N. Africa, W. Asia, Nepal (*Hodgson, Gray*), Java and Timor (*Temminck*).

LIMRI or Limbadi, a Native State of Kattywar, lying between lat. 22° 30′ 15″ and 22° 37′ 15″ N., and between long. 71° 44′ 30″ and 71° 52′ 15″ E. The chief has power to try his own subjects for capital offences without the express permission of the Political Agent.—*Imp. Gaz.*

LIMULUS, a genus of crustaceans belonging to the family Xyphosuræ. The species are found in all the seas of Southern Asia and the Eastern Archipelago, as also in the Atlantic and near the coast of N. America, and sometimes come upon the sandy beaches. They do not appear to have a higher range than lat. 44°, and seem confined to the northern hemisphere. Their food consists of animal substances, and when stranded they often bury themselves in the sand as a protection against the heat of the sun, which is soon fatal to them. The Limuli undergo in their youth considerable changes of form. At first there is no sword-like or styliform tail, which in the adult Limulus equals, at least, the rest of the body in length; their abdominal buckler is rounded posteriorly, and the last pairs of false feet are not developed. Two species are common at the mouth of the river Ganges; one is distinguished (among other characters) by having a cylindrical tail.

LIMULUS LONGISPINA. *Milne-Edws.*

Un-kiie, ... CHIN. | Kabuto-gani or
Umi-do-ganie, . . ,, | helmet crab, . . JAP.

It is found on the coasts of Japan, and probably of China.

LIMULUS MOLUCCANUS. *Latreille.*

L. polyphemus, *Fabr.* Cancer Moluccanus, *Clus.*
L. gigas, *Muller.* C. perversus, *Rumph.*
L. tridentatus, *Leach.*

The Molucca crab or king crab is found in the Molucca seas. L. Moluccanus is apparently the Cancer figured by Bontinus in the fifth book of his Natural and Medical History of the East Indies, p. 83; he notices its sword-like appendages, and states that if any incautious fisherman is wounded by it, the pain is like that caused by a scorpion, adding that its flesh is not so delicate as that of the other crabs. The chapter is headed by the following verse, which refers to the painful wound inflicted by the tail:—

'Quisquis caudati sensisti tela Paguri,
Disce meo exemplo morsus vitare dolosos,
Dente leonino quos aula volubilis infert,
A tergo, et pejus retinet fors cauda venenum.'

LIMULUS ROTUNDICAUDATA. *Edwards.* Cancer marinus perversus, *Seba*, a native of the Molucca seas.

LIMULUS VIRESCENS. *Milne-Edwards.* Polyphemus heterodactylus, *Lam.*, a native of the Molucca seas. See Crustacea.

LINARIA, the toad-flax, a genus of unimportant plants, of the natural order Scrophulariaceæ, section Antirrhineæ.

L. bipartita, *Willde.*, N. Africa, cultivated in India.
L. incana, *Wall.*, Nepal.
L. juncea, *Ait.*, Europe, cultivated in India.
L. purpurea, *Mill*, Europe, cultivated in India.
L. ramosissima, *Wall.*, Bengal, Hindustan, Burma.
L. spartea, *Hoffm.*, Europe, cultivated in India.
L. triphylla, *Mill*, Europe, cultivated in India.
L. vulgaris, *Mill*, Europe, cultivated in India.

As flowering plants, they are easily raised from seed; colours mostly purple, blue, and yellow.

LINARIA CYMBALARIA. *Mill.* Karamba, SANSK., ivy-leaved snap-dragon. Given in India with sugar for the cure of diabetes.—*O'Sh.* p. 477.

LINARIA RAMOSISSIMA. *Wall.* This little yellow-flowered plant may be seen in the Sikkim valleys, crawling over every ruined wall, as the walls of old English castles are clothed with its congener, L. cymbalaria.—*Hooker, Him. Jour.* i. p. 42.

LINDEN TRIBE, the Tiliaceæ of botanists, comprise about 91 species of the East Indies, mostly with valuable economic properties, the following being the more important of them:—

Corchorus acutangulus, *Lam.*, all India, Malayana.
C. fascicularis, *Lam.*, all British India.
C. olitorius, *Linn.*, all British India, Egypt, Malayana.
C. capsularis, *Linn.*, all British India, China.
C. triloculoris, *Linn.*, all British India, Burma.
Triumfetta angulata, *Lam.*, all British India.
T. annua, *Linn.*, Bengal.
T. rotundifolia, *Lam.*, Bengal, Circars.
T. triloculoris, *Roxb.*, Bengal, Senegambia.
Grewia abutilifolia, *Juss.*, Peninsula of India.
G. Asiatica, *Linn.*, Bengal, Peninsula of India.
G. columnaris, *Sm.*, Peninsula of India, Khassya.
G. denticulata, *Wall.*, Nepal.
G. elastica, *Royle*, Himalaya.
G. floribunda, *Wall.*, Burma.
G. humilis, *Wall.*, banks of Irawadi.
G. lævigata, *Vahl.*, all British India, Malayana.
G. microcus, *Wight*, Peninsula of India.
G. microstemma, *Wall.*, banks of Irawadi.
G. occidentalis, *Linn.*, introduced.
G. oppositifolia, *Buch.*, Dehra, Kheree Pass.
G. orientalis, *Linn.*, Peninsula of India, Bengal.
G. paniculata, *Roxb.*, Penang, Malacca.
G. pilora, *Lam.*, both Peninsulas of India.
G. polygama, *Roxb.*, Bengal.
G. populifolia, *Vahl.*, Peninsula of India.
G. sapida, *Roxb.*, Bengal.
G. sclerophylla, *Roxb.*, Dehra, Kheree Pass.
G. sepiaria, *Roxb.*, Bengal.
G. tiliæfolia, *Vahl.*, Neilgherries.
G. trochodes, —? Bengal.
G. ulmifolia, *Roxb.*, Assam, China.
G. umbellata, *Roxb.*, Penang, Sumatra.
G. villosa, *Hb. Missionis*, Trichinopoly.
G. viminea, *Wall.*, Prome.
Berrya ammonilla, *Roxb.*, Ceylon, Peninsula of India.
Brownlowia elata, *Roxb.*, Chittagong.

The Tiliaceæ abound in a mucilaginous wholesome juice. The fibres of the inner bark are very tough, and are used for a variety of economical purposes. The wood is generally white, light, and tough; that of Grewia elastica is used for making bows in India. The Trincomalee-wood, used at Madras for making the Masula boats, is the produce of Berrya ammonilla. Corchorus olitorius is cultivated in Egypt for use as a pot-herb, and species of Corchorus and Triumfetta furnish valuable fibres. The wood of Brownlowia is also valuable.—*Roxb.; Royle; Voigt.*

LINDLEY, DR., an eminent English botanist, who rendered essential service to Indian botany by numerous descriptions and figures of Indian plants that had appeared in various illustrated periodicals. He laboured indefatigably in the distribution of the great Wallichian herbarium. His elementary books of botany, and his great work the Vegetable Kingdom, are indispensable both to botanical students and to proficients; whilst by the scientific direction he gave to the study and practice of horticulture, as an author and as secretary to the Horticultural Society of

London, he was the means of rendering European botanists familiar with the plants of India in a living state, to an extent that would have been thought visionary a few years before his time.—*H. et T.*

LINDSAY-BETHUNE. Sir Henry Lindsay-Bethune, an officer of the Madras Horse Artillery, who was sent to Persia with Sir John Malcolm; along with Captain Christie, of the Bombay army, and employed in training the Persian soldiery. After many years' service, he resigned his Persian appointment, and settled on his estate of Kilconquhar, in Scotland, adding Bethune to his previous surname of Lindsay. In 1834 he was again sent to Persia, where he led the advanced division from Tabreez to Teheran, and quelled a rebellion against Muhammad Shah, for which he was created a baronet. In 1836 he was a third time sent to Persia, with the rank of Major-General.

LINEAR MEASURE. In India, the distance from the elbow to the tip of the middle finger of a tall man is known as the Hat'h, HIND., or Moolum, TAM., Mora, TEL., and averages 19½ inches. It is always translated cubit, though invariably exceeding the English cubit of 18 inches by 1½ or 2 inches. In the Southern Karnatic, the adi, or length of a tall man's foot, is in use, and averages 10¼ inches. The gaz or guz of India (translated yard) is partially in use all over India, but varies in different localities from 26 to 36 inches. In the N.W. Provinces of India it had been defined by Government, for the purpose of survey, at 33 inches. The British yard and foot are, however, very extensively adopted by native artisans; and in all the public works of India, which give employment to thousands of natives, the British linear measure is invariably employed. See Measures; Weights.

LINEN.

Linum, ...	LAT.		

Most of the names for linen in use in Europe are derived from Lin, the Saxon for flax, the word flax being derived from the Greek word Pleko, to weave. Linen is also a term applied to linen cloth, to body clothing, and bed linen.—*M'Culloch's Dictionary*, p. 761.

LINGA or Lingam is the symbol or form under which the Hindu deity Siva is principally worshipped. There are various kinds of linga, to all of which worship is offered. As usually seen in British India, the lingam is a round conical stone, rising perpendicularly from an oval-shaped rim cut on a stone platform. The salunkha is the top of the lingam altar, and the pranalika is a gutter or spout for drawing off the water poured on the lingam. The lingam is the Priapus of the Romans, and the phallic emblem of the Greeks; and the oval rim-like lines sculptured or drawn around it is the yoni or bhaga, symbolical of the female form, as the lingam represents that of the male. The effigies worshipped in Tibet are known to the Chinese as Hwan-hi-Fuh, *i.e.* Buddhas of Delight.

In British India, for at least 1500 years, the lingam has been the object under which Siva is worshipped by his followers, in this instance as a regenerator, whilst the yoni or bhaga is regarded as emblematic of his sakti or consort Parvati. These two emblems represent the physiological form of worship followed by the great Saiva sect; and the worship of Siva, under the type of the lingam, is almost the only form in which that deity is now reverenced. About two-thirds of all the Hindu people, perhaps 80,000,000 of souls, worship these emblem idols. They are conspicuous everywhere, in all parts of British India from the Himalaya to Ceylon. Throughout the whole tract of the Ganges, as far as Benares, in Bengal, the temples are commonly erected in a range of six, eight, or twelve on each side of a ghat leading to the river. At Kalna is a circular group of 108 temples, erected by a raja of Bardwan. Each of the temples in Bengal consists of a single chamber, of a square form, surmounted by a pyramidal centre. The area of each is very small, the linga of black or white marble occupies the centre; the offerings are presented at the threshold. This worship is unattended by any indecent or indelicate ceremonies, and it would require a very unusual imagination to trace any resemblance in its symbols to the objects they are supposed to represent. The Vedas do not seem to inculcate this form of worship; their ritual was chiefly, if not wholly, addressed to the elements, and particularly to fire; but the lingam is undoubtedly one of the most ancient idol objects of homage adopted in India, subsequently to the ritual of the Vedas. The worship of the linga is the main purport of the Skanda, Saiva, Bramadanda, and Linga Puranas.

In the Saiva Purana and in the Nandi Upa Purana, Siva is made to say, 'I am omnipresent, but I am especially in twelve forms and places.' These are the twelve great lingas, viz. at Somnath, Pattan, Mallikarjuna, near the Krishna, Maha-Kala Omkara, all three at Ujjain; Amareswara, Vaidhya, at Deo-garh in Bengal, Ramisseram, at Dra Charam in Rajamundry, at Benares, on the banks of the Gumti, at Kedarnath in the Himalaya. That at Benares is called Viveswara, Lord of All.

The idol destroyed in A.H. 415 by Mahmud of Ghazni, is said to have been a linga. It was a block of stone of four or five cubits long, and of proportionate thickness. Sonnerat says the lingam may be looked upon as the phallus or the figure representing the virile member of Atys, the well-beloved of Cybele, and the Bacchus which they worshipped at Hieropolis. The Egyptians, Greeks, and Romans had temples dedicated to Priapus, under the same form as that of the lingam. The Israelites worshipped the same figure, and erected statues to it.

Scripture (1 Kings xv. 13) informs us that Asa, son of Rehoboam, prevented his mother Maachah from sacrificing to Priapus, whose image he broke. The Jews caused themselves to be initiated into the mysteries of Belphegor, a divinity like the lingam, whom the Moabites and Midianites worshipped on Mount Phegor; and which worship, in all appearance, they received from the Egyptians. When Judah did evil in the sight of the Lord, and built them high places, and images, and groves on every high hill and

under every tree, the object was Baal, and the pillar, the lingam, was his symbol. It was on his altar they burned incense, and sacrificed unto the calf on the fifteenth day of the month, the sacred monthly period, the amavas of the Hindus. The calf of Israel seems the bull Nandi of Bal Iswara or Iswara, the Apis of the Egyptian Osiris, and throughout all British India a sculptured stone bull, called Nandi, the vahan or conveyance of Siva, is seated with its face looking towards the lingam. According to Colonel Tod, the lingam is identical with the Arabic idol Lat or Alhat. The worship reached France, doubtless with the Romans, and the figure of the lingam is still to be seen on the lintel which surrounds the Circus at Nismes, as well as on the front of some of their ancient churches, particularly on that of the cathedral of Toulouse, and on some churches at Bourdeaux. Plutarch says that the Egyptian god Osiris was found everywhere with the Priapus exposed. Ptah-Sokari is also so represented, and images of that kind were called Ptah-Sokari Osiri.

There can be no doubt but that the god Baal, whose votaries the Hebrews frequently became, is identical with the lingam, and the god styled Chiun in Amos v. is Siva, whose name the races dwelling in Hindustan and along the valley of the Indus pronounce Seb, Seo, Sivin, and Chivin. Yet there is nothing to fix the date at which the worship of Siva was brought to India, nor by whom brought; but the wars between the Buddhists and the linga worshippers of the Dekhan extended up to the 11th century of the Christian era, and formed a series of important events in Hindu history.

The worship of Vishnu seems to have come from Tartary, and that of Siva about the beginning of the Christian era, from the basin of the Lower Indus through Rajputana, and to have displaced the nature-worship of the Vedas. But which race brought the lingam-worship is not known. At Ujjain it was particularly celebrated about the period of the Muhammadan invasion, but probably long before, and one particular linga was named Vinda-swerna, from Vindu, drop, Swerna, gold. At present there is a four-faced lingam, sometimes three-faced or tri-murti; and tri-lingam is said to be the source of the name Telinga and Telingana, the country extending from north of Madras to Ganjam, and west to Bellary and Beder. The four-faced lingam is called the Choumurti Mahadeva, such as may be seen in the caves of Ellora, and of common occurrence in other districts; and a famous shrine of ek-linga or the one lingam is situated in a defile about six miles north of Udaipur, and has hills towering around it on all sides.

This ek-lingam, or one phallus, is a single cylindrical or conical stone; but there are others, termed Seheslinga and Kot-Iswara, with a thousand or a million of phallic representatives, all minutely carved on the monolithic emblem, having then much resemblance to the symbol of Bacchus, whose orgies both in Egypt and Greece are the counterpart of those of the Hindu Bagh-es, so called from being clad in a tiger or leopard's hide, as Bacchus had that of the panther for his covering. There is a very ancient temple to Kot-Iswara at the embouchure of the eastern arm of the Indus; and there are many to Seheslinga in the peninsula of Saurashtra. At the ancient Dholpur, now called Barolli, the shrine is dedicated to Gut-Iswara Mahadeva, with a lingam revolving in the yoni, the wonder of those who venture amongst its almost impervious and unfrequented woods to worship. Very few Saiva followers of the south of India ever realize the lingam and the yoni as representations of the organs of the body, and when made to apprehend the fact they feel overpowered with shame that they should be worshipping such symbols.

LINGA-BALJA-VADU, members of the Lingaet sect who follow the Jangam religion, natives of Telingana. They seem to be identical with the Linga-banjigya, or Linga-banjaga, or Linga-banijaga. Linga-banajiga, a merchant or trader of the Lingaet sect. Lingadhari, sectarian Hindus who wear the linga.

LINGAET, Jangam, Lingadhari.

Banjigya, . . .	CAN.	Wani, ...	MAHR.
Banjaga, . . .	,,	Linga-balja-vadoo, .	TEL.

The Lingaet, a Hindu sect in Southern India, also called Lingadhara, Linghawant, Lingamat, and Jangama. They are Vira Saiva, whose sole object of worship is the lingam, a model of which in stone or gold (Ezekiel xvi. 17) they carry on their arms, or suspend from their necks in caskets of silver or gold, the workmanship of some of them being of great beauty. They are sectarian Saivavi, for their creed does not recognise castes nor acknowledge Brahmans. Their customs and belief were described about the year 1833 by Mr. C. P. Brown, of the Madras Civil Service, in the Madras Literary Journal. They are very numerous amongst the Canarese people from Bangalore, northwards to Panderpur on the Kistna, and towards Kalliani fort, where the sect was originated in the 12th century by a Brahman named Basava, and north to Berar. They are largely engaged in agriculture, and as shopkeepers. They are rigid in external ceremonial, but they have loose ideas in morals, probably resulting from what Wilson styles their belief in the equality of women. The sect are sometimes styled Jangam, from jangam, the title of their priesthood. They do not reverence Brahmans nor acknowledge the Vedas, their principles do not recognise caste (though they have established one of avocation), and they deny polytheism and the inferiority of women. Besides the trade divisions, there are also race, sectarian, or social distinctions amongst them. The Aradhya, for instance, are of Brahman birth, and though some Aradhya are well versed in Sanskrit, they are not held in esteem by the other Lingaet, who are of Sudra birth. The Samanya or ordinary, the Visesha or extraordinary, and the Samanya Bhakta and Visesha Bhakta, are other sects. The Samanya Bhakta differ from the ordinary Samanya Lingaet only in retaining caste distinctions; the Visesha Bhakta are puritans, have no caste distinctions, and are bound by a vow to honour their guru. Their religious book is the Basava Purana, written in the Canarese tongue, in which language, as also in the Telugu, they have other writings. Lingaet women, in widowhood, re-marry by inferior ceremonies. In such case the widow returns to her parents' home, and is there remarried. The ceremonies are few, and the bridegroom gives small sums, of Rs. 5 or 10, with two cloths. A village head, who will expend

about Rs. 200 for his spinster marriage, will expend about Rs. 5 to 100 for his marriage with a widow. The lingam casket of the Lingaet is called Ayigalu. Although authorized by their principles, without castes, they are undoubtedly the most bigoted of all the Hindu sects. They are all engaged in civil avocations. Perhaps in the Madras native army, 20,000 strong, there are not one hundred soldiers of this sect. They are vegetarians, and will not sell, and will not even buy or bring, a creature that is to be killed and used as food. Their dislike to Brahmans takes many shapes; at a village near Kaladgi, three miles distant from the Gutparba river, they would not dig a well in their village, lest a Brahman should be attracted to reside, and their wives had to bring all the drinking water from the river bed.

The three words, Om! Guru, Linga, Jangam, comprise the creed of the sect, and evidently were intended to disavow every part of the Brahmanical priestly tyranny. This mystic phrase is thus expounded. The image (lingam) is the deity; the jangam is the wearer or fellow-worshippers; and he who breathes the sacred spell in the ear is the guru.

The men of the Lingaet sect have a small casket of gold or silver enclosing a lingam of stone or metal, and suspended from their necks, or fastened to the left arm; this form is known as the Jangama lingam, meaning the moveable or locomotive. That in the temples is called the Sthavara lingam, meaning the standing or stable lingam.

Lingam-worship was conducted in Phœnicia (the Canaan of Scripture) in its worst aspect. According to Lucian (De Syria Dea), after the return of Bacchus, he placed the two colossal phalli, each 300 fathoms high? in the vestibule of the great Syrian temple. In the great Bacchic pomp, celebrated by Ptolemy of Alexandria, we read (Athenæus, lib. v.) of a golden phallus 120 cubits high.

The Bana-lingam or Ban-lingam, and the Chakram-lingam of India, are stones formed by attrition in a river bed into a lingam-like form; the saligram is a fossil shell, the interior parts of which resemble a lingam. The lingam of the temples of India is almost invariably of stone of some kind, and is imbedded in the yoni, and varies from a little projecting knob to a considerable cylinder of two feet high and a foot in diameter. The figure inside the temple is often of copper or silver. The Ada-sarpa, or old serpent, in the form of a single cobra, or three, five, or nine headed cobra, is often figured bending over the lingam, with the figure of a bull Nandi, or Basava, the vahan of Siva, sitting before it.

At the Hogena Kallu, or smoke rock, where the Cauvery turns southwards on its way to the rice-fields of Tanjore, 10 or 12 huge lingam stones are arranged in a line, each in a separate cell. At Munoli, Parasgad, in the Belgaum collectorate, are a group of temples of Pancha-linga Deva. At the present day, in the south of India, the principal Siva temples are at Conjeveram (Kanchi), at Jambuk Eswar, near Trichinopoly, Tirunamalle, Callestry (Kalahistri), and at Chadambaram. The Saiva Hindu, however, is essentially polytheist, worships at every temple, and reverences all Brahmans.—*Cole. Myth. Hind.* p. 175; *Wilson's Gloss.*; *Latham*; *Lubbock's Origin of Civil.* p. 236; *Burton's Mecca*, i. p. 134; *Sonnerat's Voyage*, p. 52; *Tod's Rajasthan*, i. pp. 219-514, ii. p. 658; *Hind. Theat.* ii. p. 97; *Cat. Ex.*, 1862; *C. P. Brown in Madras Lit. Soc. Journal.* See Jangam.

LINGA PURANA, a mystical and spiritual work of 11,000 stanzas, written about the 8th or 9th century.

LING CHEE. Chin. The name for the punishment inflicted on great criminals in China. The criminal is bound to a cross, and is cut into 120, or 72, or 36, or 24 pieces.—*Gray*, p. 59.

LINGI. Sansk. One who wears the outward emblems of the Lingaet order or sect to which he belongs; but it is more usually applied to signify a pretender, a hypocrite, or one who assumes the external emblems of a caste or order to which he does not belong, or of which he does not perform the duties; the bearer of a linga.—*Wilson.*

LINGOA WOOD, or Amboyna wood, is said to be from the Pterospermum Indicum; it is very durable, and takes a high polish. It was imported into Britain from the Moluccas in considerable quantities at the time when the latter were British possessions; it may be had in any quantity. Very large circular slabs are obtained from the lower part of the tree, by taking advantage of the spurs or lateral growths; they are sometimes as large as nine feet in diameter. A circular disc of wood thus obtained, nearly seven feet in diameter, as well as some other specimens, were exhibited in 1851 by Messrs. Almeida of Singapore, and received a prize medal from the jury. The importation ceased with the cessation of British intercourse with those islands. The wood is abundant at Ceram, New Guinea, and throughout the Molucca seas. It is prepared in large circular slabs by the natives of these islands, and can be obtained in almost any quantity if the precaution be taken of ordering it during the previous trading season. The Kayu-boka or Kyaboca wood of commerce is the knarled excrescence of this tree; slabs can be had six or seven feet in diameter, by taking advantage of the spurs which project from the base of the trunk, as the tree itself has not sufficient diameter to furnish such wide slabs. They are occasionally met with as large as nine feet in diameter, but the usual size is from four to six feet. This wood is brought to Singapore by the eastern traders from Ceram, Aru, and New Guinea, and is sold at Singapore by weight. It is much esteemed as a fancy wood, both in Europe and China, but the demand in Europe seems to have decreased of late years. See Amboyna Wood; Kyaboca Wood; Pterospermum Indicum.

LINSCHOTEN. Jan Hugo van Linschoten travelled in India from 1583 to 1589. His travels were described in a book entitled Voyages into the East and West Indies. It gives information of the early struggles of the Dutch with the Portuguese.

LINSEED, flax seed of Linum usitatissimum.

Buzruk,	Arab.	Tukhm-i-katan,	Pers.

Linseme, . . .		Bezir-tukhma,	Turk.
Bidgierammi, .	Maleal.		

In India the seed is the chief product of the

flax plant, and is principally used in the manufacture of linseed oil. The first export from Calcutta was made by Mr. Hodgkinson in 1832, and amounted to only ten bushels, but the increase has been rapidly progressive. In 1860-61 the exports from India were 550,700 cwt., value Rs. 1,25,57,790; and in 1882-83 there were 6,724,514 cwt., value Rs. 3,52,84,813; in 1883-84, 8,543,766 cwt., value Rs. 4,58,40,234.

This crop in India is sown thickly in the linseed-producing provinces. In the poorer western districts it is often sown as an edging crop to wheat and other grain, because it is not eaten by cattle in the green state. The reason for its being sown in both long and cross drills, is that the plant, being weakly, requires much sowing to guard it against the action of the weather. It does not seem improbable that the spurious white 'atees' roots of the bazar are occasionally obtained from this or from the Gula-shupre, or Linum trigynum, indigenous in the Lower Provinces. The oilcake which remains after the oil is expressed from linseed, contains the albuminous part of the seed, and is used for fattening cattle. The oil is contained in the kernel of the seeds, and may be either cold drawn, or, as is usual, obtained after the seeds have been subjected to a heat of 200°. The oil obtained by the former process is paler, with less colour and taste, than where heat has been employed. The seeds of different countries yield different proportions of oil. It is one of the cheapest fixed oils; is a drying oil, and is used in the manufacture of paints, varnishes, and printing inks. Where the linseed oil of India is not possessed of the full drying properties of the oil prepared in Europe, there is no doubt this is owing to the Indian linseed being expressed before the mustard seed has been separated, with which it is commonly mixed, in consequence of the two plants being often grown together. By boiling with litharge, its drying properties are much improved. When used as the vehicle for the harder resins, it should be pure, pale, well clarified, and combined with the resin at as low a temperature as possible. Unless these conditions be attended to, a dark varnish is produced, which becomes darker by age. This oil gives softness and toughness to the resin, but produces a slowly drying varnish. It is clarified for the best varnishes by being gradually raised to near the boiling point in a copper pan. It is used also in printers' ink.—*M'Culloch; Smith.*

LINUM USITATISSIMUM. *Linn.* Flax was cultivated in Egypt in very early periods. It is extensively grown in many parts of British India, and produces abundance of seed for oil, but its fibre is inferior. European linseed, on the other hand, is better for fibre than for oil. By proper treatment, however, good fibre can be got from plants raised in India. In N. India it is cultivated as a mixed crop, with grain; it is sown in October, and never irrigated. Every 5 seers of seed yield 1¼ seers of oil by the native process of pressing. Flax fibre is prepared by steeping, stripping off the bark, and then beating, so as to separate the fibres. Linen cloth and cambric are prepared from it, the latter differing from the former in its fineness, and in being obtained from plants which are more thickly sown. Linen clothing is cool, being a better conductor of heat than cotton; but when the skin is covered with perspiration, or exposed to cold, it feels cold and chilly. The fibre of flax is a straight tube-like cylinder, and is therefore less irritating than the twisted fibre of cotton. Hence lint, which is prepared by scraping linen, is preferable to cotton for surgical dressings. Tow consists of the short fibres of the flax which have been removed in the process of hackling. In India the seeds are officinal with natives, being given in infusion for asthma. The seeds, after having had the oil pressed from them, are in the form of a flat mass, commonly called oilcake.—*M. E. J. R.; Powell; Roxb.*

LION, Felis leo, *Linn.*

Löwe, ... GER.	Lione, Leone, ... IT.
Sher, . . HIND., PERS.	Leon, ... SP.
Untia-bag, . . . HIND.	Arslan, ... TURK.

The lion is generally recognised to be of only one species, with the lion of Senegal, the lion of Barbary, the lion of Persia, the lion of Gujerat, Runn of Cutch, and Kattyawar, and the lion of Gwalior and Hurriana as varieties. The lion is the desert king, as the tiger is the monarch of the jungles. It was, till early in the 19th century, tolerably plentiful at Gwalior, and also about Goonah, and lions have been killed 20 miles from Saugor, but wretched, mangy-looking things, the male generally nearly maneless, and usually inferior in size and appearance to its African brothers. Tigers are said to avoid the lions, and to desert those jungles in which any roving lion may make its appearance. In the Kattyawar district, which the lions most affected, tigers were said to be unknown, though panthers are common. It has been also supposed that the lion avoids the tiger; and in the Central Provinces, since tigers have been shot off, lions began to appear in the northernmost parts. The lion is very rare in Afghanistan, but has been heard of in the hilly country about Kábul, and there they are small and weak compared with the African lion. The lion is found as far as Tashkend, in a northerly and easterly direction. In 1837, Major Brown ('Gunga' of the Bengal Sporting Magazine) remarked that 'only 23 years elapsed from the occupation of the Hurriana country, when the lions, which were at one time in the dry and sandy deserts of the Hurriana, became extinct south of the Cuggar. Having no inaccessible dens to retire to during the hot weather, the lions, from necessity, took up their abode where water could be found; and as places of this description were rare, and generally near villages, their retreat was easily beaten up, and their entire destruction speedily effected. We have the evidence of Jahangir and the Rev. Edward Terry, that in their days the province of Malwa abounded with lions. Jahangir records that he had killed several, and Mr. Terry mentions his having been frequently terrified by them in his travels through the vast woods and wilderness of the country. Bernier had frequent opportunities of witnessing the chase of this animal, an amusement which was reserved for the emperor Aurangzeb alone. Captain Postans observed that while Kattyawar abounded with the tiger and lion species, Cutch, the neighbouring province, was free from them. The Times of India related how Lieut. Heyland, 56th Regiment, succeeded in killing 11 tigers, 2 lions, several cheetas, bears, and wild jungle boars; and while stationed at Dessa, he shot three lions in one year. One of them, which measured some nine feet in

length, had severely wounded Lieutenant Clarke of the R.A. some time in August. When the 3d Bombay Cavalry was stationed at Rajkote in Kattyawar (in 1832-33), Captains Reeves, Berry, and others of that regiment used to shoot lions on horseback. Major Fulljames turned out a lion from the Bhet (a sort of island in the Runn of Cutch), opposite the town of Junjuwara, in 1835, and followed it up to a place called Khura Suttapur, on the southern border of the Runn, where he shot it; and Colonel Le Grand Jacob, when First Assistant to the Political Agent in Kattyawar, killed a lion and lioness in one day in the Geer jungle valley, in the southern part of Kattyawar.

In the year 1862, a correspondent in the Times of India, writing of Kattyawar, says lions existed then in certain portions of this province, and in Gujerat also, on the range of hills near Deesa. The figure of a lion is on the top of each of the three tall pillars or columns at Bettia in North Berar. A lion was shot by Mr. Arratoon, a little before the appearance of the Asiatic lion in the Barah jungles. Colonel Clifton Benbow, of the Bombay Army, in his youth a great hunter of large game, with his companions hunted the lion in the Runn, by galloping at them and firing, but continuing to gallop on without pausing to see the effect of the shot,—each of the party acting similarly until the lion fell.

One of the largest lions seen in England was caught, when very young, in Hurriana, by Gen. Watson, and was presented to George IV. The Sporting Review, in 1845, mentions the lion as an inhabitant of the territories south of Gwalior. About 1848 there was in Calcutta a lioness, more than two-thirds grown, which had been captured as a small cub in Sind. There were also then in the London Zoological Gardens a young lion and lioness from Gujerat.

Heber mentions (ii. p. 149) having been informed in the year 1825, that lions were in considerable numbers in the Saharunpur and Ludhiana districts, and that they had been killed in the northern parts of Rohilkhand, and in the neighbourhood of Moradabad and Rampur. One was killed in the Sagar district in 1851; and some years later, another only a few miles from the Jubbulpur and Allahabad railway.

In the Pro. Beng. As. Soc., Dr. King adduces several instances of the lion (not the maneless variety of Gujerat) having been recently shot by sportsmen in Goonah in Central India.

In the report of the great Trigonometrical Survey for 1871-72, Captain Trotter, R.E., gives an account of the lion of Gujerat. It is not maneless, although the mane is considerably shorter and of lighter colour than that of the African species. It is called the Untia-bag, camel-coloured tiger, by the natives. The male is rather darker than the female, and is a little heavier about the head and shoulders, the female being very much the same shape as the tiger. There are no difficulties to the lion crossing to the Runn from the south of Persia. And it is supposed to be the lion that visits India, from which the figure was taken that is used in the royal arms of England.

The lion is frequently met with on the banks of the Tigris below Baghdad, rarely above. On the Euphrates it has been seen, almost as high as Bir. In the Sinjar, and on the banks of the Khabour, they are frequently caught by the Arabs. They abound in Khuzistan, the ancient Susiana, three or four together, and are hunted by the chiefs of the tribes inhabiting that province. In 1861, Captain Balfour, of the Indian Navy, in one day, at daybreak, saw a group of four lions. About noon, from a 'tell' close to the river, on the plain below, ten were counted; and in the evening, some twenty miles up the Tigris, three were seen.

Mr. Layard was given a tame lion by Osman Pasha, commandant of Hillah; and Sir Henry Rawlinson had a tame lion for some years at Baghdad, which was much attached to him, and ultimately died at his feet, not suffering the attendants to remove it.

The maneless lions, by the people of Babylonia, are called momin, or true believers; the maned lions they call gabar; the former they say will spare a Musalman if he pray, the latter never. Sir Gardner Wilkinson says the same of the green and the black crocodile of Egypt.

The Hindus, in their fifth avatar of Vishnu, recognise that deity as Nara Sinha (Nara, a man, and Sinha, a lion), a man-lion.—*Madras Mail*, May 12, 1873; *G. Rawlinson*, i. p. 40.

LIP-LAP, in Netherlands India, a half-caste, a child of a European and a native.

LI PU, the six bureaux of administration in China.

LIQUEURS are alcoholic fluids variously flavoured and sweetened. They are called Shrab, and are largely made in all parts of India, from arrack, and spirit of aniseed, roses, saffron, musk citron, or simply sugar.

LIQUIDAMBAR.

Mia-sailah, . . . ARAB.	Liquid storax, . . ENG.
Nan-tu-yok, Tu-yok, BURM.	Rasamalay, . . MALAY.

The name is derived from Liquidum, fluid, and Ambar, the Arabic name of amber. The liquidambar of commerce is a product of three plants. L. styraciflua, a large, fine tree, is the species found in Mexico and the United States, in the latter of which it is called sweet gum, and the fragrant liquid exudes, though not copiously, from incisions in the stem. This is called liquidambar, oil of amber, and copalm balsam, and in this form has a pleasant balsamic odour, and an aromatic bitter taste. This becoming dry, forms what is called soft or white liquidambar, which resembles very thick turpentine, has a feebler odour than the liquid balsam, and contains less volatile oil, but more benzoic acid. L. orientale is a native of Cyprus, where it is called Xylon Effendi (the wood of our Lord): it produces an excellent white turpentine, especially by incisions in the bark. It is also said to be produced on the island of Cabross, at the upper end of the Red Sea, near Cadess, which is three days' journey from Suez. The product of the L. altingia is said to be mixed with the substance obtained by boiling the branches of Styrax officinale, or acting upon them with oil, spirit, or naphtha. The subject is interesting as connected with ancient commerce, inasmuch as old writers mention a liquid with the solid storax, the mia-sailah and mia-yahseh of the Arabs. L. cerasifolia of Wallich (Sedgwickia cerasifolia of Griffiths) grows in Assam, but it is not known if it yields any balsam.

All these balsams are obtained either by spontaneous exudation, by incision into the bark, or decoction of the bark, leaves, and branches.—

Eng. Cyc.; O'Sh.; Dr. Mason in Beng. As. Soc. Jour., 1848; *Hogg, Veg. King.*

LIQUIDAMBAR ALTINGIA. *Blume.*

Nan-tar-ok, . . . BURM. Rose maloes. . . ENG.
Nan-tu-yok, . . . ,, Liquid storax tree,
Liquid amber tree, ENG. Rasamala, JAV., MALAY.

A superb tree, native of the forests of Java, at elevations of 2000 and 3000 feet above the level of the sea, and indigenous on the Tenasserim coast, in some parts of which it is quite abundant, and a considerable stream in Mergui derives its name from this tree, in consequence of its growing so thickly on its banks. It grows also in N. Guinea, rising to 200 feet. The bark of L. altingia of Tenasserim and Java is bitter, hot, and aromatic, and when wounded affords a resinous substance, which is employed to mix with balsam of Peru; and a similar substance is obtained from L. orientale of the Levant islands, L. cerasifolia, and L. styraciflua of Mexico. The balsam of L. altingia, with that of L. orientalis of Rhodes, furnish the rasamala or rose maloes of commerce. This is shipped from Rhodes to Alexandria. The latter is said to follow down the Red Sea to Aden, and to the Persian Gulf and Bombay, whence it is sent to China, Asia Minor, Arabia, Surat, Annam, and Sumatra, and seems to have been shipped to places from which it was formerly sent. The balsam called liquid storax, rasamala or rose maloes, is a stimulating expectorant, influencing the mucous membranes, especially that which lines the air passages.—*Dr. Mason in Ben. As. Soc. Jour.*, 1848; *O'Sh.; Hogg, Veg. King; Smith.*

LIQUIDAMBAR CERASIFOLIA. *Griff.*

Sedgwickia cerasifolia, *Griff.*, *Wall.*

Grows in Assam, but it is not known if it yields any balsam.—*O'Sh.; Hogg, Veg. King.*

LIQUIDAMBAR FORMOSANA. *Hance.* L. Formosana, L. altingia (Altingia Sinensis, *Olic.*), and the maple-leaved L. Maximowiczii, all grow in China, where they are called Fung-shu. They are large timber trees, with gnarled branches and rustling leaves, and the Chinese believe that ghosts hide in their branches. The chi-ling or pigs' tubers are the corky excrescences on these trees. A silk-producing insect is reared on the L. Formosana.—*Hance; Smith, Mat. Med.*

LIQUIDAMBAR ORIENTALE. *Von Mueller.* L. imberbe, *Aiton*, a tree of Asia Minor, yields liquid storax, which is vanilla scented, containing much styrol and styracin. It keeps moths from woollen clothing, and is used in perfumery. Liquidambar orientalis is a small tree, a native of Cyprus and other parts of the east. It was introduced into the Jardin des Plantes, Paris, from Smyrna, and is said to occur along the Red Sea. Dr. Pococke, as quoted by Dr. Lindley, states that it is called Xylon Effendi (the wood of our Lord) in Cyprus, where it produces an excellent white turpentine, especially by incisions made in the bark. Liquid storax is said to be obtained by boiling the bark.—*Von Mueller.*

LIQUIDAMBAR STYRACIFLUA. *L.*

Usteruck, . . ARAB. Liquidambar, . . ENG.
Meati-lubani, Rasamala, . . MALAY.
Salajit, Meah, Cotter mija, . . . TURK.
Sillarus, . . . Kara-ghyunluk-yaghy, ,,
Copalm balsam, ENG.

The sweet gum of North America, obtained from the bark of this tree, is at first liquid, transparent, yellow, rather consistent; its odour is strong, and resembles that of liquid storax; taste very aromatic and acrid. By long keeping it dries into a deep brown resin. It contains benzoic acid, and has a benzoin odour.

LIQUORICE JUICE, Spanish juice.

Arak sus, . . . ARAB. Regaliz, ... SP.
Jetimad-ka-ras, . HIND. Ati madhuramu, TEL.
Sugo di regolizia, . IT. Yashti madhukamu,
Succus liquoritiæ, . LAT.

This is the inspissated juice of the root of the plant Glycirrhiza glabra. The juice is boiled to a consistency for rolling into paste, when it is wrapped in bay leaves. It costs about £5 the cwt. Liquorice lozenges are made with extract of liquorice, or of Gunch, gum-arabic, each six ounces, pure sugar one pound. Dissolve in boiling water, and concentrate to a proper consistence. Use, — demulcent in irritating coughs. — *Beng. Phar.* p. 435; *Poole; M'Culloch.*

In Europe, the liquorice roots are obtained solely from the Glycirrhiza glabra, a perennial plant, a native of the south of Europe and Persia, but cultivated in some parts of England. It is grown in large quantities about Peshawur, dug up, dried, and cut into pieces, and used by the natives as a tonic in fever, in doses of sixty grains, also as a demulcent in coughs, and in all diseases consequent upon an undue accumulation of phlegm or bile. The roots are very long, about an inch thick, flexible, fibrous, of a brown colour, and, when fresh, juicy; taste sweet. They are apt to spoil, and it is necessary to pack them in sand, when not required for immediate use. They are an article of the Materia Medica, particularly in coughs, colds, etc., and are also in demand by brewers and druggists. Throughout Southern India it is the roots of Abrus precatorius that are sold for liquorice. They are a perfect substitute, and are sold in the bazar as a medicine. In China, the roots of Glycirrhiza echinata and Gl. glabra are used.—*Cat. Ex.; Faulkner; Mason; O'Sh.*

LIRIODENDRON, the tulip tree, one of the Magnoliaceæ, is highly ornamental, growing to a large size, and well adapted for a plantation or lining an avenue; the flowers are large and of a yellow and red colour, they appear in the rains; it is easily raised from seed. The bark is a strong tonic, and is said to be equal to the Peruvian. The wood is fine-grained and smooth, used by coachmakers and carpenters. Roxburgh describes L. grandiflorum and L. tulipiferum.—*Riddell; Gamble.*

LISHARI, a section of the Gurchani tribe. The Lishari is a more degraded creature even than the Gurchani. In 1850, one raid was

reported against them; in 1852, one; in 1853, four; and in 1854, four. These raids were not, however, successful. In front of the Gurchani and Lishari Hills, and between Harrand and Mithunkote, are plains inhabited by the Dreshuk British subjects.

LI SHE CHAN, sometimes called Li Poon Woo, a Chinese author of botanical and medical works.

LITCH. BALUCH. Proprietors' dues, corresponding to jaghir. Hāq Litch paid to the proprietors generally $\frac{1}{6}$th share of produce. Pani Litch pay Abiana for the water of wells on another estate.

LITCHI. CHIN. Fruit of Nephelium litchi, Euphorium litchi, *Camb.*, common in China, but the tree is also grown in Tenasserim, Bengal, Travancore, and the island of Mauritius, a tree belonging to the natural order Sapindaceæ. The eatable part is a pulpy flesh, which covers a stone enclosed in a hard, dry, tessclated, prickly pericarp. The Rambutan, Nephelium lappaceum, and the Long-yen or Longan, Nephelium longanum, are yielded by species of the same genus. The Chinese cultivate many varieties of each. The litchi fruit, called by the Chinese Tanli, is imported from China into England in chests, and can be had in Liverpool at about 6d. per dozen. The litchi looks like a strawberry in size and shape; the tough, rough, red skin encloses a sweet watery pulp of a whitish colour surrounding a hard seed. The whampe, lichi, longan or dragon's eyes, and loquat, Eriobotrya Japonica, are four indigenous fruits at Canton. The whampe resembles a grape in size and a gooseberry in taste.—*Hogg, Veg. Kingd.; Williams' Middle Kingdom; Mason, Tenasserim; Smith.*

LITERATURE. From the most ancient times there have been races and nations in the south and east of Asia who have been famed for their literary attainments. The Akkadians were pre-eminently a literary people; their conception of chaos was that of a time when as yet no books were written, and in their legend of creation the art of writing was seemingly to be traced back to the very beginning of mankind. They were the inventors of the cuneiform system of writing. They left behind them a considerable amount of literature, which was highly prized by their Semitic successors, the Babylonians and Assyrians. Accordingly, a large portion of the tablets which have been found at Nineveh consist of interlinear or parallel translations from Akkadian into Assyrian, as well as of reading books, dictionaries, and grammars, in which the Akkadian original is placed by the side of its Assyrian equivalent. In the Akkadian mythology, there was a tree of life, of Irmin, the personified Euphrates, and of Hea, the snake-god of the tree of life.

The Hittite, another powerful race, carried their arms, their arts, and their religion to the shores of the Ægean. At one time their empire stretched from the Euphrates to the Dardanelles, and they held mastery in Syria in the era of the Judges and earlier kings of Israel. To the Phœnicians and the Hittites the Greeks owed their alphabet and their early civilisation, and the alphabet as used in Europe came through the Greeks and Romans. The Hittites were defeated by the Egyptian king Rameses II., about B.C. 1340; their last king, Pirsiris, was defeated and slain by the Assyrians B.C. 717, and their writing character was displaced by the Assyrian cuneiform.

From another race of that south Asian region there has been handed down a sacred book, the Zendavesta. It is a compilation, for liturgical purposes, from various older books which have been lost. It is composed of eight pieces or books, entitled Yaçna, Visporatu or Visparad, Vendidad, Yashts, Nyayish, Afrigans, Gahs, Sirozah. It is written in the old form of Aryan speech called the Zend, a language closely cognate to the Sanskrit of the Vedas, and to Achæmenian Persian, or the Persian of the cuneiform inscriptions. The original texts of the Zendavesta are supposed to have been written in Media by the priests of Ragha and Atropatene, and to exhibit the ideas of the sacerdotal class under the Achæmenian dynasty.

The taste for literary pursuits continues to be evinced by the Iranian, Turanian, and Semitic races of Central Asia and Arabia. In Central Asia most of the celebrities in the field of religious knowledge and belles-lettres have been Tajaks. At the present day the most conspicuous of the Mawla and Ishan are Tajaks, and the chief men of the Bokhara and Khiva courts are Tajak, or, as the Turks style the race, Sart. In Central Asia, the warrior, the shepherd, the priest, and the laymen, youth and old age, equally affect poetry and reciting of tales. The literature of the Muhammadans or settled nations brought from the S. is filled with exotic mataphor and illustration. In the three khanates, the Mawlas and Ishans have written much on religious subjects, but its mystical allusions are beyond the reach of the people. The Uzbak, the Turkoman, and Kirghiz esteem music as their highest pleasure, and often break out in song, singing soft minor airs. The Uzbak poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales, and relate to heroic deeds, similar to the romances of Europe. The Arab writings up to the time of Mahomed consisted of poetry and romances, and their learned men were accustomed to compete with one another, and invite criticism by suspending their poems in the temple of Mecca. These were known as the Muallakāt or suspended, and Mahomed with some chapters of the Koran followed this popular course.

The Muhammadans of Arab, Turk, and Iranian descent have followed this predilection, and to the present day throughout British India every educated Muhammadan occupies his leisure in writing poetry, works on grammar or history.

In the middle of the 19th century Sir Henry Miers Elliot availed himself of this trait, and undertook to gather the writings of all the Muhammadan authors on India, with the object of compiling a history of India, as told by its own historians. He collected from all sources, and the Editor sent him catalogues of the books available in the libraries of the Nawab of the Carnatic and the Dewan Mudar-ul-Umra. He did not live to complete his project, but the task was entrusted to Professor John Dowson, who edited eight volumes of extracts from 17 early Arab geographers and historians of Sind and India, and 154 historians of India. Many of these authors are known to the people of Europe and

Asia,—Abul Fazl, Abu Talib, Biladuri, Biruni, Ibn Haukal, Idrisi, Istakhri, Kazwini, Khafi Khan, Khondamir, Khurdadba, Masudi, Mir Khond, with the royal authors Timur, Baber, Firoz Shah, Aurangzeb, and Jahangir.

Another large class of the literature of Southern Asia relates exclusively to India proper, and emanated from the Brahmanical branch of the Aryans which penetrated into India from the north-west. They have had in use a spoken language or Prakrita bhasha, and a Sanskrita bhasha or perfected speech. Their Sanskrit literature was almost entirely in sloka or verse. Astronomy, mathematics, medicine, surgery, music, the drama, architecture, and painting engaged their attention, as also law as in the Grihya Sutras and the code of Menu. To the Brahmanical race India is indebted for the four Vedas,—Rig, Sama, Yajur, and Atharva Veda; also the Brahmanas supplementary to the Vedas; likewise the Sutras or sacred traditions, and two great epics, the Mahabhārata and Ramāyana. India is also indebted to the Brahman race for a system of theology, for six darsana or schools of philosophy, known as the Sankhya, the Yoga, two Vedanta schools, the Nyāya and the Vaiseshika; and the science of language in grammars and dictionaries has received the attention of their ablest grammarians.

The reverence of the Brahmanic race for learning is evinced by their recognising in Saraswati a goddess of learning, and in Ganesh or Ganapati a god of wisdom. In all their letters and all their books they commence with an invocation to Ganesh, and he is propitiated at the beginning of every undertaking.

The early Sanskrit literature comprises the Vedas and the works collected in the Buddhist Tripitaka. The Vedas are religious books of the Hindus, of which the Rig Veda, Yajur Veda, Sama Veda, and Atharva Veda are deemed inspired, and regarded as canonical. But the term is also applied to scientific works, as Ayur Veda, the art of medicine, science of life; Dhanur Veda, the art of war (the bow); Gandharba Veda, the science of music. Besides these are several series of ancient books, the Upa Veda, the Upanishad, etc. The latter writings of this race are to be seen in the Bhagavat Gita, the dramas of Kalidasa, such as Sakuntala and Urvasi, a few episodes from the Mahabharata and Rāmayana, such as those of Nala and Yajnadatta badha, the Hitopadesa, and the sentences of Bhartrihari.

The Mahabharata and the Ramayana books are the national treasuries of the traditions and legends of the Hindus, and contain all that has been preserved of Vedic ideas and institutions, as well as the expression of that later Brahmanical system, which forms the basis of the existing religion and civilisation of the masses, ramifying more or less throughout the entire body of Hindu literature. The Mahabharata is the source of all the Puranas. It is the Purana properly so called. The Bharata war relates to the period of Aryan invasion, when the invaders had reached the upper courses of the Jumna and Ganges. The Ramayana refers to a period when an Aryan empire had been established in Oudh, and when Vedic rites and institutions had been established in the very heart of Hindustan. There are three works bearing this name, the first edition in Sanskrit, by Valmiki; a later edition in Hindi, by Tulsi Das; and a third in Tamil, by Peruntevanar.

The Pancha Tantra (five chapters) is one of the oldest collections of Indian fables. It can be traced back to the 6th century A.D. The Hitopadesa, founded upon it, is still more celebrated. Among the well-known books may be mentioned twenty-five stories of a demon, thirty-two tales of the animated images supporting the throne of Vikramaditya, the tales of a parrot, etc. Each fable is designed to illustrate and exemplify some reflection on worldly vicissitudes, or some precept for human conduct; and the illustration is as frequently drawn from the intercourse of human beings, as from an imaginary adventure of animal existence; and this mixture is in some degree a peculiarity of the Hindu plan of fabling or story-telling. Again, these stories are not aggregated promiscuously, and without method, but they are strung together upon some one connected thread, and arranged in the framework of some continuous narrative, out of which they successively spring,—a sort of machinery to which there is no parallel in the fable literature of Greece or Rome. As far, therefore, as regards the objects for which the apologues or stories are designed, and the mode in which they are brought together, this branch of literary composition may be considered as original with the Hindus; and it was the form of their fabling that served as a model, whilst at the same time the subjects of their tales afforded materials, to the story-tellers of Europe in the Middle Ages. That the fables of Pilpay were of Indian extraction was known to the orientalists of Europe in the latter part of the 18th century.

The Vrihat-Katha contains the Sanskrit form of the Beast Stories, and the Hitopadesa and Pancha Tantra have been arranged for translation into many of the languages of Asia and Europe.

Kalidasa, a great dramatic and epic poet, the father of the Sanskrit drama, wrote the Raghuvansa, the Kumara-sambhava, and Sakuntala. There also appeared Mrich'chha-kati or Toy Cart, a drama in ten acts; the poem of Nala and Damayanti; the Megha-duta or Cloud Messenger; the Gita Govind of Jayadeva, about the 12th century; and between the 8th and 16th centuries there appeared the eighteen Puranas, meaning old writings, which form the sacred texts of the modern Hindus.

Hindus reckon six great poems, or Maha-Kavya, three of them, the Raghuvansa, the Kumara-sambhava, and Megha-duta, by Kalidasa; the Kiratar-juniya, author unknown; the Sisupala-badha by Magha; and the Naishadha-charitra by Sri Harsha.

The great defect in all the Sanskrit writings is in the absence of historical literature. On the other hand, the Muhammadan histories always present a connected narrative of the progress of events, show a knowledge of geography, a minute attention to dates, and a readiness to quote authorities. None of the Hindu nations have books from which a history of their own country could be drawn up, similar to what Sir Henry Elliot contemplated, the sole work of a historical character by any of the Brahman race being the Raja Tarangini, a history of Kashmir by Kalhana. Their writings have been largely speculative,—

works of imagination, poetry, and the drama; and religion, astronomy, mathematics, ethics, grammar, etymology, and philosophy, with books on medicine, have formed a large part of their writings. Hindu literature is largely interwoven with the Hindu religions.

Buddhism has had two great revivals in India. Asoka (B.C. 257) collected the body of Buddhist doctrine into an authoritative version, in the Magadhi language, or dialect of his central kingdom in Behar, and this version for 2000 years has formed the canon of the southern Buddhists. He issued and engraved on rocks fourteen edicts enjoining the principles of that faith. Later on, Kanishka, a great Saka conqueror who ruled (A.D. 40) over the N.W. of India, from Yarkand and ? Khokand to Agra and Sind, drew up three commentaries on the Buddhist faith. These commentaries supplied in part materials for the Tibetan or Northern Canon, completed at subsequent periods. The Chinese designate this Northern Canon as the Greater Vehicle of the Law, and it includes many later developments or corruptions of the faith as originally embodied by Asoka in the Lesser Vehicle or Canon of the Southern Buddhists (B.C. 244). The Buddhist Canon of China, a branch of the Greater Vehicle, was arranged between A.D. 67 and 1285. It includes 1440 distinct works, comprising 5586 books.

In A.D. 410-432, the holy books of Asoka were rendered into Pali, which is now the sacred language of the Buddhists of Ceylon, Burma, and Siam.

The literature of the Singhalese Buddhists is in Pali, and the Dipavansa contains a history of Buddhism in that island which breaks off with the death of Mahasena, A.D. 302. The Mahawansa was compiled by Mahawana, who lived about A.D. 500, was brought down by successive writers to the 18th century, and was translated by the Honourable G. Turnour, of the Ceylon Civil Service. The Singhalese language, according to Rask, belongs to the Turanian family of speech; but in Ceylon, where the Aryan and Dravidian element is intermixed, a remnant of Buddhists is still to be found who use the Pali scriptures.

Pittakayan, or the Three Baskets, embodies the doctrines, discourses, and discipline of the Buddhists. Its contents extend to 592,000 stanzas, and the Atthakatha or commentaries, which are as old as the 5th century, contain 361,550 more. They were translated into Pali from Singhalese by Buddhaghoso, A.D. 420 (Mahawanso, cxxxvii. p. 252). The legendary tales profess to have been related by Gautama Buddha, and were collected under the title of Pansiya panas jatakapota, or the 550 births.

India has been repeatedly overrun by races from the west,—Turanians, Iranians, and Semites,—and this has led to the formation of a new language, known as Urdu or Hindustani. It is a lingua franca, and largely in use throughout British India. It is a mixed tongue, formed on the Indian dialect of Kanouj, to which have been added numerous words from all the languages of the native Indian races and of the invading armies. This new tongue has been almost solely used for poetry; and Wali, the earliest of the celebrated poets who have used modern Hindustani, wrote in the middle of the 17th century; Sauda in the 18th century. They have been followed by a multitude; but their compositions are in general mere imitations of the Persians.

Of all the Turanian languages, Tamil is probably the most highly cultivated, and possesses the richest stores of indigenous literature. Its name signifies sweetness, and though it has not the softness of the Telugu it is a harmonious tongue, and much cherished. The Tamils have a kind of elegy which they denominate Ula or Malai, consisting of couplets. The Parani also consists of a succession of couplets, but has its lines of equal length. The Kalampakam is a sort of poetry in which the author mixes at pleasure all kinds of verse. The Ammanai consists of couplets, composed of lines of four feet. The diction ought to be perfectly familiar. This kind of poetry is used in recounting the lives of princes, etc.

The Burmese Buddhists' sacred book is the Beetaghat; the Wee Nee contains the whole duty of the Burmese monk. Young Buddhists learn the Payeht Gyee and the Payah Shekho, Pali sermons and forms of worship, also the Mingula Thoht Buddhist Beatitudes. Later on they pore over the Abidhamma Konit-gyan, the seven books of the most difficult parts of the Beetaghat, with the Thing-yoh and Thaddah. Their lay literature consists of beast tales, fables of animals, with the Nataka or drama, from Nata, a dancer, or the Pooay or Pwe, a dramatic performance; amusement winds up with the Pwe or Pooay.

The dramas are all founded on the tales which Gautama told of his 510 previous existences, all of them taken from the Sanskrit or Pali. These called Zaht or Woottoo (*i.e.* a real story), are religious plays, the 510 Jatakas. The work of fiction is called Paya Zaht, an acting play.

China.—Letters are held in higher esteem in China than in any other country in the world. Natural inclination, personal interest, and popular feeling are thus all on the side of literature. It is the key which opens the door to official life and is the passport for admittance into cultivated society. Nine-tenths of the educated youths of China devote themselves to imitate the established literary models. The four highest collegiate degrees are the Chwang-yuen, Pang-yen, T'an-hwa, and Ch'uen-lu.

In the classical literature of the Chinese, at the head of the Wu-king, or five classics, is placed the Yih-king, or Book of Changes, which is held by the Chinese in great veneration for its antiquity, and the occult wisdom, which only sages can understand, supposed to be contained in its mystic lines. It was composed in prison by Wan-Wang, the literary prince, about B.C. 1150, and is doubtless one of the most ancient books in any language.

The Yih-king treats of general philosophy, and the first cause is supposed to have been taught by Fuh-hi, whose Institutes were founded on the Pa-Kwa, or eight diagrams, which he invented, and by subsequent combinations increased to 64. These diagrams are merely trinities of straight lines, upon which has been founded a system of ethics, deduced by giving names to each diagram, and then associating the meaning of these names according to the changes which could be rung upon the 64 combinations. Adding to the diagrams, the points of the compass and elemental appellations, humid, light, hot, rigid, flexible,

cold, heavy, and dry, they have formed the material for a cabalistic logomancy, peculiarly pleasing to Chinese habits of thought. They have supplied also the basis for many forms of divination by shells, lines, letters, etc. The leading idea of this curious relic of antiquity seems to have been founded upon the physiological notion of the creation of the world, according to which all material things proceeding from two great, male and female, vivifying elements, the yin and yang, were made in harmony. There are about 1450 treatises on the Yih-king alone, consisting of memoirs, digests, expositions, etc.

Japan and China received from India their Buddhism, with many of the essential doctrines of Hinduism. The Shen Shiu sect of Japan, founded in China A.D. 381, under the title of the White Lotus School, sent friars to India to collect Sanskrit MSS., and several of these contain descriptions of Sukhāvat. In Japan the Shen Shiu sect dates from A.D. 1174.

India.—The latest arrivals from the west have been from nations of Europe,—Portuguese, Dutch, Danes, French, and British, and their authors are so numerous, and have contributed so largely to the literature of Southern Asia, that even for the bare mention of their names space cannot be given. The learned men of each of the civilised nations of Europe and America have formed an Asiatic Society to attend to Asiatic subjects, and individuals are competing with them.

The sacred books of the east, edited by Professor Max Muller, have been translated by several oriental scholars. They comprise—(1) twelve Upanishads; (2) the laws of the Aryas, as taught in the schools of Apastamba, Gautama, Vasishta, and Baudhayana; (3) the Confucian Shu-king, parts of the Shih-king, Yih-king, and Hsiao-king; (4) the Zendavesta, comprising the Vendidad, the Sirozahs, Yasts, and Nyayis; (5) Pehlavi texts, comprising the Bundahis, Bahman Yasts, Shayast la-shāyast, the Dadistan-i-Dinik, the epistles of Manuskihar, the Dina-i-Mainog-i-Khirad, Shikand-gu-mani, and Suddar; (6) the Koran; (7) Institutes of Vishnu; (8) the Bhagavat Gita, with the Sanatsugatiya and the Anugita; (9) the Dhammapada and Sutta Nipata, canonical books of the Buddhists; (10) seven Buddhist Suttas; (11) the Satapatha Brahmana; (12) the Patimokha, Mahavagga, and Kulavagya, Vinaya texts; (13) the Fo-sho-hing-tsan-king, life of Buddha; (14) the Saddharma or the Lotus of the True Law; and (15) the Akaranga Sutra.

The following are the names of the more famed Muhammadan and Hindu authors of works relating to India. The mere names of the European writers would fill a voluminous catalogue:—

a. Muhammadan authors, chiefly in Arabic, Persian, and Turki.

Abbas Khan, son of Shaikh Ali Sarwani, author of the Tarikh-i-Sher Shahi, written by order of the emperor Akbar.

Abdullah, author of the Tarikh-i-Daudi, A.D. 1575.

Abdullah, styled *Wassaf*, son of Fazl Ullah, author of Tazjiyat-ul-Amsar-wa-Tajriyat-ul-Asar, A.D. 1312.

Abu Abdullah Muhammad, styled Al *Idrisi*, author of the Nuzhat-ul-Mushtak-fi-Ikhtirak-ul-Afak.

Abu Is'haq, Al *Istakhri*, author of Kitab-ul-Akalim, A.D. 951.

Abu-l-Fazl, Allami, author of the Akbar-Namah, was one of the sons of Shaikh Mubarak, the most learned man of his time. Abu-l-Fazl and his elder brother, Shaikh Abu-l-Faiz, surnamed Faizi, were the intimate friends of their sovereign Akbar. Abu-l-Fazl's escort was treacherously waylaid and its leader slain.

Abu-l-Fazl-bin-al-Hasan al Baihaka, author of Tarikhu-s-Sabaktagin, died A.D. 1077. It is also known as Tarikh-i-Baihaki.

Abu-l-Hasan Abi, styled Al *Masudi*, died A.D. 956. He was a native of Baghdad, a great traveller, acute observer, and able writer. He wandered to Morocco and Spain on the west, and eastwards to China, through all the Muhammadan and many other countries, and he wrote his travels, which he styled Muruj-u-Zahab, or meadows of gold.

Abu-l-Kasim Ubaid-ullah-bin Abdullah-bin *Khurdadba*, died A.D. 912.

Abu Nasr Muhammad ibn Muhammad-al-Jabbar-ul-Utbi, author of the Tarikh Yamini, about A.D. 1030.

Abu Rihan Muhammad-bin-Ahmad al *Biruni* al Khwarizmi, author of Tarikh-ul-Hind, born about A.D. 970-71. He was an astronomer, geometrician, historian, and logician, died A.D. 1039.

Abu Umar Minhaj-ud-Din, Usman-ibn-Siraj-ud-Din al Juzjani, about A.D. 1227-1247, author of the Tabakat-i-Nasiri.

Abu Zaid-ul-Hasan, of Siraf, A.D. 916.

Ahmad Yadgar, author of the Tarikh-i-Salatin-i-Afaghana, about A.H. 1020.

Ahmad-ibn-Yahya-ibn-Jabir, al *Biladuri*, author of Fatah-ul-Baldan, died A.D. 892. He was also surnamed Abu Jafar and Abu-l-Hasan.

Ala-ud-Din Malik, son of Baha-ud-Din Muhammad Juwaini, author of the Tarikh-i-Jahan Kusha, died A.D. 1253.

Ali Sher Kani, A.D. 1767-78, author of Tuhfat-ul-Kiram.

Bakhtawar Khan, author of the Mirat-i-Alam and Mirat-i-Jahan Numa.

Beg-lar Nama, written about A.D. 1625 by a dependent of Shah Kasim Khan, son of Amir Saiyid Kasim Beg-lar.

Fakhr-ud-Din, Binakiti, A.D. 1317, author of the Tarikh-i-Binakiti, an abridgment of the Jami-ut-Tawarikh of Rashid-ud-Din.

Fazl Ullah Rashid, styled Rashid-ud-Din, author of Jami-ut-Tawarikh, A.D. 1310.

Ghiyas-ud-Din Muhammad-bin-Humam-ud-Din, styled *Khondamir*, was a son of Mir Khond, of whose book he wrote an abridgment which he called the Khulasat-ul-Akhbar. He was born at Herat about A.D. 1475. He also wrote the Dastur-ul-Wazra and the Habib-us-Siyar.

Haidar Mirza Doghlat, cousin of Baber, was the author of the Tarikh-i-Rashidi.

Hamd Ulla-bin-Abu Bakr-bin-Hamd-bin-Nasr, Mustaufi, Kazwini, A.D. 1329, author of the Tarikh-i-Guzida.

Hasan Nizami, author of Taj-ul-Maasir, about A.D. 1205.

Ibn Batuta, a native of Tangiers, travelled over the greater part of Asia, visited India in the reign of Muhammad Taghalaq.

Ibrahim-bin-Hariri, author of the Tarikh-i-Humayuni, which was dedicated to Sultan Baber, A.D. 1528. It is an abridged history of India.

Jahangir. His autobiography has several titles, amongst them Jahangir Nama, Tarikh-i-Salim Shahi, Tuzakh-i-Jahangiri, and Wakiat-i-Jahangiri. A continuation of it was written by Muhammad Hadi, called the Tatimma-i-Wakiat-i-Jahangiri. Mutamad Khan, called also Muhammad Sharif, wrote the Ikbal Nama-i-Jahangiri, and Kamgar Khan wrote the Maasir-i-Jahangiri.

Jauhar, Aftabchi, or Ewer-bearer of Humayun, author of the Tazkirat-ul-Wakiat, private Memoirs of Humayun.

Kamal-ud-Din Abd-ur-Razzak-bin Jalal-ud-Din Ishak-us-Samarkandi, the author of the Matta-us-Sadain-wa-Majma-ul-Bahrain. He was born at Herat, 6th November 1413.

Kazi Ahmad-bin-Muhammad-al-Ghaffari al-Kazwini, author of the Nusakh-i-Jahan Ara, a useful compendium. He was a Persian who went to Mecca and died at Dewal, in Sind, A.D. 1567.

Khushhal Chand, author of the Tarikh-i-Nadir-uz-

Zamani. He was in the service of the emperors Aurangzeb, Bahadur Shah, and Muhammad Shah.

Majmal-ut-Tawarikh, an Arabic work by an author who wrote it between A.D. 1126 (A.H. 520) and A.D. 1193 (A.H. 589). His name is not known, but he was the grandson of Muhalib-bin-Muhammad-bin-Shadi. It is a chronological abridgment of universal history to the 6th century of the Hijira. The Majmal-ut-Tawarikh, about the tenth century was translated from Sanskrit into Arabic by Abu Salih-bin-Shu-aib-bin-Jami, and into Persian, A.D. 1026, by Abul Hasan Ali.

Mir Ali Sher, or Ali Sher Amir, minister of Sultan Husain of Persia, was born A.H. 844 (A.D. 1440). He was of an illustrious family of the Chaghtai tribe. He passed his later days in the composition of Turki and Persian works, of which Sam Mirza names twenty-one. Daulat Shah, the biographer, Mir Khond, and Khondamir dedicated their works to him, and he supported the poet Jami. He patronized sculpture and architecture and music. His Chaghtai Odes are called Nuai, and those in Persian Fanai. He died A.H. 906 (A.D. 1500).

Mir Khusru, died A.D. 1325, author of the Tarikh-i-Alai or Khazain-ul-Fatuh. He also wrote the Bakiya Nakiya and the Ijaz-i-Khusruvi.

Mir Muhammad Masum of Bhakkar, author of Tarikh-us-Sind, about A.D. 1602, also called Tarikh-i-Masumi.

Mir Tahir Muhammad Nasayani, son of Sayyd Hasan of Thatta, author of the Tarikh-i-Tahiri, A.D. 1606.

Misar-bin-Muhalhil, author of the Ajaib-ul-Baldan, frequently quoted by Zakariya-al-Kazwini.

Muhammad Abd-ul-Baki, author of the Maasir-i-Rahimi, a history of the Muhammadans in the Dekhan.

Muhammad Abu-l-Kasim, styled *Ibn Haukal*, author of the Ashkal-ul-Bilad or Kitab-ul-Masalik-wa-l-Mamalik.

Muhammad Ali-bin-Hamid, bin Abu Bakr Kufi, about A.D. 1216 translated the Chach-nama or Tarikh-i-Hind-wa-Sind from the Arabic. The name of the author is not known.

Muhammad-bin-Khawand Shah-bin-Mahmud, styled Mir Khond, author of the Rauzat-us-Safa-fi-Sirat-ul-Ambia-wa-ul-Muluk-wa-ul-Khulafa, was born A.D. 1433, lived in Balkh and Herat, and died in Balkh. His father, Syud Burhan-ud-Din Khawand Shah, a native of Mawar-un-Nahr, claimed descent from Hasan, son of Ali. The name of his son, also an author, known as Khondamir, was Ghaias-ud-Din Muhammad-bin-Hamam-ud-Din.

Muhammad Hadi Kamwar Khan, author of the Haft Gulshan-i-Muhammad Shahi and the Tazkira-i-Chaghatai.

Muhammad Hashim, styled *Khafi Khan*, author of the Muntakhab-ul-Lubab Muhammad Shahi, frequently entitled Tarikh-i-Khafi Khan. It is a highly esteemed work, commencing with the invasion of Baber, A.D. 1519, and concluding at the 14th year of the reign of Muhammad Shah. It is full of details of Aurangzeb's reign.

Muhammad-ibn-Isa of Moquinay in Morocco.

Muhammad Kasim Hindu Shah, *Ferishta*, author of the Tarikh-i-Ferishta, born about A.D. 1570 at Astarabad, died about 37 years of age, at Bijapur, during a great pestilence. His work is a history of the Muhammadan dynasties of India.

Muhammad Saki Mustaid Khan, author of the Maasir-i-Alamgiri, finished A.D. 1710.

Muhammad Ufi, author of Jami-ul-Hikayat, about A.D. 1211.

Mulla Abd-ul-Kadir, *Badauni*, author of the Muntakhab-ut-Tawarikh, a history of India from the time of the Ghaznavi to the fourth year of the reign of Akbar.

Niamat Ullah, historiographer at the court of Jahangir, author of the Makhzan-i-Afghani and of the Tarikh Khan Jahan Lodi. The former book was written at the request of Khan Jahan Lodi.

Nizam-ud-Din Ahmad, Bakhshi, author of the Tabakat-i-Akbari. It is one of the most celebrated histories of India down to A.D. 1593.

Nur-ud-Din Lutf Ullah, styled Hafiz Abru, author of the Zabtat-ut-Tawarikh Baisangari, which contains a complete history of the world down to A.D. 1425. He died A.D. 1430.

Rai Bhara Mal, author of Lubb-ut-Tawarikh-i-Hind. He was the Dewan of Dara Shekoh.

Rashid-ud-Din, A.D. 1310, author of the Jami-ut-Tawarikh, a chapter of Al Biruni's work.

Rustam Ali, author of the Tarikh-i-Hindi, compiled A.D. 1741–42.

Saiyid Jamal, son of Mir Jalal-ud-Din, Husaini, Shirazi, A.D. 1654–55, author of the Tarkhan Nama or Arghun Nama.

Shah Jahan had several biographers, viz. Muhammad Amin, Kazwini, author of the Badshah Nama, during the reign of Shah Jahan. It was completed by Muhammad Waris; also Inayat Khan, author of the Shah Jahan Nama; also Muhammad Salih, Kambu, author of the Amal-i-Salih, a valuable history of Shah Jahan from his birth to his death, A.D. 1665; also Muhammad Sadik Khan, author of Shah Jahan Nama.

Shaikh Abd-ul-Hakk, author of the Tarikh-i-Hakki, a general history of Muhammadan India.

Shaikh Nur-ul-Hasik, author of Zubdat-ut-Tawarikh, a general history; it is an enlarged edition of the book by his father, Shaikh Abd-ul-Hakk, entitled the Tarikh-i-Hakki.

Shaikh Zain-ul-Abidin, author of the Tabakat-i-Baberi, A.D. 1589–90, an account of Baber's fifth invasion of Hindustan.

Shams-i-Siraj-i-Afif Tarikh-i-Firoz Shahi.

Sharaf-ud-Din, Ali, Yazdi, Zafarnama. He died A.D. 1466. A partial biography of Timur.

Subhan Rai, author of the Khulasat-ut-Tawarikh, a general history of India, written A.D. 1695–96.

Sulaiman, the merchant, A.D. 851, author of Salsilat-ut-Tawarikh.

Sultan Firoz Shah, author of Fatuhat-i-Firoz Shah, an autobiography. Firoz Shah born A.D. 1309.

Sur-ul-Baldan, a compilation from Istakhri and Ibn Haukal.

Timur. Malfuzat-i-Timuri, the autobiography of Timur. This is in Persian. It is supposed to have been written originally in Chaghtai Turki, but in that language it has never been found. In the reign of Shah Jahan it was translated into Persian.

Yahya-bin-Abd-ul-Latif, author of the Lubb-ut-Tawarikh, a general Asiatic chronicle, A.D. 1541. He is also named Ismail-bin-Abdul Latif, also Mir Yahya Husaini Saifi.

Yahya-bin-Ahmad-bin-Abdullah Sirhindi, author of the Tarikh-i-Mubarak Shahi. He seems to have died about A.D. 1448.

Yamin-ud-Din Muhammad Husain, styled Amir Khusru, born A.D. 1253, died A.D. 1325. He is said to have left behind half a million of verses.

Zahir-ud-Din Muhammad Baber wrote his autobiography, called Tuzak-i-Babari or Wakayat-i-Babari, in Turki, and they were translated into Persian in the middle of Akbar's reign.

Zakariya, al-Kazwini, about A.D. 1263 or 1275, author of Asar-ul-Bilad-wa-Akhbar-ul-Ibad, also Ajaib-ul-Makhlukat-wa-Gharaib-ul-Maujudat, wonders of things created and marvels of things existing.

Zia-ud-Din, Barni, author of Tarikh-i-Firoz Shahi. This is the foundation of Ferishta's history of the period.

b. Buddhist and Hindu authors, chiefly in Sanskrit, Hindi, and Tamil.

Agasti or Agastya, the earliest teacher of the Tamils.

Amara Sinha, author of the Amara Kosha Vocabulary.

Anandagiri, author of a Sankara Vijaya.

Angirasa, author of hymns in the Rig Veda.

Apastamba, author of Sutras connected with the Black Yajur Veda, and of a Dharmasastra, and two recensions of the Taittiriya Sanhita.

Aryabhata, the earliest Hindu writer on algebra.

Asoka, king of Magadha, Buddhist Edicts.

Aswalayana, author of Srana Sutras, Grihya Sutras, and other ritualistic works. Founder of a Sakha of the Rig Veda.

Auvaiyar, the most famed Tamil poetess.

Barthrihari, a celebrated poet and grammarian, who wrote the Sringara-sataka, Nita-sataka, Vairagya-

sataka, also the Vakya-padya and the Bhatti-Kavya.
Bharata, a muni, author of the Gandharva Veda, the science of music and song.
Bharavi, author of the poem Kiratar Juniya.
Bhaskaracharya, an astronomer and mathematician, about A.D. 1100, author of the Siddhanta Siromani, a chapter on arithmetic, known as the Lilavati.
Bhatta Narayana.
Bhatti, author of the Bhatti-Kavya.
Bhava Bhuti, author of the Maha Vira Charita, Uttara Rama Charita, and Malati Madhava, about A.D. 800.
Brahmagupta, an astronomer, author of the Brahma Gupta Siddhanta.
Dasi Chetty, author of the Tamil Plutarch.
Chaitanya, a Vaishnava reformer, A.D. 1485–1527.
Chand, a celebrated poet of Hindustan.
Daksha, one of the writers of the Dharmasastras.
Dandi, or Sri Dandi, author of the Kavya Darsa or Mirror of Poetry.
Devi Mahatmiya, author of the Chandipatha, an episode of the Markandeya Purana.
Dhanwantari, a physician.
Dya Diviveda, author of the Niti Manjari, a work on ethics.
Gautama, or Akshapada, founder of the Nyaya school of philosophy.
Gopi-natha, author of the Kantuka Sarvaswa, a modern farce.
Gritsa Mada, reputed author of many hymns in the second Mandala of the Rig Veda.
Halayudha Bhatta, A.D. 700, author of Abhidana Ratnamala.
Hari Charan Das.
Hema Chandra, A.D. 1300, author of Abhidana Chintamani.
Jaimini, author? of the Sama Vedas and its teacher, founder of the Purva Mimansa philosophy.
Jayadeva, author of the erotic lyric Gita Govinda, about A.D. 1200.
Jimuta Vahana, author of the Daya Bhaga, law of inheritance.
Kabir, A.D. 1380–1400, a disciple of Ramanand. He was a celebrated Hindu Unitarian, equally revered by Hindus and Muhammadans, founder of the sect called Kabir Panthi or Nanak Panthi, from which Nanak, founder of the Sikhs, borrowed the religious notions which he propagated with the greatest success. Kabir and other Hindu sectarians used the Hindi language in opposition to the Brahmans, with whom Sanskrit was the language employed.
Kalhana, a pandit of Kashmir, author of the Raja Tarangini.
Kalidasa, author of the dramas Sakuntala, Vikramorvasi, Malavikagni-mitra, Raghu-vansa, Meghadhuta, Kumara Sumbhawa, Nalodaya, Ritu-sanhara, and the Sruta-boatha, a work on prosody.
Kampar, a celebrated Tamil writer, author of the Sarasvati Antati, Erelapatu, and Kangsi Puranam.
Katyayana, author of the Varttika, a continuation of Panini's grammar. He is generally identified with Vararuchi, the author of the Prakita Prakasa, about A.D. 200. He also wrote Srauta Sutras, also the Yajur Veda Pratisakya, and the Katha-sarit-sagara.
Kautsa, author of the Nirukta, a rationalistic philosopher.
Kavi-karna-pura, author of the Chaitanya Chandrodaya.
Kavi Raja, author of the Raghava Panda Viyam, a poem of studied ambiguity.
Khushal Chand.
Krishna Dwaipayana, styled Vyasa, the reputed compiler or arranger of the Vedas and of the Mahabharata epic poem.
Krishna Misra, author of the Prabodha Chandrodaya, rise of the moon of knowledge.
Kulluku Bhatta, a commentator of the Vedas.
Madhavacharya, a celebrated scholar and religious teacher. He and his brother Sayana have attributed to them many important works, scholia on the Sanhitas and Brahmanas. Madhavacharya was a warm supporter of the views of Sankaracharya, and among his works are the Sarva-darsana Sangraha and the Sankshepa Sankara Vijaya.
Magha, author of an artificial poem, the Sisupala-badha or Magha Kavya.
Mallinatha, a poet and commentator on the Raghuvansa, Meghaduta, and Sisupala-badha.
Mamatta Bhatta, of Kashmir, author of the Kavya Prakasa.
Manu, author of Manu-Sanhita, the code of Manu, also called the Manava Dharmasastra. It is attributed to Swayambhuva, the first Menu. 2685 verses are extant.
Markandeya, author of the Markandeya Purana.
Murari Misra, A.D. 1300? author of Anargha Raghava.
Nalo Daya, ascribed to Kalidasa.
Nanak, founder of the Sikh religion, author of their religious book the Adi Granth.
Nannaya Bhatta.
Panini, about B.C. 400, a great grammarian. His writings are in the form of aphorisms.
Parāsara, a rishi, author of some of the Rig Veda hymns.
Patanjali, B.C. 150, founder of the Yoga philosophy, author of the Mahabhashya, supposed to be Patanjali, author of a commentary on the grammar of Panini.
Pavananti wrote the Nannul Tamil grammar.
Raghunandana Bhatticharya, author of the Daya Tatwa, law of inheritance.
Raja-sekhara, author of the Bala Ramayana.
Ramanand, A.D. 1250, a Vaishnava reformer.
Ramanuja, A.D. 1150, the first Vaishnava reformer.
Sama Raja Dikshita, author of the modern drama Sridama Charitra.
Sankaracharya, A.D. 800, a great Saiva reformer, author of several Bhashyas or commentaries on the Sutras or aphorisms of Vyasa, on the Bhagavat Gita, and Upanishads, and the Ananda-lahari, a hymn in praise of Parvati.
Sayana, author of the great commentary on the Veda. He was brother of Madhavacharya.
Sayani Chandra Sekhara, author of the Madhu-raniruddha, a modern work.
Somadeva Bhatta, author or compiler of the stories in the Katha-sarit-sagara, drawn from the Brihat Katha.
Sri Harsha, author of the poem Naishadha Charita, a life of Nala.
Sri Harsha Deva, the royal author of the work Ratnavali.
Sri Krishna Tarkalankara, author of Daya Krama-Sangraha, the law of inheritance.
Sundara Misra, A.D. 1599, author of Abhirama Mani.
Sudraka, a king, author of the Mrich'chha-kati or Toy Cart.
Tiruvallavar, author of the Tamil Kural.
Tolkappiyanar, author of the Tamil grammar Tolkappiyam.
Tulsi Das, wrote the Hindi Ramāyana.
Vachispati Misra, author of a gloss, called the Bhamati, on Sankara's commentary.
Vaidya Natha Vachispati, author of the drama Chitrayajna.
Vallabhacharya Vallabha Swami, A.D. 1520?
Valmiki, author of the Ramayana.
Vana Bhatta.
Varaha Mihira, author of the astronomical works Brihat Sanhita and Brihaj Jataka.
Vararuchi, a grammarian supposed to be the same with Katyayana.
Vasishta, author of many Vedic hymns.
Vatsiyayana wrote the Kamasutras.
Vepa-deva, author of the grammar Mugdha-bodha.
Vikramaditya, B.C. 57, and the nine eminent literary men of his court, called the nine gems, viz. Ghata-Karpara, a poet; Dhanwantari, Kalidasa, a dramatist; Kshapanaka, Amara Sinha, Sanku, Vetala Bhatta, Varaha-Mihira, and Vararuchi.
Visakha-datta, author of the Mudrarakshasa, the signet of the minister.
Vishnu-sarman, compiler of the Pancha Tantra tales.
Visvanatha Kavi Raja, author of the Sahitya Darpana.
Yajna Walkya, reputed author of the White Yajur Veda, Sathapata Brahmana, the Brihad Aranyaka, and the Yajnawalkya Smriti.

LITHANG. From Hokow it is four days' journey to Lithang, a Chinese and Tibetan mili-

tary station, famous for its gold-roofed Lama monastery, containing about 3500 Lamas. Lithang is situated on a high grassy plateau surrounded by mountains of perpetual snow, and indeed the whole country from Ta-tsian-lu, gradually increasing in elevation, seems at this point to reach a climax. Not a sign of vegetation beyond grass is to be seen, and the town, built on the plains at the foot of the mountains, and surrounded by a wall, stands out, making the nakedness of the country still more marked, reminding one of the cities seen along the shore of the Gulf of Cutch. Numbers of Lama priests are to be seen dressed in flowing garments of green cloth, each devoutly twirling his prayer-wheel, and muttering the great Tibetan prayer of 'Om Mani Padmi Om!' but not only amongst the Lamas is this solemnity of demeanour noticeable; even the rough tea-traders and town's-people, dressed in their sheepskin coats, carry prayer-wheels, which they constantly twirl, and join in the universal cry, pronounced 'Omani peminee, Omani peminee!' The people are mostly tall in stature, with a profusion of black hair hanging over their shoulders, while their complexion is a very dark brown; but many of the Lithang people are thick, sturdy fellows, with short woolly hair and lighter complexion, forming a great contrast with the general appearance of the Eastern Tibetans.

LITHARGE. Eng., Fr.

Mih-to-sang, . . Chin.	Budar, ... Pers.
Solvskum, Blyskum, Dan.	Glet, ... Rus.
Gelit, ... Dut.	Almartaga, . . . Sp.
Glotte, Glatte, . . Ger.	Litarjirio, ... ,,
Murdar-sang, Hind., Pers.	Glitt, ... Sw.
Litargirio, . . . It.	Marudar-singhi, . . Tam.
Lithargyrium, . . Lat.	

Litharge is a semi-vitrified oxide of lead, in the form of small shining heavy scales, or more or less agglutinated masses. It is usually produced in the purification of silver from lead, and the refining of gold and silver by means of this metal. According to the degree of fire and state of oxidation, it has a pale or a deep colour. The one is called litharge of silver, and the other litharge of gold. Litharge is used for various purposes in the arts, by potters, glassmakers, painters, etc.; it is also employed in medicine. Crude litharge is procurable in most Indian bazars; it sells at £18 the ton.—*M'Culloch; Smith; Poole.*

LITHOGRAPHIC STONES are obtained from a magnesian limestone in the valley of the Tumbudra near Kurnool. They were tried in Madras, and answered well. Mr. Bingham made stones for lithographic purposes from a grey limestone, and used them in the office of the Surveyor-General. They answered admirably for the purpose, but the stone must be freshly quarried or it chips, as after exposure to the atmosphere it grows intensely hard, and can then only be sawn into shape.—*M. E. J. R.*, 1850; *Cal. Cat. Ex.*, 1862.

LITHOMARGE. Wa-sih-shih-chi, Chin. That obtainable in China is a fine siliceous earth or clay, a sort of fulling earth, containing silicate of alumina with some magnesia. It is often streaked or mottled. Blue and dark varieties occur. Lithomargic earth occurs below the granite detritus of the Neilgherry Hills. Lithomargic hills and lateritic rocks are associated all along the western coast.

LITHOSPERMUM SEEDS are long, very white, and like small stones or pearls, on which account they have been popularly used as a remedy for stone. They are known in India by the name of Lubisfirmun. The roots of some species of Lithospermum afford a lac for dyeing and painting. L. villosum, *Wallich*, occurs at Hardwar.—*Royle; O'Sh.*

LITMUS.

Lakmus, ... Dan.	Lackmus, . . Ger., Sw.
Lakmoes, ... Dut.	Tornasole, . . . It.
Tournesol, . . . Fr.	Tornasol en pasta, . Sp.

A violet-blue dye, prepared chiefly in Holland from Lecanora tartarea, a lichen which grows in the Canary and Cape de Verde Islands. It is met with in small cubical cakes, of a dusky-blue colour, light, and easily pulverized. It is employed to stain marble; also as a chemical test of acidity, being reddened by acids, while the blue is restored by alkalis; for this purpose it is employed either in the form of a tincture, or of unsized paper coloured with it.—*Waterston; Faulkner.*

LITSÆA CONSIMILIS. *Nees.*

Charka, ... Beas.	Chindi, . . Ravi.
Chirndi, . . . Chenab.	Chilotu,
Kalban, . . . Panj.	Rauli, .

A small tree which grows in parts of the Panjab Himalaya at 2500 to 6820 feet, up to the Chenab. In some places in Chumba, an oil, expressed from the fruit, is burned. According to Madden, a species of Litsæa, which may be this, yields a coarse oil in Kamaon. L. lanuginosa, *Nees*, is also of the Outer Himalaya.

Litsæa fuscata, *Thw.*, a tree growing to 20 feet in height in the Central Province of Ceylon, at an elevation of 6000 to 8000 feet. L. glauca is a plant of Japan.—*Dr. J. L. Stewart; Thw. En. Pl. Zeyl.* p. 258.

Litsæa Zeylanica, *Nees.*

L. foliosa, *D.C.*	L. umbrosa, *D.C.*
L. scrobiculata, *D.C.*	L. consimilis, *D.C.*

This large tree (Belori of the Burghers) grows at Simla; is very abundant on the Neilgherries at 6000 to 7000 feet elevation; is found throughout the Western Ghats above 2000 feet; and equally common in Ceylon, where it is called Dawal-Kurundu. Its wood is in use for house-building purposes, planks, rafters, etc.; it is yellowish in colour, straight-grained and tough, and when fresh emits an odour of sweet briar.—*Beddome, Fl. Sylv.; F. Von Mueller; Gamble; Voigt.*

LITTERS for travelling, in Arabia are commonly borne by mules. The litter is generally one resembling the palanquin; it is borne by four mules, two before and two behind, or by two only, but more commonly by two camels, and sometimes by two horses. When borne by camels, the head of the hindermost is painfully bent down under the vehicle. Nevertheless it is the most comfortable kind of litter, and two light persons may travel in it. The Persian name generally given to it is Takht-rawan. The Arabic Mihaffeh is often used as a general name for a camel litter, and particularly applied to one with a flat top. A very common kind of camel litter, called Musatteh or Heml-mu-sattah, resembles a small square tent. Another kind of litter, called Shibreeyeh, is composed of a small square platform with an arched covering. The Musatteh and Shibreeyeh (but particularly the latter) are also called Hodaj.

LITTLE BASSES. See Basses.

LITTLE BOKHARA, also known as Chinese

Tartary and Eastern Turkestan, is a depressed valley shut in by mountains of great height on three sides, and on the east are barren sands which merge imperceptibly into the great desert of Gobi. The Tian Shan range separates it from Zungaria; the Bolor range from Transoxiana, and the Kara-korum and Kouen Lun from India and Tibet on the south. The land is clayey near the base of the mountains, but sandy in the central tracts. Rain is rare and the air is of exceeding dryness, but the climate is temperate and healthy. It is well watered from the mountains, the waters converging towards the Ergol or Tarym. The country has gold, copper, salt, sulphur, and the jade-stone. The southern line of the caravan route passes through it from Khamil to Aksu and Kashgar. From Aksu to Khokand is 800 miles. It was subject to China from the beginning of the Christian era, to the time of Chengiz Khan. After the middle of the 18th century, the Chinese regained possession of it. Alti-Shahr, or the six cities, forms the western district, comprising Yarkand, Kashgar, Khotan, Aksu, Yanghisar, and Ush-Turfan, with territories subordinate to each. Eastern Turkestan is eminently Muhammadan. Yarkand is the entrepot of trade between China and Bokhara. Khotan, from the time of C'tesias, has been celebrated for its mineral products, its jade and emeralds, its shawl-wool and flax. It was at one time the entrepot of a vast trade with Hindustan, and now imports largely furs, broadcloth, leather, and sugar.

LITTLE MAN'S BREAD, of the Neilgherry Hills, is an underground fungus of the genus Mylita. It seems very closely allied to, if really distinct from, the so-called native bread of Tasmania, M. Australis. 'Fresh specimens of this fungus,' says Berkeley, 'have a subacid smell and little taste; but we have seen others of an extremely compact horny texture, resembling a mass of sage forcibly compressed into a solid ball.' The specimens of the little man's bread submitted by Mr. Whynton are here very clearly indicated.—*Pioneer.*

LITTLE TIBET, the modern Balti, is a good deal to the north-east of Kashmir, and north-west of Ladakh. Gilgit is a country, conquered by Gulab Singh, to the west-north-west of Iskardo. The Chorbat district is a dependency of the Government of Iskardo, which, like that of Leh, is subject to Kashmir. The desert country by which Nubra and Chorbat are separated, has acted as a barrier to the further extension eastward of the Muhammadan religion, which is now universally that of the people of the whole of Iskardo (or Balti) district, as well as of Dras. On the Indus, and in the valley south of it, there is no uninhabited tract between the two, so that the Muhammadan and Buddhist population are in direct contact. The result is, that Muhammadanism is in that part gradually, though very slowly, extending to the eastward. The name Iskardo, capital of Balti, is a Muhammadan corruption of the Tibetan name Skardo, or Kardo, as it is very commonly pronounced. The mountains which surround the Iskardo plain rise at once with great abruptness, and are very steep and bare. The houses of Iskardo are very much scattered over a large extent of surface, so that there is no appearance of a town.

Bhot comprises the Little Tibetans, the natives of Ladakh, the Tibetans of Tibet proper, and the closely-allied Bhoteah tribes of Bhutan. Balti or Baltiyul is called Palolo or Balor by the Dard, and Nang-Kod by the Tibetans. It is preserved in Ptolemy in Byltæ.

Little Tibet contains about 12,000 square miles, is about 170 miles long, and lies between long. 74° and 76° 35′ E. Little Tibet or Baltistan is called by the Kashmiri Sri Bhutan. Tibetan districts are Khapolor, Chorbad, and Keris, on the Shayok river; Khartakshe, Totte, and Parguta on the Sing-ge-chu; Shigar on the Shigar river, and Balti and Rongdo on the Indus.

Balti proper is a small table-land, and, with that of Deotsu, is about 60 miles long and 36 broad; the mean height of its villages above the sea is about 7000 feet. Cultivation in Little Tibet is carried on entirely by irrigation. The Balti people of Little Tibet, though Tibetan in language and appearance, are all Muhammadans, and differ from the more eastern Tibetans of Leh (who call themselves Bhoteah or inhabitants of Bhot) by being taller and less stoutly made. Their language differs considerably from that of Leh, but only as one dialect differs from another. Little Tibet has several times tendered its allegiance to British India.—*Dr. Thomson's Travels; Cunningham's Ladakh; Latham; Mason; Campbell.*

LITTORAL CONCRETE is a rock found close by the sea-shore of the Bombay coast and western coast of the Peninsula of India, resembling the artificial stone formed by the cementation of sand, gravel, or other coarse material, by lime-water or mortar. It is composed of shells, sand, gravel, and pebbles, and varies in its character with the rocks in the neighbourhood, being micaceous towards Cochin and Tellicherri from the quantity of sand and other nodules from the granite and gneiss; gravelly to the north of Bombay and around it, composed almost entirely of fragments of shells. It is met with only in the regions where rains abound. Along the shores of Sind, Arabia, and the Red Sea, though the material composing it is abundant in a position similiar to that in which it exists on the Malabar coast, it is nowhere cemented into stone. Even on Bombay Island, indeed, the cementation is far from invariable. In one part of the esplanade there is loose sand on the surface, and concrete beneath. At another, sand or concrete, as the case may be, from the surface throughout to the rock. And in a recent excavation, concrete was found for the first 20 feet, resting on a bed of fine sand, perfectly loose. It is frequently found to rest—as, for example, at Sewree and Mahim—on a bed of blue clay filled with kankar and mangrove roots, offering evidence of a depression from the time the mangroves grew at high-water mark, so as to permit the gravel deposit to accumulate. The whole must then have been raised by a second upheaval to its present level. The principal quarries of these are at Versova, about 20 miles to the north of Bombay, where the shore is sheltered by a vast dyke of basalt formerly submerged. In quarrying it, the sand, which seldom extends more than a few inches down, is first removed, and the rock is smooth on the surface. A space about 12 feet each way is next divided into slabs one foot square, the grooves between them being cut with a light, flat-pointed, single-bladed pick. These are

raised successively by a tool something between an adze and a mattock, a single stroke of which is in general sufficient for the detachment of each from its bed. The blocks thus cut out and raised being thrown aside, the bed is once more smoothed, and the operation resumed till the pit reaches the depth of six or eight feet, when, it being no longer convenient to remove the stones by hand or basket, a new pit is cut. This variety of building material is brought in vast quantities to Bombay, where a large portion of the native houses are built of it. It is not very strong, but with admirable cement, employed with lavish hand, it makes a good and economical wall.—*Dr. Buist, LL.D., in Bombay Times.*

LIU-KIU, a dominion of a group of 36 islands, lying between those of Kiu-siu and Formosa, feudatory to China. The island of Liu-Kiu is the largest of the group. It is about 60 miles in length from north to south, with a varying breadth of from 5 to 10 miles, and its scenery, especially at its northern and eastern side, is wild and mountainous. In Liu-Kiu, the salutation consists of clasping the hands together, and in that position elevating the knuckles to the forehead, and bowing sufficiently low for the hands so placed to touch the ground. The Liu-Kiu people wear a cloak, which is gathered in at the waist with a girdle of brocaded silk or velvet; in this is stuck an embroidered pouch, containing a small pipe and some powdered tobacco. In Liu-Kiu the hair is shaven off the forehead for about three inches in front, and carried from the back and sides into a tuft on the top of the head, where it is held by one or more pins, gold being in most esteem with the men, and polished tortoise-shell among the women.

LIVISTONIA, a genus of palms, natives of Eastern Asia and Australia, of noble aspect and elegant foliage. The L. Jenkinsiana, *Griff.*, furnishes the Toko-pat of the Assamese, an indispensable article in every native gentleman's house. The leaves are in universal use throughout Assam for covering the tops of the peculiar umbrella hats (Jhapis) of the Assamese.

In some sections of the country the Karen thatch their houses with large palmated leaves of a tall wild palm, probably a species of Livistonia. Sometimes the leaves of a species of rattan are used; but the Burmese and Europeans almost universally thatch their houses with the leaves of the Nipa.

Livistonia spectabilis, *Griff.*, is a lofty palm, 50 or 60 feet high. Trunk smooth. It inhabits Malacca, is solitary in the low littoral tracts, adapted to rice cultivation. The Penang Malay name is Sardang.

Livistonia Sinensis, *Griff.*, is 20 or 25 feet high, with a stout obscurely-annulated trunk. Crown round. It grows in Southern China.

Livistonia inermis is of Australia. L. rotundifolia is supposed by Mr. Wallace to be the fan-palm, of the leaf of which the people of Celebes make water-buckets and baskets.—*Seeman; Mason.*

LIZARDS form, in natural history, the reptile order of Sauria, which comprise the Crocodilidæ or crocodiles of the Old World, the alligators of the New World, the Varanidæ or water lizards, the Lacertidæ or land lizards, the Zonuridæ or cordyles, the Scincidæ or skinks, the Acontiadæ or acontiads, the Sepsidæ or sand lizards, the Geckotidæ or geckos, the Agamidæ or agames, and the Chameleonidæ or chameleons. Most of these will be found noticed under their respective names. About 1300 are known. Oaths are taken on a lizard's skin by the Kandh race.

The lyre-headed lizard is not uncommon in the woods about Kandy. It is more bulky than any of the species of Calotes, and not nearly so active in its movements.

The ghoor is a lizard of Gujerat, which the natives believe to be poisonous. There are two kinds of ghoor, according to native report, Putlah ghoor and Chundun ghoor.

The Tuatera or Navara is a lizard of New Zealand; is also called the Hatteria punctata, and is upwards of two feet long.

Stories about venomous lizards of different species are abundant in India and other tropical countries, but on investigation have always been found to be destitute of foundation. There is, however, one lizard of which the bite is certainly highly dangerous, though probably not fatal, to man. This is the Heloderm (Heloderma horridum) of Mexico and Lower California, commonly known to the natives of those countries as the Scorpione or scorpion. Mr. J. Stein, a traveller in Mexico, who was bitten in the finger by one, suffered from symptoms similar to those produced by a snake-bite. See Reptiles.

LOADSTONE.

Magneet, ...	Dut.	Basi-barani, . . .	Mal.
Aimant, ...	Fr.	Ahan-suban, . .	Pers.
Magnet, ...	Ger.	Magnit, ...	Rus.
Chumuk-puttur, .	Guj.	Kauntum, .	Sansk., Tel.
Calamita, ...	It.	Iman, ...	Sp.
Batu-barani, . . .	Mal.	Kaundum, . . .	Tam.

Magnetic iron ore, a peroxide of iron, is found in considerable quantities in most countries. Ayaskanta mani Salakeva, 'Like a rod of the iron-stone gem,' is a phrase used in the Sanskrit poem Malate and Mad'hava, and makes it seem possible that artificial magnets, as well as the properties of the loadstone, were known to the ancient Hindus. The loadstone, as sung by Orpheus, was supposed to detect adultery.—*M'Culloch; Malate and Mad'hava in Hindu Theatre*, ii. p..22.

LOANS are raised by the Indian Government, both in British India and in Great Britain. On the 31st March 1883 the amount of outstanding debt of all loans raised in India was £90,519,566. Of that amount £87,051 bore no interest; £57,470 of 1853–54 carried interest of 3½ per cent.; £170,867 was from railway loans, bearing 4 and 4½ per cent.; £66,759,421 was at 4 per cent.; £23,420,757 bore 4½ per cent.; and £24,000 was at 7s. per Rs. 100.

LOBELIA, an interesting genus of plants, easily cultivated by seed. The blossoms are extremely beautiful from their variety of colours; they require a light, rich soil, with a moderate quantity of water. Dr. Wight, in Icones, gives L. aromatica, excelsa, nicotianæfolia, trichandra, and trigona. L. cardinalis is an annual, creeping, glabrous plant, a native of China, with flowers of a pink colour. In gardens it spreads over the soil, rooting at every branch, and is well adapted for borders to parterres. One China species is called Tan-pa-ku or Tom-ke-ki, and seems to have been used as a kind of tobacco. L. nicotianæfolia, a stout, tall species, occurs in the vicinity of Bangalore. L. radicans was accidentally intro-

duced from China into the Calcutta garden. L. inflata, Indian tobacco, a native of the United States, an acrid narcotic and violent emetic; in small doses diaphoretic and expectorant; a popular remedy in the United States, where from incautious use it has often proved fatal. Its chief employment is in asthma, and in the form of enema in strangulated hernia. L. succulenta, *Blume*, Neilgherry grass. A small procumbent plant, well adapted for hiding the earth in flower-pots, as is also L. crinus. L. trigona, *Roxb.*, is a small annual ramous plant which delights in wet pasture ground, and appears during the wet and cold seasons.—*O'Sh.* p. 426; *Roxb.* i. p. 506; *Riddell; W. Ic.; Jaffrey.*

LOBIA. Hind. Dolichos Sinensis, also D. cajang. Kala lobia is D. lablab. Large red and white beans, haricot bean, Phaseolus vulgaris or P. lunatus. Lobian, a white bean with a black eye, D. Sinensis.

LOBIPES HYPERBOREUS, Phalaropus hyperboreus, the red-necked phalarope, has the circuit of northern regions. One specimen obtained in Nicaragua, and a pair in the Bermudas. It is a little arctic bird, of rare occurrence even in the north of Scotland, Orkney, and Shetland; but a specimen was, about A.D. 1845, procured near Madras, which was sent to the Calcutta Museum.

LOCHANA, a favourite sakti of the Mahayana sect of Buddhists.

LOCK.

Dabbeh, . . .	Arab.	Serrature, ...	It.
Sloten, ...	Dut.	Fechaduras, . .	Port.
Serrures, ...	Fr.	Samki, ...	Rus.
Schlosser, ...	Ger.	Cerraduras, Cerrajos,	Sp.
Tala, Kuñ, Kulf,	Hind.		

An implement applied to doors, boxes, etc., for securely fastening them. The Egyptian Dabbeh is a wooden lock from 14 inches to 8 or 9 inches, for doors of houses, cupboards, etc., and for gates of quarters, public buildings; etc., two feet and even more in length. In Cairo the key plays a considerable part in the daily life. The handing it over ratifies a bargain for the sale or letting of a house. A fee is payable to the Shaikh of the quarter on the transfer of the key. And the inhabitants of a quarter pay an annual fee to its Shaikh,—the 'Fee of the Key,' that is the gates of the quarter being thereby made free to them without challenge, as in the case of strangers.—*M'Culloch.*

LOCUST.

Jarad-ul-bahr, .	Arab.	Locusta,.	It.
Faridi, ...	Egypt.	Maig, Malakh, .	Pers.
Sauterelle, . . .	Fr.	Malakh-i-halal, . .	,,
Heushrecke, . . .	Ger.	Malakh-i-haram, .	,,
Ophiomachez, . .	Gr.	Malakh-i-daryai, .	,,
Chargol, Arbeh, . .	Heb.	Logosta, . . .	Port.
Tiri, Tiddi, . .	Hind.	Langosta, ...	Sp.

One of the principal genera contained in the family Locustidæ is the Locusta of Leach, in which the hinder legs are about equal to the whole body in length, and the antennæ filiform or terminated in a club. Upwards of 20 species of this genus are known, and it is to this group to which the Gryllus migratorius of Linnæus belongs, a large species, which sometimes multiplies to such a degree as to devastate large districts. Africa at all times appears to have been peculiarly subject to the ravages of locusts. Mr. Barrow states that, on one occasion, in the southern parts of Africa, an area of nearly 2000 square miles might be said literally to have been covered with them. When driven into the sea by a north-west wind, they formed upon the shore, for 50 miles, a bank 3 or 4 feet high; and when the wind was south-east the stench was smelt at the distance of 150 miles. The locusts migrate in masses. They often cross from Africa to Madagascar, from Africa to Syria and Arabia, and sometimes to Italy. They often appear in Sind, in Baluchistan, and British India, particularly in Central India, but less frequently in the Peninsula; yet even there Dr. Buchanan, on his way to Seringapatam, observed a flight of locusts, in length about 3 miles, its width about 100 yards, and its height 50 feet. At a distance they appeared like a long, narrow, red cloud near the horizon, which was continually varying its shape; and in the famine years of 1876–77 they reappeared in several parts. In 1883, at Satary (Goa), the orange trees had been so damaged by locusts that it was difficult to find even a dozen oranges that season. Thousands had always been exported in former years.

Kirby and Spence (i. p. 218), on the authority of Major Moor, relate that a flight of red locusts (evidently identical with the Indian species), forming a column 500 miles long, ravaged the Mahratta country. Pottinger states that these destructive insects never penetrate to the districts of Saharawan unless in years of drought and famine; they then come as though it were to complete the devastation; they invariably appear from the south-east, and return to the same quarter. Locusts visit the Panjab and N.W. Provinces, and do much mischief while pursuing their devastating course.

In 1861, in rent-free lands in Khurda, belonging to the temple of Jaganath, the rice crop was nearly destroyed by a small green Acrydium about an inch in length, called Jhintiki by the Uriya. But history is full of accounts of the destruction caused by this plague, and one feature appears in nearly all the descriptions, the simultaneous death of whole flights, and pestilence ensuing on the putrefaction of their bodies. So Joel, 'But I will remove far off from you the northern army, and his stink shall come up, and his ill-savour shall come up, because he hath done great things' (Joel ii. 20). Joel i. 3, 4, and ii. 3, writes of the locusts' ravages, 'Let your children tell their children, and their children another generation. That which the palmer-worm hath left hath the locust eaten.'

The Phymatea punctata is a large, beautiful locust, with scarlet abdomen, and yellow and bronze above, which occasionally causes great injury. Mr. Nietner says they do not touch the Illuk grass of Ceylon, Saccharum Konigii, *Retz*, and seem only to attack cultivated plants. At Tangalle they destroyed tobacco plantations, and the larvæ and pupæ are as destructive as the perfect insects.

It is the Acrydium migratorium which, at intervals, devastates Africa and the south of Asia, and Gryllus gregarius is that of Sinai. Acrydium (Œdipoda) migratorium, which occurs in Africa and the south of Asia, is greenish, with transparent elytra, of a dirty grey, whitish wings, and pink legs. They have the power of inflating themselves with air, and of travelling about 18 miles a day. The genus Acrydium

of Latreille may be distinguished from Œdipoda by the presence of a large and prominent tubercle on the præsternum, or between the two fore legs, by the one central ocellus instead of three disposed triangularly, and by the deep transverse striæ of the prothorax. A. peregrinum, *Olivier*, has been described by that author in his Voyage dans l'empire Othoman, and by M. Audinet Serveille in his treatise on the Orthoptera, forming part of the Nouvelles Suites à Buffon. This author described a yellow variety from specimens taken in Senegal, and the red one from Mount Sinai,—a wide distribution. Both varieties occur in India; some from Raniganj show no trace of red, while in those ordinarily described, red is the predominant colour. Serveille figured the red variety in his 12th plate, fig. 3. He quotes from the work of Olivier, previously named, a description of the habits of this species. Accompanying the burning south winds in Syria, he says, clouds of locusts (A. peregrinum) arrive from the interior of Arabia and the south of Persia, causing a devastation as complete and almost as rapid as that produced on Europe by the most violent hail-storms. It is difficult to express the effect of the sight of the whole atmosphere filled on every side, and to an immense height, with an innumerable quantity of these insects, moving in slow and uniform flight, with a noise like that of rain, the sky darkened, and the light of the sun diminished. In one instant the flat roofs of the houses, the streets, and the fields were covered with locusts, and in two days they had destroyed nearly all the foliage; but fortunately their life was but short, and they seemed to have emigrated only to reproduce themselves and die. For some days afterwards the fields were covered with their bodies.

The Acrydium lineole, which is sold for food in the markets of Baghdad, and the Œdipoda migratoria, extending its ravages from Tartary to Central Africa, and from Paris to Isfahan, are the only well-known migratory species; but local species sometimes multiply to such an extent as to cause infinite damage.

Maig and Malakh are Persian names for a locust, which the Arabs most commonly call Jarad. The kind, blown over, from the opposite coast of Arabia to Bushahr, the Persians styled Malakh daryai or the sea-locust, and the Arabs, Jarad-ul-bahr, in the same sense. Bochart has enumerated various Hebrew and Arabic names for the locust in his elaborate Heirozoicon (lib. vi. cap. i. et seq.), but does not mention the above Persian names, neither does he remark that in the dialect of Misr or Egypt, those Jarad-ul-bahr or sea-locusts, above noticed, are called Faridi, according to the MS. Burhan-i-Katiah. Zakaria Kazvini divides the locusts into two classes, like horsemen and footmen, mounted and pedestrian, which will call to the recollection of the Biblical reader some passages from Joel and the Apocalypse. Forskal calls the locust which infests Arabia, Gryllus gregorius, and thinks it to be different from that which is called by Linnæus, migratorius.

Locusts of Australia are species of Tettigoniæ or tree-hoppers, all of a green, orange, brown, or black colour, with membranous wings remarkable for their iridescence. Their names are the Cicada mœrens and C. curvirostra; the orange-spotted Tettigonia, Fidicina angularis; the Cylochila Australasiæ; the Thopa saccata. Some of them are partly covered with a whitish secretion, and get the names of millers and bakers; and the Cylochila Australasiæ are called lamplighters by the boys, from three ruby-coloured spots on the front of the head.

In 1813 Marseilles expended 20,000, and Arles 25,000 francs for the destruction of injurious insects. The hunt commenced in May, and almost the whole population of certain villages were employed in it. A cloth of coarse web is carried by four men, one holding each corner. The two who walk first make the foremost edge of the cloth sweep the ground, and the insects leap into the cloth, where they are caught as in a bag. A small bag at the end of a stick, like an entomologist's bag-net, is also used. The females lay from August to October, the eggs being placed in holes in the earth in a cylindrical tube of glutinous matter covered with a thin envelope of earth (exactly as stated by Aristotle). The tube is about an inch and a half long by 3 or 4 lines wide, and placed horizontally. Each tube contains from 50 to 60 eggs, and a child trained to the work can collect 10 to 14 pounds per diem, each pound containing about 800 eggs. In other places carts are driven up and down over the breeding grounds with the object of destroying the egg-pouches by crushing them into the earth.

Mr. Taylor says the Turdus roseus, called by the Mesopotamian Arabs Samnir-med, destroy great quantities of locusts by cutting them in two. They seem to be the Seleucidæ of Pliny, which, consequent on the prayers offered up to him by the people of Mount Casius, were sent by Jupiter to destroy the locusts ravaging their corn crops (Pliny, book x. ch. 39). In Central India locusts are destroyed by digging trenches for them to fall into. As they spring from eggs deposited by previous flights of locusts, when hatched they hop along in dense masses while yet unfit for flight, and in their progress lay waste all vegetation. In Bikanir they dig trenches to leeward of where these young broods appear, and take measures to drive the locusts into them, and the sides being perpendicular, the creatures hop in, but cannot hop out, and earth is thrown in upon them. A resident at Ajmir on one occasion adopted this plan. He says: 'In about two hours we succeeded in getting several trenches dug, varying from 25 feet to 60 feet long, 1 foot wide, and about 2 feet deep. Then we sent native soldiers in a horse-shoe direction from the trench about 1000 feet away to wave hands and drive the locusts on. They came, and thickened as they approached, one dense mass, hopping along till they hopped into the trench. It was a curious sight to stand at the end and look at it all,—a seething, hopping mass inside the trench, while a regular short cataract came pouring down on to them until they were about two inches deep, then the hopping ceased in the trench. They had nothing hard to kick against, but the influx continued till they were half up the ditch, when we quickly threw in earth and buried them, and then off to another trench and repeat the whole operation. We continued this for two hours. While at one of the trenches, I sent for a finger-glass, and immersed it in the mass of locusts, as one might dip it into water, then struck it off with a piece of cardboard, so I had it as full as it would hold. When I got

home I weighed the glass full, then emptied it and weighed the glass, so I got the weight of the locusts; then I counted them out (566), then measured very accurately the solid contents of the glass, by weighing the amount of water it held, and computing from that; thus I had space, number, and weight for data. Knowing we had dug and filled 300 feet of trench one foot wide, filled to one foot deep, I calculated, and J—, S—, and C— checked the calculations with me: result, killed and buried, 7½ millions of locusts, weighing 10½ tons, in two hours from the time the trenches were ready, about four hours altogether! After such results ought any district to be thus infested?'

Mr. Portchinsky, secretary of the Russian Society of Entomology, was sent to the southern provinces of the empire to ascertain in what places grain locusts (Anisoplia Austriaca) preferred to lay their eggs, and he came to the following conclusions:—The grain locust generally deposits its eggs in wheat-fields, and so soon as they are hatched the attacks of the insect on the grain commence. There are generally from 20 to 50 locusts per square archine (an archine is 27 inches) of wheat. Rye and barley fields contain comparatively much fewer larvæ (from 2 to 5) a square archine, but if these fields be near wheat-fields, the larvæ are then just as numerous. The fields which have been sown with wheat the preceding autumn are the receptacles of an immense quantity of larvæ, which it is impossible to destroy before they have become chrysalides. The state of the fields whence the owners have driven the locusts is very different. The pursued insects fly in masses to the neighbouring fields, and while the wheat-field where the owners have fought them does not retain more than 3 to 16 larvæ a square archine, adjoining fields of flax, buck-wheat, oats, etc., which are not generally attacked by the locusts, become infested, and contain from 16 to 26 larvæ an archine. It follows that the use of ropes or machines to drive away the locusts is very dangerous, because, instead of laying their eggs in wheat-fields, where they may be destroyed in the spring while in the state of chrysalides, they light upon the surrounding fields, no matter what they are sown with. Experiments made on the spot by Mr. Portchinsky prove that the larvæ turned up by the plough re-enter the earth quickly, but if they can be kept exposed ten minutes to the sun, they infallibly perish under its heat. He concludes that in the spring, when the larvæ (become chrysalides) are in a state of complete immobility, ploughing the fields will be of great use, because the chrysalides, exposed to the action of the sun, will certainly perish. As to fighting the locust by destroying its eggs, Mr. Portchinsky considers this as impossible, inasmuch as the period during which the eggs remain in the ground before they become larvæ is precisely that during which the grain is standing.

According to Wellsted, they are sold in the markets of Yemboh and also at Jeddah, and are considered wholesome and nutritious. The Mukin or red species, being the fattest, is preserved, and, when fried and sprinkled with salt, they are considered wholesome and nutritious food. This part of the sea-coast of Arabia is occasionally visited by an incredible number of these insects, which do much damage to the date palms. Swarms are drowned in their passage to and from the Egyptian coast, and the beach is strewed with their carcases. How insects apparently so ill qualified for flight are enabled thus to cross the sea, affords matter for curious inquiry; but passing swarms are seen in its centre. The Acridophagi of Œthiopia, who are fabled to have subsisted entirely on this aliment, are said to have been thin and weak, and to have suffered an early and agonizing death. This was doubtless merely from semi-starvation. These people lighted large fires of dry leaves under the flight, and so brought the insects down in considerable numbers. A character in Aristophanes (Acharn. 1116) raises the question whether locusts or fieldfares are the daintiest eating, and answers in favour of the locust, from which one might infer that it was a recognised, though not a frequent, article of food among the Greeks. The Hottentots, unlike the Acridophagi above mentioned, are said to grow fat upon this diet. But this also is merely exaggeration, though Burton says of the Arabs that where they have no crops to lose, the people are thankful for a fall of locusts. In Hejaz the flights are uncertain; during the last five years preceding Captain Burton's visit, Medina had seen but few. They are prepared for eating, by boiling in salt water and drying four or five days in the sun. A wet locust to an Arab is as a snail to a Briton. The head is plucked off, the stomach drawn, the wings and the prickly part of the legs are plucked, and the insect is ready for the table. Locusts are never eaten with sweet things, which would be nauseous. The dish is always hot, with salt and pepper, or onions fried in clarified butter, when it tastes nearly as well as a plate of stale shrimps. At Bushire these insects are generally called Maig, and sometimes Malakh. One kind is distinguished by the epithet halal, the eating of it being lawful; the other is haram or forbidden; this is smaller and more destructive than the Malakh halal, from which it differs also in colour. The Arabs prepare a dish of locusts by boiling them with salt, and mixing a little oil, butter, or fat; they sometimes toast them before a fire, or soak them in warm water, and, without any further culinary process, devour almost every part except the wings. Ouseley ate several locusts variously cooked, and thought them by no means unpalatable. In flavour they seemed like a lobster or rather a shrimp,—one neither offensively stale nor absolutely fresh. The natives of Senegal are said to dry them, and, having reduced them to powder, use them as flour. Captain Yule (p. 114), in his account of an interview with the king of Burma, and the repast which followed, mentions that the most notable viand produced consisted of fried locusts. These were brought in hot and hot, in successive saucers. They were very much like what one would suppose fried shrimps would taste. The inside, he believed, was removed, and the cavity stuffed with a little spiced meat. Locusts of Inner Arabia, the jarad or jerad, a reddish-brown insect, and about the size of the little finger, are used as food. The hind legs are called keraa. They are boiled and fried. The locust of Northern Arabia, a small green grasshopper, is not used as food.—*Winslow; Dr. Buist; Central India Times; Kirby and Spence; Friend of India; Pottinger's Travels Burton's Mecca; Ouseley's Travels; Niebuhr's Travels; Wellsted's Travels; Palgrave; G. Bennett*, pp. 270, 271.

LOCUSTELLA RAYI, the Salicaria locustella, or British grasshopper warbler of Europe, Asia, and North Africa, is migratory. Has been obtained in Central India and in Lower Bengal, where an affined species, L. rubescens, is not uncommon. It would appear to be not uncommon at Mhow. A specimen has also been seen from the North-west Himalaya.

LOCUST TREE, Hymenæa courbaril, *L.* Wood tough and close-grained, valuable for trenails and timber of steam-engines. Some of the Brazilian locust trees, according to Von Martius, attain a size so great that 15 Indians with outstretched arms could just embrace one of them.

LODHA, a class of Muhammadan thugs, descended from or graft upon the Oudh stock, and found chiefly on the borders of that kingdom, or in the Terai bordering on Nepal.

LODHI, an agricultural race in Central India and the N.W. Provinces, and about Bhurtpur, supposed by Mr. (Sir George) Campbell to be cognate to the Kurmi, and to have at one time occupied a very considerable position in the Jubbulpur and Saugor districts. The Lodhi came from Bundelkhand about the 16th century; the Kurmi from the Doab about A.D. 1620. The Lodhi are scarcely inferior to the Kurmi as agriculturists, are hardy and active, but are the opposite of the Kurmi in natural temperament, being turbulent, revengeful, and ever ready to join in any disturbance. They make good soldiers, and are generally excellent sportsmen. Both among Kurmi and Lodhi there is no distinction between a mistress and wife, provided always that the former is of the same caste as the husband, or, better still, the widow of an elder brother or cousin, however far removed. The children born from such connections are on an equal footing as regards inheritance of property, whether personal, real, or ancestral, with those born from regularly married wives. The Lodhi agriculturists of Upper India attained to some distinction as swashbucklers and marauders in the Nerbadda country, and some of their chiefs still retain all the popular respect due to families which have forgotten to live on their own industry. Amongst the Mahrattas, the foreign Lodhi or Lodhi paradesi, from being a native of Hindustan, is employed as a thatcher and keeper of bullocks, etc.—*Mr. Campbell*, p. 193; *Central Province Gazetteer; People of India.*

LODHI KHERA, a rich trading town in the Ch'hindwara district, 38 miles from Ch'hindwara, on the Nagpur road. The river Jam flows by the town.

LODOICEA SEYCHELLARUM. *Labillard.*
Nux medica, Cocos Maldivica.

Darya ka narel, .	DEKH.	Cocos de Maldives,	PORT.
Sea cocoanut, . .	ENG.	Ubdie narikaylam,	SANSK.
Double cocoanut, .	,,	Kaddel taynga, .	TAM.
Cocos de mer, . . .	FR.	Samudra-pu-tenkaia,	TEL.

The double cocoanut tree of the Seychelles is a palm which attains a height of 80 or 90 feet. When preserved whole, and perforated in one or two places, the nut serves to carry water, and some of them hold six or eight pints; and by slicing them in different directions they are formed into plates, dishes, drinking cups, etc., known in the islands as Vaisselle de l'isle Prasten. The Muhammadan fakirs of India use it as a scallop. The crown of the trunk is eaten like the American cabbage palm. The down attached to the young leaves serves for filling mattresses and pillows; the ribs of the canes and fibres of the petiole are fabricated into baskets and brooms, and the young canes are plaited to form hats. Germinating nuts were sold in London in 1854 for £10 a-piece.

Many fabulous accounts were formerly related respecting the Lodoicea Seychellarum, such as, that it was produced at the bottom of the sea, the nuts being only found thrown up on the coasts of the Maldive Islands. They were called Coco de Maldivia, or Coco de Salomon, by the early Portuguese navigators. Many marvellous medical virtues were ascribed to these nuts by the physicians of the age, both Asiatic and European, and they were consequently sold at a high price. The tree yielding them was first noticed by Barre, a French officer of engineers, in 1697, then described by Sonnerat, but for the first time accurately described by Labillardiere in Ann. Mus., Paris, ix. p. 140, t. 13. To the inhabitants, the tree is useful for its timber, which is hard externally, and employed in building their huts and for posts; the leaves and their footstalks are used for the roof, walls, and partitions, and for many other domestic purposes. The nuts weigh from 23 to 25 lbs. each, and when fresh contain a white, transparent, and jelly-like substance, which is edible. The shells are employed in making vessels and dishes of various kinds; and the entire nuts form articles of commerce, as they are esteemed in other countries both for their fabled virtues and as curiosities.

LOGAN, a legal practitioner in the island of Penang, who started and long conducted the Journal of the Indian Archipelago, and contributed to it a great number of important editorial articles, principally relating to the ethnology of Eastern and Southern Asia. He arranges the races of S.E. Asia into types, as the Aryan, Gangetic, S. Indian, Gondwani for Vindhyan tribes, East African, Turanian, Tibetan, and Asianesian. He had great opportunities of contrasting and comparing the Dravidians from various parts of India, and called them South Indian.

LOGWOOD.

Logwood is the heart-wood or duramen of Hæmatoxylon Campechianum, *L.*, a large tree of Central America, Honduras, Campeachy, etc. and the West Indies. It is imported into Britain in logs, which are cut up into chips and ground for the use of dyers and painters, being esteemed as one of the best deep-red and black dyes. The dyewood is hard, heavy, of a deep orange colour, a sweetish astringent taste, and peculiar odour. It is extensively employed for compound colours, but its chief use is for blacks and certain shades of grey. It is also now common in the woods of Jamaica and St. Domingo, and has been introduced into India. In Tenasserim, the logwood tree is cultivated in a few gardens, and appears to flourish there as well as an indigenous plant. It is sometimes used in medicine as an astringent.

The introduction of logwood was prohibited by a statute of Elizabeth, under heavy penalties, and all that was found in the country was ordered to be destroyed. It was not until the reign of Charles II. that its use was re-permitted.—*Faulkner; Simmonds; Mason; Tredgold.*

LOHA. GUJ., HIND. Iron. Lohar, a blacksmith. The Lohar is one of the five artisan castes of the Hindus, the others being the carpenter, goldsmith, brazier, and stone-cutter. Loha chur, iron filings. On the ninth of the light half of Aswin, Hindus worship their weapons or arms. The lustration is called Loha bhisara, and at native courts was of great splendour. The blacksmith wears the zonar. The Taremuk of the Central Dekhan, known as Bail Kambar in Canarese, Ghissari in the Dekhani, Lohar in the Mahrati, is a wandering blacksmith.—*Wilson's Glossary.*

LOHAGHAT or Rikheswar is a cantonment in the Kamaon district, N.W. Provinces, in lat. 29° 24′ 15″ N., long. 80° 7′ 10″ E., situated on the left bank of the little river Loha, at an elevation of 5562 feet above sea-level, and enclosed on almost every side by precipitous mountains. It is said to be unsuited for invalids. —*Imp. Gaz.*

LOHAIA, a town in Yemen, in lat. 15° 42′ N., long. 42° 39′ E. Lohaia has stood only since the 16th century. Its founder and patron was a Muhammadan saint, called Shaikh Saleh, who built a hut on the shore where Lohaia now stands, and spent there the rest of his days as a hermit. The territory of Lohaia is arid and barren. Population, 5000. The harbour is so indifferent that even the smallest vessels are obliged to anchor at a great distance from the town.—*Niebuhr's Tr.* i. pp. 252, 253.

LOHANA, a powerful tribe who have been known as residents in Sind since the earliest times, and have undergone great vicissitudes, but still retain their credit as well as their religion, and, whether regarded as merchants or officials, are the most influential tribe in Sind. They have spread into Afghanistan, Baluchistan, and Arabia, where they expose themselves to inconveniences, insults, and dangers, in pursuit of their darling objects, wealth and final return to their native soil, to enjoy the fruits of their industry. Their name is derived from Lohanpur in Multan, from which they migrated in very remote times. They have about fifty subdivisions, of whom the Khudabadi and Sihwani are the chief. They all wear the poita, janeo, or zonar. Most of them are Hindus, but a few have become Sikhs. They eat meat, are addicted to spirituous liquors, do not object to fish or onions, drink water from their inferiors as well as superiors in caste, and are neither frequent nor regular in their devotions. The town of Agham and Agham Lohana seems to have got its name from a Lohana chief named Agham, who was governor of Brahmanabad in the time of Chach. It lies about 30 miles S.E. from Hyderabad in Sind, and though now almost forgotten, it was formerly a place of some consequence. This tribe is numerous both in Dhat and Talpura. Formerly they were Rajputs, but betaking themselves to commerce have fallen into the third class. They are now scribes and shopkeepers, and object to no occupation that will bring a subsistence; and as to food, to use the expressive idiom of this region, where hunger spurns at law, 'excepting their cats and their cows, they will eat anything.' Three or four caravans annually travel between Deraband and Kābul, and into Calcutta to Bokhara and St. Malaire in Russia, carrying coarse piece-goods, salt, indigo, kimkhab, and fruit. Baber mentions them.

The Lohana of Sind are Vaishnava and Saiva Hindus. Some of them worship the river Indus deity and his wazir under the names Jenda Pir and Udhero Lall. The suffixed titles of their subdivisions are—Mul, Chund, Rae, Ram Das, Lal. They are the principal number of Hindus in the country, but, like the Saraswati Brahmans, they eat meat, fish, and onions, and drink spirits, buying the flesh from the Muhammadans, it being unlawful for them to kill. They are not highly educated, but in the time of the Talpur Amirs they were largely employed as revenue collectors, and were described as scheming and crafty. Under British rule they have shown an earnest application and devotion to duty, able and energetic, honest and upright. They are financiers, bankers, merchants, and shopkeepers.

The Lohani section of the great trading tribe of Povindah, according to Vigne, claim to be descended from Lohani or Luhur, the son of Miani, a Muhammadan shepherd or goatherd of Ghor or Mushkon, a district east of Herat. There were Lohani with Mahmud of Ghazni, who returned with him after his victories in Hindustan. Mahmud's son was Sultan Muhammad. Sultan Masud, who succeeded, had no sons, and about this time the Lohani were placed at Deraband, which was given to them. From that time to this, they have traded between Hindustan and Kābul. Such is their own account. They have subdivided into three branches,—the Daulat Khel, Pani Khel, and Mian Khel. The two first and portions of the last have settled as farmers in the lands of Tank and at Deraband in the Dehrajat, and about Thal and Choti Ali. The other part of the Mian Khel are traders in the countries between Calcutta, Bombay, Benares, Lahore, Samarcand, and Bokhara using camels. Their horses are fine, usually 15 hands high. In their marches parties of the younger men protect their flanks. They traverse the Gulair and Cheri passes, which unite in the Deraband. The Lohani from Calcutta, Dehli, Jeypore, all take the route to their rendezvous at Deraband. The merchants assemble in Dehrajat in April, and, being joined by their families, who have waited on the banks of the Indus, they pass into Khorasan, where they remain during the summer.—*Vigne's A Personal Narrative*, pp. 32, 53, 54, 118; *Elliot's History of India; Tod's Rajasthan.*

LOHA'RA, a chiefship attached to Raipur, lying to the south-west between the Balod and Sanjari parganas. The zamindar is a Gond by caste, and the estate was originally granted in A.D. 1538, in return for military service, by one of the Ratnapur rajas.

LOHARDAGA or Lohardugga is a revenue district in the Chutia Nagpur division of the Bengal Presidency. Its principal rivers are the Subarnarekha, and the North and South Koel. The Karu, the Deo, and many minor streams fall into the South Koel. The highest hills in Chutia Nagpur are Saru (3615 feet) and Baragai

or Marang Buru (3445 feet); and in Palamau, Bulbul on the south-eastern boundary (3329 feet), Buri on the south-western boundary (3078 feet), and Kotam (2791 feet). The most numerous tribes are the Mundah, the Kol, and the Uraon; but the word Kol, as popularly employed, includes not only the Mundah of Chutia Nagpur proper and the Larka or Ho of Singbhum, but all Kolarian aborigines wherever found. The Uraon or Oraon are, excluding the semi-Hinduized aborigines, the strongest Dravidian tribe in Bengal. They are the people known in the plains as Dhangar (hill-men), and are found in great numbers throughout the Chutia Nagpur division. The most numerous of the semi-Hinduized aboriginal tribes in Lohardaga are the Bhuiya, the Kharwar, the Bhogta, and the Dosadh. Of lower classes of Hindus, the most numerous are the Ahir, a pastoral caste; the Kurmi, the great agricultural caste; the Kamar, and after them the Teli, oilmen. It yields iron ore, gold, coal, lime, soapstone, lac, resin, catechu, tasar silk, oil-seeds, cotton, hides, food-grains, blankets, ropes.

LOHIT, a branch of the Brahmaputra river which, after a winding course of about 70 miles, rejoins the parent river, thus forming the large alluvial island of Majuh Char or Kamlabar of 280,000 acres.

LOHRASB or Lohrasp, a king of the Medes, according to Mr. Masson, the patron of Zoroaster and of the Magian religion, who he supposed occupied Bamian. It is surmised that the foundation of the city of Herat or Hari was laid by Lohrasp, who was succeeded by Gushtasp. Gushtasp erected many buildings thereon; Behman, after him, added greatly to the town, and Alexander put the finishing stroke to it. Vigne remarks that if the traditions of the Persians may be credited, we should look to Bamian as the residence of king Lohrasp, the patron of Zertusht and the Magian religion, but as these traditions have been handed down to us only through the romance of Firdusi, it is not possible to say what credence they deserve.—*Mohun Lal's Travels*, p. 263.

LOI or Lui. HIND. Blanket, a woollen wrapper; these are of single, double, or triple breadths, ek-arz, do-arz, and tin-arz. Loi-kinardar has a coloured border, Loi-Kashgiri is a striped kind, and Loi-Lahori is made of Kābul wool at Lahore.

LOI KAT'HONG, a Siamese festival on the Menam river, held on the 15th day of the 12th month, when offerings of little rafts of plantain leaves, bearing lighted tapers, are launched into the river.

LOIKOB, aborigines of the east coast of Central Africa, divided into two tribes, the Wakuapi and the Masai, who are often at feud. They are pastoral, nomade, and predatory. They are handsome, tall, light complexioned, and their women are prized in Arab harams. They wear leather dresses. They kill all prisoners. Their sacred place is the mountain Kilimanjaro, which overlooks their land and fertilizes the soil by its streams. There dwells the Engai, their god. They practise circumcision.

LOKA, SANSK., Locum, LAT., a place, a sphere, and used to designate a region, as tri-loka, the three worlds, heaven, earth, and hell. In Hindu mythology, there are fourteen spheres, exclusive of Naraka or Tartarus. Of these, seven are upper spheres, viz.:—

Bhur-loka or earth.
Bhuvar-loka, atmosphere or firmament.
Swar-loka or Swarga, heaven, the sphere of the inferior deities.
Mahar-loka, the region above the pole-star, tenanted by saints.
Jana-loka, the sphere of the sons of Brahma.
Tapa-loka, the region of devotion, abode of Rishi.
Satya-loka or Brahma-loka, the region of truth and of Brahma, to which the pure are elevated.

The seven regions below the earth are habitations of the snake-gods, and are as under, in the order of their tala or descent, viz. Atala, Vitala, Sutala, Rasatala, Talatala, Mahatala, and Patala.

The Vaishnava sectaries have instituted loka of their own, as Vaikuntha, the sphere of Vishnu, and Golaka, the region of Krishna.—*Wilson's Glossary.*

LOKA, also Lok or Log. SANSK. Man, mankind. Sahib-log, gentry, Europeans.

LOKAKSHI was the son of Chitrakitu, who lived at Kanchi, but Lokakshi dwelt at Sri Saila. He inculcated the dictum, often quoted by Hindus, 'The way of the Great One, that is to be followed.' One of the Smriti, also Lobayataka, one of the Tantra, and an astrological work, are ascribed to his pen.—*Ward*, iv. p. 50.

LOKA-MATA, lit. mother of the world, a name of Lakshmi.

LOKA-P'ALA, in Hinduism, the guardians of the world, are sometimes confounded with the deities presiding over the different cardinal points; but this is not quite correct, and they are more properly the divinities who were appointed by Brahma upon the creation of the world, to act as rulers over the different kinds of created things. Lists occur in several Puranas, and in the Harivansa portion of the Mahabharat.—*Hindu Theatre*, ii. p. 218.

LOKE, a mixed race near Mount Abu. The name is probably a corruption of the Hindi word Log, people. It is supposed that the Bhil race were the aborigines of Mount Abu and the neighbouring hills, but at some remote time became mixed with marauding Rajputs from the plains, and with the workmen who were so long engaged in building the Dilwarra temples. This mixed race called themselves Loke, and are now in possession of almost all the land under cultivation. See Abu.

LOKMAN, according to some authors, took up his residence at Saba, in Yemen, about B.C. 1750, and, finding that the country was continually ravaged by impetuous mountain torrents, while at other times parched from drought, he built a dam across it. It was provided with thirty sluices, and, according to Pliny, the town became the mistress of cities and the diadem on the brow of the universe. See Mareb; Saba.

LOLIGO, the squid, one of the mollusca. The calamary, a species of Loligo, is luminous at night. Many species of squid can leap from the water and float through the air to some distance, like the flying fish. Loligo sagittatus is the flying squid. In China, the naked cephalopods are not only eaten fresh, but one species, a Loligo, forms in its dried state a considerable article of traffic. The preparation consists in removing the ink-bag without laying open the mantle. After all impurities have been removed

by water, the mollusc is submitted to a slight pressure, and ultimately exposed to the sun. Small bundles of one catty weight are tied up with slips of rattan, and enclosed in cases holding ten catties and upwards. The pikul sells at the rate of 14 to 16 Spanish dollars.—*Collingwood, Journal Ind. Arch.* iv. p. 480; *Morrison's Compendious History*, p. 141; *Crawfurd's Dict.* p. 440; *Bennett*, ii. p. 280.

LOLIUM ITALICUM, Italian rye-grass, affords fine fodder for cattle. Is a useful cold-weather green crop, and is well worthy of extensive cultivation. The best fodder grasses of Europe are usually dwarf species, or at least such as do not rise above four or five feet from the ground. The most esteemed are Lolium perenne, Phleum, Festuca pratensis, Cynosurus cristatus, and various species of Poa and dwarf Festuca.

LOMARIA SCANDENS, the scandent Lomaria fern. The low lands near the mouths of rivers and nullahs, in Tenasserim, are often fantastically dressed with this species of Lomaria, which creeps up to the tops of the tallest trees.—*Mason.*

LOMASHA, author of a treatise on Hindu law, and of other three works. He was born at Saurashtra, but his hermitage was at Chandra Shekara.—*Ward*, iv. p. 29.

LOMBARD. Long beards gave a name to the Lombard nation. A Sikh is never so much offended as when you touch him by the beard; the great facial characteristic of manhood is never allowed by him to be profaned by the razor.—*Tr. of Hind.* i. p. 303.

LOMBOK, a fertile and populous island, divided from Bali by a narrow strait. The population consists chiefly of Sassak, Balinese, and Bugi. The Bugi reside upon the coasts. The raja of Lombok has the title of Anak Agong, which means son of heaven. The indigenes are called Sassak. The people of Lombok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies. The Sassak are a Malay race, hardly differing from those of Malacca or Borneo, and have been converted to Muhammadanism. But the ruling race are Brahmanical, and from Bali. The men are jealous and strict with their wives; infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies. Even a married woman accepting a flower or betel from a stranger has been punished by death with the kris, and any one found without leave within the grounds of a house is krised, and his body thrown out to the street. The people frequently do amok, but it seems to be deliberately done. On one occasion a person doing amok killed seventeen people before he could be killed. In war, a whole regiment will agree to amok, and then run on with such desperate resolution as to be very formidable to men less excited than themselves.

Mr. Crawfurd considers the Lombok language to have a strong affinity with the Javanese. This is the termination in an easterly direction of the group of tongues which begins with Sumatra. According to Mr. Logan, Javan has a much broader, more forcible aspirate and primitive phonology than Malay, and the Javan group embraces Sundan, Maduran (with its dialect Bawian), and Bali. In Lombok are beautiful grass-green doves, little crimson and black flower-pickers, large black cuckoos, metallic king-crows, golden orioles, the jungle-fowl, the Pitta concurna, the Megapodus Gouldii, small white cockatoos, the Ptilotis honey-sucker, and the little yellow zosterops. In a pond at Gumong Sari, in Lombok, the fish swam round after Mr. Wallace, expecting food.

The Balinese may not eat beef, but substitute for it pork. Both races eat buffalo flesh, goat's flesh, fish, and poultry.

The raja of Mataram is, by right of conquest, absolute sovereign of the island. The rajas of Mataram are, like their ancestors of Kawang, Assem, and Beliling, members of the Vaisya caste of Hindus. Although absolute monarchs, they nevertheless, of their own accord, in all important matters consult the principal gusti and ida of the country, some of whom are entrusted with the execution of what is resolved upon.

In Lombok, wives may suffer themselves to be burned after the death of their husbands; they are not compelled to it. They have the choice of allowing themselves to be burned or krised. The first is the more rare.

The straits of Lombok are about 15 miles wide, but on the opposite sides of the straits the animals of various classes differ as greatly as the animals of the old and new world, not only in species, but in genera.

LON, HIND., also Lun, GUJ., from Sanskrit Lavan, salt. Lona matti, salt land; Lonar, a salt pit; Lonari, salt maker; Loni, the saline inflorescence on damp walls.

Lona, in Urdu, is a vinegar or acidulous salt which forms on the leaves of the Chana or Cicer arietinum.

LONAR, a small town in the Buldana district of Berar, in lat. 19° 58′ 50″ N., long. 76° 33′ E.; population in 1867, 1865. It is a place of great antiquity, at the side of a lake, which in Hindu fable is the dwelling of Lonasur, a giant who was overcome in single combat by an incarnation of Vishnu, and around the edge of the lake basin are several old temples. The lake is at the bottom of a crater-like depression, about 510 feet below the level of the surrounding country, and its bottom is 3 miles in circumference, with a depth varying from 5 to 14 feet, according to the season of the year. Dr. Bradley in 1851 is said to have found scoria and lava. The Sichel Hills terminate in the neighbourhood of Lonar. The crater is a nearly circular depression, in a country composed of tabular and nodular basalt. From Lonar the basaltic district extends to the S.E. as far as Beder; to the west, 200 miles to Bombay; and northward, to the banks of the Nerbadda, near the ancient cities of Indoor and Mhysir, reported to have been buried at a remote period under volcanic eruptions. It is a great basaltic region, and the Sichel range passes in a south-east by east direction to the confluence of the Wardha and Godavery, and towards the Eastern Ghats. Hot springs and streams, loaded with carbonate of lime, occur along the line of elevation of these mountains, at Mahoor, Urjunah, Kair, Byorah, and at Badrachellum, a short distance above the pass through which the Godavery reaches the alluvial plains of the east coast. Springs of clear soft water occur close to the lake. A stench of sulphuretted hydrogen is emitted by the lake

during the heat of the day, but flocks of duck and teal dot its surface. There are two saline springs near the centre of the lake, and about half a mile apart. These never become dry. It is supposed that the muriate of soda from this source, coming in contact with the carbonate of lime which abounds in the vicinity, causes the deposition of carbonate of soda or natron salt in a greater or less state of purity. The salt is raised by divers, who bring it up in their hands. It is much prized, and finds a ready sale in both Berars, Nagpur, Kandesh, and Poona. The lake was regularly worked up to 1836, in which year 2136 candies of the different salts were raised, valued at Rs. 60,081. In 1853, Major Johnston raised 35 candies, valued at Rs. 1461·4. The sulphuretted hydrogen, especially during the heat of the day, rises in millions of bubbles to the surface. The purest carbonate of soda or natron salt deposit is found close to the springs. The following are the names of the principal varieties:—1. Dulla, carbonate of soda, containing 83·8 per cent. of soda; 2. Nimmak Dulla, nearly pure salt, containing 92·8 per cent. of chloride of sodium. Dulla and Nimmak Dulla are used for dyeing silks, fixing colours, as medicine, and in the manufacture of bangles, of which there are two manufactories near the lake, where 600 or 700 are made by each man daily. 3. Khappul contains 72 per cent. of carbonate of soda, is used in fixing the red dyes of cloths; 4. Pappree contains 72 per cent. of carbonate of soda, is used in making bangles, in baking the cake called papar, and in medicine as an antacid; 5 and 6. Bhuski are neutral carbonates of soda, containing 29 and 27 per cent. left as a deposit on the margin of the lake, and used in the manufacture of soap. The average quantity is 213 candies per annum, valued at Rs. 608.

The water is clear and free from odours, but the mud at the bottom is highly charged with sulphuretted hydrogen. Natron slowly forms under the mud. The water of the lake contains, besides a little potash, muriate of soda, 29 grains; sesquicarbonate of soda, 4·2; sulphate of soda, 0·1, in 1000 grains of water. No lime or magnesia detected in it.

Dulla, a carbonate of soda with a faint trace of muriate of soda, about 2 per cent. of impurities.
Nimmak Dulla, nearly pure muriate of soda.
Khappul, carbonate of soda, with water and about 2 per cent. of impurities.
Pappree, nearly pure carbonate of soda.

Madkhar, an impure salt containing carbonate of soda,	27
Clay and sand,	30
Water, about	17
Common salt,	
Bhuski, a crude impure substance containing neutral carbonate of soda,	26
Insoluble matter, chiefly sand and clay,	58
Water,	15
Common salt,	2
Travertin, contains carbonate of lime,	78
Carbonate of magnesia,	4
Insoluble matter with oxide of iron, etc.,	9
Chloride of sodium,	2
Water,	3

—*Carter's Geological Papers on Western India*, p. 38; *Drs. G. Smith and J. E. Mayer in M. E. J. R. of* 1857; *A Paper by Dr. Buist in Trans. Bombay Geog. Society.*

LONARI. MAHR. A caste whose occupation is hewing wood, making charcoal, etc.

LONDON, the chief town of England, where the minister who rules India has his office. His title is H.M. Secretary of State for India.

LONGAN (Nephelium longanum, *Hk.*). Fruits of China and the East Indian Islands, imported in small quantities, dried for dessert.

LONGEVITY. In most eastern countries, the aged amongst their fellow-citizens are much respected, and the Chinese have in their cities temples of longevity. The races occupying British India are short-lived compared with those of Britain, and advance more rapidly to old age, both physiologically and pathologically, yet Anwar-ud-Din is said to have fallen at Ambur, when upwards of ninety years old, probably lunar years.

Rabbits live 7 years; squirrels and hares, 8 years; a fox, 14 to 16 years; cats, about 16 years; a bear lives rarely more than 20 years; a wolf likewise 20 years; hogs the same; the rhinoceros lives but 25 years; cows live to about 25 years. A horse has been known to live 62 years, but the average duration is about 25 years. Of the longevity of snakes nothing is known. Lions live from 30 to 40 years; though a lion of the Zoological Gardens of London reached the age of 70 years. Tortoises live often up to 100 years; elephants live to a great age, for centuries even. When Alexander the Great had vanquished the Indian king Porus, he consecrated to the sun an elephant, which had fought courageously for this monarch, and named him Ajax. He set him at liberty after having attached to him an inscription. The animal was found 350 years after. Amongst birds, a pelican lives for 62 years; an eagle died at 103; and ravens and parrots have been known to attain to ages beyond 100 years. At Vienna, there is the skeleton of a swan which lived for 307 years. Dolphins and sword-fish reached the age of 30 years. Cuvier supposed that whales live 1000 years. The greatest age of man or animals is, however, far out-distanced by that of some trees; for instance, in the vast forests of North America veterans have fallen to the woodman's axe whose age was to be reckoned not by hundreds, but by thousands of years. Amongst European trees the oak is the most celebrated for its longevity, and remarkable also for the slowness of its growth. In the forest of Hagenau is the oldest oak in Alsace, and, in all probability, the most aged tree in the entire world. According to tradition, Saint Arbogast had, in the 8th century, built his hermitage beneath the shade of its branches. The bucherons of the forest assign to it an existence of 1300 years. It stands in a very favourable situation, sheltered from the north wind; it has been planted in a piece of ground watered by a rivulet. Not only the trunk, but also the principal branches, are completely hollow, which does not, however, prevent the oak from reassuming its livery of green with the advent of each new season. Throughout all the neighbourhood this antique tree is regarded as the emblem of strength and immutability.

LONGICORNIA, the long-horned and long and narrow bodied group of beetles. They feed on plants; their larvæ often burrow in the wood of trees. In the E. Indies are the genera of the families Trictenotomidæ, Cerambycidæ. See Insects.

LONG PEPPER, Chavica Roxburghii, *Mig.*

Dar-filfil, . . .	ARAB.	Lada-panjang,	MALAY.
Pih-poh, Pih-po-li,	CHIN.	Tabi, ...	MALEAL.
Poivre long, . . .	FR.	Filfil-daraz, . .	PERS.
Lange pfeffer, . .	GER.	Pippali Krishna,	SANSK.
Pepili, ...	GUJ.	Pimenta larga, . .	SP.
Pepe lungo, . . .	IT.	Tipili, ...	TAM.
Chabai-jawa, . .	MALAY.	Pippallu, ...	TEL.

This kind of pepper is the produce of a perennial plant, a native of Bengal, Siam, and the Archipelago. The fruit is hottest in its immature state, and is therefore gathered whilst green, and dried in the sun. It is met with in entire spikes about an inch long, possessing a darkish-brown or grey colour. It has a weak aromatic odour, an intensely fiery and pungent taste, and its properties correspond closely with those of black pepper. Long-pepper root, Pih-poh-mu, CHIN., Piplimul, HIND., in China is deemed to be stimulant, tonic, and peptic.—*Smith.*

LONI or Loonee is a term applied to several salt-water rivers in British India. One of them rises in the Aravalli mountains, near Pokur, in lat. 26° 37′ N., and long. 74° 46′ E. It runs west, nearly parallel with the Aravalli range, and enters the Runn of Cutch by two mouths, the principal of which is in lat. 24° 42′ N., and long. 71° 11′ E., after a course of 320 miles. It receives the Rairee, 88 miles; Sokree, 130 miles; and about 19,000 square miles are drained. The river, notwithstanding the great width of its bed, in some parts of its upper course appears to be scarcely anywhere continuously navigable, being full of micaceous quartz-rock, banks low, and little above the surrounding level. Perhaps the most remarkable feature in the desert is the Loni or Salt River of Marwar. It is the barrier between the fertile lands and the desert; and as it leaves this country for the t'hul of the Chauhan race, it divides that community, and forms a geographical demarcation; the eastern portion being called the Raj of Sooe-Bah, and the western part, Parkur, or beyond the Khar, or Loni.—*Report, Royal Commission.*

LONICERACEÆ. *Lindley.* The honeysuckle tribe of plants, comprising the genera abelia, aidia, diacicarpium, leycesteria, lonicera, mastixia, polyosma, triosteum, sambucus, and viburnum.

Lonicera hypoleuca, *Dne.*, is the Kharmo, Kodi, of Chenab, and Zhiko, Rapesho, of Sutlej.

Lonicera Leschenaultii, *Wall.* Moulli-quedi, TAM. A twining villous shrub, native of the Neilgherries; found in many gardens of the Dekhan, where it grows in great luxuriance; it is easily propagated by cuttings or layers.

Lonicera xylosteum is the Jin-tung and Kin-yin-hwa of the Chinese. Its flowers, stalks, and leaves are valued by the Chinese as a discutient application to carbuncles, abscesses, swellings, sores. Its dried flowers smell like tobacco.—*Smith; Jaffrey; Riddell.*

LONKA, a sect of deist Hindus who worship the 'One' alone, and 'not in temples made by hands,' which they never enter. The mountain top and sylvan solitude are deemed by them more fitting places to pour forth their homage. They credit the missions of the twenty-four tirthankara of the Jains, considering them as superior mortals, whose sanctity and purity of life gained them the divine favour and the reward of 'mookht,' or beatitude.—*Tod's Travels*, p. 357.

LOO-CHOO, called Kiu-Kiu in Japanese, and Lu-Kiu in Chinese, islands to the N.E. of the Patchu group, consist of one large island surrounded by many smaller ones. The large island is well peopled, and extends from lat. 26° 3′ to 26° 53′ N., and long. 127° 34′ to 128° 25′ E., being 58 miles long and about 10 or 12 miles broad. In language and physical form, the Loo-Choo islanders resemble the Japanese, their Buddhism being more imperfect, and their manners more simple. The people in the small islands between the Loo-Choo group and Formosa are Japanese rather than Malay. The largest of the islands in loveliness of landscape, as in the careful attention paid to agriculture, looks like one vast enchanting garden. The principal products of the group are rice, millet, sugar, cotton, tobacco, indigo, and tea; of less importance, bananas, pine-apples, oranges, peaches, and plums. Domestic animals are ducks, geese, swine, goats, cattle, and horses. The chief minerals are iron, coal, and sulphur. The inhabitants make paper, cloths, coarse linens, earthen and lacquered wares, bricks, tobacco pipes, and baskets. Their written character is Chinese. For several centuries back, each successive king has had to seek formal recognition from Japan, but the Chinese emperors since the 15th century have claimed and exercised the prerogatives of investiture. Moreover, in virtue of the tribute paid by the islanders, they have always enjoyed certain privileges granted by the Chinese Government, and held by the latter to establish the virtual sovereignty of China.

LOOM. Nawl, Muhāka, ARAB.; Tānt, Rāch, Rās, HIND.; Aba Aba Kudu, MALAY; Mansaj, PERS. The hand-loom is to be seen in most parts of S.E. Asia and the Archipelago, but the fly-shuttle is rarely used. Both cotton and silk fabrics are woven. During the period anterior to the great advance made by Jacquard, the contrivances at the disposal of the weaver may be divided into three classes. The simplest of these consisted first of the use of healds for figure-weaving in any practicable number and order without machines, as in weaving satins, twills, spots, or small figures. In the second, or diaper weaving (from the Latin Diasper), invented, it is thought, by the silk-weavers of Asia, and known in England in the 11th century, two or more divisions or sets of healds in harness were used, each division containing eight healds connected with treadles. By this system, tablecloths, shawls, and other fabrics of widely various design might be woven. In the third system, the warp was passed through two sets of harness, the first of which formed the pattern, as it were, upon a large scale, the second breaking it up into detail, and completing the necessary minute intersections. This was known technically as the draw-loom. The merit of introducing perforated cards, generally claimed for Jacquard (1801), has been traced back to Bonchon who in 1725 employed a band of pierced paper, pressed by a hand-bar against a row of horizontal wires, arranged like a comb, so as to carry loops through the corresponding blank spaces. Improvements were made in 1728 by M. Falcon, and in 1745 by Vaucanson. But from the Jacquard machine may be said to have been developed the entire series of complex ingenious machinery which has given its marvellous expansion to the European weaver's craft. Among the more marked stages of development stands the

introduction, by Dr. Cartwright, in 1785, of the power-loom, to supersede manual labour, preceded, yet perhaps without his knowing it, by the models of De Gennes, Roberts, and Barber. There are not less than 700,000 power-looms at work in Great Britain, producing daily about 15,000 miles of cloth, and giving employment to 300,000 weavers.

Lace manufacture is the highest and most complicated of the processes of weaving. The first attempt of Mr. Heathcoat in his bobbin-net machine, patented in 1808, was followed up by the more consummate effort of his mechanical genius. The Levers machine, provided with a double-action of Jacquard apparatus, is chiefly employed in weaving guipure or narrow lace, though it can be arranged to produce lace of any width, and even shawls. The Levers lace frame fairly represents the present state of the lace manufacture of Nottingham, and in it is reached as yet the highest or culminating point in that important and attractive industry.—*Barlow on Weaving.*

LOOT. HIND. Plunder. Lootee bazar literally signifies plundering the bazars or shops, but it implies no more than a general rising of the inhabitants. This ancient usage is still preserved in Persia.—*Malcolm's Persia*, ii. p. 6.

LOPEZ SOAREZ formed the first settlement in Ceylon in 1517.

LOPHANTUS RUGOSUS. *Smith.* Ho-hiang and Ho-ken, CHIN. Its rough leaves are used by the Chinese to scour metallic vessels, and are given in infusion in disorders of the stomach and bowels.—*Smith.*

LOPHIADÆ, a family of fishes which includes the anglers, fishing-frog, or sea-devil, and the frog-fishes.

LOPHOBRANCHII, an order of fishes comprising the families Solenostomidæ, Syngnathidæ, and Hippocampenæ, and these include the East Indian genera solenostoma, syngnathus, ichthyocampus, nannocampus, urocampus, doryichthus, cælonotus, stigmatophora, nerophis, protocampus, gastrotokeus, solenognathus, phyllopteryx, acentronura, and hippocampus.

LOPHOPETALUM WIGHTIANUM. *Arnt.* Balpale, CAN. A large handsome tree of the Western Ghats, from Cape Comorin to the Bombay ghats. It grows in the moist forests in the plains of South Canara (at Parapa), but it also ascends the ghats to an elevation of 3000 feet; its timber is much esteemed by the natives.—*Beddome, Fl. Sylv.*

LOPHOPHORUS IMPEYANUS. *Lath.* The monal pheasant of the Himalaya. It is double the size of the pheasant of Great Britain. The male has a crest of great beauty, head and throat has metallic green, wings and plumage steel-blue, and tail reddish-brown. The hen bird is smaller, of a dull brown, and white throat.

LOPHOSPERMUM SCANDENS. *Don.* A beautiful climbing plant with large purple or rose-coloured bell-shaped flowers. It is of fast growth, and well adapted for covering trellis-work.—*Riddell; Jaffrey.*

LOPHOTIDÆ, a family of fishes of the one genus, lophotus. See Fishes.

LOPISIP BARK, a dye-wood of Celebes and other islands of the Eastern Archipelago. Lopisip bark, bunchong bulu wood, and the gaju gum (from undescribed plants), have been introduced into England. They are said to furnish excellent dyes in the Asiatic Islands. Native dyes from Arakan have also been imported, viz. thittel and thedan, yielding red dyes; ting-nget and reros, affording dark-purple dyes; and thit-nan-weng, a chocolate dye.

LOQUAT.

Eriobotrya Japonica, *Lind.* | Mespilus Japonicus, *Thun.*
Lu-kuh, Yung-mai, CHIN. | Yang-ma, . . . CHIN.

This small tree of Japan and China has been introduced all over the Dekhan, the Panjab, and New South Wales. It bears fruit twice in the year, and is highly esteemed both for desserts and preserves. The finest is the second crop, at the end of the cold season, and requires protection day and night from birds and flying foxes. The fruit is of a yellow colour, with thin skin, a sweet acid pulp, one or two seeds in the centre,—sometimes more. The seeds grow easily. It is very common in China, and Fortune found it growing along with peaches, plums, oranges, the Chinese gooseberry Averrhoa carambola, the wanghee Cookia punctata, and the longan and leechee. In China, the fruits of Citrus olivæformis and C. Madurensis are also called Lu-kuh.—*Fortune, Tea Districts*, pp. 7, 30; *Drs. Riddell, Irvine.*

LORANTHACEÆ, the mistletoe group of shrubs, almost invariably parasitical upon other plants, with leaves usually opposite, thick, and fleshy. In tropical countries species abound, some with large, brilliantly-coloured flowers. In India they are found in the mountains of Nepal, the two Peninsulas, and the Archipelago, and have above 400 species, in the genera loranthus, schopfia, and viscum. Roxburgh described eight species, and Wight eleven.

Loranthus globosus, *Roxb.*

Chota mauda, . . BENG. | Kenneli itti kanni, . CAN.

A ramous, shrubby parasite which grows on trees in Bengal.

Loranthus longiflorus, *Desr.*

Pand, . BEAS, KANGRA. | Banda, ... PANJAB.
Parand, . BEAS, RAVI. | Amut, ... SUTLEJ.

A handsome parasite, with branches sometimes 6 or 7 feet long, large broad leaves, and orange-coloured flowers. It is found in the Panjab Himalaya, chiefly on the eastern rivers, from 1500 to 3000 feet, and occasionally higher.—*Dr. J. L. Stewart.*

LORCHA, a vessel in use in the Chinese seas, sometimes employed in war.

LORD, P. B., an Assistant-Surgeon of the Bombay army, author of Memoir on Kunduz; on the Trade with Turkestan; on the Sheep and Goats of Kābul; on the Tribes of the Khaibar; and a Visit to the Plain of Koh-i-Daman, Ghorband, and Hindu Kush. Also author of Medical Memoirs on the Plain of the Indus, in Bom. Geo. Trans., 1836, 1838, i. p. 293; on the Medicines found in the Bazars of Sind, in Bom. Med. and Phys. Trans. iv. p. 127. He was killed in battle at Parwandara, in 1841.

LORD OF THE OXEN, or Shora-pati, a title of the king who drove Semiramis back across the Indus.

LORD OF THE WHITE ELEPHANT, a title of the king of Burma. See Titles.

LORDS OF CREATED BEINGS. Menu describes these as being produced by one of the

Hindu triad, but in a legend they are ascribed to the joint powers of the three great personified attributes of Brahma, Vishnu, and Siva. They are in places called Muni, in other passages they are considered as Brahmadica, or Prajapati, and as Rishi.—*Moor*, p. 91.

LORD'S PRAYER, a form of prayer recommended by the Messiah to his disciples. It is often repeated by Christians in their supplications to the Almighty. It was published in 1548 in 14 languages, by Bibliandro; in 1591 in 26 languages, by Rocca (Bibliotheca Apostolica Vaticana, a fratre Angelo Roccha, Romæ 1591, 4to); in 1592 in 40 languages, by Megiserus (Specimen XL. Linguarum et Dialectorum ab Hieronymo Megisero à diversis auctoribus collectacum quibus Oratio Dominica est expressa, Francofurti 1592); in 1593 in 50 languages, by the same author (Oratio Dominica L. diversis linguis, cura H. Megiseri, Francofurti 1593, 8vo). The Bible has been printed and distributed in India in 25 different languages, in ten of which between 100,000 and 600,000 copies have been printed, and in Tamil 1,560,950 have been issued since 1706, when the Bible was printed in that language. The Bible was printed and issued in Bengali in 1796, and in Malealam in 1816. The whole of the copies printed in the 25 Indian languages is 4,772,621.

LORI, in the Jummoo territory, a religious festival, in which a kid is beheaded and offered to the fire.—*Drew, The Northern Barrier.*

LORIES or Lorikeets are birds of the tribe Scansores, family Psittacidæ, sub-family Loriinæ, and genus Loriculus.

L. vernalis, *Sparrm.*, the Indian lorikeet, is of a grass-green colour, is known as the latkan or pendent, because in captivity they commonly rest and sleep pendent from the wire roof of their cage. This one occurs in Malabar, Travancore, Dharwar, the Sub-Himalaya, Assam, Sylhet, and Burma; and they are commonly known as love birds, a name also applied to the Agapornis of Africa, Psittacula of S. America, and Trichoglossus pumilus of Australia. L. Asiaticus is a Ceylon lori; L. galgulus of the Malay Peninsula, and others in China and the Archipelago. Some of them have bright colours,

> 'Gay, sparkling lories, such as gleam between
> The crimson flowers of the coral tree
> In the warm isles of India's sunny sea.'

A lori of Fiji, Domicella solitaria, is one of the most beautiful parrots. A very handsome scarlet lori was obtained by Macgillivray, closely allied to Lorius domicellus, a bird widely spread over the Indian Archipelago.—*Jerdon; Macgillivray's Voyage*, i. p. 211.

LORIS GRACILIS. *Geoff.*

Stenops gracilis, *V. Hoev.* | Theivanga, . . . TAM.
Nama-theivanga, SINGH. | Dewantsi-pilli, . . TEL.

The Loris gracilis inhabits S. India and Ceylon. It is a species of a genus of mammals, belonging to the family Lemuridæ. Its Tamil name, theivanga, means thin-bodied; and hence a deformed child or an emaciated person has the same epithet applied. The light-coloured variety of the loris in Ceylon has a spot on its forehead, somewhat resembling the namam, or mark worn by the worshippers of Vishnu, and from this peculiarity it is distinguished as the Nama-tha. Its eyes are extracted by the Singhalese as charms, and for love potions.—*Jerdon; Tennent; Horsfield.*

LO-SA, or Lo-za, or Lok-zah, CHIN., is the term applied to the branches of the Chinese green dye plant, when tied up in faggots for sale to the dyer. But there are two kinds of such faggots, one termed pa-hi-lo-sa, or white-skinned green vine branch, and the other hom-hi-lo-sa, red skinned green vine branch. Father Helot states that the people of Canton, on whose mountains the plant grows, call it lieu-lo-chou, willow green tree. Fortune states that a farmer near Hong-tcheou-fu, who had some plantations of the cultivated Rhamnus, named it loh-sah and soh-loh-shu. Mr. Sinclair gives hwuy-chiang-chi, or lee-chi, as the name of a bark used in Foh-kien for dyeing cotton green. The Hong-pi-lo-chou has all the characteristics of a wild shrub. The magnificent lustre is only obtained after immersion in the infusion of the pe-pi-lo-chou. At Ayè, Father Helot was assured that the lo-kao was prepared from the bark of the pe-pi, and the dyers of Khiu-tcheou-fu described a process for dyeing silks and cottons with the pe-pi only. It would seem that the pe-pi alone yields violet, blue, and green, according to circumstances, and a peculiar kind of the lo-kao or green dye on cloth of a watery green tending to azure, with lime or alum; that the hong-pi yields a yellow to impart a green to the colour, and that the lo-kao is impure if the admixture of this yellow be in too great a proportion. The shrubs from which the green dye is obtained are thorny. The Rhamni indigenous to China are—

R. crenatus, *Sieb. and Zuccarini*, Japan.
R. globosus, *Bunge*, North China.
R. lineatus, *Lour.*, Berchemia Loureiriana, *De Cand.*, China, Cochin-China.

Rhamnus tinctorius of China differs from R. chlorophorus only in the shape of the calyx.

M. De Caisne told M. Rondot that an English horticulturist had reared a scrophulariaceous plant, which had been sent to him as the Lo-za.

Ma-ly is the name of a tree growing wild in the province of Hit-cheou, the bark of which is used to dye common cloths.

Toxocarpus Wightianus, *Hooker*, is the Asclepias curossavica of Lour. It is called in Chinese Mali-kiu.

The Chinese have two modes of dyeing green, first, with the flowers of the hoai-hoa and indigo; second, by indigo alone.

LO-SHU. It is known that, in transacting business before the commencement of the Chinese monarchy, little cords were used, with sliding knots, each of which had its particular signification. These are represented in two tables by the Chinese, called Ho-tu and Lo-shu. The first colonies who inhabited Sze-chuen had no other literature besides some arithmetical sets of counters made with little knotted cords, in imitation of a string of round beads, with which they calculated and made up all their accounts in commerce.—*Astley's Voyages*, iv. p. 194; *Lubbock, Orig. of Civil.* pp. 29-31.

LOTA. HIND. A small metal pot, made of brass or copper or iron tinned, used for drinking and ablution by Hindus and Muhammadans.

LOTOPHAGI, an ancient people represented as living on the coast of Africa, near the Syrtes (Herod. iv. 177), and so named from their eating

the lotus. Homer says that whoever ate of the lotus lost all desire of returning to their own country. It has been supposed to be the fruit of Zizyphus (Z. napeca). Mungo Park found a species of Zizyphus in the interior of Africa, which forms a large tree with yellow farinaceous berries of a delicious taste. The natives convert them into a sort of bread, by exposing them some days to the sun, and afterwards pounding them gently in a mortar until the farinaceous part is separated from the stone. This meal is then mixed with a little water, and formed into cakes, which when dried in the sun resemble the sweetest gingerbread. The fruit of several species of Zizyphus is eaten in India. One kind, commonly known by the name Ber, forms a moderate-sized tree in a cultivated state, with oval fruit of a yellowish or reddish colour, and about the size or somewhat smaller than a common plum, which is much esteemed. The taste is mild and sweet, with a slight degree of acidity, probably coming nearer to the taste of dates than any other fruit.

In Persian works, Berri and Jharri are given as its Hindustani, Kinar and Khial as its Persian, and Sidr as its Arabic name, with Nebbe for the fruit. The fruit of the wild kind is dried and powdered, as was done with the lotus of the Lotophagi. This powder, in Arabic, is called Savik-un-Nebbek; in Persian, Arud-i-Kinar; and in Hindi, Ber-Chuñi. The Egyptian lote tree is the handakūk misri.—*Eng. Cyc.*

LOTUS.

Nufar, ...	ARAB.	Nilofar, ...	PERS.

Komol, Ponghuj,	,,	Tamare, . . .	TAM.
Lien-ngau, . . .	CHIN.	Yerra tamare, . .	TEL.
Ambuj, Kangwel,	HIND.	Tellani padmam, . .	,,

Lotus is a name given to three plants; the Nelumbium speciosum, or Egyptian lotus, figured on the ancient monuments of Egypt and India, is now extinct in Egypt, but grows in the south of Asia and in the islands of the Archipelago; one lotus of the ancients was the Melilotus officinalis, and the lotus of the Lotophagi is by some thought to be the fruit of the Zizyphus lotus, *Desfontaines*, but by Munby supposed to be that of Nitraria tridentata, called Damouch by the Arabs of the desert of Soussa, near Tunis. Its berries have intoxicating qualities.

With the ancient Egyptians, and after them with the Buddhists and Hindus up to the present day, in India, Ceylon, Burma, Siam, China, and Japan, the lotus flower of the Nymphæa pubescens, *Willde.*, has been an emblem of peculiar sanctity. It is the Indian or Egyptian lotus. Its large white flowers have a vinous smell. N. rubra, *Roxb.*, and N. versicolor, *Roxb.* are also of India; as also N. edulis, *D. C.*, the roots of which are eaten and medicinal.

The Nile was a sacred river; many of its plants, as the Faba Ægyptiaca, a species of bean, and the Nymphæa, were sacred also; and the former on account of its resemblance to a boat, and the latter from its well-known quality of always floating above the surface of the water, were adopted very generally as symbols of the ark. The Egyptian priests were accustomed to crown themselves with the lotus. The lily of 1 Kings vii. 26, the emblem of the Israelites, is supposed to be the lotus.

The lotus flower among the Hindus enters into all the ornaments of brass vessels used in the temples; it is alluded to in the most popular poems, and their poets say that the lotus was dyed by the blood of Siva that flowed from the wound made by the arrow of Kama, the Indian Cupid, as in Midsummer Night's Dream, Act ii:

'Yet marked I where the bolt of Cupid fell;
It fell upon a little western flower—
Before, milk-white, now purple with Love's wound,
And maidens call it love-in-idleness.'

Moore sang of the water lilies—

'These virgin lilies, all the night
Bathing their beauties in the lake
That they may rise more fresh and bright
When their beloved sun 's awake.'

In the Ratnavali, or the Necklace,—a Sanskrit play written in the 12th century,—Vasantaka says to his lady-love: 'My beloved Sagarika, thy countenance is as radiant as the moon; thy eyes are two lotus-buds; thy hand is the full-blown flower, and thy arms its graceful filaments.' In Hindu theogony, the lotus floating on the water is an emblem of the world; the whole plant signifies both the earth and its two principles of fecundation.

In Japanese mythology we find the goddess Quan-won represented sitting upon the same aquatic plant. In China, the deity upon the lotus in the midst of waters has been long a favourite emblem; and the god Vishnu, in Hindu mythology, is still represented in the same manner. In connection with this diluvian emblem, Diana is mentioned by Strabo, Artemidorus, and Pausanias, by the title of Limnatis, or the maritime deity. In an ancient inscription in Gruter, she is also called Regina undarum, queen of the waves; and Orpheus invokes her under the appellation of preserver of ships. It is possible that an eastern legend may have given origin to the transformation of the nymph Lotis flying from Priapus into the Aquatica lotus.—*Ovid, Metamorph.* ix. p. 341. See Nelumbium; Nymphæa; Padma.

LOUISIADE ARCHIPELAGO is S.E. of New Guinea. It extends about 400 miles in length, by about 160 miles in breadth, where broadest. The centre of the Archipelago is under lat. 10° S., and long. 152° 25′ E. The islands are inhabited by a black Papuan race with woolly hair, and Macgillivray described the natives as dark copper coloured, the hair nearly all frizzled out into a mop, in some instances of prodigious size. The physiognomy varied much; the nose was narrower and more prominent, the mouth smaller, the lips thinner, the eyes more distant, the eyebrows less overhanging, the forehead higher, but not broader than in the Australian; one man, whose head was shaven, had his forehead narrow and receding, appearing as if artificially flattened, thereby giving great prominence and width to the hinder part of the skull; and he often observed the same configuration of head combined with dark-coloured skin and diminutive stature. None had the artificial prominent scars on the body peculiar to the Australians, or wanted any of the front teeth, but the septum of the nose was perforated to admit an ornament of polished shell, pointed and slightly turned up at each end. The lobe of the ear was slit, the hole being either kept distended by a large plug of rolled-up leaf, apparently of the banana, or hung with thin circular ear-rings made of the ground-

down end of a cone-shell (Conus millepunctatus) one and a half inches in diameter, with a central hole and a slit leading to the edge. A piece of cloth-like substance, the dried leaf of the pandanus or some palm, was used by all, passed between the legs, and secured in front and behind to a narrow waistband. Several of the Megapodius duperreyi were seen by Mr. Macgillivray in the Louisiade Archipelago.—*Macgillivray's Voyage*, i. p. 189.

LOUK-KA. The green dye of China, louk-ka, lo-kao, or king-lok, was first made known to Europe in 1845. Its price in China has continued steady at 24 dollars the catty. In China, the green cloths dyed by this material are called liou-sai, but are known to the trade as so-lo-pou, green colour cloth, when dyed by the bark; nghiou-lo-se (green nymphæa colour) and nghiou-lo-pou (green nymphæa cloth), that is, cloth dyed with the lo-kao of the colour of the leaves of the nymphæa. Each piece of liou-sai is one foot or one foot one inch broad, and in 1848 cost from 50 to 53 cents. In addition to the lo-kao, the French consul, M. Montigny, sent one green dye-stuff called pih-chou-elle, ten catties of which cost 4920 sapeques; and another called tong-loh, green paint, said to be prepared from no-me, fifty catties of which cost 20,800 sapeques. Lo-kao or lou-kao, in Chinese signifies green glue or green lac, and all who sent samples of the green dye itself, call it lo-koa or lo-kiao. In Canton it is louk-ko; in Foh-kien, liok-koa and lek-ko. The first considerable consignment of the green dye was received in Paris in 1853, since which date it has become an article of trade. At the Universal Exhibition held at Paris in 1855, samples of green dye were exposed, and Dr. Royle subsequently stated that there were three kinds of the green dye of China, or green indigo from China, from Burma, and from Assam. That from the valley of the Brahmaputra, in Assam, is called roum, and is extracted from a species of Ruellia. This plant, or a nearly allied species, is cultivated with the same object in Pegu and Burma. It is altogether different from the bila-roum, the product of the Wrightia tinctoria, *R. Brown*. Others point to the R. comosa, *Roxb.*, and the Buteræa ulmifolia, *De C.* MM. Edan and Remi in 1854 reported that they had procured a very fine green from the fruit of the lo-za, but were unsuccessful in regard to the bark. Mr. Fortune informed M. Edan that without doubt the bark of the lo-za was employed to furnish the stuff with which to dye cloth green, and that the fruit was used in the preparation of green paint for paper. These points were repeated by M. Remi in 1855. All the experiments hitherto made with the bark and the leaves of the Rhamnus chlorophorus and R. utilis have not been decisive. M. Persoz had succeeded in extracting a yellow dye from the bark of R. chlorophorus and the berries of the R. utilis, but he could not discover a trace of the green dye in the extracts prepared from the berries of both kinds, which were sent to him by the Agri-Horticultural Society of India. Nevertheless the united testimony of Fathers Helot and Aymeri, MM. Arnaudtizon, Edkins, Fortune, and Remi, is to the effect that it is the bark of the branches, and perhaps also of the roots of the R. chlorophorus and R. utilis, but especially of the former, that gives to the green dye that brilliant colour which it assumes under the influence of artificial light. The fruit, at least that of the R. chlorophorus, probably yields a green colouring matter analogous to the bladder green, and differing from the true green dye both in colour and properties. The Chinese declare that other species of the same genus have dyeing properties. The pe-piu-lo-chou is the R. chlorophorus, *De Caisne*, and the hong-pi-to-chou the R. utilis, but until some European chemist shall have discovered traces of the green dye in some of the parts of the plants, the flowers, the berries, the seeds, the leaves, the bark, or the root, it cannot be asserted that the plants are really those the Chinese use to dye their cottons with or from which they prepare the lo-kao. Some European plants dye a green colour; the blue-flowered Scabiosa is used for that purpose in Sweden; the Melissa officinalis yields, under the action of spirits of wine, a permanent green dye, and the Mercurialis perennis yields a permanent blue-green. The green dyes from the Ruellia, Justicia tinctoria, *Lour.*; Adenostemma tinctorium, *Cass.*; Sanseviera læte-virens, *Ham.*; Asclepias tingens, *Roxb.*; Melissa officinalis, *Linn.*, have not yet been examined. Various plants stated to yield a green dye colouring matter have been examined, but in vain, for the green dye of China. These are the Arundo phragmitis, *Linn.*; the artichoke, deadly nightshade, wild chervil, ash tree, lucerne, Lycopersicum esculentum, *Mill.*; Mercurialis perennis, *Linn.*; Ronabea arborea, *Blanco*; the groundsel, and the common field clover. M. Michel obtained tolerable greens from the berries of R. catharticus, *Linn.*, and R. alaternus, *Linn.*, but not improving by artificial light. He found that cloth taken out of the bath with a light nankeen dye, and placed at night on the grass, had assumed towards morning, and long before it was exposed to the rays of the sun, a deep green colour. A damp atmosphere and dew were found to increase the intensity of the tint. The lower side near the grass was scarcely at all coloured, and a cloth left all night in a dark room was found in the morning to be unchanged. M. Persoz found the fruit of a buckthorn to yield a pretty lilac on silk. The green fruit of the R. infectorius, *Linn.* (Avignon berries; R. saxatilis, *Linn.*), Persian berries of R. alaternus, *Linn.*, and R. amygdalinus, *Desf.*, afford a yellow colour. The fruit of the R. frangula, *Linn.*, gathered in July and August before they are ripe, yield, according to Dambourney and Leuchs, a fast and brilliant yellow; according to Buchoz, a green; and when they are ripe, in September and October, they dye a purplish-blue without any mordant, and green, violet and blue violet or blue, according to the nature of the mordant employed. Dambourney obtained on wool, from the juice of the ripe berries fermented, very fine and fast greens, varying from an apple to a dark green. The colouring matter of the berries of the R. infectorius is yellow before they are ripe, and dark purple-red so soon as they have attained maturity. Buchoz notices similar peculiarity in the fruit of the R. catharticus; before ripening it yields a saffron red; after maturity, a green, known as a bladder green, and still later a scarlet. According to Waldstein and Kitaible, the green berries of R. tinctorius have dyeing properties similar to

those of the fruit of R. catharticus, but more esteemed by the dyers. The inner bark of R. infectorius dyes yellow, when fresh; brown-red, when dry. The dry bark of the R. frangula yields a brown or dark red, and the fresh a yellow dye; and the root as well as the bark and seeds of R. catharticus, a yellow and volatile colour, named Rhamno-xanthine, which is dissolved by the alkalies, and converted into a magnificent purple. The bark of R. catharticus and R. alaternus dye yellow; the wood of the latter species dyes dark-blue, and the root of R. infectorius a brown. The leaves of R. alaternus yield a yellow colour, and those of R. frangula a greenish-yellow. A mixture of the cuttings of R. alaternus, which yield a dark-blue, with the fresh bark of the same buckthorn and of R. catharticus, R. frangula, and R. infectorius, which contain a yellow colouring matter, ought to produce a green. The European Rhamni contain a volatile principle, and nearly the same changes take place in the colouring matter of the several species, from red to violet, to blue, to green, and to yellow. The lo-kao possesses similar qualities; and it is possible that the green dye, so remarkable when exposed to light, is a compound of blue and yellow having separately the same property, and united in the bark of R. chlorophorus. But M. Rondot suspects that the supplementary yellow requisite to produce the green of lo-kao is not obtained from one of the Rhamni, but from the hoang-chi, the fruit of Gardenia, or the hoai-hoa, the flower-bud of the Styphnolobium Japonicum. In 1855, when Mr. Robert Fortune was sent to China by the E. I. Company to procure tea-plants for the nurseries in the Himalaya, he was particularly directed to give his attention to plants of that country stated to produce a green dye. Accordingly he sent seeds and samples to the Agri-Horticultural Society of Bengal, from which numerous plants were forwarded to all parts of India. It seems established that the trees from which the green dye is prepared are two species of Rhamni, one wild, called by the Chinese white skin, and which grows in abundance in the vicinity of Kiahing and Ningpo. The other is called yellow skin by the Chinese, is cultivated at Tsoh-kaou-pang, where some thirty men are employed in the preparation of the dye-stuff. The flowers, leaves, roots, bark, and fruit have all been indicated as the part of the plant from which the lo-kao was prepared. Mr. Fortune sent to India and to England plants of both the cultivated and wild species. The wild species is a shrub, and is called hom-bi-lo-za, from the circumstance that when its bark is boiled in water a white scum is formed, which subsequently passes to rose-hom-bi, meaning red scum bark. The pe-pi-lo-chou, or R. chlorophorus, is cultivated between lat. 25° and 36° N., but more especially about lat. 30° and 31° N. The hong-pi-lo-chou, or R. chlorophorus, is mentioned as high as lat. 39° N., and down to lat. 30° N. This seems the hardier buckthorn, and capable of withstanding the severe frosts of Che-li, but it is evident that both species exist in abundance in the northern parts of the province of Che-kiang, over a space of 45 square miles.—*Report on the Green Dye of China.*

LOUNG-KIO, a bird of Chinese Tartary, described by M. Huc. It is about the size of a quail, of an ash colour, with black spots, its eye of a brilliant black, and surrounded with a brigh sky-blue rim. Its legs are covered with lon rough hair, and its feet resemble those of th green lizard, and are covered with a shell so har as to resist the sharpest knife. This singula creature is called by the Chinese Loung-kio, tha is, dragon's foot. They generally arrive in grea flocks from the north, especially when much snov has fallen, flying with astonishing rapidity, s that the movement of their wings is like a showe of hail. When caught, they are extremely fierce —*Huc's Journey*, p. 92.

LOUREIRO, J. DE. Father Loureiro, a nativ of Portugal, author of the Flora Cochin-Chinensis 1 vol., 1790, resided for 36 years in the kingdor of Cochin-China, whither he proceeded as missionary; but finding that Europeans were no permitted to reside there without good cause, h entered the service of the king as chief mathe matician and naturalist. The Flora Cochin Chinensis was published at Lisbon, in 2 volume quarto, in 1790; and a second edition, edited b Willdenow, with a few notes, appeared in octav at Berlin, in 1793. In the herbarium of th British Museum there are several small collection which are of great importance to the India botanist, especially one containing many c Loureiro's plants, which are not readily recog nisable, at all events as to species, by the descri tions in the Flora Cochin-Chinensis. There ar also considerable numbers of specimens forwarde to Sir Joseph Banks by Roxburgh, Hamilton, an Russell, which are occasionally of use in determir ing the species described by Roxburgh. Th British Museum also contains Konig's collection and manuscripts, Kaempfer's Japan and othe plants, and Hermann's herbarium.—*Hooker an Thomson's Flora Indica.*

LOUSE. Jeo, HIND. Of these there ar four kinds,—head louse, Pediculus capitis; bod louse, P. corporis; louse of sick persons, I tabescentium; and pubic louse, P. pubis.

Lice are parasites of the mammalia, with climb ing feet, terminated by pincers, by which the seize the hair of the animals on which they liv Their eggs are known as nits. They are hatche at the end of five or six days, and reproduce a the end of eighteen days. Phthirius pubis ha been found only on white races. In the Sa Range, the Ajuga bracteata is used to kill lice.

Wood lice are of the order Isopode crustacean of the family Cloportidæ.

The flea is the Pulex irritans of man; P. cani P. musculus, and P. vespertilionis are of the do mouse, and bat. In the sandy, rocky parts India, P. irritans is the flea; they are ver numerous. The Hematopinus tenuirostris fle attacks horses. There is a species of Pedicinu peculiar to monkeys.—*Van Beneden.*

LOVE-APPLE, or tomato, the Lycopersicu esculentum, is a native of South America, and of genus of the same family as potatoes. There ar two sorts, single and double; they may be sow immediately the rains commence, in beds; after wards transplanted in rows, two feet apart, an trailed upon sticks of a strong description. the soil is good, they will grow to seven or eig feet in height. The double are the finest, and sown in June, ripen in October. The low branches should be pruned, and a succession

crops may be kept up until April. The small single tomato, with a slight protection from the dry winds, will continue until the rains.—*Jaffrey.*

LOW, COLONEL JAMES, an officer of the Madras army, long employed in the civil administration of the Straits Settlements. He wrote Treatises on Siamese Grammar, Literature, and Government, on Buddha, on the Phrabat, on the Laws of Siam, and on the Soil and Agiculture of Penang.

LOWER BENGAL, a term applied to the districts in the proximity of Calcutta. The Lower Provinces, another term in use, comprise Bengal, Behar, and Orissa. Their area is 193,198 square miles, and, in 1881, population 69,536,861. The Bengal part is intersected by numerous branches of the Ganges and Brahmaputra, the chief of which are the Hoogly, formed by the junction of the Bhagirathi and Jellinghi; the Matabanga, a branch of the Ganges; the Mutlah, a mouth of the Ganges; the Kosi, a tributary of the Ganges; and the Damuda, a tributary of the Hoogly.

L'R PUKHTUN, also L/r Pushtun, a term applied by the Afghan race to their language.

LU. CHIN. A gong.

LUANG PHRA BANG, a Laos district on the Mei-kong, which has largely extended its powers towards the north, and carries on trade with Siam, Cochin-China, and a Chinese race called Lo-Lo.

LUBAN, from Greek Libanos, benjamin; Olibanum; resin of Boswellia thurifera, frankincense; Styrax benzoin. Boswellia serrata, also Styrax benzoin, yield gum benjamin, used as a stimulant, and eaten in betel leaves. The attar or perfumers of India sublime the benzoin acid very purely, and administer it as an aphrodisiac; one seer costs from two rupees to two and a half. The gum-resin of the Boswellia thurifera is also considered as luban by the community.—*Genl. Medi. Top.* p. 144.

LUBANAH. HIND. A caste of agriculturists, also grain carriers, settled in Bagur and Kantul; they live in villages, sometimes mingling with other cultivators, and sometimes having a village exclusively to themselves. They are Sudra Hindus, originally from Gujerat, and are a quiet and inoffensive race, differing widely from the Brinjara, though engaged in the same trade. Brinjara have settled down as agriculturists on waste tracts. They are very careful and thrifty cultivators. There are numerous colonies of them along the right bank of the Ravi.—*Malcolm's Central India*, ii. p. 152.

LUBB-US-SIYAR, a book of travels, by Abu Talib. See Literature.

LUBU, a people apart from the Malays of Menangkabau. They build houses like the Malays. One of their towns is Lubu Sipeking. The Lubu eat fruit, maize, dogs, monkeys, and snakes, but never rice. They are slaves to the raja of Acheen. Lubu Raja peak rises 6200 feet above the sea. It is the highest in the Batta land.

LU-BYO-LAI-THEE-KALA. BURM. Courting time. Burmese girls receive their bachelor acquaintances at 8 P.M. A lamp placed in their casement intimates that they are at home. An old bachelor (Loo-byo-hoing) or old maid (Apyo-hoing) is unknown.

LUCANIDÆ, the group of stag beetles; the mandibles of the males are very large. The larvæ feed on wood, the beetles on sap. Of all the beetles, Lucanus cervus is the most destructive to living trees. Their larvæ live for three and four years in that state in the interior of the trunks of oaks, and about Naini Tal, barely one in ten trees escape from their attacks. They bore circular chambers, penetrating to the heart of the stem, winding into various passages, both up and down the trunk. If felled logs be immersed in water, the larvæ are destroyed. These and the larvæ of Prionus beetles seem exclusively to attach themselves to the oak as their habitation. See Insects.

LUCERNE, Medicago sativa. Rishka, Shasta, PERS. In Afghanistan, lucerne and a trefoil called shaftal are grown for fodder. Panicum Italicum (arzun) and P. miliacum are also grown for fodder. Lucerne is sown in spring and autumn; grows to perfection in three months, after which it can be cut once a fortnight. The plant is often ten or fifteen years old. Shaftal can be cut in three months, and never lasts longer than three years.—*MacGregor.*

LUCHA. HIND. A necklace worn tight round the neck; a skein or bunch of gold wire or silk, etc.

LUCK is the past tense and past participle of the Anglo-Saxon Læccan, to catch, and means anything caught; thus the haul of the fisherman would be his luck. The word used by the Hindu for luck is the name of the goddess Luchmi or Lakshmi, or from the Sanskrit word Luchmee. The Hindu phrase, she is the Lutchmee to her man, signifies that she is the source of good luck to her husband.—*Tr. Hind.* ii. p. 344.

LUCKNOW or Lakhnau, the capital city of the province of Oudh, situated on both banks of the river Gumti, in lat. 26° 51′ 40″ N., and long. 80° 58′ 10″ E. Area, 13 square miles; population in 1881, 261,303 persons. Lucknow was not, by the most probable accounts, founded before the time of raja Jye-chand of Kanouj, the downfall of whose kingdom, at the hands of Shahab-ud-Din in A.D. 1194, saw the last of the Hindu dynasties of Northern India. Owners of the Oudh country, before the early Rajput and Muhammadan settlers, were tribes of Bhai, Arakh, and Pasi. At present the non-Hindu Pasi, Chamar, are numerous; other tribes being Ahir, Brahman, Kshatriya, Kach'hi, Kurmi, and Lodha, with Muhammadans. The Hindus form by far the greatest portion of the agricultural classes. Saadat Khan, founder of the last Oudh kingdom, began life as a Persian merchant of Naishapur, and ended it as the greatest warrior of his age, except perhaps Ahmad Shah. He became subahdar of Oudh in A.D. 1732. Before his death he had made Oudh practically an independent principality. Even in his old age he retained his personal strength and his military skill; and his Hindu foes recorded with awe how he slew in single combat Bhagwant Singh Khichi, and how his troops, when almost beaten, rushed again to the conflict where the long white beard of their chief led the van of the battle.

Ghazi-ud-Din Hyder, son of Saadat Ali Khan (1814), was the first of his line who bore the name of padshah or king. For a hundred years, until the middle of the 19th century, it was the capital of a great Muhammadan kingdom. It was then assumed by the British; but it is still the centre of modern Indian life, the leading city

of native fashion, and the chief school of Indian music, grammar, and Musalman theology. It was taken by the Indian rebels in 1857. It was entered on the 25th August 1857 by Generals Havelock and Outram, and was relieved by General Havelock on the 25th September 1857. The second relief of Lucknow was effected by Sir Colin Campbell on the 17th November 1857; its final capture occurred on the 19th March 1858. Lucknow was so named by Rama, in compliment to his brother Lakshman. The most remarkable objects are the Imambara in the eastern Gothic style, erected to the memory of Asof-ud-Dowla. It consists of buildings of great extent, in two courts; in the inner is the tomb of the founder, on which are placed his turband and sword; the Rumi Darwazah or Constantinople gate; the tomb of Nawab Saadat Ali; the tomb of general Claude Martine; the palace called Dil Kusha.

LUCKPUT, a fort 2¼ miles in circumference, on the bank of the Koree river, at the western extremity of Cutch. The stones from which it was built had been taken from Wagam-chaora-ka-Ghar, a ruined city of the Chaora Rajputs.

LUCULIA GRATISSIMA. *Sweet.* Grows in profusion on the dry micaceous rocks at the Tambur river in East Nepal; in great abundance on Nag-Arjun and some of the other smaller hills in the valley of Nepal; also at Bechiaco and Kulakan. It delights in exposed, rather naked situations, blossoming, according to the situations where it is found, nearly the whole year round. It is also found on the Pandua Hills in Sylhet, flowering in the month of September. Wallich says it is impossible to conceive anything more beautiful than this tree when covered with its numerous rounded panicles of pink-coloured very fragrant large blossoms. Its locality and affinity are interesting, particularly when coupled with the prevalence in the same mountains of two other genera, Hymenodictyon and Hymenopogon, belonging to the same sub-tribe Eucinchoneæ, and therefore equally allied to the true cinchonas; all indicating the part of the Indian territory where these valuable plants might most certainly be grown, and yield a profitable article of commerce. L. pinceana makes a gorgeous show in the Khassya Hills in October.—*Hooker, Him. Jour.* ii. p. 286; *Wallich, Tent. Fl. Nepal*, t. 21.

LUD or Ludi, a Semitic race, the original inhabitants of Asia Minor, Pontus, and Cappadocia as far as the Halys, where the historical Lydians were seated. The race which settled west of Arphaxad is the representative of the Semitics who went into Asia Minor and settled there, but afterwards passed the Halys, when they founded the Lydian empire.

LUDHIANA, a town in the Panjab, in lat. 30° 55′ 25″ N., and long. 53° 36′ E., with a population of 44,163, the greater number being Muhammadans. The Jat rank first both in number and in agricultural importance; they form one-third of the whole population, and nearly two-thirds of the cultivating class. As a race, the Jat are patient, laborious, and enterprising. The Rajputs cluster thickly in the fertile strip by the bank of the Sutlej. Though they hold the richest portion of the district, they are here, as elsewhere, careless and improvident cultivators, and ill fitted for any but a predatory regime.

The mercantile classes are represented by Kshatriya and Banya, also Kashmiri, employed in weaving shawls and woollen goods. The town was founded in 1480 by two of the Lodhi race (then ruling at Dehli), from whom it derives its name. It gives its name to a revenue district. The shrine of a Muhammadan saint, Shaikh Abdul Kadir-i-Jalani, yearly attracts an important religious gathering, frequented by Hindus and Musalmans alike.—*Imp. Gaz.*

LUDWIGIA PARVIFLORA. *Roxb.* i. p. 419.

L. jussiæoides, *Wall.*	L. oppositifolia, *Linn.*
L. diffusa, *Ham.*	L. Zeylanica, *Pers.*
L. perennis, *Linn.*	Jussiæa caryophyllæa, *L.*
Bun lubunga, . BENG.	Karambu, . . MALEAL.

This plant grows in Bengal, the Peninsula of India, and is common in stagnant water, in Tenasserim. It is used in medicine.—*Mason.*

LUDZU country extends westward beyond the Noukiang, and is inhabited by a tribe of that name. Their village consists of a dozen log-houses. The Ludzu are barbarous in their habits and mode of life. Except the Christian converts, who have adopted the ordinary Chinese costume, and who are industrious and peaceable cultivators, the rest of the tribe are a terror to their neighbours, against whom they carry on a continual warfare. In religion they sacrifice fowls to propitiate the evil spirit. In appearance they are darker than any others of the neighbouring tribes, and wear their hair long. Their costume consists of a girdle of cotton cloth or skins; at least the warriors of the tribe, on their way to fight in Yunnan, had no other garments, except a few of the leaders, who wore cloaks of leopard, goat, or fox skins hanging from their shoulders. Their arms, like those of the other tribes, consisted of knives brought from the Khamti country, on the borders of Assam, spears and crossbows. They owe no allegiance and pay no tribute to the Chinese authorities, but occasionally serve as voluntary allies for the sake of plunder, and could muster about 1200 fighting men.

LUFFA AMARA. *Roxb.*

L. plukenetiana, *Ser.*, in D. C. Prodromus.

Kurella, ... HIND.	

The Luffa genus of plants, belonging to the natural order Cucurbitaceæ, owes its name to the Arabic word for L. Ægyptiaca, viz. louff, loof.

Every part of L. amara is remarkably bitter, the fruit is violently cathartic and emetic. The juice of the roasted young fruit is applied to the temples by the natives to cure headache. The ripe seeds, either in infusion or substance, are used as emetics and purgatives.—*Roxb.* iii. p. 715.

Ghia-tori, .		Neti bira, Nune bira,	Tel.

Five-stamened, much cultivated in the rains. It is a long gourd with a striped skin, considered by the natives a delicious vegetable. When quite ripe within, it has no pulp, but is dry and filled with netted fibres, very much interwoven. It is used in Turkish baths as a scrubber. It is a useful product, is of easy culture, and should be trained on a raised mundwa or platform, similar to the snake-gourd, etc.

L. pentandra, L. acutangula, L. clavata, and L. racemosa are cultivated or found wild in all parts of India.—*Genl. Med. Top.; O'Sh.; Roxb.*

LUGGUN. Hind. A large flat hollow basin.

LUGGUR or Laghar, female hawk; Juggur or Jaghar, male; native of Sind, with dark eyes. They are trained for the season, and then let loose; the Falco juggur.—*Gray.*

LUGHAR, a well-affected tribe of Afghans who live near the Kosah tribe, partly in the hills and partly in the plains. Their country extends from Fidore southwards about 30 miles. In these hills is situated the town of Lukkee Surwar, a place venerated by both Hindus and Muhammadans. An annual fair is held here. The pass which runs by this point is one of the chief thoroughfares to Kandahar, and the route traverses the Khutran country to the westward. The Khutran and the Kosah were greatly favoured by the government of Sawun Mull, who desired to use them as a counterpoise against other tribes.

LUGMAN is supposed to have been Æsop.

LUI-SHIN, according to the Chinese, is the spirit that presides over thunder. This figure has the wings, beak, and talons of an eagle. In his right hand he holds a mallet, to strike the kettledrums with which he is surrounded, whose noise is intended to convey the idea of thunder, whilst his left is filled with a volume of undulating lines, very much resembling those in the hands of some of the Grecian Jupiters, and evidently meant to convey the same idea, namely, that of the thunderbolt or lightning.—*Baron Macartney's Embassy*, i. p. 33.

LUK is the Baluch word for a pass or defile, called Kohtul in Persian.—*Pottinger, Trav.* 151.

LUKH. Hind. A reed or flag, which is much used to make floor-mats, resembling the matting made out of Typha elephantina in the plains.—*Powell's Handbook.*

LUKKEE, a range of hills in Sind, length about 50 miles, runs S.E. from Jutteel towards Hyderabad. The centre of the range is in lat. 26° N., and long. 67° 50′ E. Highest part, 1500 to 2000 feet. Between Lukkee and Schwan the mountains have a nearly perpendicular face, towards the Indus above 600 feet high. They are of recent formation, and contain a profusion of marine exuviæ. Huge fissures traverse this range, and hot springs and sulphureous exhalations are of frequent occurrence. See Hot Springs; Khaibar.

LUKUT is the chief tin-producing basin in the south of the Malay Peninsula. It has a large population of Chinese, Malays, and Binua, and its importance induced the king of Salangor for some time to reside there. From Lukut, good Malay paths lead to the Langat on the one side, and Simujong on the other.—*J. Ind. Arch.*, 1850.

LULI. Pers. A dancing girl, a kept woman, a common woman. See Gypsies.

LULLETPUR, in Bundelkhand, noted for the ferruginous spherules which occur in the sandstone strata there.

LUMINOSITY. Sea water, in the deep, is of a deep violet-blue, but often in the ocean are seen luminous sparks or points of light; also a soft, liquid, general, and wide-spread effulgence. Occasionally are moon-shaped patches of steady light and instantaneous recurrent flashes, and a milky sea is often seen. There are many minute ocean creatures, Entomostraca and others, which are luminous at night. Often the globular Noctilucæ are to be seen; they are $\frac{1}{275}$ to $\frac{1}{325}$ of an inch in diameter, and Pyrosoma are also supposed to be causes. The cause of a milky sea is not known, but a bucket of water brought up from one had a small Entomostraca, Megalopas, minute Medusæ, small Porpitæ, Pteropods, Annelids, Globigerinæ, etc., and all night the Crustaceæ gave forth bright spots of luminous light. It is the small Crustaceæ (Entomostraca) and small Medusæ (Medusidæ) which seem to exhibit the more prominent luminous properties; not the larger Medusæ (Lucernaridæ), as Aurelia, Pelagia, Rhizostoma, etc.; the Physophoridæ, the Porpita or Velella, nor the Physalia, or Portuguese man-of-war. The Protozoæ, Noctilucæ, however, retain their luminosity so long as they retain organic contractility. In the majority of cases of luminous annelids, the light manifests itself in scintillations along the course of the muscles alone, and only during their contraction. The Squalus fulgens of the South Seas gives forth a bright phosphorescent light, resembling that of the Pyrosoma. The tunicated mollusc Pyrosoma gives forth a livid greenish phosphorescent glow. The Salpæ, Cleodora, and other points or dots are luminous. On the night of October 30, 1772, Dr. Foster saw a very beautiful exhibition of this sort of sea-light off the Cape of Good Hope, at a few miles' distance from the shore, and while a fresh gale blew. Upon examining the water on which it was displayed, he was convinced that it proceeded from living animalcules. Dr. Sparmann, in the years 1772 and 1775, observed Mollusca and Medusæ in such masses near the surface of the ocean, and moving with such a rising and falling motion, as seemed perfectly adequate to the production of the phenomenon. The Noctilucæ of the ocean are so minute, that seventy of them ranged in a line would only make an inch, and millions could be contained in a wine-glass.

Luminous appearances at sea, observed by Dr. Bennett in the South Pacific, were caused by Medusæ, species of Salpa, Pyrosoma, Cancer, and Scopelus. The molluscs, Nereis noctiluca, Medusa pelagica, *var.* B, and the Monophora noctiluca, when alive, during pleasure emit a weak phosphoric light, generally of a bluish colour. In July 1853, between lat. 12° and 13° N., and long. 50° and 65° E., when the Peninsular and Oriental Steamer *Madras* was on her voyage to Aden, with the sea very high during a gale, at midnight the horizon was visible all round. The sea was of the faintest green colour, almost like milk. The

luminous Scopolus stellatus, *Bennett*, occurs in the Pacific.

Luminous shark is Squalus fulgens, *Bennett*. In a dark apartment at night the entire surface emitted a vivid and greenish phosphorescent gleam, which faded away after the shark died.

Luminosity of land animals is exhibited in the fire-fly, the glow-worm, among the Myriapoda, and the luminous centipede, Geophilus fulgens. In Australia it occurs in a species of Agaricus, which gives out a pale livid light. With the glow-worm (Lampyris) there is neither combustion nor phosphorus, but the light is the product of a nervous apparatus, and dependent on the will of the animal. A species of Agaricus of Australia emits light sufficient to show the time on a watch.—*Humboldt in Jam. Ed. Jour.* v. p. 328; *M. de Quatrefages, Kolliker, quoted by Collingwood; Bennett's Gatherings; Niebuhr's Travels*, i. p. 441; *Hartwig.*

LUMNITZERA RACEMOSA. *Willd.*
Jussiæa racemosa, *Rottl.*
Petaloma alternifolia, *Roxb.*
Combretum alternifolium, *Herb., Madr.*
Pyrrhanthus albus, *Wall.*
Bruguiera Madagascarensis, *Rheede, D.C.*
Hmaing, Yen-yai, BURM. | Kara kundal, . MALEAL.

This tree grows in Madagascar, in the delta of the Ganges, on the banks of salt-water creeks, on the western coast of India, and Malay Peninsula. Its strong and durable wood is used for posts and other purposes in house-building, but, in Calcutta, chiefly for fuel.—*Roxb. Fl. Ind.*

LUMRI or Numri or Luka is a grand subdivision of the Baluch race, and is mentioned by Abul Fazl as ranking next to the Kulmani, and being able to bring into the field 300 cavalry and 7000 infantry. The Lumri are also styled Luka, a familiar term for fox, and are affirmed to be of Jit origin.

The country of the Bulfut tribe of Lumri extends in the direction of Kurachee until, parallel to Tatta, they are met by the Jukia, another Baluch tribe. The Bulfut boast of comprising 12,000 khana or families, and as many fighting men. The Bulfut tribe are denominated Lumri Barani, in contradistinction to the Lumri tribes of Las, called Lassi. In the public records of Sind they are called Namadi, by which designation they are mentioned in the treaty between Nadir Shah and Muhammad Shah of Dehli. There are two important divisions, the Bappakhani and the Amalani. The Lumri are addicted to the use of opium.—*Masson's Journeys*, ii. p. 152.

LUNAR RACES. The Rajput races of India, who trace their descent or origin from the moon, Soma, or Chandra, through Yadu or Jadu, are called Yadava. It has eight branches, of which the Jhareja and Bhatti in Cutch and Jeysulmir are the most powerful. The dynasties which succeeded the great beacons of the Solar and Lunar races, are three in number,—1st, The Suryavansa, descendants of Rama; 2d, The Induvansa, descendants of Pandu through Yudishthra; 3d, The Induvansa, descendants of Jarasandha, monarch of Rajgraha. The Bhagavat and Agni Purana are the authorities for the lines from Rama and Jarasandha; while that of Pandu is from the Raj-Taringini and Rajao. The descendants of Krishna and Arjuna carried down the Lunar line of Indian chieftains, as the Cushites and Lavites from Cush and Lava, sons of Rama, carried down that of the Sun.

The earliest settlement of the Aryan race in India lay probably in that portion of the Panjab which surrounds the upper waters of the Sarsuti or Saraswati river. In the Doab they founded the famous city of Hastinapur, the capital of the Lunar race, who also ruled at Muttra, Kasi or Benares, Magadha, and Behar. The Solar race, on the other hand, gave princes to Ayodhya in Southern Oudh, and founded colonies in many parts of the North-Western Provinces. The Vedas show us the Aryan settlements as almost confined to the upper basin of the Ganges and the Jumna, with a few outlying branches in Tirhut, Western Bengal, the Vindhyan Hills, and the Nerbadda valley; while the south of the Peninsula still remained almost entirely in the hands of the Dravidians. Throughout the whole historical period, the Upper Gangetic valley retained its position as the chief seat of the Aryan supremacy in India, and afterwards the centre of the Moghul empire at Dehli or Agra.

The earliest traditions of the North-Western Provinces cluster round the city of Hastinapur, on the Ganges, in Meerut district, the ancient metropolis of the Pandavas. Only a few shapeless mounds now mark the site where lived the children of the moon, the descendants of Bhârata, whose great war is chronicled in the Hindu epic of the Mahabharata. The poem deals chiefly with the conflict between the five Pandavas, sons of Pandu, and founders of Indraprastha (see Dehli City), and the Kauravas, who held the older capital of Hastinapur. These events, if not absolutely mythical, may be assigned to the 15th century B.C. But the earliest empire in this portion of Upper India of which any certain monuments remain, was that of the Buddhist dynasty of Magadha. The founder of the Buddhist creed, Sakya Muni, was born at Kapila in B.C. 598, and died at Kassia in Gorakhpur district in 543. After his death, the creed which he had preached spread rapidly over Hindustan, and became for many centuries the dominant religion of the Aryan race. See Rajput; Solar Race.

LUNAR ZODIAC. As well as a solar, the Hindus have a lunar zodiac, divided into twenty-eight mansions, called Nakshatra, and believed to have been so divided or invented by Daksha, a mythological son of Brahma; hence their poetical astronomy feign these Nakshatra to be the offspring of daughters of Daksha, and, as diurnally receiving the moon in his ethereal journey, to be the wives of Chandra. Of these wives, Chandra is fabled to have the greatest affection for Rohini, the fourth daughter of Daksha, who, on the complaint of the majority of this pointed partiality, cursed Chandra with a consumption that continued 15 days; but on his due repentance his strength and power were eventually restored. The meaning of this story, which is detailed in the Siva Purana, is an allusion to the waning and waxing moon. Chandra, like the western Lunus, is somewhat proverbial for inconstancy, and tales are related of his adulterous communication of his influences to the radiant spouses of others of the heavenly host.

LUNATIC.

Majzub, . .	ARAB.	Majnun,	HIND.
Lunatique, .	. FR.	Lunatico,	IT., SP.
Mondsuchtige,	. GER.	Alunddo,	
Dewana, . .	HIND.	Paiti, .	TAM.

In Asiatic countries lunatics are numerous. St. Luke, viii. 27, mentions that 'there met him out of the city a certain man, which had devils long time, and ware no clothes, neither abode in any house, but in the tombs.' A deranged person at liberty in the streets is almost a singular object in Britain, but it is a very common sight in India, where such unfortunate beings wander about in all manner of dresses, frequently without any dress at all; some perish while wandering from place to place. The numbers returned in the 1881 census were 50,328 males and 30,776 females. They are not held in any reverence by Hindus, and in but little by Indian Muhammadans. In Arabia and in Egypt they are more objects of awe, and Lane devotes several pages to noticing that there the idiot or fool is vulgarly considered an especial favourite of heaven.

LUNAWARA, capital of Lunawara State, Rewa Kanta, Bombay; a fortified town, situated in lat. 23° 8′ 30″ N., and long. 73° 39′ 30″ E., about 4 miles east of the confluence of the Mahi and Panam rivers.—*Imp. Gaz.*

LUNGA. HIND. In Kangra, a method of rice cultivation by sowing seeds broadcast.

LUNGAR. HIND. Literally anchor. A string of flowers or leaves. Lungar-nikalna, a Muhammadan ceremony. See Langar.

LUNGI or Loongee or Lahunga. HIND. Long pieces of cloth made of silk, or silk and cotton, used as sashes or turbands, or as a scarf thrown over the shoulders and upper parts of the body, or wrapped around the lower part of the body. Some of them, the manufacture of Sind, are very beautiful and rich, where the loom-made goods consist of turband, dhoti, lungi, kamrband, and saree.

Many of the borders of the lungis, dhotis, and sarees are like plain silk ribbons; in some instances corded or ribbed, in others flat. The saree, boonee, bafta, jore, ekpatta, gomcha, etc., of Dacca are now entirely made of imported British yarn.—*Pottinger's Travels; Burton.*

LUNG-KUH, dragon's bones, also an herb.

LUNG NAOU HEANG, dragon's brain perfume. Borneo camphor, product of Dryabalanops camphora of Borneo and Sumatra.

LUNG-NGAU, the dragon's-eye fruit of China.

LUNGOTI. HIND. A narrow strip of cloth worn in India by Hindus and Muhamadans, which is passed between the thighs, and tucked in before and behind to a waist string. It is worn by the men and boys of all the races in British India, whose habits of life necessitate their appearing uncovered in public. The women and girls of British India, however poor, never wear the lungoti; but girls wear, suspended from a string, a silver or gold ornament, shaped like a leaf of Ficus religiosa.

LUNG-TAN, literally dragon's tail, gentian or other bitter root; the root of a species of Erythræa.—*Smith.*

LUNG WONG, the dragon king, is the rain god of the Chinese. He is worshipped on the 1st and 15th of each lunar month, with sacrifices of a sheep, a pig, and fowls; but the great ceremonials are at the spring and autumnal equinoxes. In seasons of drought, intercessory service extends over three days.—*Gray*, p. 146.

LUP or Luff, HIND., is as much as two hands joined can hold, the Scotch gowpan; but in Benares, Dehli, and the Doab, it means only one handful; in Scotch, luff or loof signifies the hollow of the hand, and hence is derived the term love, used in the scale of the game of whist, when the adversaries score none. It originally meant that they have so many love (luff), *i.e.* so many in hand.—*Jamieson's Scottish Dict.; Elliot, Supp. Gloss.*

LUPINUS ALBUS. Zurmish, Turmuz, HIND., said to be brought from Egypt, and used as a carminative, and said to be useful in leprosy and internal heat. The small blue-white lupin, rose lupin, and Egyptian, flower freely. Some of the species are very common in Egypt, and grown for food, the seed being ground into flour.—*Powell; Riddell.*

LU-PU. CHIN. The civil and criminal courts of justice in China. The government of China is conducted by the Nuy Ko, or interior council chamber, in which there are four chief councillors, two of them Tartars and two Chinese, who bear the titles of Choung-thang and Ko-laou. The Tartar minister presides. The lu-pu are six boards for the conduct of government business, and the provinces of the country are each under a governor, or, where two provinces are united, a governor-general.

LURI, a houseless migratory race in Persia, in many respects with a marked affinity to the gypsies of Europe. They speak a dialect peculiar to themselves, having a king to each troop, and are notorious for kidnapping and pilfering. Their favourite pastimes are drinking, dancing, and music. Both men and women dress in the most fantastic way they can devise, adorning themselves with feathers, skins, berries, shells, and other baubles. They are impudent and immodest in demeanour, and addicted to every species of vice. They pretend to be Muhammadans, but they are avowedly indifferent about it.—*Pottinger's Travels, Beluchistan and Sinde*, p. 153.

LURISTAN, a province of Persia which extends westward for about 270 miles, from the borders of Fars, in lat. 31° 51′ N., to those of Kermanshah, about lat. 34° 5′ N., with an ordinary width of about 70 miles. Luristan is divided into two provinces, Luri-buzurg and Luri-kuchuk, or the Greater and Lesser Luristan. The former is the mountainous country of the Bakhtiari, stretching from the frontiers of Fars to the river Dizful; the latter is situated between the river and the plains of Assyria, being bounded to the north and south by Kermanshah and Susiana. The province of Luri-kuchuk is again subdivided into two districts, Pesh-koh and Pusht-i-koh, Cis and Trans-Alpine Luristan, referring to the great chain of Zagros. The Luristan mountains west of Irak, between Shuster and Isfahan, and from Shuster to near Kermanshah, are occupied by the Bakhtiari tribe, who often wander to other parts. The Mehmasani have branches in Seistan and the hills of Luristan. Luristan-kuchuk is bounded on the north by Burujird and Kermanshah; the river Dizful separates it on the east from the Bakhtiari of Luristan-buzurg, but the boundary line on the south and west is much more uncertain, as the Lur tribes, in their winter migrations, disperse with their flocks over the plains of Dizful, lying to the southward of their mountains, and meet with the wandering Arabs on the Turkish frontier on the west, in the vast Assyrian plains. Luristan-pesh-koh lies east, and Luristan-pusht-i-koh west of the great Zagros chain. The Lur are a great

family, their principal divisions being the tribes of Koghilu, the Lek, and the Kurd. They are not of Arab or Turkish descent, but seem to have always occupied the hilly country which runs from the south-east to north-west of Persia. The Lur do not receive Mahomed and the Koran. They worship Baba Buzurg, and have amongst them seven holy men, whom they regard with little short of adoration. Many of their observances are traceable to a time long prior to Mahomed. They have had attributed to them the custom of formerly meeting at night, supposed to be a remnant of the physiological worship of Anaitis and Mithra.

The four principal tribes who occupy the Pesh-koh are the

Silasile, Dilfun,	Lek tribes.	Amalah, Bala-gheriveh,	Lur tribes.

The Silasile and Dilfun amount to about 30,000 families; the former are the more powerful, also the more unmanageable. The Amalah were formerly very numerous, but have been much reduced since Aga Muhammad Khan, the founder of the present Kajar dynasty, transplanted them into Fars. After his death, it is true, the greater part returned, but their force was broken. A portion of the Amalah Iliyat was found by De Bode encamped at the foot of Mount Istakhr, in the plains of Persepolis. They are styled worshippers of violence, who always submit tamely to any sort of authority, good or bad; whereas the other Lur tribes cannot easily brook oppression. Their number is held to be between 2000 and 3000 families, but it appears to be rather underrated. The Bala-gheriveh do not exceed 4000 families, but are a very trouble-some tribe. The Pusht-i-koh tribes, who bear the name of Feili, are less numerous than those of Pesh-koh; Major Rawlinson estimated them at 12,000 families. They consist of the Kurd, Din-arved, Shuhon, Kalhur, Badrai, Maki. The Feili clan inhabit a portion of the province of Khuzistan. They have two sections, the Pesh-koh and Pusht-i-koh. The Pesh-koh are notoriously predatory, and single travellers or caravans cannot travel with safety. Luristan could raise 4000 or 5000 horse-men, and 20,000 matchlockmen.

The Feili pretend to have more respect for an oath, and to be less bloodthirsty, than their neigh-bours the Bakhtiari; but there is little difference between them.

Independently of the tribes mentioned in Pesh and Pusht-i-koh, there live in the plains of Huru, between Burujird and Khorremabad, the Bajilan and the Beiranevened, who belong to the Lek family.—*Layard; MacGregor*, iv. pp. 287–297; *De Bode's Luristan; Ferrier's Jour.; Rawlinson, Royal Geog. Jour.* ix.; *Strabo*, xi.; *Euphrates and Tigris, by Col. Chesney; Kinneir.*

LUSCINIA, a genus of birds, the species of which, L. philomela and others, are known as nightingales. In Southern Asia, the birds famil-iarly known as bulbuls must not be confounded with the Persian bulbul, which is a species of true nightingale (Luscinia), a genus very closely re-lated to some of the small thrushes of America. There are no true nightingales wild in India; but the Shama, Cercotrichas macrourus, undoubtedly the finest song-bird of that part of the world, is not unfrequently designated the Indian nightin-gale. It is common to India and the Malay countries; there is a second species (C. luzoniensis) in the Philippines, and a third (C. erythropterus) in Africa. The Orocetes cinclorhynchus is also termed shama in the Madras Presidency.—*Blyth.*

LUSHAI, a race dwelling south of the Kookee, and south-west of the Kom Naga in the Tiperah territory, in lat. 23° 30′ N., and long. 92° 30′ E. They dwell at the sources of the Kurnafula or Chittagong river. On the southern frontier of Cachar, they inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of Chatter Choora Hill, and east of Hill Tiperah to the Tepai river is Burmese frontier. In 1848-49 they drove the Kuki from the south into Cachar. In their turn they are being pressed up into Cachar by the Poi, a tribe who are advancing from the south-east.

At the close of 1868 and beginning of 1869, they descended on the territory of the Tiperah raja, and advanced on Sylhet, burning, plundering, and killing; and an expedition was sent against them, with only partial success.

In the beginning of 1871, the Lushai made a prolonged raid on the N.E. Provinces of British India; and in that year an expedition was sent against them, in two columns; one moved south from Cachar, and the other north from Chitta-gong; all captives were recovered, and they pro-mised to live amicably. They are an Indo-Chinese people, speaking a language different from that of the Siamese or Burmese, though related thereto.

LUSIAD, a book written by Camoens, an exile from Portugal; the grotto in which he resided is only a brick and mortar enclosure between two rocks; there is no view from it to the sea, nor of anything else, except the tops of some straggling trees growing in the shrubbery below.—*Frere's Antipodes*, p. 244.

LUSTRAL CEREMONIES are deemed very important by Brahmans, and are attended to, as prescribed in their books, with a degree of minute particularity that appears ridiculous to those not interested or informed on the points to which such lustrations are supposed to have reference; indeed, there is no end to the Hindu lustral cere-monies, to which the Romans also gave the greatest attention. Images are frequently bathed with water, oil, etc. Lingas are constantly washed. Nandina of the Romans presided over the lustral purification of infants on the ninth day of their age. Nandina was, from her office, a form of Diana. In a great many Hindu cere-monies, lustrations make a part; spoons and the argha are therefore in extensive use. The argha in a circular form is called Patra, and is an attribute to Devi. It is sometimes called pana patra, and is seen in many drawings borne by her and others of her family, apparently both as a drinking and ceremonial utensil. The lustral spoons are called Sruva and Druva in Sanskrit; by the Mahrattas and other Hindus, Pulaphi and Achwan; and have different forms, according to the rites or objects of adoration. One such spoon represents Naga, the holy serpent, overspreading Ganesha; in another, the Naga overspreads the image of a deity; and in another, the spread hood of the snake appears to cover Hanuman. The argha is a vessel shaped like a boat, used by the Hindus in lustrations; it is of spout-like form, so that liquids may be poured from it. The Hindu Sth'nanam, after childbirth, is performed

on the 16th day. In this purificatory rite the Muhammadans adhere to the Hebrew forty days. Amongst Hindus, the Sth'nanam is the religious rite of purification, and ordinarily performed once daily, in the early morning; their evening ablution not involving the head, but from the neck. The Abhiangana Sth'nanam is that, generally twice a week, in which the head is anointed with oil, and corresponds to the anointing of the Jewish ceremonial, and to the Indian Muhammadan's Sir-Nahana or head-washing, of which perhaps the initiatory head-washing rite of certain craftsmen in Britain is a remnant; as possibly similarly may be the feet-washing of the British marriage ceremony. In Britain, the bride's feet used to be washed, and in the south of India the engaged son-in-law performs the ceremony palal-kal-kazhu-viradu (TAM.) of washing his intended father-in-law's feet. Mark vii. 2-4 mentions that when the Pharisees saw some of the 'disciples eat bread with defiled (that is to say, with unwashen) hands, they found fault; for the Pharisees, and all the Jews, except they wash their hands oft, eat not, holding the tradition of the elders. And when they come from the market, except they wash, they eat not. And many other things there be which they have received to hold, as the washing of cups and pots, brazen vessels, and of tables.' And, up to the present hour, the Hindu ritual is almost identical. Along the banks of the Ganges, at every large place, crowds of men and women are to be seen at certain hours of the day bathing. In Japan there are bathing houses, in which, at Hakodadi, both men and women of the lower ranks assemble. Mr. Hodgson tells us that on one occasion, at Yedo, the bathers of both sexes indiscriminately sallied out to see them pass, from some twenty of their common cells, in all the natural simplicity of our first parents' costume before their expulsion. On another occasion, when Mr. Alcock went, preceded by a band of music, to the Governor's Yamun, all the bathers of both sexes came out, unabashed and without the slightest idea or reflection that they were naked, to gratify their curiosity by a good long gaze on the novel spectacle. — *Moor*, p. 394; *Wanderings of a Pilgrim*, p. 265.

LUTRINÆ, the Otters, a sub-family of the carnivora, several species of which occur in S.E. Asia.

Lutra auro-brunnea, *Hodgson*, of the Himalaya, Neilgherries? and Ceylon mountains?

Lutra barang, *Raffles*, the Barangia varang of Gray, of the Malay Peninsula.

Lutra kutab, *Gray*, *Hugel*, Kashmir.

Lutra leptonyx, *Horsf.*, *Blyth*, clawless otter.

Aonyx Horsfieldii, *Gray*. | Lutra indigitata, *Hodg*.
A. Sikkimensis, *Hodg*. | Chusam, Suriam, . LEPCH.

This otter is found throughout all the Himalaya, south and east to Calcutta, Arakan, and the E. Archipelago. Length of head and body 24 inches, tail 13 inches.

Lutra nair, *F. Cuv.*, common Indian otter.

L. Chinensis, *Gray*.
L. Indica, *Gray*.
Nir-nai, ... CAN.

L. Tarayensis, *Hodg.*, *Ell.*, *Bly*.
Jal-manjer, . . . MAHR.
Anjing-ayer, . MALAY.
Saglahu?. . . . PANJ.
Sag-i-abi, . . . PERS.
Neeru-kuka, . . TEL.

Found from the Indus to the E. Archipelago. Length 46 inches, of which tail is 17. It frequents marine lagoons and rivers. It is very easily domesticated, and in Bengal it is trained to drive fish into the nets. In the Panjab and N.W. Himalaya the skins of the Lutra nair are used for fur caps and postins. It is extensively tamed and trained along the course of the Brahmaputra, as cormorants are trained in China. Fishermen of the Jessore Sunderbans train otters to drive fish into their nets, the otter being rewarded with some fish each time it is successful. These tamed otters have a collar round their necks, and they are secured by it to the prow of the boat, and when required they are slipped like hounds.

Lutra simung, *Raffles*.

L. barang, *Fischer*. | Mustela lutra, *Marsden*.
Anjing-ayer, . MALAY. | Simung, . . . MALAY.

An otter of Sumatra.

Lutra vulgaris, *Erxleben*, *Blyth*, hill otter. L. monticola, *Hodgson*, is the common otter of Europe, and is found in the interior of the Himalaya. Length, head and body 20 to 22 inches, tail 12 to 13 inches.—*Jerdon's Mammals*, pp. 86-89; *Horsfield's Cat.* pp. 115-120; *Powell's Handbook*; *Blyth*.

LUXOR or Lugsor, the ancient Thebes. Luxor temple was begun by Amenhotep III., carried on by Seti I., Rameses II., Horus Sabaco, and Alexander Ægus; and the great pylons erected by Rameses II. are sculptured with battle-scenes similar to those at Abu-Simbel, and inscribed with a version of the heroic poem of Pentaur.

LYCIUM, a genus of plants of the natural order Solanaceæ, the nightshade tribe, of which L. barbarum, *Linn.*, of Asia, Africa, and Europe; L. Chinense, *Mill.*, of China; L. Europeum, *Linn.*, of the Himalaya, are known to occur in the Himalaya and China.

LYCIUM EUROPEUM. *Linn.*

Kangu, Kungu, BEAS. | Mral, Chirchitta, . PANJ.
Ganger, Gangru, HIND.

A small thorny plant of Asia Minor, Sind, and the Panjab, browsed by camels and goats, and used for fuel and wattling. Its fruits are deemed aphrodisiac.—*Dr. J. L. Stewart.*

LYCOPERDON, a genus of fungi. L. pratense occurs in the Panjab and S. India. Other fungi of that province are Polyporus oblectans, Geaster limbatus, G. mammosus, Erysiphe taurica, a boletus infested with Sepedonium mycophilum, Scleroderma verrucosum, an Æcidium, and a Uromyces, both on Mulgedium tataricum, about half-a-dozen agarics, one at an altitude of 16,000 feet above the Nubra river, a Lycoperdon, and Morchella semilibera, which is eaten in Kashmir, and exported when dry to the plains of India. L. giganticum, the Ma-peh of the Chinese, and L. squalmatum, are used medicinally by the Chinese internally and externally.

LYCOPERSICUM, the tomato or love-apple, the produce of South America, a genus of the same family as potatoes, a delicious vegetable, cultivated in many gardens. There are two sorts, single and double; may be sown immediately the rains commence, in beds; afterwards transplanted in rows, two feet apart, and trailed upon sticks of

a strong description. If the soil is good, they will grow to seven or eight feet in height. The double, which are the finest, if sown in June ripen in October. The lower branches should be pruned, and a succession of crops may be kept up until April. The small single tomato, with a slight protection from the dry winds, will continue until the rains.

Lycopersicum esculentum, *Mill.*

Solanum lycopersicum, *L.*	Pomum amoris, *Blackw.*
Wal-mangi, . . BOMBAY.	Thah kali, . . . HIND.?
Khayan mya phung, BURM.	Thak kali,
Fan-kia, ... CHIN.	Tamati, . . . MALAY.
Love-apple, Tomato, ENG.	Maha rata tamati, SINGH.
Wolf peach, . . ,,	Simi takali pallam, TAM.

This fruit is a valuable ingredient in soups and stews, also as a preserve and for sauces, chatnies, garnishing, soups, etc. It produces the best fruit when trained on a trellis; more a luxury than valuable as a vegetable. The large-lobed red and very succulent berries contain much malic acid. The plant is a native of South America, but it is much cultivated in England, in Southern Asia, United States of North America, and in France, Germany, and Italy. Near Rome and Naples, whole fields are covered with it, and scarcely a dish is served up into which it does not enter as an ingredient. There are several varieties cultivated; the best are called the large and small cherry and pear shaped red, and the large and small or cherry-shaped yellow.—*Roxb.* i. p. 570; *Jaffrey's Hints; Riddell's Gardening.*

LYCOPODIACEÆ. *D.C.* The club moss tribe of plants, comprising the genera Lycopodium and Isoetès. The green woods of Tenasserim are often carpeted with the club moss. Mr. Fortune met with a dwarf Lycopodium on the hills of Hong-Kong, which he carried to Messrs. Dent's garden. The old compradore was quite in raptures of delight, and coolies and servants gathered round the basket to admire this curious little plant. I had not, says Fortune, seen them evince so much gratification since I showed them the 'old man cactus,' Cereus senilis, which I took out from England, and presented to a Chinese nurseryman at Canton. On asking them why they prized the Lycopodium so much, they replied, in Canton English, 'Oh, he too much a handsome; he grow only a lecte and a lecte every year; and suppose he be one hundred year ould, he only so high,' holding up their hands an inch or two higher than the plant. This little plant is really very pretty, and often naturally takes the very form of a dwarf tree in miniature, which is doubtless the reason of its being such a favourite with the Chinese. L. aristatum, cernuum, Hookeri, imbricatum, phlegmaria, and Wildenowii occur in India. L. clavatum, of the British moors, grows at Chakoong in the Lachen Lachoong valley, Sikkim, and amongst mosses, the superb Himalayan Lyellia crispa, with the English Fumaria hygrometrica. Lyellia crispa also grows at Chakoong in Sikkim, in the Lachen Lachoong valley. It is one of the most remarkable mosses in the Himalaya mountains, named after Charles Lyell of Kinnordy, the father of the eminent geologist. The Lycopodium is an inflammable powder used in fireworks, obtained from a common moss-like plant.—*Mason; Fortune's Wanderings; Hook. Him. Jour.; Waterston.*

LYCOSA SINGORIENSIS, a black tarantu on the Kirghiz plateau. It is about the size of pigeon's egg, covered with dark brown or blac hair. It is not deadly.—*Schuyler*, ii. p. 128.

LYCURGUS, a lawgiver of ancient Greece, said to have penetrated as far as India.

LYDIA or Lydda, in the plain of Ramla i Palestine, the birthplace of St. George, th patron saint of England. Lydian and oth languages of Lesser Asia were altered to th Hellenic or Pelasgic Greek. See Mar Jurjyus.

LYGODIUM FLEXUOSUM. *Sw.* Bhoot Ra The powder of the leaves are used as a powerf errhine in obstinate headache. Lygodium scan dens, one of the most elegant climbers on th Tenasserim coast, is a species of fern, easil recognised by its habit of running over othe plants, and by the fringed margin of its leaflet from which it is sometimes called fringed fern An allied species is found in the United States.—*Mason, Tavoy.*

LYMNÆA HOOKERII. *Reeve.* The water of the Lachen in Tibet contain many shells c this species of Lymnæa. This is the most alpin living shell in the world, many specimens bein from nearly 17,000 feet elevation.—*Pro. Zoo Soc.* No. 204; *Hook. Him. Jour.* ii. p. 156.

LYMO. CHIN. Printing in China is by system of stereotype, the types being made fro the pear-tree wood, called by them ly-mo. Thei paper is made from refuse paper, rags of silk an cotton, rice-straw, the liber of a species of moru but principally of bamboo.

LYNCH, LIEUTENANT, an officer of the India navy who ascended the Tigris nearly to Nimru in 1838, in the *Euphrates* steamer.—*Layard Nineveh*, i. p. 139.

LYNX. The caracal, or Indian lynx or lyn cat, called the siah-gosh or black-ear, has immens speed, runs into a hare as a dog into a rat. I often catches crows as they rise from the ground by springing five or six feet into the air afte them. It is an eastern custom of great antiquity of training certain feline animals, as the cheet and the caracal or siah-gosh; the lion, too, a it would appear, was trained in ancient times and in Britain and India the otter is employed i fishing, as cormorants are in China.

LYRE BIRD, Menura Australis, also calle mountain pheasant, also native wood pheasant It is a good mocking bird, and imitates the note of the more pleasing songsters. Its elegant tail feathers are sought after for commercial purposes Its principal habitat is New South Wales, an its range does not seem to extend so far to th eastward as Moreton Bay, nor to the westward o Port Philip. It appears to inhabit alike th bushes on the coast, and those that clothe th sides of the mountains in the interior. Th Menura is most shy and difficult to procure.—*G. Bennett, Gatherings.*

LYTHRACEÆ, the Loosestrife tribe, furnishe several useful products. The leaves of Ammanni vesicatoria are applied as a blister in rheumatism the soft yellow wood of the lofty Duabang Sonneratioides readily seasons; several Lager strœmia furnish valuable timbers; the excellen pomegranate fruit is from the Punica granatum Grislea tomentosa flowers are given medicinally and are a dye, and Sonneratia acida wood is goo for modelling, and its fruit is edible.

M

This letter of the English alphabet has epresentative letters in Arabic, Persian, Urdu, anskrit, Hindi, Mahrati, Gujerati, Bengali, riya, Telugu, Tamil, Karnatica, and Malealam. ome nations, however, are unable to sound the tter m, and in its place have used a b. On a ummy from Memphis, and on the sarcophagus f Amyrtæus, we find the name of the god Ammun a written Oben-Ra, and this is the spelling used n a plate of ivory found among the ruins of ineveh, to which distant city the Egyptian style f art had made its way two centuries earlier.—*harpe's Egypt*, i. p. 200.

MA. HIND. Mother; a respectful address to a oman in Asia, Turkey, and Egypt.

MA. CHIN. Fibres of Agave Americana, oehmeria, Corchorus pyriformis, Dolichos tri-obus, jute, Hibiscus cannabinus, linum, sesa-um, Sida urtica, tuberosa, Triumfetta, etc.

MAA. ARAB. Water.

MAADITE ARABS for the most part trace heir origin from Abraham, although, according o Genesis, some must be descended from Abraham's brother Nahor, and his nephew Lot. The nations mentioned in Genesis under the name shmaelite, 'the rams of Nebaioth,' 'the tents of Kedar,' the Kedarenes, the Edomites or Idu-næans, the Amalekites, the descendants of Uz nd Buz, sons of Nahor, the Moabites, and the Ammonites (descended from Lot), the Midianites, were all of this Arab branch of the Semitic family.

MAASH. ARAB., HIND. Food, livelihood. Bad-maash, an evil liver; Be-maash, without em-loy; Madad-i-maash, aid to subsistence, a pension.

MAASIR-i-RAHIMA, a valuable historical work by Muhammad Abd-ul-Baki-ur-Rahim-un-Nahavándi. It relates chiefly to the Dekhan history, and notices the poets of the era.—*Elliot.*

MAAZAM, son of Aurangzeb, on ascending he throne assumed the title of Bahadur Shah. He defeated and slew his brother Azam in a attle near Agra. He died in 1712 at Lahore, aged 72, after a reign of 5 years. He was succeeded by his son Ferokhsir.

MABA BUXIFOLIA. *Pers.*

Ferreola buxifolia, *Roxb.*

rumbeli, . . . TAM.	Utti chettu, . . TEL.
Pishanna, Pisinika, TEL.	Nalla muddee, . . ,,

A small tree of the Circar mountains and of he forests of the Godavery, furnishing a dark-coloured wood, small but remarkably hard and durable. M. geminata, *R. Br.*, also M. fascicu-osa, ebony trees of Queensland. There are everal other species. — *Von Mueller; Voigt; Beddome, Fl. Andh.*

MAB'AR, mentioned in Briggs' Ferishta (i. p. 373), means the place of crossing over, a place of passage or ferry, and has very generally been supposed to be Malabar, as well from the resem-blance of the names as from the position of the latter country in reference to Arabia; but there is no doubt that the appellation really applies to the tract on the eastern coast of the Peninsula, the coast of Madura extending north from Rameswara.

It is possible that this Arabic name was originally a corruption of Marawa, the name of the Hindu state which adjoins Adam's Bridge, and the chief of which state was called Setu Pati, the lord of the bridge. Ritter puts Mab'ar on the west coast, and Lassen (iv. p. 888) says that the name with Ibn Batuta signifies the southernmost part of the Malabar coast; but both learned authors are certainly wrong. Kunstmann, again, says 'it has been recently pointed out that the name applies neither specially to the S.W. nor to the S.E. coast, but to the whole southern apex of the Peninsula.' It is, however, clearly used for the S.E. coast, as Abulfeda precisely says it commences from Cape Comorin.—*Elphinstone's India*, ii. p. 47; *Gildemeister*, pp. 56, 185; *Yule's Cathay*, i. p. 80; *Marsden's Marco Polo*, p. 626.

MA'BUD. ARAB. The adored, one, a title applied by orthodox Muhammadans to God alone. In the Bagh and Bahar the darveshes who narrate the stories which make up the work, commence their discourses with the ejaculation, Ya ma'bud Allah! (O adored God!) as a sort of apology for with-drawing their attention one moment from contemplation of him, and as a suggestion that though addressing their fellow-creatures they have God only in view. This is a mere common-place with the Sufistic darveshes, and is as natural to them as Amen is to a Church of England parish clerk. The assumption of such a title is by no means rare among the self-styled saints of the Shiah rite. Their doctrine starts with the assertion that God is the only real exist-ence, and that everything else is but hypothetical, or at best a reflection of his; and that man, the most perfect expression as well as the ultimate object of creation, is but an emanation from him, and has no higher aim than to return to the divine source whence he sprang. The nearer, therefore, the fanatic feels that contemplation brings him to bewilderment, the nearer he thinks he has drawn to God, and when the slight barrier between religious exaltation and madness is over-leapt, the enthusiastic mystic may and does believe his union with the Deity to be complete, and he proclaims himself one with him, as did the Ma'bud Syud Ma'sum Ali Shah, and as did Mansur of Hellaj, who constantly exclaimed, Ana 'l Hakk, I am the Truth! and was hanged for his temerity in the year 309 A.H. This is the reason why Sufi poets are always talking about their giddiness, their ecstasy, and their fainting with passion. It is the explanation, too, of half the vagaries of the darveshes. See Sufi.

MACACUS, a genus of mammals, of the family Simiadæ, of which there are several species in India, the Malay Peninsula, and Eastern Archi-pelago. Their tails vary greatly in length.

Macacus Assamensis, *M'Clelland.*

M. pelops, *Hodgson.* | Inuus pelops, *Jerdon.*

A native of Assam, of a bluish-grey colour, dark brownish on the shoulder.

Macacus cynomolgus, *Linn.*, common macac.

Simia cynomolgus, *Linn.*, the male.
S. aygulah, *Linn.*, female.
Cercopithecus cynomolgus, *Muller.*

Hare-lipped monkey, ENG.	Jakko of sailors, . ENG.
Egret monkey, . . . ,,	Kra, ... MALAY.

This monkey occurs in the Nicobar Islands, Tenasserim, and all over the Eastern Archipelago. It is intelligent, good-natured, docile, and easily trained to the performance of amusing tricks. In

advancing age it becomes sullen, morose, and mischievous. Dr. S. Muller regards M. auratus of Belanger and M. carbonarius of F. Cuvier as varieties.

Macacus nemestrinus, *Linn.*

Simia nemestrina, *Linn.*	Inuus nemestrinus, *Erxl.*
S. platypygos, *Schreb.*	Papio nemestrinus, *Erxl.*
S. carpolegus, *Raffles.*	
Pig-tailed monkey, ENG.	Bruh sepotong, SUMATRA.
Broh, ... PENANG.	Bruh selapi, . . ,,
Bruh, ... SUMATRA.	Bruh putih, . . . ,,

This macac occurs in Penang, the Malay Peninsula, Sumatra, and Borneo. There are three varieties of it. It is good-natured and intelligent. The natives of Sumatra have taught it to climb the cocoanut palms and throw down the fruit, to select the ripe from the unripe fruit, and pluck no more than its master desires.

Macacus pileatus, *Shaw and Desmarest.* Rilawah, SINGH. This appears peculiar to Ceylon.

Macacus radiatus, *Geoffroy.*

Cercopethecus radiatus, *Kuhl.*	Cercocebe toque, *Geoffr.*
	Bonnet chinois, *Buffon.*
Simia sinica, *Linn.*	
Munga, ... CAN.	Waanur of the . . MAHR.
Madras monkey, . ENG.	Makadu, ... ,,
Bonneted monkey, . ,,	Vella munthi, . MALEAL.
Kerda of . . . GHATS.	Koti, ... TEL.
Bandar, ... HIND.	

When young this monkey is inoffensive, and soon acquires a knowledge of various feats of agility and tricks. It is the most inquisitive and mischievous of its tribe, and its powers of mimicry are not surpassed by any other. With age it becomes more sullen and less amenable to discipline.

MACADAMA TERNIFOLIA. *Von Mueller.*
Helicia ternifolia, *Von Mueller.*

The nut tree of sub-tropical East Australia. The nuts have the taste of hazels. It might be introduced into India.—*Von Mueller.*

MACAO, in lat. 22° 11′ 30″ N., long. 113° 32′ 30″ E., is built on a rocky peninsula. The Portuguese settled there in 1557. They paid a rent of 500 taels, till Governor Ferreira refused it in 1848. The town is regularly built on a high peninsula, which terminates the beautiful island of Macao to the southward. The island is also called Heang-Shan, or the Fragrant Hills. In the 16th century Macao was given up to the Portuguese as a reward for services against some daring pirates, who then infested the neighbouring islands. The most interesting object now to be seen is the cave of Camoens, the author of the Lusiad. Camoens wrote this exquisite poem at Macao. The cave is at the summit of a rock, over which is erected a very elegantly tasteful temple, in which is placed a fine bust of Camoens; on the walls are inscribed some of his choicest lines in the original, to which is also added a Chinese translation. Some of these lines are descriptive of the boundless sea lying beneath.—*Horsburgh; Davies' China; Sirr's China*, i. p. 127.

MACARANGA INDICA. *R. W.*

Putta thamara, . MALEAL.	Vutta thamar, . . TAM.

This tree grows on the Neilgherries, and is common in Travancore. A simple pure gum of a crimson colour is obtained from the tree. It has been used for taking impressions of leaves, coins, medallions, etc. When the gum is pure and carefully prepared, the impressions are as sharp as those of sulphur, without its brittleness; the exudation so far as known is an entirely unknown production. Is used in medicine.—*M. E. of* 1857; *Drury's Useful Plants.*

MACARANGA ROXBURGHII. *Wall.*

Osyris peltata, *R., W. Ic.*	Boddi chettu, . . TEL.

A shrub of the Circars and Tavoy. All the young parts are covered more or less with soft, resinous, adhesive matter, smelling strongly of turpentine.—*Voigt.*

MACARANGA TOMENTOSA. *W. Ic.*

Upligi, Upalkar, . CAN.	Kanda, . . SINGH.
Chenthakanni, . . ,,	Vatte kanni, . TAM.
Chanda, . . . MAHR.	

A small or middling-sized tree, is of very rapid growth. It is very common in all the western forests of Madras, Bombay, and Ceylon, up to 3000 feet, generally affecting old clearings of forest, and often planted for shade by coffee-planters. A gum exudes from the tree, which is used medicinally by the natives, and for taking impressions. The timber is soft and useless.—*Thwaites*, p. 274; *Useful Plants; Beddome, Fl. Sylv.*

MACARONI.

Men-kin, ... CHIN.	Simian, . . . HIND.
Save, ... GUJ.	Bughra, ... PERS.
Suin, Siwin, . . HIND.	

A wheaten paste, formed into long, slender, hollow tubes, and used in soups, etc. Macaroni is similar to vermicelli, the only difference consisting in the latter being made into thinner and smaller tubes. The macaroni in use by the people of Persia and India is prepared by themselves. The Indian variety is not in the tubular form. It is properly served up in a boiled state, mixed with milk and sugar. That used by most European households in India is imported, though cooks also make it for ordinary use. In China it is made from wheat flour by kneading and washing with water to get rid of the starch, then squeezed into short lengths. It is reckoned very nutritious, and forms part of the diet of priests and those abstaining from animal food. A macaroni, called Taukiu, is made from bean curd.—*Smith, M. M. China.*

MACASSAR, the Mangkasara of the Celebes, is the chief settlement of the Dutch on the Celebes, and is in lat. 5° 8′ 15″ S., and long. 119° 23′ 30″ E. The N. coast of Celebes is in general high, bold land. Macassar town has a good harbour, defended by Fort Rotterdam. It was occupied in 1810 by the British without any resistance. The Macassar race differ from the Bugi or Wugi in having larger and more open features, as well as in the peculiar ruddiness that is mixed with the brown tincture of their skin. The hair is suffered to fall down and float loosely upon the shoulders, and its ends have a deep red hue. The little boys and girls of the Macassar race are often very handsome, while the lineaments of the latter are sometimes not only faultless in design, but they have withal a shade of thoughtfulness and melancholy, which is rightly esteemed to be the last touch and finishing stroke of personal beauty. These promises of future loveliness vanish before maturity. In the manufacture of gloves and baskets, the workmanship for delicacy and fineness cannot be surpassed. Their writing character is the same as the Bugi, with a deficiency of three or four letters. Many can read. They value themselves as being of a more ancient and noble stock than the Bugi, but

ney esteem it creditable to understand that nguage. It is said that Dr. Leyden translated a ospel into the Bugi. The Damasonium Indicum id the gomuti are common.

Macassar Men is a common name of the Bugi ce. Macassar is the most notorious place in the astern Archipelago for the Bugi people to run nok. It is, in fact, amongst the natives of elebes the national mode of committing suicide, id is therefore the fashionable mode of escaping fficulties. Ten or twenty persons are sometimes lled and wounded at one of the amok. Stabng and killing all he meets, the amok runner at last overpowered, and dies in all the excitent of battle. It is a delirious intoxication, a mporary madness, absorbing every thought and tion.

There are five Bugi states, the system of governent being that of a limited monarchy, with udal nobles styled Arong and Pangwa or freelders. Their vessels take from Singapore, as turn cargo, British calicoes, iron, hardware, uskets, gunpowder, of value from 10,000 to),000 dollars.

The Bugi tribes inhabiting Celebes are celerated for the temper they give to steel, and for eir arms in general. In addition to those of e Malays on the Peninsula, they use defensively e baju ranti (chain jacket), and both a long and round sort of shield. They swear by their risses, for which they have a great veneration, id on going into battle drink the water in which ey have been dipped, uttering imprecations on foe. The inhabitants of Pulo Nias, an island the western coast of Sumatra, wear for armour baju made of thick leather, and a cap to match, overed with the eju, the vegetable substance sembling black horse-hair obtained from the renga saccharifera.—*Journ. Ind. Arch.*, 1852; *Tradescant Lay, Voyage of the Himmaleh in* 857; *Singapore Free Press*, 1837.

MACASSAR OIL. This is supposed to be the il of the Carthamus tinctorius seed. Macassar oison is from Hernandia sonora.

MACAULAY, THOMAS BABINGTON, Lord [ACAULAY, the first legal member of the Council f the Governor-General of India, born 1800, died 859. Since his time, legislative councils, for aking laws for British India, sit at each of the residency towns. On the 16th January 1862, he Governor-General in Council, under the uthority vested in him by the Act 24 and 25 ictoria, cap. 67, sec. 16, appointed Saturday the 8th of January 1862 and the Council Chamber the Government House at Calcutta, for the first eeting of the Council of the Governor-General, r the purpose of making laws and regulations nder the provisions of the Act. On the 17th anuary 1862 there was issued the proclamation hat the provisions of the Act, touching the aking of laws and regulations for the peace and ood government of the presidencies of Fort St. eorge and Bombay, were extended to the Bengal ivision of Fort-William presidency. See Law.

MACAW TREE, the Acrocomia sclerocarpa, *Mart.*, of the West Indies and Brazil, is chiefly aluable owing to its fruit, which yields an oil. The fruit is slightly roasted and ground to a paste, irst in a mill and then on a levigating stone. This paste, having been heated and mixed with -10ths of its weight of boiling water, is put in a bag, and pressed between two heated plates of iron; it yields about 7-10ths or 8-10ths of oil. The oil can be purified, when melted, by filtration. It is then of the consistence of butter, of a golden yellow hue, has an odour like violets, and a sweetish taste. If well preserved, it will keep several years; if spoiled, it loses its golden hue and delightful aroma. It is frequently sold in the shops as palm oil, and enters largely into the composition of toilet soaps. It might be usefully introduced into the East Indies.—*Seeman.*

MACCAW, birds of the tribe Scansores. The true maccaws are large birds, with long tails and gorgeous plumage; some of them blue and yellow, others red and blue. Another group, Conurus, is smaller, usually green, with various markings.

M'CLELLAND, Dr. J., a Bengal medical officer, distinguished by his researches into the natural history of India. In 1842, in the Calcutta Journal of Natural History, he described the freshwater fishes which Dr. Griffith had collected; and in 1843 he described a collection made at Chusan and Ningpo. He wrote on the Indian Cyprinidæ in the As. Res. xix. p. 217; he added birds from Assam and Burma. He also wrote on the timber and other vegetable products of Burma, and edited Griffith's Writings. He rose to be the principal Inspector-General of the Bengal Medical Department. He wrote on the Geology and other Branches of Natural Science in the Province of Kamaon, Calcutta 1835; a Report on the Physical Condition of the Assam Tea Plant, 1837. His personal exertions were mainly instrumental in adding isinglass to the articles of exportation from India to the European markets.

MACDONALD, General, an officer of the E. I. Company's Service, who raised in India the Deolee Irregulars, known as Macdonald's Meenas. He exerted an extraordinary influence over the men, became the chief of the clan, and introduced to them the bagpipes and the glengarry. It is told of the Meenas that, when once exhorted by an enthusiastic missionary to adopt Christianity, they professed their readiness to be converted on the spot if Macdonald Sahib would pass the order.

Mace is the aril or arillus of the nutmeg, and forms around the shell of the nutmeg. It has a pleasant aromatic smell, and a warm, bitterish, pungent taste; it is a favourite medicine of the Hindu physicians, who prescribe it in the slow stages of fever, etc. It is imported into India from Singapore, Batavia, and the Banda Islands. Mace is fleshy, branching, and, when recent, of a bright scarlet colour; but in the process of drying it changes to yellow, orange-yellow, or, what is considered best, golden-yellow, and becomes transparent and horny. It is prepared by drying in the sun for some days. The aril is sometimes flattened out, and dried in a single laver, but

frequently also is pressed together in two layers. The Dutch sprinkle mace with salt water prior to packing it in sacks. London dealers distinguish three sorts of true mace.

Penang Mace is flaky and spread, and fetches the highest price.

Dutch or *Batavian Mace*, a fleshy sort, scarcely so high priced as the Penang mace.

Singapore Mace, a somewhat inferior kind.

The mace of the male or false nutmeg is distinguished from the true mace by being formed of three or four regular bands united at the summit. The chemical properties of this article are analogous to that of the true mace, but the oil is so inferior that the male mace is but of little commercial value, and is used in India only among the poorer natives. It is procurable in most bazars under the name of Ramputri, is of a dark-red colour, and deficient in flavour and aroma.

Mace oil.

Jaiwantry, . .	HIND.	Wassa wasitali,	SINGH.
Jaiputri-ka-tel, .		Jaiputri tailum, .	TAM.

A brown-coloured, highly-fragrant, almost solid soil. It is obtained by expression, and is of a butyraceous consistence. It is very stimulant, and is much employed as a liniment and embrocation in rheumatism.—*Faulkner; M. E. J. R.; Food Adulteration; M'Culloch; Mason; Powell; Poole.*

MACEDONIANS. There were Grecian military colonies established at Alexandria ad Caucasum, Arigæum, and Bazira, and garrisons at Nysa, Ora, Massaga, Peucelaotis, and at Aornis, a mountain range, supposed to be the mountains of Mahaban in the Pir Panjal or Mid-Himalayan range. See Greeks; India.

MACGREGOR, GENERAL, C.M., a distinguished officer of the Bengal army, in which he rose to be Quartermaster-General. He travelled over much of Persia, Baluchistan, Afghanistan. He wrote accounts of the Khugiani, Mohmand, Safi, Shinware, of the Valleys of Jalalabad and Kunar; Gazetteers of Afghanistan, Persia, N.W. India.

MACHAN. HIND. A raised platform or scaffold in a field, from which crops are watched.

MACHARAS or Muchiras. HIND. A reddish brittle gum-resin, stated to be obtained from the Moringa pterygosperma. It is considered by the natives a temperate remedy, is used as an astringent in diarrhœa and special diseases, also for pain in the loins and colic. Usually given moist.—*Powell*, i. p. 333.

MACHA REWA, a river in Garrawara, the principal affluent of the Sher. It rises in the Seoni district, but its course is chiefly through the Bachai subdivision of the Narsingpur district. Coal is exposed in the river-bed two miles above its junction with the Sher.

MACH'HA. HIND. A fish. Mach'hi-mar, a fisherman. Mach'hua, a fisherman, a vender of fish. Mach'hwa, a small boat, a fishing boat.

MACH'H-GIDHI, BENG., is the Hypsirhina enhydras. It is one of the Homalopsidæ, a fresh-water serpent, common in Bengal, Assam, Burma, and Tenasserim. It is a timid reptile.

MACHI. HIND. An insect which injures paddy.

MACHILUS MACRANTHA. *Nees.*

M. macrantha, *Wight.*		M. glaucescens, *Wight.*	
Iruli, .	ANIMALLAY.	Koorma, . .	S. CAN.
Kroma,	NEILGHERRIES.	Ullalu,	SINGH.

This is a very handsome tree when in full blossom. It is most abundant in all the western moist forests of the Peninsula, from Canara down to Travancore and Tinnevelly, and in Mysore and Coorg very abundant from elevations of about 1000 feet up to nearly 6000. It is also found in the Bombay ghats, and in the Central and South-Western Provinces of Ceylon at an elevation of 1500 to 4000 feet. The timber is often used for building purposes; it is light and even grained, and would answer as a substitute for deal. The tree flowers in March and April. Other fine species occur in N. India.—*Thwaites, En. Pl. Zeyl.* p. 254; *Beddome, Fl. Sylv.*

MACHILUS ODORATISSIMUS. *Nees?*

Badror, Muskru,	BEAS.	Chau, Chandna of	RAVI.
Prora, Mitpattar,		Shalanglu, . . .	"
Taura of	CHENAB.	Baghol, Shir of .	SUTLEJ.

A tree of the Panjab Himalaya up to 4050 and 7000 feet, and of Simla and Darjiling. The cocoons of the Mugah silk-worm feed on its leaves in Lakhimpur and Sibsagar.—*Brand. Ex.*, 1878.

MACHIN or Maha-China, Great China, the name by which Hindus style the empire of China. But it is often used pleonastically coupled with Chin to denote the same thing; Chin and Machin, a phrase having some analogy to the term Sind wa Hind, used to express all India, also similarly to Yajuj and Majuj, applied to the northern nations of Asia. The use of a double assonant name, sometimes to express a dual idea, but often a single one, is a favourite oriental practice. As far back as Herodotus we have Crophi and Mophi, Thyni and Bithyni. The Arabs have converted Cain and Abel into Kabil and Habil, Saul and Goliath into Talut and Jalut, Pharaoh's magicians into Risam and Rejam, of whom the Jewish traditions had made Jannes and Jambres; whilst Christian legends gave the names of Dismas and Jesmas to the penitent and impenitent thieves in the gospel. Jarga and Nargah was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing, *e.g.* Zabulistan and Kabulistan, Koli Akoli, Longa Solanga, Ibir Sibir, Kessair and Owair, Kuria Muria, Ghuz and Maghuz, Mastra and Castra (Edrisi), Artag and Kartag (Abulghazi), Khanzi and Manzi (Rashid), Iran and Turan, Crit and Mecrit (Rubruquis), Sandor and Candor (Marco Polo), etc.

The name of Achin in Sumatra appears to have been twisted in this spirit by the Muhammadan mariners as a rhyme to Machin; the real name is Atcheh. In India such rhyming doublets are not confined to proper names; to a certain extent they may be made colloquially, at will, upon a variety of substantives. Thus chauki-auki means chairs simply (chauki), or, at most, chairs and tables; lakri-akri, sticks and stakes.—*Quatremere's Rashid*, p. 243; *D'Avezac*, p. 534; *Prairies d'Or*, i. p. 399, *in Yule, Cathay*, pp. 119, 120.

MACHULAK, a plant with yellow flowers and succulent root, found in the neighbourhood of Liya and Bakkar, west of the Indus. The root is employed as a horse medicine.

MACKENZIE. Colonel Colin Mackenzie, C.B., a native of the island of Lewis, was appointed to the Madras Engineers in 1782, and in 1783 visited Madura, where he began to collect Hindu manuscripts relating to the history of India. He was employed throughout the war with Mysore from 1790 to 1792. He was afterwards employed in

geographical researches in the Dekhan, and after the fall of Seringapatam, he was specially appointed to examine the districts obtained. He was appointed Surveyor-General of India, and in 1821 his manuscripts were purchased by Government from his widow for £10,000, but they had cost him £15,000. A catalogue (Raisonné) was published by Professor Wilson in Calcutta in 1828, and a second catalogue in Madras in 1857 by the Rev. William Taylor. He was celebrated as a geographer, antiquary, linguist, and naturalist. A biographical sketch and literary career of him, by Sir Alexander Johnstone, was given in the London As. Trans. i. p. 333. From 1783 to 1796, he was variously employed south of the Kistna, in Dindigul, Coimbatore, and accompanied the expedition to Ceylon. He died in 1821 in Bengal. Wilson's Mackenzie Catalogue, in 2 vols., reported on 1568 MSS., 2070 local tracts, 8076 inscriptions in Sanskrit, Tamil, Telugu, Karnatica, Hala Kanara, Kanara of the Gaimas, Malealam, Uriya, Mahrati, Hindi, Hindustani, Arabic, Persian, Javanese, Burmese, mostly palm leaves. The Rev. William Taylor's Report is in three volumes. —*Dr. Buist's Catalogue.*

MACKENZIE, GENERAL COLIN, an officer of the Madras army, who distinguished himself in the British wars against the Afghans in 1838 to 1843. He was the means of releasing the British prisoners taken before and after Kábul.

MACKINTOSH, CAPTAIN A., 27th M. N. I., author of an Account of the Origin and Present Condition of the Tribe of Ramoossies, including the Life of Umiah Naik, Bombay 1833; Account of the Tribe of Mhadeo Kolies, and of the Maun Bhows, or Black-clothed Mendicant Devotees, 1836.

MACLEOD, SIR DONALD FRIELL, C.B., K.C.S.I., was the son of General Duncan MacLeod, and was born at Calcutta in 1810. He was employed for 42 years, the last five of which he was Lieutenant-Governor of the Panjab. During the mutiny he did good work, helping Sir John Lawrence to send troops to put down the mutiny in the North-West Provinces. As Lieutenant-Governor of the Panjab, he succeeded Sir Robert Montgomery in 1865. He was made C.B. in 1858, and in 1866 he was created a K.C.S.I. He was crushed to death on the London and Metropolitan Railway.

MACLURA TINCTORIA. *D. Don.*

Broussonetia tinctoria, *Kth.*; Morus tinctoria, *Linn.*

This tree, one of the Urticaceæ, grows to the height of 30 or 40 feet; a yellow dye is obtained from the wood, known as fustic wood in commerce. It has been introduced into the Agri-Horticultural Gardens, Calcutta.—*Jaffrey; Voigt.*

M'MURDO, CAPTAIN J., wrote on the Canals of Scinde; Observations on the Indus, in Bom. Geo. Trans., 1836, 1838; Bombay reprint, i. p. 9; Account of a Supposed Volcano in Cutch, ibid. ii. p. 110; Notes on the Mahra Tribe of South Arabia, Bom. As. Trans., 1847, p. 339; Earthquake in Cutch, 1819, Bom. Lit. Trans. iii.; Former State of Runn of Cutch (in Appendix to Burnes' Bokhara Travels). — *Dr. Buist; Lond. As. Trans.* i. p. 123.

MACNAGHTEN, SIR WILLIAM, a Bengal civil servant, who entered the E. I. Company's service at Madras in 1809 as a cavalry cadet, and in 1814 was transferred to Bengal. In 1830 he accompanied Lord Bentinck in a tour through Upper India, and afterwards held the office of Political Secretary. In 1838 he was sent on a mission to Ranjit Singh, who was then at Adinanagar, and marched with him to Lahore, where a treaty was signed on the 26th June, to the terms of which Shah Shuja agreed. Subsequently armies were formed by Ranjit Singh, Shah Shuja, and the British, and Mr. Macnaghten was sent with the Shah as envoy and minister, and a declaration of war issued on the 1st October 1838. He was killed on the 24th December 1841 by Akbar Khan, son of Dost Muhammad Khan, at a conference.

MACPHERSON. Duncan Macpherson, M.D., a medical officer of the Madras army who served in the first war with China, 1841-42; also in the war of the Crimea against Russia. He wrote on the War with China, also the Antiquities of Kertch, and Researches in the Cimmerian Bosphorus.

MACPHERSON, SIR JOHN, came to Madras at the age of 22, and served the nawab of the Karnatic in various capacities. He revisited England, and secured a seat in Parliament, but returned to Calcutta as second member of Council. His economy of the public monies obtained for him a baronetcy, and on the resignation of Warren Hastings he held the government for 22 months, 8th February 1785 to 12th September 1786.

MACPHERSON, MAJOR SAMUEL, a Madras officer, eldest son of Dr. Macpherson, professor of Greek in King's College, Aberdeen, was born in 1806. While engaged in the Trigonometrical Survey of Orissa, he became acquainted with the fact that the Khand race till then offered up periodical human sacrifices to the deity who presided over the fields, and he did much to suppress it. Lord Dalhousie afterwards named him Political Agent at the court of Sindia, where he gained the entire confidence of the maharaja and of his enlightened minister, Dinkur Rao. Died 15th April 1860.

MACREIGHTIA BUXIFOLIA. *Pers.*

Kaloo-habaraleya-gass, . . . SINGH.

Of this there are four varieties, α, β, in the hot drier parts of Ceylon, in the Ambagamowa district, and near Ratnapura. M. oblongifolia, *Thw.*, is a small tree of Ceylon, near Ratnapura, and in the Singheraja and other forests between that place and Galle.—*Thw. Zeyl.* p. 183.

MACROCLADUS SYLVICOLA is a handsome palm, about 40 feet in height, with somewhat the habit of Cocos nucifera. Crown subhemispherical, dense. Leaves pinnate, ample, 12 to 15 feet long, spreading in every direction. Grows in Malacca, in forests at Ching. Malayan name, Ebool.

MACROCYSTIS PYRIFERA. *Agh.* An enormous seaweed, abounding in the Antarctic Ocean, between the parallels of 40° and 64°. Sometimes from 500 to perhaps 1000 feet.

MACROPANAX UNDULATUM. *Seem.* A timber tree of the Darjiling Hills, one of the Araliaceæ. Another species, M. oreophilum, *Miq.*, is an evergreen tree, growing above 5000 feet, on the Martaban Hills.—*Brandis, Paris Ex.*, 1878.

MACROPHTHALMUS, a genus of the crustacea. M. transversus, *Edws.*, is a species of Pondicherry; M. parvimanus, *Edws.*, Mauritius; M. depressus, *Edws.*, Red Sea.

MACROPIPER METHYSTICUM. Its root, or

rhizome, is used in the South Seas in the preparation of the ava drink. It is chewed, spat in a bowl, and allowed to ferment, and drank. In the Samoan Islands, the large ava bowl is made from the tamanu, Calophyllum inophyllum, and occupies a conspicuous place.—*Elph.*; *Erskine, Western Pacific*, p. 46.

MACROPODIDÆ, the sea spider tribe of brachyurus decapodous crustacea, of the order Decapodes of Milne-Edwards, Legion Podopthalmiens, as under:—

Egeria arachnoides, *Edw.*, Coromandel coast.
E. Herbstii, *Edw.*, Asiatic seas.
E. Indica, *Edw.*, Indian Ocean.
Doclea ovis, *Edw.*, Indian Ocean.
D. hybrida, *Edw.*, Coromandel coast.
D. muricata, *Edw.*, E. Indies.
Composcia retusa, E. Indies.

MACROPODUS PUGNAX, *Cantor*, of Siam, occurs numerously at the foot of hills at Penang. Like the rest of the family, it is capable of living for some time out of water. The Siamese denominate them Pla kat, Pla, fish, Kat, a fighter. The real fighting fish appears to be a variety produced by artificial means, like the varieties of the golden carp of China, and Dr. Cantor named it Macropodus pugnax. When the fish is in a state of quiet, with the fins at rest, its dull colours present nothing remarkable. But if two are brought within the sight of each other, or if one sees its own image in a looking-glass, the little creature becomes suddenly excited, the raised fins and the whole body shine with metallic colours of dazzling beauty, while the projected gill membrane, waving like a black frill round the throat, adds something grotesque to the general appearance. In this state it makes repeated darts at its real or reflected antagonist. But when taken out of each other's sight, both instantly become quiet. A gentleman at Singapore was presented with several by the king of Siam. They were kept singly in glasses with water, fed with larvæ of mosquitos, and lived for many months. The Siamese are as infatuated with the combats of these fishes as the Malays are with their cock-fights, and stake on them considerable sums, and sometimes their own persons and their families. The licence of exhibiting fish fights is farmed, and affords a considerable annual revenue to the king of Siam.—*Cantor*. See Fishes.

MACROTOMIA EUCHROMA, *H. f. et T.*, occurs in the N.W. Himalaya. It is the Lithospermum euromon of Royle, and the Onosma echioides of Linnæus, the Rattanjot or Gao zaban. The bruised root is applied to eruptions, and is sent to the plains as the officinal rattanjot, Potentilla Nepalensis, which is also used in dyeing wool. Royle assigned rattanjot to L. vestitum (See Geranium nodosum). In Lahul, Spiti, and Kanawar, it is used by the Lamas to stain images, and as a red dye for cloth, being applied with ghi or the acid of apricots.—*Dr. J. L. Stewart, M.D.*

MACTRA, a species of the sand clam, is fished up near Macao.

MACULLA is a commercial town on the south coast of Arabia. It is in lat. 14° 30′ 40″ N., and long. 49° 6′ E. Maculla and Shuhur were the two principal ports on the southern coast of Arabia. On the 14th May 1863, Brigadier Coghlan concluded an engagement with nakib Silah-bin-Muhammad of Maculla and nakib Ali Naji of Shuhur, in which they agreed to abolish and prohibit the export and import of slaves.—*Horsburgh; Treaties*, vii. p. 308.

MAD. Arab. Rise, extension. Mad-o-Jazr, flood and ebb. Mad is often used in the complimentary phrases of letters as Mad-o-zillaho, May your shadow increase.

MADA, an ancient gold coinage of the Peninsula of India, known as the Kamala-mada. Mada is the Telugu term for a half pagoda = 48 grains.

MADAD. Hind. An intoxicating mixture of betel-leaf and opium, swallowed or smoked in a pipe.—*W.*

MADAGASCAR ISLAND, 250 miles from the east coast of Africa, extends from lat. 12° to 25° 30′ S., almost 1000 miles long, and 260 miles of average breadth. A lofty granitic plateau, 80 to 160 miles wide and 3000 to 5000 feet high, occupies its central region, bare undulating moors, on which rise peaks and domes of bazalt and granite to a height of nearly 9000 feet. Many islands are on its north and north-east,—the Comora, Bourbon, Mauritius, Roderiques, Amirantes, and Seychelles, with the Chagos and Maldive coral atolls farther east, which are supposed to mark larger subsided islands. The queen is nominally sovereign of the whole island, though practically several of the western tribes are independent. So long ago as 1828, king Ravama, with the aid of England, not only threw off the Sakalava yoke, but, invading their country again and again, compelled them, as well as other tribes, to submit. Madagascar has 66 species of mammals. Near, comparatively speaking, as it is to Africa, and broad as is the belt of forest which surrounds the island in an almost unbroken line, it has no lions, leopards, elephants, monkeys, zebras, or giraffes, and no hoofed animals, except a species of river hog. The special occupants of its tropical woods are the lemurs, which in Africa are unknown. The original relationship between Madagascar and Malaysia is indicated in some measure by the flora, and still more by the fauna; and a hypothesis has been constructed by several naturalists, of the existence of a lost continent, named by Mr. Sclater Lemuria, to which Madagascar and Malaysia are supposed to have both belonged. The coral reefs of the region are a sign that the surviving islands belong to the class called by Mr. Darwin sinking lands. Several mines of excellent coal were being energetically worked in 1881, and the iron and copper manufactures evinced much skill.

One language only is spoken throughout, with trifling varieties of dialect. The inhabitants are of two classes, the Hova, the ruling nation at present, and the Malagasy. Both are of African lineaments, but the Hova fairer than the Malagasy, with hair less woolly, and said in features to bear some remote resemblance to the Malays. The eyes of the Malagasy are large, brilliant, and restless; ears large; nose short and flat, though not so much so as in the Negro; lips moderately thick; height middling, and limbs well proportioned; lower jaws large, and mouth well garnished with teeth; colour dark; hair jet black, thin, and curly, occasionally inclining to woolly; beard very slight. The women are generally small and well proportioned, usually

plain, but some of them very handsome. They are about the size of the native women of India. Christian missionaries abated infanticide and some of the worst horrors of war. They have shamed into secrecy the cruel superstitions connected with divination and charms. They have promoted external modesty and sobriety.

MADAKPOR, a migratory race of the Central Dekhan, known also as Kelikatr.

MADAN, a village with turquois or firozah mines, on the declivity of a mountain, two miles from the village. The firozah stratum in some places is in very narrow seams. There are many different minerals intermixed with the firozah, and most part of the rock contained iron ore. A small wheel is turned by one hand, while the stone is applied by the other, till sufficiently polished. It is then fixed to the end of a small piece of stick with sealing-wax, and exposed for sale.—*Mohun Lal's Travels*, pp. 174, 175.

MADANA, a name of Kama, the Hindu god of love. Festivals are held on the 13th and 14th of the month Chaitra, in honour of Kama. Madana is he who intoxicates with desire. The festivals of the 13th and 14th are called Madana triodasi (thirteenth), and chaturdasi (fourteenth). On these days the Rajputs of Udaipur sing hymns handed down by the bards, 'Hail! god of the flowery bow; hail! warrior with a fish on thy banner; hail! powerful divinity, who causeth the firmness of the sage to forsake him. Glory to Madana, to Kama, the god of gods; to him by whom Brahma, Vishnu, Siva, and Indra are filled with emotions of rapture.' There is no city in the east where the adorations of the sex to Kama-deva are more fervent than in Udaipur, the city of the rising sun. Madanotsava, a festival held in Kama's honour on the 13th and 14th of the month Chaitra.—*Tod's Rajasthan.*

MADAPOLLAM, a cotton fabric, manufactured in the Madras Presidency at Madapollam. The trade in madapollams and long cloths was annihilated by the goods laid down by the British manufacturer in all the bazars of India.

MADAR. HIND. Calotropis gigantea, also C. procera. The stalks of both of these plants yield a strong fibre, used in making fishing-lines; the silky floss of the seeds in the seed-pod has been woven into a fine silk-cotton like fabric, and has been employed to mix with silk, and the juice furnishes a substance very like gutta percha in many of its qualities. It comes to maturity in a year, is perennial, and requires no care. Mr. Strettel estimated the cost of bringing an acre into cultivation, planting four feet apart, at £2, 9s. 8d., after which the only recurring expense would be for harvesting and treatment. He estimates that it will yield a crop of from 5 to 7 cwt. per acre yearly, and the fibre is pronounced equal to good flax, and therefore worth £40 to £50 per ton.

MADARI, a race who pretend to cure snake-bites by charms.

MADARIA, a sect or school of fakirs, founded by Badi-ud-Din Shah Madar, a converted Jew, born at Aleppo A.D. 1050. See Dam-i-Madar.

MADARU, a servile race in Coorg who make baskets. The Madagaru, predial slaves of Coorg, are seemingly identical.—*Wils.* See Madega.

MADD. ARAB. A line drawn across the top of a letter, when addressed to a superior, meaning that the writer of all below the line is a person wholly inferior to the recipient. See Mād.

MADDAL. TAM. An enclosure of a Hindu temple.

MADDANG KAMENHJIR, a Penang wood, used by the Chinese for making boxes.

MADDER.

The dyers of France seem to use madder as a generic term for all plants yielding a red dye. Of these may be enumerated, Ventilago acalyculata, V. maderaspatana, Oldenlandia umbellata, Morinda bracteata, M. citrifolia, M. tinctoria, Rubia cordifolia, and R. tinctorum. In Great Britain, the product known as madder is the long slender roots of the R. tinctorum. The principal supplies of it are obtained from Holland, Belgium, France, Turkey, Spain, and the Balearic Isles, the Italian States, India, and Ceylon. The best soil for it is dry, fertile, and deep sandy loams. It is propagated by dividing and transplanting the long and fibrous roots, but it grows from seed, and between the years 1881 and 1883 the imports into Britain of madder, madder root, garancine, and manjith were—

1881, 19,585 cwts.	£28,633	1883, 21,574 cwts.	£28,197
1882, 23,162 ,,	23,050		

And the imports of madder or manjith into India were as under—

1879-80, . .	3298 cwts.	Rs. 38,548
1880-81, . .	8353 ,,	95,736
1881-82, . .	8241 ,,	92,445
1882-83, . .	17,096 ,,	1,94,013

Garancine is prepared from madder by the action of sulphuric acid. Madder requires three years to come to maturity. It is, however, often pulled in eighteen months without injury to the quality; the quantity only is smaller. When the soil is impregnated with alkaline matter, the root acquires a red colour; in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this colour; but in France the red sells higher, being used for the Turkey-red dye. Madder does not deteriorate by keeping, provided it be kept dry. It contains three volatile colouring matters, madder purple, orange, and red. The latter is in the form of crystals, having a fine orange-red colour, and called alizaine. This is the substance which yields the Turkey-red dye. A field may be planted with madder, and fed off by cattle for three or four years, without any detriment to the roots, which are afterwards as good for dyers' uses as those cultivated in the ordinary way. The flesh, milk, and bones of animals fed upon madder become tinged.

The dyers of India use the chay root (Hedyotis umbellata) and the aal root (Morinda citrifolia), and the manjith (Rubia cordifolia) as substitutes. R. cordifolia, the manjith of India, has white flowers, is a native of Siberia, but is cultivated largely about Assam, Nepal, Bombay, Sind, Quetta, China, etc. It thrives best at elevations of 4000 or 5000 feet in Nepal and Sikkim. The long

tendrils are cut into pieces of a foot long, and laid on the ground. The plant grows over the stumps of trees and trails along the ground. The process of dyeing with madder as practised by native dyers is simple; the dye colour is deepened afterwards when required by alum. The fabrics to be dyed are first steeped in a decoction of main, the galls of the tamarisk, and then submitted to the madder solution hot. It is fixed by alum as a mordant; the galls seem to impart to the cloth a facility for taking the colour.—*Simmonds; M'Culloch; Home News; Poole's Statistics of Commerce; Powell, Handbook.*

MADEGA. KARN., TEL. In the Peninsula of India, the Chakili or Chaklar of the Tamil people, and the Mhang of the Mahratta nation. They are leather manufacturers, shoemakers, executioners. They are a very humble people, dwell in the outskirts of villages, and in many places are almost slaves. They are, in general, black, with slender lower limbs. They are largely addicted to robbery. They eat creatures which die of disease. They have certain territorial rights in the soil, and are bĕgār or forced coolies. Their right to dead carcases is often disputed by the Dher or Pariah, and continued litigation results. In the years 1866 to 1868, the Dher or Pariah and the Madega or Mhang of the village of Dongopura, 25 miles west of Beder, were litigating on this point, and none of the men would come as bĕgār till it was settled. Colonel Tod tells us that the bhangi or scavengers of Ramkhaira mortgaged their rights in the dead carcases of their town to a professional brother of Laisrawun.—*Tod's Rajasthan*, i. p. 624.

MADEIRA WINE, once on every table, has ceased to be used in India. The character of this wine, famous for centuries, was first damaged during the wars with France at the close of the 18th and opening of the 19th centuries, when the high prices tempted many merchants of Funchal to throw inferior wines into the market. The island never produced more than 70 pipes of first-class wine, but in 1825, 14,432 pipes left the island. In the autumn of 1852, the vine fungus, the Oidium tuckeri, appeared. It settles on the leaves in the form of fine white powder, drying up the leaves, preventing them inhaling carbon and exhaling oxygen; the leaves are thin, and the plant falls and dies. In 1864 only 2085 pipes were exported, and in 1865 probably not one pipe of wine left the island.

MADH or Madha. HIND. Honey; sweet; any intoxicating substance; the Saxon mead. Madhaki, a hookah to smoke opium in. Madhava-rapiala, or intoxicating cup, to which the Rajputs have always been accustomed, is a solution of opium, or a cold infusion of the poppy capsules. The atrs or essences, whether of grain, of roots, or of flowers, still welcome the guest, but is secondary to the opiate. See Hookah.

MADHAM, the fourth note in the musical scale, Fa. Madham-sitar, a kind of sitar, *q.v.*; one of the strings in the guitar (Tambura).

MADHAVA, a name of Krishna, from Ma, the goddess Lakshmi, and Dhava, husband.

MADHAVA, a celebrated Brahman, native of Tuluva, who became prime minister to Vira Bukka Raya, king of Vijayanagar in the 14th century. Madhava was brother of Sayana, author of the great commentary on the Veda, in which work Madhava is believed to have shared. Both brothers are celebrated as scholars, and many important works are attributed to them, not only scholia on the Sanhitas and Brahmanas of the Vedas, but original works on grammar and law. Among those of Madhava are the Sarva-Darsana-Sangraha and the Sankshepa Sankara-vijaya. Madhava was a worshipper of Vishnu, and as a religious philosopher he held the doctrine of Dwaita or dualism, according to which the supreme soul of the universe and the human soul are distinct. Sankaracharya, who lived in the 8th or 9th century, was a follower of Siva, and upheld the Vedanta doctrine of Adwaita or non-duality, according to which God and soul, spirit and matter, are all one.

Madhava wrote the Jaiminiya Nyaya Mala Vistara, a work on philosophy. The various styles and subjects in the writings attributed to them point to a variety of authorship. But Dr. Burnell says the 29 writings of Madhava were composed by him between A.D. 1331 and 1386, whilst he was abbot of the monastery of Sringeri.

He is the founder of the Dwaita philosophy, and was known by the name Ananda Tirtha. He established temples at Udipi, Madyatala, Subrahmaniya, and other places; also eight mat'hs or monasteries in Tuluva, below the ghats. The superior gurus of this sect are Brahmans or Sunyasis, who profess cœnobitic observances; the disciples who are attached to the several mat'hs profess also perpetual celibacy, lay aside the Brahmanical cord, carry a staff and a water-pot, go bareheaded, and wear a single wrapper stained of an orange colour with an ochrey clay. They are usually adopted into the order from their boyhood, and acknowledge no social affinities nor interests. They regard Vishnu as the Supreme Spirit, as the pre-eminent cause of the universe, from whose substance the world was made. In Karnata, the sect is presided over by eight Swami or spiritual heads.

Madhava's Sarva-Darsana-Sangraha is a critical review of the principal systems of philosophy which have exercised the greatest minds of India throughout its middle age. From the Vedanta point of view (for Madhava was in 1331 elected Prior of the Smarta Order, founded by Sankaracharya in 8th century), these systems are arranged in a progressive series, beginning with the Charvâka and Bauddha, as being the furthest removed from the Vedanta, and gradually ascending to the Sankhya and Yoga, the systems nearest approaching to Madhava's, and therefore the highest. He successively passes in review the sixteen philosophical systems current in the 14th century in the south of India, and gives what appeared to him to be their most important tenets, and the principal arguments by which their followers endeavoured to maintain them. In the course of his sketches he frequently explains at some length obscure details in the different systems. As a rule, he draws his observations directly from the works of their founders or their chief exponents. One author says he was born A.D. 1199 in Tuluva. Professor Wilson says he lived in the 13th century.—*Wilson; Burnell's Vansa Brahmana; Weber.*

MADHAVACHARYA or Brahma Sampradayi, a small sect of Vaishnava Hindus in Southern India, founded by Madhavacharya. Madhava Brahmans hold the ninth day of the 11th lunar

month as a festival.—*Wils. Gloss.* See Brahmacharya; Brahma Sampradayi.

MADHU. SANSK. Honey; anything sweet; anything intoxicating. Madhu is one of the poetical names of Krishna, viz. the intoxicator (from Madhua, strong drink, and Madhu, the bee, perhaps originating the English mead). Amongst the Hindus, a new-born infant has a little honey put into its mouth as a ceremonial rite, called Madhu prasana. Several of the drinking races of India and Asia still use the cup or piala to welcome the coming guest. Colonel Tod tells us, regarding the love of strong drink and indulgence in it to excess, so deep rooted in the Scandinavian Asi and German tribes, and in which they showed their Getic origin, that the Rajput is not behind his brethren either of Scythia or Europe. Though prohibited by ordinances which govern the ordinary Hindu, the Rajput welcomes his guest with the munwar peala, or cup of request, in which they drown ancient enmities. The heroes of Odin never relished a cup of mead more than the Rajput his madhua; and the bards of Scandinavia and Rajwara are alike eloquent in the praise of the bowl, on which the Bardai exhausts every metaphor, and calls it ambrosial, immortal: 'The bard, as he sipped the ambrosia, in which sparkled the ruby seed of the pomegranate, rehearsed the glory of the Rajput race.' Even in the heaven of Indra, the Hindu warrior's paradise, akin to Valhalla, the Rajput has his cup, which is served by the Apsara, the twin-sister of the celestial Hebe of Scania. 'I shall quaff full goblets amongst the gods,' says the dying Getic warrior; 'I die laughing,' are sentiments which would be appreciated by a Rajput.—*Tod's Rajasthan*, i. 377; *Wilson's Gloss.*

MADHU PAYKA. SANSK. An offering of honey, butter, and curds, presented to a person to whom it is intended to show particular respect, as to a guest, a bridegroom, or Brahman.—*W.*

MADHU RAO I., Peshwa from A.D. 1761 till his death in 1774, at the early age of 28. Madhu Rao II., from 1774, died 1797.

MADHYA-DES, the middle country; according to one authority, the country comprising the provinces of Allahabad, Gorakhpur, Oudh, Dehli, Agra, and part of Bundelkhand, bounded N. by the Siwalik Hills, S. by the confluence of the Ganges and Jumna, E. by the S. branch of the Himalaya, and W. by the Vindhya mountains. Also the Doab; but the Madhya-des of the Mahratta is the country between the Konkan and Kandesh. Central Hindustan or Central India was the Madhya-desa of the ancient Aryans, the middle region of Aryavarta, the Ariya country. In a slokam in the Sanskrit work, the Amarakosha, the ancient boundaries of it are thus defined:—

'Ariavartaha punia bhumi hi
Mad'hiam Vindhya Himava yoho;'

i.e. the Aryan country, the sacred land (lies) between the Vindhya and Himalaya, in this way indicating both the ruling race and the boundaries of the country held by them at the time that Amara Sinha wrote the Amarakosha. The first known dynasty was the Bharata, so called from the first king Bharata, and the last of the dynasty was Samvarama, who was driven westward by the Panchala of Kanouj, B.C. 589. The Bharata kingdom seems to have been established between B.C. 2600 to B.C. 2200.—*Wilson; Dowson.*

MADIVALA, a bard or herald, one of the mixed castes, born of a Vaisya father and Kshatriya mother; also a native of Magadha or South Bahar.

MADKI. A battle was fought here on the 18th December 1845.

MADOORKATI. Papyrus pangorei. A sedge, extremely common about Calcutta, and very extensively employed in Bengal for making the elegant, shining, useful mats for which the capital of India is famous, and which are frequently imported into Europe. Strips of this sedge are suited for platting.—*Royle.*

MADOOWA. Amongst the superstitious ceremonies of the races in Ceylon are a variety of forms for the recovery of the sick,—1, daana, or 2, the food-offering, the harvest-home of the Singhalese, and horn-pulling, a rite in honour of Pattine, performed to drive away pestilence. But the principal ceremony is the Dewal madoowa, which is celebrated on a larger scale, and frequently performed on behalf of a whole village or district which has been afflicted by cholera or fever. It takes place in a madoowa, or temporary building constructed of branches, and decorated with white cloths and garlands; and it generally lasts throughout seven days, on each of which offerings are made of wild flowers and fruit, together with rice and money.—*Tennent's Christianity in Ceylon.*

MADRA, the ancient name for a country and people to the N.W. of Hindustan. Its capital was Sakala, and the territory extended from the Beas to the Chenab.

MADRASSA, any Muhammadan college. One of these was established in Calcutta in the year 1780 by Warren Hastings. Another was established in Madras by Nawab Gholam Muhammad Ghouse, which after his death was taken over by the British, but abolished in 1884.

MADRAS CITY, on the Coromandel coast, is situated in lat. 13° 4′ 6″ N., long. 80° 17′ 22″ E. It is the principal town of the presidency which bears its name, and in 1881 had a population of 405,848 souls. It is the third largest town of British India, the population of Bombay being 773,196, and Calcutta town and suburbs, 736,316; that of the Calcutta municipality being 433,219, its north suburbs 51,658, and its south suburbs 251,439. Madras, Bombay, Calcutta, Rangoon, Kurachee, Singapore, all of them now busy mercantile towns, are alike creations of the British since the 17th century. Madras city is an aggregate of 16 hamlets, viz. Mootial Pettah and Peddoo Naik Pettah, which are commonly called Black Town; Chintadrepettah, St. Thomé, Triplicane, Comaleswaram Coil, Nungumbaukum, Egmore, Vepery, Pursawakum, Nadoombary, Chetput, Peramboor, Veysurpady, Eroongoondum, and Tondiarpet. St. Thomé, 3 miles south of the fort, is famed as having been a Christian hamlet since an early part of the Christian era. This part of the coast has no sheltered harbour, and the waves of the Bay of Bengal break continuously on the shore, with which communication can only be held by means of catamaran rafts, and masula boats of planks sewed together.

The history of the Madras Presidency forms an integral part of the history of India, and occupies many hundred pages of Mill and Wilson, Elphinson, Grant Duff, and other standard works. Alaud-Din, the second monarch of the Khilji dynasty

at Dehli, and his general, Malik Kafur, conquered the Dekhan, and overthrew the kingdoms of Karnatica and Telingana, which were then the most powerful in Southern India. But after the withdrawal of the Musalman armies, the native monarchy of Vijayanagar arose out of the ruins, with its capital on the Tumbudra river. This dynasty gradually extended its dominions from sea to sea, and reached a pitch of prosperity such as had been before unknown. At last, in 1565, after a glorious history of two centuries, Vijayanagar was overwhelmed by a combination of the four Muhammadan principalities of the Dekhan.

Mr. Francis Day, the representative of the English E. I. Company A.D. 1639, obtained permission from the local chieftain, Damerlu Venkatadri Naidu, to settle at the fishing village which is now the site of Madras, and on the 1st March 1640, the Rayel of Chandragiri, a descendant of the Vijayanagar kings, issued a sunnud granting permission to erect a fortress. The city gets its name from Mundir-Raj, but the Rayel wished it to be called Sri-Ranga Patnam, and the Naik wished its name to be Chinnapa Patnam, by which last it is known to the natives to this day. In A.D. 1653 the Agent and Council of Madras were raised to the rank of a presidency.

In 1702, Daoud Khan, Aurangzeb's general, blockaded the town for a few weeks; and in 1741 the Mahrattas attacked the place, also unsuccessfully. In 1746, Madras was besieged by M. de la Bourdonnais, and on the 10th September the city capitulated, but it was agreed to be ransomed by a payment of 11,00,000 of pagodas. On Bourdonnais departing, however, M. Dupleix declared the treaty void, and the British were taken prisoners to Pondicherry, or escaped to Fort St. David, which, till 1752, became their chief town, though in 1749, Madras, after the treaty of Aix la Chapelle in 1748, had been restored to the British. War again broke out between the British and French, and M. Lally a second time besieged Madras, from the 15th December 1758 till the 17th February 1759, when the French withdrew to Pondicherry.

The progress of Madras through the two centuries of its existence has been continuous, though its government has sustained some severe strains. In 1774, the governor, Mr. Wynch, was deposed by orders from the Court of Directors. In 1775, Lord Pigot was appointed, but in 1776 he was deposed by his Council, and confined; he was restored, but in April 1777 he died. In 1770, Sir Thomas Rumbold was appointed Governor of Madras, but dismissed in January 1781. In the beginning of the 19th century much agitation occurred whilst Sir George Hilaro Barlow was governor, and in 1860 Sir Charles Edward Trevelyan was removed from the Governor's office. Its annals contain some of the most romantic episodes of Anglo-Indian history, such as a struggle with the French for supremacy, the exploits of Clive, Wellesley, and Cornwallis,—Assaye and Seringapatam, the mutiny of Vellore. As soldiers, Sir Barry Close, Major Laurence, Generals Harris and Meadows, acquired fame and honours. As soldiers and administrators, it produced the great Lord Clive, Sir Thomas Munro, Governor of Madras, and Sir John Malcolm, Governor of Bombay. As botanists, the missionaries John, Rottler, and Kœnig, and Drs. Roxburgh and Wight, laboured in the Madras Presidency; Dr. Jerdon, author of the Birds of India and of the Mammals of India, was a Madras medical officer; and Dr. Russell and Dr. Day described the fishes of the coasts. Xavier, Ziegenbald, Dubois, and Caldwell have been eminent as Christian missionaries; and the first Government Museum in India was established there in 1851 by Assistant-Surgeon Balfour.

The first essay at forest conservancy in the Madras Presidency was the introduction of a State royalty over teak and other valuable timber in Malabar and Canara in 1807. The existing Forest Department for Madras Presidency was first organized by Dr. Cleghorn in 1856, and placed on a new footing in 1875. The tea plant was introduced on the Neilgherry Hills about 1838.

Madras, as a presidency, has a dissimilar military and a civil jurisdiction. The former extends from Cape Comorin northwards to the Nerbadda, and includes the foreign territories of the maharajas of Travancore, Cochin, Mysore, Hyderabad, and part of the British Central Provinces and British Burma; while its civil sway may be described as of four parts,—the Telugu country of the north, extending northwards from, and including Nellore; the Tamil country of the south, and the Canarese, Tulu, and Malealam districts of the western or Malabar parts of the Peninsula; and these surround a central table-land, elevated about 1000 to 2000 feet above the sea, comprising the inland districts of Salem, Coimbatore, Bellary, Kurnool, and Cuddapah, in which Canarese is the prevailing language.

The several languages have somewhat sharp boundaries,—Telugu, Tamil, Canarese, Malealam, Tulu, Uriya, and hill languages, Hindustani or Urdu being used by the bulk of the Muhammadans, their Labbai section of the Tamil country speaking Tamil, and the Moplah of Malabar speak Malealam.

The area thus indicated is partly British, and in part the territories of the following sovereigns in alliance with the British,—Travancore, Cochin, Banaganapilly, Sundur, Hyderabad, Puducottah, with a population of about 14 millions. The British territory is 141,001 square miles, with a population in 1881 of 31,170,631,—221 to the square mile. In 1871 it was 31,597,872, being a decrease of 427,241. This was the consequence of a famine in 1876-1877, which prevailed in several of the plateau districts, and affected chiefly the males, of whom there was a decrease of 453,192; while of the females the increase was 25,951.

1881. Males, .	15,421,043	1871. Males, .	15,874,235
,, Females,	15,749,588	,, Females,	15,723,637
Total, . .	31,170,631	Total, . .	31,597,872

The famine was the consequence of failure in the rains of 1876. The water supply of the several districts is somewhat varied. The average annual rainfall during a period of years ranged from 17·57 inches in Bellary to 146·31 inches in S. Canara. The N.E. monsoon prevails with heavy weather from the middle of October till the beginning of December, and violent gales sometimes occur in May. Cyclones also occur, and do immense damage. Those of 1807, 1828, 1836, and 1847 were very violent.

The three principal rivers of Madras are the

Godavery, Kistna or Krishna, and Cauvery, each with a large tributary system of its own.

Dodabetta (8640 feet) is the loftiest peak in Southern India. There are, besides, many outlying spurs and tangled masses of hills, of which the Shevaroys in Salem, the Animallay in Coimbatore, and the Palni (Pulney) Hills in Madura are the most important. The Laccadive Islands form, for administrative purposes, a part of Madras Presidency, being attached to the districts of Malabar and South Canara.

The Madras Presidency is eminently agricultural. Its males so engaged numbered 6,779,971, and its females 4,024,032; but there are several important towns.

Madras, . .	405,848	Tanjore, . . .	54,745
Bangalore, .	155,857	Negapatam, . .	53,855
Trichinopoly,	84,449	Bellary, ...	53,460
Madura, .	73,807	Salem, ...	50,667
Calicut, . .	57,085	Coombaconum, .	50,098

The presidency for revenue purposes is arranged into 21 districts, ranging from 4000 to 19,000 square miles in extent. The districts of Ganjam, Vizagapatam, Godavery, and Kistna are on the N.E. coast, to the E. of the Central Provinces and Hyderabad; and other E. coast districts are Nellore, Madras, Chingleput, South Arcot, Tanjore, Madura, and Tinnevelly, the last named being situated in the extreme south of the Peninsula. To the west of Madura and Tinnevelly, and on the W. coast of the Peninsula, are the Travancore and Cochin territories governed by feudatory rajas. North of these states, on the same coast, are the Madras districts of Malabar and South Canara. The central districts of the presidency are those of Coimbatore, Trichinopoly, and Salem, between Malabar and Madras, and those of Bellary, Kurnool, Cuddapah, and North Arcot, between Hyderabad and the Mysore country, which intervenes between Canara and Bellary and Nellore.

There are several large zamindaries,—Venkatagiri, Kalastri, Karvetnuggur, Punganur, Rammad, Shevagunga, and Palicondah, with permanent settlements similar to those in Bengal.

The Madras revenue system is largely that known as the ryotwari, which had its strongest advocate in Sir Thomas Munro in the latter years of the 18th and beginning of the 19th centuries, and means a settlement direct with the occupying cultivator. About the year 1870 there were 3,227,726 farmers and sub-tenants, holding 2,297,158 single or joint farms. Under the ryotwari system, the peasantry pay an average of Rs. 2½ per acre. Of the ryots on the rent-roll only 420 were paying upwards of £100 a year of rent to Government, only 1627 from £50 to £100, only 5641 from £25 to £50, and only 77,408 from £10 to £25. Of all the rest, forming about 90 per cent. of the whole, 118,672 were paying less than £5 a year, 431,569 less than £3, and 1,197,157 —the great majority—less than £1 a year. Only one country of Bengal—Chittagong—presents a parallel to it, and there Government has long tried to induce the peasantry to accept a fee-simple tenure. Mr. Maltby, Acting Governor, in a minute on Sir W. Denison's proposal to remove the poverty and agricultural ignorance of the Madras ryots by model farms and imported machinery, observed that the surest way of promoting improvement is to render land valuable and attract capital to it by such methods as fixing a light and permanent assessment, giving security of title, enlarging the means of irrigation, and facilitating the conveyance of produce. Mr. Pycroft, with similar wisdom, said, 'The main remedies are the lowering of the land assessment where unduly high, and placing it on a permanent footing, security of tenure, development of internal communication, extension of irrigation, reduction of the interference of subordinate revenue officials, cheaper and more prompt administration of justice, and diffusion of education.'

Mr. Dalyell, secretary to the Madras Government, estimated that there was produced an annual supply of 129 million cwt. of grain for the support of the population, or more than 5 cwt. for each person, being more than 1½ lbs. per diem, whereas a family of five can subsist upon 7 lbs. per day, without difficulty; and 3 acres of superior land, supposing 1 acre to be irrigated, or 4 acres of unirrigated land, would support such a family for a year. The produce of an acre of the best rice land varies from 1080 Madras measures (= about 30 cwt.) in the southern districts to 1200 measures (= about 33 cwt.) in Godavery and Kurnool; and the worst rice lands yield 8 to 14 cwt. Mr. Dalyell's estimate of 7 lbs. for five of a family is, however, a scant allowance.

The following inams or revenue-free tenures are found in the Madras Presidency:—(1) Lands held by religious institutions, with an estimated area of 1,458,081 acres, on which the Government assessment would be £242,247; the larger portion of these are held by the pagodas in the southern districts, at Tripati, Conjeveram, Srirangam, Rameswaram, and Madura. (2) Grants for purposes of public utility, chiefly for providing water and shade.

The Chetty and Komati are the chief trading classes; the Kama, Kapu, Naik, Reddi, Wakkaliga, Vellala, and Velama are the agriculturists, with Bant and Nadavar in Canara, and Nair in Malabar. These belong to the well-to-do ranks of the community. They do not usually cultivate with their own hands, and many of them formerly held their lands on a military tenure. The pastoral castes are called Idaiyar in Tamil, and Golla in Telugu. Of the artisan castes, called Kamalar in Tamil and Kamsala in Telugu, nearly one-half are employed with metals. They have succeeded generally in maintaining a higher position in the social scale than is awarded to them in Northern India. The agricultural labourers belong to castes that were predial serfs up to the close of the last century. Even at the present time the conditions of service are not favourable to the labourer.

In the south, the Vannian supply the bulk of agricultural labour. The Maravar and the Kallar, whose acknowledged head is the raja of Puducottah, bear a bad reputation for thieving and general lawlessness. The Upparavar are chiefly engaged in the manufacture of salt and saltpetre; the Wadavar in tank-digging and road-making. The fishing and hunting castes are called Sembadavan in Tamil and Besta in Telugu. Many of them have now betaken themselves to agriculture. The non-Aryans proper, whose Tamil name of Parayen has been adopted into European languages, are called Mala in Telugu, Holia in Canarese, Poliygar in Malealam, and Dher in Mahrati. In the country round

Madras they amount to about one-quarter of the total population. In 1871 the Pariahs returned themselves under more than 200 subdivisions in the census report. The principal wandering tribes are the Brinjara and Lambadi, carriers of grain and salt. The Koravar races wander over a wide area in Nellore and the adjacent districts, and constitute one of the chief criminal classes.

In 1881 there were 519,823 children under instruction; 1,535,790 adults could read and write, and 12,843,296 could neither read nor write. Over 28 millions of the population (28,497,678) follow forms of Hinduism; 711,080 are Christians, and 1,933,561 Muhammadans. The great bulk of the population is of Turanian origin, the Brahmans and Rajputs who claim Aryan origin being only 1,136,111 out of the 31,497,678 of total inhabitants. Christians are more numerous in this presidency than in any other part of the country, the total of British India being 1,862,525. 473,352 of the Madras Christians are of the Romish persuasion. The Muhammadans, 1,933,561 in number, are chiefly of the Sunni sect.

The following are the more numerous of the castes in Madras, Mysore, and Travancore:—

MADREPORIDÆ, a family of zoophytes in which the polypes have ten short tentacles and a stony polypidom, sometimes branched and arborescent, sometimes developed in a leaf-like or fan-like form. They exist in all the warm seas. Large, strongly-branched corals of the genus Madrepora fringe the island of the Mauritius. The corals or coralliaria have already been briefly noticed under that heading. But it may be here mentioned that under the general name of coral animals are included all those members of the Actinozoa which have the power of secreting hard structures of the nature of a skeleton. This skeleton is what is known as the coral or corallum, and the animals which produce it are the so-called coralligenous zoophytes, Actinozoa coralligena. The forms of the class Actinozoa which secrete a corallum, belong to the orders Alcyonaria, Rugosa, and Zoantharia. No corallum is ever produced in the order Ctenophora; even many members of the Zoantharia are destitute of a skeleton, or have but an imperfect one; and that of the Alcyonaria is also often rudimentary.

The class of the Actinozoa is divided into four orders, viz. the Zoantharia, represented by the sea anemones, madreporaria, etc.; the Rugosa, in which occur the genera cyathophyllum, zaphrentis, etc.; the Alcyonaria, which comprise the red coral sea-pens, sea-shrubs, organ-pipe corals, etc.; and the Ctenophora, comprising the Beroë, Pleurobrachia, Venus' girdle, etc.

Order I. Zoantharia (Hexacoralla).

Section. Zoantharia malacodermata, sea anemones.

Fam. i. Actinidæ, no corallum. *Genera*, actinia, adamsia, antheus, bunodes, bolo cera, cancrisocia, corynactis, phymactis, sagartia, tealia, etc.

Fam. ii. Ilyanthidæ, no corallum. *Genera*, ilyanthus, peachia, Edwardsia, cerianthus, halcampa.

Fam. iii. Zoanthidæ, generally a pseudo-skeleton.

Section. Zoantharia sclerobasica, the black corals or Antipathidæ. They form colonies which are attached by the base to some foreign object, and are generally more or less branched and plant-like. It comprises the genera gerardia, cirrhipathes, antipathes, arachnopathes, rhipidopathes, leiopathes, etc.

Section. Zoantharia sclerodermata (Madreporaria) includes most of the coralligenous zoophytes of eastern seas. They always possess a corallum. They propagate by gemmation and fission. The genera are madrepora, dendrophyllia, cladocora, oculina, lophohelia, astrocœnia, astrangia, rhizangia, caulastræa, mœandrina, diploria, latimæandra, rhipidogyra, phytogyra.

The Zoantharia sclerodermata were arranged by Milne-Edwards and Jules Hœime into the four great sections Aporosa, Perforata, Tabulata, and Tubulosa.

Aporosa, with six families, — Turbinolidæ, Pseudo-turbinolidæ, Oculinidæ, Astræidæ, Pseudofungidæ, and Fungidæ.

The two Perforata families are the Eupsammidæ and Madreporidæ.

The genera of the Tabulata are not yet agreed upon, but the Millepora, the Heliopora, the Favositidæ, the Chætetidæ may be named.

The corallum of the Tubulosa is both simple and compound.

Order II. Rugosa possess a well-developed sclerodermic corallum, all fossil.

Order III. Alcyonaria (Octocoralla) comprise the families Alcyonidæ, Tubiporidæ, Pennatulidæ, Gorgonidæ, and Helioporidæ.

The Tubiporidæ are known as the organ-pipe corals; the sea-pens and sea-rods form the Pennatulidæ; and the Gorgonidæ are known as sea-shrubs.

The simplest corallum is most commonly cylindrical, conical, or turbinate (Caryophyllia, Turbinolia, Balanophyllia, etc.), but it may be more or less compressed (Flabellum); also arborescent or dendroid (Madrepora, Dendrophyllia, Lophohelia, etc.), or in clusters of branches springing from a common base (Mussa, Caulastræa, many species of Porites, Madrepora, etc.); others are foliaceous, as species of Madrepora, Pocillopora, Manopora, etc.

Amongst the more important reef-building corals may be mentioned the Astræidæ generally (Astræa, Astrangia, Cladocora, Diploria, Mœandrina, etc.); also the Madreporidæ (Madrepora, etc.); the Poritidæ (Porites, Goniopora, Monti-

pora, etc).; many of the Oculinidæ (Orbicella, Stylaster, Pocillopora, etc.); the majority of the Fungidæ and the Millepores. Various alcyonoid corals (Heliopora, Tubipora) also help with many of the Gorgonidæ and the calcareous algæ (Nullipores and corallines).

The structures raised by them are known as barrier reefs, fringing reefs, and atolls. Fringing reefs are in the immediate neighbourhood of land, in shallow water, either surrounding islands or skirting the shores of continents. Barrier reefs also may either encircle islands or skirt continents, but far from land. The barrier reefs occasionally surround islands. An atoll is a ring-shaped reef enclosing an open lagoon. — *Darwin, Encyc. Britan.* See Corals.

MADURA, a town in the southern part of the Peninsula of India, in the Madras Presidency, in lat. 9° 55′ 16″ N., and long. 78° 9′ 44″ E. It gives its name to a revenue district, lying between lat. 9° 4′ and 10° 44′ N., and long. 77° 14′ and 79° 20′ E., and bounded on the S. by Tinnevelly, Palk's Strait, and the Gulf of Manaar. Madura is on the banks of the Vaiga river. It was the capital of the ancient Pandiyan monarchy, which was overthrown by Muhammadan invaders in the 11th century. Another Hindu dynasty, that of the Naiks of Madura, began about A.D. 1420. Tirumala reigned from A.D. 1623 to 1660 or 1662, and the public edifices erected by him furnish evidence of his wealth and magnificence. The Naik dynasty ceased to rule in the middle of the 18th century, but so late as 1820 a great-grandson of Bhangaru, the last Naik, visited Madras from Vellikurchi, seeking pecuniary assistance from the Government. After the dynasty was set aside, the Madura district witnessed for years the contests for dominion, in which Chanda Sahib, Muhammad Ali, Muzaffar Jung, Muhammad Yusuf, Polygars, and the British were engaged; but it was finally, in 1801, placed under British rule.

In the legends of the south of India, Kula Sakara is said to have founded Madura city, and the story is abundantly illustrated in the sculptures of Tirumala Nayak's choultry, and in other buildings there. Seventy-three kings are said to have reigned prior to the accession of the Naik dynasty. Extant legends connect the city with fables about Agastiya, for it was the great seat of Tamil learning, and was famed for its Sangattar or College Council, with which the names of Agastiya and his 12 pupils are associated. Their names are Tholcāpyar or Tiranath-amagini, Athankotasān, Thuralingam, Kākipādini, Nattathan, Vāminan, Vyapican, Vaypyan, Panambaran, Kalaramban, Sembootsay, and Avinayan. The three works published by them were the Paragathyam, Sittagathyam, and Tholcappyam. Madura has been both the political and religious capital of the extreme south. The Madura College exercised as great an authority over Tamil literature as the Academy of Paris in its palmy days in France. At the first institution of the Madura Sangattar, it would appear that some dispute arose immediately between the professors and the Saiva priests, connected not impossibly with that contention for pre-eminence of knowledge which has ever prevailed in the Tamil countries.

Madura had formed the southern part of the Regnum Pandionis of Ptolemy, the Pandi Mandalam of the Indians, and its capital, the Madura of Ptolemy, was the royal residence of the ancient monarchs about the beginning of the Christian era.

Pandiya, the Pandion or Oi Pandiones of the Greeks, was the titular name of the dynasty of Madura, and the race were styled Pandyi, Pandiya; the king, the Pandyan or Pandiya Deva. Two embassies were sent by the Pandiyan king to Augustus, the first of which he received at Tarragona; the second is mentioned by Strabo. The friendship of the Romans was sought by only one other Hindu prince, O Kerobothros, the king of Chera or Kerala, who was also a Dravidian.

At the beginning of the Christian era, Pandiya territory appears to have embraced all the Peninsula south of the Cauvery. It was about the 2d century that the ruler, Vamsa Sekhara, founded a college at Madura, with a council or sangattar of 48 professors. The college was broken up between the 6th and 9th centuries. About the 11th century the town of Madura was destroyed by fire, the king and all his family perished, and the Pandiya dynasty was ended. This was followed by a long period of anarchy, till the Naiks became dominant in the 15th century. Their power culminated during the reign of Tirumala, and the dynasty allowed Christian missionaries, Robert de Nobilibus, De Britto, and others, to labour among the people. The great Hindu temple forms a parallelogram 847 feet long from north to south, by 744 feet broad, with 9 gopuras, one of which is 152 feet high. The principal structure is the Sahasra-stambha-mantapam or Hall of One Thousand Pillars (the actual number being 997), which was built by Arya Nayaga Mudali, the general and minister of Viswanath, the founder of the Naik dynasty. The whole is profusely ornamented both with sculptures and paintings. Several of the great buildings of Madura city are associated with the name of Tirumala. The palace is the most perfect relic of secular architecture in the Madras Presidency.

The Vellalar are the most numerous and the most respected class of agriculturists. They speak a pure Tamil dialect. The Maravar chiefly inhabit the two zamindari estates bordering the sea-coast. Their hereditary chiefs are the rajas of Ramnad and Siva-ganga. They were a martial race, and more than once rose against British authority. They bury their dead, and allow the re-marriage of widows. The Kallar are predatory, with headquarters in the Tributary State of Puducottah.

The Pulney Hills, called Varaha or Pig mountains, project across the district for about 54 miles. Their highest peaks attain an elevation of more than 8000 feet above sea-level. On this plateau a sanatorium for Europeans has been established at Kodaikanal, and coffee-planting is rapidly extending. The precipitous fortress of Dindigul, and the Elephant Rock, the Cow Hill, and the sacred Skandamalia, are in the neighbourhood of Madura town.

In Tinnevelly and Madura are valuable marbles. In Madura was a dangerous sport called jalicut. It consisted in making a bull infuriated, and then letting him loose, with cloths or money tied to his horns, which became the property of any person who could succeed in removing them. Since the year 1855 a prohibition existed against the sport being indulged in, and in 1859 certain village

servants were dismissed for permitting it within the limits of their jurisdiction.—*Orme, Friend of India; Tennent's Hindustan*, ii. p. 7; *Caldwell's Grammar.*

MADURA or Madoera Island, in the Eastern Archipelago, forms part of Netherlands India. Its N.W. point is in lat. 6° 55¾′ S., long. 112° 51¾′ E., and its E. point in lat. 6° 59′ S., long. 114° 11¼′ E. It is the most important of a line of 75 islands which runs along the northern and eastern coasts of Java, and is separated from the great island by a strait not more than two miles wide, which serves to form the capacious harbour of Sourabaya, the strait widening at its eastern extremity to fifty miles. Its soil is poor compared with that of Java, but its inhabitants are peaceful and industrious. Since the early part of the 18th century, the Madurese have been migrating to and settling on the opposite shores of Java, depopulated by long wars, and in some districts they form the bulk of the present population, so that the Madurese language is not confined to Madura. In 1880, its population, 810,135 in number, comprised—Europeans, 509; Natives, 804,015; Chinese, 3932; Arabs, 1516; others, 163. The sultan resides at Bangkallan. Few mammals are found, and none peculiar to Madura. The island is famous, however, for its breed of cattle, and supplies from its rich pastures provisions to many of the agricultural and seafaring communities of the neighbouring regions. The meat when cured resembles, but is far superior to, the jerked beef of South America. The people are similar to the hillmen of Java, and from them the Dutch recruit the line of their native army with the best troops in their service.—*Raffles' History of Java; Earl, Eastern Seas; Horsburgh; Temminck, Coup d'Œil sur les Possessions Neerlandaises*, i. p. 335; *St. John's Indian Archipelago*, i. p. 337.

MADUWAR, a tribe occupying the higher slopes of the Animallay Hills in Coimbatore. They hunt the ibex and sambur, using powerful bows and arrows and large dogs. See Kader.

MADYAL, a savage Gond tribe, called in Bastar Jhodia, dwelling on the Beila Dila Hills, and in the remotest parts of Chanda. The women wear a bunch of leafy twigs to cover them before and behind. In this they resemble the Juanga to the south of the Kol country, the Chenchi near the Pulicat lake, and to the north of Ellore; and till about the year 1830 a similar leaf dress existed amongst the Holier of the forests near Mangalore.

MAEMANA is situated on a plain in the midst of hills. It is 172 miles N.E. of Herat, 105 miles S.W. of Balkh, 380 miles E. of Mashed, 280 miles S. of Bokhara, 350 miles W.N.W. of Kabal, 665 miles N.N.W. of Kandahar by Kabal, 572 miles from Kandahar by Herat, and 230 miles S.E. of Merv. The inhabitants are Uzbaks, with some Tajaks, Herati, about 50 families of Jews, a few Hindus and Afghans, in all about 15,000 or 18,000 souls. The district is 20 miles long by 18 broad. In 1857, the Mir of Maemana tendered submission to Persia. Early in 1858, being threatened by Persia, he applied to Muhammad Afzal for assistance; in 1859 he headed a rebellion against the Afghans, but was defeated. In 1861 he tendered his submission to Herat, and in the end of the year transferred it to Kabūl. In the beginning of 1868, Maemana stood a siege by Abdur Rahman, and the inhabitants gallantly repelled three assaults, but at last submitted to terms. It is at the present time (1884) regarded as forming part of Afghan Turkestan, but it is a region of change.—*MacGregor.*

MÆSA INDICA. *A.D.C.* Matabimheya-gass, SINGH. A Ceylon tree, very abundant up to an elevation of 5000 feet.—*Thw.*

MAFFENS, author of Historia Indicarum, A.D. 1570.

MAFI. HIND. A rent-free tenure. Mafidar, holder of a rent-free tenure. Properly Mūāfi.

MAFINE, in Polynesia, an imaginary being who is supposed to bear the world on his shoulder, and earthquakes are caused by his shifting the earth from shoulder to shoulder.

MAGADHA. The territory of which this is the ancient name corresponds with that part of the present Behar which extends along the south of the river Ganges. The capital was Rajagriha. Magadha is mentioned so early as in the Atharvan Veda, and is met with so late as the 7th century A.D., when Chinese pilgrims speak of it under the scarcely intelligible name of Moki-a-to. The present appellation Behar is from Vihara or a monastery of the Buddhists, whose most reputed convent was at Behar, the place where Buddha obtained the law. As Magadha was the scene of Buddha's early career as a religious performer; it possesses a greater number of holy places connected with Buddhism than any other province of India. The chief places are Buddha Gya, Kukkutapada, Rajagriha, Kusagarapura, Nalanda, Indrasilaguha, and the Kapotika monastery.

The kings of Magadha were of six dynasties, viz. that of

Barhadratha, of the line of Pandu, the first of which was Jarasandha, a co-temporary of Yudishthra and Krishna. According to Sir William Jones, B.C. 3101, according to Professor Wilson in the reign of Sahadeva, B.C. 1400, Parakshita was born, and the great war ends, and in the reign of Ripunjaya, B.C. 915, a Buddha was born. The accepted era of the Pandu dynasty is B.C. 1400 to 915.

The *Sunaka* dynasty, kings of Bharatkanda, of Magadha kings, reigned 128 years.

The *Saisunaga* or Sesnag reigned 360 years, and we find amongst them, B.C. 415, Nanda Mahâpadma (B.C. 1602 Jones, 360 Wilson), regarding whom it was said he will bring the whole earth under one umbrella; he will have eight sons, Sumalya and others, who will reign after Mahapadma. He and his sons will govern for 100 years. The Brahman Kaulilya will not root out the nine Nanda.

The *Maurya* dynasty governed 137 years, the first of whom, according to Wilson, B.C. 315, and 1502 Jones, was Chandragupta, the Sandracottus of the Greeks, contemporary with Seleucus.

The *Sunga* dynasty reigned 110 years, the first of whom, Pushpamitra (B.C. 178), put his master, the last of the Maurya, to death.

The *Kanwa* dynasty reigned 45 years. The first was, B.C. 66 Wilson, Kanwa, named Vasudeva, who usurped his master's kingdom.

Sahadeva was king of Magadha at the end of the war of the Mahabharata. The 35th king in succession from him was Ajata Satru, in whose reign Sakya or Gautama, the founder of the Buddh-

ist religion, was born, and Sakya died about B.C. 550. The 6th in succession from Ajata Satru, inclusive, was Nanda; the 9th from Nanda was Chandragupta, and the 3d from him was Asoka. Pali was the spoken tongue.

Magadha was first mentioned by the Greeks B.C. 300. The last mention of it was about the 5th century A.D. It is mentioned in a note in the Vishnu Purana.

The Magadha kingdom occupied the tract called Prachi by Hindu authors, the Prasii of the Greeks. Megasthenes was ambassador at the court of Chandragupta when king of Magadha, who had Pataliputra as his capital, known to the Greeks as Palibothra.—*Cunningham's Ancient Geography*, p. 452; *Elphinstone*, pp. 138, 143; *Dowson*.

MAGAHI, a tribe of agriculturists in Behar, probably a vernacular form of Magadhi, or native of Magadha.

MAGALHAES, FERDINANDO DE, more generally known by his Spanish designation Magellanes, in the year 1520 set out on a voyage of eastern discovery, passed through the straits which bear his name, discovered Mindanao, and died in Mactan on 26th April 1521, from wounds received in action. Only one of his fleet, the Vitoria, commanded by Elcano, a Biscayan, returned to Spain. Magellan had become disgusted with the Portuguese service, and he offered to Charles V. to discover a passage to India by the west, in order to divide the rich traffic of the Spice Islands. He passed the straits in S. America which have since gone by his name, in 1520, and, entering the South Pacific Ocean, arrived in a few months at the Philippine Islands, of which he took possession in the name of the Spanish monarch. Barbosa fell three days after Magellan, and in twelve days more the people waylaid and murdered twenty-four of his companions.—*Bikmore*, p. 308; *Chatfield's Hindustan*, p. 37.

MAGAR or Mugger, a small martial tribe in Nepal, originally from Sikkim, from which they were first driven west by the Lepcha, across the Mechi and Kook rivers, and thence farther west by the Limbu, beyond the Arun and Dud Kushi. The Magar race now occupy the lower levels on the banks of the Kali in Nepal. They use a monosyllabic language, like the Tibetans, Chinese, Burmese, and Siamese, with an alphabet of Indian origin. They abstain from beef, drink to excess, and have an Indian priesthood. They are divided into twelve thum, supposed to be descendants of twelve different male ancestors. They do not marry in their own thum. This exogamic practice occurs in Australia, North and South America, Africa, and Europe. They reside in the valleys. —*Dr. Latham's Ethnology*.

MAGAR-BANS. HIND. Bambusa arundinacea, a solid bamboo, called a male bamboo.

MAGAR TALAO, or Crocodile Tank, also called the Magar Pir, or more correctly Pir Mangho tank, has hot springs and a temple in the Kurachee district of Sind. It is about 7 or 8 miles north of Kurachee. The swamp is not more than 150 yards long, by about 80 yards broad; and in this confined space a visitor counted above 200 large crocodiles. The natives say they never touch a buffalo, but will instantly attack any other animal, however large, and a goat was therefore killed for them. The animal was slaughtered on the edge of the swamp, and the instant the blood began to flow, the water became perfectly alive with the brutes, all hastening from different places towards the spot. In the course of a few minutes, and long before the goat was cut up, upwards of 150 had collected in a mass on the dry bank. When the meat was thrown among them, it proved the signal for a general battle; several seized hold of a piece at the same time, and bit and struggled and rolled over each other until almost exhausted with the desperate efforts they made to carry it off. At last all was devoured, and they retired slowly to the water. The mosque is a neat white building. It is dedicated to Pir Haji Mangho, who is esteemed a saint by both Hindus and Muhammadans, and is held in such high veneration throughout Sind, that numbers of corpses are yearly brought from a great distance to be interred near his shrine. The valley is in consequence covered with burying-grounds, which are full of tombs elaborately carved and ornamented.—*Imp. Gaz.*

MAGDAR. HIND. Indian clubs, used for exercise in developing the muscles of the arms and chest.

MAGH, commonly applied to the natives of Arakan, particularly those bordering on Bengal or residing near the sea, and to the people of Chittagong. The Arakanese, however, disclaim the appellation, and restrict it to a class whom they hold in utter contempt, the descendants of the Arakanese who were settled at Chittagong and Dacca, by Bengali mothers. The word is also written Magh, Mug, or Mugh, and is an ancient name for the Magi, also, in Central Asia, called Gabr, applied to a fire-worshipper, also a wine-drinker or tavern-keeper.

The Magh of Bakarganj came from Arakan in the beginning of the 19th century, when that country was overrun and conquered by the Pegurs. They profess Buddhism, but nearly all traces of that religion have been obliterated, and many have accepted Hinduism. They intermarry among themselves, adhere to their own mode of living, build their houses like those of Burma, and are fond of revisiting their old homes.

MAGH or Magha. SANSK. The tenth month of the Hindu year, when the sun enters Capricorn, and when the full moon is near the asterism Magha (January—February). On the 1st of Magha, according to solar calculation, or the first lunation of the moon, that is, the day of new moon, a great festival is observed in Upper India, when bathing in the sea at Ganga Sagara, or the mouth of the Bhagirathi, is considered of peculiar efficacy. At the full moon a great festival is held at Combaconum. Magh Bihu and Baisakh Bihu are the two national festivals of the Assamese. The two great festivals, Pocham and Pochi, of the Buddhist Shan and Burmese, are held about the same period of the year. The Baisakh Bihu is as gay as a carnival, and the women, especially the maidens, enjoy unusual liberty. The prettiest girls dance with their hair hanging loose on their shoulders.

MAGHA or Sisupala-Badha, a collection of Hindu heroic epic poems of 20 cantos, written by different authors, under the patronage of king Magha. The subject is the death of Sisupala, slain in war by an arrow from Krishna.—*Ward*, iv.

MAGHAZZI, one of three great tribes in

Baluchistan, the other two being the Nahrui and Rind. Jell and Shadia are the chief towns of the Maghazzi, who have been located for a long time in Kachi. They are divided into four principal clans, of which the Bhutani is the more illustrious, and furnishes the Sirdar of the whole. They boast of being able to muster 2000 fighting men, and when visited by Mr. Masson, had been engaged in endless hostility with their neighbours the Rind, an inextinguishable blood-feud existing between the two tribes. The Maghazzi and the Rind are alike addicted to the abuse of ardent spirits, bhang, and opium. Their clans are the Abra, Birdi, Isobani, Jakra, Jakrani, Jatki, Kakrani, Kalandarani, Lashari, Maghzi, Mataiki, Musani, Nari, Turbandzai, and Unar.

MAGH-MELA. HIND. A sacred fair held at Allahabad. Every twelfth year an unusually great gathering takes place at the Magh-Mela of Allahabad, which is then called the Koombh Mela. See Mela.

MAGHRAB. ARAB. The west; sunset. Maghrab-ka-namaz, the eventide prayers. Maghrabi, a western person. Maghrab, the west, is applied to Western Africa and its people; the common plural is Maghrabin, generally written Mogrebyn. The form of this word in the singular seems to have given rise to the Latin Maurus, by elision of the letter Ghain, to Italians an unpronounceable consonant. From Maurus comes the Portuguese Moro, and the English Moor. When Vasco da Gama reached Calicut, he found there a tribe of Arab colonists, who in religion and in language were the same as the people of Northern Africa, —for this reason he called them Moors. This was explained long ago by Dr. Vincent (Periplus, lib. 3), and lately by Prichard. Maghrabin or Westerns then would be opposed to Sharkiyin, Easterns, the supposed origin of Saracen. The word Saracens came through the Greeks (Ptolemy uses it), who have no such sound as sh in their language, and the Italian, which, hostile to the harsh sibilants of oriental dialects, generally melts sh down into s. So the historical word Hash-sha-shiyun, hemp-drinker, was civilised by the Italians into assassino. The Maghrabi dialect is the harshest and most guttural form of Arabic. It owes this severity to its frequent use of the Sukun, or the quiescence of one or more vowels, Klab, for instance, for Kilab, and Msik for Amsik. Thus vowels, the soft and liquid part of language, disappear, leaving in their place a barbarous sounding mass of consonants.—*Burton's Mecca*, i. pp. 274, 293; *Natural History of Man; Niebuhr Tr.* p. 101.

MAGHRABI, a small gold coin current on the Malabar coast. Maghrabin, a western Arab of Northern Africa.

MAGHWAY. A pagoda called the Emerald Couch, standing in the town of Maghway on the Irawadi, is reputed to contain a relic of the bed of the last Buddha, Gaudama.

MAGHZ. HIND. The brain, the kernel of a nut, fruit, etc.: hence Maghzak, the mango; Maghz-khubani, apricot kernels; Maghz-pipal, or Filfil-i-daraz, Piper longum, or Chavica Roxburghii; Char-Maghz, Juglans regia.

MAGI were the priests of the Persians, Bactrians, Charismians, Aryans, and Sakæ. Diogenes Laertius (in Proem, p. 2, Lond. 1664) notices their reverence for fire, earth, and water,—Ους κα πυρ ειναι, και γην, και υδωρ. But Herodotus had before him, mentioned sacrifices offered on mountains to Jupiter by the ancient Persians, and their worship of the sun and moon, of the earth of fire, water, and of the winds; he adds, also that they learned from the Assyrians and Arabians to adore Venus, Urania, or celestial, which the Persians called Μιτρα. Strabo, like Herodotus declares that the Persians neither erected statues nor altars; 'they regard,' says he, 'the heaven as Jupiter, and reverence the sun, which they call Mithra. The moon also, and Venus, fire, the wind, and water.' Yet in a previous passage of the same book, if the text be correct, he has affirmed that Mars alone was worshipped by the Persians. What they called Jupiter, says Herodotus, was the whole compass or circuit of heaven which Strabo, as above quoted, confirms. From both authors it appears that the Persians did not attempt to embody, under the human form an object of such materiality as the celestial expanse. But Clemens Alexandrianus gives us reason to believe that some of their idols resembled human beings, and the statue of Venus Tanais, Την Αφροδιτις ταναιδος, mentioned by him, represented without doubt, the female divinity more correctly named Anaitis, that Venus, we may suppose whom the Persians learned to worship from neighbouring nations, as Herodotus had already declared.

The Magism of the Chaldees, as it prevailed about B.C. 2234, when a Median dynasty sat on the throne of Babylon, was a modification of the doctrines of Zoroaster.

Their cult seems to have been essentially a worship of the elements, and of these fire was deemed the most worthy of representing the deity.

The Magian religion was of a highly sacerdotal type. No worshipper could perform any religious act except by the intervention of a priest or Magus who prepared the victim and slew it, chanted the mystic strain which gave the sacrifice all its force, poured on the ground the propitiatory libation of oil, milk, and honey, and held the bundle of thin tamarisk twigs, the Zendu Barsom (Baresma), the employment of which was essential to every sacrificial ceremony. In the time of Darius, the Magi were not the priests of Ormazd, and Darius treated them most unmercifully. After the time of Ardeshir Daraz-dast (Artaxerxes Longomanus) the Magi seem to have converted the rulers to their creed. Professors Westergaard and George Rawlinson regard Magism as in its origin completely distinct from Zoroastrianism.—*Geo. Rawl.* ii. pp. 347-354.

MAGIC. The Tamil people enumerate 64 arts and sciences, 20 being connected with magic, spells, charms, some of a malignant character. One of these, an invocation to Kali, for the destruction of an enemy, runs:—

'Om!
Adoration to thee, Supreme Power,
Kali ratri, black night,
To whom the bloody flesh of man is dear,
Whose very form is fate and death.
Seize, seize on the life of *such a one*,
Drink blood! drink blood!
Devour flesh! devour flesh!
Make lifeless! make lifeless!
Hum Phut!'

MAGINDANAO, an island of the Eastern Archipelago. The people use the Tagala alpha-

bet of the Tagala nation, of the great island of Luçon.

MAGIZADI SERVAI, a Hindu festival celebrated at Tiruvattiyur village, six miles north of Madras. According to the Sthalapuranum, Sundara Swami, a disciple of Siva, fell in love with one of the two maid-servants of the goddess Parvati, and Siva ordained him to marry her at some future period in the nether world. The girl was accordingly re-born in the house of Nayirkila, and brought up under the name of Sangilnachiar. During one of her daily visits to the Tiruvattiyur temple, she met with Sundara Swami, who was spending his days in the service of the deity, and who, being fascinated by her charms, begged Siva's permission to marry her in the temple. Sangilnachiar prevailed upon Suntharur to celebrate the marriage under a Magizada tree, in the presence of Siva, whence the festival takes its name. At the conclusion of the wedding, the leaves of the tree are torn off, and showered down. On this occasion, the two celebrated birds of Tirukkazikundrum, which were once rishis, said to be thousands of years old, are said to visit the temple. Thousands of people attend this festival from distant villages.

MAGNESIA is the Fi-kan-shih, Lu-kan-shih of the Chinese. A soft white powder, used in medicine. It is prepared by burning the carbonate of magnesia, but latterly also from the bittern of sea water after the crystallization of common salt.

Magnesia carbonas.

Magnesia alba.	Kohlensaures bittererde,
Magnesia sub-carbonas.	GER.
Carbonate of magnesia.	Kohlensaures talkerde, ,,

This forms a constituent of the dolomitic, or magnesian, limestone which is found largely in Southern India, near Trichinopoly. Very fine silicious and magnesian earths, such as rottenstone, alkaline loam, and Armenian bole, occur near Sundur, Bangalore, and Cuddapah.

Magnesia sulphas.

Sulphate of magnesia.	Schwefelsaure bittererde,
Epsom salts.	GER.
Sulphate de magnesie, FR.	

A medicinal salt, valuable as a cathartic. It is usually made from the bittern of sea water, but could be prepared from the magnesite of Southern India.

MAGNESITE, carbonate of magnesia, is found in Styria, Moravia, Spain, Silesia, at Hoboken, in New Jersey, N. America. A few miles N.W. of Mooscry is a small mountain composed of beautifully pure magnesite and brucite, and some other magnesian compounds. Near it, in the direction of Cannanore, is an extensive bed of pure chlorite potstone, which is wrought to a considerable extent, and the vessels made of it find a ready sale in Trichinopoly, Madura, and other large towns. Magnesite formations occur at Yedichicolum and other places in the valley of the Cauvery. It is a nearly pure carbonate of magnesia. About three miles from Salem, on the Woomaloor road, there is a remarkable deposit of magnesite, containing 48 per cent. of magnesia, 52 per cent. of carbonic acid, and a trace of silica. It occurs in seams in the gneiss rock. Local traditions make it the bones of Jataya, king of birds, who was killed by Ravana. A water cement was proposed to be formed from it by Dr. M'Leod, and again by M. Sorel, by mixing powdered calcined magnesia, in the form of thick paste, with a solution of chloride of magnesia.

MAGNET.

Zeilsteen,	DUT.	Calamita,	IT.
Aimant,	FR.	Ahan-subah,	PERS.
Chamak pat'har;	HIND.	Iman,	SP., PORT.

Of native loadstone, magnetic iron ore, there is an abundance in the Peninsula of India, and it is largely used in the manufacture of iron or wootz steel. The Chinese names for magnetic iron ore are Yen-sang, also Ts-ze-shih. More than a thousand years before the Christian era, a people living in the extremest eastern portions of Asia had magnetic carriages, on which the moveable arm of the figure of a man continually pointed to the south, as a guide by which to find the way across the boundless grass plains of Tartary; and at least 700 years before the use of the mariner's compass in European seas, Chinese vessels navigated the Indian Ocean under the direction of magnetic needles pointing to the south.—*Humboldt's Cosmos*, i.; *Curiosities of Science*, p. 194.

MAGNOLIACEÆ, the Magnoliad tribe of plants, occur in America, Hindustan, China, Japan, N. Holland, and N. Zealand,—fine trees or shrubs, with large, beautiful, often strongly odoriferous flowers. The Indian species are variously ranged, under the genera Michelia, Manglietia, Magnolia, Euptelea, Illicium, Schizandra, Kadsura, and Talauma.

MAGNOLIA CAMPBELLII, *Hooker*, the purple-flowered magnolia, hardly occurs in Sikkim below 8000 feet, and forms an immense, but very ugly, black-barked, sparingly-branched tree, leafless in winter, and also during the flowering season, when it puts forth from the ends of its branches great rose-purple, cup-shaped flowers, whose fleshy petals strew the ground. On its branches, and on those of oaks and laurels, Rhododendron Dalhousiæ grows epiphytically, a slender shrub, bearing from three to six white lemon-scented bells, 4½ inches long and as many broad, at the end of each branch. M. globosa, *Hk.*, M. Griffithii, *Hk.*, and M. sphenocarpa, *Roxb.*, occur in India.

MAGNOLIA CONSPICUA. *Smith.*

Sin-i, Yu-lan, . . CHIN. | Ying-chun-hwa, . CHIN.

A splendid flowering tree of Shen-si and Chekiang in China. Its large white flowers appear before the leaves, welcoming the spring, as Ying-chun-hwa implies. Its cones are used medicinally. It has been cultivated by the Chinese since A.D. 627. It attains a height of 30 or 40 feet. It is a very showy tree, having white flowers sometimes suffused with purple, which give out a most delicious perfume.

MAGNOLIA DISCOLOR. *D.C., Vent.*

M. purpurea, *Curt.* | M. obovata, *Roxb.*

Grows in Japan and China. A shrub with large, dark purple, rose-coloured inodorus flowers. —*Roxb.; Voigt.*

MAGNOLIA EXCELSA. *Wall.* The white-flowered magnolia of Nepal and Sikkim, near Darjiling, forms a predominant tree at 7000 to 8000 feet. The wood, called Champ, is highly prized in the neighbourhood of Patna for joinery work, it being at first of a fine greenish colour, but changing to a fine yellow, and the grain very close.—*Royle; Hogg*, p. 25; *Hooker, Him. Jour.*

MAGNOLIA HYPOLEUCA. *Siebold.* Hau-

p'oh, CHIN., is a stately tree of Cochin-China and Japan, and introduced into S. China; trunk one foot in diameter, with very large whorled leaves. The rough thick bark is rolled into large tight cylinders, very thick, and from 7 to 9 inches long; taste aromatic and bitter, but mostly inert; wood flexile, used for utensils.—*Smith, M. M. C.; Von Mueller.*

MAGNOLIA RUBRA. *Smith.* Chih-p'oh, CHIN. Grows in Sze-chuen and Ngau-hwui, in China. The bark is rolled into short, thick quills of a reddish-brown colour; taste bitter.—*Smith, M.M.C.*

MAGOG and Gog, applied in the Scriptures to the nations of Northern Asia, known to Muhammadans as Yajuj and Majuj. See Machin.

MAGOUNG, an old kingdom of the Indo-Chinese nations, also called Pong. See Maha Radza Weng.

MAGURA, a fish in the Colombo lake, said to grunt under water when disturbed. Bishop Pallegoix, in his Account of Siam, speaks of a fish resembling a sole, but of brilliant colours with black spots, called by the natives dog's tongue, which attaches itself to boats, and gives out a very sonorous and even harmonious sound.—*Jenn.* ii. p. 470.

MAGUS, a native of Persia, of considerable celebrity as a physician. His name was Ali Abbas. He lived in the 10th century. He was author of a book styled the Royal Work.—*Catafago.*

MAH. PERS. A month. Mahwar, monthly.

MAHA. SANSK. Great, applied literally and figuratively to gods, individuals, books, countries, and towns. Maha is thus largely used as an honorific affix to men, but it is also prefixed to the Hindu gods and goddesses, as Mahabali of Mahabalipura, the seven pagodas near Sadras; Mahabharata, a great epic poem; Mahabhashya, Patanjali's commentary on the grammar of Panini; Mahadeva, Mahadevi, the great god and great goddess; also Maheswara and Maheswari, titles of Siva and his consort; Maha Kala, great time, the destroying power; Maha Kavya, great poems, a title of six poems in Sanskrit, famous amongst the Hindus, viz. Raghavansa, Kumara sambhava, Megha duta, Kiratarjuniya, Sisupala badha, and the Naishadhacharitra; Maha Purana, the two great Vaishnava Puranas, the Vishnu and Bhagavata; Maha-Purusha, the great male, a name of the god Vishnu; Mahanaga, the serpent Sesha; Maharashtra, the Mahratta country; Maha-Sena, great captain, name of Kartikeya, god of war; Mahishasura, a great Asura.

M. R. S. are letters prefixed to all addresses on letters to Hindus. They are the abbreviation of Maharaja Sri. Maharaja is the highest title of a Hindu prince or ruling sovereign, under that of Chakravarta, which means an emperor.

Maha-Muni means a great saint; Maha Prabhahu, great lord; Maha-Lakshmi, Maha-Vishnu, and Maha-Kali; Maha-Bal-Eswar is the great god Bal.

MAHABALESWAR HILL, in lat. 17° 58′ 5″ N., and long. 73° 42′ 35″ E., is an elevated plateau of the Sahyadri range of hills. It takes its name from a Brahman village at the north end of the table-land, near the source of the river Krishna, the name meaning the god of great power. The western side rises abruptly from the Konkan. It varies from 8 to 15 miles in breadth, is 17 miles from N.E. to S.W., and its greatest height is 4700 feet above the sea.

Mean elevation of plateau,	4500 ft.	*Syk.*
A rock E. of Beckwith's monument,	4712 ,,	*Bomb. Cal.*
Source of the Krishna,	4110 ,,	*Schl. Adv*
Yenna lake,	4070	
Southern border of plateau,	3510	
Eastern border of plateau,	3930	

The mean temperature is 66°·2; maximum, 71°·2; minimum, 61°·3; and daily variation, 9°·8. The rainfall averages 229·19 inches, and there are 127 rainy days. It is a sanatorium, and the founder's name still survives in the village of Malcolmpet. The monsoon strikes this outlying range of the ghats with its full force, and deposits on their slopes the main portion of its aqueous burden. The average discharge is about 240 inches, and the residents leave the station en masse on the first burst of the summer rains, and retire to Poona.—*Bombay Almanac; Bombay Times; Schlagentweit; Imp. Gaz.* vi.

MAHABALIPURAM, called by the people Mavelpuram or Mavalivaram, and by the British the Seven Pagodas. In the Sthala Purana, written in Sanskrit, the name is simply Mallapuri. But in the inscription near the Varashvami temple it is enlarged into Mahamallapuram, by prefixing the Sanskrit adjective Maha. It is a village on the coast, 35 miles south of Madras, in lat. 12° 36′ 55″ N., and long. 80° 13′ 55″ E. Legends describe it as the city of a great king, which was submerged by the sea, and six temples are said to have been thus overwhelmed. According to the legend, Mahabali was a raja living in the treta-yuga, who by penance and austerity had obtained possession of the whole universe, including heaven, earth, and hell, so that he was a universal monarch. He became so elated by his greatness, that he omitted to perform the customary religious ceremonies to the gods. Vishnu, in order to check the influence of so bad an example, became incarnate in the person of a wretched-looking Brahman dwarf, and in this form appearing before Mahabali, asked as a boon as much of his wide possessions as he could pace in three steps. This the king readily granted, upon which the dwarf grew larger, and continued to expand till he filled the whole universe, thus depriving the insolent monarch of all his possessions except hell, which he was allowed to keep. This legend probably represents the victory of Hindus of the Vaishnava sect over some powerful non-Aryan king.

It is a moot point whether to the Malla family of the Chalukyas, or to Bali of legendary greatness, belongs the antiquities of the place. These may be divided into three groups,—(1) the 5 raths to the south of the village, belonging probably to the latest Buddhist period; (2) the cave temples, monolithic figures, carvings, and sculptures, west of the village, probably of the 6th or 7th century A.D. (these contain some marvellous relievos, ranking with those of Ellora and Elephanta); (3) the more modern temples of Vishnu and Siva, the latter being washed by the sea. To these two and five others, buried (according to tradition) by the sea, the place owes its English name.

The shore temple is so close to the sea that the surf in the calmest weather dashes against the doorway. This and the usual stone pillar in front of such temples lying in the sea, [illegible] wall

as fragments of images, large quantities of stone and broken bricks lying about, some partially buried in the sea, plainly show that at one time buildings existed to the eastward, but have been overwhelmed by the sea. Besides tradition, it is stated in the catalogue of the Mackenzie MSS. that the whole coast from Mailapur, or St. Thomé, down to Mahamallapuram was overflowed by the sea, and that many towns were destroyed. The monolith temples consist of chambers cut out of the solid rock, and with figures and inscriptions in an ancient character; only one of them is now on the land. A temple on the shore has a statue of Vishnu entwined by the cobra; also a lingam and other Saiva remains are observable near. Rocks partly covered at high water are carved with the figures of tigers. Inland 400 yards are sculptured rocks running parallel with the sea. A small but elegant fane contains a statue of Ganesh. A temple of Vishnu has the giant figure assumed by that deity after throwing off the dwarf form; in another compartment is a figure of Durga surrounded by adorers, and one of Vishnu as Varaha or the Boar Avatar, with his sakti Lakshmi. Near this is a small Saiva temple with bas-reliefs of Siva and his son Subramanya. Underneath a small monolithic pagoda is a colossal statue of Vishnu reclining amid the coils of an enormous five-hooded cobra. Opposite this group, Durga mounted on a lion is seen rescuing a figure from Yem-raja, a buffalo-headed monster. There is also a rock 20 feet high and 70 to 80 feet long, facing the sea, literally covered with the sculptured figures in basso-relievo of gods, men, and animals, many of them of great artistic beauty.—*Chalmers*, 1772-76; *Goldingham*, 1806; *Bishop Heber*, 1826.

MAHABAN, meaning Great Forest, is a hill on the Panjab frontier, 40 miles up from Attock, at the east end of a spur of the Ilam range. It is situated on the right bank of the Indus, and rises to a height of 7400 feet above the sea, and 50 miles in circuit. The southern side of the hill is thickly wooded, and is inhabited by the Jadun tribe, the north side being peopled by the Amazai. The hill would be suitable for a sanatorium, but as a strategical point it is said to be worse than useless. The country of the Jadun is below that of the Husanzai, and on the right bank of the Indus, opposite the British town of Torbeila, and thence stretching westward. The most notable place in this tract is Mount Mahaban. Near its base and on the bank of the Indus was the Sitana colony. The Syuds of Sitana are the remnant of the followers of Syud Ahmad, who gathered a handful of Muhammadan devotees from various parts of India, and raised a formidable rebellion in Peshawur. After winning and losing Peshawur and Yusufzai, the Syud was eventually slain at the mouth of the Kaghan glen by Sher Singh, son of Ranjit Singh. Most of his adherents, chiefly foreigners to the Panjab, dispersed, and the remainder settled at Sitana. One of the rulers of Swat was elected to his position. They intrigued with the Wahabees in various parts of India, and more than once correspondence relating to them was intercepted. The Bezoti and other Afghan tribes gathered and fought against the British from 1860 to 1868. Theories as to the locality of Aornos have been held by General Court, the missionary Loewenthal, General James Abbott, and General Cunningham. The Mahaban most nearly corresponds in height and in its position on the Indus with the ancient description. The height was from 11 to 16 stadia, or from 7000 to 10,000 feet; Strabo represents its base as washed by the Indus near the spot whence that river issues from the Himalayas. The Mahaban, too, supplies best the very object—shelter with wood and water—sought by a comparatively large population, such as Ranigat would have failed to accommodate, fleeing from a resistless invader. The Chinese pilgrim Hiwen Thsang, who visited it, describes the Mahaban as a great mountain which derived its name from the Mahavana monastery in which Buddha, under the name of Sarvvada raja, had dwelt in a former life. Thence the pilgrim descended to the Masura monastery, now the large village of Sura in the Chamba valley, 10 miles to the north-west of the Muchaie peak.—*MacGregor's N.W. Fr.* p. 296.

MAHABAN, or Gokula, in the N.W. Provinces, in lat. 27° 25′ 35″ N., and long. 77° 47′ 30″ E., situated on the left bank of the Jumna (Jamuna), is six miles S.E. of Muttra, on the Etawa road. It is the reputed birthplace of Krishna, who is supposed to have been reared at Gokul, one mile to the west. Mahmud of Ghazni conquered the raja in 1017, and the town was sacked, after the native prince had slain his wife and children and then committed suicide. A hill, extending over 80 acres, occupies a large part of the town. On its summit stands a ruined fort of great antiquity, containing a shrine of Syam Lala. The Gosain are descendants of Vallabhacharya, through his only son Bitthal-nath. It is an insignificant village. There is a high hill in the town. The Assi Khamba, or 80 pillars, are the covered court of Nanda's palace.

MAHABHARATA, an epic poem, or a collection of ancient lays, of different dates. The groundwork of the poem, the Kaurava and Pandava war, contains 24,000 verses. The leading story commences with Atri, a flash of light from whose eye produced the moon (which in Sanskrit is male), and that being was the ancestor of the Lunar dynasty of kings. One of these kings was Pururavas, whose love for the heavenly nymph Urvasi is detailed in Kalidasa's drama Vikramorvasi. His descendants in a direct line were Ayas, Nahusha, and Yagati, the last becoming the father of Puru and Yadu. The line of Yadu acquired celebrity through Vasudeva and his sister Kunti or Pritha, and also through his sons Krishna and Bala Rama, who have become deified as incarnations of the god Vishnu. Puru's son was Dushyanta, who married Sakuntala, and their son was Bharata. From Bharata descended successively Hastin, Kuru, and Santanu. Santanu married Satyavati, already the mother of Vyasa, but their children died without offspring, and Satyavati then asked her son Vyasa to marry her widowed daughters-in-law; by one of them he had Dhritarashtra, born blind, and by another, Pandu, born a leper or an albino. Dhritarashtra married Gandhari, and amongst their many children were Duryōdhana, also called Suyodhana, and Duhsasana,—these were the Kaurava. Pandu married two wives, viz. Pritha, sister of Vasudeva and aunt of Krishna, and Madri. By Pritha he had three sons, Yudishthra, Bhima, and

Arjuna; by Madri, twins, Vakula and Sahadeva; and these were the Pandava. Both the Kaurava and the Pandava were related to Krishna, but the Pandava more nearly so, owing to their mother Pritha being aunt of Krishna. Vyasa, the compiler of the Mahabharata, is the reputed grandfather of both the Kaurava and the Pandava. It is the series of events which happened in the time of the Kaurava and Pandava that forms the groundwork of the great epos of the Mahabharata, and they may thus be briefly related.

Santanu had resided in Hastinapur, the ancient Dehli, and after his demise Dhritarashtra was by seniority entitled to succeed. But, as he was blind, he resigned the throne in favour of his brother Pandu. The latter became a powerful monarch, but after a while, having become tired of his regal duties, he abdicated and retired to the forests of the Himalaya, to indulge in his favourite sport, the chase. His brother Dhritarashtra then resumed the reins of government, but, being blind, his uncle Bhishma governed for him, and conducted the education of his sons. After a while Pandu died, and his widow Pritha and her five sons returned to Dhritarashtra's court to be educated along with his own children, their cousins. But the Pandava brothers were superior lads, and their cousin Duryōdhana, out of jealousy, tried to destroy them, first by poison, then at trials of arms. Subsequently, Drona, a Brahman, who had taught the Kaurava, brought about a reconciliation, and the relatives unitedly attacked Drupada, king of Panchala (Kanouj), who, principally by the Pandava's aid, was defeated. On this the blind king Dhritarashtra resolved to pass over his son Duryōdhana, and named his nephew Yudishthra, the eldest of the Pandava, to the throne; and their cousin Duryōdhana made another effort to destroy them, by burning them alive. This also they escaped, but they considered it advisable to conceal themselves, which they did by assuming the form of mendicant Brahmans, and retiring to the forests. After some time, they were informed by Vyasa that Drupada, king of the Panchala, would make his daughter Draupadi queen of a tournament, to be won by the most successful competitor, and she was won by Arjuna. On this occurred a civil commotion, in which Drupada nearly lost his life; but Draupadi went with the Pandava brothers, and became their joint polyandric wife.

After the tournament the Kaurava and Pandava made peace, the former to reign at Hastinapur, the ancient Dehli, and the Pandava at Khandavaprastha, the modern Dehli. Yudishthra, the eldest of the Pandava, reigned so successfully, that he resolved to declare himself emperor by the performance of the Rajasaya sacrifice. This was accomplished with much splendour; but Yudishthra was afterwards involved by his cousin Duryōdhana in a game at dice, and Yudishthra lost everything,—kingdom, wealth, and his joint wife Draupadi. Duryōdhana offered to restore their kingdom if they would exile themselves for 13 years. In these 13 years they all took service with king Virata of Matsya, and ultimately defended him against an attack of Duryōdhana. On this account Virata gave his daughter Uttara in marriage to Abhimanya, son of Arjuna by Subahdra. In claiming restoration to their kingdom at the close of the 13 years, the Pandava first tried negotiations, offering to be content with five small towns, but they ultimately resolved to fight it out on the plain of Kuru-kshetra, the rules of battle being duly laid down. In the battle that ensued, and which lasted 18 days, the Kaurava lost successively all their chiefs, Bhishma on the tenth day, Drona on the fifth day, Karna on the second day, and their last commander, Salya, was killed on the first day of his command. In these battles much foul play was practised on both sides. After the close of the battle, Yudishthra was elected heir-apparent of the old blind king Dhritarashtra. But the latter subsequently abdicated and led the life of a recluse, along with his wife Gandhari, Pritha, the mother of the Pandava, and their uncle Vidura. Vidura soon died, and all the rest of the royal exiles perished in a forest conflagration. The grief of the Pandava for this was great, and they too, after hearing also of Krishna's death and of the destruction of Dwaraka, resolved to abdicate; they all set out for Mount Meru, but all save Yudishthra perished before reaching it.

The legends connected with it relate that Yudishthra ultimately entered Indra's heaven, and there found all the Kaurava relatives and his brothers. It is also related in the Mahabharata that after the battle of Kuru-kshetra, when the widows of the slain were talking over their losses, Vyasa bid them repair to the banks of the Ganges. Vyasa also was present, and called out the names of the slain. All appeared in great glory and splendour, and more beautiful than when they were alive; widows went to their husbands, daughters to their fathers, mothers to their sons, sisters to their brothers, and all the fifteen years of sorrow which had passed since that war were forgotten in the ecstasy of seeing each other again. The night passed away in the fulness of joy, and when the morning dawned, all the dead mounted their horses and chariots and disappeared. But Vyasa said that the widows who wanted to rejoin their dead husbands might do so, and all the widows went and bathed in the Ganges, and came out of the water again, kissed, one by one, the feet of Dhritarashtra and Gandhari, and then went and drowned themselves in the river; and, through the prayers of Vyasa, they all went to the place they wished, and obtained their several desires.

The complete text of the Mahabharata has been twice printed in India. It has been partially translated into French by M. Fauche. It is the longest poem in the world, consisting of 220,000 lines, divided into 18 parva or books, viz. the Adiparva, Introductory Book, the Sabha, Vana, Virata, Udyoga, Bhishma, Drona, Karna, Salya, Sanptika, Stri, Sauti, Anusasana, Aswa-medhika, Asrama, Mansala, Maha-prasthanika, and the Swarga-rohana. Within the poem is an acknowledgment that it was put into its present form by Sauti, who received it through another person from Vyasa, who was contemporary of the events which it relates. 24,000 verses out of 100,000 are alleged in the same place to be the work of the original author. But in some parts it mentions the Yavanas, showing that such portions at least were subsequent to the 4th century B.C.

Professor Williams believes that the earliest or pre-Brahmanical composition of the Rama-

yana and Mahabharata was not later than the 5th century B.C., but that the first orderly completion in their Brahmanized form may have taken place in the case of the Ramayana about the beginning of the 3d century B.C., and in the case of the Mahabharata still later.

Lassen was of opinion that three different arrangements of the Mahabharata are distinctly traceable.

Weber shows that the Mahabharata was known to Dion Chrysostom in the 2d half of the 1st century A.D.; and as Megasthenes does not mention this epic, and he was in India about B.C. 315, Weber supposes its date to be between the two.

It is in the Sanskrit language. The Puranic legends tend to show that the language of the Mahabharata is not in its older form, but, as it has come down to us, has been the subject of various recensions, the latest of which can scarcely be fixed later than the 3d century B.C. (between B.C. 500 and 250). Of the two great Epopœia, the Mahabharata and Ramayana, it is doubtful whether either of them was composed as a whole, and the Mahabharata was undoubtedly a compilation of popular lays on national events. The main story in each belongs to a post-Vedic age, when the Aryans had pressed far into the Peninsula. That of the Mahabharata describes the internecine war of two closely-allied tribes, the Kuru and Pandu, for the supremacy of the land of the Doab, with Hastinapura, the modern Dehli, as its capital. The war fought by the Kaurava and Pandava kinsmen to gain possession of the lands near Hastinapura lasted 18 consecutive days, and terminated in the complete destruction of the Kaurava. The war is described as conducted by a series of challenges and personal combats, which would seem to have been related in ballads, and then subsequently gathered together and embellished by a Vaishnava Hindu. The Pandava family were supported by the advice of their Yadava kinsman Krishna, who was brought up as a worshipper of Vishnu, and seems to have actively opposed the worship of Siva and of Indra; and the Vaishnava compilers of the Mahabharata have interwoven the story of the battle with innumerable legends regarding Krishna, whom they deify as an incarnation of Vishnu. In addition to falsifications, exaggerations, and embellishments, geographical, religious, moral, mythical, legendary, scientific, and physiological dissertations are interpolated, interwoven, and forcibly intermixed. It has never been entirely translated, but extracts from it were discovered by Mr. Wheeler in the library of the Bengal Asiatic Society, and these formed the foundation of his History of India, which is an interwoven commentary on the war. Portions of the interwoven materials seem to relate to the life of Christ, portions are taken from the Koran, and it is said Buddhist elements also are found in it. Hastinapura is probably the place on the Ganges, north-east of Dehli, which still bears the ancient name. The family itself was of the Lunar race, but the different parties were supported by numerous allies, and from some very remote quarters. Krishna, who was an ally of the Pandu section, though born on the Jumna, had founded a principality in Gujerat. Among the allies on each side are chiefs from the Indus, and from Kalinga in the Dekhan; some, the translators are satisfied, belonged even to nations beyond the Indus, and orientalists consider the Yavana to apply in all early works to the Greeks. The Pandava were victorious, but paid so dear for their success, that the survivors, broken-hearted with the loss of their friends and the destruction of their armies, abandoned the world, and perished among the snows of the Himalaya; and Krishna, their great ally, is known to have been killed in the midst of civil wars in his own country. Some Hindu legends relate that his sons were obliged to retire beyond the Indus; and as those Rajputs who came from that quarter in modern times to Sind and Cutch are of his tribe of Yadu, the narrative seems more deserving of credit than at first sight might appear. The more authentic account, however (that of the Mahabharata itself), describes them as finally returning to the neighbourhood of the Jumna. The story of the Mahabharata is much more probable than that of the Ramayana. The date of the war was probably in the 14th century B.C.

This poem is interesting to astronomy, because it records the first eclipse of the sun mentioned in any of the Sastra. Modern European commentators suppose that the date of the eclipse which it records is the 25th October in the year 945 before Christ, and therefore anterior to that transmitted to us from the Chaldæans, which was observed on the 19th March 720 before Christ. Professor Lassen and Mr. Wheeler both consider that the Pandava history in the Mahabharata conveys a history of India in successive periods.—*Dowson; Elphinstone*, pp. 154, 173, 390; *Wheeler, Hist. of India; Muller*, p. 47; *Darwinism in Morals*, p. 216; *Westminster Review*, April 1868.

MAHABHASHYA, a commentary by Patanjali on the grammar of Panini.—*Dowson.*

MAHA-BRAHMANA. SANSK. A great Brahman, but applied contemptuously in Bengal to a low class of Brahmans, who officiate at funeral rites, and are the first feasted after the period of mourning; also a Brahman who performs religious ceremonies for Sudras and mixed castes.

MAHADEO or Mahadeva hills, in the Hoshangabad district, the finest in the whole Satpura range, at one point rising to a height of 4500 feet above the sea. It is in this cluster that the very remarkable group of rocks, known by geologists under the name of the Mahadeo sandstones, attains its greatest development. Here the sandstone mass presents a thickness of 2000 feet, and the finest of all those striking vertical escarpments which characterize this formation is seen on the south face of the Mahadeo block, where it rises from the flat ground of the Denwa valley. See Geology.

MAHADEO KOLI reside in the valleys of the Syhadri range, extending from Musa S.W. to Poona, northwards to Trimbuk, the source of the Godavery river, between lat. 18°. 15′ and 20° N., and long. 73° 30′ and 74° E. These small valleys are known as Mawils, Khorahs, Nahirs, and Dangs, *i.e.* valleys, glens, straths, and wilds. These are classed into 24 Koli or clans, each of which has many subdivisions. Their numbers in 1837 were estimated at about 50,000 souls. The members of the same Kol do not intermarry. With the exception of the cow and village hog, Koli eat all other animals. The women are generally slender and well formed, with a pleasing expression of features, and some are very pretty. They are chaste, and have large families. Koli are fond of

charms and amulets.—*Captain Mackintosh in Madras Lit. Soc. Journ.*

MAHADEVA, Great God, a title given to Siva by his followers of the Saiva sect, who acknowledge Siva as their great or supreme god. Similarly they style his consort Parvati or Bhawani, Mahadevi, or great goddess. Siva's emblem is the lingam, the priapus or phallus, rising from the yoni, usually in stone, with the bull Nandi kneeling in front. Mahadeva has Parvati, the mountain nymph, as his sakti or female energy; and in the figures of Mahadeva and Parvati, commonly called Gouri Sunkur, Parvati is seated on Mahadeva's knee, with the bull Nandi at his feet, and the Sinha or lion at her feet. The Lingaet are a Vira-Saiva sect, whose sole object of worship is the lingam. Benares is a great site of the Saiva worship, and there is a celebrated temple of Mahadeva at Karikal, four miles south of Hardwar.

MAHADEVI. Devi, the goddess, is a title given to Lakshmi, to Saraswati, and to Parvati, but the last is most commonly called Mahadevi and Devi. The mythological origin of these three goddesses is thus described in the Varaha Purana, translated in Colonel Vans Kennedy's Researches on the Mythology of the Hindus, etc. In consequence of the distressed situation of the gods from the oppression of the Asura, Brahma hastened to Kailasa and Siva. Siva in thought summoned Vishnu, who instantly stood between them, and from their three refulgent glances sprang into being a virgin of celestial loveliness, who bashfully bowed before them. They said, 'Who art thou, lovely one? and why art thou thus distinguished by the three several colours of black, white, and red?' She replied, 'From your glances was I produced.' Brahma then bestowed on her this blessing: 'Thou shalt be named the goddess of the three times, Morning, Noon, and Evening, the Preserver of the Universe; and under various other appellations shalt thou be worshipped, as thou shalt be the cause of accomplishing the desires of thy votaries. But, O goddess! divide thyself into three forms, according to the colours by which thou art distinguished.' On hearing these words she divided herself into three forms of a white, a red, and a black colour. The white was Saraswati, the sakti of Brahma; the red was Lakshmi, the beloved of Vishnu; and the black, Parvati. This account differs widely from other accounts of the origin of these goddesses, but consistency is not to be found in Hindu mythology.—*Cole. Myth. Hind.* p. 95; *Moor's Hindu Pantheon*, p. 65.

MAHAGANDI and Sulagandi are Buddhist sects of Burma. The Paramat is another sect. The Sulagandi are puritans; the Mahagandi are less strict.

MAHAIL and the Dhuttola tree of Nepal are varieties of plums; the former bears abundance of beautiful flowers.

MAHA-INDRA, the Vedic god of the elements, the personification of the sky, the god of thunder; the king of immortals and the lord of the firmament, the chief of the Devata or Sura.

MAHAJAN, literally a great man, but applied to a banker, a money-lender, also the hereditary officer or the headman of a village. In the villages of N. India, the mahajan are generally Brahmans. Their advances or loans are entered in their books —(1) Takawi for the purchase of cattle or implements; (2) Khawi for food, given in cash or grain; (3) Besari for seed, given in money or kind; (4) Biahi, loans for marriages; and (5) Karza, loans of money at 24 per cent. Mahajani, a written character used in their mercantile book-keeping.—*W.*

MAHAJLU. Uriya. Lygodium scandens, used as a twine for tying beams.

MAHA-KALA. Sansk. In Hindu mythology, eternity. This deity is a representation of Siva, and in the Elephanta caves he is represented with eight arms. In one he holds a human figure. At Ujjain, worshipped in the form of a lingam. The name is from Maha, great, Kala, time. Maha-kala, in Hindu astronomy, the conjunction or opposition of the sun and moon. Maha-kala Sanhita is a book translated by Captain John Warren. See Cala.

MAHA KAVYA. Sansk. A classical Sanskrit work. Of these six are recognised. One by Sri Harsha is the Naishadha Charitra. See Maha.

MAHAL. Arab. A house, a section of a town. Mahallat, fem. pl., women's apartments; figuratively women. Mahal, a ward of an Indian town, which is regulated, with a view to its police, in a manner very similar to what it is in Europe. Mahal is also applied to a district or section of country, as the Bara-mahal of the Salem district of the Madras Presidency. It is also equivalent to a fort or killa, and to ghar or country. Also an estate made up of a parcel or parcels of land. In Oudh the mahals are small estates, which are held by independent zamindars, and are called Mufrid mahal or independent mahal, in contradistinction to the large properties held under sunnud, called taluka.—*Malcolm's Persia*, ii. p. 177; *Malcolm's Central India*, i. p. 216.

MAHA-MAGHA (commonly Maman-gam), *i.e.* the occurrence of the full moon in or about the asterism Magha with other astronomical incidents, which recur once in 12 years. Peculiar rites in honour of Siva are then performed. The time is auspicious for bathing. At Combaconum is a large tank, the water of which is supposed to rise once in 12 years, on the above occasion, and then people in great numbers assemble from distant places to bathe and obtain remission of sins.

MAHA-MARRI. Hind. Lit. great death, from Maha, great, and Mri, to kill; a plague which appeared in the Kamaon and Garhwal Hills, and on one occasion extended to the Rohilkhand plains. It was believed by the people to be contagious. It broke out about the year 1837.

MAHA-MERU, a fabulous mountain of extraordinary height, in the extreme north of India, supposed to be upheld by elephants. See Meru.

MAHA MOHA. Sansk. In Hinduism, extreme illusion, causing addiction to the enjoyments of sense; one of the five kinds of obstruction to the soul's liberation, or, as they are called in the Patanjala philosophy, one of the five afflictions,—the five-fold ignorance of the Vishnu Purana.—*Garrett.*

MAHAMRA, a town in Khuzistan in Persia, situated on the N. bank of the Hafan Canal, 26 miles below Basra. The climate from June to October is said to be unhealthy to Europeans. The Shat-ul-Arab is here about a half mile wide, and of sufficient depth to float the largest ships alongside the perpendicular clay bank. A great channel connects the Karun with the Shat-ul-

Arab. In November 1856 the Government of India declared war against Persia; in December Kharag was occupied; on the 8th February 1857, Sir James Outram defeated the Persian forces at Khushab; on the 26th March Mahamra was captured, and a treaty of peace was entered into at Paris.—*MacGregor*, iv. p. 300.

MAHA-MUNI, a pagoda in the Akyab district of the Arakan division of British Burma, situated in lat. 20° 52′ 40″ N., and long. 93° 5′ 30″ E., to the north-east of Mro-houng, or Old Arakan. This edifice is visited by numerous pilgrims. It enshrined formerly an image of Gautama Buddha.

MAHANADI rises in lat. 20° 10′ N., and long. 82° E., in the Raipur district, and, after a course of 520 miles through the Central Provinces and Tributary States of Orissa, it falls into the Bay of Bengal. Its catchment basin is estimated at 43,800 square miles, and its rapid flow renders its maximum discharge in time of flood second to that of no other river in India. During high floods, 1,800,000 cubic feet of water pour every second through the Naraj gorge, 7 miles above Cuttack city. About 250,000 cubic feet per second strikes into Puri district by means of the Koyakhai. The remaining six-sevenths pour every second, through the Katjuri, Birupa, and Mahanadi proper, into Cuttack district. An elaborate system of canals starts from the Mahanadi, with the design, in the first place, to regulate the water supply for irrigation; and, secondly, to utilize it for navigation and commerce. In this end a massive masonry weir 3000 feet long has been erected across the mouth of the Katjuri, the southern bifurcation of the Mahanadi; another enormous weir, 6400 feet long, across the Birupa at Chandwar. The first two of these weirs are 12½ feet, and the third 9 feet high. Orissa canals, when completed, are designed to irrigate a total of 1,600,000 acres. In 1868-69 a drought at the end of the rains awoke the fears of the husbandmen, and water was taken for 9378 acres at an aggregate charge of £2288.—*Imp. Gaz.*

MAHANANDA, a tributary to the Ganges, rises near Darjiling, in the Sikkim Hills, lat. 26° 57′ N., and long. 88° 20′ E.; S., 40 miles; S.W., 60 miles; S.E., 50 miles; S., 20 miles; S.E., 40 miles; S., 30 miles. Length, 240 miles. It is navigable during the dry season for craft of 8 tons as far as Kishengunge; for those of much larger burden during the rains.

MAHANT, the head of a religious establishment of the mendicant orders of the Hindus; the prior or superior of a monastry or mat'h.

MAHANTI. URIYA. A man of the writer or accountant class? The caste itself is Mahayajna. Mahanti, amongst the Munda, a deputy headman.

MAHA-PATA. SANSK. A heinous crime. Of these the Hindus reckon five,—the murder of a Brahman, intercourse with the wife of a guru, stealing gold from a priest, drinking spirits, and associating with persons guilty of such offences.

MAHA-PRAHU or Maha-prabahu, a respectful term of address amongst the Mahratta nations.

MAHA-PRALAYA. SANSK. According to the Hindu cosmogony, the universal collapse of all creation at the close of the Kali Yoga. See Yoga.

MAHA-PRASADA. SANSK. The great food, *i.e.* the distribution, amongst the persons present, of food offered to an idol, such as sweetmeats and the like. It is especially applied to the distributions at Jaganath.

MAHA-PURUSHA, great or supreme spirit, a title applied to Vishnu; also any great man, but also to religious ascetics, especially to such as pretend and are believed to have overcome physical infirmities, to be able to live without food, and to be impassive to external or elemental influences.

MAHA-PURUSHYA, a Hindu sect in Assam, who follow the doctrines of Damudhar, Gopal, and Hari-Deb, and regard Vishnu as the sole god. They are arranged into Grihi or laymen, who worship images of Vishnu and Krishna and the saligramma, and the Udasin, who are interdicted all image-worship. Its founder was the remarkable Maha-purush at the Ghosauls of Kidderpur. He was apparently a man about 40 years of age, with a very fair complexion, and jet-black hair. He did not seem to eat or drink anything, nor speak a word, but remained in a sitting posture.

MAHA RADZA WENG or Radza Weng, Burmese chronicles of kings. These are found in the kingdoms of Burma, Pegu, Arakan, Manipur, the old state of Pong or Magoung, and indeed in all the Indo-Chinese nations, even in such small states as Tavoy and the Shan principalities of Zimme and Laboung.

MAHARAG, Arad, and Famahoy are three islands surrounded by the Jiha or Arad coral reefs, and only separated from each other at high tides. They form one side of the entrance to the port of Bahrein in the Persian Gulf. The town of Maharag stands on the island of that name, and, with the adjacent town of Manama, contains the trading population of the main island of Bahrein.

MAHARAJA. SANSK. This title was originally applied in the Puranas and Hindu books to the sovereign of a vast monarchy, which in the second century comprised a great part of India, the Malay Peninsula, Sumatra, and the neighbouring islands. But there are now in India several Hindu rulers by whom the title of maharaja has been assumed, or been given by the British,—the maharajas of Gwalior, of Indore, of Travancore, of Vizianagram. It is occasionally bestowed on Hindu civil officers of rank; as an honorific title, is also assumed by religious teachers of the Hindus, particularly by the leaders of the Rudra Sampradayi sect, followers of Vallabhacharya; and it is a term of respect used by inferiors when addressing any person in authority. The Malay ruler of Johore also bears this title. With the reigning princes it is always associated with other titular designations; those of the sovereign of Travancore, for instance, are His Highness Sri Patmanabha Dasa Vanchi Bala Rama Varma, Kulasikhara, Kiritapati, Manny Sultan, Maharaja, Raja Ramaraja Bahadur, Shamshir Jung, G.C.S.I. —*India in 15th Cent.*

MAHARAJA, an honorific appellation of the head of a sect of Hindus styled the Rudra Sampradayi, also Vallabhacharya, also Gokalastha. The sect arose about the 15th century, from the teachings of Vallabhacharya, a Telinga Brahman, and his doctrines are best known as those of the Gokalastha gosai, the title of its teachers, who are usually in Bombay styled Maharaja. The doctrine of Vallabha was that privation was not sanctity, and that the duty of teachers and disciples was to worship the deity,

not in nudity and in hunger, but in costly apparel and choice food. The followers of this sect are very numerous and opulent; the merchants and bankers, especially those from Gujerat and Malwa, belong to it. Their temples and establishments are numerous all over India, but particularly at Mathura and at Bindraban; but at Sri Nat'h Dwar, at Ajmir, is the most celebrated and most richly-endowed of all the Gosain establishments. The disciples who are devout make the threefold Samarpana, tan, man, d'han, of body, mind, wealth, to the guru, whom many of the Bhattia race regard as an incarnation of Krishna, the worship of whom, as Bala Gopala, they follow. There are about 60 or 70 maharajas in India. Of these, the maharaja at Sriji is said to be the chief, and he has a great temple near Udaipur. When the people wish to worship a maharaja, they fetch him to their houses, offer him flowers, wave a light round him, present him with money, and prostrate themselves at his feet. The maharajas worship the gods much in the same way, and in addition they bathe and dress the images. On certain occasions it is customary to worship the idol by swinging it; and at these swinging festivals, swinging the maharaja is a religious ceremony which is performed by the female members of the different families of the disciples. Whilst the maharaja is swinging he throws the red powder called gulal amongst his devotees, and some of it falls upon the necks and breasts of the women. If any one else threw gulal upon women, it would, excepting on the Holi festival, be regarded as an insult. Nautch dances are occasionally given by the maharaja, but in a different part of the temple to that which the idols are placed, and female devotees occasionally visit the maharaja's family in a separate part of the temple. The maharajas have temples in Bombay, and sometimes there are several residing in the island. When Gokalnath maharaja originally visited Bombay, in 1811, all the Vaishnava sect requested his holiness to settle permanently with his family, for the purification of their souls, offering at the same time to build a temple for him, and to make arrangements to meet his expenses in connection with the temple. Accordingly a tax upon articles of trade was determined upon; and all the Vaishnava merchants, who in Bombay possess a monopoly in almost every important article of trade, solemnly bound themselves to add it to the price of every article they might buy or sell. The result is that about Rs. 1,62,000 are raised every year for six different maharajas, of whom the maharaja of Bombay receives about half a lakh per annum.

According to the doctrines of the Vallabhacharya sect, every maharaja is considered as the husband of his female devotees; but in 1855 the followers held a meeting, at which it was resolved that none of their daughters or wives should be allowed to resort to the maharajas for worship except at certain stated hours, when the maharajas would be necessarily occupied in ceremonies at the temple. Many amongst them, no doubt were as ignorant as the public in general were, before the trial took place in 1862, of the habits of the maharajas; or, if they knew what was done, they considered such practices to be sanctioned by their religion. Bold and earnest words fitly concluded Sir Joseph Arnould's judgment—'It is not a question of theology that has been before us; it is a question of morality. The principles for which the defendant and his witnesses have been contending is simply this,—that what is morally wrong cannot be theologically right; that when practices which sap the very foundations of morality, which involve a violation of the eternal and immutable laws of right, are established in the name and under the sanction of religion, they ought for the common welfare of society, and in the interest of humanity itself, to be publicly denounced and exposed. The defendants have denounced and have exposed them. At a risk and at a cost which we cannot adequately measure, these men have done determined battle against a foul and powerful delusion. They have dared to look custom and error boldly in the face, and proclaim before the world of their votaries that their evil is not good, that their lie is not the truth. In thus doing they have done bravely and well. It may be allowable to express a hope that what they have done will not have been in vain, that the seed they have sown will bear its fruit, that their courage and constancy will be rewarded by a steady increase in the number of those whom their words and their example have quickened with thought and animated to resistance, whose homes they have helped to cleanse from loathsome lewdness, and whose souls they have set free from a debasing bondage.' Their persons are deemed very sacred. At the trial in 1862, Jadunathji Brijruttonji Maharaj, the plaintiff in the case, when under cross-examination in the witness-box by the late Mr. Anstey, was shown a document for identification. Mr. Anstey, who stood near the witness-box, stretched forth his hand holding the paper, in order to deliver it to the maharaj. The latter shot back into the furthermost corner of the box. Mr. Anstey felt indignant, and his indignation increased when the interpreter of the court explained to him the Wallabhacharyan doctrine of touch. He told the witness through the interpreter, 'I would not touch you with a pair of tongs.'

MAHARAJPUR, a village in the Gwalior State in Central India, in lat. 26° 29′ N., and long. 78° 5′ E., 15 miles N.W. of Gwalior fort. The British, under Sir Hugh Gough, on the 29th December 1843, here gained a victory over the Mahratta forces, and captured 56 guns and all their ammunition waggons.

MAHARANA means Great Prince, the title by which the Rajput rulers of Udaipur are always distinguished. Maharani, the queen.

MAHARASHTRA, the Mahratta country. The race now occupying Maharashtra is known as the Mahratta. The men are robust, and generally employed as cultivators. The women are not well featured nor well shaped. In the Sareda Tilaka, a monologue of later date than the play of Mrich'chha-kati, which was of the 1st century of the Christian era? but still of comparative antiquity, there is a description of some of the various women of India, distinguishing each by her nationality:

'There goes the maid of Gurjara (Gujerat), blooming as with perpetual youth, having eyes like the chakora, of the complexion of the yellow rochana, and a voice musical as that of the parrot. She wears anklets of silver, large ear-rings set with pearls, and her bodice is buttoned below the hips with gems.

'The matron of Maharashtra proceeds yonder, her forehead stained with saffron, and with silver chains upon her feet; she wears a coloured veil, and a girdle round her loins.

'A Chola female (south of India) approaches, whose cheeks are tinted with saffron, and whose dress is embroidered with the buds of the lotus.'

A bodice which buttons below the hips is certainly unknown at the present day, either in Gujerat or elsewhere in India; and as no single cloth, as a scarf or the present saree, could be buttoned, it can only be presumed that the garment was cut out and sewn in the fashion of a long tight-fitting robe, as in use among Persian women of the present time.

MAHA-RAWUL, a royal title of the rulers of Jeysulmir and Doongurpur.

MAHARI. In the Uriya, a dancing-girl attached to a temple is called a Mahari.

MAHARI. ARAB. A riding camel. It is more slender than the camel used for burden. In the desert it is of great value.

MAHARNAVAMI, a festival in Coorg, held on the 9th day of the seventh month. Arms are worshipped.

MAHARRAM, the first month of the Muhammadan year; the first ten days of the month are held as a festival, which is celebrated as Christmas is, sometimes by strict religious rites or by great festivity, according to the opinions or ignorance of the sects. The Shiah Muhammadans and learned Muhammadans are generally most strict in the observance of their religious duties for the first thirteen days of this month. The twelve months in succession are—

Maharram.	Jemadi-ul-Awul.	Ramzan.
Suffer.	Jemadi-us-Sani.	Shawal.
Rubbi-ul-Awul.	Rujjub.	Zu-ul-Kaida.
Rubbi-us-Sani.	Shaban.	Zu-ul-Hajja.

Ashrah, an Arabic word, from Ashr, a tenth, are the first ten days of the Maharram, or the ceremonies observed during that part of the month. Houses are appropriated, in which they set up the Allum, Taboot, Shah-nasheen, Booraq, etc., and sometimes screens made of mica. These places are called the Ashoor Khanah (ten day house); Tazeea Khanah (the house of mourning); and Astana (a threshold or fakir's residence). In Northern Hindustan, opulent Muhammadans erect an Imambara, and the Shiah sect generally follow a similar practice.—*Herklots.*

MAHA SAKSHI, Maisakshi, or Meshakshi-kusuma, a gum-resin found in druggists' shops, which is said by Ainslie to come from Arabia, and is said by Wight to be a kind of bdellium. In the bazars at Madras, the Pansari or druggists, if asked for maisakhshi, will produce gugul, which is the same as the Arabic muql. The word means buffalo's eye.—*O'Sh.*

MAHASAL. ARAB. A government servant sent to obtain payment of village dues. It is rarely resorted to in the British administration, though legal under Regulation xvii. of 1827, section 12. The villagers had to feed the peon; and in the event of their not complying, a second, a third, even up to 10 or 20 peons, would be sent, and horsemen also often sent. The Mahasal were often quartered on a village in case of a robbery.

MAHA-SANKRANTI. SANSK. The ... Sankranti, the sun's entrance into Capricorn; the winter solstice. The Pongol festival in the south of India.

MAHASHTAMI. SANSK. The 8th day of the festival in Aswin in honour of Durga; the Durgapuja.

MAHA SIVA RATRI, one of the greatest festivals in the Hindu calendar, occurs about the middle of February. Various legends are given in connection with this festival, but public opinion among the Hindus is in favour of the following:—Ravana, king of Lanka, undertook a pilgrimage to Mount Meru, the residence of Siva, and there put himself through a course of the most rigid penance, and supplicated the god by fasting and prayer. Siva appeared to him and asked him his desire. The king replied that he had only one request to make, and that was that none of the gods should be permitted to invade his country, and that they should not have power either to conquer or slay him. Siva, in reply, gave him a lingam of stone, and commanded him to take it to his country, and there build a temple over it to his honour. He further enjoined him not to place it on any carriage, but to carry it himself. He was also not to set it down anywhere on the road, for if he did he would never, the god said, be able to lift it off the ground again. An implicit obedience to these injunctions would obtain for him a favourable answer to his prayers. When Ravana had started from Mount Meru with the lingam, the other gods supplicated Pillyar after this wise: 'This Ravana has been a constant source of annoyance and trouble to us; and now that he has obtained from Siva this lingam as a protection from our power, he will become yet more arrogant and troublesome. You must therefore devise some means of depriving him of the lingam before he reaches the country.' Pillyar acceded to this request, and, summoning Varuna, he desired him to enter into the stomach of the king of Lanka and become water, so as to fill him. This Varuna accordingly did. Ravana, when the watery element filled him, began to feel exceedingly uncomfortable and dropsical, and looked out for some shady retreat where he might rest a while till the waters had subsided! Pillyar at this moment assumed the form of a Brahman child, and appeared to him, and Ravana asked him to carry the lingam for a few minutes.

MAHAVINYAKA, sacred peak of the Barunibunta Hills, Cuttack district, Bengal; visible from Cuttack city.

MAHAVIRA, the title of Vardhamana, the 24th and last Jaina tirthankara, began his austerities at the age of 30, continued them for twelve and a half years as a digambara or naked ascetic, without even a bhikhshu's begging dish, and at the age of 72 he died at the court of king Hastipala, about B.C. 526. His disciple Gautama Swami or Gautami Indra Bhuti is supposed by some to have been Gautama Buddha, the founder of the Buddhist religion. The Buddhists designate Gautama as Mahavira, and mention Maha Kasyapa as his chief and eminent disciple. The Jains style him Kasyapa Mahavira, and mention Gautama as his chief disciple (Ganadhara). Both Buddhists and Jains concur in making Mahavira the friend and spiritual teacher of a king of Rajagriha, the capital of Magadha, whose name was Srenika or Bhambhasara according to the Jains, and Bimbisaro according to the Buddhists.

Mr. Garrett gives a legend which relates that Mahavira was repeatedly born again. His first birth was as Nayasara, headman of a village in the country of Vijaya, from which he was transferred for oceans of years to the Sandharma heaven. He was then re-born as Marichi, the grandson of Rishaba, the first tirthankara, and thence transferred to Brahma-loka, whence he returned as a worldly-minded and sensual Brahman, the consequence of which was repeated births in the same caste, each birth separated by an interval passed in one of the Jaina heavens. He then became Visvabhuta, prince of Rajagriha, and next a Vasudeva named Triprishta; then a Choravartti Priyamitra, then a Nandana, leading a life of devotion. On the return of the spirit of Nandana to earth, it first animated the womb of the wife of a Brahman, but was transferred to the womb of Tresala, wife of Siddharta, of the family of Ikshvaku, a prince of Ravana in Bharakshetra. He was born on the 13th of the light fortnight of Chaitra. His father named him Varddhamana, but it was changed to Mahavira. He married Yasoda, daughter of prince Samara Vira, by whom he had one daughter, named Priya Darsana, who married Jamali, a prince, one of the saint's pupils, and founder of a schism. Siddhartha and his wife died when Mahavira was 28 years of age, on which Mahavira adopted an ascetic life, the government devolving on his elder brother Nandivarddhana. After ten years of abstinence and self-denial, he commenced an erratic life, often fasting and in silence. In twelve and a half years he attained the Kevala or only knowledge, under a sal tree on the north bank of the Rijupalika, and commenced to instruct from a stage. He enjoined to avoid injury to life or giving pain, to speak truth, not to steal, to be continent. On his death his body was burnt, but unconsumed portions were kept as relics.—*Dr. Bhau Daji in Bo. R. As. Voc.; Garrett.*

MAHA-VIRA CHARITA, a stirring and martial drama by Bhava-Bhuti, which has been translated into text by Pickford; it relates the exploits of the great hero Rama. There are several editions of the text.

MAHAWANSO, a metrical chronicle in Pali of the dynastic history of the island of Ceylon, from B.C. 543 to A.D. 1750, discovered and translated by the Honourable George Turnour. Mahawanso and other Ceylonese scriptures were reduced to the present form by Buddhaghosa in the beginning of the 5th century A.D. The 17th chapter of the Mahawanso is entitled the Arrival of the Relics, and details the acquisition to Ceylon by Dewanan-piyatipo, of the collar-bone and other relics of Buddha. The right canine tooth was transferred in A.D. 310 from Dantapura to Ceylon, and is now enshrined in the Dalada Maligawe temple in Kandy. In the Mahawanso, p. 249, it is mentioned that Upatisso, son of Buddha Das, built hospitals for cripples, for pregnant women, and for the blind and diseased. Dhatusena (p. 256) built hospitals for cripples and sick. Buddha Das himself (p. 245) ordained a physician for every ten villages on the high road, and built asylums for the crippled, deformed, and destitute.

MAHA-WELLI-GANGA, the Ganges of Ptolemy, rises near Adam's Peak in Ceylon. It traverses more than one-third of the mountain zone, and drains upwards of 4000 square miles. Mahawellaganga is the largest river in Ceylon. Its principal branch has its source in Pedro tallagulla, on the plain of Nuwera Elia; when near the east coast, it divides into two branches, one of which falls into the great bay of Trincomalee, the other, called the Virgel, into the sea 25 miles south of Trincomalee.—*Sir. J. E. Tennent's Ceylon.*

MAHAYAJNA. SANSK. A great sacrifice. Of these, in Hinduism five are recognised:—1. Brahma-y, the study of Brahma or the Veda; 2. Pitri-y, offering to the manes; 3. Deva-y, offerings to the gods; 4. Bali or Bhuta-y, worship of all things, of evil spirits; 5. Nri-y, worship of man, hospitality.

MAHAYANA, a form of Buddhism, which was introduced by Nagarjuna, and those who assisted at the fourth convocation under Kanishka. It means the Greater Translation, and was said to have been preserved by the Nagas, from whom Nagarjuna received it. It spread from Peshawur over all Northern and Eastern Asia. From that time the Tibetans, Burmese, and Chinese date the introduction of Buddhism into their countries. It was considerably in advance of the Hinayana school of Central India in all complications of ritual observances.—*Fergusson*, p. 180.

MAHA YAZA WIN, also written Maha Radza Weng, a royal chronicle of Burma, which gives dates from B.C. 1000. There is no doubt that Tagoung and Prome and Pagan were each in their turn for many centuries the seat of an empire, but there is no certainty until the middle of the 16th century. According to this chronicle, however, the first ruler was Maha Thammada, the object being to connect the royal line with prince Siddhartha, the Buddha of the present cycle of religion. To give this theory the greater verisimilitude, the chronicle represents the whole Burmese race as descended from a tribe of the Indian Solar race, who, with Abhi Raja, their king, were driven from their home in Kapilavastu, and, marching eastward, finally settled in the valley of the Irawadi, where they built Tagoung for their capital. This ancient capital is said to have been founded by Anawrata Saw. He was a very devout Buddhist, and marched with a large army into China to obtain a tooth of the Buddha. In this he was not successful, but he came back with a golden replica obtained from the Hwang-ti. This was about the time of the Danish kings in England. Five hundred years later, Buyin Noung, a monarch a monster of cruelty, succeeded to the throne. The country was then divided into four separate and independent kingdoms,—Pegu, Arakan, Burma, and Ava. When he died he had exalted Burma at the expense of the neighbouring kings, and, besides subduing Zimme, had ravaged Siam up to the gates of the capital. Cæsar Fredericke says about him, 'The king (Branginoco he calls him) hath not any army or power by sea, but in the land, for people, dominions, gold and silver, he far exceeds the power of the Great Turk in treasure and strength.' Buyin Noung employed Portuguese soldiers of fortune in his various expeditions, and prominent among them were Philip de Brito and Nicote and Gonsalves. The former, originally a cabin-boy, established himself for thirteen years as an independent monarch at Syriam, below Rangoon, and the ruins of the

fort he built may yet be seen. Gonsalves was a common soldier, who became a pirate on a large scale, and, after a brilliant eight years of murder and plundering, lapsed into the common soldier again. Philip de Brito and Nicote was impaled on a spike. Many of the Portuguese captured during these expeditions were sent as prisoners into the interior, and their descendants form a distinctly recognisable class to the present day at Mandalay, though they dress as natives of the country, and have Burmese names.

During the period between Buyin Noung and Aloung-payah, the founder of the present dynasty, at one time the Burmans were masters, at another the Peguans, while the kings of Arakan or of Tounghoo made raids on the lowlands. About the middle of the 18th century, the Talaings of Pegu rose against the Burmese, and not only drove them out of Pegu, but, under their king, the prince of Dala, a village opposite Rangoon, overran the Burmese dominions, and finally sacked and burnt Ava, the capital of the country. But Oung Zaya, a hunter, finally overthrew the Talaing near Prome, and proclaimed himself king, with the title of Aloung-payah. He was the founder of the town of Rangoon, and in the eight years of his reign not only possessed himself of Pegu, but annexed Arakan, Tavoy, and Tenasserim, and was on the march against Siam when he was seized with the illness which ended in his death. His son Sin-byoo-shin, however, inherited his military genius; and, besides conquering Siam, came off victorious in four severe struggles with the Chinese, who invaded the country with large armies. Under him and the next few kings the power of the country was consolidated, the Shan states and Manipur were overrun, and finally the Burmese came into collision with the British. Under Bodaw-payah, the last of the sons of Aloung-payah, the empire reached its largest extent, and had become one of the most formidable powers in Asia. It had nearly 1000 miles of sea-coast, and extended from the borders of Chittagong to the centre of Siam. The Burmese soldiery were feared all over Indo-China as the most ruthless and invincible of foes. But the braggart spirit which led Bodaw-payah to proclaim himself an embryo Buddha, and lord it over British envoys, prompted his successor to demand from the Indian Government the surrender of Chittagong, Dacca, and Murshidabad. Actual aggressive movements on Chittagong led to a declaration of war in 1824, and in 1826 Sir Archibald Campbell dictated peace close to the walls of Ava.

MAHA-YOGA, in Hindu cosmogony, a period of four Yoga. It comprises 12,000 years of the gods, which, according to the Vishnu Purana, are 4,320,000 years of mortals. See Yoga.

MAHAZAR. ARAB. A representation. Mahazarnama, a written statement.

MAHBUB-i-SUBHANI, or Dastagir, a Muhammadan saint.

MAHDI. ARAB., HIND. A guide; according to the Shiah sect of Muhammadans, the twelfth and last of the Imams or successors of Ali. The Mahdavi part of the Shiah sect believe him to be still alive. The Ghair Mahdavi believe that he has been on, but has disappeared from, earth. The Sunni sect believe that Mahdi is yet to come. From time to time, amongst the Muhammadans, persons have been appearing claiming to be the Mahdi. One of these appeared in Hindustan at Jonepur early in the 16th century; his followers are the Ghair, Mahdi. In the early part of 1884 one such rose in the Soudan in Northern Africa, and gained many adherents. There are continual prophetic announcements made. There is an old widespread prophecy that the Mahdi is to appear in the 14th century of the Hijira, which begins about 1886. The adherents of a numerous sect, which has ramifications throughout all Northern Africa, believe that the Mahdi is to bear the name of Abdullah, his father's name to be Mahmud, his mother's Aminat, while his vicegerent is to be called Abdul Muttalib. The Mahdi's troops attacked Jazireh, which, as its name signifies, is an isle near Berber. The explanation is that there is an old tradition that the future ruler of the Soudan will come from that isle. The people of the Soudan are very superstitious; and the fall of the flag by a gust of wind on the occasion of Tewfik's proclamation at Khartoum was looked on as an omen of the end of Muḥammad Ali's dynasty. There is an old tree opposite Cook's office at Jerusalem in Tophet, belonging to an old family, and protected by the Sultan's firman, and the Arabs believe that it will fall when the Sultan's rule ends. It lost a large limb during the Turco-Russian war, and is now in a very decayed state. All Muhammadans believe that Mahdi will reappear before the second coming of Christ, and the most of them indicate Damascus as the site. See Imam.

MAHE, a town in Malabar district, Madras, is in lat. 11° 41′ 50″ N., and long. 75° 34′ 25″ E. This little French settlement is about 4 miles to the south of Tellicherri. Between 1761 and 1793 it repeatedly changed hands, during the strife between the British and the French. Mahé has an area of 1445 acres, with a patch of ground in the town of Calicut further south.

MAHENDRA, son of Asoka, king of Magadha, in B.C. 236 converted Ceylon to Buddhism. The earliest recorded voyage down the Bhagirathi was made in the age of Asoka, who sent this son Mahendra, with a branch of Buddha's sacred pipal tree, on a mission to the king of Ceylon.—*Tr. of Hind.* i. p. 20.

MAHENDRAGIRI or Mahendra Mallai, a mountain peak in the Eastern Ghats, Ganjam district, Madras, in lat. 18° 58′ 10″ N., and long. 84° 26′ 4″ E., and 4923 feet above sea-level. Mahendragiri mountain is in the Parla Kimedi district, distant about 20 miles from the sea-coast. The view to the south-west ranges over the greater part of Parla Kimedi; on its western side runs a deep valley, on the opposite side of which rise the numerous and extensive hills occupied by the independent Saurah tribes, some of them but little inferior in height to the Mahendragiri. To the north and north-east are the Jarada, Jalantra, Bodarsingi, Surungi, and Chikati hill zamindaris, and the taluks of Itchapur, Moherry, and part of Pubaconda. The Mundasa zamindari extends from the east face of the range to the sea-shore. The valley which divides the Mahendragiri range from the hill tracts of the independent Sourah to the west extends from the Jarada zamindari completely into the Parla Kimedi country. It was tried as a sanatorium, but proved very unhealthy.

MAHENDRAGIRI, near Cape Comorin, about 5000 feet high, is the mountain with which the ghats terminate. Indragiri means the great mountain of Indra. It is alluded to in the Ramayana as that from which the monkey god Hanuman leapt to Ceylon, alighting on the summit of Adam's Peak. The Tinnevelly Gap separates it from the mountains to the immediate north. To the south are a few rocky hills, the Arambully pass, and then the open sea. Upon the Tinnevelly side, immediately under the shadow of this mountain, lies the town of Trichenagoody, with its fine gopuram, or temple tower; and on the Travancore side is the town of Nagercoil, famous as a station of the London Missionary Society since the days of Ziegenbalg. Several large and highly-cultivated coffee estates spread over its sides. The forests, consequently, which once rolled around it, and enfolded it as it were with a grand mantle of green, are fast disappearing.

MAHESH, a village, a suburb of Serampur, in the Hoogly district of Bengal, lat. 22° 44′ N., and long. 88° 23′ 45″ E. Famous for the two great festivals of Jaganath, the S'thnam-Jatra or bathing of the god in May, and the Rath-Jatra or car procession, six days later. At the latter, the god is dragged to the village of Ballabhpur, a mile distant, and brought back after eight days' visit to the temple of Radhaballabhæ. An important fair is held at Mahesh during the eight days, with an attendance of about 8000 persons daily, and 100,000 people on the first and eighth day, when the procession and return journey take place. At Mahesh, Jaganath and his brother Balaram, having fasted the whole day, on one occasion are said to have pawned a bracelet with a shopkeeper to procure some food. The ornament was missed by the Pandas (priests) on their return to Puri, and they released it from the shopkeeper.—*Imp. Gaz.* vi.; *Tr. of Hind.* i. p. 5.

MAHESHA, a demon of the Hindus of great power, who, having been troubled by the army of Durga, assumed the form of a buffalo to destroy them, but was speared by Durga. In the sculptures at the Burabur caves, Durga slaying 'Mahesh-Asur' is the principal and most often repeated. Maheshasura Mardini is the form of Durga as the destroyer of the buffalo-born giant Mahesha. Maheswara (the great lord), one of the five great lords or faces of Siva. It is this name which Europeans have changed to Mysore.

MAHESHWAR. SANSK. The Binlang stones, worshipped as emblems of Siva, are formed at Maheshwar, on the Nerbadda, where a whirlpool occurs, and rounds and polishes fallen stones into the form of a lingam.

MAHI. PERS. A fish. From Basrah to Hormuz, the sea-coast people still principally live on fish. The Mahi-abah and Mahi-ashnah, literally fish bread and fish soup, used among the people of Lar, is prepared from fish (more particularly a small kind found near Hormuz) by exposing it to the sun. Strabo and Arrian relate that the ancient Ichthyophagi made into bread in a similar manner the fishes which they had dried and roasted. The region of the Ichthyophagi commenced at Malana near Cape Arabah, and ended between the ancient Dagasira and the place now called Cape Jashk. Churchill's Collection of Voyages mentions that 'the coastes of Persia, as they sailed in this sea, seemed as a parched wildernesse, without tree or grass; those few people that dwell there, and in the islands of Lar and Callon, live on fish, being in manner themselves transformed into the nature of fishes. So excellent swimmers are they, that seeing a vessel in the seas, though stormie and tempestuous, they will swimme to it five or six miles to begge almes. They eate their fish with rice, having no bread; their cats, hennes, dogges, and other creatures, which they keepe, have no other dyet.' Nieuhoff, who travelled in 1662, says that about 'Gambraon the common people make use of dates instead of bread or rice; for it is observable that the ordinary food of the Indians all along the coast from Basora to Sinde is dates and fish dried in the air; the heads and guts of the fishes they mix with date stones, and boil it all together with a little salt water, which they give at night to the cows after they come out of the field, where they meet with very little herbage.'

MAHI, river of Bombay, with a course of from 300 to 350 miles in length, and a drainage area estimated at from 15,000 to 17,000 square miles. After the Nerbadda and the Tapti, it is the largest river of Gujerat. The main branch of the Mahi rises about 1850 feet above sea-level in the Amjhera State, Malwa, in lat. 22° 52′ N., and long. 75° 5′ E., about 160 miles east of Cambay. The source of the river is in the Mehad lake.

MAHIDPUR, in lat. 23° 30′ N., and long. 75° 38′ E., in Malwa, 23 miles N. of Ujjain. The mean height of the village above the sea is 1600 feet. The battle of Mahidpur, on the 21st December 1817, fought and won by the British in war against the Mahrattas.—*Scott.*

MAHIJAH. HIND. In the Bari Doab, high lands above river inundation.

MAHIKANTA, a group of Native States under the Government of Bombay; situated between lat. 23° 14′ and 24° 28′ N., and between long. 72° 40′ and 74° 5′ E., with an area of about 4000 square miles. In 1838, Captain (Sir James) Outram instituted border panchayats for the settlement of the numerous blood-feuds and disputes between the wild Bhils on the Mahikanta and Rajputana frontier.

MAHI MURATIB. PERS. The fish-banner, a Muhammadan regal distinction, granted also by sovereign princes, entitling the receiver to have carried before him the gilt metal figure of a fish, borne upon a pole, with two gilt balls similarly elevated. Shah Alam conferred the honour on Lord Lake.—*W.*

MAHI-RUBIAN. HIND. Dried shrimps, from the coast of Sind; also an undetermined drug, in appearance consisting of dried-up pieces, having a grey colour.

MAHMAN. In Gujerat is a numerous race, called Mahman, or in conversation, Mehman. Many families of this sect live in Bombay, and are a very useful, hard-working, trusty people.

MAHMUD, son of Sabaktagin, commonly called of Ghazni, was a brave, experienced, prudent sovereign, distinguished in war and as a civil administrator. He ruled from A.D. 997 to A.D. 1030, in which period he extended his dominions from the Persian Gulf to the Sea of Aral, and from the mountains of Kurdistan to the banks of the Sutlej. He was the greatest sovereign of his time, and is considered by Muhammadans among the greatest of any age. He

was athletic and well-proportioned, but scarred with smallpox; prudent, active, and enterprising, zealous in the encouragement of literature and art to a degree which has not yet been surpassed. The poets Dakiki, Ansari, and Fardusi were attracted to his court. He founded at Ghazni the mosque called the Celestial Bride, which was the wonder of the east, and the nobility imitated his taste for architectural display. Such were the multitudes of slaves he brought from India, a purchaser could not be found for them at 4s. 7d. a head. At that time the northern part of India seems to have been under the sway of four rulers, one at Dehli under the Chauhan, one at Kanouj under the Rahtor; Mewar was under the Gehlot, and Anhilwara under the Chaura and Solanki. The Dehli rule extended to the Indus in the west, and the Himalaya to the north; Kanouj eastwards to Benares, with part of Bundelkhand; and Mewar and Anhilwara consisted probably of the present Mewar and Malwa, and thence to the Lower Indus and the sea.

Mahmud put aside his elder brother Ismail in A.D. 997. In A.D. 1001 (A.H. 391) he made his first campaign against the Hindus of India. He left Ghazni with 10,000 chosen horse, and on the 27th November, near Peshawur, defeated and took prisoner raja Jaipal I. of Lahore, afterwards stormed Batinda, and returned to Ghazni rich with plunder. Jaipal, on his return from captivity, immolated himself on a pyre which he had ordered to be constructed.

Mahmud's second expedition was against the raja of Bhattia, south of Multan, who, being driven from a well-defended entrenchment, and then from his own fortress, at last destroyed himself in the thickets of the Indus, where he had fled for concealment, and where many of his followers fell in endeavouring to revenge his death.

His third expedition was to reduce his dependent, the Afghan chief of Multan, Abul Fattah Lodi, who had formed a close alliance with Anang Pal. Anang Pal interposed his army between those of Mahmud and Abul Fattah, but was routed near Peshawur, and Mahmud invested Multan, but after seven days' siege he accepted the submission of the chief. Taking advantage of Mahmud's occupation near the Indus, Elik Khan sent an army to invade the Ghaznavi dominions of Herat and Balkh, but Mahmud left his capital under Suk Pal, a converted Hindu, met Elik Khan near Balkh, drove the Tartars with prodigious slaughter from the field of battle, and Elik Khan escaped across the Oxus with a few attendants. In the meantime Suk Pal had renounced Muhammadanism, and revolted, but Mahmud came unexpectedly on him, took him prisoner, and confined him for life.

His fourth expedition (A.D. 1008, A.H. 399) was formed to punish Anang Pal's combining with Abul Fattah Lodi. Anang Pal had induced the rajas of Gwalior, Ujjain, Kalinjar, Kanouj, Dehli, and Ajmir to enter into a confederacy, and their united forces advanced into the Panjab. Hindu women sold their jewels, melted down their gold ornaments, and sent their contributions from a distance to furnish resources for this holy war. Mahmud formed an entrenched camp, but the Ghakkar overthrew his guards, and cut down 3000 or 4000 of his army. The elephant of Anang Pal, however, unable to withstand the archers, fled from the field, his army gave way, and Mahmud sent in pursuit 10,000 chosen men, who killed great numbers of the enemy before they reached a place of safety. Mahmud then advanced on Nagarkot, a fortified temple on a mountain connected with the lower range of the Himalaya, and he carried off from it to Ghazni 700,000 gold dinar, 700 man of gold and silver plate, 200 man of pure gold in ingots, 2000 man of unwrought silver, and 20 man of various jewels, pearls, corals, diamonds, and rubies.

In A.D. 1010 (A.H. 401) Mahmud went in person against, and defeated, Muhammad Sur of Ghor, in the mountains east of Herat; the chief swallowed poison.

His fifth expedition was in the same year; he returned to India, took Multan, and carried Abul Fattah Lodi prisoner to Ghazni.

His sixth expedition was to Tanesar, not far from the Jumna, where he plundered the temple, sacked the town, and returned with an incredible number of captives to Ghazni, before the Indian princes could assemble to oppose him.

His seventh and eighth expeditions were to Kashmir. In returning from the last, at an advanced period of the year, many lives were lost.

After the expedition against Kashmir, Samarcand, Bokhara, and Kharasm were occupied without opposition.

His ninth expedition against India, A.D. 1017, A.H. 408, was on a great scale. Ferishta says 100,000 horse and 20,000 foot were assembled from all parts of his dominions. He set out from Peshawur, and kept close to the mountains until he passed the Jumna, when he turned towards the south, and presented himself before Kanouj. The raja was so entirely unprepared, that he came out with his family and gave himself up to Mahmud, who left Kanouj uninjured. He halted for twenty days at the holy city of Muttra, during which the city was plundered, the idols broken, the temples profaned, and the city fired. The raja of Mahawan, near Muttra, submitted, and was received with favour; but a quarrel broke out between the two armies, when the Hindus were massacred and driven into the river, and the raja, imagining himself betrayed, destroyed his wife and children, and then made away with himself. At Munj, after a desperate resistance, part of the Rajput garrison rushed out through the breaches on the enemy, while the rest dashed themselves to pieces from the works, or burned themselves with their wives and children in their houses; not one survived. Various other towns were reduced, much country laid waste, and Mahmud returned to Ghazni with the spoil and prisoners.

His tenth and eleventh expeditions into India were made A.D. 1022, A.H. 413, and A.D. 1023, A.H. 414. The first was to the relief of the raja of Kanouj; but before Mahmud arrived, the Kanouj raja had been cut off by the raja of Kalinjar in Bundelkhand, against whom Mahmud turned his arms, but made no permanent impression in this or a subsequent campaign. During the first of these expeditions, Jaipal II. was on friendly terms, but on the second he opposed Mahmud's march on Kanouj, and Mahmud annexed Lahore and its territory to Ghazni. In A.D. 1024, A.H. 415, Mahmud marched to

Transoxiana, in person, to crush a revolt, and then returned to Ghazni.

In his twelfth and last expedition to India, he directed his forces against Somnath. His army moved from Ghazni in September, A.D. 1024 (A.H. 415), crossed the desert without any disaster, and made good his hold near Ajmir. The raja fled, Ajmir town was given up to plunder, and the country ravaged. Advancing on Anhilwara, the capital of Gujerat, its raja also fled, and Mahmud reached Somnath. Its temple was erected on a peninsula, and the isthmus connecting it with the mainland was fortified. The Ghazni troops on the first day occupied the ramparts, only to be driven from them. Next day brought a still more signal repulse. On the third day the rajas of the neighbourhood, with the Anhilwara raja, presented themselves in order of battle, and Mahmud had to move against them. His troops wavered, but Mahmud charged, and 5000 Hindus fell. The garrison, 4000 strong, then abandoned the place, and fought their way to the boats. Mahmud entered the temple, and it is said refused all offers to abstain from destroying the idol. Two pieces were sent to Mecca and Medina, and two to Ghazni, where one piece was to be seen at the palace, and one at the public mosque, as late as when Ferishta wrote his history. The treasure taken on this occasion exceeded all former plunder. After a year's stay in Gujerat, he returned to Multan and Ghazni by the sands of Sind, in which many of his troops perished miserably. This expedition lasted from October—November 1024 to April—May 1026.

After his return he chastised a tribe of Jats in the Jund mountains, who had molested his army on its march from Somnath. He afterwards moved in person against the Turki tribe of Seljuk, and defeated them, A.D. 1027, A.H. 418, in a great battle. His next success was against the Buya or Delmi. He invaded Irak, took possession of the whole territory, took Isfahan and Kaswin, putting to death thousands in each city. These were the last acts of his reign. Soon after his return to Ghazni he was taken ill, and died on the 29th April 1030. Muhammad, son and successor of Mahmud, was put aside and blinded by his brother Masaud; but ten years after, Masaud, unsuccessful in war, was dethroned and put to death, and Muhammad reinstated. Modud, son of Masaud, was at Balkh when his father was murdered; he hastened eastwards with his army, defeated and put to death his rivals (A.D. 1040, A.H. 433), and afterwards crushed a rebellion excited by one of his own brothers.—*Elph.* p. 302.

MAHOBA, an ancient city, in lat. 25° 17′ 40″ N., and long. 79° 54′ 40″ E., in the N.W. Provinces of India, at the foot of a low granite hill 54 miles to the south of Hamirpur, at the junction of the Betwa and Jumna, 34 miles to the north of Khajuraho. Its name is a contraction of Mahotsava-nagara, or 'the city of the great festival,' which was celebrated there by Chandra Varmma, the founder of the Chandel dynasty. To the west of the city lies the great lake of Kirat Sagar, about 1½ mile in circumference, which was constructed by Kirtti Varmma, who reigned from A.D. 1065 to 1085. To the S. is the Madan Sagar, about three miles in circuit, which was constructed by Madana Varmma, who reigned from A.D. 1130 to 1165. To the E. is the small lake of Kalyan Em Sagar, and beyond it lies the large deep lak Sagar, which was constructed by Vijay Pala, who ruled from A.D. 1045 to 1065. The las is the largest of the Mahoba lakes, being not les than four miles in circuit, but the most picturesqu of all the sheets of water in the beautiful lak district of Bundelkhand is the Madan Sagar.

According to the legend, as related by th poet Chand, the Chandels are sprung fron Hemavati, daughter of Hem-raj, the Brahma Purohit of Indrajit, Gahirwara of Banaras.

Hemavati was very beautiful; and one day, wher she went to bathe in the Rati Talab, she was seer and embraced by Chandrama, the god of th moon, as he was preparing to return to the skies Hemavati cursed him. 'Why do you curse me? said Chandrama. 'Your son will be lord of th earth, and from him will spring a thousan branches.' Hemavati inquired, 'How shall my dishonour be effaced, when I am without a husband?' 'Fear not,' replied Chandrama. 'You son will be born on the bank of the Karnavat river; then take him to Khajuraya, and offer hin as a gift, and perform a sacrifice. In Mahoba he will reign, and will become a great king. He will possess the philosopher's stone, and will turn iron into gold. On the hill of Kalinjar he will build a fort. When your son is 16 years of age you must perform a Bhanda jag to wipe away your disgrace, and then leave Banaras to live at Kalinjar.'

According to the prophecy, Hemavati's child, like another Chandrama, was born on Monday, the 11th of the waxing moon of Vaisakh, on the bank of the Karnavati, the modern Kayan or Kane river of the maps. Then Chandrama, attended by all the gods, performed a great festival (Mahotsava), when Vrihaspati wrote his horoscope, and the child was named Chandra Varmma. At 16 years of age he killed a tiger, when Chandrama appeared to him and presented him with the philosopher's stone, and taught him polity (rajnit). Then he built the fort of Kalinjar, after which he went to Kharjurpur, where he performed a sacrifice (Jag or Yajnya) to do away with his mother's shame, and built 85 temples. Then Chandrama Rani and all the other queens sat at the feet of Hemavati, and her disgrace was wiped away. Lastly, he went to Mahotsava or Mahoba, the place of Chandrama's great festival, which he made his capital. —*Cunningham, Ancient Geog. of India*, p. 486.

MAHOGANY, Swietenia mahogani.

Mahonitræ, . . .	DAN.	Maogani, ...	IT.
Mahonichout, . .	DUT.	Pao-magno, . .	PORT.
Acajou, ...	FR.	Krasnoë derevo, .	RUS.
Mahagony, .	GER., SW.	Caoba, Caobana, . .	SP.

This name is given in Europe and America only to the wood of the Swietenia mahogani of botanists, but in India the timber of the Cedrela toona, *Roxburgh*, is so called, and in Australia it is applied to that of a species of Eucalyptus. S. mahogani was named after Gerard van Swieten, a physician of Leyden, is indigenous in the West Indies and Central America, and naturalized in some parts of India. It is a lofty tree, with a large spreading head, and glossy pinnate leaves. The trunk frequently exceeds 40 feet in length, with a diameter of 6 feet; the timber of a rich red-brown, of different shades and markings, capable of a brilliant polish.

MAHOMED, the founder of the Muhammadan religion, was born on the 10th November 570, and died on the 8th June 632, in his 63d year. Arabian Prophet and Apostle are terms sometimes applied to him in European literature, but his followers in India only recognise the appellations of Rasul Allah, the messenger of God, and Paighambar, the bearer of a message. He was of the tribe of Koresh; his great-grandfather's name was Hashim; that of his grandfather was Abd-ul-Mattalib, whose son Abdullah was Mahomed's father. Mahomed is generally supposed to have been of Ishmaelitic origin, of the tribe of Kenanah. In Genesis, Ishmael is made to marry an Egyptian woman, but Arab traditions make him marry into the family of Jorhem, a descendant of Kahtan. Probably he had two wives. The Kenanah tribe was near akin to that of Kais, and both were descended from Nezar, whose name was the war-cry of the northern Arabs, in their combats with the armies of Yemen. The descendants of Kahtan, Arab-ul-Arab, were held to be the noblest of all Arabia, and it has been surmised that this alliance was introduced to raise Mahomed into the noble families of Arabia.

The melancholy incidents associated with almost every step of Mahomed's birth and parentage, deepened the seriousness and heightened the sensibility of his character. He was a posthumous child, orphan of both father and mother at five years of age, among a people with whom to be an orphan was a disgrace. How deeply he felt his unprotected state, is evident from the earnestness and frequency with which in the Koran he recommends orphans to the care of the Faithful. The life and destiny of his father Abdallah was also peculiar, for he had narrowly escaped being offered in sacrifice to an idol, in consequence of a rash vow of Abd-ul-Mattalib, and was only rescued at the price of a hundred camels. Mahomed was born during the period of tears and desolation of his mother Amina, after the death of her young husband, at the age of twenty-five, on a caravan journey. When born, he was carried by his grandfather before an idol, and received his name. Unable to nurse her own infant, his mother, after Arab fashion, wished to send him to the desert to be reared; but the Bedouin nurse who ultimately took him, at first refused to have charge of a fatherless boy. At six years of age Mahomed lost his mother also, and was taken care of by his grandfather; and on the death of the latter, three years later, by Abu Talib, his uncle, who, as long as he lived, gave him his protection. The events known of his youth are few. He appears to have accompanied his paternal uncle to Syria, and on that journey Muhammadans place the absurd legend of Sergius, Djerzi, or Bahzra, recognising the boy as the future prophet by a mark between his shoulders. During the wars of the tribes, known as the wars of the Fidjar, he is reported to have been present at one battle when he was fourteen, and to have picked up arrows for his uncle; at twenty he was keeping sheep for something like a farthing a day, an occupation considered disgraceful by the Arabs, and abandoned to slaves and women. But Mahomed always loved to dwell on the fact that Jacob, Moses, and David had been shepherds before him. Not long afterwards he entered the service of Khadijah, a wealthy trading widow with three children, as camel-driver of the caravans which she despatched to the different markets of Arabia and Syria, and rose by his good conduct to be master of the caravan, a position of confidence. He was found a good man of business, and to have an acute perception of the market value of the striped stuffs and incense of Yemen, and the leather of Arabia, which he exchanged in the markets of Syria for corn and oil, and the silk goods of Damascus. His good qualities gained him the title of El Amin, the honest fellow. He was of comely appearance, and Khadijah, in spite of being fifteen years older than Mahomed,—an immense difference in a country like Arabia,—conceived the project of marrying him, and carried it into execution. For such a marriage, Mahomed seems to have been an exemplary husband. He married other wives, it is true, one of them in two months after Khadijah's death; but he never ceased to speak of his deceased wife in such terms of praise, that Ayasha declared she was the only one of the prophet's wives of whom she had ever felt jealous. Seven children were the result of this marriage; and throughout the east many claim to be descended from some one of the three daughters who survived. There were three sons, who all died young; one was called Abd Manaf, after the idol, which proves that Mahomed was at that time still an idolater. The last daughter, Fatima, was born eleven years after the marriage, when Khadijah was beyond fifty. Four years after the birth of Fatima, he had his first vision, and in connection with that event some considerations are necessary respecting his mental and bodily constitution. Whatever may have been the superiority of his moral character, it is certain that he was as unlike the most esteemed type of Arab manliness as it is possible to conceive. Nowhere in the world does man reach such a degree of dauntless independence as the Arab, educated in the freedom of the desert, and exposed to its hourly and daily vicissitudes of destiny. The ideal of the Arab was a fiery-souled, irresistible warrior, always in sight of his tribe, bold in speech, rapid with song and repartee, indulging in wine, feasting, gambling, and love of women; holding tears to be disgraceful, with limbs as iron as his armour, supporting without suffering the heat of the desert under an Arabian sun; delighting in the beauty and swiftness of his steed or of his camel, impassioned for the chase, a match unarmed for the lion, indefatigable in combat, and routing like Antar whole armies with his single spear and shield. Recent travellers have confirmed the experience of ages, that the Bedouin have the least religious sensibility of any known race; at the present time they are mere Muhammadans in name, and never utter a prayer, or, if they perform any religious rites at all, these may possibly be some lingering relic of the old Sabæan adoration of the rising sun. In the days of Mahomed, the people of Mecca upheld the worship of their idols from motives of gain, but Arabs in general had little respect for them, and treated them worse than Neapolitans have ever treated a refractory saint. If the prophecies of their kalim, seers, or holy men, did not concur with their wishes, they often put them to death.

When Amr-ul-Kais commenced an expedition to avenge the death of his father, he entered, according to custom, the temple of the idol Dhu-l-Kholosa, to obtain his approbation by means of the divining arrow. Drawing the wrong arrows three times in succession, he broke them all, and threw them at the head of the idol, saying, 'Wretch, if your father had been killed, you would not forbid revenge for his death!' Mahomed was directly the opposite of this Arab ideal. He had inherited from his mother a delicate, nervous, and extremely impressionable constitution. He was gifted with an exaggerated and sickly sensibility; he had a woman's love for fine scents and perfumes; he was melancholy, silent, fond of desert places, solitary walks, and lonely meditations at set of sun in the valleys; full of vague restlessness, weeping and sobbing like a child when he was in pain; subject to attacks of epilepsy, and without courage in the field of battle. In addition to all which, he had religious excitability of the most acute character. He was of middle height, but of a strongly-built frame; his head was large, and across his ample forehead, and above finely-arching eyebrows, ran a strongly-marked vein, which, when he was angry, would turn black and throb visibly. His eyes were coal-black, and piercing in their brightness. His hair curled slightly; his beard was long, his step quick and firm, and between his shoulders was a mark the size of a pigeon's egg, which his disciples persisted in believing to be the sign of his prophetic office. He was naturally shy and retiring; as bashful, said Ayasha, as a veiled virgin. He lived soberly, in humble houses, and the fare of the desert seemed most congenial to him.

His principal biographers have been—

Ibn Hisham, A.D. 833, A.H. 218.
Waqidi, A.H. 130–207, A.D. 747–822.
Ibn Saad, A.H. 230, A.D. 844.
Tabari, A.D. 922, A.H. 310.
Mir Khond, 15th century.
Ali Jannabi, 16th century.
Ismail Abul Fazl, prince of Hamah in Syria, A.D. 1332, A.H. 733. His book was translated by John Gagnier, professor of Arabic at Oxford, A.D. 1723, and into English by the Rev. W. Murray, Episcopal clergyman at Duffus in Scotland.
Dr. A. Sprenger, in 1851, published part of Mahomed's life at Allahabad in English, and in 1869 a completed life in German was published at Berlin.
Sir William Muir, of the Bengal Civil Service, in 1858–1861 published a life in London.

He is lauded by Muslim authors for his religious and moral virtues, his piety, veracity, justice, liberality, clemency, humility, and abstinence. He expended his all in charity. His judgment was excellent, and he had a happy memory. He was of few words, of an equal and cheerful temper, pleasant and familiar in conversation, courteous to his friends, and condescending towards inferiors. His person was comely and agreeable, and his address polite.

He began to teach at the age of 40. He had only nine followers in his first military expedition, after his flight from Mecca to Medina; but before his death, which happened in the 23d year of his mission and the 10th after his flight, he had brought all Arabia under his obedience, and had commenced an attack on the dominions of the Roman emperor in the direction of Syria. Abul Fazl mentions (pp. 195–267) 27 military expeditions undertaken by Mahomed; and of smaller actions and skirmishes some enumerate as many as 48.

The reformation commenced by Mahomed was continued by his successors. Within six years after his death, Syria and Egypt had been subdued by his successors. Persia was invaded in A.D. 632, her force broken, A.D. 636, in the great battle of Kadesia, and after the battle of Jallalia (A.D. 637) and Nehawand (A.D. 642), her government was entirely destroyed, and her king driven into exile beyond the Oxus. At the death of the second khalif Omar (A.D. 644, A.H. 23), the whole of Persia as far east as Herat, nearly co-extensive with the present kingdom, was annexed to the Arab empire. In A.D. 650, an insurrection in Persia induced the exiled monarch to try his fortune once more, but he was cut off near the Oxus, and the northern frontier of the Arabs was advanced to that river, including Balkh and all the country north of the range of Hindu Kush. The boundary on the east was formed by the rugged tract which extends (north and south) from those mountains to the sea, and (east and west) from the Persian desert to the Indus. The northern portion of the tract was then known by the name of the mountains of Ghor, whose inhabitants may have been Afghans, and is now inhabited by the Aimak and Hazara. On the west, after Syria, Roman Africa (from A.D. 647 to 749), and Spain (A.D. 713), followed in succession; and within 100 years from the death of Mahomed, his followers had pushed their conquests into the heart of France, but were defeated by Charles Martel, A.D. 732, between Poictiers and Tours.

In A.D. 644, A.H. 44, an Arab force from Merv penetrated to Kābul, and made converts of 12,000 persons.

Abdur Rahman, governor of Khorasan, A.H. 80, led a large army in person against Kābul, and subdued the greater part of the country. His proceedings displeased Hujaj, governor of Basrah, and Abdur Rahmam rebelled, took Basrah, occupied Kufa, and threatened Damascus, but, after a struggle of six years, he was defeated, and chose a voluntary death.

While they conquered they proselytized, and at the present day their creed is professed by nearly all the people of Arabia, N. Africa; Asiatic Turkey, Persia, Central Asia, Baluchistan, Sind, and Afghanistan, and by about a third part of those of European Turkey and of British India, with many in China and the Archipelago. Their religion is called by them Islam, but it had no sooner become a power, than divisions, feuds, wars, and schisms broke out among its professors. In their lust for personal distinction and temporal power, immediately on Mahomed's death, disputes arose as to the rightful succession to the office of leader of the Faithful. The first to succeed was Abubakr, the father of Ayasha; following him came Omar, and then Osman, who died A.D. 655, and Ali then succeeded. In A.D. 660, Ali was assassinated by a Muhammadan in a mosque at Kufa, on which Hasan, his eldest son by Fatima, sold his birthright of empire for an annual stipend, to Moawiyah, of the family of the Ommeiades. He took up his residence at Medina, occupying himself in acts of charity and benevolence, but in A.D. 669 he was poisoned by his wife

at the instigation of Yezid, the second Ummiah khalif, and son of Moawiyah. Eleven years thereafter, viz. in A.D. 680, Husain, the younger son of Ali and Fatima, left Medina for Kufa, to contend for the khalifat against the Ommeiades; but on reaching Karbila, a day's journey from the west bank of the Euphrates, he was attacked, and slain with thirty-three strokes of lances and swords. The story of Husain is one of the most touching pages of Muhammadan history. His head, by order of Yezid, was carried about on the point of a javelin.

MAHOMED ALI, a nawab of the Karnatic, from the middle to the close of the 18th century. He was supported by the British in S. India, whilst the cause of Chanda Sahib was upheld by the French in India. His father, Anwar-ud-Din, in 1749, when about seventy years old, fell at the battle of Amboor, on which Mahomed Ali fled to Trichinopoly. After the defeat of the French in the Karnatic, Mahomed Ali was recognised as nawab by the treaty of Paris in 1763; and till his death in 1795, the Karnatic was occasionally under his rule, and at times under the civil and military administration of the British. In 1795 he was succeeded by his eldest son, Umdat-ul-Umra, who died in 1801, when the British put aside Umdat-ul-Umra's son, Ali Husain, and placed his nephew, Azim-ud-Dowla, on the throne. The British in 1856, on the demise of Mahomed Ghous, grandson of Azim-ud-Dowla, finally abolished the titular nawab.—*Malleson's French in India.*

MAHOMED ALI HAZIN, a Persian poet, who was in Isfahan during the siege by Mahmud the Ghilji chief, in 1722, when Shah Husain, the last of the Saffavi dynasty, ruled.

MAHOMEDANISM. At present the followers of Mahomed are styled Muhammadan, Moslem, and also Musalman, by the Europeans, the last-named being from the singular Muslim, and plural Musalmin, of the Arabs. The Burmese call them Pa-thi, and the Chinese in Yunnan, Panthay, also Quay. The Chinese know them also as the Hoai-Hoai; the Tamil race designate them Turka-kara and Chulia; and the Teling style them Turka-vadu and Jonangi. Moor, until the middle of the 19th century, was the softened pronunciation of Maghrabi, the designation of the western Arab race in the north of Africa; and Saracen, another name for them, is the changed form of Sharkia, the eastern race.

In the time of the emperor Jahangir, in India, the Hindus were estimated as 5 to 1 Muhammadan. Mr. Elphinstone's estimate about 1840 was 8 to 1. Another estimate made the relative numbers as 6½ to 1, or about 17 per cent. of the population as Muhammadans.

In the Feudatory States of India in alliance with the British, the predominant numbers follow Hinduism, or worship local deities; but in the territories under British rule, the census of 1881 showed the Muhammadans to be 50,121,585, viz.:

N.W. Provinces,	6,162,900	Ajmir, ...	57,809
Bengal, .	21,704,724	Coorg, . . .	12,541
Madras, .	1,933,561	British Burma,	168,881
Panjab, .	11,662,434	Baroda,	174,980
Bombay,	3,774,360	Central India,	510,718
Central Provinces,	285,687	Cochin, . .	33,344
Mysore, .	. 200,484	Hyderabad,	925,929
Assam, .	1,317,022	Rajputana,	861,747
Berar, .	. 187,555	Travancore,	146,909

In India, the people of this religion are of the most varied descent, the offspring of Arabs of every tribe, from the Iranian races of Persia, from the Scythic, Tartar, Mongol, Turk, Baluch, and Afghans, with bodies of converts from the Agnicula Rajput, from the Jat, and from the prior Mongoloid tribes who preceded the Aryan immigrants. In the northern parts of India, the bulk of the Muhammadans are of Mongol or Afghan descent, and recognise themselves by the titles of Moghul and Pathan converts, Arab Muhammadans being styled Shaikh.

The descendants of the various Muhammadans who from time to time, as conquerors and camp-followers, entered India with Mahmud, Chengiz Khan, Timur, Nadir Shah, Ahmad Shah, and others, have found employment in the armies of Dehli, Hyderabad, Arcot, Lucknow, and Rohilkhand, and in the native Indian armies of Great Britain.

On the western frontier of India, in the Panjab, and in the territories lying on each side of the Indus, the Muhammadans are chiefly of Mongol, Turk, Afghan, and Baluch descent, with other smaller bodies, converts from Hinduism, of Rajput and Jat races. There are the Multani, Bhatti, and Khurul of the Rechnab Doab in the Panjab, the Awan of the Sind Sagor Doab, who are supposed to be of Grecian descent, the Daoudputra of Bahawulpur, the Tuwana of the Shahpur district, the Mewatti of Gurgaon, and many of the Gujar race scattered through different parts of Northern India. In the N.W. Provinces are the Afghan Rohilla of Rohilkhand, and the Kourboh of Meerut, likewise Muhammadan. There are also Muhammadans in Bhopal, Mundisor, and Joura; the late rulers of Oudh were Syuds, the late rulers of Hyderabad in Sind were Baluch, and the rulers of Hyderabad in the Dekhan are Syuds. The Daoudputra Mahummadans trace their descent to the khalif Abbas, but take their name from Daoud, the first of the family who acquired a name. They are, however, supposed to be Baluch, changed by a long residence in Sind. They moved from Bahawulpur, and seized land on the Sutlej, reducing the remains of the ancient Lungga and Johia, and introducing the Sind system of canal irrigation. Their claim to be descendants of the race of Al Abbas, who reigned at Baghdad from A.D. 749 to 1258, may, however, be correct. The surnames met with —Gori, Kirmani, Koreshi, Sherazi—show their possessors' views as to their old homes, and the tenacity with which the families look to their original starting-places. All Afghans, while in India, carefully retain their tribal names, the Yusufzai, Mehmun, Barakzai, etc. The Wallajah family, who for a few years had a troubled rule in the Karnatic, trace their descent from the khalif Omar, A.D. 644, and in their conversations would notice the course of their fortunes as having had amongst them a khalif, a kazi at Samarcand, and nawabs of the Karnatic. Races who, as in this instance, can take a retrospective view of their history for 1280 years, who can disregard many hundreds of years of obscurity, and can see in that long time only the dignities possessed by three ancestors, a khalif, a kazi, and a nawab, will readily accept a reverse of fortune as God's hand laid upon them, will regard it as but of temporary duration, and will watchfully await a change.

In Peninsular India, the only important ruling power of these religionists is that of the Syud of Hyderabad, the Nizam Subahdar of the Dekhan, whose sway has existed above a century, themselves strangers, ruling with a mixed foreign soldiery of Arabs, Negroes, Abyssinians, and northern Hindus, over parts of the Canarese, Teling, Mahratta, Gond, and Kol races, and their capital is now the principal resort of adventurers. In the extreme south of India there are three Muhammadan races,—the Moplah, the Labbai, and the Nao-Aiti,—differing, by very marked characters, from all around them. The Labbai are a tall and large-made race, of a deep bronze colour. Their usual dress consists of a wrapper round the loins. They are extensively engaged in mercantile business, and as pedlars. They use the Tamil alphabet, have a Tamil Koran, and speak and read the Tamil language only. Their name is derived from the Arabic word Labek,—May it please you,—and the people are usually supposed to be descendants of trading or sailor Arabs with mothers of India. The Nao-Aiti are a small non-military race, who, but for a slightly xanthous tinge, would have an almost English fairness. They are called Nao-Ait, new-comers, emigrated from Arabia about 300 years ago, and are to be found in considerable numbers in Southern India. They are slender, fair men, with very handsome women, and are engaged in civil avocations, never becoming soldiers. They say that they came from Arabia to the Konkan. Indian Muhammadans assert that they are the descendants of women and children from Arabia, whose men were killed on being detected in an attempt to rob the tomb of Mahomed, and with their wives and children were sent off in a ship, which landed on the western coast; but this is doubtless a story got up to vilify the race.

The Moplah on the south-western coast of India and in Ceylon are said to have had a similar origin to the Labbai, viz. from Arab fathers and Indian mothers, and the name is supposed to be derived from the Tamil Ma, mother, and Pillai, son. On several occasions since that part of India came into the possession of Great Britain, they have required to be coerced, and are believed to possess a restless spirit, with much fanatical zeal; but it is generally recognised that agrarian disputes have been a prominent cause of their outbursts. The Moplah of North Malabar, although Muhammadans, follow the rule as to property of descensus a matrice, the Marumakkatayam, having in this respect conformed to Hindu usage, in the times of Hindu ascendency. The Moplah also take the wife of a deceased brother.

The Moplah and Labbai are called by the Teling, Jonangi, Zonangi, Jonagar, Jonakara. The intercourse of Muhammadan merchants and seamen with the women of Western India seems to have been from the most ancient times. Abu Zaid, writing A.D. 916, mentions that the more devout merchants of Siraf, when young men were on board, avoided sending their ships to Ceylon, as the women were very licentious, and merchants would, when newly arrived, make advances to the daughter of a king, and she, with the knowledge of her father, would go to meet him in some woody place.

The Abyssinian and Negro races in India are usually known as the Habshi, Habush, or Sidi. Many of them are slaves, but both as slaves and freemen they are often employed about the households of native sovereigns. The Sidi of Janjera or Zanjera was long powerful and independent, occupying the coast a few miles south of Bombay.

The Bohra are found on the north-western coast of Peninsular India, and in the Rajput states, and represent themselves to be the descendants of the followers of the Shaikh-ul-Jabl, or the celebrated Old Man of the Mountain. They call themselves Ismaili, acknowledge an Archamandrite or religious chief. They principally follow mercantile pursuits, and are a robust, active intelligent mercantile race. They are scattered all over the country, but are found principally in Gujerat and the adjoining provinces of Cutch Sind, and other parts of the Bombay Presidency and are a peaceable, inoffensive body of men.

The Maiman or Mehman are said to be the descendants of a couple, of Sind, long childless who about six hundred years ago became converts to Muhammadanism, in consequence of the prayers in their behalf by Mahbub Sub'hani at Baghdad being rewarded by seven children. Their original language is Sindi. They greatly revere Mahbub Sub'hani. Many families are met with in Gujerat and Bombay, and they are a useful, hard-working, trusty mercantile people.

In Sumatra and the more western islands of the Archipelago, there has been a large conversion to the creed of Islam. In Sumbawa the Muhammadans take a high place, and they are largely proselytizing the mountaineers, who, however, secretly trust in their idols.

There are many Muhammadans in China who are neither zealous in the propagation of their doctrines nor over-strict in the observances of their religion. But their religion is one of the authorized state creeds of that country.

Muhammadan religionists are of two great sects, the Sunni and Shiah, the former being the more numerous in India, Turkestan, Turkey, and Arabia, while the Shiah are most numerous in Persia. The Sunni hold, amongst other points, the succession to the khalifat to have followed in the line of Mahomed, Abubakr, Omar, Osman, and Ali; the Shiah sect, on the other hand, maintaining Ali to have, and by right, succeeded his cousin and father-in-law Mahomed. There are other points on which their sectarian differences turn; but small numbers of the Shiah religionists, in several parts of Asia, as in the west of India, believe in incarnations of Ali, and of these the Ismaili may be instanced. The Muhammadans of India, of these two great religious sects, worship apart; but amongst both sects are to be found men of Syud, Shaikh, Moghul, and Pathan descent, and sons will be found as Sunni and the daughters Shiah. The Syuds, the Saadat, or lords, are chiefly descendants of Mahomed through his daughter Fatima and her husband Ali, and as a rule are quiet, humble-minded men, not distinguished by other qualities from the Shaikhs. They are of the Sunni and also of Shiah persuasion, and are met with in India serving as soldiers, or in civil avocations, or following some religious duties. The term Shaikh is given to other descendants of Arabian origin, and is applied generally to all of the Sunni sect other than Syuds, Pathans, or Moghuls. The Shaikh, therefore, is of the most varied origin, and is engaged

in all avocations, military and civil, as soldiers in regular and irregular armies, as police, shopkeepers, and a sprinkling of them in learned professions or occupations requiring prior education. The Pathan is the descendant of the Afghan soldiers who came into India with the armies of Mahmud, Timur, Chengiz Khan, Baber, Nadir Shah, and Ahmad Shah, and carved out principalities or obtained lands for themselves and their descendants; but there are numerous individuals of the Afghan and Baluch tribes, large, powerful, fair men, scattered throughout India, who are seeking a livelihood in it as soldiers, traffickers, and chapmen. The Pathan claims for himself the designation of Khan, but this is never permitted at courts, Khan being one of the honorific appellations bestowed by Indian sovereigns.

Moghuls assume the suffix of Beg. They are comparatively few in number, are generally fair people, of a larger physical frame than the Arab Muhammadans, and are of unassuming manners. Of all these religionists of foreign descent, few have taken to agriculture; a very small number have fitted themselves for the civil situations available under the British Government; except in entering the disciplined armies of Britain as private soldiers, and forming perhaps one-fourth of its Indian forces, very few of them have accommodated themselves to the changes which the British supremacy has introduced. In India, the bulk of them are essentially a people not belonging to the present time, but dwell on the past and look forward to the future, the religious among them meditating on the transgressions which have brought upon them great reverses, and all, perhaps without exception, looking forward to the time when it shall be God's will again to give them dominion. As a whole, they are earnest, ardent men, who can be easily excited. As soldiers they are patient, and have an elan in warfare which the steady, calmer Hindus of Southern India do not possess. Their religious feelings, for many years past, have been personal, and though dwelling and ruling in parts of India since nine hundred years, and though holding an essentially proselytizing faith, they have not made many voluntary conversions from Hinduism, either from the Aryan family or from the non-Aryan servile classes. Perhaps nothing has ever taken place from the efforts of Muhammadans like the upheaving which has for some years past been agitating non-Aryans in the extreme south of the Peninsula. In India, as a body they are illiterate, and even as regards their religion they have acquaintance only with a few formulas in the Arabic language. Their book, the Koran, has been translated into Persian, Hindustani, English, Tamil, Burmese, and Malay; but in India the Arabic is deemed the more sacred language, although a very small number of them know that tongue.

The spoken language of Muhammadans in India is the Urdu, or camp tongue, called in the Peninsula Hindustani, which, since the beginning of the 19th century, under British influence has become a written tongue, and a few books have been printed in it; but the educated of the higher classes all use Persian as their sole means of communication. Living as they have been amongst races so highly educated as Hindus are, it is perhaps this want of learning that has blunted their proselytizing efforts, the only great changes which their religion has effected having been amongst the Jat, the Rajput, and the people of Bengal.

Social Customs.—Distributed as these religionists are, from the Atlantic to the islands of the Pacific, the acknowledgment of the Koran and of their creed by all of them, gives a certain similarity to their religious observances, bu the customs of social life in all the varied nations are as varied as are the nations themselves. In India there are ceremonials before and after childbirth, such as congratulations to the young wife on the seventh month of her pregnancy. As in the Hebrew law, after the birth of a child, the chahlam or fortieth-day ceremonial is performed, and each stage of development in childhood is attended with certain forms. There is no time rigidly adhered to for circumcision, which is not in the Koran, and grown-up lads have not unfrequently remained unattended to in India up to the seventh or the fourteenth year. The coming of age of a girl amongst the Hindus is made known by noisy music, a practice which is imitated by the humbler Muhammadans, though the educated and noble families abstain from all such rude rejoicings. Very few of the Muhammadan women of India can read, and still fewer can write. But in the towns of India, amongst the better classes, all boys are sent to school, and their education is conducted in such a manner as permanently to fix their faith. At the age of four years, four months, and four days, each child is taught to pronounce the name of God with much ceremonial,—with more even than is shown when children of the Episcopal persuasion in England are confirmed, for the ceremony is made to last for days. The boy is then taught the first words that were revealed to Mahomed. They are recorded in the 96th chapter of the Koran, which says, 'Read in the name of thy God, for he it is who hath created all mankind out of a lump of coagulated blood. And he is likewise that almighty Being who has blessed us with the voice of utterance and taught us the use of the pen;' and until the lad has read the Koran (many of them learning it all by heart, and then receiving the literary title of Hafiz), and until they have been carefully instructed in all the books of their faith, the lad is not allowed to read any other tongue. In their marriages the Indian Muhammadans are united by the civil and religious rite, the Nikkah, similarly with all other of their co-religionists, but to this has been added several days of costly ceremonial rejoicings (Shadi), which they have gathered from the Hindus. Divorce, in India, is almost unknown, for in the Nikkah the dower which the bridegroom promises is a fabulous sum, which no one can pay, and as, until paid, divorce (tallaq) cannot be concluded, no one in India is ever divorced. The Indian Muhammadan lives faithfully to his one wife, polygamy being almost unknown, except amongst the loose livers of great towns. The Ramazan month of fast is very strictly attended to; but amongst the Sunni in the south of India the Maharram is a period of extravagant amusement, in which many non-Hindu and many Hindu races join. The illiterate Sunni, by far the majority, at this period grossly outrage the grief of the Shiah sect, and scandalize the learned and devout. In Southern Asia

there is a great reverence shown to saints' shrines and foot-marks. Amongst these are the tombs of the Pir-i-Dastagir at Baghdad, of Kadar Wali at Negapatam, and the footprints of the prophet at the Kadam Rasul hill near Secunderabad, to which multitudes annually resort. The great religious festivals are the Ramazan month of fasting and prayer; the thirteen days of the Maharram, a period of festivity amongst the Sunni and grief amongst the Shiah; the Shaban feast of Shab-i-Barat on the 14th day of that month; and the sacrificial festival of the Bakrid or Zihaj, also known as the Eed-us-Zoha, which is held in commemoration of Abraham's sacrificial offering up of his son,—of Ishmael according to Muhammadans, and of Isaac according to Hebrews and Christians.

The Akhiri Char-shambah is the last Wednesday of the month Suffur, on which Mahomed in his last illness felt a little better, and bathed for the last time.

The Bari Wafat, or great death, is commemorative of the demise of Mahomed, on the 12th–13th of Rabi-ul-Awal, A.H. 11.

Muhammadans speak reverentially of the dead. They will say, Rahlat farmaia, he has taken departure; Intikal kia, has made a change; Guzr gaia, has passed away; and they believe in the consciousness of the departed while awaiting resurrection in the tomb.

Amongst those who crave for other aids to salvation, some seek the spiritual advice of a holy man, who is reckoned a pir, or religious teacher, and by certain secret words and signs are initiated as his murid or disciples. Others, even men of rank, adopt the darvesh or fakir life of the religious mendicant devotee, often attended with solemn rites of investiture, and followed by the severest of ascetic lives; but the bulk of these mendicants are, in India, idle, dissipated men, and a few are of very degraded habits. They arrange themselves into the followers of certain pir or spiritual guides, and those generally met with in India are the Kadria or Ba-nawa, Chastia, Shutaria, Tabqatia or Madaria, Mallang, Rafai or Gurz-mar, Jalalia, Sohagia, Naksh-bandia, and Bawa Piray. All these have their own rules and customs. Some of them are ascetic devotees, eating if given to eat, but never begging; some largely use intoxicating fluids and vegetable narcotics; some, as the Salik, have wives; the Majzub and Azad have no wives; and some Calandar marry, and some do not. There are, among Muhammadans in India, good, devout men, leading pure and holy lives, earnestly seeking for the truth, cultivating literature assiduously; but they are compelled by the multitude of ordinary people to retire into the peaceful shade, as the purity of their lives begets for them the objectionable name of Wahabee. The Muhammadans in India, when their limited education is considered, are but little superstitious. They believe in Mahomed as an intercessor, and in the second coming of Christ. They believe that at death the soul will be judged, and that the angels Nakir and Mankir will visit it in the tomb to question as to the life on earth. They believe that all must cross the Pul-i-Sirat, a bridge for the good, but a sharp sword to the wicked; they believe in a purgatory called Iraf, and in places of future rewards and punishments, and they picture the latter as fearful. But the idea of a heavenly place as enunciated in the Koran, is the grossest that any race has ever promulgated or given credence to. The wild hunter tribes of America have sublime notions of a future life; Hebrews were in conflict as to the immortality of the soul; the Buddhists believe in absorption or annihilation, as a release from all the troubles and trials of a mundane existence; and Christians believe the future to be a spiritual life; but the doctrines taught in the Koran as to the occupations in heaven are wholly confined to that book and its believers. For there, the Koran says (lv. 393-394), 'they shall repose on couches, the linings whereof shall be of thick silk interwoven with gold; and the fruit of the two gardens shall be near at hand to gather. Which, therefore, of your Lord's benefits will ye ungratefully deny? Therein shall receive them beautiful damsels, refraining their eyes from beholding any besides their spouses, whom no man shall have deflowered before them, neither any genius (which, therefore, of your Lord's benefits will be ungratefully deny?); having complexions like rubies and pearls. . . . And besides these, there shall be two other gardens, . . . of a dark green. In each of them shall be two fountains, pouring forth plenty of water; . . . in each of them shall be fruits and palm trees and pomegranates. . . . Therein shall be agreeable and beauteous damsels, . . . having fine black eyes, and kept in pavilions from public view; . . . whom no man shall have deflowered before their destined spouses, or any genius. . . . Therein shall they delight themselves, lying on green cushions and beautiful carpets.'

Such is the heaven of the Koran. Yet Mahomed was a monotheist and an iconoclast. And before the final struggle, lifting up his voice, he exclaimed, 'May God be far from those who make the tombs of his servants places of prayers.' The very last words he was heard to utter as he expired, as if in answer to an unseen visitor, were, 'In the company of the blest on high.'

The tombs of Muhammadans have usually been of earth, or unbaked brick, but every material is employed, and names are even engraved on the tombs. The tombstone of a man is distinguished by a raised part in the centre, and that of a woman by a depression. The prevalent form in India for the tombs of the rich is a dark or black tombstone, with verses of the Koran engraved on it, and covered by a cupola. Some of these are very magnificent. Those of the Adal Shahi dynasty at Bijapur and Gogi have attracted much attention, as also have those of the Bahmani dynasty at Kulburga and Beder, and Kutub Shahi dynasty at Golconda. The cupolas at Roza, where Aurangzeb also is buried, have not any display, and that of Aurangzeb himself is the least ostentatious. His daughter's tomb at Aurangabad is magnificent; and many of the tombs at Dehli and Agra are great structures. That of Mumtaz Begum, known as the Taj Mahal, is particularly remarkable. Reformers amongst the Muhammadans consider that unbaked brick or earth should alone be used.

Muhammadans are bound to recognise professors of Muhammadanism, being enjoined to do so in the Koran: 'Do not say to one who meets you and salutes you, You are not a true believer,' and, 'O ye true believers, avoid suspicions, for suspicion is often a crime,' are two texts known to all,

and generally obeyed. Hence the pronouncing of the first part of the creed, La illaha il Allaho, There is no deity but God, entitles the speaker to a favourable reception.

Mahomed in the Koran asserts that his religion is that of Abraham. The religion he established is termed Islam, signifying safety or salvation, and comprises the two essentials, Iman, implicit faith, and Din, practical religion. Five points are insisted on, namely, belief in God and Mahomed his apostle; prayer; almsgiving; fasting during the month of Ramazan; pilgrimage to Mecca. The first of these belongs to Iman; the latter four to Din.

Muhammadanism, as it now exists, stands upon other foundations than the Koran. This book not furnishing a guide or precept to meet every emergency, a great body of tradition, denominated the Hadis, has been added; and this law, oral as it originally was, is generally considered equally binding with the written law of the Koran. These traditionary precepts were derived from Mahomed himself, his companions, and immediate successors. Some of them are, however, of doubtful authenticity, and not a few are evidently of more modern fabrication. The Persians reckon four kinds of Hadis.

The principal places for minor pilgrimages are the tomb of Ali, called Mash'hid-i-Ali, at Naj'f near Kufa; the shrine of Imam Husain at Kerbela; and that of Imam Raza at Mash'hid in Khorasan; but all the numerous Imam-zadah and tombs of holy characters throughout the country are visited. The minor pilgrimage is termed a Ziyarat, as distinguished from the Haj or great pilgrimage to Mecca.

Of the Muhammadan saints of Asia are Abdul-Kadar, surnamed Ghous-ul-Azam, the great contemplative, born at Jal, near Baghdad, A.H. 471 (A.D. 1078-79). He was endowed with great virtue, and, with the gift of miracles, had many disciples, and is still much revered. He is called Shaikh, but was a Syud, *i.e.* of the race of Husain, and died in A.H. 571 (A.D. 1175), aged ninety-seven years. Where he died or was buried does not appear.

Sultan Sarwur, at Baluch, four cos from Multan, was distinguished for piety and purity of manners, and died as a martyr, with his brother, fighting against a troop of idolaters, and was buried with his wife (who died of grief) and his son in the same tomb. Several miracles are related as having happened at his tomb. A camel's leg, when broken, was forthwith made whole; the blind, the leprous, the impotent were cured.

Shah Shams-ud-Din, Dariai, at Depaldal in Lahore, is stated to have had even a pious Hindu among his disciples. The latter having expressed a wish to go and bathe in the Ganges, the saint directed him to shut his eyes, when lo! the Hindu found himself among his relations and friends on that sacred stream, in which (as he supposed) he bathed with them. On opening his eyes again, he straightway found himself beside his spiritual guide in Lahore. His tomb is guarded by Hindus, who will not resign their posts to the Muhammadans. It is also related that some carpenters, having proceeded to cut down a tree which grew near his tomb, split it into many pieces for use. Suddenly a dreadful voice was heard; the earth shook, and the trunk of the tree arose of itself; the workmen fled terrified, and the tree did not fail to resume its flourishing condition.

Kutub Sahib, or Kutub-ud-Din, lies buried at Kutub, a town near Dehli, named after him, in which the late Shah Alam and many members of the royal family of Dehli are buried. His tomb is much frequented by pilgrims, he being one of the most renowned and venerated of the Muhammadan saints.

Shaikh Baha-ud-Din, Zakaria, born at Cotcaror in Multan. He was a great traveller, having, it is said, overrun Persia and Turkey, and a disciple for some time of Shahab-ud-Din, Sohurmurdi, at Baghdad. He died on the 7th Sufur, A.H. 665 (A.D. 7th September 1266), and was buried at Multan.

Furrid-ud-Din, born at Ghan-awal, near Multan. He was so holy, that by his look clods of earth were converted into lumps of sugar. He was therefore surnamed Shakargunj, the treasury of sugar.

Shaikh Sharif bu Ali Qalandar, born at Paniput, a town 30 cos north-west of Dehli, to which capital he came at forty years of age, and became a disciple of Kutub-ud-Din. He devoted himself for twenty years to external sciences; after which he threw all his books in the Jumna, and began to travel for religious instruction. In Asia Minor he profited greatly by the society of Shams Tabriz and Mulvi Rumi. He then returned home, lived retired and worked miracles, and is said to have died A.H. 724 (A.D. 1323-24?).

Shah Nizam-ud-Din Aulia, by some supposed to have been born at Gazna, A.H. 630 (A.D. 1222-23), and by others in A.H. 634 (A.D. 1236), at Badaun, a town in the province of Dehli, where he lived. He died A.H. 725 (A.D. 1325), and was buried near Dehli, hard by the tomb of Kutub-ud-Din. Through his great piety he was considered one of the most eminent saints of Hindustan.

Kabir, a celebrated Hindu unitarian, equally revered by Hindus and Muhammadans, founder of the sect called Kabir Panthi or Nanak Panthi, from which Nanak, founder of the Sikhs, borrowed the religious notions which he propagated with the greatest success.

Baba Lal, a darvesh (and likewise a Hindu), who dwelt at Dhianpur, in the province of Lahore, the founder of a sect called Baba Lali. He held frequent conversations on the subject of religion with Dara Shikoh, eldest son of Shah Jahan, and brother of Aurangzeb, which have been published in a Persian work by Chandarbhan Shah Jahani.

Shah Dola died in the seventeenth year of the reign of Alamgir, was at first a slave of Humayandar Sialkoti, in Lahore. But he seems afterwards to have attained great affluence, as well as fame; for, having settled at Ch'hotee Goojrat (Little Gujerat), he built tanks, dug wells, founded mosques and bridges, and wondrously embellished the city, for though his contemporaries came to visit him from far and near, and made him presents of gold, money, and other objects, he returned to each three or four fold more than he received. His generosity was such, that had he been contemporary with Hatim Tai, no one would have mentioned the name of that hero.

Syed Shah Zuhur, distinguished by his wisdom, piety, and austerity of life. He built a small monastery of earth at Allahabad, which still remains. He was celebrated for his miracles; and by his prayers the most frightful chronic complaints were immediately removed, of which an instance is given in respect to the case of the governor of Allahabad, Nawab. Umdat-ul-Mulk

Amir Khan. Zuhur boasted of having lived 300 years.

Shaikh Muhammad Ali Hasin Jilani. His tomb is at Buxar, where he died in A.H. 1180 (A.D. 1766-67), distinguished for his science, learning, and literary talents. He wrote in both prose and verse with equal skill.

There may be mentioned also Abdul-Kadar, Gilani, styled Pir-i-Piran and Pir-i-Dastagir, and Badi-ud-Din, a Syrian saint.

They recognise about 156 sects. As a broad distinction, they are generally classed as Shiah and as Sunni, but the six bodies of sectarians who oppose the Sunni are classed by them as Rafziah, Kharjiah, Jabriah, Kadriah, Jahmiah, and Marjiah, each of whom are broken up into smaller bodies. Before the end of the 1st century, from the ascetic turn and the theosophy inseparable therefrom, a combination, styled among the Arabs Sufi, had arisen. This made rapid strides, and in the end of the 3d century of the Hijira was already itself the subject of learned works, and the Muhammadan world has carried the system to the utmost extreme. Their Sufi outstrip in every point of view both the Hindu Jogi and the Christian monks. The asceticism of the Sufi is more systematic, their pantheistic teaching deeper and more consistent, and their vices more enormous, than those of any other people. Spinoza and Schelling are left far behind by Ibn Arabi.

Great portions of the earth have been brought under the sway of the races professing Islam, and this has moulded the heroic character of the Muhammadan world. The pride of belonging to the dominant creed makes every man a hero, and, even in the domain of mind, produces under such circumstances the elements of greatness.

Muhammadan law comprises things lawful and things unlawful. The lawful are arranged into five classes, viz.:—

Farz, enjoined in the Koran.

Wajib, there are some doubts as to its divine injunction.

Sunnat, the example of Mahomed.

Mustahab, that which he sometimes did, and sometimes omitted.

Mubah, that which may be left unperformed, without any fear of divine punishment.

The unlawful things are—

Haram, distinctly forbidden in the Koran and Hadis.

Makruh, that which is by common consent considered to be unclean or unlawful.

Mufsid, that which is corrupting and pernicious. —*Sale's Koran; Malcolm's Persia; Malcolm's Central India; Huc, Chinese Empire; P. Arminius Vambery of Bokhara; Richard F. Burton, Scinde; Bunsen, God in History; Ferrier's Journey; Araish-i-Mahfil; Price's Muhammadan History; The Bhilsa Topes; Cunningham; Dr. Sprenger; Herklots, Qanoon-i-Islam.*

MAHOMED-bin-KASIM, a general of the Khalif Walid; about A.D. 718, overran Gujerat, and was advancing on Chitore when he was met by Bappa and entirely defeated.

MAHOMED GORI, in Hindustan, overthrew and slew Prithi, raja of Dehli and Ajmir, took Kanouj and Benares, plundering all their Hindu temples. In A.D. 1206 he was assassinated in his tent on the banks of the Indus. He was succeeded by Kutub, one of his slaves.

MAHOMED HAIDAR, commonly called Mirza Haidar, author of the Tarikh-i-Rashidi. He was a cousin of Baber. He was killed in a night attack, A.H. 958.

MAHOMED HUSAIN KHAN, author of the Makhzan-ul-Adwiah, or Storehouse of Medicine. It was written A.D. 1769, and printed at Hoogly 1824. Another work, Qarabidin, is also by this author.

MAHOMED KASIM was nephew of Hejaj, governor of Basra. During the khalifat of Walid, Hejaj sent his nephew from Shiraz with an army 6000 strong, to attack Dewal (A.D. 711, A.H. 92), a seaport connected with Sind, belonging to Raja Dahir. It had numerous Brahman inhabitants, but was garrisoned by Rajputs. A shot from a catapult carried away the flagstaff displayed on the tower of the temple; the garrison, dispirited by the event, yielded, and the town was occupied. At first he contented himself with circumcising the Brahmans, but they still refused Muhammadanism, on which he ordered all above seventeen years of age to be put to death, and all under it, with the women, to be reduced to slavery. The rich booty obtained was equally divided, after reserving one-fifth for Hejaj. A son of Dahir was in the garrison, and retreated to Brahmanabad, where he was followed by Kasim, and surrendered on terms. Kasim then advanced on Neirun (Hyderabad), and thence to Sehwan, which the garrison evacuated after a seven days' siege. Kasim then waited till reinforced by 2000 horse from Persia, and, after several indecisive combats, reached the neighbourhood of Alor, where he was opposed by Dahir, who fell fighting in the midst of the Arabian cavalry. His son fled to Brahmanabad, but Dahir's widow defended the city against the attacks of the enemy until the failure of provisions rendered it impossible to hold out longer. Then the whole garrison resolved to die. The women and children were first sacrificed in flames of their own kindling; the men bathed, and, with other ceremonies, took leave of each other and the world, threw open the gates, rushed out sword in hand, and, throwing themselves on the weapons of their enemies, perished to a man.

One more stand was made at Ashcandra, after which Multan and the other parts of the dominions of Dahir seem to have been occupied without resistance, and tribute enforced from the Hindus who refused to be converted.

Kasim sent to the court of Walid two daughters of Dahir, but when the eldest was brought into his presence she burst into tears, and said she had been dishonoured by Kasim, on which Walid gave orders to sew Kasim into a raw hide, and send him to Damascus. This was done, and the khalif showed the body to the princess, who now exultingly declared that Kasim had been innocent, and that she had thus revenged the death of her father and the ruin of her family. About 36 years after the death of Kasim, the Muhammadans were expelled by the Rajput tribe of Sumera, A.D. 750, A.H. 132.—*Elphin.* pp. 264–65; *Ayin-i-Akbari*, ii. p. 119; *Tod's Rajasthan*, i. p. 243; *Tarikh-i-Hind-wa-Sind.*

MAHOMED MUMIN-ibn-MUHAMMAD DILIMI, a celebrated physician, author of the Persian book on medicine, Tuhfat-ul-Muminin. He was an inhabitant of Tinkaboon, in the pro-

vince of Mazanderan, on the S.W. coast of the Caspian Sea.

MAHOMED SHAH, emperor of India, was the son of Shah Jahan. He ascended the throne in September A.D. 1719 (A.H. Zi Kaidah 1131), and died April A.D. 1748 (26 Rabi-us-Sani 1161). His name was Roushan Akhtar, and he was selected for the throne by Abdallah and Husain Ali, two brothers, Syuds of Barrh, after the deaths of Rafi-ud-Darjat and Rafi-ud-Dowla. In October 1720 he accompanied Husain Ali in his march against Asof Jah, but the Syud was assassinated, and Abdullah Khan, his brother, revolted, and put another king on the throne; but in November Mahomed Shah's army defeated and made him prisoner. Mahomed Shah was indolent, irresolute, and ruled timorously. During his long reign he witnessed the breaking up of the Moghul empire by the Mahrattas, chiefly while Nizam-ul-Mulk, one of his officers, founded the sovereignty of Hyderabad in the Dekhan. The Mahratta Peshwa, Baji Rao, obtained Malwa as a jaghir, with a large portion of country south of the river Chambal. In 1739 Nadir Shah defeated Mahomed Shah in battle, and plundered Dehli, massacring its inhabitants, of whom about 50,000 perished, and carrying off treasure valued at 10 or 12 millions sterling. Nadir Shah reinstated him on his throne, receiving the cession of all the provinces west of the Indus river. Mahomed Shah, in 1748, sent his son Ahmad Shah and his minister Kamr-ud-Din against the Abdali; but his minister was slain, and Mahomed Shah, on hearing of the death, died in convulsions.—*Orme.*

MAHOMED TAGHALAQ, emperor of India, reigned from (A.H. 725) A.D. 1325 to (A.H. 752) A.D. 20th March 1351. His name was Juna Khan, but he took the title of Mahomed Taghalaq. He succeeded to the throne as a parricide. He erected a wooden structure, and after his father the king, Ghaias-ud-Din, had alighted and was resting in the pavilion with his favourite son Mahmud, Mahomed proposed that the whole of the elephants should pass in review before the building. When they came over the fatal spot, the structure came down on the heads of Ghaias-ud-Din, Taghalaq Shah, and his young son. After intentional delay, the ruins were removed, and the king's body was found bending over that of his boy as if to shield him. It was carried to Taghalaqabad, and laid in the tomb which the king had built for himself. This still stands one of the simplest and grandest monuments of Muhammadan antiquity, rising from the middle of what is now a swamp, but was then a lake. Mahomed Taghalaq was the most eloquent and accomplished prince of his age, with an extraordinary memory, devout, abstinent, and moral, of distinguished gallantry and personal activity; but his whole life was occupied with visionary schemes, pursued in an irrational manner, with a total disregard of the sufferings of his subjects. He completed the reduction of the Dekhan. He sent an army 100,000 strong across the Himalaya to conquer China, but they had to retreat, and scarcely a man returned. It is difficult to guess by what point this host entered the Himalaya, nor has the town of Jidiah, at the base of the mountains, mentioned by Ibn Batuta, been identified, which would indicate the position. He maintained an enormous royal establishment analogous to the Gobelins, or weavers in silk and gold brocade, to provide stuffs for his presents, and for the ladies of the palace. He repeatedly massacred his subjects, whom he drove into revolt in Malwa and Bengal, and Karnata and Telingana threw off their allegiance. He twice made Deogiri, the modern Dowlatabad, his capital, removing the inhabitants of Dehli to it. His court was visited by Ibn Batuta about A.D. 1341.—*Yule, Cathay*, ii. p. 405; *Elphinstone's Hist. of India.*

MAHOMED YAKUB-bin-YUSUF, physician to the emperor Shah Jahan. He compiled the Alfaz-ul-Adwiah, a catalogue work on medicine, which was translated into English in A.D. 1793 by Mr. Gladwin.

MAHOMEDZAI or Mamanzai, a mixed population of 25,000 souls in the Hashtnagar division of the Peshawur district. They have about 5000 matchlock men.—*H. A. N. W. F.* p. 302.

MAHR. ARAB. A Muhammadan bride's dower, settled on her before marriage, and due to her or her heirs. Divorce cannot be completed until the dower is paid, and in India the dower is fixed so high that divorce is almost unknown.

MAHR or Mohur, from Muhr, HIND., a seal, is a gold coin of value 15 or 16 rupees.

MAHRATTA, a country, called Maharashtra, first mentioned in Indian history in the Mahawanso. Maharashtra was one of the nine kingdoms of Southern India in the time of Hiwen Thsang, the Chinese Pilgrim (640 A.D.). The Mahratta race inhabit the country lying between the range of mountains which stretches along the south of the Nerbadda, parallel to the Vindhya chain, and a line drawn from Goa, on the sea-coast through Beder to Chanda, on the Wardha river. That river is its boundary on the east, as the sea is on the west. At the census of 1881 the number speaking the Mahratta language was returned as 16,966,663.

The district of Poona, and the adjacent tracts of Satara and Sholapur, the home of the Mahrattas, stretch for about 150 miles along the Sahyadri ghats, between the 17th and 19th degrees of latitude, and extend at one point as far as 160 miles inland. To the west the Mahrattas possessed the narrow but strong tract of country which borders on the Konkan, and stretches parallel with the sea from near Surat to Canara. This country is well calculated for the maintenance of defensive warfare, but that the people were not of the Kshatriya military caste is proved by the names of their particular tribes, the Kunbi, the Dhangar, and the Goala, or the farmer, shepherd, and cowherd, all of them rural occupations.

It is not known under what form of government the Mahrattas anciently dwelt. Early in the Christian era, Maharashtra is said to have been ruled by the great Salivahana, whose capital was at Paitan, on the Godavery. At a later period a powerful dynasty of Chalukya Rajputs reigned over a large part of Maharashtra and the Karnatic, with their capital at Kalliani, not far from Sholapur. The founder of the line, Jai Sinh, had overthrown another Rajput tribe, the Pallava. The Chalukyas rose to their greatest power under Talapa Deva, in the 10th century, and became extinct about the end of the 12th century, when the Yadhava rajas of Deogiri became supreme, and were ruling at the time of the Muhammadan invasion in 1294. There was also a raja at

Punalla, near Kolhapur, at the end of the 12th century, whose power extended as far north as the Nira river. He was conquered by Singhan, the Rajput ruler of Deogiri, whose camp is shown at Mhasurna, near Pusesauli, in the Satara district.

The first Muhammadan invasion took place in 1294, but the Yadhava dynasty was not finally extinguished until 1312.

The Dekhan remained subject to the emperor of Dehli till A.D. 1345, when the Muhammadan nobles revolted from Muhammad Taghalaq.

The Mahrattas are mentioned by Ferishta in the transactions of the year A.D. 1485, but it was under the Bijapur kings that the Mahrattas first began to make themselves conspicuous. In the middle of the 16th century, the Adal Shahi king of Bijapur adopted the Mahratta language for his financial papers, and he enlisted a considerable number of Mahrattas in his army, and others of them were employed by Kutub Shah, king of Golconda. Later on, among the officers of Malik Amber (A.D. 1610, 1612) was Malaji Bhonsla, a Mahratta of respectable family, an active partisan, who at one time had been in the service of the Ahmadnaggur dynasty. His son Shah Ji married a daughter of Lukji Jadu Rao, one of Malik Amber's officers. One of the fruits of this union was Sivaji, the founder of the Mahratta empire.

It is certainly extraordinary that a nation so numerous as the Mahrattas should have remained almost wholly unnoticed in Indian history for so long a period as from the first Muhammadan conquest until the reign of Aurangzeb; but it appears probable that prior to the time of Sivaji, the Mahratta country, like the other parts of the Dekhan, was divided into little principalities and chiefships, many of which were dependent on the neighbouring Muhammadan princes, but never completely brought under subjection. Towards the close of the 17th century they suddenly started on a career of conquest, during which they obtained the control over a great portion of India, and established governments of shorter or longer duration at Poona, Satara, Kolhapur, Gwalior, Nagpur, Indore, Gujerat, and Tanjore.

Shah Ji had taken an active part in the last events of the kingdom of Ahmadnaggur, but was subsequently employed in the southern districts of the Adal Shahi of Bijapur, who gave him Sira and Bangalore in jaghir. His son Sivaji, however, born A.D. 1626, was brought up at Poona; while still a youth he engaged in predatory expeditions, in 1648 openly plundered a convoy of royal treasure, and before his death, on the 5th April 1680, by alternately aiding and attacking the Moghul and Bijapur armies, or allying himself with the Kutub Shahi kings of Golconda, while taking every opportunity of securing for himself the fortresses and their adjoining territories, he had created a nationality which, in spite of numerous internal disorders, was kept together until it had established its supremacy over the greater part of India. In A.D. October 1659, Sivaji was guilty of the treacherous assassination of Afzal Khan at a conference near the hill fort of Partabgarh; but he was a skilful general and able statesman, and though he latterly became superstitious and austere, he left a character which has never since been equalled by any of his countrymen. His eldest son Sambaji succeeded, but he was cruel and wilful; he put to death the wife of Sivaji in a cruel manner, and he left his army in arrears. His country was overrun by Aurangzeb and Prince Azim, and he himself was captured at Sangameswar in the Konkan, and carried to Aurangzeb in the Moghul camp, where (A.D. August 1689) his eyes were destroyed with a hot iron, his tongue was torn out, and he was then beheaded along with the Brahman Calusha. This cruelty raised the indignation and religious hatred of the nation, and his infant son Saho was acknowledged by them as raja, with his uncle Raja Ram as regent, but in 1690 Saho also was captured at Raighar, and remained a prisoner till Aurangzeb's death.

On the capture of Saho, Raja Ram assumed the government, and took the field against the Moghuls with the largest army that the Mahrattas had ever raised, but with little success; and he died in the early part of 1690, to be succeeded by his son Sivaji II., under the regency of Tara Bai. Aurangzeb's efforts to conquer the Dekhan in his advanced years all failed, and he retreated to Ahmadnaggur, where he died on 21st February 1707, in the 89th year of his life and 50th of his reign. His successor, Bahadur Shah, released Saho. But during his captivity other claimants had been striving for power, and it was not until A.D. 1720, through the aid of Balaji Wiswanath, that Saho became the recognised ruler of all the territories conquered by Sivaji and his successors. Balaji Wiswanath, a Brahman, was the founder of the dynasty of the Peshwas, who from this time ruled the Mahratta counsels, and on his death he was succeeded by his son Baji Rao.

Baji Rao had been brought up in camp, and he combined the habits of a Mahratta horseman with enlarged judgment and extensive knowledge, never flinching from fatigue or danger. He established the Gaekwar families in Gujerat, April A.D. 1731, and Udaji Puar, Mulhar Rao Holkar, Ranaji Sindia, and Parsoji Bhonsla were officers of high rank in his army. They invaded the Karnatic, defeated Dost Ali, took and evacuated Trichinopoly, and plundered Porto Novo and Cuddalore. In 1731, Baji Rao compelled the Azof Jahi dynasty to permit him to plunder the northern parts of the Moghul territory. He crossed the Nerbadda in 1732, plundered Malwa, obtained a third of the Jhansi territory; in 1736, obtained the cession of Malwa; in 1737, he exacted from Azof Jah an assignment of all the countries south of the Chambal, the surrender of Benares, Gya, Mattra, and Allahabad. For 20 years Baji Rao headed the Mahratta Confederacy, and elevated it to a high pitch of glory. He died 28th April 1740, on the banks of the Nerbadda, and was succeeded by his son Balaji Rao.

Raja Saho died without issue, December 1749, and Balaji Rao took possession of the government. Balaji Rao's brother Ragonath Rao, surnamed Ragoba, took Dehli in 1758, and then withdrew to the Dekhan, leaving one division of his army under Dataji Sindia, and another under Mulhar Rao Holkar. The Mahratta power was at this time at its zenith, and Sedasheo Rao Bhao, the cousin of the Peshwa, with an army which has been stated at 300,000 of all arms, advanced and took Dehli. Ahmad Shah, Abdali, also advanced, and passed the Jumna, 25th October 1760, on which the Mahrattas retreated to Paniput. Detachments

nd foraging parties of the two armies harassed heir respective opponents, till the Mahrattas pened the action on the 6th January 1761. The attle was well contested, but the whole Mahratta rmy gave way, and on the field and in the pursuit 00,000 were slain. Sedasheo Rao Bhao, also Viswas Rao, the Peshwa's son, and most of the reat Mahratta chiefs, fell. The government of ne Peshwa never regained its vigour; and nough most of the Mahratta conquests were ubsequently recovered, this was effected by independent Mahratta chiefs, several of whom were ided by European officers, with soldiers disiplined in the European manner. From 1768 to 799, these chiefs were operating south of the Kistna river, sometimes in alliance, sometimes at ar, with Hyder Ali, Tipu Sultan, and the British.

The first war between the British and the Mahrattas lasted from 1779 to 1781. The British n the beginning of the 19th century interfered n their internal dissensions, and war again broke ut in 1803. The campaign commenced on the th August. It was directed against Sindia and Perron and the Bhonsla raja of Berar; these two Mahratta powers had 72 regular battalions officered y Frenchmen, and 200,000 troops untrained, ut from the sources whence they were drawn, uch took a higher social standing than their oldiers of the line. Before the end of December here were gained by the British four battles, mongst which were Assaye, and Argaum, and aswari. The British completed eight sieges nd storms, and effected the almost total destruction of the 72 trained battalions, the dispersion of he rest of their armies, the capture of 738 pieces f cannon, the British force being about 55,000 egular troops, amongst which were 10,000 British oldiers. To effect these results, Sir Arthur Vellesley had been moving northwards, taking Ahmadnaggur, the key of the Dekhan; taking Gawilgarh in the Vindhya, also Asirgarh; and ord Lake moved southwards, fighting the battle f Laswari. Subsequently, in 1817, war again roke out between the British and the Peshwa Baji Rao and the Bhonsla raja of Nagpur, ut the Mahrattas were politically annihilated in 817-18, under the administration of the Marquis f Hastings, by the actions at Kirki, Mahidpur, nd Nagpur.

On 19th February 1818, the Peshwa's power vas destroyed at the battle of Ashta, where Gokla, his general, was defeated and slain, and he Peshwas disappeared; and on the 11th April 818, a descendant of Sivaji was replaced on the hrone at Satara, from which he was again removed n 1839 for alleged intrigues, and his brother, who vas put in his place, died without an heir. The Bhonsla of Nagpur died in 1855 without an heir, lso the Tanjore raja without a son, and in the 9th century the Kolhapur rajas have been ontinued by repeated adoptions. In 1878, the States of Holkar at Indore, of Sindia at Gwalior, f the Gaekwar at Baroda, of the Kolhapur t Sawuntwari, have continued in alliance with he British Government. There are also several hieftains of this race with almost regal powers, mongst whom may be mentioned the branches t Sundur, Gunjundurghur, and Akulkote, a ew miles from Kaladgi, all of the once powerful Ghorphara family.

The British Indian Government, after the fall of the Peshwa, provided for those who had been high officers under the rajas of Satara and the Peshwas. Some, as the Vinchurkar in Ahmadnaggur zillah, and the nawab of Sadernur near Dharwar, had held offices under Aurangzeb and other Moghul emperors. They were, as a rule, guaranteed the enjoyment of their ancient rights and privileges, by treaties binding them to provide a contingent of troops, to make adequate police and judicial arrangements, in consultation with the political agents, for the extradition of criminals. By Regulation 29 of 1827, three classes of Sirdars were established, and an agent to the Governor, for Sirdars in the Dekhan, was appointed to try such suits against them as would ordinarily be cognisable by the judges of Poona or Ahmadnaggur. No decree of the agent against a Sirdar is executed without the order of the Governor in Council, to whom also plaintiff may appeal, a further appeal to the Queen in Council being open to either party. The personal privileges of Sirdars consist in formal courtesies, varied with each class. Their precedence in durbar is exactly settled.

The Mahratta race has family names like the people of Europe. Bhonsla, Holkar, Sindia, and Gaekwar are patronymics. Mahrattas, even of the highest rank, have not a dignified appearance. They are under the European standard, but well-proportioned, with dark skins and irregular features, and the women, as a rule, are not well favoured. They are sturdy men, rude, rough, boorish, and illiterate, but patient under labour. Their fields and gardens are kept in excellent order, and they have formed good, hardy, and active soldiers, capable of endurance, much of their tactics having resembled that of the Parthians, though even in this Lord Lake's energy overcame them. Speaking generally, the race is shorter, more robust and darker in complexion, than the races of Northern India, or even than the Teling people, and their appearance is so dissimilar to that of the Aryan families as to preclude the belief that they have come of that stock. The Mahrattas bordering on the Teling and Canarese countries in the south-east are taller and better formed men than those around Ahmadnaggur.

During their military operations, if the Mahrattas showed none of the pride and dignity of the Rajputs, they had none of the Rajput indolence or want of worldly wisdom. A Rajput warrior, so long as he did not dishonour his race, seemed almost indifferent as to the result of any contest in which he was engaged. The Mahratta thought of nothing but the result, and cared little for the means if he could attain his object. For this he would strain his wits, renounce his pleasures, and hazard his person, but had not a conception of sacrificing his life, or even his interest, for a point of honour. This difference of sentiment affects the outward appearance of the two nations: there is something noble in the carriage of an ordinary Rajput, and something vulgar in that of the most distinguished Mahratta. The Rajput proved the most worthy antagonist, the Mahratta the most formidable enemy, as they did not fail in boldness and enterprise when these were indispensable, and always supported them or supplied their place by stratagem, activity, and perseverance.

The efforts of the Mahrattas in emancipating

themselves from a foreign yoke were neither guided nor strengthened by any distinct hope or desire. They became free, but knew not how to remain independent, and they allowed a Brahman to turn their aimless aspiration to his own profit, and to found a dynasty of Peshwas on the achievements of unlettered Sudras. Ambitious soldiers took a further advantage of the spirit called up by Sivaji, but as it was not sustained by any pervading principle of action, a few generations saw the race yield to the expiring efforts of Muhammadanism, and the Mahratta owe their present position, as rulers, to the intervention of European strangers. The genuine Mahratta can scarcely be said to exist, and the 200,000 spearmen of the 18th century are once more shepherds and tillers of the ground. The attention of the Mahratta Sudra, for nearly 200 years, from the middle of the 17th up to the 19th centuries, was directed solely to foreign conquest, and nearly all India, from Cape Comorin to Dehli, yielded the fourth part of the revenues as tribute to their kingdoms. During that period of war, agriculture cannot but have been neglected, and even in the early part of the present century they were characterized as mountaineers, herdsmen, and soldiers, but essentially bad farmers. Since 1820, however, they have been settling down to their fields, and are now extremely well-to-do agriculturists, for the great bulk of them follow this pursuit, and are usually designated the Kunbi.

The races and tribes and sects and fragmentary nations dwelling in the Mahratta country are numerous, with many immigrants. The most prominent are the Kunbi cultivator, the village authorities, amongst whom are the Mhar and Mhang as predial slaves, Muhammadans, Brahmans, and Parsees. The chief races and castes daily seen are—

Brahman, Deshasth or Mahratta, and Konkani.
Kunbi, cultivators.
Kulkargi, cultivators.
Wani, Lingaet, cultivators.
Manwar, cultivators.
Baghwan or Mali, gardeners.
Goliwar keep sheep and goats.
Komti, banya merchants, generally grain merchants; they wear the sacred thread, and are in several sections.
Teli, oilmen, oil-makers, and oil-sellers; are many of the Lingaet sect; some of their sections are deemed impure, and must not enter sacred places.
Jain, shop-keepers.
Muhammadans, in every avocation.
Sempi or tailor.
Julai or weaver.
Wattan or bangle-maker.
Kumhar or potter.
Sutar or carpenter.
Sonar or goldsmith.
Lohar or blacksmith.
Dhobi or washerman.
Kallal, palm-wine drawers.
Hajam or barber, unclean.
Burud, bamboo basket-makers.
Kaikari, palm-leaf basket-makers.
Chamar, leather-workers.
Dher or Mhar or Pariah.
Mhang or tanner.
Thakur.
Gosai.
Bairagi.

The Mahratta people have amongst them, outside every village, the Pariah or Dher, whom they designate as Mhar; the tanner, who is called Mhang; and inside the hamlets dwell the Dhor or currier.

Though professing Brahmanism, amongst them is a more general amount of demon, spirit, fetish, totem, shaman, and hero worship than is observed amongst the other races of the Peninsula. The Mahratta Kunbi race chiefly worship the deified heroes Kandoba, Etoba, and Hanuman. The idols of Kandoba and Hanuman are to be seen in every village south to the Tumbudra, and blood sacrifices of sheep and fowls are largely made. Hanuman is the chief of the village gods, and is invariably smeared over with red lead, which is also applied to every bit of stone or wood that has been erected into a fetish god.

The temple of Kandoba near Poona is famous. Panderpur, on the left bank of the Kistna river, is a celebrated place of pilgrimage, and there is a famous temple and image of Ganesh at Morgaum; and a tree, said to be 300 years old, is an object of great veneration, in the belief that, in the 18th century, the leaves had the virtue of turning into gold on being taken to Benares. The superstitions of the low Mahrattas are said to have a strong resemblance to those of the Bhils. Yet they have all outwardly assimilated to the Brahmanical teachings, and have amongst them a Brahmanical body, who are considered to apply Brahmanical tenets as to caste more stringently than any other Brahmans of India; the bulk of the Mahratta nation, however, are only of the Sudra caste. Their chief objects of worship are certain incarnations or images of deified mortals, known as Etoba and Kandoba at Panderpur, Jejuri, and Malligaon, but the village deities receive a large part of their attention in times of sickness or peril.

There has seemed amongst them, also, a more extensive polytheism than prevails in any other part of India, and an introduction even of the Semitic and Christian names. Between Ellichpur and Amraoti, the Pariah converts are ordinarily called Krishn,—not Krishna, but a variation of the word Christian; all along the tract southwards to Udghir, the Bawa Adam near Panderpur is largely worshipped, and the Jabral Abral, worshipped in East Berar, is evidently the Gabriel or Jibrail of the Semitic races. Even amongst the Kunbi race, who profess Brahmanism, the Hindu deities Siva and Vishnu are little heard of, and the Editor put up for two days in the temple of the village of Assaye, to which the villagers came at the usual periods to worship Hanuman and the serpent, and the officiating priest to wash and ornament its lingam. An officer of Sindia's artillery, who had fallen in the battle of Assaye, had been buried beneath a neighbouring tree, and there the villagers continue to worship his spirit. Sickness is usually attributed by them to the influence of a malignant spirit, and all through the Mahratta-speaking districts the practice of the Bolwan prevails, viz. the ceremony of propitiating the Bhuta or spirits who have entered a village, inducing them to leave the village, and conducting them across the borders with music and a procession. The conductors often move to the next village, and thereby cause intense fear and anger, as the morbific influence is supposed to be conveyed to it. Ai, mother, equivalent to the southern Ammun, is largely worshipped in the form of a rude stone smeared with red lead, and her temples are to be seen in lone places, passes, and defiles. The Mahrattas have public recitations of histories or stories of the gods, called Katha. The Gondana or Gondala or Gondhal of the Mahrattas is a tumultuous festival held in honour of Devi.

They have the Pat, the Murat, or the Mohatar forms of marriage of widows, a custom of which it is hard to judge between the advantage of the women, who get a husband or part share in one,

and the misery of the men, who often get more wives than they can manage. Women are, in truth, often deliberately sold by their parents. Mahratta men are faithful, kind husbands, kind to their children and dependents. Mahratta women have the full control of the households, and are the friends as well as the helpmates of their husbands. Mahratta Sudras, being widely spread, differ greatly in appearance, in language, and in caste observances, but all intermarry and eat together. It is the custom with all the Mahratta and Canarese Brahmans to take their wives to their homes a few months before they grow up.

Owing to the powerful position so long occupied by them in India, they imposed their language and some of their customs on about twice their own number of menial and helot races, such as the Dher and Mhang, who speak Mahrati in Nagpur, but Hindi in the Nerbadda valley. Mahratta linguistic influence did not penetrate to the north much beyond the Nagpur plain, consisting of the lower valleys of the Wardha and Wainganga. The northern line of demarcation may be drawn along the southern crest of the Satpura range, for though a few Mahrattas are found on the table-land, there are probably more Hindi speakers below the ghats in the Nagpur plain, and the almost universal language of the three Satpura districts, Seoni, Chindwara, and Betul, is Hindi. The establishment of a Mahratta government at Nagpur drew many of the nation into that part of Gondwana, and made their language general for a considerable distance round the capital.

In Hindustan and Bengal the republic or village system has been greatly disturbed by the repeated inroads and conquests of foreign races and the long period of Muhammadan rule, and the village officers and servants are less complete. But even there the headman and the accountant are almost invariably retained, and some of the other officers and servants are also to be found, and in most instances the offices are hereditary, are capable of being mortgaged or sold, are paid by recognised fees and perquisites, by allotments of grain at the time of harvest, or sometimes by portions of land held rent-free or at a low quit-rent.

In the Canarese and Mahratta countries the village authorities are still ruling. They greatly vary in number and in duties, but there are office-holders who claim to be descendants of the persons who first settled, and at dates long before the oldest of the European dynasties were established. Potails are in the Mahratta country who trace their descent from persons who settled a thousand years ago and more in the villages they now hold, and the same is to be found amongst the Reddi and Gauda of the south and east. It is this that preserves the Indian villages from the changes which would otherwise have occurred from the irruptions of the Aryan, Brahui, Jat, Persian, Tartar, Rajput, Arab, Moghul, Afghan, Portuguese, French, and British. Amongst the Mahratta, office-bearers are known as Balute or Alute; amongst the Canarese, as Ayakarru, Ayagarru, or Ayangandlu. The following municipal officers may be enumerated:—

Head office, styled Potail, Reddi, Gauda, and assistant do. or Changala.
Accountant or Kalkarni, district do. or Despandi.
Chaudari or convener of trades.
Money-changer, assayer, gold and silversmith, or Potadar.
Barber, Nhawi or Nai.
Washerman, Parit, Dhobi.
Temple servant or Gurao.
Carpenter or Sutar.
Potter or Kumhar.
Gate-keeper or watchman, usually a Pariah or Mhar, Mhang, Ramusi, or Bhil, called Eskar, Veskar, Tallari.
Waterman, do.
Astrologer or Josi.
Shoemaker or Mhang.
Bhat or Bard.
Maulana or Mulla, Muhammadan priest.
Corn meter.
Blacksmith.
Notary.
Sweeper.
Tailor.
Physician.
Musician.

The Mahratta village head, the potail, rents the lands to cultivators, collects the Government land tax, and forwards it to the tahsildar. He is also the civil magistrate, and settles petty civil matters to the extent of two maunds of grain, or four or six rupees, and sends higher claims to the tahsildar. In criminal matters he is only the police, and sends all to the Amin. In lieu of pay for the above services, the potail is allowed from 25 to 50 bighas of land rent free, the land tax being about Rs. 3 or 4 the bigha. For the cultivation of his rent free lands two to four bullocks would be needed, because from 10 to 16 bighas, according as the rains are heavy or light, are all that a pair of bullocks can get over. There are, generally, two to four potails in a village, not always of the same caste; for instance, the village of Khanpur, zillah of Nandair, has four potails, two Mahratta, a Canarese-speaking Lingaet, and a Kulkargah, and there are a few Brahman and Muhammadan and Pariah potails, but a Christian potail is unknown.

Their prominent leaders were—

Shah Ji Bhonsla, 1634.
Sivaji, son of Shah Ji Bhonsla, born 1627, died 1680.
Sambaji, son of Sivaji, reigned 1680-1689.

Their successors, the Peshwas, were—

Balaji Viswanath.
Balaji, 1st Peshwa, 1718.
Baji Rao, 2d Peshwa, 1721-1740.
Balaji Baji Rao, 3d Peshwa, 1740.
Madhu Rao, 4th Peshwa, 1761-1772.
Narayan Rao, 5th Peshwa, 1772, assassinated.
Madhu Rao Narayan, 6th Peshwa, 1774-1795.
Baji Rao II., the 7th and last Peshwa, 1795, defeated and deposed 1818, died at Bithur near Cawnpur.

—*Prinsep's Antiquities*, p. 286; *Moor*, pp. 241, 424; *Cole. Myth.* pp. 189, 285; *Wilson's Glossary; Central Provinces Gazetteer; Elphinstone's India.*

MAHSIR or Maha-sir, literally great-head, the native name of species of Barbus (carp); B. macrocephalus, *M'Cl.*; B. mosal, *Buch. Ham.*; B. tor, *Buch. Ham.*; and B. Neilli, *Day*. They afford good sport to amateur fishermen, and they are good eating. Voracious as an English pike, many a one is taken with his own species while spinning in the heavy rapids of the Upper Brahmaputra, the Ganges, and the Tohee river in Jummoo territory. They will eat every fish they can swallow, but love change of food, rising greedily at all large and gaudy flies, natural and artificial, and will also take wild fruits and sweet pastes, when the angler is trying for other fish. The mahsir pulls and rushes very violently at first, and then moves down sulkily to the bottom, where he will remain for hours together if not opposed; it swarms in all the mountain streams of India, when they retain water in the hot season; the Ganges, Jumna, and Brahmaputra hold the largest; next, the great rivers of the Panjab; but this fish is often met with running to a huge size in small streams with deep pools.

The Indian mahsir are only to be caught from dawn to eleven, or from late in the afternoon till dusk. Its favourite haunts are in the rocky fastnesses of rapid rivers flowing from the hills. Mahsir run not unfrequently to 40 lbs., and even 50 lbs., and show more sport than a salmon. When the rod is stiff, the first pull on the tackle is great. Unlike the salmon and the trout, the mahsir, except under peculiar circumstances, is only to be taken in clear water; and in clear water, under cloudless skies, the angler must make himself and his tackle as little conspicuous as possible. Like all fish that inhabit rough water, it is, of course, extremely vigorous; and, as it runs out the line over a rocky bottom, the angler is very likely to be 'broken.' The mahsir does not hold out so long as the salmon, but the fight while it lasts is more exciting, the first struggles being more violent, and the rush more impetuous. The difficulty of playing it may be conceived from the fact that the length of line which Mr. Thomas recommends is 120 yards,—some authorities, indeed, prescribe 250 yards,—and he admits that with the lesser quantity it is at least possible that an active fish may get to the end of the tackle. The strain upon the reel may be tremendous. As a specimen of the sport the mahsir give, we may refer to an article extracted from the Madras Times; it was where the Darrung, in its lower course, flows through a plain, and the presence of mahsir had not been even suspected. But, chancing to camp for the night on a sandbank, the sportsmen heard heavy fish jumping in the darkness. Next morning they tried their luck, and caught or lost monster after monster. When one of the party had his hands full, another would go by in a boat, fast to a fish that was towing him along as if he had been whaling in the Arctic Seas. There is the excitement of danger, too, when fishing from what does duty for a boat in some of the mountain rivers. The frail craft is a wickerwork basket, slighter than the Welsh coracle, although at least as buoyant.

The teeth in the throat of the mahsir seem unusually powerful. They are required to be so to crush fresh-water molluscs and large crabs, Ampullaria glauca, Paludina Bengalensis, one of Unio species, Limnea stagnalis, Planorbis Indicus, P. Coromaudelina.

Fish also form a large portion of their food. The gall-bag is large, and is much prized by the country people as a remedy in cases of stomach-ache, cholera, and puerperal fever. When the south-west monsoon commences, the rivers are at once in flood, and continue so for four months, subsequently diminishing by slow degrees. While in flood, the mahsir abounds most at the heads of the rivers; the higher up they are, the more advanced their roe and milt generally was, and lower down there was scarcely a mahsir to be found at the same time, though they are well known to abound there later in the year.

Mahsir fishing, for which the Dūn is so celebrated, is always most successful after rain. The Ganges at Hardwar is the beau-ideal of an Indian mahsir stream. This river, before it enters the plains, stands in the first rank as regards this species, five or six brace of which, weighing 60 or 70 lbs. each, may be killed by a good hand in a good day.

The most sport is had and the finest specimens are taken with a paste made of coarse flour and coarse sugar, kneaded with ghi and a little chopped cotton, also with the ripe fruit of Ficus Indica. It frequents sacred ghats and steps of temples the Pind Puja, with its balls of rice, flour offerings, and Ficus fruits being greatly attractive. Large specimens (up to 20 lbs.) are taken about the temples at Hardwar, in Upper Assam, at Bagesur in the Sundah, and in other parts approaching the mountains. This fish, after a short time, with all the cunning of the carp species, evades the hook, flattening the paste gradually with his nose, and it is then sucked off in fragments.

MAHSUD, a section of the Waziri inhabiting the hills on the Tank and the south Banu borders. Their clans are the Alizai, Shahman Khel, and Batozai. They number about 15,000. They have always been highly predatory, especially the Alizai, and are at enmity with all around them. After British occupation they continued their habits, and in 1860 the tribe was coerced by a force under General Chamberlain, but they have continued to give trouble.—*H. N. W. F. I.* ii.

MAHSUL. Arab. Revenue, a tax or toll.

MAHTABI. Hind. Cloth on which is pasted devices of the heavenly bodies in gold or silver.

MAHTAR. Hind. Scavengers, and, like the Dher or Mhar, and Mhang and Totti, generally village servants.

MAHTO, the title of the headman amongst the Kurmi, Koeri, and Goalla in Behar, Gorakhpur, Hurrpur, and the neighbouring parts.

MAH-ul-LAHM. Hind. Essence of meat, used in medicine. The flesh of a young, lamb being cleared of bones, fat, sinews, etc., is boiled in a moderate quantity of water, until only one-third of the water remains. This is strained and condiments added, and portions dissolved when needed.—*Powell.*

MAHWA. Mahr. Bassia latifolia. A fatty substance, obtained from the kernels of the fruit, is of common consumption in India, and may often be met with under the names of Mowha or Yallah oil in the London market. The tree grows wild, but is also planted in groves in most parts of Oudh, near villages, etc. Its cultivation can be extended almost indefinitely, and it thrives without any trouble. Its flowers have a thickened and enlarged tube, in which is contained a considerable amount of sugar. They are dried and eaten by the natives, and also fermented for the manufacture of mahwa spirit. The cost of the oil extracted is 3 rupees per maund. The proportion of oil yielded by native process is about half the weight of the seed. It is used only for burning. In Oudh, four gallons of a mahwa spirit, between 25° and 30°, can be made for Rs. 1.13, and from gur for Rs. 5½, the different prices of the raw material causing the difference.

MAH YUH GAH. Burm. A tree of maximum length, 18 feet. Abundant all over the Tenasserim and Martaban provinces. It is used for elephant bells, but is not a durable wood.—*Captain Dance.*

MAI-BEE, lit. lady mother, the priestesses of the Munipore people, deemed oracles. The Baiga tribe worship most of the Gond deities, but have a special reverence for Mai Dharitri, mother earth.

MAIDAH. BENG. A conical hillock raised on salt field to serve as a filter of the saline soil.

MAIDAN. HIND. In India, an open plain, or e esplanade outside a city or fort. In Western sia it seems to be used specially for the public uare or piazza, in the Italian sense, of a city.

MAIDEN-HAIR.

liantum capillus Veneris. | Shih-chang-sang, . CHIN. A fern found wild in many parts of Europe, on mp shaded rocks, and a favourite garden plant th the British in India. It is the 'Αδίαντον of e Greeks, and probably gained its name from having formed a part of the preparations used the ladies for stiffening their hair. Adiantum pillus Veneris, *Linn.*, is used medicinally in dia as a febrifuge, and in catarrhal affections. ngko, the maiden-hair tree of Japan (Salisburia iantifolia), is planted about all the temples, and tains a great size. The Chinese are fond of varfing it. Its fruit is sold in the markets in Chinese towns by the name of Pa-kwo, and is t unlike dried almonds, only white, fuller, and ore round.—*Fortune, Tea Countries.*

MAIKAL, a range of hills running S.W. from markantak, for a distance of some 70 miles, hence they are continued by a similar range, cally known as the Saletekri Hills. The Maikal ills form the eastern scarp or outer range of the eat hill system which traverses India almost om east to west, south of the Nerbadda. They not ordinarily exceed 2000 feet in height, but e Lopha Hill, which is a detached peak belong- g to this range, has an elevation of 3500 feet.

MAIKAY. BURM. A species of Murraya? timber tree of Amherst, Tavoy, and Mergui, aximum girth 1 cubit, and maximum length 15 et. It is used by Burmese for handles of knives d other weapons, and is a strong, tough wood, grain like boxwood.—*Captain Dance; Major mpson's Report.*

MAIL GHAT, a strip of wild country along the ardha river, where dwell Gond, Raj Gond, garmunde Gond, Bhoya Gond, the Pardhan or rd of the Gond, the Ballai or Gond Pariah, the ihal or out-caste of the Kurku, the Muge fishers d quail-catchers, numbering in all about 34,650 uls of the aborigines, along with whom are 5196 indus.—*Campbell*, pp. 41, 42.

MAIMANSINH or Mymensing, a British dis- ict of Bengal, lying between lat. 23° 56′ and ° 25′ N., and between long. 89° 43′ and 91° 18′ . Its rivers are the Jamuna, the Brahmaputra, d the Megna. Its chief aboriginal tribes are e Hajang, the Garo, the Chandal. The proper me of the Garo is the Garo Hills, but the Garos Maimansinh dwell in villages of their own at e foot of the hills. They are hard-working ople, of unusually robust constitution. They t all kinds of flesh, and are very fond of liquor, anufacturing for themselves a kind of rice-beer, which they consume large quantities.

The Chandal are cultivators, fishermen, day- bourers, etc., and some of them are also nployed as menial servants in the households of e upper classes; but they are greatly despised, d are not allowed to touch any vessel containing inking water, or any article of food.

Aus rice is sown from February to April and ven May, and reaped from the middle of May ll about the middle of September. Aman or inter rice, which forms the main harvest of the year, is sown in April, May, and June, and reaped in October, November, and December. Boro rice is sown in November and December, and reaped in March, April, and May.

Jute is largely cultivated throughout the district, but particularly in the rich alluvial tracts formed by the Brahmaputra between Ghafargaon in the south-east, and Bhairab Bazar in the north of Dacca District. The river has here silted up a great deal of late years, and jute is grown on the alluvial accretions (chars) thus formed. The seed is generally sown in April or May, after the cold-weather crops have been reaped and the fields repeatedly ploughed. The ordinary quantity of seed used is about 8 lbs. per acre. Seed is raised from the plant by the cultivator.

Tigers infest the char lands in the river beds in the north-west of the district, and bears and other wild animals are found in the Madhupur jungle.—*Imp. Gaz.*

MAIMONIDES, the Latin name of Musa bin Maimun, a learned philosopher and physician, born A.D. 1135 at Cordova in Spain, and died at Fostat, at the age of 70, in 1204. He wrote a work on the Jewish Calendar, but left Spain for Acre in 1165, to escape persecution, and finally settled at Fostat, near the modern Cairo, where he practised medicine, and was physician to Salah-ud-Din. He composed a religious guide (his Mishneh thorah), based on revelation and tradition, and then, 'to prove that the principles there set forth were confirmed by philosophy,' he wrote his Dalalat al-hairin, the Guide of the Perplexed, called in Hebrew Moreh nebhuchim. A charge of apostasy from the Jewish faith under Muhammadan persecution, was brought against Maimonides, which was either suggested or corroborated by a letter on Involuntary Apostasy, purporting to be written by Maimonides, and containing such sentiments as that death must be preferred to the worship of idols, but Islam is not idolatry; that the profession of a belief in Mahomed is not a breach of any divine commandment; and that Jews should in such a case seek an opportunity to leave the country, but need not suffer martyrdom.

MAIMUNA. Across the Murghab, and towards Balkh, lie the small states of Andkho, Maimuna, Shibbargham, Siripool, and Akchee. Maimuna is the most important. Maimuna itself is an open village of about 500 houses, but the strength of the chief consists in his il, or moving nomade population, who frequent Umur, Tankira, Sorbagh, Kafir Killa, Khyrabad, Kusar, Chuckaktoo, Takht-i-Khatun, and other sites, which can scarcely be called villages, and Arabs have been long settled here.

At Andkho or Andkhoee, Shah Wale Khan, an Afghan Turk, settled, with others of his tribe, in the time of Nadir. They were then Shiahs, but are now Sunnis. The il of the Andkho chief, besides the chief's race, were Arabs. Andkho has a larger fixed population than Maimuna, being in one of the high roads to Bokhara, but there is a scarcity of water in this canton; here wheat is a triennial plant. Andkho is the place where Moorcroft died.—*Papers, East India, Cabool and Afghanistan.*

MAINPURI, a British district in the N.W. Provinces, lying between lat. 26° 52′ 30″ and 27° 30′ N., and between long. 78° 27′ 45″ and 79° 28′ 30″ E.; area, 1696 square miles. The earliest

historical inhabitants were Meos, Bhars, and Chirars, most of whom were entirely supplanted by the Chauhan Rajputs in the 15th century. At a still earlier date, the warlike Ahirs had swarmed over the wild ravines of the western regions, where they remain by far the most numerous and powerful tribe to the present day. Many great Thakur families still retain their hereditary estates in Mainpuri, where they have long formed the aristocratic class. The Ahirs are the most important among them, both in numbers and influence. The Chamar are numerous, and are the labourers of the community. In 1865, Mr. Colvin took a census of the Chauhan and Phatak villages, and found six of the former without a single female infant.—*Imp. Gaz.* vi.

MAIRWARA is inhabited by predatory tribes, and belongs partly to Udaipur, Jodhpur, and the British Government, in virtue of its possession of Ajmir. Mairwara was entirely subdued by a British force in 1821. It was taken under British administration, and a local corps was raised, to which Udaipur and Jodhpur were to contribute annually 15,000 rupees each. Under the British Government, the Mairs greatly benefited. In 1847, the British wished to take over all Mairwara, but this was not done. The Mair is also called Mairote and Mairawut. Mera is a mountain in Sanskrit; Mairawut and Mariote, of or belonging to the mountain; the name of the Albanian mountaineer, Mainote, has the same signification. Mairwara is that portion of the Aravalli chain between Komulmer and Ajmir, a space of about 90 miles in length, and varying in breadth from 6 to 20. The Mair are a branch of the Cheeta, an important division of the Meena, a race which consists of as many branches as their conquerors the Rajputs. All these wild races mingle their pedigree with that of their conquerors. The Cheeta-Meena accordingly claim descent from a grandson of the last Chauhan emperor of Dehli. Unail and Anoop, they say, were the sons of Lakha, the nephew of the Chauhan king. The cocoanut was sent from Jeysulmir, offering princesses of that house in marriage, but an investigation into their maternal ancestry disclosed that they were the issue of a Meena kept woman, and their birth being thus revealed, they became exiles from Ajmir, and associates with their maternal relatives. Unail espoused the daughter of a Meena chieftain, by whom he had Cheeta, whose descendants enjoy almost a monopoly of power in Mairwara. The sons of Cheeta, who occupied the northern frontier near Ajmir, became Muhammadans about fifteen generations ago, when Doodha, the sixteenth from the founder of the race, was created Dawad Khan by the hākim of Ajmir; and as Athoon was his residence, the Khan of Athoon signified the chief of the Mairote. Athoon is still the chief town of the Mair race. Chang, Jhak, and Rajosi are the principal towns adjoining Athoon. Anoop also took a Meena wife, by whom he had Burrar, whose descendants have continued true to their original tenets. Their chief places are Burrar, Bairawara, Mundilla, etc. The Meena were always notorious for their lawless habits, and importance was attached to them so far back as the period of Beesildeo, the celebrated prince of Ajmir, whom the bard Chand states to have reduced them to submission, making them carry water in the streets of Ajmir. Like all mountaineers, they broke out whenever the hands of power were feeble. The Mair country is situated but a very few miles west of Ajmir, and is composed of successive ranges of huge rocky hills, the only level country being the valleys running between them. From the sturdy valour of this race, the rulers of India never made any impression on them, notwithstanding their vicinity to the occasional residence, for a long period, of the emperors of Hindustan. In later times the Mair were the terror of their lowland neighbours and even the Rajputs, perhaps with the sole exception of the Rohilla, the bravest men in India, dreaded their approach. The Koli assert their relationship to them, and they admit having intermarried with the Bhil and Meena, and, as Colonel Dixon says, for hundreds of years they have been recruited by refugees and all sorts of rascals from Hindustan, and they are probably a very mixed race. They are described as rather good looking. No native corps did more substantial service at the time of the mutiny than the Mairwara Battalion. The mere fact of its having held Ajmir with an immense arsenal, when the troops in Naseerabad mutinied, was a boon to the British which it would be difficult to overestimate. Had the mutineers got possession the arsenal, with its vast stores, it would have given them a prestige which would have made it impossible for the Rajput princes to resist the pressure of the people to rise against the British Government. In subsequent actions they were always loyal, often very gallant. A single company on one occasion turned the whole of Tantia Topi's force when trying to pass the Aravalli. They were some years afterwards formed into a police corps. This has been felt keenly by the Mairs, who are proud of their old prowess. Ajmir is remarkable for a monument to Colonel Dixon, of the Bengal Artillery, who was superintendent there for many years. His efforts in reducing the Mairs to order, in clearing a jungly country of bands of robbers, in forming an irregular corps out of those very banditti, and in persuading the inhabitants to do away with witch-finding, female infanticide, and slavery, were repeatedly acknowledged. He died in June 1857. He had, with others, to leave Ajmir when the Bengal sepoys broke into mutiny at Naseerabad, the military cantonment, and the Bombay cavalry, till then believed to be stanch, refused to charge their comrades.

MAI-SHUTR-ARABI, blood which has congealed in the belly of a young camel, after being overfed; the young camel is driven about violently, and then killed, and the blood extracted; is brought from Bombay and Dehli; supposed to benefit in impotency. One tola costs 3 rupees.—*Gen. Med. Top.* p. 147.

MAIZE, Indian corn.

The Zea mays of botanists is much cultivated in India, and in all the islands of the Asiatic Archipelago; is, however, more reared in the

western than in the old continent. The stem and leaves, when dry, are chopped up and given to cattle. The seed is ground for bread, and eaten under the name of Chabena.

In China, large portions of the population depend on this grain. It is parched, or ground into meal for cakes. In Japan it is honoured with a place in the armorial bearings of the State.

The growers of Nepal reckon three kinds of maize: a white-grained species, which is generally grown in the low and hot valleys; and a smaller one, called Bhoteah or Murilli Moki, which is considered the sweetest of the three, but, from being less productive, is not generally grown on good lands. Maize thrives best on a siliceous, well-drained, rich soil. The finest Indian corn of the Sikkim range is grown where the soil consists of a substratum of decomposed mica from the under or rocky stratum, with a superstratum of from 3 to 6 inches of decayed vegetable matter from leaves, etc., of the ancient forests. Throughout Hindustan, June is the usual time for sowing. In Behar, about two seers are usually sown upon a bigha; in Nepal, twenty-four seers upon an English acre; in the vicinity of Poona, one and a half seer per bigha. In Nepal, the seed is sown, after one delving and pulverization of the soil, in the latter end of May and early part of June, the seeds being laid at intervals of 7 or 8 inches in the drills, and the drills an equal space apart. The drills are not raised as for turnip sowing, but consist merely of rows of the plant on a level surface. The seed is distributed in this manner with the view of facilitating the weeding of the crop, not for the purpose of earthing up the roots, which seems unnecessary. Indian corn sowing resembles that of the gohya or upland rice in the careful manner in which it is performed, the sower depositing each grain in its place, having first dibbled a hole for it, 5 or 6 inches deep, with a small hand hoe, with which he also covers up the grain.

Cattle are voraciously fond of the leaves and stems, which are very sweet, and even of the dry straw. It is said that near Kaliyachak, though the people give all other straw to their cattle, yet they burn that of maize as unfit for fodder. In Nepal, the stalks, with the leaves attached, often 12 feet long, cut by the sickle, are used as fodder for elephants, bedding for cattle, and as fuel. The maize crop within the hills of Nepal suffers much from the inroads of bears, which are extremely partial to this grain. In the Peninsula of India it is roasted as a luxury. Maize is increasing in cultivation in Java and some of the eastern islands. It is found to have the advantage there over mountain rice, of being more fruitful and hardy.—*Simmonds, Commercial Products; Schouw in Jameson's Philosophical Journal; Simmonds, Colonial Magazine*, ii. p. 309.

MAJAWAR. Arab., Hind., Pers. An attendant at a shrine.

MAJLAS, Arab., is an assembly; Ijlas, Arab. a sederunt.

MAJMA-ut-TUARIKH, an Arabic work, descriptive of the early Arab inroads on Sind. It is an abridgment of universal history up to the 6th century of the Hijira. It was commenced in the reign of Sanjar of the Saljuki (A.D. 1126, A.H. 520), but the unknown author must have died an old man, as he notices an event of A.D. 1193.

MAJNUN. Hind. Salix Babylonica, weeping willow; also, Pers., a lunatic.

MAJUM. Hind., Sansk. An electuary or compound, generally; an intoxicating electuary, formed of ganja leaves (Canabis sativa), milk, ghi, poppy seed, flowers of the thorn-apple or Datura, the powder of the Nux vomica, and sugar, sometimes also cloves, nutmegs, mace, saffron, and sugar-candy. It is used by the Muhammadans and Hindus, particularly the more dissolute, who take it to intoxicate, to ease pain, as Kaif (intoxication), Kuwat (aphrodisiac, tonic), and Imsaq (impotence). There are many recipes, in some of which charras, opium, mastic, cinnamon, aniseed, cummin, cardamoms, are mixed with other ingredients. One kind is prepared from the larger leaves and capsules of the hemp plant, boiled in water along with ghi, sugar, and milk. When of sufficient consistence, it is poured on a slab, when it hardens into a cake, which is divided into small lozenge-shaped pieces.—*W.*

MAJUSI, or Gaor Yezdi, a religious sect in Persia who are said to worship the cow.—*Ogilvy; MacGregor*, iv. p. 303.

MAKADAM. Arab., Hind. The leader of a gang, also the headman of a village; also called Jeth-rayat, Mahto, etc.; and in Bengal, Mandal, Makadam, Karbhari, Karbhari patel, Sirkari patel, and Patwari are used synonymously. The Patwari is likewise called the Pandya or Kulkarni; but Kulkarni is solely applied to the person who transacts the business. In some parts of the Mahratta country, the terms Grammadhi-kari and Gramlekhak are used for Patel and Patwari.

MAKALLAH, the principal commercial town on the south coast of Arabia, trading in gums, hides, senna, and coffee, with India, the Red Sea, and Muscat, and importing cottons, lead, iron, crockery, rice, slaves from Berbera, Cosseir, and other ports near the town. Ras Makallah projects into the sea.

MAKAN. Hind. A house, a burial-place. Makandar, the proprietor of a burial-place.

MAKARA, a fabulous sea animal of the Hindus, representing their Capricornus sign of the zodiac, and is depicted with the head and fore legs of an antelope, and the body and tail of a fish. It is also called Asita danshtra, 'black teeth,' and Jala rupa, water-form. It is the vahan or vehicle of Varuna, the god of the ocean, and is on the banner of Kama-deva, god of love.

MAKARA-TORANAM. Sansk. The royal arch; one of the insignia of royalty of the Chalukya dynasty, when ruling at Kalian.

MAKAR SANKRANTI, a Hindu festival day, held on the occasion of the sun entering the sign Makar, corresponding to Capricorn. It occurs on the 1st of the solar month Magh. From this day, when the sun reaches the most southern, till the time of his arriving at the most northern, point of the zodiac, is called Uttarayana, and the time from his leaving the northern sign Karka or Cancer, till he again returns to Makar, is called Dakshinayana. The days of Uttarayana are reckoned lucky, and those of Dakshinayana unlucky. During the days of Dakshinayana, it is said the gates of heaven are shut, and in the Uttarayana they are open. For the good to die in the Uttarayana is considered more blessed, because they are said to get immediate entrance into heaven; but if they die in the Dakshinayana,

they have to wait outside the gates till the Uttarayana sets in. In Uttarayana, Munj — the ceremony of investing youths with the sacred triple thread—and marriages are celebrated. On the day of Makar Sankranti, just at the time of the sun's entrance into the sign, the Hindus go to the sea, accompanied by a Brahman priest, to bathe; there they rub their bodies with tila or sesamum seed, the favourite grain of the sun, and wash themselves in the manner prescribed in the Shastras. The Brahman then repeats certain prayers suited to the occasion, and closes the ceremony by receiving adoration and a present of money for himself. On their return home they invite Brahmans, present them with cups of bell-metal filled with tila seed and with money, according to the ability of the Yajaman or worshipper; some present copper pots, new dhotis, umbrellas, etc., and the whole family receives benediction from them, which is done by the Brahmans repeating certain words, and throwing on their heads a few grains of red-coloured rice. After the performance of this ceremony, they go to take their meals, which consist of sweetmeats. They invite their friends and relations to dinner; and towards evening they wear new clothes, gold and other ornaments, and frequent the houses of their friends and relations, distributing tila seed mixed with sugar. At the time of putting the tila seed into the parties' hands, they repeat these words: 'Receive these tila seeds mixed with sugar, and be friendly with me throughout the year.' All the praise and prayers offered this day are to the sun, and to no other god. The second day of Sankranti is named Kar, and is generally celebrated by the women making small presents among their own sex.

MAKHDUM SAHIB, a Muhammadan pir or saint, whose tomb in Mahim is a place of pilgrimage. His full name is Fakih Ali Makhdum Sahib.

MAKHSAN-ul-ADWIAH, a medical book, written in A.D. 1769 by Muhammad Husain Khan.

MAKKA PARIJE, a kind of marriage amongst the Coorgs. In the event of there being no male in the house, a daughter is retained to represent the family, and a husband is procured for her from another family. The husband does not become alienated from his own family, but can take a wife from his own family also, thus raising up seed for both houses. A Makka parije marriage must be made expressly for the purpose at the time; the arrangement cannot be made after the marriage.

MAKKATAYAM. See Marumakkatayam.

MAKKRUH, anything which Mahomed himself abstained from without enjoining others to do so.

MAKLEUA, the berry of a large forest tree at Bankok, said to be the Diospyros mollis, which is used most extensively by the Siamese as a vegetable black dye. It is merely bruised in water, when a fermentation takes place, and the article to be dyed is steeped in the liquid and then spread out in the sun to dry. The berry, when fresh, is of a fine green colour, but, after being gathered for two or three days, it becomes quite black and shrivelled like pepper. It must be used fresh and whilst its mixture with water produces fermentation.

MAKOK, a Siamese plant, producing a sharp acid fruit, after eating which, if water be drunk, a sweet taste is left in the mouth and palate, which remains for a whole day.

MAKRAN, a province to the east of the Persian empire, and on the borders of Sind, by the Greeks called Gedrosia or Gadrosia. Cape Monz terminates a range of mountains that form the boundary between Persia and India.—*Ouseley's Travels.*

MAKSE. AMB. The hair-like fibre of Arenga saccharifera. Gomuto.

MAKTA, ARAB., from Kata, ARAB. In Maharashtra, quit-rental, land held at a fixed low rate. Maktadar, the holder of an estate which pays quit-rent.—*W.*

MAKTAB. ARAB. A Muhammadan domestic festival in India, held on the first occasion of a child's going to school.

MAKWA, a fisherman race on the Malabar coast. Makati, females of the Makwa.

MAL or Mar, a tribe scattered over Sirguja, Palamau, Belounja, etc., who are now a thoroughly Hinduized people, and resemble Hindus in appearance. They declare they came originally from Malwa. They are said to have at one time formed the bulk of the population in Palamau, but there are very few there now.

MALA, also Malavadu. TEL. The Pariah or Dher race of Telingana.

MALA. HIND. A necklace, a garland, a rosary. The tulasi or rudraca has the same estimation amongst the Hindus that the misletoe had amongst the ancient Britons, and was always worn in battle as a charm.—*Tod's Rajasthan*, i. p. 619.

MALA-ARAYAN. Various tribes of wild mountaineers occupy the higher hills and the mountains of Travancore. The hillmen proper number close upon 12,000, and Ulladars, a hunter race, 2829. The Vedar hunters are at the foot of the hills, and in a social condition very similar to that of the Pulayars. The tribes living towards the south of Travancore are usually designated Kanikar, those in the north being commonly called Mala-Arayar in Malealam, from Arachan, chief, or from Raja, a king; in Tamil they are called Malei Arasar. Kanikaran means hereditary proprietor of land, thus recognising their ancient rights over the forest lands.

The *Kanikar* are very short in stature and meagre in appearance. They live together in little clans, each hamlet under the patriarchal rule of a headman (Muttukani, the 'stem' or principal Kanikaran). They are wandering husbandmen; cut down a patch of forest, burn and clear it, and sow a crop, with little or no tillage. They can never tell their own ages. They are unable to count a hundred; over ten they lay down a pebble for each ten. They knot fibres of various climbing plants to express their wants. In the south they speak Tamil, and Malealam further north.

The *Mala-Arayans* have fixed villages, generally on the western slopes of the higher range of mountains or their spurs. They will not often work for hire, and are very averse to carry loads. Some of them are well to do. They are great hunters of the wild beasts and game which abound in their hills, and relate a tradition giving them special permission to eat the black monkey. From this they are called by the low country people Kurangu tinni, 'monkey eaters.' The Hindus regard them as beings in alliance with some powerful demonolatry, and presents are

abundantly bestowed in order to prevent the curses producing ill effects. Each village has its priest, who, when required, calls on the Hill (mala), which means the demon resident there, or the Pretham, ghost. If he get the afflatus, he acts in the usual way, yelling and screaming out the answers sought. They have some sacred groves in which they will not fire a gun or speak above a breath.

Ulladar are a jungle tribe of timid savages. They are without settled villages or civilised clothing, wandering within certain boundaries prescribed to each division. They subsist chiefly on wild yams, arrowroot, and wild beasts. They are adepts in the use of the bow and arrow. The arrow they use has an iron spear-head, and an Ulladar has been known to cut a wriggling cobra in two at the first shot.

A small number of *Urali* wander over the Todupuley Hills, building their huts on trees like the Arayans.

The *Pulayar* are a hunter race.

The *Mannan* are strange-looking mountain men, hardy, and very black, speaking bad Tamil, much employed by the Travancore Sirkar to collect cardamoms, as watchmen, etc. They rarely cultivate anything but ragi.

The hill *Pandaram* are without clothing, implements, or huts of any kind, live in holes, rocks, or trees. They bring wax, ivory, and other produce to the Arayan, and get salt from them. They dig roots, snare the ibex of the hills and jungle-fowls, eat rats and snakes, and even crocodiles. Some seen by Mr. Baker were perfectly naked, filthy, and very timid. They spoke Malealam in a curious accent, and said that twenty-two of their party had been devoured by tigers within two monsoons.—*Mateer's Travancore.*

MALABAR, a region on the western part of the Peninsula of India, between the mountains and the sea. Its name is obtained directly from the Portuguese Malavares, but the people call themselves Maléallar, from Malé, a mountain, and Alam, a district or country. The term Malabar, as usually applied by geographers, designates the whole of the narrow belt of country, rarely above fifty miles broad, west of the great peninsular chain, from Goa to Cape Comorin; it thus includes the British district of Malabar, and the kingdoms of Cochin and Travancore to the south. This tract is in general hilly and mountainous; a narrow strip of lowland borders the sea, frequently intersected by long sinuous salt-water creeks, and covered with cocoanut trees; the hills, which are thrown off as spurs from the main axis, often reach the sea and dip suddenly into it; they enclose well-cultivated valleys, and though generally low to the west, they rapidly rise to the east, where they join the chain. The climate of Malabar is characterized by extreme humidity, and an abundant rainfall during the south-west monsoon, when the temperature seldom rises above 75°, the mean of the year being 81°.

The area of the Madras portion is 6002 square miles, lying between long. 75° 14′ and 76° 52′ E., and lat. 10° 15′ and 12° 18′ N., and bounded on the north by South Kanara, east by Coorg, the Neilgherries, and Coimbatore; south, by the Native States of Cochin and Travancore; and west by the Arabian Sea.

Malabar is the garden of peninsular India. Here nature is clad in her brightest and most inviting robes; the scenery is magnificent, the fields and gardens speak of plenty, and the dwellings of the people are substantial and comfortable.

Hindu legend ascribes its creation to Parusu Rama, who caused the sea to retire from the Western Ghats, and introduced Brahmans into the country, which he divided into sixty-four gramam or districts, and these were subsequently separated into two divisions, Tulu and Kerala, the Kangarote or Chandragiri river being the boundary. According to the Kerala Ulpati (a Hindu historical book), the Malabar coast was formerly divided into four provinces. The most northerly was called Tulu Rajyam, the Tulu kingdom. It commenced at Gokuru in N. Canara, and extended southward to Perumbura, near Mangalore. From Perumbura to Pudapatuam, near Nelishwaram in S. Canara, was called Capa Rajyam; thence to Canneti, near Quilon, was the Kerala Rajyam; and thence to Cangakumari, or Cape Cormorin, the Muchica Rajyam.

Chera was a small ancient state between the territory of the Pandiya and the western sea. It comprehended Travancore, part of Malabar, and Coimbatore. It is mentioned in Ptolemy, and may have existed at the commencement of the Christian era. It ruled at one time over the greater part of Carnata, but was subverted in the 10th century, and its lands partitioned among the surrounding states.

Vasco da Gama visited Malabar in 1498, and his successors speedily established themselves at Cochin, Calicut, and Cannanore. In 1656 the Dutch appeared in the Indian seas, to compete with the Portuguese for the trade of the country. They conquered Cannanore, and in 1663 captured the town and fort of Cochin, as well as Tangacheri, from their rivals. In 1717 they secured the cession of the island of Chetwa from the Zamorin. But in the next half century their power began to wane: Cannanore was sold to the Cannanore family (Bibi), represented at that time by Bamali Raja, in 1771; Chetwai was conquered by Hyder in 1776; and Cochin captured by the British in 1795.

Malabar, when overrun by Hyder Ali, was made tributary to Mysore, but after the war of 1791-92, the treaty of 1792 transferred part of it to the British.

The French first settled in 1720 at Mahé, in 1752 obtained a footing at Calicut, and in 1754 acquired Mount Dilli, and a few outposts in the north, all of which fell into the hands of the British in 1761. Their frequent wars with the British ended in the destruction of their commerce in the east, Mahé having been thrice taken and restored. The British had established themselves in 1664 at Calicut, in 1683 at Tellicherri, and by 1714 at Anjingo, Chetwai, and other commercial factories. Tellicherri became their chief entrepôt for the pepper trade.

The rainfall is on the average 120 inches. The rainfall in June, July, and August averages 80 inches, or two-thirds of the total fall for the year. Cattle suffer from murrain and foot-and-mouth disease, but no epidemic rinderpest has been recorded. Gold is washed for in all the rivers of Malabar; but in 1877 to 1881 it was not found in sufficient quantity to repay the expenditure for European machinery and labour.

A great Brahman colony, known as the Namburi, are large landed proprietors; there are small tribes of Jews, and Tamil-speaking Hindus have come in considerable numbers into this region. Other languages spoken are Malealam and Tulu, with some Canarese; and in the northern part of the coast, the Konkani.

Juan Ribeyro mentions that in his time, 1656, there were fifteen kings ruling in the low tract of country between the sea and the ghats, in the short space between the Salt River and Cape Comorin; and that to this minute division of the country was due the facility with which the invaders overran it.

After the pacification of the country in the early years of the 19th century, the sub-collector, Mr. H. Baber, turned his attention to coffee-planting in Wynad; and by 1840 this important industry was fairly established. Since 1850 it increased greatly.

Malabar has many Muhammadan Moplahs, active, intelligent men, engaged in commerce. They have several times in the 19th century risen in rebellion, feeling aggrieved by the laws which regulate Hindu property, and they have displayed on these occasions much fanatical bravery.

The *Charumar* race are predial slaves, whose name Wilson derives from Chera, Malealam for the soil; they follow the rule of Alya Santana. They are very diminutive, with a very black complexion, and not unfrequently woolly hair. The *Makkavan* is a fisherman caste, also called Makwa, and their women Makate. The toddy-drawer is called *Katti Karan*. The *Ashary* is the carpenter caste. In common with the brassfounder, gold and iron smiths, they continue the practice of polyandry, but in civil inheritance follow from father to son, and not the practice of maternal descent, descensus ab utero. The elder brother marries, and the wife is common to all the brothers. If a junior wish to marry, he must live apart and set up business apart; but if any of his younger brothers reside with him, his wife is common to them. The *Panni Malayan* are a servile caste. The *Adiyan* is a slave, serf, or vassal, who lives under the protection of a raja or religious establishment. The Malealam Sudras, of whom the better class are called Nairs (or lords), are the bulk of the respectable population,—the landholders, farmers, soldiers, officials, and rulers of the country. The *Nair* are the ruling race of Malabar. They were formerly accustomed to duelling. The practice was called Ankam, and hired champions were often substituted. The *Pulichi* is a forest tribe, who are deemed so unclean that they are not allowed to approach other castes. The *Uradi* or *Urali* are a servile race. The *Tiyar* race are toddy-drawers and agriculturists. The *Pulayan* or *Pulian* is a servile caste, often slaves; this is doubtless the Puller.

In South Malabar, descent to sons is the law, but in North Malabar, the Nair, the artisans, carpenter, brass-smith, blacksmith, goldsmith, the Tiyar, who are toddy-drawers, and the Makwa, who are fishermen, are all polyandrists, and descent of property goes in the female line. In North Malabar this law of descent is called Marumakkatayam, and the Muhammadan Moplah has conformed to this usage. In Canara, a similar law, called Alya Santana, or nephew inheritance, prevails, and is in practice more strictly carried out than in North Malabar. In North Malabar, the adherents to Marumakkatayam form united family communities, termed Tarwaad, the senior member of whatsoever branch is the head of the family, and is termed Karnaven; the other members are styled Anandraven. The remotest member is acknowledged as one of the family, and entitled to maintenance if living under subordination to the head of the family, and taking part in their religious observances; for the women there is nothing analogous to the state of widowhood as existing elsewhere,—whether in alliance with men or not, they reside in their own families. The Nair marries before he is ten years of age, but though he supports, he never associates with his wife, who receives at her pleasure any men, provided they be not of lower birth. Consequent on this form of descent, a Nair does not know who his father is. In law, property is held to vest in the females only; practically the males are co-sharers with the females. In default of males, females succeed to the management of the family property. In some families, the management devolves on them preferably to the males, and the senior female takes it. There is, however, a growing tendency to convey property from father to son, arising from the gradual abandonment of polyandrism. The connubial connection in question is called in Malabar 'Goona-dosham' (Goona, good, Dosham, evil—for better for worse). In Travancore it is styled Mundu-vanga,' viz. Mundu, cloth, Vanga, receiving, where the girl taken is of ripe age, and her consent must be obtained. Personal acquaintance thus precedes the union. The hour selected is 8 P.M.; there is an assemblage of friends; the man presents the woman with a Mundu, or white muslin cloth, in a corner of which, in North Malabar, a small sum of money is tied. The girl either goes to the man's house, or remains in her own and is visited by him there. Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three. The descent being in the female line, the parentage of the father is immaterial. The Marumakkatayam law is not followed in North Malabar by the Aka-Podwal, a class of pagoda servants, nor by the Brahmans of North Malabar or of Canara; but in Travancore law, only the eldest brother of a Brahman's family is allowed to marry with his equal, and the other brothers form other connections. In the Tuluva country, the Brahman widow can devote herself to the temple, and reside outside or inside its walls. If within the walls, she is a servant of the idol, and receives the visits of men of her own caste only; the offspring of such, if boys, are called Moylar, and the girls are married to them. But if she elect to reside outside the walls, she must pay a monthly sum to the pagoda, and may cohabit with any man of pure descent. This, however, is disputed.

Malabar is a term applied erroneously to the Tamil language. Malabar black-wood is Dalbergia latifolia. Malabar civet cat, Viverra civettina, *Blyth;* Malabar creeper, Ipomœa tuberosa; Malabar hemp, Crotalaria juncea; Malabar nightshade, Basella rubra; Malabar nut, fruit of Adhatoda vasica; and Malabar sago palm is Caryota urens.

MALABAR HILL. With the exception of Malabar and Worli Hills on the western, and Chinchpugly Hills on the eastern shore, the land

in Bombay island is flat, and a very large area is still below the level of the sea at high water, and is annually flooded during the rainy season. Malabar Point, in Bombay, has the ruins of a very ancient black stone temple, and has many fragments strewn about with a variety of images sculptured on them. Below the Point, among the rocks, there is a cleft esteemed very sacred, where the believing Hindu obtains regeneration or a second birth. He comes to the spot and deposits all his clothing, then, passing through the aperture, he is supposed to be born again, and ablution in the tank and gifts to the priests complete the washing away of his sins.—*Chow Chow*, p. 60.

MALABATHRUM, among the writings of the ancients, was applied to a leaf imported from India, and employed by them both as a medicine and as a perfume. From it there was prepared both an oil and a wine, by maceration of the leaves in these menstrua. Many fabulous statements accompany the earliest accounts, as that of Dioscorides, by whom it is stated that by some they are thought to be the leaves of the Indian Nard; that they are, moreover, found floating on Indian marshes, and that they grow without roots (lib. i. c. 11); and that (lib. ii. c. 10) it is by feeding on them that the animal affording the Onychia or Unguis odoratus of the ancients becomes aromatic. In the works of the Arabs, Saduj is given as the synonym of Malabathrum; and Saduj, both in Persian works and in India, is applied to Tej-pat or Tej-bal, or the leaf of the Tej, which is from Cinnamomum albiflorum, growing in the dense forests of the valleys of the Himalaya, from Rangpur to the Dehra Doon, in lat. 30° N. Dr. Hamilton found the same name applied to the C. tamala, C. nitidum, as also C. aromaticum. They are analogous in all respects to bay leaves produced by the Laurus nobilis. The physician Garcias da Horto, in his work on the Aromatics of India (first published at Goa in 1563), pointed out that Malabathrum was the Tamalapatra, the leaf of a species of cassia.—*O'Sh.; Eng. Cyc.; Yule, Cathay; Powell.*

MALACCA, a town on the sea-coast of the Malay Peninsula, which gives its name to a district, forming part of the Straits Settlements under the British Colonial Office. The lighthouse is in lat. 2° 11′ N., and long. 102° 16′ E. The mean length of the province is 40 miles, the average breadth being 25, comprising an area of 1000 square miles, with a population of 77,756. Malacca derives its name, according to Malay history, from the Malaka tree, Jambosa Malaccensis. The country a few miles inland is formed of undulating hills, moderately elevated, called Malacca Hills, and 7½ leagues E. by N. ½ N. From it rises the high mountain Gunong Ledang, called also Queen Mount, also Mount Ophir, about 7000 feet high. Except Goa, Malacca was the earliest European settlement in the east, and was at one time the great emporium of trade from the innumerable islands of the Eastern Archipelago, but has seen many changes since it was wrested from Muhammad Shah by the Portuguese in 1511; and in 1547 the salvation of this city from the Achinese was ascribed to the sudden appearance of Saint Francis Xavier, the apostle of India, who was then on his pilgrimage through the east. After remaining in quiet possession of Portugal for 130 years, it fell into the hands of the Dutch, who held it for 74 years, when the British took possession, and their first act was to demolish the fort, erected at a vast cost by the Portuguese, and much improved by the Dutch. In 1818, Malacca was again ceded to the Dutch, who finally exchanged it with the British for Bencoolen and other settlements in Sumatra. In 1825, the British, by treaty with the Dutch, agreed to hold no possessions in the Archipelago south of the equator, and the Dutch, vice versa, north of the equator.

The great mineral product is tin. In the great tin mining district thousands of Chinese work,—some by surface washings, others by following up veins deep into the bowels of the earth, and others by grinding the quartz so richly impregnated with the stanniferous ore that is almost metallic in its matrix. Water power, somewhat in principle of the Egyptian wheel, is the usual means resorted to to raise the accumulating water from the pits, the chain of buckets running down an inclined plain often exceeding a hundred feet. The ore is smelted in small furnaces, a rapid white heat being produced by the action of a double bellows made from the trunk of a tree hollowed out, and the ore, as in iron, runs out at an aperture below the furnace into moulds prepared for it. The tin is sold on the spot for 25 dollars a pikul; the price in England is double that. Near Malacca are thermal springs, 137° being the average heat throughout the year. There are six of these springs in a square of about 100 feet, perpetually steaming and boiling over. A powerful odour of sulphurated hydrogen is evolved; the water is clear, strongly impregnated with iron and sulphur, and held in great repute both as a vapour and plunge bath, chiefly in cutaneous maladies.

At the census of 1881 the population was found to be—Malays, 57,474; Chinese, 13,450; Kling, 2874; Arabs, 303; Boyanese, 135; Bugis, 85; Javanese, 339; Siamese, 6. The district produces many valuable timber trees.—*Census.*

MALACCA CANE. Dr. Griffith believed these canes to be produced from the Calamus scipionum of Loureiro, the Heo-tau of Cochin-China. They do not occur about Malacca, but are imported from Siak, on the opposite coast of Sumatra. Some of them are simply mottled or clouded, others of a brown colour, in consequence, it is said, of their having been smoked. The most slender specimens, with the longest internodes, are the most valued.—*Seeman.*

MALACCA STRAITS, a seaway leading from the Bay of Bengal into the Archipelago. They are bounded on the north by the island of Singapore. There are three banks in it,—the One-Fathom Bank, on which is a light vessel; the Sumatra or Third Bank is to the N.W. of the Carimons. Towards the entrance of the Strait of Malacca, near the Nicobar and Acheen Islands, and betwixt them and Junk Seylon, there are often very strong ripplings, particularly in the S. W. monsoon. There is no perceptible current, yet the surface of the water is impelled forward by some cause. They are seen in calm weather approaching from a distance, and in the night their noise is heard from a considerable distance before they are near, alarming to persons unacquainted with them, for the broken water makes a great noise when the vessel is passing through it. They beat against a ship with great violence, and pass on, the spray

coming on deck; and a small boat could not always resist the turbulence of these remarkable ripplings.—*Horsburgh.*

MALACHITE.

Luh-tsing, . . . CHIN. Shih-tsing, CHIN.
Shih-luh, ... ,,

This carbonate of copper is found in many parts of China, where it is used as a pigment and for making ornaments. The mines of Siberia at Nichne Tagilsk have afforded great quantities of this ore. A mass partly disclosed measured at top 9 feet by 18 feet, weighing 40 tons, and the portion uncovered contained at least half a million pounds of pure malachite. Other noted localities are Chessy in France, Sandlodge in Shetland, Schwartz in the Tyrol, Cornwall, Australia, and the island of Cuba. This mineral receives a high polish, and is used for inlaid work, and also earrings, snuff-boxes, various ornamental articles, slabs for tables, mantelpieces, and vases, which are of exquisite beauty, owing to the delicate shadings and radiations of colour. At Versailles there is a room furnished entirely with tables, chairs, etc., wrought in malachite. Malachite is easily distinguished from turquoise by its shade of colour and much inferior hardness. It is a valuable copper ore when abundant, but it is seldom melted alone, because the metal is liable to escape with the liberated volatile ingredient, carbonic acid. In India it is rarely worn as a gem, and only by Europeans.—*Eng. Cyc.; Smith.*

MALACHRA CAPITATA. *Linn.* A plant of Bengal, Kutch, N.W. Provinces, Sind, and the Panjab. M. rotundifolia is a plant of S. America, belonging to the natural order of Malvaceæ. Marshy places within the tropics are considered favourable to its growth. The fibre is prepared in precisely the same way as jute, but requires to be steeped directly it is cut. The fibre is in length from eight to nine feet, has a silvery appearance, with a peculiar lustre, and is almost as soft as silk. In passing the fibre through the machinery, damped with oil and water, as is commonly done with Bengal and Konkan jute, yarn was produced strong enough and nearly equal to that made from the second quality of Bengal jute. If the plant is carefully grown and well looked after, the fibre would then no doubt rank fully equal to Bengal and Bombay jute. The fibre, if carefully prepared, would command a ready sale at 3·12 to 4 rupees per Indian maund.

MALAGASY, the people of Madagascar.

MALAGUETA, or Grains of Paradise, is also written Mellighetta, Malagueta, Manighetta, and has been applied sometimes to two kindred species of Amomum exported from different parts of the West African coast (Am. Granum-Paradisi and Am. Melegueta), and sometimes to the seeds of the Unona Ethiopica or Ethiopic pepper. It appears to be one of the former which Gerarde and Mattioli describe as the greater cardamoms or melegette, for Gerarde states they were said to come from Ginny, and were called in England Graines of Paradise, the Grana-paradisi of authors. —*Yule, Cathay*, i. p. 88.

MALAI ARASAR. TAM. Lit. hill kings; a tribe inhabiting the foot of the Animallay Hills, very useful in the forest, preparing elephant ropes from the vaca nar, assisting in the clearing of brushwood, and the repair of roads, etc., for which they are paid. See Malé Arasar.

MALAMIUM, an order of darvesh, supposed to resemble speculative freemasons.

MALAM KOLLE? a kind of wax produced from the wild plantain.—*Ind. Arch.* 1853, p. 267.

MALANG, a Muhammadan mendicant who lets his hair grow loose and uncombed.

MALANGI. BENG. A salt maker.

MALARIA, a climatic influence unfavourable to health. It is more frequently observed in dense moist forest lands, valleys and gorges of mountains, but even dry arid tracts are not free from it. It has been remarked along the Mahaveliganga, a few miles from Kandy, that during the sickly season, after the subsidence of the rains, the jungle fever generally attacks one face of the hills through which it winds, leaving the opposite entirely exempted, as if the poisonous vapour, being carried by the current of air, affected only those aspects against which it directly impinged. A malarious part of India is the Terai, near the Himalaya, also the Wynad.

MALATI and Madhava is the title of a drama by Bhavabhuti, in which the social life of the Hindu race is largely represented. It was translated by Professor Wilson. Malati puts on her bridal dress in presence of the deity. It was customary also amongst the Greeks for the intended bride to pay her adoration to some deity before her marriage, usually to Diana; but at Athens no virgin was allowed to be married before worshipping Minerva, who was the tutelary deity of the city. Madhava's passion is described as

'Heard, felt, and seen, possesses every thought,
Malati alone fills every sense, and pants in every vein.'

The passion of Malati is equally intense with that of Juliet; but her unconquerable reserve, even to the extent of denying her utterance to him she loves more than life, is a curious picture of the restraint to which the manners of Hindu women were subjected, even whilst they were in enjoyment, as appears from the drama, of considerable personal freedom. Megasthenes tells us that the Indians of his time did not communicate their metaphysical doctrines to women, thinking that, if their wives understood their doctrines, and learned to be indifferent to pleasure and pain, and to consider life and death as the same, they would no longer continue to be the slaves of others. We find from the later ceremonial sutras (Srauta and Grihya sutra) that women were not allowed to learn the sacred songs of the Vedas, the knowledge of which constituted one of the principal acquirements of a Brahman before he was admitted to the performance of the sacrifices. Menu ix. and 18 says, 'Women have no business with the text of the Vedas, thus is the law fully settled; having therefore no evidence of law, and no knowledge of expiatory texts, sinful women must be as foul as falsehood itself, and this is a fixed rule.' The practice of the wife worshipping the husband is very ancient. In the drama styled Ratnavali, or the Necklace, Vasavadatta, after worshipping the image of the deity, her attendant says—

'The worship of the divinity concluded, be pleased, madam, to pay adoration to your lord.

'Vasava. Where are the flowers and unguent?

'Kanch. Here, madam.'

On which Vasavadatta worships the king. This is conformable to the Bhavishyottara Purana,

which directs, 'Having offered adoration to the mind-born divinity, let the wife worship her husband with ornaments, flowers, and raiment. Thinking internally with entire complacency, This is the god of love.'—*Hind. Theat.* ii. pp. 67, 122, 275; *Muller, Hindu Literature.*

MALAUN, a hill fort in the Hindur State of the Panjab, situated in lat. 31° 12′ N., and long. 76° 52′ E., 4448 feet above the sea, on the crest of a ridge bearing the same name, and rising from the left bank of the Sutlej to the sub-Himalayan range. It was taken by the British; the engineers constructed a road practicable for heavy artillery up the difficult heights, and a battery being formed close to the fort, the Gurkhas surrendered, and evacuated, by the terms of capitulation, all the hill states west of the river Kali.—*Imp. Gaz.*

MALAVIKA and Agnimitra, a drama by Kalidasa. The text has been printed at Bombay and Calcutta; it has also been printed and translated by Tullberg; a German translation by Weber, an English one by Tawney, and a French one by Foucaux.—*Dowson.*

MALAY. The Malay race are found in the Malay Peninsula, and in the western islands of the Archipelago. In the Maldives the people speak the Malay language, and the Hova of Madagascar are said to bear in their features some resemblance to the Malays.

Peschel says (p. 355) that when Roderigues, Mauritius, and Bourbon were discovered by Europeans and still unpeopled, Madagascar was peopled by Malays; and Crawfurd says (Grammar and Dictionary, i. p. 148) very clear traces of a Malayan tongue are found in the languages of the island of Madagascar, an island some 3000 miles distant from the nearest part of the Malayan Archipelago, and only 240 miles from the eastern shore of Africa. Peschel adds that the similarity of words of the Malagasy or Madagascar language with Malay words had been observed by Sir Joseph Banks and by Hervas the philologist; and Wilhelm von Humbolt's researches into the Kawi language have shown that Madagascar was peopled by Malays.

In 1847, Mr. Spencer St. John estimated the population of the Malay Peninsula and Eastern Archipelago at 18,436,622, as under:—

Malay Peninsula,	562,482	Sumbawa, . . .	200,000
Sumatra and adjacent islands, . .	4,964,770	Floris, ...	278,000
		Solor, Adenatti, Lombatti, . .	157,000
Java and islands, . .	10,060,580	Sumba, ...	425,000
Bali, ...	900,000	Timor, ...	639,000
Lombok, . . .	250,000		

The latest estimate by Behm and Wagner gives the population at 63,969,000:—

Independent Malacca, . . .	300,000
Straits Settlements, ...	390,000
Sunda Islands and Moluccas, .	28,867,000
Philippines, ...	6,300,000
Netherland India and N. Guinea and Papuan Islands,	27,962,000
British North Borneo,	150,000

The Malay Races and Languages have been given (Asia, p. 620) by Professor A. H. Keane, as under:-

Malayan Proper.	Sub-Malayan, West.	Sub-Malayan, East.	North-East Branch.	South-West Branch.
High Malay.	Atyeh.	Balinese.	Tagalog.	Malagasy—

In that region are two distinct races. There are men of brown or copper complexion, and lank hair, who are the most advanced inhabitants of the Archipelago. There is another race who, from their resemblance to Africans, have been called Negroes and Negritos. The Malays apply to those of the latter race best known to them, the people of New Guinea, the epithet of Puwa-puwa or Pa-puwa, which is an adjective meaning frizzly or crisping, and is equally applied by them to any object partaking of this quality. The term Negro, from the Latin Niger, is also employed to designate the black-skinned races, of whom mention is now made. But from the Andaman Islands eastward to the races in the Pacific, of the people generally classed as Negroes there are at least 12 varieties, differing from each other in physical appearance, some being pigmies under five feet, and others large and powerful men of near six feet. Keeping this marked difference in remembrance, to the Malay type, and to the Papuan type respectively, all the people of the various islands can be grouped. The Asiatic races include the Indo-Malay, and all have a

continental origin; while the Pacific races, including all to the east of the Malay (except perhaps some in the Northern Pacific), are derived not from any existing continent, but from lands that now exist or have recently existed in the Pacific Ocean. On drawing a line to separate the Malay and Papuan races, it almost coincides with that which divides the zoological regions, but juts somewhat eastward of it, as the maritime enterprise and higher civilisation of the Malays have enabled them to overrun from the west a portion of the adjacent region on the east, to supplant the original inhabitants, and to spread much of their language, their domestic animals, and their customs far over the Pacific into islands where they have but slightly or not at all modified the physical or moral characteristics of the people.

Peschel classes the Malay people amongst the Mongoloid races. He believes with Moritz Wagner that the shape of the skull, the form and colour of the face, as well as the whole physical constitution of the Malay race, is so nearly allied to the Mongolian that in similar apparel the two races are hardly distinguishable.

Mr. Wallace believes that the Malay and the Papuan races have no traceable affinity to each other; that the Asiatic races include the Malays, and all have a continental origin; while the people of the Celebes and Pacific races in the islands on its east are derived from lands which now exist or have recently existed in the Pacific Ocean. He allots the Eastern Archipelago amongst two races, and shows their islands thus:—

Indo-Malayan Regions.	Austro-Malayan Regions.	Polynesian or Pacific Regions.	
The Malayan Group.		The Papuan Group.	
Sumatra.	Lombok.	Floris.	Ki Islands.
Lingen.	Sumbawa.	Sumba or Handana.	Ceram.

Mindanao.		Tenember.	Jobi.
		Part of Bourou.	Mysol.
		Part of Ternate.	Waigiou.
			Salwatty.
			Sook.
			Biak.

The cradle of the Malay race was the plains of Menangkabau, in the interior of Sumatra, from whence they emigrated and pushed their conquests, or formed settlements to their present extensive limits. They formed colonies in the Malay Peninsula and in Borneo, the former probably, and the latter certainly, occupied before their arrival by rude tribes of the same race of men, who could offer no effectual resistance. In the remoter islands, or in those occupied by powerful and civilised nations, the Malays appear only as settlers and not colonists, as in Java and the principal islands of the Philippine Archipelago.

The Malay Peninsula, called Tannah Malayu, or Land of the Malays, with the exception of a few diminutive Negro mountaineers, is occupied by [illegible] or by men of the same race, for the several wild tribes in the interior speak the Malay language, and have the same physical form as the Malays, although not calling themselves by this name, and their language contains many words that are not Malay. Nearly the whole of the coast of Borneo is occupied by Malays, who are supposed to have first emigrated to that island about the date of the reign of the Saxon king Athelstan.

The annals of several ancient Malay states point to Palembang as the original land of the Malays. They afford various indications of a close connection between it and Java, and mention Java invasions and settlements long anterior to the modern conquest of Palembang by Majaphit. From their concurrent tenor, it appears that the royal dynasties of Menangkabau, Malacca, and other states, traced their descent from Palembang. It may be inferred that it was in Palembang that the Malay race and language received their earliest and deepest impressions from Hindu and Java influences, and that the Indian monarchical form of government was first engrafted on the native Sumatran institutions, which are of a mixed patriarchal and oligarchical form.

Mr. Crawfurd has regarded the *Malays* as consisting of four great tribes and a few minor semi-civilised tribes; and a number of others who may be termed savages. The four great tribes are:—

The *true Malay* races, the Malay proper, who inhabit the Malay Peninsula, and almost all the coast regions of Sumatra and Borneo. They all speak the Malay language, or dialects of it; they use the Arabic characters in writing, and they are all Muhammadans in religion.

The *Javanese*, who inhabit Java, part of Sumatra, Madura, Bali, and part of Lombok. They speak the Javanese and Kawi languages, which they write in a native character. They are of the Muhammadan religion in Java, but Bali and Lombok is Brahmanical.

The *Bugis* are the inhabitants of the greater part of Celebes, and there seems to be an allied people in Sumbawa. They speak the Bugis and Macassar languages with dialects, and write these in two different native characters. They are all Muhammadans.

The *Tagala* of the Philippine Islands are the fourth great Malay race; many of them profess Christianity; their native language is Tagala, but they speak Spanish.

Moluccan Malays, who inhabit chiefly Ternate, Tidore, Batchian, and Amboyna, may be held a fifth division. They are Muhammadans, but they speak a variety of curious languages, which seem compounded of Bugis and Javanese, with the languages of the savage tribes of the Moluccas.

The *Savage Malays* are the Battak and other wild tribes of Sumatra, the Dyak of Borneo, the Jakun of the Malay Peninsula, the aborigines of Northern Celebes, of the Sulu Island, and of part of Bouru.

Peschel and Friedrich Muller have proposed other classifications, but neither of them have resided among the races under notice.

The *Malay tongue* is now, and was, when Europeans first visited the Archipelago, the common language of intercourse between the native nations among themselves, and between these and foreigners. It is in the Archipelago what French is in Western Europe, Italian in

Eastern, Arabic in Western Asia, and Hindi in Hindustan. All nations who hold intercourse of business with strangers must understand it, and all strangers must acquire it. This is the case in Sumatra, where other languages are also vernacular, in Java, in Celebes, in the Moluccas, in Timur, and in the Philippine group. Mr. Crawfurd attributes the spread of this language to the enterprising or roving character of the people, whose native tongue it is, as also its own softness of sound and simplicity of structure and consequent facility of acquirement.

The *Malay family* approximates closely to the ruder or more purely Mongolian type of Ultra-India, and the identity in person and character is accompanied by a close agreement in habits, customs, institutions, and arts, so as to place beyond doubt that the lank-haired populations of the islands have been received from the Gangetic and Ultra-Indian races. The influx of this population closed the long era of Papuan predominance, and gave rise to the new or modified forms of language which now prevail. The rude maritime tribes who frequent the coasts and islands of the Malay Peninsula, and amongst whom several distinct tribes are distinguishable by their physical characters, speak a language mainly Malay, but with differences in pronunciation. The Malay race, as a whole, very closely resembles the East Asian populations from Siam to Manchuria. The Malays are frequently quite Burmans in appearance, but the normal and least mixed Malays are more Binua and also more Siamese than the Western Burmans.

The colour of all the Malay tribes is a light reddish-brown, with more or less of an olive tinge, not varying in any important degree over a wide extent of country. The hair is equally constant, being invariably black and straight, and of a rather coarse texture, so that any lighter tint, or any wave or curl in it, is an almost certain proof of the admixture of some foreign blood. It is plentiful on the head, but other parts of the body are smooth. The moustaches alone are retained on the face, other hairs being removed by pincers. The stature is tolerably equal, and is always considerably below that of the average European,—five feet two or three inches being considered the average height of a man, and that of a woman is a few inches shorter. Their bones are large and clumsily put together, but strongly knit; arms and legs usually short compared with the length of the body; and the whole frame robust, and capable of much labour. The body is fleshy and muscular, legs remarkably so, thighs so large as to be unwieldy. Malays seldom become obese; the breast well developed, the feet small, thick, and short, the hands small and rather delicate. The head is round, and elongated at the summit, broad at the back, and set on a stout, thick neck. The facial angle seldom exceeds 50 degrees, while that of the European is seldom less, and sometimes is nearly ninety, or perpendicular. The face is a little broad, and inclined to be flat; the forehead is broad and rather rounded, the brows low; the eyes long and narrow, rather deep set, black or dark hazel in colour, and seldom clear about the white. The nose is rather small, not prominent, but straight and well shaped, the apex a little rounded, the nostrils broad and slightly exposed; the cheek-bones are rather prominent; the mouth large; the lips broad and well cut, but not protruding; the chin well formed; ears large and ill-shaped; jaws wide and square; teeth regular, large, and white, unless discoloured by lime and gambier. The Malays, when mature, are certainly not handsome, but in youth up to 15 years of age both boys and girls have pleasing countenances, and in their way almost perfect. Women soon show signs of old age; they become wrinkled and haggard after bearing a few children, and in old age are hideous. With shades of difference, not to be fixed in words, this, with the exception of a few Negroes, is a description which applies to all the inhabitants of Sumatra, the Peninsula, Java, Borneo, Celebes, the Moluccas, Timor, and the whole Philippine group.

In *character*, the Malay is impassive. He exhibits a reserve, diffidence, and even bashfulness which is in some degree attractive, and leads the observer to think that the ferocious, bloodthirsty character imputed to the race must be grossly exaggerated. He is not demonstrative. His feelings of surprise, admiration, or fear are never openly manifested, and are probably not strongly felt. He is slow and deliberate in speech, and circuitous in introducing the subject he has come expressly to discuss. Children and women in the company of men are silent, and are generally quiet and obedient. When alone, the Malay is taciturn, he neither talks nor sings to himself. When several are paddling in a canoe, they occasionally chant a monotonous and plaintive song. He is cautious of giving offence to his equals, he does not quarrel easily about money matters, and practical joking is utterly repugnant to his nature. The higher class of Malay are exceedingly polite, but this is compatible with reckless cruelty and contempt of human life, which is the dark side of their character. They are proud, and, if ill-treated, revengeful; but under generous treatment are gentle, kind, humane, grateful, docile, and faithful. Capable of the warmest attachments, and yet impelled to madness and the commission of the most revolting deeds by real or imaginary unkindness. They are dutiful children and kind parents. They treat their aged kinsmen with the greatest kindness, and feel it a duty to relieve the wants of an indigent relation. Old men and women are always regarded with respect.

Dr. Oxley described the character of the unsophisticated Malay as remarkable for its simplicity and honesty; having no artificial wants, they are satisfied and content with what would be considered positive destitution by a Chinese; they are consequently apathetic and inactive, and will not for any amount offered to them labour beyond their usual habits or customary routine; they have little of any speculative turn; they have a regard for truth, and may generally be depended upon in their statements. What has so often been written of their revengeful spirit, he says, is much exaggerated; polite in the extreme, according to their own ideas, they never indulge in abuse one towards the other, the only reply to any deviation from this rule is the kris, for which they will watch their opportunity, and most certainly not afford their adversary any advantage it is in their power to deprive him of. This is their code of honour, and, being fully

aware of it amongst themselves, provocation is seldom given, and satisfaction as seldom required. When goaded, however, to the necessity, they become perfectly reckless, and should discovery attend the deed, they attempt no refutation, but sell their lives at the utmost cost they can to the captors. 'Too often have I known the officers of police compelled to shoot them on these occasions. Such is one species of amok, and how offenders of this description are to be dealt with can admit of but little doubt; but there is another variety of the Orang 'Beramok vastly different, and by no means the least frequent, which requires discrimination on the part of the medical jurist to prevent irresponsible persons suffering the penalty of the injured law. For instance, a man sitting quietly amongst his friends and relatives will, without provocation, suddenly start up, weapon in hand, and slay all within his reach. I have known so many as eight killed and wounded by a very feeble individual in this manner. Next day, when interrogated whether he was not sorry for the act he had committed, no one could be more contrite; when asked, "Why, then, did you do it?" the answer has invariably been, "The devil entered into me, my eyes were darkened, I did not know what I was about." I have received this same reply on at least twenty different occasions; on examination of these monomaniacs, I have generally found them labouring under some gastric disease or troublesome ulcer, and these fearful ebullitions break out upon some exacerbation of the disorder. Those about them have generally told me that they appeared moping and melancholy a few days before the outbreak.' The Bugis are by far the most addicted to the amok. They are a bold, self-reliant, maritime people of Celebes, of which they occupy the northern part, and they are known, in consequence, as the men of Macassar. The Bugis, originally from the same stock as the Malay, are superior to all other natives of the Archipelago in their spirit of adventure. They are a brave, active, haughty, fierce, and vigorous race. They love justice, and are faithful to their bonds, but seldom forgive injuries. Under the name of Macassars, they form the flower of the colonial troops in the Dutch service; they are bold hunters, and, mounted on their brisk little horses, drive the deer through the woods, and capture it with a lasso. The Bugis have been the greatest colonists as well as the principal traders of the Archipelago. The ingenuity of the savage and the amenity of the civilised man, appear united in them. They have received the Koran, but not abjured the practices of their ancient faith,—the dark old idolatry once universal in the Archipelago. Stones and trees, painted red, still share their devotions with the invisible god of Islam. Women are treated honourably among them,—a distinction in their manners not yet effaced by the Muhammadan social law. They determine many disputes by single combat, but never avenge themselves by personal assassination. The Sulu race, on the contrary, have no idea of putting themselves on a footing with their antagonist, but always attack him in the dark or off guard. Both the Malayan and Bugis nations are maritime and commercial, devoted to speculations of gain, animated by a spirit of adventure, and accustomed to distant and hazardous enterprises; while the Javans, on the contrary, are an agricultural race, attached to the soil, of quiet habits, and contented dispositions, almost entirely unacquainted with navigation and foreign trade, and little inclined to engage in either.

Religion.—Malays have largely become converts to Muhammadanism. The earliest conversion recorded was that of the Achinese, the nearest people of the Archipelago to the continent of Asia. This was in 1206 of our era. The Malays of Malacca were not converted until 1276; the inhabitants of the Moluccas not until 1478, and the people of Celebes not until 1495, only the year before Vasco da Gama passed the Cape of Good Hope. Thus the earliest conversion of these islanders took place 574 years after the death of Mahomed, and long after the first zeal of his followers had evaporated.

The Malays were not coerced into Muhammadanism, nor have instances of violent conversion been frequent in later times. The Arabs and other Muhammadan missionaries have conciliated the natives, acquired their language, followed their manners, intermarried with them, and their superiority of intelligence and civilisation was employed only for the instruction and conversion of a people, the current of whose religious opinions was ready to be directed into any channel into which it was skilfully diverted.

In the Malay Peninsula the race are in part Muhammadan, and in part pagan in the more impracticable parts. To this day there are a few mountaineers in Java still professing a kind of Hinduism, and the Javanese retain numerous of their old pagan superstitions, and have added those of their subsequent religion. They people the air, the woods and rivers, with various classes of spirits. They have the praying or fleeting ghosts; the barkas-a-han, kabuka-male, and wewe, evil spirits; and the damit and dadun-gawu or tutelary spirits. They now consider the Hindu gods of their former belief not as imaginary beings, but as real demons, and have added the jan of the Arabs. The Malay of Borneo firmly believe in ghosts. If a man die or be killed, they are afraid to pass the place.

Learning.—Malays can hardly be said to have an indigenous literature, for it is almost entirely derived from Persia, Siam, Arabia, and Java. Arabic is their sacred language. They have, however, a celebrated historic Malay romance, called the Hang Tuah, parts of which are frequently recited in their villages after sunset prayers by their village raconteurs, and some Arabic and Hindu romances stand high in popular favour. They have one Malay historical composition, dated A.H. 1021. The conversion of the Sumatra Malays to Muhammadanism arose mainly out of their commercial intercourse with Arabia.

Customs.—Malays rub noses, in lieu of the kissing of Europe. Most of the advanced nations of the Asiatic islands are gamblers, and the little fighting fish of Siam and cock-fighting are largely betted on. In the Archipelago, in Bali, Lombok, Celebes, and the Philippines, cock-fighting is quite a passion. The only material exceptions are the Javanese. The passion for cock-fighting is indeed impressed in the very language of the Malays, which has a specific name for cock-fighting, one for the natural spur of the cock, and another for the artificial spur, two names for the comb, three for the crow of the cock,

two for a cock-pit, and one for a professional cock-fighter. The passion is nowhere carried further than in the Spanish dominions of the Philippines. There it was licensed by the Government, which derived from it a yearly revenue of about 40,000 dollars, or about £8000.

Malay women of the Peninsula, when engaged to be married, have their teeth filed down about a fourth part.

War.—Sulu, Mindanao, and the crowd of islands extending from Mindanao to the N.E. coast of Borneo, and separating the Mindoro from the Sulu sea, were the great seat of piracy in the Archipelago.

The Ladrones, or pirates of the Eastern Archipelago, consisted wholly of the inhabitants of the free Muhammadan states in Sumatra, Lingin, Borneo, Magindanao, and Sulu.

The Malay pirate prahu or prow are stockaded, and armed with heavy guns, generally the mariam and lelah, to which last the Malays are very partial; also matchlocks, long spears, pointed nibong stakes charred at the end, and others cut short for throwing when at close quarters, and large stones. The signal for attack is the sound of a sort of gong, called tawa tawa.

The Malay are the great manufacturers of weapons of war. They have the sword, the kris and spear, brass and iron cannon, of sizes called miriam, rantaka, jala rambang, ekor lotong, and lelah. They have also the blunderbuss and matchlock, satengar and pemura.

The Baju wear the baju ranti, or chain jacket, and a shield of a long or round form. They swear by their krisses, for which they have a great veneration, and on going into battle, drink the water in which they have been dipped, uttering imprecations on the foe.

In Pulo Nias, the war jacket and cap is of thick leather, covered with the black horsehair-like eju of the Arenga saccharifera palm. They have a spear and short sword. The Orang Laut have the limbing or lance, the tampuling, a large hook, the kujore, broad-headed fishing spear, and the Serampong prong.

The Sumatran races have also the rudus and pemandap swords and suvar dagger; the Batta race wear the kalassan and jono swords, also the tombak leda and terjing, the last a long curved knife, which is used to cut up human flesh, according to Mr. Anderson, and guns, matchlocks, the kris, and ranjow.

Games.—Sumatrans and Burmese have the sepa raga, or cane football game. It does not require strength or courage, but is an exhibition of skill, dexterity, and activity. The ball is hollow and elastic, about 4 in. in diameter. The players are unlimited in number, and stand in a circle about 6 feet apart from each other. The ball is thrown into the air, and as it descends, one of the players strikes it up again with hand or foot, shoulder, elbow, or knee, arm, forearm, thigh, or leg. Sometimes the ball descends beyond the circle, and is dexterously struck back again with the sole of the foot, without the player altering his position. Expert players will keep the ball from touching the ground for a considerable time.

The Malays are exceedingly fond of music, but the drum seems to be their sole native instrument, though they have the violin. They have a drama called Myong, in which young lads take the part of women. It is supposed to be of Siamese origin, as none but natives of Siam engage in it. Music from drums and brass instruments accompany the performance. The actors move about to the sound of the instruments.

Dress.—Malays set the fashion of dress to the islanders, and the principal portions of the apparel are worn by the Malays, the Bugis, the Javanese, and most of the smaller races all over the Archipelago. The sarong is worn by both sexes; it is a cloth two yards long and four feet broad, and is wrapped round the lower part of the body from the waist, like an unsewed gown. It is often the sole dress worn in the house and courtyard.

The saluar or sluar is a pair of drawers or trousers, invariably worn when abroad; there are several kinds, the Achinese, the Chinese, the Singapore sluar, and that of the Bugis, the last reaching the middle of the thigh.

The baju or jacket. Its arms have several shapes, and have respective names, Baju sikat, Baju chari, and Baju pesa sabla or Baju tutop iman. The Baju tangan-kachang is a long gown reaching to the ankles, worn by old women; Baju bastrob is a vest or shirt; Baju ayit karang resembles a shift.

The saluar, sarong, and baju are the essential parts of their dress.

The bang-kong, or waist-cloth, or sash, is often worn. It is of cotton or silk.

The dustar or justar, a kerchief, is worn as a turband. The turband and flowing dress of the Arab are worn by all who have performed the Mecca pilgrimage.

The kris is never allowed to be visible in the presence of a superior or equal.—*Bikmore's Trav.; Crawfurd's Grammar; Journ. Indian Archip.; Latham's Ethnology; Logan; Le Moniteur*, 1847; *M'Nair*, p. 233; *Newbold; Peschel; Wallace; St. John's Ind. Archipelago; Marryat's Ind. Archipelago; Earl's Ind. Archipelago; Quarterly Review*, No. 222; *A. H. Keane's Asia.*

MALAYANESIA. The name Indian Archipelago being too long to admit of being used in an adjective or in an ethnographical form, Mr. Earl suggested the term Indu-nesia, but rejected it also in favour of Malayanesia. The purely geographical term Indonesia was, however, suggested by Mr. Logan, as we thus get Indonesian and Indonesians for the Indian Archipelago or Indian islanders.

MALAY ARCHIPELAGO is a term sometimes applied to the multitudinous islands of the Archipelago to the east of the Straits of Malacca, though this is more usually called the Archipelago, also the Eastern Archipelago. It is sometimes applied to the Mergui Archipelago along the Tenasserim coast, in the Bay of Bengal.

MALAY PENINSULA, or Tanna-Malayu, extends for 500 miles from the southern extremity of Tenasserim almost to the equator, the island of Singapore being in lat. 1° 41′ N. Its width varies from 50 to 150 miles, and the entire area will be about 83,000 square geographical miles. The possession of it is chiefly divided between the British and the Siamese. Engagements have been formed by the British with the Kedah State, which is tributary to Siam, and with the Independent States of Perak, Selangor, the Confederate States of Rambowe, Sungei Ujong,

Johole, Sree-Menanti, and Johore. The districts of Tringanu and Kalantan are also protected by the British Government, under the treaty of Bankok. A forest-clad mountain chain, rising in Perak to ascertained heights of 8000 feet, runs down its whole length near the centre, with extensive outlying spurs and alluvial plains on both sides. In the early part of the 19th century, Newbold thus estimated the population:—

Kedah,	50,000	Johole,	2,000
Perak,	35,000	Muar,	2,400
Selangor,	12,000	Orang Binua Johole,	1,000
Johore,	25,000	Orang Binua of the rest of the Peninsula,	25,000
Pahang,	40,000		
Kemaman,	1,000		
Tringanu,	30,000	Penang and Province Wellesley,	120,000
Kalantan,	50,000		
Patani, about	30,000	Malacca,	46,882
Sungei Ujong,	3,200	Singapore,	60,000
Rambowe,	9,000		

On the west side of the Peninsula are the Native States of Kedah, Perak, Selangor, and Sungei Ujong, the last three of which are under British protection; and on the east are Patani, Kalantan, Tringanu, and Pahang; the southern extremity being occupied by the state of Johore. The interior, which is scarcely at all known, contains towards its centre the Negri Sembilan, a confederation of eight (formerly nine) small states. The northern and eastern states of Kedah, Patani, Kalantan, Pahang, and Tringanu are more or less tributary to the Siamese empire, which at intervals has exacted a golden rose, the token of vassalage, from every state in the Peninsula.

The British possessions in the Peninsula are the detached provinces of Wellesley, with the island of Penang, also the Ding Dings, Malacca, and the island of Singapore, and in 1881 their respective population was as under:—

	Penang, Prov. Well., Ding Dings.	Malacca.	Singapore.
Arabs,	574	...	...
Europeans,	674	40	2,768
Eurasians,	1,597	2,213	3,094
Chinese,	67,502	19,741	86,766
Malay,	84,724	67,488	22,114
Tamil,	25,094	...	...
Armenians,	32	...	...
Jews,	32	...	...
Eastern races,	...	4,697	...
	190,597	93,579	139,208

The East India Company acquired Penang in 1775, Province Wellesley in 1798, Singapore in 1823, and Malacca in 1824. These were under the rule of the E. I. Company until they were consolidated in 1867 into one government under the British dominion, and are known as the Straits Settlements.

The Ding Dings, a lively group of small islands, ceded to Britain by the Pangkor treaty.

The mainland of the Peninsula, with the exception of a few diminutive Negro mountaineers, is occupied by Malays, or by men of that race, for the several wild tribes in the interior speak the Malay language, and have the same physical form as the Malays, although not calling themselves by this name, and their language containing many words that are not Malay.

The wild tribes have been vaguely estimated at 8000 to 11,000 souls. The Semang race are found in the forests of Kedah, Tringanu, Perak, and Selangor. Jakuns inhabit the south part of the Peninsula, from about Selangor on the west coast, and Kemaman on the east, and extending nearly as far as Singapore. Orang Binua signifies men of the soil. All these various wild tribes are ordinarily classed under this general and expressive appellation, Orang Binua or Orang Utan, and in Perak the Sakei; there are also the Udai, Hala, Belanda, Besisik, the seafaring Selong, and the seafaring Akkye or Rayat Laut or Orang Laut, men of the sea.

The *Semang* are about the same height as the Malays, but their hair, instead of being lank and straight like theirs, is short and curly, though not woolly like that of the African Negro, and their skins are of a dark brown, nearly black. Their noses incline to be flat, their foreheads recede, and their lips are thick. They are singularly shy, and shun intercourse with men of other races.

With the *Sakei* or Jakun, Orang Binua or Orang Utan, the mouth is wide and the lips are large, the lower part of the face projects, the nose is small, the nostrils are divergent, and the cheek-bones are prominent. The hair is very abundant and long, and usually matted and curly, but not woolly. They have broad chests, and very sturdy, muscular limbs. They are much shorter in stature than the Malays, the men in some of the tribes rarely exceeding 4 feet 8 inches in height, and the women 4 feet 4 inches.

The *Rayat or Orang Laut*, subjects, or men of the sea, live almost entirely upon fish. They are altogether restless and impatient of control. They are passionately fond of music, and are most ingenious in handicrafts, specially in boat-building.

Kedah or Quedah, called in Siamese Muang Sai or the Sai kingdom, extends from the Trang river, in lat. 7° 20′ N., to the Krian, in lat. 5° 10′ N., which separates it from Perak. The purest Malay is written and spoken in this state, being often in the Archipelago influenced by mixture with other tongues. The highest detached hill is Gunong Gerai or Kedah peak. Penang was sold by the raja of Kedah for £2000 a year, which is paid at the present day to his successor. When the Kedah prince ceded Penang to the British he represented himself as independent, and as such was treated by the British.

Several tribes are within its limits, the Semang and Udai in the forests of the north; the Rayat Utan, the Jakun, Sakei, Hala, Belanda, and Besisik in others to the south; while the Akkye or Rayat Laut (lit. people of the sea) dwell upon the shores and islets of the Peninsula. Wherever scattered, they live totally apart from the Malays, and differ from them widely in person, habits, and religion; in short, are of a much lower grade in the scale of civilisation. The Malays themselves sometimes class the various tribes under the general appellation of Orang Binua, men of the soil.

The names of inland places are chiefly Binua terms. There is a striking resemblance in feature between the Binua and the Malay, and scarcely less in their respective languages. Many Malay believe the Udai tribe are a class of Jakun. The Tuanku Puteh of Rambowe informed Newbold that the Udai are thinly scattered over the states

of Jellabu, Pahang, Tringanu, and Quedah, and resemble in feature the darker variety of Jakun. Their size is represented as smaller, and their habits more savage. According to Sir S. Raffles and Mr. Anderson, the Semang of Quedah has the woolly hair, protuberant belly, thick lips, black skin, flat nose, and receding forehead of the Papuan. Mr. Anderson described the Semang of Perak as resembling those of Quedah in personal appearance, but speaking a different dialect. They possess, he says, the same curling black hair, are a little darker in colour, and have not the thick lips of an African; they subsist by hunting, and make huts of the branches, and cloths of the bark of trees, shunning the haunts of more refined beings. They are numerous in Quedah, and reside generally on or near mountains, such as those of Jerrei and Juru, and are found in Tringanu, Perak, and Selangor. They live in rude huts, easily removed from place to place, constructed of leaves and branches.

Perak lies between lat. 4° and 6° N. It is famed for its tin mines. Gold is met with in all its rivers. Perak (pronounced Payrah) is the richest and most important of the states of the Peninsula, as well as one of the largest. Its coast-line is about 125 miles in length. Perak river is a most serpentine stream. Its population, 971,940, is chiefly Chinese and Malays. Tin is the most abundant of the mineral products of Perak. Gold is found in tolerable quantities even by the Malay easy-going manner of searching for it, and diamonds and garnets occur.

Selangor is a small Malay state lying between lat. 2° 34′ and 3° 42′ N. Its coast-line is about 120 miles in length; population about 20,000. Its rivers, up to 1871, were shelters for pirates. In Selangor and Perak are isolated hills of limestone from 80 to 1000 feet in height. At Batu are magnificent limestone caves with stalactites and stalagmites. The roof of one cavern is 355 feet from the floor.

The *Negri Sembilan* or Nine States are inland, south of Selangor. These have been independent since the breaking up of the kingdom of Johore.

Sungei Ujong is mainly an inland state, access to its very limited seaboard being by the river Linggi, its area about 700 square miles. Its aboriginal tribes, the Besisik, Jakun, Orang Bukit, Rayat Laut, Rayat Utan, and Semang, have been largely pushed aside by Malays. Its population in 1883 was 12,000, of whom the Chinese were 10,000. It is rich in tin. It is the great mineral product of the Peninsula, and is largely washed by the Chinese. The tin districts which have been most worked of late years have been those at Klang in Selangor, at Laroot in Perak, and at Linghie near Malacca. Gold, garnets, and sapphires likewise occur, and it is said diamonds also. — *Rev. P. Faver, Apostolic Missionary, Malacca; Osborn's Quedah; Newbold's British Settlements; Sonnerat*, ii. p. 177; *St. John's Ind Archip.; Journ. Ind. Archip.; J. L. Bird, Golden Chersonese.*

MALBUK, ARAB., confused, possessed, ecstatic, is a term applied to a Muhammadan permanently insane, or overcome by religious excitement. It is the ecstatic condition described in 1 Samuel x. 5-11, when Saul reached the hill of God, 'Behold, a company of prophets met him; and the Spirit of God came upon him, and he prophesied among them.'

MALBUS. ARABO-HINDI. Clothing; clothed; pl. Malbusat. Malbus-khas, an annual investment of fine muslins, formerly furnished from Dacca, for the royal wardrobe at Dehli.—*W.*

MALCOLM. Three brothers of this name are known in the history of the East Indies. Sir Pulteney Malcolm, who rose to the rank of Admiral in the British navy, and in 1798 was employed in cutting out of vessels at Manilla. Sir Charles Malcolm, born in 1782, also a British naval officer, served under his brother Sir Pulteney at Manilla in 1798. He saw much service during the war with France. He was knighted by Lord Wellesley at Dublin in 1826, became Rear-Admiral in 1837. He was appointed as the first Commander-in-Chief of the Indian navy in 1827, where he served till 1838, and instituted several extensive and important surveys along the shores of the Arabian Sea, Bay of Bengal, and Indian Ocean.

Sir John Malcolm, born 1769, entered the Madras army (1782) at the age of 13. When the Nizam's army took the field in Mysore against Tipu Sultan, Captain Malcolm accompanied it as Political Agent, and after the fall of Tipu Sultan and the reduction of Seringapatam, he was associated with General Arthur Wellesley, Colonel Close, and Captain Munro in the commission appointed for the settlement of Mysore. He was on four occasions sent as ambassador to the court of Persia in 1799; again in 1808, but was not allowed to advance beyond Bushire; a third time whilst Sir Harford Jones was there; and he went a fourth time on a supplementary mission, but it was a mere pageant and very costly, though from it resulted his History of Persia and Pottinger's Baluchistan.

During the war against the Pindara and Mahrattas, which lasted from the 5th November 1817 to the 13th May 1819; in all the operations of the war, as second in command at Mehidpur, 21st December 1817, in the pursuit of Baji Rao and of Apa Sahib, and in the final reduction of the fortress of Asirgarh, he was the prominent authority. At the close of that war he was appointed to the civil and military command of Malwa, and in the year 1827 he became governor of Bombay. He was an active, able man, of large stature, with much energy and great bonhomie. He was a voluminous writer. Amongst his other books were—Sketch of the Political History of India from 1784 to the present time, London 1826; Observations on the Disturbances in the Madras Army in 1809, London 1812; History of Persia from the most early period to the present time, London 1815; Report on the Province of Malwa and adjoining Districts, Calcutta 1822; Instructions to Officers acting under his Orders in Central India, 1821, London 1824; Sketch of the Sikhs; History of Persia; Letter on the Persian Army; on the Present (1810) Condition of Persia; Memoir of the Kajar Family; on the Trade of the Persian Gulf; Sketches of Persia.

MALCOLMSON, JOHN GRANT, M.D., F.R.S., F.G.S., a Madras medical officer from 1823 to 1840. He wrote on Beri-beri, on the Rheumatic and Neuralgic Affection, termed by the natives burning of the feet; on the Fossils of the Gawilgarh Range, and on the Basaltic District of India, in the Madras Journal of Literature and Science;

also on the Effects of Solitary Confinement of European Soldiers in Warm Climates. While geologizing in Gujerat and Kandesh, he died of hepatitis at Dhoolia, 23d March 1844.

MALDAH, a British district in the Lieutenant-Governorship of Bengal, occupying an eastern projection of the Bhagulpur division. It lies between lat. 24° 29′ 50″ and 25° 32′ 30″ N., and long. 87° 48′ and 88° 33′ 30″ E. Three of its towns have been its capitals. Gaur is said to have been abandoned on the occurrence of a great pestilence. Its ruins, lying between the Mahananda and the Ganges, are scattered over an area of more than 20 square miles. The foundation of this city is referred back to the remotest antiquity. It was the Hindu metropolis of Bengal before the Musalman conquest, and continued to be the capital of the Afghan invaders for at least three centuries, and its name distinguishes a class of languages and a tribe of Brahmans. Pandua or Perua, which lies about 20 miles north-east from Gaur beyond the Mahananda, superseded the latter city as the seat of government during the reigns of five successive Afghan monarchs, towards the close of the 14th century. Tandan Tangra succeeded Pandua. As far back as 1686 the E. I. Company had a silk factory here. In 1770, English Bazar was fixed upon for a commercial residency; the buildings of which, strongly fortified after the fashion of those days, exist to the present day.

The two staple manufactures of the Maldah district are silk and indigo. The weaving of silk is said to date back to the Hindu kingdom of Gaur, and the peculiar cloth known as Maldahi has been for generations a speciality of external commerce. The English had a factory at Maldah at least as early as 1686. The population comprise the aboriginal Kharwar, Dhangar, Koch, Pali, Rajbansi, Chain, and Bind; also the Hindu Kaibarta, Nagar, Teli, Goala, and Tiar, with a few Muhammadans.

MALDEO, died S. 1671 (A.D. 1615); he had twelve sons. His death formed an important epoch in the annals of the Rahtor race. The banner of the Moghul empire floated over the panchranga, the five-coloured flag, which had led the Rahtor from victory to victory, and had waved from the sandhills of Amerkot to the salt lake of Sambhar; from the desert bordering the Garah to the peaks of the Aravalli. Thenceforward the Rahtor princes were required to maintain a contingent of their proud vassals, headed by the heir, to serve at the Moghul's pleasure.—*Tod*, ii. p. 30.

MALDIVE ISLANDS, Zabiyah-ul-Mohli, a vast group of islands, estimated at 1200, extending southward from lat. 7° 6′ 30″ N. to 0° 42′ S. A memoir of them, by Lieuts. J. A. Young and W. Christopher, I.N., is given in Bom. Geog. Trans., 1836-1838. These islands and rocks have about 60 miles of breadth, the islands being formed into large groups, which the natives call atoll or atollon.

The most northern is Heawandoo Pholo Atoll, 12 miles by 7, contains 24 islands, of which 7 are inhabited, with a population of 760.

Tilladoo Matte Atoll, 35 miles in extent, has 38 islands, all the northern of which are inhabited.

Malcolm Atoll contains 100 inhabitants; many ships have been wrecked on it.

Milladoo Madou Atoll contains 101 islands, of which 23 are inhabited, with a population of 1700 or 1800.

Phaidee Pholo Atoll, 10 miles south of Milladoo Madou, has about 10 islands near it.

Mahlop Mahdoo Atoll extends from lat. 5° 1′ to 5° 59′ N., in long. 72° 55′ E., has 4 small islands on its south.

Ari Atoll has a number of small islands on its eastern boundary.

Male Atoll has near it Male Island or King Island, with a population of 1500 or 2000. It is unfavourable to the health of European strangers.

Cardiva or Cardoo, in lat. 4° 58′ 30″ N., and long. 73° 25′ E., has 200 inhabitants.

South Male Atoll contains 22 islands, of which only 3 are occupied with 200 people.

Pha-lee-doo Atoll is situated between lat. 3° 19′ 30″ and 3° 41′ N.

Moloque Atoll is 15 miles broad from east to west.

Nillandoo Atoll extends from lat. 2° 40′ to 3° 1′ 30″ N. At its south extreme is a group of 20 islands, and there are detached small islands on the boundary.

Coollo Mandoo Atoll, Adou Matte Atoll, Suadiva or Hooahdoo Atoll may be named.

Phoowa Moloku Islands, the most south-easterly of the Maldive islands, is 2 miles long; it has 300 or 400 inhabitants, who are fishers and weavers.

Addoo Atoll is the south extreme of the Maldive chain of islands. Its south point is in lat. 0° 41′ 30″ S., and long. 73° 5′ E.

The group extend 466 geographical miles in length, and 46 or 48 miles in breadth. Between the islands the water is of great depth, but on the surrounding reefs the waves beat with great violence. The reefs have openings which admit ships to enter, and though the water inside the atolls is generally shallow and calm, the depth is sufficient to allow vessels to pass from one side to another. The soil is sandy, all the islands are densely clothed with palms, fig trees, bread-fruit trees, and a thick jungle covers them all. Indian corn, sugar-cane, and millet are grown in a few.

Large numbers of vessels have been wrecked upon the islands, the steamers *Sea Gull* (in 1879) and *Consett* (in 1880). As a rule, shipwrecked people are well received by the Maldivians, and the Ceylon Government occasionally have an opportunity of reciprocating that kindness by providing for Maldivians wrecked on the Ceylon coasts. The islands are inhabited by 30,000 or 40,000 people. They trade with India, Ceylon, Chittagong, and Singapore, carrying in their peculiar ships cocoanuts, salt fish, cocoanut oil, coir, jagari, coral, ornamental mats, tortoise-shell, and cowries, and import grain, cotton, silk, and tobacco. The coir is noted for its light colour, fineness, and comparative strength. Maldive mats, for delicacy of pattern and permanence of dye, are perhaps unsurpassed in the world.

The Maldivians construct their own quadrants, and translate into their own language the nautical tables. The people are quiet and inoffensive. Their ruler is styled Sultan of the thirteen atolls and 12,000 isles. Upon the acquisition of Ceylon by the British in 1796, the inheritance of the suzerainty over the Maldives fell to them by the free-will of the Sultan. The present Sultan sends an ambassador to the Governor of Ceylon annually, and his arrival at Colombo, and formal journey from the wharf to the Government House, is one of the most curious sights to be had in the capital. Maldivian etiquette requires the ambassador to bear with both hands on his head the silver salver containing his sovereign's letter (in a double envelope of coloured silk and spangled muslin) and two tiny silk bags of ambergris and sea cocoanut. The management of all state and

revenue matters is entrusted by the Sultan to vizirs, and he frequently consults with them. Justice is dispensed in the house of the Fadiyaru or Kazi, who is head of the church and chief magistrate, and sometimes, in important cases, in the king's palace. With the education imparted to the children is the reading and writing of the Koran. Three different writing characters are found on the tombstones, the Dewehi Hakura, the Arabic written from right to left, and the Gabali Tana similarly written, and the last is the common dialect of all the atolls. It is said to be Malay. Muhammadanism has been the accepted religion of the Maldivians for at least six centuries, but side by side with it there has continued to exist an older creed—not the less real because disowned—in demons and spirits, spells, charms, and the like. Every man in his lifetime provides for himself a burying-place.—*Darwin; Lieuts. J. A. Young and W. Christopher, I.N., in Bombay Geog. Trans.*, 1836-1838; *Encyc. Brit.*; *Mr. Bell's Report.*

MALÉ, in Coorg, a class of people whose mothers have forfeited their caste by reason of adultery after widowhood.

MALÉ or Paharia are hillmen of Rajmahal, whence their other designation Rajmahali. The Rajmahal hill country extends from the banks of the Ganges at Segrigalli, in lat. 25° 15′ N., and long. 87° 3′ E., to the Brahmani river and the boundary of the Birbhum district, a distance of 70 miles. To the south of the Brahmani, the hills continue to the river Dwaraka as the Ramgarh Hills of the Birbhum district.

The Rajmahal Hills form a kind of knot at the extreme eastern point of the hill country of Central India, dividing Bengal from Behar, and the people are known as Malé. They are to the east of the Oraon, and are entirely different from their neighbours the Santal.

In the year 1832, the British Government, in order to protect the Malé race, marked off by pillars their territory. The cordon or ring-fence encloses a tract called the Daman-i-Koh, and within it the Malé dwell. It is 295 miles in circumference, containing 1366 square miles, of which 909 are said to be culturable. At the census of 1872, there were returned 53,866 Paharia, 191,462 Santal, and 18,985 of other races. The rest of the hill country is called the Santal Parganas, and, including the Daman-i-Koh, its area is 5456 square miles, the population aggregating 1,257,281 souls, of whom 455,513 were Santal. The bulk of the Santals are in the Bhagulpur and Bardwan divisions (569,643). The total in all India, 1,087,202, of whom 203,264 are semi-Hinduized.

The Rajmahali is less cheerful than the Santal, less industrious, and does not join in the dances to which the people of the Mundah stock are so devoted. The Malé are better looking than the Santal. It was the Malé race amongst whom Mr. Cleveland successfully laboured to impart to them settled habits. They are quiet cultivators, and formed the bulk of the corps formerly known as the Bhagulpur Hill Rangers. Ghatwal estates are particularly numerous in the Bhagulpur and Birbhum districts adjoining the Rajmahal Hills on either side. The estates pay no revenue, but are held on the condition of guarding the passes against hill robbers, murderers, and cattle-lifters.

The Malé language abounds in terms common to the Tamil and Telugu, and contains so many Dravidian roots of primary importance, though it also contains a large admixture of roots and forms belonging to the Kol dialects, that Dr. Caldwell considers it had originally belonged to the Dravidian family of languages. Test words show an identity of language among the Rajmahali on the east, and the Maira in the remote jungles down to the Godavery, and the Gond, who live along the Satpura as far west as Nimar and Malwa.

The Paharia arrange themselves in three tribes, the Malér, the Mal, and the Kumhar; the first retain more of the habits of their ancestors than the others, and they eat the carcases of animals which die of disease.

The houses are built of wattled bamboo. A long bamboo is fixed in the ground in front of each house to ward off evil spirits.

The Malér call themselves the Asal Paharia, pure Paharia. The people of the southern or Ramgarh Hills, called Mal, have another division called Kumhar, who abstain from cow's flesh, from flesh of animals which die a natural death, and will not partake of food that has not been cooked by themselves; repudiating all notions of consanguinity with the impure feeding Northerners.

The Malér is short of stature and slight of make, and wears his hair well oiled and combed in a knot on the top of his head. The features are of a mild Tamil type. The Oraon custom of excluding the unmarried adults of both sexes from the family residence is followed by the Paharia, and the bachelors' hall and maidens' dormitories are institutions of the Rajmahal Hills, as well as of the Chutia Nagpur highlands. Colonel Dalton says the hill lads and lasses form very romantic attachments; they work together, go to market together, eat together, and sleep together. But if they overstep the prescribed limits, a sacrifice of animals is enforced at their expense in atonement. But this is fanciful.

In their marriages, the groom, with the little finger of his right hand, marks the girl on the forehead with red lead, and then, linking the same finger with the little finger of her right hand, he leads her away to his own house. Colonel Dalton says polygamy is practised, and if a man leave several widows they can become the wives of his brothers or cousins, but only one to each.

The Malér have a firm belief in the transmigration of souls; they call God Bedo, and the title affixed to the name of all their deities is Gosai. They have priests, Demonos, and priestesses, Khiendri, who, when officiating, become wildly excited. They make wooden images, which are honoured for a season as idols, and annually renewed, the old ones being thrown away as rubbish. In each village, as in nearly all Hindu villages, a shed is put up for the tutelary gosain, in which stones are placed to represent him and his attendants. There are two processes of divination. Lieutenant Shaw calls one Satani, the other Cherin. The former is a test by blood sprinkled on bel leaves. The Paharia bury their dead, but a priest's body is carried on a cot into the forest, and placed under the shade of a tree, where it is covered with leaves and branches, and left. The reason assigned by them for treating Demonos exceptionally, is that their ghosts

are exceedingly troublesome if the bodies are laid in the village cemetery. The bodies of people who die of contagious diseases are similarly disposed of.—*Logan; Dalton's Bengal; Tickell; Hodgson.*

MALEALAM or Malayalam, also called Kerala, a region in the extreme S.W. portion of the Peninsula of India, extending from the Chandragiri river, in lat. 12° 29′ N., to Cape Comorin, in lat. 8° 4′ 20″ N. It is fabled in Hindu legend to have been reclaimed from the ocean by the now deified warrior Parasu Rama, and within historic times it has had many dynastic changes. The Zamorin of Calicut, the Bibi of Cannanore, the raja of Travancore, the Portuguese, Dutch, French, and the Muhammadan Sultan Tipu, have held sway there, but the present paramount power is the British, and it is now partitioned into the British districts of South Canara and Malabar, the States of Cochin, Travancore, and the Bibi of Cannanore. The region is a series of hills and valleys, which explains the name Malealam, meaning literally hill and dale,—Malai, a mountain, Alam, a dale. Kerala, its other name, is of doubtful origin, one derivation being from Keram, a cocoanut, another being from a wise ruler of that name.

The prominent race are the Maleala Sudra or Nair. Of them, the 1881 census returned 664,260, and the people speaking the Maleala language at 4,847,681.

Malealam, Malearma, Malayarma, or Malayalam is the vernacular, but Tamil is spoken by 16·8 per cent. of the population, these two tongues being used by 99·2 per cent. of the inhabitants, Tamil chiefly south of Trevandrum, and Malealam to the north; but all along the southern portion of the west coast, a large part of the population is of foreign blood. There are settled here numerous smaller tribes or castes of Indian races, of Aryan and non-Aryan and Semitic descent, speaking Canarese, Gujerati, Hindustani, Konkani, Mahrati, Nagari, Tamil, Telugu, and Tulu, with foreign races speaking Arabic, Hebrew, English, French, Portuguese. Malayarma is spoken along the Malabar coast on the western side of the ghats or Malealam range of mountains from the vicinity of Mangalore, where it supersedes the Canarese and the Tulu, to Trevandrum, where it begins to be superseded by the Tamil. Malealam was separated from the Tamil before the latter was cultivated and refined, and, from Brahmanical influence, has since had an infusion of Sanskrit words more than in any other Dravidian language, the fewest of such being in the Tamil. In all the southern languages, save the Malealam, the pronoun is postfixed in a contracted form to the verb. Some of the postfixes are also made honorific by slight euphonic changes.

In this tract the Nair race occupy large holdings; the maharaja of Travancore is a Nair, and there are many of the Moplah or Mappila Muhammadans. The Mappila in N. Malabar, known also as the Chulia, write Malealam with the Arabic character, but with additional vowel marks for e, o, and i, and some of the consonants have additional dots. In S. Malabar they use the old Tamil character called vattezhuttu.

The Moplah, written also Mapillai, possibly derived from the Tamil words Ma, mother, Pilla, a son, are all Muhammadans, and are descendants of Arabs who visited or settled in Malabar; and Wilson supposes that the Malabar women who bore children to them, from such casual or permanent intercourse, ignorant as to who of the race of foreigners were the fathers, styled the children sons of mothers; but the probability is that the law of descensus ab utero, marumakkatayam, followed by the mothers, was prevailing from prior ages. The Moplah are active, enterprising, and possess much landed property. Their origin is explained by the fact that till lately Tyatti, or women of the Tiyar race, did not lose caste by forming connections with rich and respectable foreigners, though, since two or three have risen in the Government service to position (one was a deputy collector) they have put a stop to this practice. The Mappila race have several times risen in insurrection, seemingly from agrarian grievances. Hindu landlords kept the land in their own hands or leased it out to the Mappila at high rents, and then took advantage of legal rights to turn them out.

MALEALI, a cultivator and shepherd race of mountaineers, about 3500 in number, occupying 79 villages in the rude valleys scattered over the Shevaroy Hills. They are said to have emigrated from Conjeveram in the 13th century. The houses are circular in form. They speak the Tamil, and are Hindus. They cultivate the soil, but have herds of cattle.

MALE ARASAR, hill kings, are hill tribes inhabiting the Southern Ghats. They speak corrupt Malealam in the northern part of the range, where the Malealam is the prevailing language, and corrupt Tamil in the southern, in the vicinity of Tamil-speaking districts. The Malé Arasar tribes inhabit the range of ghats between Tinnevelly and Travancore, in small communities of five or six families, and probably do not exceed 500 in all. Their huts consist of a few sticks covered with bark and thatch. They live on wild forest products, but, since A.D. 1850, they have been cultivating potatoes for their own family use. They have a few fowls and dogs. As a race they are diminutive and pot-bellied, their crania small and pear-shaped, rising to a point about the junction of the occipital bone and the sagittal suture; a low retreating forehead, long, tangled, black hair, flat nose, and small eyes. They are averse to intercourse with strangers. They catch wild animals with pits and traps, and use bows and arrows. They are miserably low in the scale of civilisation. See Malai Arasar.

MALEGAON, in lat. 20° 32′ 18″ N., and long. 74° 36′ 51″ E., is a town and military cantonment in the Nasik district of the Bombay Presidency, built on an affluent of the Girna. The mean height of the village is 1587 feet.—*Wils.; Schlag.*

MALEGAWA, a Buddhist temple at Kandy, contains the Delada or reputed tooth of Buddha.

MALEKUDI, literally hill inhabitants, races dwelling on the skirts of the Malabar forests who gather the wild produce of the forests. They are known in some parts of the forests as Mahratta, also as Malemaylaru, Kudubi, Gowda, Koragar, Davalu, Nangaru, and Holyar. They sell the produce to the bazar men, but the sale proceeds are so trifling as barely to suffice for their food and their very limited clothing. In bad seasons they live on roots, fruits, and game. They were formerly largely engaged in the kumari cultivation, which was stopped in Fasli 1267.

MALE MANGOSTEEN, fruit of Garcinia purpurea.—*Roxb.*

MALEO, the Megacephalon rubripes, deposits its eggs in the loose sand of the sea-beach, in holes just above high-water mark; the female lays one large egg, which she covers over and returns to the forest; but many birds lay in the same hole. A dozen eggs are often found together. One egg fills an ordinary teacup, from 4 to 4½ inches long, and 2¼ to 2½ wide. They are very good to eat, and much sought after. The hen-bird takes no further care of the eggs, which the young bird breaks through about the 13th day, and runs at once to the forest. Each hen lays six or eight eggs in a season of two or three months.

MALER KOTLA, in lat. 30° 31′ N., and long. 75° 59′ E., is 30 miles south of Ludhiana. It is the chief town of a Native State in the Panjab, ruled by a Muhammadan nawab of Afghan descent. It is about 165 square miles in area, with a population 91,560 in 1876.

MALEVARA, a tribe of hillmen in the Nagar district of Mysore, said to be the aboriginal landholders. Malevelan is Malealam, and means a tribe of mountaineers.

MALGUZAR. HIND., PERS. In India, the person responsible to Government for the payment of the revenues assessed on a village. Malguzari, revenues.

MALI. HIND. A gardener. The gardener race of India are a very large body, engaged in the finer branches of their profession. Many of the Koer of Northern India, and of the Kunbi of the Mahratta districts, with the Tota Kara or Tota Vadu of the Teling and Tamil countries, follow gardening. The Mali at the 1881 census were returned at 1,209,019. They are particularly numerous in the Dowlatabad province, extending into Ahmadnaggur and Poona, southwards to Sholapûr, and northwards to Berar. They are cultivators, and sell vegetables, fruits, and flowers. In the Mahratta country the Mali is distinguished by the article he chiefly cultivates, as Jiri-Mali, grower of cummin and other aromatic seeds; Phul-Mali, grower of flowers, etc.

Mali are supposed by Mr. Campbell to be a considerable and widespread people. Between Ambala and Dehli are a good many Mali villages, and they are scattered about the N.W. Provinces as gardeners. They are common about Ajmir, and on the southern frontier of Hindustan. South of Jubbulpur, they are many and mixed with the Kurmi; all through the Mahratta country they are mixed with the Kunbi, and most of the potails are either Kunbi or Mali, and extending with the Kurmi far to the east, the Mali into Orissa, and the Kurmi into Manbhum and other districts of Chutia Nagpur.—*Campbell.*

MALIA, a small Native State in the Kattyawar province of the Bombay Presidency. Its ruler is a Jarija Rajput, with a yearly income of £6098; pays tribute of £136 jointly to the Gaekwar of Baroda and the nawab of Junagarh, and maintains a military force of 50 men.

MALIAH or Maliya, hill tracts in Ganjam and Vizagapatam districts, a hilly or mountain tract in the western portion of the Ganjam district, covering an area of 3500 square miles, and inhabited by the Khond and Savara races. The country is covered with dense forests of sal. The Khond race are skilful and energetic, and well-to-do farmers. This hilly country nearly encompasses the more productive parts of Gumsur.

MALIDA. HIND., PERS. Soft food, used in India by toothless people. Also cloth of shawl-wool, fulled or rubbed so as to have the surface felted like cloth. It is a woollen fabric in use in Tibet.

MALIK, also called Dasht-i-Malik, also Chol Malik, is a flat desert plain on the road from Bokhara to Samarcand.—*Tr. C. As.*

MALIK. ARAB. A king. It is the title of every Afghan house or tribal subdivision. Malikah is a queen.

MALIK or Mullak, a race in Behar, who follow the Muhammadan religion of the Sunni sectarians.

MALIKANA. HIND. A sum paid in money or kind to the malik or owner of land by the kashtkar or pahi kasht cultivator, who is his tenant.

MALIK DIN, a khel or section of the Afridi. Their three sections are located close together in the central portion of the Tira Maidan.

MALIKI. In the first periods of Muhammadanism, four Arabian doctors made commentaries on the original text of the Koran, which were adopted by sects, now severally distinguished by the names of the commentators. But these explanations did not militate with much force against the first system, nor create any violent feuds among the different sectaries. The Muhammadans have now about 150 sects.

The names of the four great commentators were Malik as above; Hanbali, born at Baghdad A.H. 146, died 241; Hanifi, born at Kufa A.H. 80, died in prison at Baghdad A.H. 150; and Shafi; and their followers are designated Maliki, Hanbali, Hanifi, and Shafai.

MALIK-ibn-ANAS was born at Medina A.D. 713–714, and died there 795. The years A.H. 95 and 179 are also given.

MALIK RYHAN SAHIB. Oblations are offered at his shrine.

MALIK-SHAH-JALAL-ud-DIN. There are two eras in Persia, viz. that of Yezdejird III., king of Persia, dating from his accession, 16th June A.D. 632, and that of Malik-Shah-Jalal-ud-Din, king of Khorasan, which dates from A.D. 1079, the date of his reforming the Yezdejird era. It is still in use in Persia. The Persian tropical year consists of 365d. 4h. 49′ 15″ 0‴ 48⁗, which is more correct than the Gregorian year.

MALIK TAOUS. Mr. Rich, describing the Kurd tribe who worship this idol, says (ii. p. 70) their pir or shaikh reads prayers, every hearer at intervals crying out, Amen; and this is the whole of their worship. It is true that they pay adoration, or at least a sort of worship, to Malik Taous, the figure of a cock placed on a kind of candlestick, and produced once yearly for the purpose of worship.

MALIKZA, a section of the Razar division of the Yusufzai of the Peshawur district.

MALIMBI, a mountain in the Yelusavira range of hills, Coorg; 4488 feet above the sea. The summit is conspicuous from every part of Coorg. —*Imp. Gaz.*

MALIPUR or Maliyapuram, a group of hamlets in Malabar, Madras. Lat. 11° 3′ 2″ N., long. 75° 51′ 21″ E.—*Imp. Gaz.*

MALKA, a village in the Amazai country, on a plateau in the N.W. of the Mahaban mountain.

Wahabee sectarians from Hindustan settled in it, and in 1863 led to an expedition being sent against them. Major James, C.B., Commissioner of Peshawur, induced the Boner tribes to send a contingent of 2000 men with the Corps of Guides to burn down Malka. Thus the elder branch of the Yusufzai repeated the vengeance which they once before took on the fanatics, when in May 1831 their fathers rose against Syud Alimad, the founder of the sect, who was then slain at Balakot on the Indus, drove his family to take refuge with the nawab of Tonk, who long sheltered them, and expelled his Ghazi followers.

MALKAGIRI or Malkangiri, in the Jeypore zamindari of the Vizagapatam district, Madras, a wild forest-clad tract, watered by the Taveri and Sitern, and sloping from the Tulasi Dangari Hills. Average elevation above the sea, about 1200 feet. There are some splendid sal and teak forests, and the whole tract is full of large game. —*Imp. Gaz.*

MALKANGANI. MAHR. Celastrus montana, C. paniculata. The oil is empyreumatic, obtained by the destructive distillation of the seeds of Celastrus paniculata, either alone or in combination with other ingredients. It was much used in the treatment of Beri-beri.—*Malcolmson's Essay.*

MALKAPUR, town in Buldana district, on the western frontier of Berar; situated in lat. 20° 5′ N., and long. 76° 23′ 20″ E., on the Nalganga river; elevation above the sea, 900 feet. Population (1867), 7988.

MALKAVI, a Baluch tribe in the Dehra Ghazi Khan district.

MALLA, the Telingana Pariah, or Dher people, of Turanian origin, worshippers of Ammuns, scarcely of Brahmanical faith; properly Mala.

MALLA. According to the Mackenzie MSS., the patronymic of a northern tribe of mountain chiefs, who sprang from the aboriginal inhabitants, and who were non-Aryan. The Khond call themselves Mallaru. Both Khond and Mallaru mean highlanders.

MALLA, a king of Mallapuram, to whom Brahmans apply the legends relating to Mahabali and Mahabalipuram.

MALLAH. HIND. A sailor, a boatman, a maker of salt.

MALLAR. TAM. Agricultural labourers of the Pallar tribe; cultivators generally.

MALLESON, GEORGE BRUCE, Companion of the Star of India, an officer of the Bengal army, who rose to the rank of colonel. His literary labours have produced the Red Pamphlet on the Mutiny of the Bengal Army, 1857; Essays and Lectures on Indian Historical Subjects, 1866; History of the French in India, 1868; Studies from Genoese History, 1875; Historical Sketch of the Native States of India, 1875; Final French Struggles in India and on the Indian Seas, 1878; History of the Indian Mutiny, 3 vols., 1878-80; History of Afghanistan, 1878; Herat, the Granary and Garden of Central Asia, 1880; The Life of Lord Clive, 1882; The Decisive Battles of India, 1883; The Battle-Fields of Germany, 1884; The Life of Field-Marshal London, 1884.

MALLI, the ancient people of Multan.

MALLI. TAM., TEL. Properly Malai, a hill, as Raman-malli, Nalla-malli. Malavari, a pass through mountains; Malealam, the mountain country in the west of India, the province of Malabar.—*Wils.*

MALLIAL, a people who are very industrious cultivators and gardeners, on the N.W. frontier of British India, above the Salt Range, and extending up into Peshawur. They now profess Muhammadanism.—*Campbell*, p. 108.

MALLIMBI, a peak lying on the confines of Yelusavira and Yeddavanad; it is an exact cone.

MALLINATHA, a poet and author of commentaries of great repute on the Raghuvansa, Megha-duta, Sisupala-badha, and other great Sanskrit poems of the ancient Hindus.—*Dowson.*

MALLOTUS PHILIPPENSIS, *Mull.*, is the Rottlera tinctoria, *Roxb.* The capsules are covered by a mealy powder, consisting of minute ruby-like glands; and the tomentum on the under side of the leaves yields a dye called Kameela. This imparts a fine yellow colour to silks. The mealy powder is of a rich purplish-red colour, and has a melon-like heavy odour. It mixes with difficulty in water; but when boiled with alkaline salts, it gives out a very deep blood-red colour. Kameela is used as a vermifuge, its action depending on the minute stellate hairs in the powder.—*J. A. Murray.*

MALMALLA. HIND. Slightly brackish water.

MAL-NADU. KARN. Any hill country; the woody and hilly districts of Nagar in Mysore.

MAL OCCHIO. IT. Evil eye.

MALOJI BHONSLA, a Mahratta officer of rank in the army of Malik Ambar. He was of a respectable, though not a considerable family, and served with a few men, mounted on his own horses. He was especially dependent on the protection of Lukji Jadu Rao, who attained to a command of 10,000. Lukji Jadu Rao is supposed to have been of the Jadu race of Rajputs; and when Maloji rose in the service of the Ahmadnaggur State to a command of 5000 horse, and to the possession of a large jaghir, of which the chief place was Poona, his son Shah-ji was married to the daughter of Lukji Jadu Rao, and one of the fruits of the union was Sivaji, the founder of the Mahratta empire.—*Elphinstone*, pp. 544, 545.

MALONI BAPCAI, seed of a small plant found about Ajmir; tasteless, has a fine scent, is of a warm nature; a drachm is given in medicine; used externally with other medicines to cure the itch.—*Med. Top.* p. 127.

MALOPE, a genus of very beautiful annual plants of the Malvaceæ; the colour of flowers purple and violet; the plant grows to the height of seven or eight feet. M. grandiflora, a plant of India which yields fibres.—*Riddell.*

MAL PAHARIA. In the Ramgarh Hills of the Birbhum district, and at the foot of the Rajmahal Hills, there are villages and detached houses occupied by this tribe, but who appear to be altogether unconnected with the Rajmahal hillmen. They resemble the Kharria and Paharia met with in Manbhum, who belong to the Kolarian group. They dance like the Kol, and are fond of the amusement, and have one great festival in the year, in the month of January or Magh, corresponding with the great harvest joy of the Ho and Munda.—*Dalton's Bengal*, p. 274.

MALPIGHIACEÆ, the Barbadoes cherry tribe of plants, which consists of the genera Malpighia, Byrsonima, Gaudichaudia, Hiptage, Hiræa, Stigmatophyllum, Heteropteris, Banisteria, Ancistro-

cladus. Malpighia coccifera is a small stunted shrub, with leaves resembling the box; common in gardens. M. heteranthera, a handsome shrub, with leaves like the holly, is occasionally cultivated in European gardens. M. punicifolia, the Barbadoes cherry, is an ornamental shrub introduced from the West Indies.—*Hort. Garden*, p. 25.

MALT.

Mout, ...	Dut.	Maly, ...	Ger.
Mal, Bledgerme, . .	Fr.	Malto, ...	It.

Malt is grain steeped in water, and made to germinate to a certain extent, after which the process is checked by the application of heat. This evolves the saccharine principle of the grain, which is the essence or malt. Rice, and almost every species of grain, has been used in malting; but in Europe, and especially in Great Britain, malt is almost entirely prepared from barley. It is the principal ingredient in the manufacture of beer, and is little used except in brewing and the distillation of spirits.

The consumption of malt liquor of local brew is steadily increasing in the army in India. During the ten years from 1872-73 to 1882-73, the cost of the malt liquor imported has decreased £98,000; while the expenditure for locally-brewed beer and porter has risen to Rs. 18,13,000, *i.e.* an increase of Rs. 15,74,000.

	In England.	In India.	Total.
1872-73,	Rs. 23,88,000	Rs. 2,39,000	Rs. 26,27,000
1879-80,	9,18,000	9,37,000	18,55,000
1882-83,	12,12,000	18,13,000	30,25,000

—*Faulkner; M'Culloch's Dict.*

MALTA, an island in the Mediterranean Sea, in lat. 35° 54′ N., long. 14° 31′ E., about 200 miles from the African coast, and 60 from Cape Pessaro in Sicily. The population, exclusive of the garrison and sailors of the fleet, comprising a mixture of Maltese, Franks, Greeks, Africans, and natives of the Levant, is about 150,000. Malta had been successively occupied by Phœnicians, Greeks, Carthaginians, and Romans. On the decline of the Roman power, it was seized by the Goths and Vandals, and then passed for a short period into the hands of the eastern emperors, who surrendered it to the Saracens. It then came into the possession of the Norman and German kings of Naples, with whom it remained until 1522, when it was granted by Charles V. to the knights of St. John of Jerusalem, who on several occasions valiantly defended it against the Turks, but surrendered it to Napoleon on the 12th of June 1798, at the first summons. The island was soon after blockaded by the British fleet under Lord Nelson, and, after suffering severe privations, the French finally relinquished the island to Sir Alexanker Ball in August 1799. The climate is excellent in the winter.

MALTHA, or Sea Wax, is a solid, whitish, inflammable, vegetable substance, not unlike tallow, and may be impressed with the nail. It swells when heated, and on cooling assumes the consistence of white cerate. It affords a better light than petroleum, and emits a less disagreeable smell. It is found on the surface of the Baikal Lake in Siberia, at the foot of the Bakhtiari mountains in Persia, and other places.

MALVACEÆ, the mallow worts, a natural order of useful plants, comprising the East Indian genera,—abutilon, althæa, hibiscus, gossypium, malachra, malva, pavonia, senra, sida, thespesia, and urena. The mallow worts are extremely numerous in species; these abound chiefly in tropical parts of the world in the form of trees and shrubs, though the mallow and marsh-mallow extend to temperate climates. They are remarkably destitute of all noxious properties, are mucilaginous, afford from the inner layers of the bark useful fibre, and many are employed in different countries as sources of commercial products,—the genera malva, hibiscus, sida, althæa, lavatera, and urena yielding tenacious fibres suited for cordage and other purposes, and the hairy covering of the seeds of the various species of gossypium forms the raw cotton so important to manufacturers. The seeds of Abelmoschus moschatus are warm and musky, and are employed in perfumery as a substitute for musk. Those of A. esculentus form the ochra, much used in hot countries as a mucilaginous ingredient in soups. A few species are acid, as Hibiscus sabdariffa. Tenacious fibres are procured from the inner bark of H. elatus and H. tiliacea, and several kinds of sida. Urena lobata and U. sinuata, the one called bun-ochra and the other kunga, and common in most parts of India, also abound in strong fibre, and a tolerable fine substitute for flax. The common mallow (Malva sylvestris, etc.) of Europe, and the marsh-mallow (Althæa officinalis), abound in fibre. Malva crispa is said by Cavannilles to have its fibre separated in Syria, and Althæa cannabina is sometimes so employed in the south of Europe; so Lavatera arborea, or tree mallow, will be found to abound in fibre. As emollients they are well known in medical practice, the marsh-mallow (Althæa officinalis) being one of the most useful among this kind of remedial substances. Malva cuneifolia is an annual growing in single plants here and there all over the Burmese country, but chiefly in the jungle. It affords a strong yellowish-white fibre, but it would be difficult to collect it in any quantity. M. tiliæfolia, a straggling annual widely dispersed in Burma during the rains. Its fibre resembles jute. Some of the best materials for paper-making in India are the barks of trees allied to the hibiscus, mulberry, malvaceous and cotton plants; the bauhinias, grewia, and guazuma or bastard cedar. The principles of cleaning them are the same as for other fibres, viz. to get away the sap and juices of the plants as soon as possible, and if this is done within 20 or 30 hours after the plant is cut, a nearly pure white strong fibre can be obtained. Several trees contain tannin, which almost immediately begins to discolour the fibre of the bark, as soon as the branch is cut off from the parent tree. To remove this, a caustic ley made of fresh burnt lime and wood ashes should be prepared, and the bark, after having been stripped off, well beaten with sticks and washed with water, may be soaked for one night in this caustic ley; next morning the bark should be well beaten with sticks on a flat board, washed with clean water, and hung up in the shade to dry. In this way very strong and nearly white materials for paper can be prepared at a cheap rate. The beating or crushing allows the water to remove the sap, and the tannin is dissolved by the alkali before the fibres have time to get discoloured.—*M'Clelland; Riddell; Royle; Murray.*

MALVA MAURITIANA.

Kungi ki pat, . HIND. | **Khatmi safed,** . HIND.

It is cultivated in most parts of India.

MALVA PARVIFOLIA. *Linn.*

Sonchal of . . . RAVI. | Narr of . . . SUTLEJ.
Gogi, Sag, . . . ,, | Panirak, Supra, TR.-IND.

In Kanawar, women clean their hair with an infusion of the root, and woollen cloth is washed by its aid. Bellew states that the root is used as resha khatmi? See Althæa rosea.

MALVA ROTUNDIFOLIA. *Willd.*

Seed. Khabazi. | *Leaves.* Kangi-ka-sag.
Flowers. Gul-khaira, Kangi.

Mucilaginous and emollient, used to form poultices, said to be inferior to Althæa, cultivated in India.—*Roxb.* ii. p. 184.

MALVA SYLVESTRIS. *Linn.*

Anjil, ... ARAB. Marsh-mallow, . ENG.
Khabazi, Khitmi, PERS.
Common mallow, . ENG. The seed—Towdri,

Grows in the Panjab, Kashmir, and the W. Himalaya, in waste places. It is used largely by native physicians, in decoction with rose leaves, as a demulcent.—*O'Sh.*

MALWA, in Central India, is a region bounded on the north by Hindustan proper, east by Bundelkhand, south by the Dekhan (Dakshin), and west by Rajputana. It is an upland region, with many fertile valleys, included within the main rivers of the Ganges, the Sone, the Chambal, and the Nerbadda. In pre-historic times, the capital was at the ancient city of Ujjain, associated in Hindu legend with Vikramaditya, a great king, the date of whose accession (B.C. 57) has given the Samvat era to all India.

The ancient rajas of Malwa are known from the writings of Abul Fazl, whose information is supposed to have been furnished from Jain authorities. It would appear that in an early age Mahahmah founded a fire temple, which was destroyed by Buddhists, but restored in B.C. 840 by Dhanji (Dhananjaya), a name of Arjun, about 785 before Vikramaditya. Between A.D. 866 and A.D. 1390, the country repeatedly changed hands from Hindu to Muhammadan sovereigns from the time that, in 866, Maldeva was conquered by Shaikh Shah, father of Ala-ud-Din, to 1390, when Dilawar Khan Ghori, viceroy of Malwa, assumed sovereignty. Malwa was added to the Dehli empire by Humayun, before his flight, but the Mahrattas have since been its dominant possessors.

At the close of the Pindari war (1817-1818), the districts in Central India and Malwa were left in a disorganized state, the Mahratta chiefs had parcelled out amongst themselves the possessions of the Rajput chiefs, and the smaller states were all subject to Sindia, Holkar, or the Puar, and sometimes to all three. Many of the smaller chiefs had been driven from their possessions, and had sought refuge in the jungles and mountains, where they robbed or levied tankhah or blackmail from the larger states.

Under an engagement mediated by Sir John Malcolm in 1819 between Purbut Singh, raja of Rutlam, and Dowlat Rao Sindia, the former agreed to pay an annual tribute of Salim Sahi rupees 84,000, while Sindia undertook never to send any troops into the country, or to interfere in any way in the internal administration or succession. This tribute was assigned under the treaty of 1844 with Sindia, in part payment of the Gwalior Contingent. It is now paid to the British Government under the treaty of 1860. The raja of Rutlam is considered the principal Rajput leader in Western Malwa, and in consequence receives a voluntary allegiance and assistance if called for from the neighbouring Rajput chiefs. Raja Bulwunt Singh rendered good service during the mutinies, in recognition of which his successor, Bhyru Singh, received a dress of honour value Rs. 3000, and the thanks of Government. The military establishment of the raja of Rutlam consists of 500 sepoys. The revenue from all sources is estimated at Rs. 3,64,064, and the population at 94,839. The town of Rutlam is the principal opium mart in Western Malwa. The area of Rutlam is about 500 square miles. Sillana pays an annual tribute of Rs. 42,000, under the same conditions as Rutlam. The tribute is paid to the British Government under the treaty with Sindia of 12th December 1860, having been assigned in 1844 in part payment of the Gwalior Contingent. The revenue of Sillana is estimated at Rs. 2,49,000, the population at 88,978, and the area at about 103 square miles. Seetamhow, like Sillana, was once a part of Rutlam, but separated from it in A.D. 1660, on the death of Ram Singh, raja of Rutlam. A tribute of Rs. 60,000 from this state was guaranteed to Sindia by an agreement mediated by Sir John Malcolm in 1820. The total revenue of Seetamhow is about Rs. 1,50,000, and the population about 20,000. In consequence of repeated representations from the raja, Rs. 5000 of the annual tribute were remitted in 1860 by Sindia of his own free will, on the occasion of the raja's son waiting on him at Gwalior. The raja of Seetamhow remained faithful to the British Government during the mutiny of 1857, and received a dress of honour of Rs. 2000. The raja keeps up a military force of 40 horse and 200 foot.

Malwa and Gwalior are great centres of trade. In Malwa, the towns of Indore, Bhopal, Ujjain, Mundipore, Rutlam, Dhar, Jowra, Augur, Nemuch, Shoojawulpur, and Bhilsa are the principal marts. The opium exported from Malwa is about 17,000 chests.—*Thomas' Prinsep*, p. 259; *Orme; Malcolm's Central India*, i. p. 67; *Treaties, Engagements, and Sunnuds*, iv. p. 364.

MALWA and Be-Malwa, terms by which the Assamese designate the Garo race.

MALWAN, chief town of the Malwan subdivision of Ratnagiri district, Bombay, situated on an island off the coast of the Konkan, 70 miles south of Ratnagiri, in lat. 16° 3′ 20″ N., and long. 73° 30′ 10″ E.; pop. (1872), 13,955.—*Imp. Gaz.*

MAMANGONI, a very ancient festival, celebrated every twelve years at Tirnavay by the Vellaterra raja, and afterwards by the Zamorin of Calicut. It lasts twenty-eight days, and is attended by immense numbers.—*Bombay Lit. Soc. Tr.* i. p. 2.

MAMASENI, a nomade tribe dwelling in Luristan, who belong to the Lur family, as do likewise their neighbours the Khogilu and the Bakhtyar, who, like themselves, occupy the valleys of the great chain of Zagros which separates Irak Ajam from the provinces bordering on the Persian Gulf. All these tribes are the

descendants of the ancient Zend race, and the Mamaseni claim great antiquity. The country inhabited by the Mamaseni is called Shulistan, and has the direct dependencies of Fars to the east, Kazerun to the south, the Khogilu tribes and the hilly country descending towards the Persian Gulf to the west, and the chain of the Ardekan mountains to the north.—*De Bode's Tr.* p. 262.

MAMIRA, also written Mamiran, are roots of two different kinds in the Lahore bazar, the one from Kashmir, the other from China, called Khatai (Scythca). The latter is officinal all over the east, being much used by the hakims, who deem this root to be a specific in ophthalmia; but the genuine drug is seldom to be met with, as it has many substitutes, Chelidonium majus and C. glaucum, and Dr. Royle affirms Ranunculus ficaia or ficaria to be the plant from which the Kashmirian mamira is produced. Both sorts are used, in general externally, and in composition with other drugs are applied to the eyes as a dry collyrium. Mamira or Mamiran is the Thalictrum foliolosum.—*Honigberger*, p. 304.

MAMLATDAR, the head native revenue and police officer of a district of India.

MAMLUK, ordinarily written Mameluk, a purchased slave or captive taken in war. Ghuz. an emancipated Mamluk. A body of them in Egypt for a long time governed that country, although a ruler with the title of pasha was sent from Constantinople; they were at last exterminated by Muhammad Ali. At one time these were of two races, the Baherite and the Borgite, the latter of Circassian origin. In the times of Selim the First, the Mameluks were all of pure Circassian blood, but their ancestors had all been originally slaves.

MAMMALIA. The animal kingdom was arranged by Cuvier into four great subdivisions, —Vertebrata, Mollusca, Articulata, and Radiata. The Articulata has since been greatly subdivided, and the limits of two of the other subdivisions have been slightly altered. Vertebrate animals comprise four distinct classes, some of which, viz. fishes and reptiles, have blood nearly the temperature of the water or air in which they live, whilst the others, viz. the birds and mammals, are warm blooded. The mammals, which are here to be noticed, are warm-blooded, vertebrate, viviparous animals, and are distinguished from birds, as well as from the other vertebrate animals, by the possession of mammary glands, secreting milk for the nourishment of their young, and terminating outwardly in all (except in one or two) by teats. They are also distinguished by a covering of hair, except whales but even the fœtus of whales has some tufts of hair. Most mammals have four limbs, from which they were formerly termed quadrupeds, but that term has been discontinued, as it is not applicable to the Cetaceæ. In cold climates, several animals pass the winter in a state of torpidity; and even in India certain bats and hedgehogs, and perhaps some rats, are more or less torpid during the cold season. Two species of bears found in the Himalaya retire to their caves during winter, and are rarely or never seen from the month of December till the end of March.

The animals of the East Indies in this branch of natural history have been described by several eminent men. In 1830-34 Dr. J. E. Gray published Illustrations of Indian Zoology, chiefly selected from a collection made by Major-General Hardwicke; Colonel Sykes published a list of the animals observed by him in the Dekhan; Sir Walter Elliot in 1839 gave a Catalogue of the Mammalia of the Southern Mahratta Country; Mr. Hodgson published several lists of the Mammalia of Nepal; Colonel Tickell gave a detailed History of a few Animals; Major Hutton recorded some facts on the Mammals of Afghanistan; Mr. E. L. Layard, Dr. Kelaart (in his Prodromus Floræ Zeylanicæ 1852), Dr. Templeton, and Sir J. E. Tennent, almost exhausted the subject of the Fauna of Ceylon; Dr. Horsfield (1824, 1851) and Sir T. S. Raffles were amongst the first to describe the animals of the Eastern Archipelago; and Professor Bikmore and Mr. A. Russell Wallace have recently extended their predecessors' researches. Mr. Wallace in 1869 and 1872 wrote on the Malay Archipelago, and in 1876 and 1880 on the Geographical Distribution of Animals. In 1846-47 Dr. Cantor furnished a valuable list of the Mammalia of the Malay Peninsula; Dr. T. C. Jerdon in 1864 published the Mammals of India; and the labours of all these zoologists were reviewed by Mr. Blyth, curator of the Bengal Asiatic Society's Museum, in the scientific journals of the day. Colonel A. C. MacMaster, of the Madras army, in 1870 gave to the public his interesting Notes on Jerdon's Mammals, and since then, in 1874, Dr. Jerdon's book has been reprinted. In 1876, Captain J. H. Baldwin described the Large and Small Game of Bengal and the N.W. Provinces. In the same year (1876), W. T. Blanford, in the second volume of his book on Eastern Persia, described its Zoology and Geology; also those of Abyssinia, in 1879; and in the same year he gave the scientific results of the second Yarkand mission. In 1881 the Calcutta Museum published a Catalogue of its Mammalia; in 1884 Mr. R. A. Sterndale's Natural History of the Mammalia of India and Ceylon was printed; and it may be added that Sir Joseph Fayrer has written on the Tiger. The Journal of the Bengal Asiatic Society contains numerous contributions from other able zoologists.

Classification.—The animal kingdom has been arranged by learned naturalists in varied modes. Mr. A. R. Wallace, one of the ablest of the present day, in his Geographical Distribution of Animals, i. p. 85, gives the following classification as according with the views of Professors Huxley (1869) and Flower (1870):—

i. Monodelphia, 11 orders, viz. :—

Primates.	Ungulata.
Chiroptera.	Proboscidea.
Insectivora.	Hyrocoidea.
Carnivora.	Rodentia.
Cetacea.	Edentata.
Sirenia.	

ii. Didelphia, 1 order, viz. Marsupialia.

iii. Ornithodelphia, 1 order, viz. Monotremata.

MAMMALIA.

ORDER I. PRIMATES.

Sub-Order. Anthropoidea.

Hemidæ, man.	Cynopithecidæ, baboons and macaques.
Simiidæ, anthropoid apes.	Cebidæ, American monkeys.
Semnopithecidæ, Old World monkeys.	Hapalidæ, marmosets.

Sub-Order. Lemuroidea.

Lemuridæ, lemurs.	Chiromyidæ, aye-ayes.
Tarsiidæ, tarsiers.	

ORDER II. CHIROPTERA.

Pteropidæ, fruit-eating bats.	Rhinolophidæ, horse-shoe bats.
Phyllostomidæ, leaf-nosed bats.	Vespertilionidæ, true bats.
	Noctilionidæ, dog-headed ,,

ORDER III. INSECTIVORA.

Galeopithecidæ, flying lemurs.	Potamogalidæ, otter shrews.
Macroscelididæ, elephant shrews.	Chrysochloridæ, golden moles.
Tupaiidæ, squirrel shrews.	Talpidæ, moles.
Erinaceidæ, hedgehogs.	Soricidæ, shrews.
Centitidæ, tenrecs.	

ORDER IV. CARNIVORA.

Felidæ, cats, lions, etc.	Mustelidæ, weasels.
Cryptoproctidæ, crypto-procta.	Procyonidæ, racoons.
	Æluridæ, pandas.
Viverridæ, civets.	Ursidæ, bears.
Protelidæ, aard wolf.	Otariidæ, eared seals.
Hyænidæ, hyænas.	Trichechidæ, walrus.
Canidæ, dogs, foxes, etc.	Phocidæ, seals.

ORDER V CETACEA.

Sub-Order i. Mystacetæ.

Balænidæ.	Balænopteridæ.

Sub-Order ii. Odontoceti.

Catodontidæ.	Monodontidæ.
Hyperoodontidæ.	Delphinidæ.

ORDER VI. SIRENIA.

Manatidæ.

ORDER VII. UNGULATA.

Sub-Order i. Perissodactyla or odd-toed Ungulates.

Equidæ, horses.	Rhinocerotidæ, rhinoceros.
Tapiridæ, tapirs.	

Sub-Order ii. Artiodactyla or even-toed Ungulates.

Hippopotamidæ, hippopotamus.	Cervidæ, deer.
	Camelopardidæ, giraffes.
Suidæ, swine.	Bovidæ, cattle, sheep, antelopes, etc.
Camelidæ, camels.	
Tragulidæ, chevrotains.	

ORDER VIII. PROBOSCIDEA.

Elephantidæ, elephants.

ORDER IX. HYRACOIDEA.

Hyracidæ, rock rabbits.

ORDER X. RODENTIA.

Muridæ, rats.	Octodontidæ, octodons.
Spalacidæ, mole-rats.	Echymiidæ, spiny rats.
Dipodidæ, jerboas.	Cercolabidæ, tree porcupines.
Myoscidæ, dormice.	
Saccomyidæ, pouched rats.	Hystricidæ, porcupines.
Castoridæ, beavers.	Caviidæ, cavies.
Sciuridæ, squirrels.	Lagomyidæ, pikas.
Haploodontidæ, sewellels.	Leporidæ, hares.
Chinchillidæ, chinchillas.	

ORDER XI. EDENTATA.

Bradypodidæ, sloths.	Orycteropodidæ, ant-bears.
Manididæ, ant-eaters.	Myrmecophagidæ, ant-eaters.
Dasypodidæ, armadilloes.	

ORDER XII. MARSUPIALIA.

Didelphidæ, opossums.	Peramelidæ, bandicoots.
Dasyuridæ, native cats.	Macropodidæ, kangaroos.
Myrmecobiidæ, native ant-eaters.	Phalangistidæ, phalangers.
	Phascolomydæ, wombats.

ORDER XIII. MONOTREMATA.

Ornithorynchidæ, duckbill. | Echidnidæ, echidna.

Dr. Jerdon arranged mammals into Placental, or those in which the fœtus is nourished in the maternal uterus by means of a placenta; and Implacental or Marsupial, or those in which the young fœtus is expelled at a very early period, and maintained, in a pouch, firmly attached to a nipple. The implacental or marsupial animals occur in the Australian region, and a few in America.

MAMMALIA.

Mr. Blyth arranged the Placental mammals into—

I. Typodontia, animals with the typical forms of teeth developed, and include man, monkeys, bats, carnivorous animals, and shrews. The majority live on animal food.

II. Diplodontia, rarely more than two kinds of teeth, and include rats, squirrels, deer, sheep, cattle, the elephant, pig, horse, and the almost toothless ant-eater. They chiefly live on vegetable matter.

III. Isodontia, teeth, when present, are all of one kind, and comprise the whales and porpoises.

The details of the above classification are thus shown—

a. Placental mammals, fœtus nourished in the uterus, through a placenta.

I. TYPODONTIA, teeth of all four kinds.

1st group, Primates, hair of one kind only.

ORDER, Quadrumana, with thumb on the feet.

ORDER, Cheiroptera, winged.

2d group, Secundates, hair of two kinds.

ORDER, Carnivora, molars trenchant, mixed with tubercular ones.

ORDER, Insectivoria, molars studded with cusps.

II. DIPLODONTIA, teeth generally of two kinds only, abnormal.

ORDER, Rodentia, front teeth long and chisel-like.

ORDER, Pachydermata, teeth varied, skin thick, do not ruminate.

ORDER, Ruminantia, upper incisors generally absent, chew the cud.

ORDER, Sirenia, want posterior extremities.

ORDER, Edentata, incisors absent.

III. ISODONTIA, teeth, when present, of one kind, and often very numerous.

ORDER, Cetacea, posterior extremities wanting.

b. Implacental or Marsupial mammals.

I. UNGUICULATA, with nails.

Distribution.—Southern India, more particularly the richly-wooded Malabar coast, possesses more species peculiar to it than all Central and Northern India, except the Himalayan range. Of the animals found in the Himalayan range, several equally belong to the Indo-Chinese fauna, of which they appear to be the western extension, and a few others to Central Asia, whilst a moderate number appear to be peculiar to the Himalayan mountains.

The Langur monkeys (Presbytis) form a well-marked group in India, and are still further developed in the Indo-Chinese provinces and Malayana. Out of five continental species, one is spread through all the plains of Central and Northern India, one through the Himalayas, and there are three well-marked species in the extreme south of the Peninsula. Macacus radiatus of Southern India replaces Inuus rhesus of all Northern and Central India. A well-marked form of this group, Inuus silenus, is peculiar to the south-west corner of the Peninsula.

The lemurs are almost peculiar to Madagascar, but one species of the Lemuridæ is very abundant in the extreme south, and a Malayan species extends sparingly through Burma into the N.E. corner of Bengal.

Two species of frugivorous bats are spread all over India, and one species occurs only in the south. Of insectivorous bats, seven species of Rhinolophus have been found in the Himalayas, but only two species in Southern India. The

Hipposideros section is represented equally in the north and south of India, and is more Malayan. The Cœlops of Blyth has as yet been found only in the Bengal Sunderbans. The yellow-bellied Nycticeji occur pretty generally throughout India, N. ornatus occurring in the Himalayas.

A few European forms are found in the Him alayas. Moles occur in the Indo-Chinese region, and in the S.E. portion of the Himalayas. Shrews occur in all parts of India, but are most abundant in the Himalaya. One species of Tupaia occurs in Southern India, and another extends from the S.E. Himalayas to Burma.

Of the carnivora, two species of bears are Himalayan, and a third species extends throughout all the plains of India. Ailurus fulgens, one of the Ursidæ, is peculiar to the Eastern Himalayas. Weasels occur only on the Himalayas; one marten is found both on the Neilgherries and Himalayas. One species of otter is found in the south of India; in Bengal are two species, and others occur in the Himalayas. Of fifteen feline mammals found in India, five are common to India and Africa, seven are found in India and the Indo-Chinese region, but three of these occur only in the S.E. Himalayas. One, the ounce of Central Asia, is Himalayan, and the smallest of the feline animals are peculiar to the plains of India, two of them in the extreme south of the Peninsula, and the other on the N.W.

Of the strictly Asiatic Parodoxurus, more Malayan than Indian, one species is common in most parts of India, and two occur on the Himalayas and adjoining Terai. The genus Herpestes is common to India and Africa; out of seven Indian species, five occur only in the south of the Peninsula, and of these four only in the extreme south. One small civet-cat is found throughout India, and is common in the Himalaya, a large species on the Himalaya replaced by a different race in the extreme south. Arctonyx, Arctictis, Helictes, Urva, and Prionodon are found in the S.E. Himalayas and in the Indo-Chinese region. The wolf, the jackal, and wild dog are found throughout India; two small desert foxes are found throughout the plains, and a fox of the European type occurs in the Himalayas. Squirrels are found throughout India up to the foot of the Himalayas, in the Indo-Chinese region, Assam, Burma, and Malayana. One species of flying squirrel is limited to the extreme south of the Peninsula, one in the south of the Peninsula, but several species in the Himalaya. Marmots only occur in the Himalayan region, to which they have been extended from Central Asia. Of the Muridæ, Golunda, three species of Leggada, and the curious Platacanthomys are peculiar to the south of India. Arvicula occurs only on the Himalayas, and Rhizomys in the Himalayas and the Indo-Chinese district.

The ran-hun or wild dog, Cuon rutilans, is a native of the Kashmir ranges, and although not to say common, is by no means rare; it is so stealthy in its habits that attempts to obtain specimens often prove abortive. They hunt in packs, and attack the largest deer. Even the Kashmir stag is said to be brought to bay and killed by packs of wild dogs. The wild dog seen by Dr. Hooker on the Khassya mountains, and known there by the names kulsam and khas, may be a different species, though Colonel Sykes considers it identical with the kolsum of the Dekhan.

The domestic dog of the Jhelum district has a great resemblance to the pointer, and doubtless was introduced from India. Mr. Vigne makes a similar remark with reference to the dogs of the Rajawar district, south of the valley of Kashmir, where a formidable breed is also found, having the external appearances of the shepherd's dog, but much larger. A closely-allied form, not differing in any way from the Scotch collie, is common all over the cultivated regions of the Western Himalayas, and even westward to the sources of the Oxus, as observed by Lieutenant Wood. This uniformity is in favour of the view that the shepherd's dog forms almost a permanent race, which may have been one of the original varieties.

The Tibetan black bear, Helarctos Tibetanus, probably finds its way across from the Lower Himalaya. The black bear of the Southern Provinces (U. labiatus) is not found in the Panjab. Helarctos Tibetanus is common in the Panjab, and hunts among the ravines and around the villages at night. The isabella, or brown bear of the Himalaya, is an exceedingly stupid and unsuspicious animal in districts where it has not been disturbed. The contents of the gall-bladder are much prized as medicine by the hill people.

Malayana.—170 species of mammalia are known to inhabit Indo-Malaya. There are 24 of the quadrumana or monkey tribe, 10 of which occur in the Malay Peninsula, 11 of them in Sumatra, 9 in Java, and 13 in Borneo. The orang-utan are found only in Sumatra and Borneo; the siamang, next to them in size, in Malacca and Sumatra, and the long-nosed monkey only in Borneo. The gibbons or long-armed apes and monkeys, and the lemur-like animals, Nycticebus, Tarsius, and Galeopithecus, are found in all the islands. With the exception of the orang-utan, the siamang, the Tarsius spectrum, and the Galeopithecus, all the Malayan genera of quadrumana are represented in India by closely-allied species. In the Indo-Malay region are 33 carnivora, 5 of which—a tiger, leopard, civet, tiger-cat, and otter—are found in India and Malacca, and 20 in the Malayan region; 13 have representatives in India of closely-allied species.

The Malacca glutton, Helictis orientalis, has the H. Nepalensis in the Himalaya. There are 22 hoofed animals in Indo-Malaya, 7 of which are found in India and Burma. The Bos sondaicus is found in Burma, Siam, Java, and Borneo. There is a goat-like animal in Sumatra; the two-horned and the long-horned rhinoceros occur in Burma, Sumatra, and Java; and the elephant of India is found in Malacca, Sumatra, and Borneo. There are about 50 bats, of which under a fourth part occur in India; 34 rodents (squirrels, rats, etc., of which 6 or 8 are Indian; and 10 insectivora, 9 of which are peculiar to the Malay regions. The Tupaia, insect-eaters, closely resemble squirrels, are almost confined to the Malay islands, as also are Ptilocerus Lowii of Borneo and Gymnurus Rafflesii. In Timor there are 15 bats and 7 land mammals; amongst them the Macacus cynomolgus, the common monkey of all the Indo-Malay islands. Paradoxurus fasciatus, a civet-cat, is found over much of the Archipelago.

Felis megalotis, a tiger-cat, is peculiar to, and rare even in Timor. Cervus Timoriensis, Sus

Timoriensis, Sorex tenuis, and Cuscus orientalis are all found in Timor and the Moluccas. Paradoxurus fasciatus is a civet-cat of Timor.

The mammalia of Celebes consist of 7 bats and 14 terrestrial species, amongst them the Tarsius spectrum, Viverra tangalunga, and Rusa hippelapha. Cynopithecus nigrescens in Batchian is of a jet-black colour, and the size of a spaniel.

The Anoa depressicornis, called Sapi-utan or the wild cow of the Malays of Celebes, approaches the ox-like antelopes of Africa, and has been classed as an ox or a buffalo and antelope. It is found only in the mountains, and never occupies places where there are deer.

The wild boar of Celebes is peculiar, but the Babirussa or pig deer there has long and slender legs, and the male has curved upper tusks turned back so as to resemble horns. It feeds on fallen fruits; it is found in the Celebes, in the Sulu Islands, and in Bouru. There are also 5 species of squirrels and 2 species of Cuscus or eastern opossums. Cynopithecus nigrescens, the black baboon monkey, is also of Celebes.

Out of the very small number of mammals which inhabit Celebes, it possesses three genera of singular and isolated forms, viz. the Cynopithecus, tailless ape, allied to the baboons; the Anoa, a straight-horned quadruped, quite unlike anything else in the Archipelago or in India; and Babirussa, an altogether abnormal wild pig. With a rather limited bird population, Celebes has an immense preponderance of species confined to it, and has also six remarkable genera (Meropogon, Ceycopsis, Streptocitta, Enodes, Scissirostrum, and Megacephalon) entirely restricted to its narrow limits, as well as two others (Prioniturus and Basilornis), which only range to a single island beyond it.

The Moluccas consist of three large islands, Gilolo, Ceram, and Bouru, with many small isles and islets, Batchian, Morty, Obi, Ke, Timor Laut, Amboyna, Ternate, Tidore, Kaiva, and Banda. There are 25 bats, but only 10 land mammals are known in the group; amongst them Cynopithecus nigrescens, Viverra tangalunga, Rusa hippelaphus, the Babirussa, Sorex myosurus, common to Sumatra, Borneo, and Java, and four marsupials, viz. the small flying opossum, Belideus ariel, a beautiful little animal resembling the flying squirrel in appearance, and a species of Cuscus, peculiar to the Austro-Malayan region. They are opossum-like animals, with a long prehensile tail, of which the terminal half is generally bare; they have small heads, large eyes, and a dense covering of woolly fur, often pure white, with irregular black spots or blotches, but sometimes ashy brown. They live in trees, and feed on the leaves, of which they devour large quantities; they are very tenacious of life.

The islands eastward from Java and Borneo form a part of a previous Australian or Pacific continent.

Australia has no apes, monkeys, cats, tigers, wolves, bears, hyænas, no deer or antelopes, sheep or oxen, no elephant, horse, squirrel, or rabbit. In lieu, it has kangaroos, opossums, wombats, and the duck-billed palypus. It has no woodpecker or pheasants, but has in lieu the mound-making brush turkeys, honey-suckers, cockatoos, the brush-tongued lories, which are found nowhere else in the globe; and all these peculiarities are found in the islands which form the Austro-Malayan division of the Archipelago.

The Aru Islands, Mysol, Waigiou, and Jobie agree with New Guinea in their species of mammalia and birds, and they are all united to New Guinea by a narrow sea. The 100 fathom line around New Guinea marks the range of the paradise birds.

The Papuan Islands consist of New Guinea, 1400 miles long, and its adjacent islands. In them only 17 mammals as yet are known, viz. 2 bats, 1 Sus Papuensis, and the rest are marsupials, one of these a kangaroo of Mysol and the Aru Islands. An allied species occupies N. Guinea. Two species of the tree kangaroo with powerful claws. There are 4 species of Cuscus, and the small flying opossum; and there are 5 small marsupials, one of which is the size of a rat, and takes its place by entering houses and devouring provisions.

Uses.—The horse, the donkey, the camel, the dog, the elephant, and the otter have been trained to be servants to man. The first four have been entirely domesticated, and there are now many varieties of them. The elephant has rarely bred in captivity, but they are captured in a wild state in Ceylon, in the Peninsula of India, in the east of Bengal, and in Assam. They were not in use by the Moghuls, as Polo tells, until Kablai's capture of a number in the war with Mien or Ava. A few continued to be kept at the Chinese court at Timkowski's visit in 1821. The huge creatures are docile, and soon accommodate themselves to the requirements of man. They are usually employed in India, both in peace and war, in carrying heavy articles, but are trained also to carry individuals. There are many elephants in Africa, but the people there have not learned to ensnare them, and they are destroyed for the ivory of their teeth and tusks.

In the south of Asia, the wild ass or gôr-khar of the desert, Equus onager, *Pallas*, also the Equus hemippus, *Is. Geoffroy*, and the kiang or dzighta'i of the Tibetan plains, Equus hemionus, *Pallas*, still roam untamed; and the E. asinus or Asinus tæniopus, *Heuglin*, is in South Arabia and N.E. Africa. No attempt within historic times has been made to domesticate any of these, but many of the Kattyawar breed of horses have the shoulder-stripe of the wild and common ass distinctly across the withers.

Naturalists arrange the whales, porpoises, and dolphins under the Cetacea, a title taken from the Greek word Κητος, a whale. The fat and whalebone of the whales, and the spermaceti of one of the species, are largely used. The natives of the Arctic Atlantic shores, and those of the Northern Pacific Islands, eat the whale blubber, and the whalebone is applied to many useful purposes. Ships from Europe and America visit the Northern and Southern Seas to catch these great mammals. Many thousands of seals are yearly brought from the Greenland shores to furnish warm winter robes. Few of the ladies of Europe and America are aware of the fact that many ornaments for their hats which look like feathers are of split whalebone.

The porpoises are distinguished from all their allies by their great strength and ferocity, being the only cetaceans which habitually prey on warm-blooded animals; for, though fish form part of their food, they also attack and devour seals and various species of their own order, not only the

smaller porpoises and dolphins, but even full-sized whales, which last they combine in packs to hunt down and destroy, as wolves do the larger ruminants. The Platanista Gangetica of the rivers Ganges and Irawadi is quite blind. It feeds on small fish and crustacea; it ascends as high as there is water to swim in, but never passes out to sea.

The mammals which chew the cud are known to naturalists as the Ruminantia. They comprise most of the animals most useful to man,—camels, deer, cattle, and sheep. They are the most truly and exclusively vegetable feeders, and grass forms their chief food. They have four stomachs. The first of these, the paunch, receives the food as it is plucked, and passes it on to the second, where it receives a good maceration. From this it is returned to the mouth in pellets or boluses, to undergo a complete trituration by the molar teeth; is then passed into the third stomach, where it undergoes an additional preparation; and is lastly received into the true digestive stomach. This provision of nature enables them to crop a large quantity of food quickly, to be masticated at leisure, and thereby obviate the many interruptions they are liable to from beasts of prey and other alarms, as they are all excessively timid and wary. All of them are eaten as food by man, and all but the deer have been domesticated from the most ancient times. The camel, the sheep, and goats, by the Arabs and other races, have been offered in sacrifice. The races who follow Hinduism look with abhorrence on the slaughter of the cow. Their reverence for it almost amounts to worship, and they typify the earth as the ever-yielding cow. The camel, the ox, and the buffalo have all been trained for carriage, and they are utilized in agricultural operations. In Egypt, the camel and the ox, or the camel and the buffalo, may be seen yoked together at the plough. The cow is rarely thus employed. The hare and the rabbit, species of the rodentia or gnawing tribe, are eaten by most races, but as they do not chew the cud, they are abstained from by religionists who follow the Mosaic law. For the same reason, the hare, the rabbit, and the swine are avoided by Jews and Muhammadans, for though they divide the hoof they do not chew the cud. The swine and the rabbit have been domesticated. The Chinese and most Christian races eat the swine largely; and in India, to hunt the wild boar with the spear is a favourite sport.

Many of the races professing Hinduism, and all the Jains and Buddhists, ought by the tenets of their religion to abstain from all animal food. No Hindu would eat the cow. The Buddhists of Ceylon, Further India, Tibet, China, and Japan ought to be similarly abstinent; but though many of them will not kill to eat, few have scruples to use what another has killed, or creatures that have died of disease. The Burmese on the banks of the great rivers partake largely of fish, and the pig is reared for food by all Chinese. One or other of the non-Aryan races of India eat most of the quadrupeds and fishes, and many reptiles, amongst which may be mentioned the field, bush, and bamboo rats, the jerboa rat, a species of Gerbillus, several of the frogs and snakes.

Some of the frugivorous bats are occasionally used medicinally, as also the secretions of the musk deer and civet, Viverra zibetha. Otters are trained in China to aid in fishing with the cast or bell net. The net is cast, and the otter, attached by a cord to the boat, is lowered to frighten fish out of holes in rocky or uneven bottoms into the net, which, as soon as lifted, is closed at the bottom by the leaden sinkers, and the fish are thus caught.

Jerboa rats, in thousands, issue from their holes in the dusk of the evening, and stand erect on their long hind legs. The credulous and superstitious greatly value as a charm the projecting process on the frontal bone of the jackal, and imagine it to be a horn; the claws and teeth of the tiger are also prized. The striped and spotted skins of the tiger, the lion, the leopard, and the panther are prepared as rugs for the drawing-rooms of the wealthy; the horns of the rhinoceros are valued by the Chinese carver; the ivory of the tusks and teeth of the elephant is used for many purposes in the arts; but the hides, skins, furs, hair, wool, horns, and bones of the horse, cattle, deer, sheep, and goats far outweigh in value to man the arts products of all other mammals.

Of the other mammals of the East Indies, many are even hurtful. The elephant, the lion, the tiger, the leopard, the hyæna, and the wolf, the jackal, the fox, the wild dog, and the bear cause many deaths of man and domestic animals. In British India, in the seven years 1875 to 1881, the yearly numbers of human beings so killed (144,260) ranged from 19,273 to 21,990; and the deaths of cattle (362,027) from 43,669 to 58,386. The Government of India pay annually ten or twelve thousand pounds as rewards for killing wild beasts. About 1600 elephants are destroyed annually, 7000 tigers and leopards, 2000 bears and hyænas, 5000 wolves, and 200,000 snakes.

The following were the numbers of human beings killed by

	1875.	1876.	1877.	1878.	1879.	1880.	1881.
Elephants,	61	52	46	33	38	46	58
Tigers, .	828	923	819	816	698	872	889
Leopards,	204	156	200	300	277	261	239
Bears, .	84	123	85	94	121	108	75
Wolves, .	1,061	887	564	845	492	347	256
Hyænas,	68	49	24	33	28	11	8
Other wild beasts	2,015	1,143	1,180	1,323	1,270	1,195	1,232
Snakes,	17,070	15,946	16,777	16,812	17,388	19,150	18,670

Tigers, leopards, and wolves are the most destructive.

One species of hare is found in the south of the Peninsula, another in Northern and Central India; the hispid hare in N.E. Bengal, and lagomys on the Himalayas. One elephant is common to all India; two species of rhinoceros occur in N.E. Bengal, one of them extending to the extreme south of the Malay Peninsula; one wild pig occurs throughout all India, varying slightly in appearance; and a peculiar dwarf species is found sparingly in the Terai adjoining the S.E. Himalayas. The wild ass of Western Asia and Persia is found in the north-western deserts. Two species of the true deer of the red deer type occur only within the Himalayas, beyond the outer range in Kashmir and Sikkim, and these two extend over a great part of Asia. The maral, a large stag, is found in all the higher regions of the Ala-tau and Mus-tau. He affords noble sport for the hunters, and his horns are highly valued by the Chinese. But it demands a fearless hunter

to follow him into his haunts among the precipices, glaciers, and snowy peaks of this region. In winter and spring he is found in the valleys, but as the weather becomes warmer he ascends, to escape the flies and other insects. They are seldom found in herds, though groups of 10 or 12 are sometimes seen standing on the brink of a precipice 1500 to 2000 feet in height, quite inaccessible to man. Two Cossacks hunting the maral, followed the game far up into the Ala-tau, and found a magnificent animal, whose horns were worth 120 roubles.

Four rusine deer are found throughout India, one of them, the ruervus, occurring only in Central and Northern India, and extending into Assam. The musk deer is only in the Himalayas, and the memimna or moose deer throughout India and in Malayana. The nil-gai and four-horned antelope, peculiar to India, are found throughout the Indian region. Gazelles occur both in India and Africa. The goat-like antelope, Nemorrhœdus, is found on the Himalayas, and is peculiar to Eastern Asia from Burma to Japan. One type of the true goats, the type Hemitragus, has a representative on the Himalayas, and another on the Neilgherries. The Siberian ibex extends to the Himalayas; and the markhor, quite of the type of the domestic goat, is found on the N.W. Himalayas and adjoining hilly districts. Of two species of wild sheep, one occurs in the Panjab Salt Ranges, and the other in the Him-

The bison of sportsmen, the magnificent gaur, Gavæus gaurus, abounds in the forests of S. India, and extends into Central India, Burma, and the Malay Peninsula.

Two species of the manis, the scaly ant-eater, occur, one common throughout all India, and one extending from Darjiling into China.

The dugong occurs sparingly on the southern coasts of India; various species of Delphinus, one Globiocephalus, and one Balænoptera, and the fresh-water porpoise of the Ganges, Indus, and Irawadi, the Platanista, is a peculiar type.

Along the base of the Himalayas, in the dense jungles, an occasional tiger prowls; the leopard is not uncommon; while many of the game birds about Dugshai are there also plentiful. Among the lesser ranges bordering the plains, and to an elevation of 8000 or 9000 feet, barking-deer are common; and on the more secluded and craggy mountains the goral or chamois (Nemorrhœdus goral) may be occasionally seen sporting among the pine-clad precipices. This little antelope is gregarious, feeding in scattered herds, so that when the loud hissing call of alarm is uttered by one individual, the others, one by one, take it up; and the hunter, from a prominent position, may see from 10 to 20 gorals in different parts of the hill bounding across the precipices. The goral is rather higher than the barking-deer, and more compact and agile in appearance.

The species of mammalia in the Southern Mahratta country were described by Mr. (now Sir) Walter Elliot, of the Madras Civil Service, in the Madras Literary Society's Journal, July 1839. The district of India in which the animals were procured is a part of the high table-land towards the south of the Dekhan, commonly called the Southern Mahratta country, and constitutes the British zillah of Dharwar. It ought likewise, geographically speaking, to include the small province of Sunda. The general boundaries are the rivers Kistna and Bhima on the north and north-east, the Tumbudra river on the south, the Nizam's territory on the east, and the Syhadri range of mountains on the west. The latter are generally called the ghats, a term which, however, properly applies only to the passes leading through them. The general face of this tract is much diversified, and affords a great variety of elevation and of geological structure, thereby materially affecting the distribution and the habitat of the different species of animals existing within its limits. The whole of the western portion is a thick forest, extending from the outskirts of the mountainous region of the ghats to their summits, and clothing the valleys that extend between their different ridges. It abounds with the teak and various other lofty forest trees, festooned by enormous perennial creepers. The bamboo forms a thick and luxuriant underwood in some places, while others are entirely open, and the banks of many clear and rapid streams flowing through it abound with the black pepper plant, the wild cinnamon, and other odoriferous shrubs. Portions of this forest are often left entirely untouched by the axe or knife, forming a thick impervious shade for the growth of the black pepper, cardamom, and Mari palm (Caryota urens). These are called kans, and are favourite resorts of wild animals. To the east of the regular forest lies a tract called the Mulnad or rain-country (though the natives of the plains often include the jhari or forest under the same denomination), in which the trees degenerate into large bushes, the bamboo almost entirely ceases, and cultivation, chiefly of rice, becomes much more frequent. The bushes consist chiefly of the karunda, the pallas, etc. It abounds in tanks and artificial reservoirs for purposes of irrigation. East of the Mulnad is a great extent of alluvial plain, producing fine crops of wheat, cotton, maize, Holcus sorghum, Panicum Italicum, Cicer arietinum. And on the Nizam's frontier are found a succession of low dry hills with tabular summits, often rising in abrupt scarped precipices, and intersecting and traversing the plains in various directions. They are clothed with low thorny jungle of babul and other acacia; and their bases, and the valleys between, composed of a light sandy soil, are cultivated with millet, vetches, etc., Panicum spicatum, P. miliare, Phaseolus max, Ph. mungo, etc. The first or mountainous division consists chiefly of micaceous clay and other schists, which to the northward are succeeded by basaltic or trap formation. The Mulnad is composed of undulating clayslate hills, which become covered with basalt to the north. This trap formation extends in a slanting direction from S.W. to N.E., nearly coinciding with a line drawn from Sadasheghur on the coast to Bijapur and Sholapur, and, what is remarkable, is almost coincident with that marking the separation of the two great tribes of the population using totally distinct languages, the Mahrattas and Canarese. The hills to the N.E. and E. are all of primitive sandstone, sometimes resting on schists, sometimes immediately on granite, which latter is the rock nearest the surface in the central and eastern plains. But a well-defined range of hills to the S.W., called the Kupputgud, is entirely composed of micaceous

and clay slates, resting on granite. The hills more to the N. and N.W. are basaltic. The extensive plains lying between these different lines of hills and eminences are composed of the rich black mould called regur or cotton ground, resulting from decomposed basaltic rocks. To the N.E. a considerable tract of limestone is found, resting on the sandstone, about Bagalcote, Badami, Hungund, Mudibihal, etc.

The strange-looking goat-antelope (Nemorrhœdus bubalina), known by the name ramoo in Kashmir, and serou in other districts of the Western Himalaya, is perhaps the rarest of the wild ruminants. Occasionally the sportsman comes across an individual in the depths of the alpine forests, but the animal is very solitary in its habits, and seldom more than a couple are seen together. Both in figure and movements the serou is perhaps one of the most ungainly of its tribe, and so stupid is it that when come on unawares it will stand and gaze at the intruder; even the report of a rifle seldom scares it. The serou has the legs of a goat, the horns of an antelope; its general appearance is bovine, whilst the long stiff bristles on its back, and general shape of the head, are decidedly porcine,—a sort of nondescript beast, which European sportsmen often call a very extraordinary looking animal, and so it is. The serou is said to fight desperately; it has been known when wounded or brought to bay to have kept off a pack of wild dogs, and killed several by its sharp-pointed horns. A few are met with on the Kashmir ranges, and in favourable situations eastward to Nepal.

The houriar (Caprovis Vignei) extends along the eastern spurs of the Salt Mountains, but becomes less common as we proceed eastward, and is seldom met with on the ranges beyond the town of Jhelum, or southwards of the Beas river. It is confined to the north and western portions of the Panjab, including the Suliman chain, where it is known by the name of kuch. It is also a denizen of the mountains around Peshawur, including the Khaibar pass, Hindu Koh, and Kafiristan. The shapoo or shalmar of Ladakh, if not identical, is certainly very closely allied; its differences are slight, and such as might result in a great measure from the marked diversity of climate, food, etc., of the two regions. This species is no doubt the sha of Tibet described by Vigne, and possibly the wild sheep of Western Afghanistan, Persia, the Caucasus, Armenian and Corsican mountains, is the same species altered mayhap by climate and other external agencies. The eastern limits of the shapoo have not been fixed with certainty; but so far as inquiries have extended, it would seem that, commencing at Ladakh, it proceeds westward towards the Indus, into the regions where the houriar is found; and probably when these regions are explored we shall find out the relation between what has been supposed distinct, but which Dr. Adams was inclined to consider one and the same animal.

The ibex (Capra Himalayana) frequents many of the lofty ranges of the western chains, and is known to the natives by the names skeen and kail, which they apply indiscriminately in the districts of Aserung, Spiti, Kanawar, the Northern Kashmir mountains, Ladakh, Chinese Tartary, and the Altai. There appears to be a variety in Ladakh with shorter horns than the Himalayan, and specimens of the Siberian ibex possess the same peculiarity. The leopards, panthers, wild dog, and bearded vulture are the common enemies of the ibex; the vulture preys on the kids only. The ibex is found on certain ranges in Ladakh, especially on the chains northward.

The Caucasian ibex (Capra Caucasia) frequents the mountains of Baluchistan, and it is likewise a native of the Murree and other ranges on the north-western frontier of Sind. The Caucasus, Asia Minor, Syria, and Arabia are also countries which it inhabits. It does not appear to travel any great distance eastward, and is probably replaced on the higher ranges of Afghanistan and Persia by its noble congener the Himalayan ibex. The Caucasian ibex has the hair short and dark-brown, with a black line down the back. The beard is also black. Like the European and Himalayan animals, the horns are also bent backwards, but they differ in being more slender and tapering. In the latter, moreover, the horns are three-sided, and the anterior and posterior surfaces sharp, and generally smooth, with the exception of a few irregular tuberosities on the frontal aspect. Like the other species, it frequents dangerous and inaccessible places, such as bleak and barren mountain tops.

Some quadrupeds are undoubtedly diminishing in British India, and markedly the elephant and the lion. The lion, until the middle of the 19th century of not unfrequent occurrence in the region between Sind, Kattyawar, and the Central Provinces, is now (1884) almost unheard of. We have the evidence of Jahangir and the Rev. Edward Terry that in their days the province of Malwa abounded with lions. Jahangir records that he had killed several, and Mr. Terry mentions his having been frequently terrified by them in his travels through the vast woods and wildernesses of the country. It is known to the people as the Untia-Bag, literally camel-coloured tiger. They do little injury. Tigers, however, have always been destructive to the domestic cattle, and as the opening up of British India by roads and railways has led to the destruction of the herds of deer, the tiger has been more and more making man his prey. They are supposed to breed largely in Bustar. In the extreme south of the peninsula of Malacca they are very numerous. The uncultivated forest tribes of India revere the tiger, style him brother, and the Burmese eat the tiger in the belief that they may improve their courage. They buy its flesh at a shilling a pound.

A mere mention of the hyæna, the jackal, the wild dog, the porcupine, rhinoceros, and tapir will suffice. They cause little injury to man. From time to time, frequently following famine years, swarms of rats invade the already wasted lands, and their original habitats remain untraced. One of the leopards, the Felis jubata, has been trained to hunt the deer. The mungoose, species of the genus Herpestes, readily attacks and kills the venomous cobra, and thus aids to protect man.

The wolves, wild dogs, and jackals hunt in packs, and evince much intelligence and cunning. Notices of them will be found under their respective headings.

The following details exhibit the families, genera, and principal species of mammals in the south and east of Asia, with some of Africa:—

ORDER, PRIMATES.

Fam. Simiadæ, Monkeys, the Quadrumana, the Heopitheci, *Van Hœven*, and Catarrhinæ, *Geoffrey*.

Sub-Fam. Simianæ, Apes.

Troglodytes niger, chimpanzee, Africa.
T. gorilla, gorilla, Africa.
Simia satyrus, orang-utan of Borneo.
S. morio, orang-utan of Sumatra.

Sub-Fam. Hylobatinæ, Gibbons of Indo-Chinese countries and Malayana.

Hylobates hoolook, hoolook of Assam, Cachar, Khassya, and Sylhet.
H. lar, gibbon of Tenasserim.
H. agilis, gibbon of Malay Peninsula.
There are several others in the Malay islands.

Monkeys.

Presbytis illiger, *syn.* Semnopithecus, *F. Cuvier*, the hanuman or langur.
P. entellus, *Jerd.*, Bengal langur.
Simia, *Dufresn.* | P. anshises, *Ell.*
Musya, ... CAN. | Wanur, Makur, . MAHR.
Hanuman, . . . HIND.
Common in Bengal and Central India.
P. schistaceus, *Hodgs.*, *Horsf.*, Himalaya langur.
Kubup, ... BHOT. | Kamba suhu, . LEPCH.
Occurs throughout the Himalayas.
P. priamus, *Ell.*, *Blyth*, *Horsf.*, Gandangi, TEL., the Madras langur, inhabits the eastern side of the Peninsula and the north of Ceylon.
P. Johnii, *Jerdon*.
Simia Johnii, *Fisher*. | Sem. Johnii, *var. Martin*.
Semnopithecus Dussumierii, *Schinz*. | Sem. cucullatus, *Is. Geoff.* Sem. hypoleucos, *Bl.*, *Hors.*
The Malabar langur, of Travancore, Cochin, Malabar, and South Canara.
P. jubatus, *Jerdon* (Semnopithecus Johnii, *Wagner*, *Blyth*, *Martin*), the Neilgherry langur, of Neilgherries, Animallay, Pulney, and Wynad, not below 2500 and 3000 feet.
P. pileatus, *Blyth*, Sylhet, Cachar, Chittagong.
P. barbei, *Blyth*, interior of Tiperah Hills.
P. obscurus, *Reid*, Mergui.
P. Phayrei, *Blyth*, Arakan.
P. albo-cinereus, Malay Peninsula.
P. cephalopterus, *Blyth*, Ceylon.
P. ursinus, *Blyth*, Ceylon.
Several other species occur in the Malay islands.

Sub-Fam. Papioninæ, the true Baboons of Africa and monkey-like Baboons of India. Generic name Bandar.

Inuus silenus, *Jerdon*, lion-monkey.
Simia leonina, *Linn.* | Silenus veter, *Gray*, *Bly.*
Nil-bandar, . . . BENG. | Nella-manthi, . MALEAL.
Siah-bandar, . . HIND.
W. Ghats, Cochin, Travancore.
I. rhesus, *Jerdon*, Bengal monkey.
I. erythræus, *Schreb.* | Pithex oinops, *Hodg.*, *Hor.*
Morkot, ... BENG. Marcut-banur, . LEPCH.
Piyu, ... BHOT. Banur, Suhu, .
Inhabits nearly all India.
I. pelops, *Jerdon*, hill monkey (Macacus Assamensis, *M'Clelland*, *Horsf.*, *Blyth*), high up on the Mussoori Hills.
I. Assamensis, *Jerdon?* is Macacus Sikkimensis, *Hodg.?*
I. nemestrinus, *Jerdon*, Tenasserim, Malayana.
I. leoninus, *Blyth*, Arakan.
I. arctoides, *Is. Geoffroy?* Arakan.
Macacus radiatus, *Jerdon*, Madras monkey.
Simia sinica, *Linn.*, *Ell.*, *Blyth*, *Horsf.*
Munga, ... CAN. Wanur, MAHR. of SYKES.
Makadu, ... MAHR. Vella munthi, . . TAM.
Kerda, MAHR. of GHATS. Koti, ... TEL.
All over Southern India.
M. pileatus, *Shaw*, Ceylon.
M. carbonarius, *F. Cuvier*, Burma.
M. cynomolgos, *Linn.*, Burma.

Fam. Lemuridæ, the Lemurs, mostly of Madagascar, one genus of Africa, and two or three from India and Malayana. Cheiromys, indris, lemur, and lichanotus are Madagascar forms.

Nycticebus tardigradus, *Jerdon*.
Stenops Javanicus, *Auct.* | N. Bengalensis, *G.*, *H.*, *Bl.*
Lajja banar, . . BENG. | Slow-paced lemur, . ENG.
Lajjawoti banar, . ,, | Sharmindah billi, . HIND.
Found in Bengal, Rungpur, Dacca.
N. Javanicus, *Blyth?* of Java.
Loris gracilis, *Jerdon*, Lemur Ceylonicus, *Fischer*, *Bly.*
The slender lemur, . ENG. Tevangar, TAM.
Sloth of . . MADRAS. Dewantsi pilli, . TEL.
Found in Ceylon and Southern India.
Tarsium, a genus of Java.

Fam. Galeopithecidæ, Flying Lemurs.

Galeopithecus, *sp.*, natives of Malayana, form a link to the frugivorous bats. They have pectoral mammæ. They have a membrane connecting their limbs, but have not the power of sustaining flight. They are nocturnal and insectivorous, and sleep with their heads down.

SUB-ORDER, CHEIROPTERA, Bats.

Fam. Pteropodidæ, Frugivorous Bats of Malayana, Ceylon, India, Burma, Malacca, Java.

Pteropus Edwardsi, *Jerd.*, large fox bat, flying fox.
Pt. medius, *Temm.* | Pt. Assamensis, *M'Clelland*, *Blyth.*
Pt. leucocephalus, *Hodg.*
Badul, ... BENG. War-baggul, . . MAHR.
Toggul bawali, . . CAN. Sikat yelli, . . TEL.
Gadal, Bar-bagal, HIND. Siku rayi, . . ,,
Found in Ceylon, India, and Burma.
Pt. Leschenaultii, *Jerdon*.
Pt. seminudus, *Kelaart.* | Fulvous fox bat, . ENG.
Madras, Carnatic, and Trichinopoly.
Pt. edulis, Java and Malacca.
Pt. Dussumierii, *Is. Geoff.*, continent of India?
Cynopterus marginatus, *Jerdon*, small fox bat.
C. affinis, *Gray.* | Pt. tittæcheilus, *Temm.*, *Ell.*, *Bly.*, *Horsf.*
Pteropus pyrivorous, *H.*
Cham gadal, . . BENG. | Gadal, ... HIND.
Throughout all India and Ceylon.
Macroglossus minimus (*Jerdon*, the Pteropus minimus, *Auctorum*), Tenasserim and Malayana.

Fam. Vampyridæ.

Sub-Fam. Megadermatinæ, Vampire Bats.

Megaderma lyra, *Jerdon*.
M. schistacea, *Hodgs.*, *Bly.*, *Horsf.* | M. Carnatica, *Ell.*
Large-eared vampire bat, over all India.
M. spectrum, *Jerdon*, Kashmir vampire bat.
M. Horsfieldii, *Blyth*, Tenasserim.
M. spasma, *Linn.*, Ceylon, Malayana.

Sub-Fam. Rhinolophinæ, Leafy-nosed Bats.

Rhinolophus perniger, *Jerdon*, *Hodg.*, *Blyth* (R. luctus, *Temm.*), large leaf bat of Nepal? Malabar? Java? Darjiling.
R. mitratus, *Blyth*, mitred leaf bat, Chybassa, Mussoori, Central India.
R. tragatus, *Hodg.*, *Blyth*, dark-brown leaf bat of Nepal, Mussoori.
R. Pearsoni, *Horsf.*, *Blyth*, Darjiling, Mussoori.
R. affinis, *Horsf.*, *Blyth.*
R. rubidus, *Kelaart.* | R. cinerasceus, *Kelaart.*
Malabar? Ceylon, Burma, Malayana.
R. rouxi, *Temm.*, *Blyth* (R. lepidus, *Bly.*), rufous leaf bat of Malabar, Calcutta, Colgong, Mussoori.
R. macrotis, *Hodg.*, *Bly.*, large-eared leaf bat, Himalaya, Nepal, Mussoori.
R. subbadius, *Hodg.*, *Bly.*, bay leaf bat, Nepal, Himalaya.
R. brovitarsus, *Bly.*, Darjiling.
Other species of Rhinolophus occur in the Malayan islands, China, and Japan.
Hipposideros armiger, *Bn. Hn.* (H. nobilis, *var*, *Blyth*), large horse-shoe bat, Nepal, Mussoori, Darjiling.
H. lankadeva, *Kel.*, Ceylon.
H. nobilis, *Cantor*, Burma, Ceylon, and Malay Peninsula.
H. speoris, *Bl.*, *El.*, *Jerdon*.
H. apiculatus, *Gray.* | H. Dukhunensis, *Sykes.*
H. penicillatus, *Gray.*
India generally, Ceylon, Archipelago.

H. cinerasceus, *Bly.*, ashy horse-shoe bat, Panjab, Salt Range.
H. murinus, *Jerdon* (Rhinolophus fulgens, *Ell.*, *Blyth*), little horse-shoe bat, S. India, Ceylon, Nicobars, Burma, Malayana.
H. larvatus, *Horsf.*, Burma, Malayana, Sylhet.
H. insignis, nobilis, diadema, and galeritus, *Cantor*, are from the Malay Peninsula.
Cœlops Frithii, *Bly.*, tailless bat, Sunderbans.
Rhinopoma Hardwickii, *Gray*, *Blyth*, long-tailed leaf bat, all India, Burma, Malayana.
Nycteris Javanica, *Geoff.*, Java, Malacca.

Fam. Noctilionidæ.

Sub-Fam. Taphozoinæ.

Taphozous longimanus, *Hard.*, *Blyth.*
T. brevimanus, *Blyth.* | T. fulvidus, *Blyth.*
T. Cantori, *Blyth.* | Long-armed bat.
All India.

T. melanopogon, *Temm.*, *Horsf.*, black-bearded bat of Canara and Malayana.
T. saccolaimus, *Temm.*, *Blyth.*
T. crassus, *Blyth.* | T. pulcher, *Elliot.*
White-bellied bat of Madras and Malayana.
T. bicolor, *Temm.*, E. Indies?
Emballonura, *sp.*, from Java.

Sub-Fam. Noctilioninæ.

Nyctinomus plicatus, *Jerdon.*
Vespertilio plicatus, *Buch.*, *Bly.* | N. dilatatus, *Horsf.*
N. Bengalensis, *Geoff.* | N. tenuis, *Horsf.*
The wrinkled-lip bat of Madras, Calcutta.
Cheiromeles torquatus, of Java.

Fam. Vespertilionidæ.

Sub-Fam. Scotophilinæ.

Scotophilus serotinus, *Jerdon*, silky bat.
Vespertilio noctula, *Geoff.* | V. serotinus, *Schr.*
Europe, Himalaya, Tyne Range beyond Mussoori.
S. Leisleri, *Jerdon* (Vespertilio dasycarpus, *Leisleri*, *Blyth*), hairy-armed bat, Tyne Range, Himalaya.
S. pachyomus, *Jerdon*, the thick muzzled bat of India?
S. Coromandelianus, *Jerd.* (Kerivoula Sykesii, *Gray*, *Ell.*), Coromandel bat of all India.
S. lobatus, *Jerd.* (Vespertilio abramus, *Temm.*), the lobe-eared bat of India.
S. fuliginosus, *Jerd.* (Nycticejus atratus, *Blyth*), the smoky bat of Nepal.
S. fulvidus, *Ell.*, Tenasserim.
S. pumiloides, China.
S. Hodgsonii, Calcutta.
S. falcatus, India.
S. fulvus, Madras, Java.
Noctulinia noctula, *Gray*, Vespertilio lasiopterus, *Sch.*, V. altivolans, *White*, V. labiata, *Hodgs.*, *Blyth.*
The noctule bat of England, Nepal. Flies high.
Nycticejus Heathii, *Horsf.*, *Bl.*, large yellow bat, Southern and Central India.
N. luteus, *Blyth* (N. flavcolus, *Horsf.*), Bengal yellow bat, all India, Assam, Burma.
N. Temminckii, *Jerd.*
Vespertilio belanger, *Geoff.* | V. noctulinus, *Is. Geoff.*
The common yellow bat of India, Burma, Malayana.
Nycticejus castaneus, *Gr.*, *Bly.*, chestnut bat of Bengal, Burma, Malayana.
N. atratus, *Blyth* (Scotophilus fuliginosus, *Bly.*), sombre bat of Darjiling.
N. canus, *Blyth* (Scotophilus Maderas-patanus, *Gray*), hoary bat of all India.
N. ornatus, *Blyth*, harlequin bat, Darjiling.
N. nivicolus, *Hod.*, *Horsf.*, alpine bat, near the snows of Sikkim.

Sub-Fam. Vespertilioninæ.

Lasiurus Pearsoni, *Horsf.*, *Bl.* (Noctulinia lasiura, *Hodgson*), the hairy-winged bat of Darjiling.
Murina suillus, *Jerd.*
N. lasiura, *Hodg.* | L. Pearsoni, *Bl.*
The pig bat of Darjiling, Malayana.
Murina Formosa, *Jerd.*, the beautiful bat.
Vespertilio Formosa, *H.* | Nycticejus Tickelli, *Blyth.*
Kerivoula Formosa, *Gr.* | N. isabellinus, *Horsf.*
Central India, Nepal, Sikkim, Darjiling.
Kerivoula picta, *Jerd.* (Vespertilio kerivoula, *Boddaert*), painted bat of all India, Burma, Malayana.
K. pallida, *Blyth*, the pale-painted bat of Chybassa.
K. papillosa, *Jerd.*, the papillose bat of Ceylon, Calcutta, Java, Sumatra.
K. tenuis? *Tomes* (Vespertilio tenuis), Java, Sumatra.
K. Hardwickii, *Tomes* (Vespertilio Hardwickii), Java, Sumatra.
Vespertilio caliginosus, *Tomes*, mustachoed bat of India.
V. Siligorensis, *Hodg.*, *Horsf.*, Terai bat, Siligori in the Sikkim Terai.
V. Darjilingensis, *Hodg.*, Darjiling bat, like V. mystacinus of Europe.
V. Blythii, *Tomes*, Nasseerabad.
V. adversus, *Blyth*, *Horsf.*, Malayan bat of Ceylon, Calcutta, Burma.
V. Horsfieldii, *Temm.* (V. tralatitius, *Horsf.*), Malayan Peninsula and Java.
Myotis murinus, *Jerd.* (Vespertilio murinus, *Geoff.*), mouse-like bat of Europe, Mussoori.
M. Theobaldi, *Blyth* (M. pallidiventris, *Hodg.*, *Blyth*), mouse bat of Kashmir.
M. parvipes, *Blyth* (M. pipistrellus, *Bly.*), small-footed mouse bat of Mussoori.
M. lepidus, *Blyth*, Kandahar.
M. Berdmorei, *Blyth*, Tenasserim.
Plecotus auritus, *Jerd.*
P. homochrous, *Hodg.* | P. Darjilingensis, *Hodg.*
Long-eared bat of Darjiling.
P. Timorensis, *Geoff.*, Timor.
Barbastellus communis, *Gr.*, *Bl.*
Vespertilio barbastellus, *Schr.* | B. Daubentoni, *Bell.*
Barbastelle bat of Himalaya, Mussoori, Nepal.
B. leucomelus, *Jerd.* (Vespertilio leucomelus, *Ruppell*), Red Sea.
B. macrotis, *Jerd.* (V. macrotis, *Temm.*), Sumatra.
Nyctophilus Geoffroyi, *Bl.*, *Leach*, the large-eared leaf bat of Europe, Australia, Mussoori.

ORDER, INSECTIVORA, Insectivorous Mammals.

Fam. Talpidæ, Moles.

Talpa micrura, *Hodg.*, *Blyth* (T. cryptura, *Blyth*).
Biyu kantyem, . BHOT. | Pariam, . . . LEPCH.
Nepal, Sikkim.
T. macrura, *Hodg.*, long-tailed mole, Sikkim.
T. leucura, *Blyth*, Sylhet, Tenasserim.
T. mogura, *Temm.*, Japan.
Urotrichus talpoides, Japan.

Fam. Soricidæ, Shrews.

Sorex cærulescens, *Shaw*, *Blyth*, musk rat, musk shrew.
S. Indicus. | S. Sonnerati, *Geoff.*
S. giganteus. | S. myosurus, *Gray.*
Sondeli, ... CAN. | Chachundi, . . HIND.
All India.
S. murinus, *Lin.*, *Blyth.*
S. myosurus, *Pallas.* S. viridescens, *Blyth.*
S. Swinhæi, *Blyth.* Mouse-coloured shrew.
S. India, Bengal, Burma, Malayana, China.
S. nemorivagus, *Hodgson* (S. murinus, *Horsf.*), Nepal wood shrew of Nepal and Sikkim.
S. Griffithii, *Horsf.*, Khassya Hills.
S. serpentarius, *Is. Geoff.* (S. Kandianus, *Kelaart*), rufescent shrew of Ceylon, S. India, Burma, Tenasserim.
S. heterodon, *Blyth*, Khassya Hills.
S. saturatior, *Hodg.*, Darjiling.
S. Tytleri, *Blyth*, Dehra Doon.
S. soccatus, *Bly.*, *Hodgson*, hairy-footed shrew of Nepal, Sikkim, Mussoori.
S. niger, *Ell.*, *Horsf.*, Neilgherry wood shrew.
S. leucops, *Hodgs.*, long-tailed shrew, Nepal.
S. Hodgsonii, *Blyth*, Nepal pigmy shrew.
S. Perroteti, *Durcrnoy*, pigmy shrew of Mysore, Neilgherries, Dekhan.
S. micronyx, *Blyth*, small-clawed pigmy shrew of Western Himalaya.
S. melanodon, *Blyth*, black-toothed pigmy shrew of Calcutta.
Hodgson described Sorex Sikkimensis, homourus, oligurus, macrurus, holo-sericeus, and tenuicauda of Darjiling.
Sorex ferrugineus, montanus, Kelaarti, purpurascens, *Temp.*, and Horsfieldii, *Tomes*, of Ceylon.

S. fuliginosus, *Blyth*, and S. nudipes, *Blyth*, Tenasserim.
S. atratus, *Blyth*, Khassya.
S. albinus, *Blyth*, China.
S. pulchellus, *Licht.*, Central Asia.
Soriculus nigrescens, *Jerd.*
Corsira, *Gray, Blyth.* | S. soccatus, *Hodg.*
S. Sikkimensis, *Hodg.* | Ting-zhing, . . . BHOT.
S. aterrimus, *Blyth.* | Tang-zhing, . . . LEPCH.
Mouse-tailed shrew of Sikkim, Nepal.
Crossopus Himalaicus, *Gray.*
Choopitsi, . . BHOT. | Oong-lagniyu, . LEPCH.
The Himalayan water shrew of Sikkim.
Corsira alpina, *Jerdon* (Sorex caudatus, *Hodgson*, *Bly.*), alpine shrew of Europe and Sikkim.
C. Newera-elia, *Kel.*, of Ceylon.
Feroculus macropus, *Kel.* (Sorex macropus, *Blyth*), Ceylon.
Myogalea (mygale) or musk rat of N. America. The scaly tails of this shrew are imported into India.

Fam. Erinaceidæ, Hedgehogs.

Erinaceus collaris, *Gray, Blyth* (E. Grayii, *Bennett*), N.W. Provinces, Panjab, Sind.
E. micropus, *Blyth.*
E. nudiventris, *Horsf.* | E. collaris, *Gray.*
South India, Neilgherries.
E. mentalis, *Gray*, India; E. spatangus, *Benn.*, Himalaya; E. Grayii, *Benn.*, Himalaya; E. auritus, *Pallas*, Central Asia; E. megalotis, *Blyth*, Afghanistan.

Fam. Tupaidæ.

Tupaia Elliotti, *Water., Bl.*, Madras tree shrew, Eastern Ghats.
Tupaia Peguana, *Less.*
T. Belangeri, *Wagner.* | Sikkim tree shrew, . ENG.
T. ferruginea, *var. Blyth.* | Kalli-tang-zhing, LEPCH.
Sikkim.
T. Javanica, Java; T. tana, Sumatra; T. murina, Borneo; T. ferruginea, *Blyth*, Malayana.

ORDER, CARNIVORA, or Beasts of Prey.

Feræ normales, *Gray.* | Secundates, *Blyth.*

TRIBE, PLANTIGRADA, walk on sole of foot.

Fam. Ursidæ, the Bears.

Ursus isabellinus, *Hors., Blyth.*
U. Syriacus, *Hemp?*
Barf ka reetch, . HIND. | Harput, . . . KASH.
Bhalu, ... ,, | Drin-mor, . LADAKH.
The snow bear, brown, yellow, grey, silver bear of Himalayas.
Ursus Tibetans, *F. Cur., Blyth.*
U. torquatus, *Schinz.* | U. ferox, *Robin.*
Bhalak, . . . BENG. | Bhalu, ... HIND.
Thom, ... BHOT. | Sona, ... LEPCH.
Himalayan black bear, Himalaya, Assam.
U. Malayanus, Burma, Arakan, the Malay Peninsula.
U. euryspilus of Borneo.
U. labiatus, *Ell., Blain, Blyth.*
Bradypus ursinus, *Shaw.* | Melursus lybicus, *Meyer.*
Karadi, Kaddi, . . CAN. | Aswail, . . . MAHR.
Yerid, ... GERD. | Riksha, . . . SANSK.
Banna, ... KOL. | Elugu, ... TEL.
Indian black bear or sloth bear, has a V mark on breast. All India.
Ailurus fulgens, *F. Cur., Bly., Hard.*
A. ochraceus, *Hodgs.*
Wahdonka, . . BHOT. | Wah, ... NEPAL.
Sunnam, Suknam, LEPCH. | Negalya-ponya, . ,,
Red cat bear, S.E. Himalaya, Nepal, Sikkim.

TRIBE, SEMI-PLANTIGRADA, *Blyth* (Mustelidæ of *Blyth*), Badgers, Weasels, and Otters.

Fam. Melididæ, Badger-like animals.

Arctonyx collaris, *Cuv., Blyth.*
Mydaus, *Gray, Hardw.* | A. isonyx, *Hodg.*
Bhalu-sur, . . HIND. | Bear pig, Hog badger.
Nepal, Sikkim, E. Bengal, Assam, Sylhet, Arakan.
Arctonyx taxoides, *Blyth*, of Sylhet, Assam.
Mellivora Indica, *Jerdon.*
Ursitaxus inauritus, *H.* | M. ratel, *Blyth.*
Ratelus Indicus, *Schin.*

Bhajrubhal, . . BENG. | Tavakaradi, . . . TAM.
Biju, ... HIND. | Biyu-khawar, . . TEL.
Indian badger. All India.
Meles albo-gularis, *Blyth*, Tibet.
Taxidea leucura, *Blyth*, Tum-pha of Tibet.
Helictis Nepalensis, *Jerd.*
Gulo, *Hodg., Blyth.* | Oker, ... NEPAL.
Nepal wolverine, Nepal.
H. orientalis, Malayana.

Fam. Mustelidæ, Weasels and Martens.

Martes flavigula, *Jerdon*, Indian marten.
Mustela Hardwickii, *H.* | Gatidictis chrysogaster,
M. Gwatkinsii, *Jardine.* | *Jardine.*
Huniah, Aniar, BHOT. | Sakku, . . LEPCH.
Tuturala, KAMAON. | Mal sampra, NEPAL.
India, Malayana.
Martes toufœus, *Hodgson*, Tibet, Ladakh, at 11,000 feet, Afghanistan, Peshawur, Qu.? M. abietum of Europe.
Mustela zibellina, *Blyth*, Tibet sable marten.
M. sub-hemachalana, *Hodg., Blyth.*
M. humeralis, *Blyth.* | Kran, ... KASH.
Zimiong, . . . BHOT. | Sang-king, . . LEPCH.
Himalaya, Nepal, Kashmir.
M. erminra, the stoat, the ermine, W. Himalaya, Nepal.
M. kathiah, *Hodg., Blyth.*
M. auriventer, *Hodg.* | Kathiah nyal, . NEPAL.
Yellow-bellied weasel of Nepal, Himalaya, Bhutan.
M. strigidorsa, *Horsf., Hodgs.*, striped weasel of Sikkim.
M. Horsfieldii, *Gary*, Bhutan.
M. temon, *Hodg.*, Tibet.
M. nudipes, *F. Cur.*, Java, Malayana.
M. Sarmatica, *Pallas*, North and Central Asia, Afghanistan.
M. Sibirica, *Pallas*, China, is M. Hodgsoni of Gray.
M. larvata (Putorius Tibetanus, *Hodgs.*), Tibet.

Sub-Fam. Lutrinæ, Otters.

Lutra nair, *F. Cur.*
Lutra Chinensis, *Gray.* | L. Tarayensis, *Hodgson*,
L. Indicus, *Gray.* | *Ell., Blyth.*
Nir nai, ... CAN. | Ud, Hud, . . HIND.
Indian otter, . . ENG. | Udni, Udbilli, . . ,,
Pani kuta, . . HIND. | Jal-manjer, . . MAHR.
Ceylon, India, Burma, Malayana.
L. vulgaris, *Erxleben, Bl.* (L. monticola, *Hodgson?*), the hill otter of Inner Himalayas.
L. auro-brunnea, *Hodgs.*, Himalayas, Neilgherries? Ceylon mountains?
L. monticola, *Hodgs.* (L. vulgaris apud *Jerdon*), of Himalaya.
L. barang, *Raffles* (Barangia varang, *Gray*), Malay Peninsula.
L. kutab, *Gray, Hugel*, Kashmir.
L. leptonyx, *Horsf., Blyth*, clawless otter.
Aonyx Horsfieldii, *Gray.* | Aonyx Sikkimensis, *Hody.*
Lutra indigitata, *Hodg.* |
Chusam, . . . BHOT. | Suriam, . . . LEPCH.
Himalaya.

TRIBE, DIGITIGRADA, walk on the digits, typical carnivora, very quick and speedy.

Fam. Felidæ or Cat tribe, lions, tigers, leopards, cats, and lynxes.

Of these, the lion, pard, cheeta, chaus or wild cat, and the caracal or lynx, are common to Africa and India. Seven, viz. the tiger, pard, clouded leopard, marbled tiger cat, large tiger cat, leopard cat, and bay cat, are common to India, Assam, Burma, and Malayana, and three of the seven, viz. the clouded cat, marbled cat, and bay cat, occur in the S.E. Himalaya. One, viz. the ounce, is an outlayer of Central Asia; and only three, the F. Jerdoni, F. rubiginosa, and F. torquata, appear peculiar to the Peninsula of India.

Felis leo, *Linn.*, the Asiatic lion.
F. Asiaticus, F. Gujrattensis, *Smee., Benn., Blyth.*
Shingal, ... BENG. | Sher, Babbar sher, . SIND.
Untia-bag, HIND. in GUJ. | Singha, ... ,,
Allahabad, Jubbulpur, Cutch, Gujerat, Gwalior.

MAMMALIA.

Felis tigris, *Linn.*, the tiger.
Tigris regalis, *Gray, Blyth.*

Go-vagh, . . . BENG. | Bag, Bagni, HIND.
Tut, . . BHAGULPUR. | Sela-vagh, ,,
Tukh, ... BHOT. | Suhtong, . . LEPCH.
Huli, ... CAN. | Wuhag, . . MAHR.
Nahar, . CENTRAL INDIA. | Puli, ... TEL.
Nongya-chor, GORAKHPUR. | Tagh, . . TIB.
All India, up to 6000 or 7000 of Himalayas, measures up to 10 feet 2 inches long.

F. pardus, *Linn.*, the pard.
F. leopardus, *Schreber.* | Leopardus varius, *Gray.*

Var. a. Larger, the panther.

F. pardus, *Hody.* | F. leopardus, *Temm.*

Honiga, ... CAN. | Chita, Chita-bag, HIND.
Burkal, . . . GONDI. | Adnara? . . . ,,
Bay-hira, . . HIMALAYA. | Asnea, ... MAHR.
Tahir-hay, . . ,, | Chinna puli, . . TEL.
Tendwa, . . . HIND. | Sik, ... TIB.
India.

Var. b. Smaller, the leopard.

F. leopardus, *Hodg.* F. pardus, *Temm.* | F. longicaudata, *Valenc.*

Bibla, ... BAORI. | Bibia-bag, . . HIND.
Kerkal, . . . CAN. | Ghur-hay, . . SIMLA.
Gor-bacha, . . HIND. | Dheer-hay, . . . ,,
Borbacha, . . ,,
India.

F. melas, *Peron*, black leopard (F. perniger, *Hodg.*), Ceylon, India, Himalaya, Assam, Malayana.
F. uncia, *Schreber, Blyth, Hodg.*, ounce.

F. uncioides, *Hodg.* F. pardus, *Pallas.* | F. irbis, *Ehrenberg.*

Sah, ... BHOT. | Pah-le, ... LEPCH.
Snow leopard, . . ENG. | Burrel-hay, . . SIMLA.
Thur-wag, . KANAWAR. | Iker, ... TIB.
Himalaya, at great elevations, and on Tibetan side.

F. diardi, *Desm., Blyth.*

F. macrocelis, *Temm., Horsf.* | F. nebulosa, *Griff.* F. macroceloides, *Hodg.*

Clouded leopard, . ENG. | Lam-chittia of the KHAS.
Zik, ... BHOT. | Tungmar, . . LEPCH.
S.E. Himalaya, Nepal, Sikkim, Burma, Sumatra, Java, Borneo.

F. nebulosa, *Jerdon* (F. diardi, *Blyth*), Himalaya.
F. viverrina, *Benn., Blyth*, large tiger cat.

F. viverricops, *Hodg., Hardw.* F. Celidogaster, *Temm., Gray, Blyth.* | F. Himalayana, *Jardine.* F. Bengalensis, *Buch. Ham.*

Bag-dasha, BENG., HIND. | Mach-bagrul, . . HIND.
Bengal, Burma, Malayana, China.

F. marmorata, *Martin, Blyth.*

F. Charltoni, *Gr., Blyth.* F. Ogilbii, *Hodg.* F. Duvancelli, *Hodg.* | F. diardi, *Jerd.* Leopardus dosul, *Hodg.*

Marbled tiger cat of Sikkim, Assam, Burma, Malayana.

F. Bengalensis, *Desmoulins.*

F. Sumatrana, *Horsf.* F. Javanensis, *Jerd., Hor.* F. minuta, *Temm.* F. undulata, *Schinz.* F. Nepalensis, *Hodg.* | F. pardichrous, *Hodg.* Leopardus Chinensis, *Gr.* L. Reevesii, *Gr.* L. Elliotii, *Gr.* Chaus servalinus, *Gr.*

Leopard cat, . . . ENG. | Wagati, . . . MAHR.
Hilly regions of Ceylon, India, Himalaya, Tibet, Assam, Burma, Malayana, Sumatra, Java. Fierce and variable.

F. Nepalensis, *Vigors*, probably a hybrid.
F. Jerdoni, *Blyth* (F. rubiginosa, *Geoff. ?*), lesser leopard cat, Peninsula of India.
F. aurata, *Temminck*, Moormi cat.

F. Moormensis, *Hodg.* F. Temminckii, *Vigors., Horsf., Blyth.* | F. nigrescens, *Hodg.*

Black cat or bay cat of Nepal, Sikkim.

F. rubiginosa, *Is. Geoff., Belanger.*

F. Jerdoni, *Blyth.* | Namalli pilli, . . TAM.
Rusty spotted cat of Ceylon, India Peninsula.

F. planiceps, *Vigors*, Malayana.

b. LYNXINE GROUP.

F. torquata, *F. Cuv., Blyth.*

F. ornata, *Gray, Hardw., Blyth.* F. servalina, *Jardine.* | F. Huttoni, *Blyth.* Leopardus inconspicuus, *Gray.*

Spotted wild cat of Salt Range to Central India.

F. chaus, *Guld, F. Cuv., Blyth*, jungle cat.

F. affinis, *Gray, Hardw.* F. kutas, *Pears.* Chaus lybicus, *Gray.* | F. Jacquemontii, *Is. Geoff.* F. (lynchus) erythnotis, *Hodg.*

B. Australis, S. Atlantic, S. Seas.
B. mysticetus, Arctic Seas, Greenland whale.
B. Biscayensis, N. Atlantic.
B. antipodarum, S. Pacific.
B. antarctica, S. Seas.
B. Novæ Zelandiæ, S. Seas.
Neobalæna marginata, Australian and N. Zealand Seas.
Rachianectes glaucus, N. Pacific.
Megaptera, *sp.*, humpbacks, all seas.
Balænoptera borealis, Indica, musculus, rostrata, Sibbaldii, called rorquals, finners, and razorbacks.
B. Indica is of the Bay of Bengal, near Ceylon.

SUB-ORDER, ODONTOCETI, the Delphinoidea or Toothed Whales.

Fam. Physeteridæ. *Sub-Fam.* Physeterinæ.

Physeter macrocephalus.
P. simus, *Owen* (Euphyseter simus), Bay of Bengal.
Kogia breviceps, Bay of Bengal, N. and S. Pacific.

Sub-Fam. Ziphiinæ.

Berardius arnouxi, N. Zealand.

Fam. Platanistidæ.

Platanista Gangetica, *Jerd.*
Delphinus rostratus, *Shaw.*, *Hardw.*

Sishuk, ... BENG.	Susa, Sons, Susu, HIND.
Gangetic porpoise, ENG.	Sisumar, . . . SANSK.

Ganges, Jumna, Gogra, Brahmaputra.

P. Indi, *Blyth*, Indus porpoise of the river Indus.

Fam. Delphinidæ.

Monodon monoceros, narwhal, Arctic Seas.
Delphinapterus leucas, Arctic Seas.
Phocæne communis, porpoise.
P. melas, Japan.
P. brevirostris, Bay of Bengal.
Orcella brevirostris, Bay of Bengal.
O. fluminalis, Irawadi.
Orca, *sp.*, Grampuses, all seas; the number of species uncertain.
Orca gladiator?
Globiocephalus Indicus, *Blyth*, Indian ca'ing whale, Bay of Bengal.
Grampus griseus, N. Atlantic.
G. Richardsoni, Cape.

Fam. Delphinidæ, Porpoises.

Delphinus perniger, *Ell.*, *Blyth*, Bay of Bengal.
D. plumbeus, *Dussumier*, Malabar coast.
D. eurynome, *Gray*, Bengal Bay.
D. godama, Bengal Bay.
D. sandama, *Owen*, Bengal Bay.
D. lentiginosus, *Owen*, Bengal Bay.
D. maculiventer, *Owen*, Bengal Bay.
D. fusiformis, *Owen*, Bengal Bay.
D. pomeegra, *Owen*, Bengal Bay.
D. delphis, Atlantic, Mediterranean dolphin.
D. Forsteri, Australian Seas.
D. Bairdii, N. Pacific.
D. Sinensis, Chinese Seas.
D. albirostris, N. Atlantic.
D. Peronii, S. Seas.
D. tursio, British Seas.
D. leucopleuris, N. Atlantic.
Steno frontatus, *Cuvier*, Bengal Bay.
S. attenatus, *Gray*, Bengal Bay.
Neomeris phocœnoides, *Duss.*, Bengal Bay.

SUB-ORDER, SIRENIA, *Ill.*, Herbivorous Cetacea.

Halicore dugong, *Jerd.*
Duyang trichechus, *Erxl.*, *Bly.*, *F. Cuv.*
H. cetacea, *Illiger.* | H. Indica, *Desmarest.*
Dugong, ... ENG. | Talla maga, . . SINGH.
Ceylon, Andamans, Malayana, Singapore, marine lagoons of Malabar.
H. tabernaculi, *Ruppell*, Red Sea.
H. Australis, Australia.

The dugongs feed on seawater algæ. They inhabit the shallow bays and creeks of the Red Sea, the east coast of Africa, Ceylon seas, and islands of the Bay of Bengal, the Eastern Archipelago, and north coast of Australia, and are never met with in the high seas far away from the shores.

ORDER, RODENTIA, the Gnawing tribe, Glires of authors.

Fam. Sciuridæ, or Squirrels.

Sciurus Malabaricus, *Schintz.*
S. maximus, *Bly.*, *Horsf.* | Jangli gilhri, . . HIND.
Malabar, Wynad, Neilgherries, Travancore.
S. maximus, *Schr.*, *Ell.*, *Blyth.*

MAMMATA BHATTA of Kashmir, author of the Kavya Prakasa, a work on poetry and rhetoric.

MAMMEA AFRICANA. *Sab.* From Sierra Leone and the Niger. Delicious tropical fruits. M. Americana, the Mammee apple or wild apricot of S. America, might be introduced into India. The gum of the American Mammee is used to destroy the chiggers (Culex penetrans) in the feet of the Negroes.

MAMMET. This word, used by Shakespeare in Romeo and Juliet,—

'A whining mammet in her fortunes tender,'

similarly to Spenser in his Faerie Queen,—

'And oftentimes by Termagaunt and Mahomed swore,'

was meant to apply to Mahomed, in an age when Muhammadans were supposed to be idolators.

MAMMOTH, Elephas primogenius, the mammoth. One was discovered in 1799 by a Tungus, near Lake Oncoul in Siberia. It is surmised that in the north the mammoth was covered with long hair. They are extinct.—*Mangin.*

MAMMOTH TREE, or Wellingtonia (Sequoia gigantea), of California. The Wellingtonia was first found in the Sierra Nevada, at a spot called Calaveros Grove, near the sources of the Stanislaus river, at nearly 4600 feet above the sea. It occurs in other localities in the same region. The Mariposa grove numbers about 400 trees, the Fresno grove about 600. In the Calaveros or Mammoth Tree Grove, most of the trees attain the average height of 300 feet. A tree has been described 450 feet in height, with a trunk 116 feet in circumference.

Dr. Bigelow describes a tree which had been felled, which required five men twenty-two days to perform the operation. After it was severed at the stump, the same five men were occupied two days in driving wedges with a battering-ram to throw it out of its equilibrium sufficiently to make it fall. It might be introduced into India.

MAMOOL. ARAB. Usage, custom. Immemorial custom is declared by Menu (i. pp. 108-110) to be the root of all law. It is the vital spirit of the Hindu system, and the immediate cause of the permanence of their institutions.—*Elph.* p. 48.

MAMUN, son of Harun-ur-Rashid, was the fourth khalif of the house of Abbas. He reigned A.D. 813 to 833. He was the greatest of the khalifs of Baghdad. In A.D. 814 he caused a degree of the earth's surface to be measured on the sandy plains of Mesopotamia, between Palmyra and the Euphrates, by which 56·66 miles were fixed as the equivalent of a degree of the earth's circumference.—*Catafago.*

MAMUZAI, a branch of the Lashkarzai Orakzai. Also a subdivision of the Razar division of the Yusufzai plain. They rebelled during the mutiny of 1857, and were subdued.

MAN. ARAB., HEB., HIND., TAM.

Maund, ... ENG. | Manugu, ... TEL.
Mannah, ... HEB. | Mahana, . . . URIYA.

A measure of weight amongst the Hebrews, and now in India, but varying in quantity according to locality and the article weighed.

Bengal bazar man	= 40 seers = 82 lbs.		
„ factory man	= 74 lbs. 10 oz. 10·6 grs.		
Central India „	= 20 „		
Gujerat „	= 40 „	of less value.	
Bombay „	= 28 „	avoirdupois.	
Southern India „	= 25 „	„	

Bengal man of 1833 = 87⅜ lbs. avoirdupois.
Akbar's ,, = 34¾ ,, ,,
Mysore ,, =163 ,, ,,
Hebrew man or mannah = 13,125 grains or 1-14 lbs.

The man or maund weight, therefore, varies according to the article weighed. In the Panjab, villagers use a kucha man, which is only 13 to 20 seers, and the Lahori man is = 3 kucha maunds.

The man of the British Government is 82·6 lbs. In the time of the emperor Akbar, it is defined as 40 seers, each seer being 30 dam in weight. This gives 388,275 grains, about 55½ lbs.—*Wilson; Powell.* See Weights and Measures.

Man, a derivative root, means to think. From this we have the Sanskrit manu, originally thinker, then man. In the later Sanskrit we find derivatives, such as mânava, mânusha, manushya, all expressing man. In Gothic we find both man and mannisks, and in the modern German mann and mensch.

The question whether mankind consists of one or of several species, has of late years been much agitated by anthropologists, but those naturalists who admit the principle of evolution, though they may, for the sake of expressing their amount of difference, designate them as distinct species, nevertheless feel no doubt that all the races of man are descended from a single primitive stock. Virey held that there were six species or races; Jacquinot, three; Kant, four; Blumenbach, five; Buffon, six; Hunter, seven; Agassiz, eight; Pickering, eleven; Bory St. Vincent, fifteen; Desmoulins, sixteen; Morton, twenty-six; Crawfurd, sixty; and Burke, sixty-three.

Leibnitz and Lacepede classed the human race into Europeans, Laplanders, Mongols, and Negroes; Linnæus into white, red, yellow, and black; Kant into white, copper-coloured, black, and olive-coloured races; Blumenbach into Caucasians, Æthiopians, Mongols, Americans, and Malays; Buffon into Northern (viz. Laplander), Tartarian, South Asiatic, black, European, and American races; Prichard into Iranians (also Indo-Atlantics or Caucasians), Turanians (Mongolians), Americans, Hottentots and Bushmen, Negroes, Papuans (or woolly-haired tribes of Polynesia), and Alfourous (or Australians); and Pickering arranged them into whites, Mongolians, Malays, Indians, Negroes, Æthiopians, Abyssinians, Papuans, Negritos, Australians, and Hottentots.

Peschel, a recent writer, separates mankind into seven groups, races, sub-species, or species, viz. (1) the Australians and Tasmanians; (2) the Papuans of New Guinea and adjacent islands; (3) the Mongoloid nations, comprising the Asiatics of the continent, the Malayo-Polynesians, and the aborigines of America; (4) the Dravida of Western India of non-Aryan origin; (5) the Hottentots and Bushmen; (6) the Negroes; (7) the Mediterranean nations answering to the Caucasians of Blumenbach.

But although the existing races of man differ in many respects, as in colour, hair, shape of skull, proportions of the body, yet if their whole organizations be taken into consideration, they are found to resemble each other in a multitude of points. Europeans and the bulk of the Hindus belong to the same Aryan stock, and speak a language fundamentally the same, but they differ widely in appearance, which is supposed by Broca to have arisen through the Aryan branches having, during their wide diffusion, been largely crossed by various indigenous tribes. In the East Indies, where, amongst Hindus, the system of caste prevails and keeps each sub-species distinct, the Scythic Jat, the Rajput, the Brahman, the Turanian, and Helot races are seen to vary, from the black squat tribes of the mountains to the tall olive-coloured Brahman, with his intellectual brow, calm eyes, high but narrow head; and in the Further Indies, the Burman, the Malay, the Negrito or Negro, and Papuan are all at once distinguishable. Amongst Indian Muhammadans, too, as obtained from Arabia, Persia, and Scythia, and converts from Hinduism, where they have not intermarried, the distinctions are very marked.

Man was long supposed to have existed in the earth since about 6000 years, but it is now believed that he has existed from an incomparably greater period. The world appears as if it had long been preparing for the advent of man. At the present day, even the most distant races of man, with the exception of some Negro tribes, are much more like each other than is generally supposed. In India, a newly-arrived European cannot at first distinguish the various native races, though they soon appear to him extremely dissimilar; and the natives of India cannot at first perceive any difference between the men of several European nations. There are, however, marked distinctions. The Mongolian, the Negro, the Australian, and the Hottentot differ in a multitude of characters, some of slight, some of considerable importance, and are undoubtedly distinct species of the family of man, the Negroes of the present day being of the same form as those of 4000 years ago. The Malays and Papuans who live under the same physical conditions, differ greatly. The different races of man are distributed over the world in the same zoological provinces as those inhabited by distinct species and genera of mammals. This is manifestly the case with the Australian, Mongolian, and Negro races of man; in a less marked manner with the Hottentots, but plainly with the Papuans and Malays, who are separated by nearly the same line which divides the great Malayan and Australian provinces. The different species, however, mingle together and produce progeny with mixed characters. In Brazil is an immense mongrel population of Negroes and Portuguese. In Chili and other parts of South America, the whole population consists of Indians and Spaniards blended in various degrees, and with complex crosses of Negroes, Indians, and Europeans. Capt. Burton observes that the mixture of French with Indian blood produces a favourable progeny, but that the offspring of the Portuguese and of natives of the East Indies is coarse and dark-coloured. In S. America, on the contrary, the

offspring of the Portuguese and Indians are often fairer and never darker than that of the Indian. In one island of the Pacific is a small population of mingled Polynesian and English blood; and in the Viti Archipelago is a population of Polynesians and Negritos crossed in all degrees.

There are great differences in the physical structure of the races. As to height, the smallest among the peoples measured by Dr. A. Weisbach are the Hottentots (1286 millimetres). This is far behind any other people, as the next, the Tagals, are 1562. Then follow the Japanese (1569), the Amboinese (1594), Jews (1589), Zingani (1609), Australians (1617), Siamese (1622), Madurese (1628), South Chinese (1630), Nicobars (1631), Roumanians (1643), Sundanese (1646), Javanese (1657), Magyars (1658), Bugis (1661), North Sclaves (1671), North Chinese (1675), and Congo Negroes (1676). The longest measurements, however, are found among the Sandwich Islanders and Kanaks (1700 millimetres), Kafirs (1753), and the Maoris of New Zealand (1757). To compare these with the stature of European peoples, we find that that of the English and Irish is 1690 millimetres; the Scotch, 1708; Swedes, 1700; Norwegians, 1728; Danes, 1685; Germans, 1680; French, 1667; Italians, 1668; and, lastly, Spaniards and Portuguese, 1658.

The mental characteristics of different races are markedly dissimilar. The old Aryans designated natural phenomena or the forces of nature according to the impressions made by these on their senses. They soon forgot the origin of these terms, which gave rise to endless myths. The Semites, on the contrary, gave to their gods names referring to abstract qualities, such as El, the Strong; Bel or Baal, the Lord; Bel-samin, the Lord of Heaven; Moloch, the King; Eliun, the Highest; Ram or Rimmon, the Exalted. These terms, at first adjectives, became nouns, and the Jews forgot the derivation, and worshipped El and Baal as separate deities. The Semites, however, had an inherent tendency to spiritualize all things.

With the Hindus as with the Romans, there are domestic ceremonies when their youths and girls grow up. The dhoti of the Hindu men is an unseamed cloth worn by men as a wrapper around the lower limbs. It is kept up to the waist by a waist-belt of cord or of gold or silver, and recalls the Roman cingulum. And, as in Rome, when the ceremony of changing the toga prætexta for the toga virilis was performed, the aurea bulla was taken from the boy's neck and consecrated to the domestic Lar, so in India, at the ceremony of investiture with the sacred thread, an identical ornament, a hollow hemisphere of gold, hung from a yellow cotton thread or chain of gold, is taken from the boy's neck, and the sacred cord, the symbol of his manhood, is put on him.—*Birdwood, Indian Arts; Report, Brit. Association; Darwin, Animals and Plants; Origin of Species; Bopp, Glossarium Sanskritum; Muller's Lectures; Peschel.*

MANA, a pass in Garhwal district, North-West Provinces, over the crest of the main Himalayan range, dividing British territory from the Chinese empire. Elevation of Mana village above sea-level, 10,492 feet; of the pass, 18,000 feet. In the Mana pass is the temple of Badarinath. The people who occupy the Mana district are Bhots, dwelling in the passes and their neighbourhood at heights above 6000 feet.. The pass-men state that ridges which within the memory of man were covered with forest and pasture lands, are now covered with snow, showing the extension of the snow zone. The Niti pass on the Duli, a feeder of the Ganges, is the best, and the Juwar on the Gauri (Douli) pass, a feeder of the Sarda or Gogra, is the worst. Mana is on the Saraswati, and the Byans pass on the Kali.

The Bhot here, as elsewhere, is an agriculturist, and is assisted by slaves, who live under the roofs of their masters. The people in the Mana, Niti, Juwar, and Byans passes are supposed to be immigrants from Tibet who drove out an earlier body of occupants, and many of the chief families trace their origin to a Tibetan locality. The inhabitants of the Dharma pass are said to be a body of Mongols left in Kamaon by Timur. The Dharma inter their dead for a time, and in the month Kartik exhume and burn them, but the other pass-men burn their dead on their demise. The Dharma practise divination, taking their omens from the warm livers of sheep sacrificed for the purpose. The women of the Dharma and Byans passes dress alike, and these two clans eat the yak, and would eat the cow, while those of Mana, Niti, and Juwar abstain from beef of all kinds, and look down, as on an inferior caste, on the Dharma and Byans. The Juwar nearest India have the largest trade, and resort to an annual fair in September at Gartokh, the residence of the Lhassa viceroy. These passes are the roads from India to Nari or Gnari, Tibetan provinces of the Chinese empire. Immediately below the village of Mana is the Hindu shrine of Badarinath, dedicated to an incarnation of Vishnu, and one of the most sacred Hindu temples. The temple is built on the bank of the Bishen Ganga, immediately over the site of a hot spring, the existence of which no doubt led to the original selection of this remote spot. The rawal, or chief priest, is invariably a Namburi Brahman from Malabar, no other class of Brahman being allowed to touch the idol.—*Cunningham's Ladakh; Latham's Ethn.*

MANA. HIND. A platform erected in tall crops; on these people sit to frighten off birds, etc.

MANA or Manike. TEL. A measure of capacity in Telingana, 8 or 16 to a tum or t'hum.

MANAAR ISLAND, in the Gulf of Manaar, a dreary sandy waste, 14 miles long and 3¼ broad. The town is in lat. 8° 59′ N., and long. 79° 53′ 20″ E. Manaar, according to Sir J. E. Tennent (ii. p. 555), is the island of Epiodorus, which, according to the Periplus, was the seat of the pearl fishery. Manaar Gulf, separating Ceylon from the Peninsula of India, is so named from the island of Manaar near Ceylon, which, with that of Ramisseram near the continent, almost connect Ceylon to the Peninsula, the two islands receiving the name of Adam's Bridge. The gulf passage was deepened by a series of engineering operations.

MANAI. TAM. A ground, a land measure. At Madras, 24 manai, each of 2400 square feet, is the standard cawnee.

MANAK or Manik. HIND. A ruby; also any gem or precious stone.

MANAKARI, families in the Mahratta country who claim to be of Rajput descent.

MANAKHYALA, a town in Afghanistan. A

tope there was opened by General Ventura in April and May 1830.

MANAMADOO, in the district of Trichinoply, makes cloth very superior in quality, and used as clothing under the name of Manamadoo Sullah. That at Arnee, in the district of Chingleput, is known as Arnee Sullah.

MANANTODDY, Manantadi, or Manantawadi, a town in Malabar district, Madras, in lat. 11° 48′ N., and long. 76° 2′ 55″ E. Population (1871), 10,959.—*Imp. Gaz.*

MANAS, a river of Assam, which takes its rise far up in the Bhutan Hills, and flows south into the Brahmaputra. It enters the Brahmaputra in lat. 26° 15′ N., and long. 90° 41′ E., just opposite Goalpara town.—*Imp. Gaz.*

MANAS, an encyclopædical collection of all the Kirghiz mythological tales and traditions, brought down to the present period, and grouped round one person,—the giant Manas. Another epos, the Samyatei, serves as a continuation of the Manas, and is the Burut Odyssey.

MANASA, in Hindu mythology, the snake goddess. She is worshipped as a preservative against the bite of these reptiles, and is represented sitting on a water-lily environed with snakes. If a Hindu be bitten by one, incantations are pronounced to propitiate the favour of Manasa.—*Cole.* p. 338.

MANASA BUL, one of the most beautiful tarns in Kashmir. On its banks are the remains of the once noble palace and gardens of the famous Nur Jahan. The clearness of the water and the grandeur of the mountain scenery northwards, render this a most perfect little picture of Kashmir beauty.—*Adams.*

MANASA-PUTRA, the seven (or ten) mind-born sons of Brahma, also known as the Prajapati. Manasi, SANSK., spiritual.

MANASAROWARA, properly Manasa-sarovara, a lake in Tibetan territory beyond the great southern wall of the Himalayas, in about lat. 30° 8′ N., and long. 81° 53′ E. The lake lies to the south of the Kailas mountain, and, like that celebrated peak, occupies an important place in Hindu mythology. No river flows from the Manasarowara lake. Close to it is another lake, Ravana-hrada, from which the Sutlej flows. The Kailas mountain forms a great water-parting to the north of the southern range of the Himalaya. The Indus starts eastward from its northern slope; the Sutlej takes off to the south-west from its southern side, and the Tsan-pu or Brahmaputra flows eastwards from its eastern base. The Manasarowara formed a beautiful feature of the elysium of the Hindus, or Siva's paradise, on the Kailas mountain. It is one of the four lakes of which the gods drink.—*Imp. Gaz.*

MANATAPPAN, a caste of cultivators originally from Coimbatore, first settled in Palghat, and intermixed and often confounded with the Nairs.—*Wilson.*

MANAVA DHARMA SUTRA, the code of Menu; Menu's book on the Vedic rites; part of it has been published by Goldstucker.—*Dowson.*

MANAVALA, the head of the Tengala Vaishnava sect of the south of India.

MANBHOW, dissenters from Hinduism in Berar and the Dekhan. They wear a black dress, and are of quiet, inoffensive manners. These Hindu religious sectaries are worshippers of Krishna, and about the year 1830 were described by Captain Mackintosh. They are under a vow of celibacy, and elect young people into their order; but there are errors, and if pregnancy occur, the parties are allowed to withdraw. The sect was formed by Krishna Bhat. Their chief locality is in the country between the Syhadri Hills and the east Gond country on the east of Berar, and between the Kistna river and Malwa. A few are to be found in the Panjab. They dwell in mat'hs, the chief mat'h being at Rudpur, near Ellichpur, Umarkher. They resemble in their relations some of the Christian monks. They are believers in Krishna, as his life is detailed in the Bhagavat Purana, and they reject all other Hindu Shastra, and do not worship other Hindu gods.—*Capt. Mackintosh, M. J. L. and S.*, 1836.

MANBHUM, a British district of Chutia Nagpur, which has numerous remains of Aryan colonization close to its southern and eastern approaches, but none on the plateau itself. The most numerous aboriginal tribes are those of the Santals, the Bhumij Kols, the Bhars and Rajbhars. Amongst the semi-Hinduized aborigines are the Bauri and the Bhuiya. The Bhumij Kol are the characteristic aboriginal race of Manbhum, as the Ho are of Singbhum, and the Munda and Oraon of Lohardaga. Colonel Dalton, in his Ethnology of Bengal, describes them as being located in the country between the Kasai and Subarnarekha rivers. They had once large settlements to the north of the former river, but they were dislodged by Aryans, who, as Hindus of the Kurmi caste, now occupy their old village sites. The Bhumij Kol of Western Manbhum are pure Munda. Manbhum and Purulia have surface coal.—*Dalton*, p. 63; *Imp. Gaz.*

MAN-CHANG, a minor deity of the Chinese pantheon, who is worshipped by collegians and school-boys. He is supposed to record their names in a note-book. He was famous for his great literary attainments and love of virtue. His most important temple is at Chu-toong-yu-ne.—*Gray*, p. 144.

MANCHE. CAN. A boat or ship. The *Calicut manche* is a boat very similar to that of Mangalore, with the exception only of a raking stem, for the purpose of taking the beach, as the port of Calicut is open to the coast and there is no river. These boats are propelled by the paddle and sail, and generally carry eight men. They are much employed in watering and completing the sea-stock of ships homeward bound; also in loading ships with pepper, timber, etc., from Bombay; and in shipping the produce of the forests of Canara and Malabar, all of which is rafted off to vessels called dow, boatile, patamar, etc.

The *Panyani manche* is a coasting boat of about 50 feet long, 10 to 12 feet broad, and 5 to 7 feet deep. It is framed with timbers and planks, which are sewed together. The timbers are about 4 feet asunder, and on them, inside, some few planks are placed as bands and clamps, which are nailed to the frame. These are very rudely put together, and not of much importance either in form or construction. During the south-west monsoon, or from June to November, they are laid up at Baipur river for safety, and are only used in the fine-weather season. They carry the coir husk of the cocoanut, from which rope is made; copra, the inside albumen of the nut,

from which oil is expressed; cajan, the leaf of the Corypha umbraculifera tree, which is used for thatching houses, also for books, and various other purposes; jagari sugar, made from the toddy or juice of the palm; oil and arrack, a strong spirit, distilled from the toddy taken from the palm. These vessels keep along shore, and take advantage of the sail in rowing. They have generally from eight to ten men, who are fishermen of the Moplah Muhammadans, descendants of Arabian settlers on the shores of the Peninsula, and who, marrying the daughters of the country, obtained the name of Mapillai, or sons-in-law, corrupted by Europeans into the above term.

The *Boutila manche*, of the island of Ceylon, navigates the Gulf of Manaar and the coasts of the southern part of the Peninsula of India. This boat is about 50 to 60 feet in length, 16 to 18 feet in breadth, and 8 to 10 feet in depth, has more of the European form than any of the Indian-built vessels that are met with. The after part shows the construction to be of Portuguese origin, as it is very similar to that of many of the boats still in use by the people of that country, which are said to be of the same shape as the vessels in which Vasco da Gama sailed to India. They have a deck fore and aft, and are built with all sorts of jungle wood in a very rough manner, and fastened with nails and bolts. They are equipped with one mast, which inclines forward, and a square lug-sail; also a small bowsprit, at about the angle of 45°, with a sort of jib foresail, one pair of shrouds, and a backstay, which completes the rigging. These vessels carry on the trade of the island across the gulf.

Mangalore manche, of the western coast of the Peninsula, is a flat-bottomed boat of burden, about 25 to 35 feet long, 6 to 7 feet broad, and 4 to 5 feet deep. It is formed to meet the river, which is very shallow and flat; and to land the cargoes of the patamars, which are discharged and loaded at the mouth of the rivers. These boats are sewed together similar to the masula boat and other native vessels; they are forced along by bamboo poles, as the water is not more than from 6 to 10 feet deep, except in the south-west monsoon, when the rapids swell, and the whole of the river is considered impassable; and at this period all the vessels are taken to the shore and laid up.—*Edye.*

MANCHHAR, a lake in the Sehwan subdivision, Kurachee district in Sind. A little north of Larkhana, on the right bank of the Indus, the Narrah or Snake River, a Sind Serpentine, falls into Lake Manchhar, flows through it, and issues from the southern extremity under a fresh name, the Aral. The Narrah and the Aral form a semicircle of about 60 miles from point to point. They are probably artificial, as their tortuous course presents the appearance of man's rather than Nature's doings. The country is so level that, when the Indus rises, the water flows up the Aral, and vice versa when the main stream falls.

At certain periods, when the Indus is higher than the lake, the current runs into it through numerous openings in the belt of alluvium between its bed and the lake.

The fisheries of the lake yield an annual revenue of about £170, the rule being that one-third of the fish caught becomes the property of Government. The principal fish are the pala, which may be considered the finest in Sind, and the dambhro (or chelri), a reddish-coloured fish, often attaining an enormous size.—*Burton's Scinde*, ii. p. 231; *Imp. Gaz.*

MANCHHL. HIND. A litter slung on a pole, with a top like a tilt, used in the Himalaya.

MANCHU, a race who, in A.D. 1644, became rulers in China. The original seat of the reigning Manchu Tartar dynasty is the north-east of China. The dynasty has given every encouragement to the Chinese forms of education, and has admitted the learned men of the Chinese to a share in the administration, while retaining the higher offices for the Manchu. The emperor has numerous titles, all indicating some attribute of virtue or greatness, besides the most commonly used one of Hwang-ti. The family name of the dynasty is Gioro or Golden, so called from its original founder, Aisin Gioro. All members of the blood are registered in the Clan Court. Those who are descended from an emperor have the privilege of wearing a yellow girdle; those from the Manchu chiefs before they had become Chinese sovereigns may only wear a red girdle. They all enjoy an allowance, but this is gradually reduced the further they recede from the throne, until at last it barely suffices to procure the necessaries of life. There are four grand secretaries, but their power is very limited. They are called Ta-his-sze, and two of them are Manchus, and the others are Chinese. The senior post was always reserved for a Manchu, Li Hung Chang, about 1883, being the first Chinese to possess the preeminence. There are two under-secretaries—one Manchu and the other Chinese—with ten subordinates. Upon these sixteen officials devolves the work of placing all public matters before the emperor, and of receiving the answers which are to be sent forth as the official decisions. The fact of being a grand secretary does not prevent the official from holding other offices. The formation of the Grand Secretariat goes back to the first half of the 17th century, when the present dynasty was placed upon the throne, and the principal value of membership is that it gives social preeminence. The general council or Kiun-ki Chun was founded in 1730 by the emperor Yung-Ching. The members of this council rarely exceed four. They meet every morning in a chamber set apart for their deliberations in the interior of the palace.

Next to these come the six boards of administration, which have existed under slightly varying forms from a remote antiquity. The senior of these is that of Civil Office or the Li Pu. The work of this board is very heavy, and it is divided into four departments. The next in order of rank is the Board of Revenue or Hu Pu.

All girls of Manchu race, on attaining the age of twelve, ought to appear before the emperor for him to make selections for his harem, and the families that have personal objects of ambition to attain consider it highly desirable to obtain admission in this way for one of their members into the palace. The Board of Revenue is charged with the task of keeping and revising a complete list of the Manchu maidens. The next board, that of Rites, supervises all the ritual performances and court ceremonies. Its members possess great power and influence at a court where everything is decided in strict accordance with precedent as established by the Book of Rites. The Board of

War comes fourth, and all matters appertaining to either the army or the navy come under its purview. The fifth board, that of Punishments, the Hing Pu, has power in both civil and criminal cases. The Court of Censors, in conjunction with the Board of Punishments, forms the highest judicial authority in the kingdom. The most onerous as well as the most dangerous duty which a censor has to perform is to remonstrate with the emperor for any acts that may seem unworthy of his rank and injurious to his reputation as a good and wise prince. The sixth and last of these boards is that of Works. It has the supreme direction of all public works throughout the realm. These include the state of the canals, the high-roads, and the rivers, in addition to that of the fortifications of the towns and of the arsenals; it provides the stores of the army, and attends to the sewers and the cleansing of the gutters of the capital.

The Tsungli Yamen department only came into existence in January 1861, for the transaction of business with the foreign ministers resident in the capital, whose sovereigns possessed by treaty the then novel position of admitted equality with the Chinese emperor. But from an early period a department called the Li Fan Yuen has transacted all business with the tributaries and other external states which held intercourse with China on a footing of distinct inferiority. This department is now usually termed the Colonial Office, the privilege of membership being reserved for Manchus and Mongols. This office superintends the whole of the arrangements for the management of the four divisions of Mongolia, as well as those with regard to the dual government maintained in Tibet.

The Hanlin Yuen is the Chinese academy. To be a member of the Hanlin is in itself the highest distinction, and alone qualifies a man for the highest posts in the state. The Hanlin doctors are employed in drawing up all important state papers, in the most elegant language and according to the most approved form. They also collect daily the records of the reign, which are duly placed in the historiographer's department, but which never see the light until the dynasty has ceased to reign, and has been superseded by another. The Pekin Gazette is brought out by officials answerable for its accuracy to the police authorities of the capital. There are sixteen forwarding stations at Pekin for the purpose of sending copies of the Gazette immediately on publication into the provinces.

It is computed that in Pekin alone there are not fewer than 20,000 officials employed in the public offices and departments. For the provincial service in the higher grades there are not more than 2000 persons employed in it above the rank of assistant district magistrate. Of these there are eight viceroys, or Tsung-tuhs or Chetais, who govern fifteen out of the eighteen provinces of China proper. Peh-chi-li and Sze-chuen are the only single provinces having viceroys. The six others are Kwang-tung and Kwang-si (the Liang or Two Kwang); Kiang-si, Kiang-su, and Anhwui (the Liang or Two Kiang); Foh-kien and Che-kiang (Min Cheh); Yun-nan and Kwei-chu; Kan-su and Shen-si; and, lastly, Hu-peh and Ho-nan (Hou-kwang). In each of these provinces, with three exceptions, there is also a governor or Futai, while the three provinces Shan-si, Ho-nan, and Shan-tung are administered by officials of that grade. There were, therefore, fifteen governors serving either under viceroys or in independent command; but in 1877 Formosa was, after much deliberation, converted into a governorship, and placed under the 16th Futai. By usage the official entrusted with the control of the Yellow River is styled governor-general or viceroy, and although he has no territorial authority, it is clear that he holds an office of greater difficulty than even the administration of a province. A recent change in the form of government in Manchuria has also resulted in the addition of one to the ranks of the viceroys. When the Manchus established themselves in China they left the form of government in their own province practically undisturbed, and as it was formed on a military basis it was very much simpler than that in force among the Chinese. But at the same time, in order to sustain the national spirit, or gratify their own vanity, or possibly only to do honour to their ancestors, they declared Moukden or Sheng-king to be the twin capital of the empire, and that the great administrative boards of Pekin should have offices there as as well as in the capital. The chief military officer was of the rank of Tsiang-kun, but it naturally followed that he and the civilians of the boards soon came into collision, and gradually his authority was enfeebled, if not absolutely superseded. This state of things led to a formal investigation, and in 1875 it was proposed that for the Tsiang-kun a Tsung-tuh or viceroy, having supreme direction of all questions within the three divisions of Manchuria, should be substituted, and the president of the commission of inquiry became the first viceroy of Sheng-king.

The city of Pekin has a government of its own, and is in no way dependent upon the viceroy of Peh-chi-li, in which province it is situated. It has a mayor or Furgin, who is, however, subordinate to a minister from the Board of Works duly appointed for the purpose. There are two distinct magistrates to assist in the regulation of a city which, with what is believed to be a declining population, still contains a million human beings. The military officials are divided not less strictly than the civilian. The Ti-tuh is the highest, and of this rank there are only sixteen; but the Tsiang-kun, who commands the Manchu garrison in each of the larger cities, is perhaps the most powerful of them all. He is quite independent of all the civil Chinese authorities, and only reports to the captain-general of his banner at Pekin. In the same way the general-in-chief of the Pekin field force, who is usually a Tartar of high birth and position, is only answerable to the throne itself.

The number of Manchu troops is estimated at 60,000 men. They are habitually under arms, and are assiduously exercised in their profession. The Government watches over them with great anxiety, for the emperor has a strong interest in not allowing these troops to stagnate in inaction. He takes care that they shall preserve something at least of the warlike character to which they owe their conquest of the empire. A Manchu is under obligation to enrol himself under some banner, and, failing to do so, loses his privileges. Many neglect to enrol themselves voluntarily in

order to avoid the conscription. The Manchu, who are still (1884) ruling, obtained possession of the kingdom in 1643. Their founder was Shun-shi, and the dynasty is styled Tsing, or pure. They have placed Tartar garrisons in all the principal towns. His son Kang-hi, an able administrator, reigned from A.D. 1661 for 61 years. The people had previously made several important canals, but Kang-hi excavated the grand canal which connects the inland navigation of the great river with Pekin to the north, and with Ningpo to the south. Early in the 18th century, Kwei-chow broke out in rebellion, but it was suppressed; subsequently dominion over Tibet was acquired, and in the beginning of the 19th century Nepal was made tributary.

The Manchu dynasty has four times been at war with European powers, viz. with Great Britain 1840-42, Great Britain and France 1859-60, and France 1884. China proper is arranged into 18 provinces, 15 under viceroys and 3 under governors, and these deputies or the rulers long strove to prevent British ambassadors having personal interviews with the sovereign. The viceroys were all in practice autonomous. But about A.D. 1858 the Imperial Customs department was placed under Europeans, and has been a recognition of the supreme authority. Insisting upon the responsibility of the emperor, and refusing to treat with subordinate or provincial officers, though at first deemed most obnoxious to its pride, has nevertheless afforded the most efficient support to the administrative rights of the Imperial Government.

The Manchu is the most vocalic of the Tartar languages. It approaches to the Corean, but has other special vocalic affinities to the Japanese.—*Mr. Rowland Hamilton.*

MANCHURIA lies within lat. 39° and 49° N., and long. 120° and 133° E., and measures approximately 800 miles in length, and 500 miles in breadth. It is bounded on the south by the Gulf of Peh-chi-li and the highlands of Corea, on the east by the river Usuri, which divides it from Russian territory, on the north by the Amur, and on the west by the rivers Naun, Sungari, and the South-West Palisades. It is divided into three provinces, viz. Liau-tung or Southern, Kirin or Central, and Tsi-tsi-har, the Northern Provinces. The climate presents the extremes of heat and cold. The Liau-Ho and Ta-yang-Ho, Sungari, Harka, Usuri are the only important rivers. The population numbers about fourteen millions, Manchu, Tartars, and Chinese.

In 1859-60, Russia's representative at Pekin, General Ignatieff, obtained the surrender to Russia of the maritime province of Manchuria, the value of which had been discovered at the time of the Crimean war, and the Russian frontier was accordingly advanced to the close vicinity of Corea and the important city of Moukden.

Manchuria for ages past has swarmed off masses of humanity into other lands, and at present her millions are pressing on her neighbours for room. Researches have made it more than probable that the Tartar, Manchu, and Tungus belong to one great stock; that the Turkoman, as well as the Tshude, Fin, Laplander, and Magyar (Hungarians), present another stock closely united, and that both these families are originally connected with each other. They sit upon the throne of Byzantium, and upon that of China. Manchu Tartars of Manchuria are the bravest of the Mongol race. Much of Manchuria is now Chinese, and the Chinese language has been introduced. Manchu Tartars are strongly made and active; they are fond of the chase, and use the rifle and wolf-dogs. They dress like the Chinese, but wear long hair parted down the middle. The women have a loose jacket close round the neck, and reaching to the waist, where it is fastened with loops on the right side. A bright red petticoat reaches half-way below the knee. They have silver ear-rings, wear bracelets of brass and white metal, and they wear their hair with two long tails separated by a leathern band, edged with blue beads and a central line of cowries and brass beads below it.

The Manchu forbid marriage between those whose family names are different. In this respect they differ altogether from the Chinese and Brahmans, who abstain from marrying into families with their own race name. The Manchu and the Coreans have legends relating immaculate conceptions. Mr. Meadows and Mr. Griffis (p. 155) relate a Manchu legend of three heaven-born virgins who dwelt near the Great White Mountains. As they were bathing in a lake a magpie dropped a blood-red fruit on the clothes of the youngest. This the maiden naturally ate, and forthwith conceived, and she bore a son, whom they named Ai-sin-Gioro, or Golden Family Stem, which is the family name of the emperors of China.

The Fuyu are the aboriginal race of Corea. They trace their descent from a waiting-maid of the king of To-li or Korai. One day, while her master was absent on a hunting expedition, she saw floating in the atmosphere a glistening vapour, which entered her bosom. This tiny cloud seemed as big as an egg. Under its influence she conceived, and bore a son, who became the king of the tribe and kingdom of Fuyu.—*Williamson; Griffis, Korea; Adams; Meadows.*

MAND, probably another name for the Med. There are several tribes,—the Mandar, Mandlior, Mindhra, the Baluch tribe of Mondrani; and the ancient towns of Mandra, Mandropat in Chachgam, to the east of the Guni; Mandrasa, to the north of the Makali Hills; and Mundra and other similar names in Cutch.

MANDAKU or Manda chettu. TEL. A plant, the juice of which is said to prevent baldness.

MANDAL. ARAB. A form of divination in Egypt, which owed its celebrity in Europe to Mr. Lane. In the mandal, or palm-divination, a black slave was considered the best subject. When Lane wrote his account of this jugglery, he was unaware that Osman was a confederate of the supposed magician, and supplied him with the necessary hints. When Osman died, the Maghrabin magician said all had gone wrong since Osman Effendi departed. Three travellers had a seance in 1836, resulting in blunder after blunder, until they got disgusted and left. On that occasion, amongst others, an absent person was named, and was described by the magician as a tall Frank, with black hair, a long black beard, and one eye gone,—he being fair-haired, with eyes still (1884) perfect.—*Lane; Burton, Mecca.*

MANDAL. GUJ. A close-woven silk and gold fabric, used to form the rope-like turbands.

MANDALA. HIND. A circle, a district, a division

of a country, a region, as Tonda Mandalam, Pandu Mandalam, Chola Mandalam, Mandlaisir, and Okamandal. Also an orb; also a section of a book. The Rig Veda has ten Mandala. In Bengal, the headman of a village. In Purniah it is the title of any respectable Hindu Sudra. A township, in its simplest form, is under a headman, called in the Dekhan and in the west and centre of Hindustan Patel, Mandel in Bengal, Makaddum in many places. He is assisted by different officers, of whom the accountant and watchman are the most important. 1. The accountant, called Patwari in Hindustan, Kulkarni and Curnum in the Dekhan and south of India, and Tallali in Gujerat. 2. The watchman, called Pasban, Gorayet, Peik, Domaha, etc., in Hindustan, Mahar in the Dekhan, Tillari in the south of India, and Paggi in Gujerat; 3. Money-changer or silversmith; 4. Priest; 5. Astwhju; 6. Smith; 7. Carpenter; 8. Barber; 9. Potter; 10. Worker in leather; 11. Tailor; 12. Washerman; 13. Musician; 14. Minstrel; 15. Dancing-girl. The number is fixed by common opinion, and by the native name Bara-balotta, at twelve, but varies in different villages, and the officers included are not always the same, though up to No. 10 are seldom wanting. From 11 to 14 are not so general, and the dancing-girl seems only to be in the south of India. Each of these village officers has a fee, sometimes in money, but more frequently a portion of produce, as a handful or two out of each measure of grain.—*D.; Wilson.*

MANDALA PURUDAR was a Jaina ascetic, said to have lived in the time of Raja Krishna Rayar, who reigned at Vijayanagaram in the beginning of the 16th century. He wrote a poetic lexicon, Sudamani Nikanda, somewhat on the plan of the Sanskrit Amerakosha.

MANDALAY, the capital of Independent Burma, is situated in lat. 21° 59′ 4″ N., and long. 96° 8′ E., about two miles from the left bank of the Irawadi, in a level plain at the foot of an isolated hill 600 feet in height, from which the city takes its name. The city proper is laid out in a square, each side of which is a little over a mile in length. It is enclosed in a brick wall, 26 feet high and 3 feet thick. An inner square, covering an area of about 72 acres, is taken up by the royal buildings. The parts of the city outside the royal enclosure are inhabited by the officials, civil and military, the soldiers, and the general population. The central or royal square is surrounded by an outer stockade of timber and an inner wall. Entering, the stranger comes on a wide space, and then finds on the right the Government offices and the royal mint. There is also the high court, or hlot dau, where the four chief ministers sit to hear appeals. The Pakhan Menghee, or Foreign Minister, and the Yaw-Ahtwen-Woon, or Minister of the Interior, have likewise their offices here. The palace buildings lie behind a wall on the left. The reception-hall with its rich decorations and golden throne, and some of the outer apartments, have been described by travellers; but into the inner apartments no European has ever been admitted. The repoussé gold and silver work is very beautiful and finished in execution; and the ivory and wood carvings, in clear and bold alto-relievo, are artistic in composition and design. —*Imp. Gaz.*

MANDAPA or Mantapam, the portico of a Hindu temple; an open building, a pavilion for receiving and sheltering idols when carried in procession for the performance of marriage or other festive ceremonies.

MANDARA. Mount Mandara, celebrated in the Puranic legends for the churning of the ocean, lies southward of Bhagulpur. Vishnu is fabled to have become incarnate in the form of a tortoise; in which shape he sustained the mountain Mandara, placed on his back to serve as an axis, whereon the gods and demons, Sura and Asura,—the vast serpent Vasuki serving as a rope,—churned the ocean for the recovery of the amrita, or beverage of immortality. And the result of the operation that chiefly distinguished this avatara, was the obtainment of fourteen articles, usually called fourteen gems, or chaturdesa ratna, in common language chowda ratni,—1. the moon, Chandra; 2. Sri or Lakshmi, the goddess of fortune and beauty; 3. Sura, wine, or Suradevi, the goddess of wine; 4. Uchisrava, an eight-headed horse; 5. Kustubha, a jewel of inestimable value; 6. Parijata, a tree that spontaneously yielded everything desired; 7. Surabhi, a cow similarly bountiful; 8. Dhanwantara, a physician; 9. Iravati, elephant of Indra, with three probosci; 10. Chank, a shell conferring victory on whoever should sound it; 11. Danusha, an unerring bow; 12. Bikh, poison or drugs; 13. Rhemba, the Apsara, a beautiful and amiable woman; 14. Amrita, the beverage of immortality.

On the downfall of Buddhism, Mandara fell into the hands of the Saivites, and became a seat of their god so as to rival Benares, and form, as the Kasikhund states, a second Kailasa. The legend of the churning of the ocean is an interpolation in the Mahabharata, and evidently refers to the contest between the Brahmans (Sura) and the Buddhists (Asura), the great serpent Vasuki alluding to the Naga race.

MANDARIN, a magistrate of China, or a person having authority, from a Portuguese word Mandar, to command. Chinese mandarins use bamboo caps in summer as the official head-dress. —*Wathen's Voyage*, p. 180.

MANDARIN DUCK of China is the Aix galericolata, costly birds even in China, where they are called Een yeong. They are regarded by the Chinese as patterns of conjugal fidelity, and are usually carried about in their marriage processions. Sir John Bowring had great difficulty in obtaining a few. The Mandarin duck appears to be indigenous to the country north of Pekin. It has also been found in a wild state on the Southern Amur.—*G. Bennett, Gatherings*, p. 189.

MANDAVAR KOOLY. Tam. Graves of the dead, ancient burial-places in the Coimbatore district, circles of various sizes. They contain earthen jars, with fragments of human bones in earth. The term is supposed by Dr. Shortt to be a dialectal change from Panda curzi, the usual name for the cairns of the south of India.

MANDAVI, a large seaport town, in lat. 22° 51′ N., and long. 69° 34′ E., on the west side of a narrow creek, close on the Gulf of Cutch. Its vessels are from 25 to 200 tons burden, have a large lateen sail, with two masts, and are never decked. They trade with Zanzibar, Persian Gulf, Mekran, and Sind. Population about 50,000. Its chief is of the Baghela race. It

sends out some of the best seamen, pilots, and merchants, and exports cotton, wool, grain, ghi, and oil.

MANDELSLO, a traveller to India, accompanied the Duke of Holstein's mission to Russia and Persia, to which Olearius was secretary, in 1633-39. He had left Isfahan 16th January 1638, saw the ruins of Persepolis, passed through Shiraz, and on the 23d February 1639 reached Gomroon or Bandar Abbas. His surgeon, John Weinberg, died on the 22d March, and was buried in the English cemetery. On the 6th April, he embarked for Surat with Messrs. Mandley and Hall, two English merchants, and arrived on the 25th; and from Bandar Abbas he went on to Surat and Baroach, Brodera (Baroda), Ahmadabad, Cambay, Lahore, and Vezeapour, returning to Denmark, where he landed, May 1, 1640, from Surat. The narrative of his Voyages and Travels, translated by John Davies, was published in England, in one volume, with Olearius' account of the Duke of Holstein's mission in 1662 and 1669, and gives a most interesting account of the factory at Surat, and of the factors' manner of life. They were the inventors of punch (Puntz of Mandelslo, Paunch of Fryer), so called from the five (in Hindustani panch) ingredients, spirit, lemon or lime-juice, spice, sugar, and rose-water, used in its composition. The πεντα-πλόα of the Greeks was composed of wine, honey, cheese, meal, and oil.—*Sir G. Birdwood.*

MANDEVILLE, SIR JOHN, author of a book of alleged travels in India and China. He set out from St. Albans in 1332, and returned and died in Liege in 1366. His descriptions of Ceylon are borrowed from Marco Polo and Odoric of Portendu. He seems to have adopted, as regards Sumatra, the accounts of Odoric when he says, 'Beside the ysle of Lemery is another yclept Sumobor; and fast beside, a great ysle yclept Java.'—*Marsden's Sumatra*, p. 7.

MANDHATA, an island in the Nerbadda, belonging to the Nimar district, containing numerous temples, ancient and modern, including the great shrine of Omkar, a form of Siva. It is cleft in two by a deep ravine running nearly north and south, the eastern end containing about one-third of the whole area. The southern bank of the Nerbadda opposite Mandhata (called Godarpura) is as precipitous as Mandhata, and between them the river forms an exceedingly deep and silent pool, full of crocodiles and large fish, many of which are so tame as to take grain off the lower steps of the sacred ghats. The worship of Siva was established here at an early age. On Mandhata the shrine of Omkar, and on the southern bank that of Amareswar (lord of the immortals), are two of the twelve great lingams which existed in India when Mahmud of Ghazni demolished the temple of Somnath in A.D. 1024. The name Omkar is from the syllable Om, which, says Professor Wilson, is a combination of letters invested by Hindu mysticism with peculiar sanctity, employed in the beginning of all prayers. It comprehends all the gods, the Vedas, the three spheres of the world, etc. The Brahmans who now officiate at the shrine wish to exclude Omkar from the twelve lingams, and it is usually called A' di, or first, as something above and before them all. The Narmada Khand supports them in this assertion, but as it contains a prophecy of the time when India shall be ruled by M'hlecha (non-Hindus) and other modern allusions, its antiquity is certainly a good deal open to doubt. The evidence of the Kasi Khand and other Saivite writings is against them, and the pilgrims who have vowed to visit the Bara jyoti lingam pay their adorations both to Omkar and Amareswar. The raja of Mandhata, who is hereditary custodian of all the modern temples, is a Bhilala, claiming descent from a Chauhan Rajput named Bharat Singh, who is stated in the family genealogy to have taken Mandhata from a Bhil chief in the year A.D. 1165.—*Atk.*

MANDHATA, Gurla Mandhata, also called Nimo Namzil, lies ten miles south of Lake Manasarowar. According to the legend told by the Milam Bhotia, the great mountain is the transformation of the body of a raja of Benares of the name of Mandhata, who is said to have died some thousands of years ago on the shores of the Manasarowar lake while on a pilgrimage to its waters. Another notable peak is Kailas; it lies to the north of Manasarowar, and being in the shape of a Hindu temple is greatly venerated by all the Hindus of Northern India. 'Owing to its immense bulk and height,' says Mr. Ryall, '3000 feet above any within a radius of 40 miles, it is perhaps the most impressive sight in the whole of the Himalayas; the celebrated mountain of Nanga Parbat, N.W. of Kashmir, alone excepted.'

MANDI, a Native State of the Panjab, lying between lat. 31° 23′ 45″ and 32° 4′ N., and between long. 76° 40′ and 77° 22′ 30″ E. The ruling family is Rajput, of the Chanda Bansi clan, and is known as Mandial. Sen is the title borne by the ruling chief, whilst the younger members of the family are called Sinh. The chiefships of Mandi and Sukhet were originally a single state, bounded by Kangra on the west and Kullu on the east, by the Dhaoladhar mountains on the north and the Sutlej on the south. Mandi means the market, and its favourable position on the Beas river, at the junction of the two roads from the west and south, must have ensured its early occupation, which was rendered prosperous and lasting by the existence of valuable mines of iron and rock-salt in its immediate vicinity.

Mandi town, in lat. 31° 43′ N., and long. 76° 58′ E., is on the banks of the Beas. The river here is a swift torrent, and is spanned by the new 'Empress' bridge. The banks are high and rocky.—*Imp. Gaz.*

MANDIOCA or Manioc, the cassava root, is the Janipha manihot of Kunth, and Jatropha manihot of Linnæus, and furnishes the tapioca of commerce. The pulp, after grating and washing, is thoroughly drained, and strained through long cylindrical and plaited baskets. In India every planter or landholder should have at hand the cassava or mandioca plant, the root of which is of the same nature as rice, as delicious as the potato, and keeps fresh under ground for years, indifferent to great changes of heat or cold.

It is a universal article of food in Brazil. Tirhut is in latitude north what Santa Catharina is south, and conforms to a great diversity of climates, seasons, and soils. It is easily planted and cultivated, and gives a return six times greater than wheat. It is branchy, and the numerous knots or leaf-marks on the branches are each a new plant. In cutting the branches to

plant, the slips are made about three inches long, and include two or three of these knots, and each plant will give from say twenty to sixty separate slips, and therefore as many new plants.

Manioca and arrowroot are both rather extensively grown in the maritime provinces of Ceylon, the former being inferior in quality to that grown in the West India Islands. From the manioca, the Singhalese prepare a fine flour resembling arrowroot, but much sweeter and far more nourishing. Boiled or baked with milk, it forms a most delicious meal, partaking of the nature of a rich custard. See Arrowroot; Manihot.

MANDIR. HIND. A dancing hall at a Hindu temple. The mantapam of the Dravidian temples.

MANDLA, a town and district in the Jubbulpur division of the Central Provinces, on the right bank of the Nerbadda. The district lies between lat. 22° 14′ and 23° 22′ N., and long. 80° and 81° 48′ E., with Rewah and part of the Balaspur district on the east, and Seoni, Balaghat, Raipur, and Balaspur on the south, with an area of 4719 square miles, and in 1877 a population of 223,883. It is a wild highland region, and 1724 feet above the sea.

While the rani Durgavati, widow of Dalpat Sa, was regent, A.D. 1564, Asaf Khan, the Dehli viceroy, invaded Mandla. Durgavati opposed him, but she was defeated near Singaurghar in Jubbulpur district, and she fell back on Garha, and then on Mandla, where she took up a strong position in a narrow defile. Asaf Khan renewed the action, and suffered a check, but the next day he brought up his artillery and renewed the battle. The rani, though wounded, defended the pass in person, but the river in the rear of her army began to rise, and the Gond troops, alarmed at their retreat being cut off, broke and fled. Durgavati snatched a dagger from her elephant driver, and plunged it into her bosom and died.

The aboriginal tribes consist of Ahir, Baiga, Basor, Gauli, Gond, Dher, Mhar or Dhimar, Kach'hi, Kol, Kurmo, Yelo, Lodho, Teli, Panka, Marar, Mehra.

The original inhabitants of this district are undoubtedly the Gond and Baiga, who at the present time form the larger share of the population. Next to these are Brahman families, some of whom affect to trace back their arrival in Mandla to the time of Jadhava Raya in Samvat 415 (A.D. 358), though it is much more probable that they settled here in the reigns of Hirde Sah and Narendra Sah, from Samvat 1663 to 1788 (A.D. 1606 to 1731). The former of these two kings introduced a number of foreigners into the country, especially a large colony of Lodhia, who settled in the valleys of the Banjar, Motiari, and Nerbadda, gave the name of Hirdenagar to the taluka thus brought into cultivation, and did much by digging tanks and otherwise to colonize the best parts of the district. The Mahto are the best cultivators, are Hindus, originally of the Teli caste, and formerly resident at Maihir. The Mandla Gond is divided into two classes, which again are subdivided into forty-two different clans or got. The two classes are the Raj Gond and the Rawan Bansi. The former is the higher, and outdo the highest caste Hindus in the matter of purifying themselves and aping them in all their religious ceremonies. They wear the janeo or Brahmanical thread, and consider themselves deeply insulted if compared in status with a Gond. Mr. Hislop says that they carry their passion for purification so far that they have the faggots with which their food is cooked sprinkled with water before use. See Gond.

MANDLESAR, town in Indore State, Central India, situated on the right bank of the Nerbadda, in lat. 22° 11′ N., and long. 75° 42′ E., on the route from Mhow (Mhau) to Asirgarh.—*Imp. Gaz.*

MANDOH, the ghost of a Muhammadan, in Hindu demonology deemed the most malignant of all demons.

MANDONG or Mandrong. MALAY. A rush much used by the natives in the manufacture of rice and sugar bags, mats, and for tying up articles, the fibre being strong. It grows spontaneously in the rice-fields of Province Wellesley, after the crop has been gathered, and overspreads them like a second crop. It may prove a suitable paper material.—*Royle.*

MANDOO, now in ruins, some time the capital of the independent Muhammadan kingdom of Malwa. It is on a spur of the Vindhya mountains, overlooking the valley of the Nerbadda and the plains of Nimar, having a site at an elevation of more than 2000 feet above the sea. The city of Mandoo was founded by Hoshang Shah, the founder of Hoshangabad; the second king, Muhammad Khilji, erected a mausoleum of white marble over the remains of Hoshang Shah, still in good preservation. On the Mandoo Hill is a terrace on which its Hindu queen would recline to gaze on the sacred Nerbadda winding through Nimar; close to this terrace was erected a palace, near a well-known spring, which to this day is called the queen's fountain. In general, Muhammadan ruins are situated on the plain, but the Mandoo ruins are in the midst of beautiful mountain scenery, so that the combination of works of art with the beauties of nature is most charming. Mandoo is built on coralline limestone, but that used for building is derived from near Baug or Bagh.

MANDRAKE, Atropa mandragora.

Usul-ul-lufah, . .	ARAB.	Mandragen, . . .	GER.
Astrung, ...	,,	Mandragola, . . .	IT.
Tuhfah-us-shaitan,	,,	Lufahat, . . .	MALAY.
Serag-ul-koshrob, .	,,	Mardam-i-giah, .	PERS.
Yebruj, ...	,,	Yabruz, Yabrukh, .	,,
Lakmuna, Lakmuni,	HIND.	Kaat-juti, . . .	TAM.
Mandragore, . . .	FR.		

The mandragora or mandrake, the fetid root of which was so celebrated in the magic rites and toxicology of the ancients, is known in the bazars of Central Asia and the north of India. It has various names, arising from its fancied resemblance to the human form. It was formerly an article of the materia medica of Europe, but is now exploded, though the leaves are still sometimes employed in preparing anodyne fomentations. The Arabians place the root, which they call Usul-ul-lufah, amongst their most powerful cathartics, and also suppose it to be of use as an antispasmodic. What of it is found in India is probably brought from Persia or Arabia. It is found in many parts of the south of Europe, is of poisonous qualities. Lufah is the plant. Tuhfah-us-shaitan is the fruit. Its properties are identical in nature with those of Atropa belladonna, but weaker, in consequence of drying and decomposition of the atropia. The mandrakes of Genesis xxx. 14, are generally supposed to be the root of Mandragora officinalis.

Calmet regards dudaim and plantains as citrons; but violets, lilies, jasmines have all been named. The Chinese physicians assert that this plant possesses the faculty of renovating exhausted constitutions. Some nations have believed that the root of the mandrake, if wholly dislodged from the ground, becomes the good genius of the possessor, not only curing a host of maladies, but discovering hidden treasures, doubling the amount of money locked up in a box, keeping off evil spirits, acting as a love-charm, and rendering several other notable services. — *O'Sh.* p. 466; *Hogg*, p. 552; *Faulkner; Ain.* p. 26; *Calmet.*

MANEGAR or Maniyakaran. TAM. An agent, a native accountant, an overseer.

MANEL, a pink water-lily of delicious perfume, commonly offered before the figures of Buddha. Its flower closes at sunset.

MANELAVADU. TEL. An itinerant dealer in coral and gems, commonly termed a Manillaman, but probably from Mani, SANSK., a jewel.

MANERUNG, in the Himalaya, in lat. 31° 56′ N., long. 78° 24′ E. Its crest is 18,612 feet, and the source of the Darbung there, 15,000 feet. A very difficult pass. See Kanawar.

MANES of Hindus are worshipped and have sacrifices offered to them on the third day, the twelfth day after demise, every month of the first year, and on every anniversary. The Bhumij, Bhuniya, and Kol tribes practise the ceremony by which the soul of a man just deceased is attracted back into the house soon after the funeral, apparently with the object of worshipping it as a household spirit. All Hindus bring back into the house the soul of their deceased relative, and then release it.

MANG or Mhang, a low caste tribe scattered through Kandesh, the Konkan, and Kolhapur, employed as village watchmen and in humble offices. The Mang reside outside villages. They are met with in most of the hamlets throughout the Hyderabad country and in Berar, and serve as scavenger, guide, watchman, and executioner. Their signature mark is a knife. They are part of the Baluth, and, like the Dher and Mahar, are predial slaves of the village. There were 556,771 in 1881 census returns of India.

MANGA of Zanzibar is Arabia. The Arabs are called Wa Manga by the people of Zanzibar.

MANGALA. SANSK. The planet Mars. In Hindu mythology, Mars was son of Siva and the earth, and had several names. Mangal-var is Tuesday.—*D.* See Graha; Va'ra.

MANGALA SUTRA. SANSK. Tali, HIND. A thread with a gold coin or other valuable, which every Hindu married woman in the south of India wears during her husband's lifetime round her neck. It is tied on by the bridegroom at the time of marriage. In the north of India, it is a string or piece of silk tied round the wrist during the marriage ceremony. In other parts of India it is a string of glass beads set in gold, worn round the neck of the married woman. Its absence is a sign of widowhood. With the Teling people Mangala is applied to a married woman, a wife. The Hindu women of Bengal, on marriage, assume an iron bracelet. The Christian women of Europe wear a gold ring on the fourth finger of their left hand.

MANGALORE, on the coast of Canara, in lat. 12° 51′ 40″ N., and long. 74° 52′ 36″ E., is built near the mouth of a river navigable by small vessels, with about 10 or 11 feet on the bar. It is a civil and military station of British India. It has long been resorted to by vessels trading with Arabia. It was taken in 1708, again in 1783, by troops from Bombay; and on one occasion afterwards was successfully held for nine months against a besieging force from Mysore, 10,000 strong, with 100 guns. The garrison was commanded by Colonel Campbell, of the 42d Highlanders, with 700 Europeans and 2000 sepoys; but when taken, the defenders were reduced to 850. In 1799, Mangalore became British territory, and since that time it has only once been disturbed by the appearance of an enemy, namely, during the Coorg insurrection in 1837.—*Imp. Gaz.*

MANGALORE or Mangala means fortunate. The native name is Kaudial; the Mangalur, Manjarur, and Mangaruth, according to the Greek writer Cosmas (6th century), of Arab travellers. —*Yule, Cathay*, ii. p. 451.

MANGANESE.

Mung-kin, . . . CHIN.	Braunstein, Glasseise, GER.
Bruinstein, . . . DUT.	Kolsa ka pathar, . HIND.
Savon du verre, . . FR.	Iddali kalu, . . TEL.

The substance known in commerce under this name is the peroxide or black oxide of the metal. It is commonly of an earthy appearance, and mixed with other ingredients, but sometimes in crystals of a black colour and metallic lustre. The substance is well suited for glazing pottery, along with galena and felspar. In small quantities it gives a yellow colour; in large, brown; then a blood-red, purple, or black, as the proportion of manganese is increased. It has also the property of hardening the glaze, so as to resist vinegar and weak acids. Concentrated mineral acids, however, will corrode it. It is largely consumed in the manufacture of bleaching compounds; it is also used by potters; and it is considered the cheapest material from which to procure oxygen.

At the Madras Exhibitions of 1855 and 1857, the silicated sesquioxide was exhibited from Vizianagram in blocks, weighing from 2 to 3 cwt. each, with from 53 to 54 per cent. of metallic manganese. It has been discovered in a good many parts of the Madras Presidency under the form of earthy manganese ore, dendritic manganese ore, and combined with iron in a good many of the ochrey ironstones, laterites, claystones, and cotton soils of India. It was mined by Hyder Ali and Tipu Sultan in the Kupputgode range. It has been found also in the iron ore near the lake at Ootacamund, and in the Kaiti valley; also in Mergui, Burma, and the Himalaya.

Good ore occurs in Kurnool, at Tumkur in Mysore; in Sundur and Rudrar in the Coilcuntlah taluk. Brown wad and brown fibrous manganese occur at the Red Hills, Bangalore, and Cuddapah.

In the bazars of the Panjab, manganese in the forms of a silicated sesquioxide and a peroxide is obtainable as a black powder, or in lumps of the pyrolusite.

Manganese is found in China in connection with the iron ores of Chin-Chan of Ho-nan.—*Smith; M. E. J. R.; Waterstone; Faulkner; Powell, Handbook; Mason's Tenasserim.*

MANGCHAR has a few dispersed hamlets. It is well irrigated with canals, and the whole plain is intersected with bunds or dams to preserve the rain. The tomans are scattered over the plain.

Many brood mares are kept. It is separated from Mustung by a lengthened valley termed Khad, in which the Shirwani tribe of Brahui dwell. The Brahui tribes on the east border with the Mandawari, Kuchik, and Puzh Rind tribes, and the Ghazgi Brahui adjacent to Cutch Gandava.

MANGEL-WURZEL.

Field beet, . . . Eng.	Mangold-wurzel, . Ger.
Betteraves, ... Fr.	Biettola, ... It.

A variety between the red and white beet has been a good deal cultivated in France, Germany, and Switzerland, partly as food for cattle, and partly to be used in distillation and in the extraction of sugar. Its culture in Great Britain dates only from the end of the 18th century. It is employed almost entirely in the fattening of stock and the feeding of milch cows.

MANGIFERA, a genus of plants belonging to the natural order Anacardiaceæ. There are several species, but only M. Indica is of much value. M. coloneura, *Kurz*, of Burma; M. fœtida, *Loureiro*, a native of Cochin-China, the Moluccas, Sumatra, and Penang; M. laxiflora, *Desv.*, indigenous in Mauritius; M. sylvatica, *Roxburgh*, a native of the hilly districts bordering on Sylhet, called Lukshmi-Am, grows to a great size, and bears a fruit which ripens in February and March, and is eaten by the natives, though not so palatable as even a bad mango. It is also dried and kept by them for medicinal purposes. M. oppositifolia, *Roxburgh*, a native of Rangoon, was proposed by Messrs. Wight and Arnott to be formed into a distinct genus; M. glauca, *Blainv.*, a tree of the Moluccas; M. quadrifida, *Jack*, M. cæsia, *Jack*, trees of Sumatra; M. gandaria of the Moluccas, and M. sylvatica of Tinnevelly.—*Voigt; Roxb.* p. 1641.

MANGIFERA FŒTIDA. *Lour.* Horse mango.

La moot, . . . Burm.	Bachang, . . . Malay.

This large mango is cultivated at Mergui, and is quite a favourite with the natives. It has an odour resembling the dorian, and, like that, has been introduced from the Straits.—*Dr. Mason.*

MANGIFERA INDICA. *Linn.* Mango.

The mango tree is generally diffused over all the warmer parts of S. Asia, as far north as 30° in the Panjab, in N. India up to 3500 feet, and up to Nabu at an altitude of 4000. It has been successfully introduced into the West Indies. It grows to a great size, with an erect trunk, and dark-coloured cracked bark. Its flowering time is January, February, and March; the fruit ripens in May, June, and July, and is one of the most grateful fruits of the tropical parts of Asia. The Archipelagic names of the cultivated mango are all, according to Crawfurd, derived from the Sanskrit, Maha-pahala, or great fruit. Through the agency of Europeans, however, the corrupted form of the Sunda name for the wild mango has become prevalent throughout the east, from Madagascar to the Philippines, and has extended to America. The mangoes of Mazagaon were once celebrated. The best mangoes come from Goa, Bombay, Multan, Hushyarpur, and Karnal. The best of all are the Paiwandi, or grafted mangoes, at once known by the utter absence of all stringiness of texture, and by their delicate flavour. Natives usually prefer mangoes when they are so ripe that they have lost their firmness, and are quite flabby and soft. The wood is of a dull grey colour, porous, yet pretty durable if kept dry, but soon decays if exposed to wet, of the effect of which it is very sensitive. In very large old trees it acquires a light chocolate colour towards the centre of the trunk and larger branches. This is hard, closer grained, and much more durable. It is generally used for constructing masula boats, and for packing-cases; the cabinet-makers at Madras prefer it to other wood for veneering on; it is also generally used by coach-builders, cabinet-makers, and others, where common light wood is required, being the cheapest wood obtainable for packing-cases, boarding, and rough work, and for backs and linings of furniture. The wood holds a nail faster than any other wood. It is very serviceable for planks, when not exposed to wet, and is much used for house purposes. It seems to bear the action of salt water better than that of fresh; is hence used for canoes. It could be readily creosoted. It is used in Mysore for the solid wheels of country carts and rough furniture. The root bark is an aromatic bitter. The kernels are large, and seem to contain some nourishment; during times of scarcity and famine, they are boiled in the steam of water, and used as an article of diet. Propagating by layers, and grafting by approach, are the only modes of certainly continuing fine sorts, as well as of improving them. These have the advantage also of bearing when small in size, that is, only a few feet in height, and therefore well suited to culture in the hothouses of Europe.

The mango tree is said to have been brought into India by Ravana from Ceylon. Some of the most esteemed sorts of this fruit in India are the Alphonso, Raspberry, Doria, Maghrabah, and the Mazagong. The practice of engrafting the mango was first introduced at Madras by Dr. James Anderson, who improved it in a great degree. Propagation may easily be effected by seed and cuttings, etc., but the process is slow, as a tree thus raised will not bear fruit before the fifth or sixth year, whereas those that are grafted produce in the second or third, although it is injurious to the tree to let it bear so early, and the blossoms should be removed. Young grafts will sometimes, indeed very often, blossom the first season they are removed, but if allowed to bear fruit, it checks them for a length of time after. A mango graft may be applied at any time of the year, but the stock must be kept continually moist by watering. When the graft and stock have become united, the former must be partially divided by a notch with a sharp knife; this may be done after six weeks have elapsed from the time of its first being united. A second cutting may be effected a fortnight later, and the complete removal from the parent tree at the expiration of nine or ten weeks. After this, remove the graft into the shade for a fortnight longer, when it may be put into the spot where it is to remain. A graft tree never attains the size

of a seedling, neither will it continue to live or bear so long, and it is doubted if the seed of a graft mango would produce the same fruit, whereas a seedling often does so. The time that a seedling takes to produce fruit is the great objection to this mode of rearing trees; nevertheless a young tree of three years old might have one of its branches brought into blossom by ringing; this would enable the cultivator to judge if the tree was worth preserving or not. The Maghrabah variety is of a greenish tinge inside when ripe, and by far the largest of the whole, being three times the size of an Alphonso, and it ripens the last. When the graft is planted out, it requires only a moderate proportion of care, clearing the ground of all weeds, and removing any buds that show themselves. Within the space from the ground to where the first branches are to rise from, all superfluous and weak shoots should be removed, more particularly those from the centre of the tree, as also all branches that trail on the ground, unless required for grafting from. The tree is better for being pruned, and whenever the interior of a tree may contain superfluous branches, or when there is not sufficient room for the growth of the young and fruit-bearing shoots, a clear space must be provided, and this can only be done by pruning. The best time for this operation is soon after the tree has done bearing fruit. No old and decayed wood should be allowed to remain, and great care must be taken to remove, on the first appearance, the 'borers,' should they indicate their presence by their appearance on the bark. When trees are old and have their bark injured, it must be all cleared away, and the parts covered with a composition. One mode of propagating by slips or cuttings is thus described: Take slips from the healthy branch of a mango tree, at least two feet long, taking care to cut it one inch above the joint at the top, and the same below the joint at the bottom. The cuttings will not all be equal, as in some branches the joints are short and in others long. The thickness of the slip is to be from ¾ to 3 inches in diameter. Half the length of the slip is to be slightly punctured with an awl, and then inserted into the ground to that depth (half of the slip), perfectly perpendicular, and then make a knob at the top of the slip with plain cow-dung. The cuttings must be well watered in such a manner as to keep up an uninterrupted moisture in the ground; and, moreover, the cuttings are to be well shaded, and the coverings only to be removed by degrees as the plants attain leaves and strength, and not to be transplanted on any account until the next monsoon. The slips begin to bud within a month generally, but sometimes take a much longer period. In all cases the punctures are indispensably necessary, to admit of root-fibres being thrown out from them.

The tree and its fruit may both be improved, if, during the cold season, the ground is dug all round the roots, and by the addition of a suitable quantity of good old manure. The seed will only grow when fresh, and seldom after six weeks. When green, it is used for making preserves, pickles, tarts, etc. The mango may be procured twice in the year in Bombay. Mango tree leaves are liable to be attacked with a blight caused by an aphis.—*Drs. Ainslie, Roxb., Riddell, M'Clelland, Gibson, Wight, Cleghorn, Voigt, Mason.*

MANGIFERA OPPOSITIFOLIA. *Roxb.*

Cambessedea oppositifolia, *W. and A.* | Boueia oppositifolia, *Meis.*
Mayan, ... BURM.

A lofty spreading tree which grows wild in most parts of Burma. Fruit edible, yellow; the size of a plum. There are several varieties, of which some are sweet, and others sour. Wood used for building purposes.—*Cal. Cat. Ex.*, 1862; *Roxb.* i. p. 640; *Malcom's Travels*, i. p. 179.

MANGLIETTA, a genus of plants belonging to the natural order Magnoliaceæ. M. glauca has a white solid wood, which is largely employed in Java, and is supposed to prevent the decay of corpses put into coffins made of it.—*Eng. Cyc.; Hogg, Veg. King.*

MANG-MO, a name of Bamo, a frontier town in the Shan territory, between Yun-nan and Burma. It has the Pu-long tribes and the Ka-khyen around it.

MANGO BIRD, the bright yellow oriole.

MANGO FISH, species of Polynemus, of the Irawadi and Ganges. P. longifilis, *Cuv.*, P. paradisæus, *Linn.*, and P. risua, the Tupsee-mutchee, 8 or 9 inches long and 2 deep, are splendid fish and favourites with many; they are nearly related to the mullets; the last is remarkable for the long filaments to the pectoral fins, and as being without a swimming-bladder, while the other species have it large and stout. Five species are described by Dr. Buchanan in his Gangetic Fishes, but only two are of considerable size, occurring in the estuary of the Hoogly. One of these, with another large species, is also described by Dr. Russell in his work on the Fishes of the Madras Coast. That figured in his tab. 184, and called maga-booshy, is Polynemus uronemus of Cuvier; while the magajellee, tab. 183, named P. tetradactylus by Shaw, is probably P. Teria of Buchanan. Both, but especially the first, Russell says, are esteemed for the table, and called roeball by the English.—*Mason.* See Polynemus.

MANGOH. HIND. An edible Himalayan root.

MANGO PEEL, dried mango, the Am chur or Am khusk or Ambusi, HIND., dried mangoes. Mango pickles are much in use amongst both Europeans and natives. Take about 300 green mangoes, divide into two, and dry in the sun for three days. Take of turmeric, 4½ oz.; garlic, 3½ oz.; salt, 6 lbs.; mustard, 1½ oz; and coriander seed, toasted, 1½ oz.; — mix the spices together, and lay the mixture in alternate layers with the mangoes, and add 9 oz. of gingelly oil. The green fruit of the mango is used for making chatnies, pickles, and curries. Mangoes, when full grown, are cut into slices, dried in the sun and preserved, and they form an article of commerce; used in acidulating curries, mulligatawnies, etc. Mango spirit is prepared from the mango. The taste of the spirit is not unlike whisky, and far superior to anything of the sort sold in Indian bazars for every purpose to which the latter is applied. With the specific gravity about ·9035, temperature of 80° F., gives about 60 per cent. of alcohol to the volume of spirit.

MANGOSTEEN, Garcinia mangostana.

Manggis, BALI, JAV., MAL. | Shan-chuh-kwo, . CHIN.
Manggusta, . . . ,, | Monggos, . . LAMUNG.
Manggisi, ... BUGI. | Mangu, . . . SUNDA.

The mangosteen plant is about the size of a cherry tree, and very handsome. It grows in perfection as far as 14° north of the equator and

7° south of it. A congenial proportion of heat and moisture throughout the year seems much more requisite than soil or latitude for the successful growth of this fruit. Malaya's nectared mangosteen is truly a delicious fruit, and is by many esteemed as the most palatable of known fruits. It is cultivated to a considerable extent in Mergui and Tavoy,—in Mergui ripening in May, —and it has been successfully introduced into the Travancore province; and both the nutmeg and the mangosteen have been introduced with singular success at Ceylon, while their cultivation has entirely failed in Bengal.

Bontius thus describes this delicious fruit—

'Cedant Hesperii longe hinc, mala aurea fructus,
Ambrosia pascit Mangostam, et nectare Divos.'

Its characteristic quality is extreme delicacy of flavour, without being rich or luscious. It is a drupe of a brownish-red colour, and the size of a common apple, consisting of a thick rind, somewhat hard on the outside, but soft and succulent within, encompassing kernels which are covered with a juicy and perfectly white pulp, which is the part eaten, or more properly sucked, for it dissolves in the mouth. The thick fleshy rind is given internally in diarrhœa and dysentery, and is applied as an astringent externally.—*Marsden's Sumatra; Crawfurd's Dict.; Mason's Tenasserim.*

MANGROVES are plants, shrubs, and trees, of the natural order Rhizophoraceæ, *Lindley*. In the East Indies, the principal are—Bruiguiera caryophylloides, cylindrica, eriopetala, gymnorhiza, Malabarica, parviflora, and Rheedii; Carallia garcinifolia, lanceæfolia, lucida, Zeylanica, and Candollianus; Rhizophora conjugata, mangle, and mucronata; Ceriops Roxburghianus, Candoleana, and Kandelia Rheedii.

Mangroves abound on the coasts of the Bay of Bengal, and of the Indian islands. The true mangroves are remarkable for the copious development of adventitious roots, which arch outwards from the base of the stem over the reeking mud-flats in which they delight; and yet more so from the circumstance that the seed germinates in the ripe fruit while still attached to the parent tree, growing down into the mud, or attaining a foot or more in length before falling. Rhizophora mangle is used in tanning, and its wood gives a red dye. The tree forms a striking feature in the physical geography of the Archipelago, as it does indeed of all tropical countries, for a belt of it as deep as the reach of the tide is always found wherever there is a shallow and muddy shore. The tree rises to the height of 40 or 50 feet, and is invariably found in such situations constituting a dense and almost impenetrable forest. Each tree stands on a cradle of its own roots from 5 to 6 feet high, bare at low water, but as the tide rises covered so as to give the appearance of trees growing in the sea. Mangrove jungle is the favourite resort of mosquitoes and crocodiles, and affords a convenient and almost inaccessible retreat to pirates. The bark of Rhizophora mangle is used in the East and West Indies to dye chocolate colour. This was one of the colours introduced by Dr. Bancroft, and for the exclusive use of which he obtained an Act of Parliament. It is procured in plenty at Arakan, in Malabar, and at Singapore, and as it is often imported for tanning, can be readily enough obtained if found valuable to the home dyer. The bark of a small tree from the mangrove swamps is used by the Tavoy women in dyeing red, but Mr. Mason thinks only as a mordant. Rhizophora gymnorhiza, the Kayu api-api of the Malays, is used for fuel in the Indian Archipelago. The cuttings of the black mangrove or Rhizophora (uppu ponna), as of the white mangrove, the Avicennia tomentosa (Mada chettu) and of the Sonneratia, are used for firewood at Masulipatam. Mangrove bark is imported from Singapore and Siam into China, where it is used to tan sails, cordage, and nets, and is called Kau-p'i. Curriers in England have failed with it, although the bark, fruit, and roots all abound in tannin.—*Smith, M.M.C.; Royle, Fib. Pl.* p. 301; *Mason; Crawfurd*, p. 266; *Cat. Ex.*, 1862.

MANGU. This wood, and the ati ati, the kraminan, the purwo-kuning, and several others, are employed as timber at Singapore.

MANGUIAN, aboriginal tribes occupying the interior of the island of Mindoro. The Manguianes are a mild people, but so little advanced in civilisation, that European visitors, who have not had opportunities of personal communication with the Manguian, often leave the island with the impression that they are only a more savage variety of the same race.—*Jour. Ind. Arch.; Earl*, p. 133.

MANI. SANSK. Literally precious stone. In Tibet, long dykes covered with slate slabs, engraved with the words, 'Om! mani padma om,' or walls 4 to 5 feet in height and 4 to 8 in breadth, but their length varies much. One, 2200 feet long, is on the road leading from the banks of the Indus to Leh. They are generally of loose stones, and have flagstaffs at their ends. They are often of mingled heaps of broken things, which are raised up in notable places and hills as objects of peculiar veneration. Om is an often occurring word amongst Buddhist Tibetans in the prayer, Om! mani padma om. In passing the Mani, the Ladakhi keep them on the right hand. The same is done in passing monasteries. They are votive offerings from all classes of people for the attainment of some object.

MANI. HIND. A weight (agricultural) = 6¼ maunds.

MANI or Manes, a Persian of the time of Shapor, A.D. 277. He pretended to be the Paraclete promised in the 14th chapter of John, and soon established a sect, but was persecuted by Shapor, on which he fled to Eastern Tartary. While there, he engaged in drawing, and produced a great many extraordinary figures, which his followers, on his return, believed were given to him in heaven, where he informed them he had spent the time during his retreat. His religion is known to Europeans as the Manichean, a mixture of magian, Christian, Buddhism, and Hinduism. Christian patriarchs and bishops followed him. He blended with his doctrine the metempsychosis and the two principles of Zertusht. He was put to death by Bahram I. about A.D. 277. Sir W. Jones, however, gives the date ... that of king Shapor of Persia, and the dat... the death of Mani as A.D. 272.—*Chatfield's ...ndustan; Sir W. Jones*, v. p. 600; *Mosheim, E... list.* i. c. v.; *Socrat. Schol. Lit.* i. c. xxii.; *H... Keene.*

MANIAM or Maniyam. ARA... In the south of India, lands held rent-free ... under easy conditions. Professor Wilson ... it from Manya, SANSK., respectable. It is ...ably from Inam, ARABIC, gift. There are fou... kinds of tenure,

viz. ardha, dumbala, sanad, and sarva-manyam. —*Cal. Cat. Ex.*, 1862.

MANIAUK or Maneeoga. BURM. A wood much used for rice-pounders. Abundant all over the Tenasserim and Martaban provinces. When seasoned, it floats in water; when stored, it soon dies and rots. The roots are used for medicine; the fruit is eaten by Burmese.

MANI CHAKA, Chandra-kanta. SANSK. The moonstone.

MANIHAR, Maniar, or Mannair, a maker of glass bracelets worn by women, a jeweller.

MANIHOT AIPI. *Pohl.* The sweet cassava plant; the root reddish and harmless, and can be used as a vegetable after simple boiling, and tapioca can be prepared from it; it grows several feet high.—*F. V. Mueller.*

MANIHOT UTILISSIMA. *Pohl.*

Janipha manihot, *Kth.* | Cassava manioc.
Aipy, Kaviaraku, BRAZIL. Piwore, Ouycon, GUIANA.
Tapioca plant, . . ENG. Masato, . . . MEXICO.

Manihot utilissima, *Pohl.*, the bitter cassava or tapioca plant. The yellowish tubers attain a length of three feet, and a weight of 30 lbs., in warm countries, and are available in eight months, though they continue to grow longer than that. The growth of the plant upwards is checked by breaking off the buds. The propagation is effected by cuttings from the ligneous part of the stem. It is a very exhausting crop, needs rich soil and manuring, and the soil must not be wet. The tubers do not become soft by boiling. They can be converted into bread or cakes, the volatile poison of the milky sap being destroyed through pressing of the grated root in the first instance, and the remaining acridity is expelled by the heating process. The starch, heated in a moist state, furnishes the tapioca.—*Von Mueller.* See Mandioca.

MANIKHYALA, a village and group of ruins in the Rawal Pindi district of Panjab, lying in lat. 33° 27′ 30″ N., and long. 73° 17′ 15″ E. The small village is 40 miles from the Jhelum on the high road. It is a little more than half-way between Attock and the town of Jhelum. It is built on the ruins of a very ancient city of unknown origin, but its position and the abundance of coins found in the ruins, admit of the assumption that it must have been the capital of all the country between the Indus and Hydaspes, a country which the ancients knew by the name of Taxila, and of which frequent mention is made in the history of Alexander. Near it are 15 or 20 Buddhist topes, most of which were opened by General Ventura and M. Court about the year 1830, when relics of great value were found. In one was a gold cylinder enclosed in one of silver, and that again in one of copper. In the innermost one were four gold coins, ten precious stones, and four pearls, with some worn Roman coins, one of date B.C. 30. General Cunningham opened one, in which he found a copper coin of the Satrap Zeionises, enclosed with other relics in a glass stopper bottle. The principal tope was figured by Mr. Elphinstone, and is 127 feet in diameter. General Ventura found in it three separate deposits of relics with coins, some Sassanian, one of Yasoverma (A.D. 720), one of Abdullah-bin-Hassim, struck at Merv A.H. 66 (A.D. 685). One tope is 80 feet high, and 320 feet in circumference.—*Fergusson*, p. 79.

MANIKI, amongst the Kol, the head of a number of Munda.

MANIK RAI, a Chauhan king who, in A.D. 685 (Hijira 63), met the first Muhammadan invaders of India, who were part of an army sent into Sind by the khalif Umar. Manik Rai and his son Lot were both killed, but the anniversary of Lot's death is still preserved by the Chauhan. The family then retired to Sambur in Rajputana, where they prospered, and great Rajput families descended from it are known as the Hara, Mohil, Bhadaurea, Dhanarea, with the Kheechee, Narbhana, Bhowreecha, etc. The first-named four established independent kingdoms. In A.D. 1170, the Chauhan wrested Dehli from the Tuar Rajputs, as recorded in inscriptions in a Jain temple at Morakuro, and on the column at Dehli. Throughout the subsequent period of the Muhammadan conquests of India, the Chauhan retained their fame for heroic endurance of misfortune above all other warlike tribes of India.

MANIKYAVA-CHAKAR, a devotee of Siva, a poet.

MANILA, the capital of Luçon and the Spanish Indies, one of the largest in the Philippine Islands, and the seat of the Spanish Government in the east, situated in lat. 14° 36′ N., and long. 120° 57′ 20″ E. Manila is on the right bank of the river. It was founded in 1581, and in 1851 contained a population of 150,000. In 1762, Roya surrendered, and transferred the island to the British. It is a large city and convenient for trade, the adjacent country producing excellent indigo, sugar, tobacco, and hemp for cordage. Manila Bay is a large inlet in the S.W. coast of Luçon, about 22 miles in extent each way; the city of Manila stands on its eastern shore, about 25 miles from the entrance. The Spanish Indians are passionately fond of dress and personal decoration, and are given to pleasure. To a certain point they will work, but they are improvident and devoid of ambition, taking no thought for the morrow. There is much sympathy between the Indians and the Spaniards, and intercourse between the two races by no means entails the social degradation of the children which it does in India. The Mestizos of the Philippines are a more fortunate product than the Indian half-castes, for they usually combine the best points, physically speaking, of both parents. The true aborigines of the Philippines, in the mountains and the less habitable parts of the islands, are several tribes of savages who have not been brought within the government of the priests. The Negritos are woolly-headed people of the true African type. They are harmless and docile. The Iggrotos, a straight-haired tribe, fierce and untameable, inhabiting still more remote parts of the jungle, are very little known to the Spaniards. In the Philippines earthquakes are not only frequent but severe. A very important one occurred in 1880.

Cock-fighting is carried to a passion unknown elsewhere. Every Manila Indian has a game cock upon his shoulder, or tucked under his arm, or occasionally perched on his head; and when two men meet they will speak a few words, squat down, and allow their respective birds, who have meanwhile been bristling up with warlike ardour, to take a few quiet pecks at each other, and without further comment each will go on his way, and each cock resume a peaceful attitude. Yet, as

there is a tax on cock-fighting, it is unlawful to allow the cocks to come to a regular pitched battle, excepting at the proper certified cock-pits; the same with gambling out of the licensed houses; and half the convicts that are seen working on the roads in chains are doing so for the grave offence of fighting their cocks or playing 'monte' in unlicensed places, by the roadside, or anywhere but at one of the Government establishments. The principal saints' days and Sunday afternoons are the favourite cock-fighting times. The cocks are spurred with bright pieces of steel, about 3 inches long, and as sharp as the best razor,—generally made out of old razors; and frequently both birds lie dead at the same moment. Sometimes an accidental blow from the inferior bird settles the question, for the spurs are deadly, and do not need much repetition to become effective. In general, the handsomer bird is the vanquished, and the lesser and meaner-looking the hero and victor. The Indians often pluck a beaten cock alive in revenge at his having lost, though the poor brute has been the petted and constant companion of his master for months before, and has learnt all the ways which domestic animals do learn when in hourly contact with man.—*Literary Gazette.*

MANILA DRAGON CANES. These white and brown canes of commerce are supposed to be the stem of the Calamus draco, the dragon's blood palm. See Calamus; Cane; Dragon Cane.

MANILA HEMP. La mot, BISAYA; Abaca, TAG. The Musa textilis plant, which yields this hemp, was introduced by Dr. Roxburgh into the Northern Circars, but it had been neglected and died out, and during the administration of Lord Harris, Colonel (now Sir George) Balfour obtained for Madras a fresh supply of its roots, and it is growing freely in the Wynad; but Great Britain is annually importing 18,000 tons of it from Manila, value nearly a million sterling, although India, in two years' care, could supply all the demand. It is a native of the Philippine Islands, where there are several varieties known under different names. The Abaca brava, the wild abaca, is called by the Bicoles, agotai, but the fibres of the mountain abaca, only, serve for making ropes, which are called by them Agotag, Amoquid. The Sagig and Laquis of the Bisaya are other varieties. Rumphius states that the Malay name of the Laquis is Pissang utan, which means wild plantain. It is called in Amboyna Kula abbal; in Ternate Fana; and in Mindanao Coffo; also the cloth made from it. The abaca is abundant in the volcanic region of the Philippine Islands from Luçon to Mindanao, as also in the neighbouring islands as far south as the Moluccas. It therefore extends from the equator to lat. 20° N., and may probably be easily cultivated in Travancore, Arakan, Assam, and the Northern Circars.

Mr. G. A. K. Honey, British Consul, Manila, reports that the plant thrives best in soil largely impregnated with decayed vegetable matter, the districts in which it is planted being to a great extent reclaimed forest lands. Hilly land is the most suitable, the plant yielding more abundantly on such than on low-lying flat ground. The plants require a large amount of moisture, and the production is chiefly in the southern districts, where the rainfall is greater. The plants suffer severely during long periods of excessive heat and drought. The custom there, after cleaning the land thoroughly, is to plant small plants of about 3 feet high, leaving a space of from 2 to 3 yards between each, the young shoots which spring up later round the parent stem filling up the intervening spaces, the ground being thoroughly cleaned and freed from weeds at least twice a year. In a favourable soil, the first crop will be available in about two years after planting, but will only be about one-third of the full production. In the fourth year a full crop will be obtained. The plants must on no account be allowed to fruit, as they then become worthless. When matured, they are cut down about a foot from the ground; and the labourer strips off layers from the trunk, which are cut into strips of about 3 inches wide, or, say, three strips to each layer. The strips are each drawn through between a blunt knife and a board, to remove the pulpy vegetable matter from the fibre, which is then spread in the sun to dry. So soon as it has been thoroughly dried, it is ready for the market. The appearance of the fibre depends entirely on the care bestowed in drying it, as, should it be exposed to rain or not thoroughly dried, it becomes discoloured or assumes a brownish tinge, and loses strength to some extent. The outside layer produces a reddish-coloured fibre, which is, however, quite sound, and is easily distinguishable from spoiled hemp. The cost of preparing and planting a quinon (10,000 square fathoms), and keeping it clean up to the time of the first crop, is estimated at $200 to $300, not including the original cost of the land, and afterwards an annual outlay of about $60 would be required to keep the soil free from weeds, etc. The above-mentioned extent of land would produce 30 to 40 pikuls (140 lbs. English each), after the plantation is three years old. The labourers receive one-half of the result of their work, the other half going to the owners of the trees. The quantity cleaned by one man working steadily day by day averages about 12 lbs. When once planted, the trees send up shoot after shoot from the old roots, and a plantation will continue to give a good production for from 15 to 20 years, after which the soil becomes exhausted, and new land has to be planted. The total production of the fibre in the islands in 1882 was 325,600 bales, or 40,700 tons, which is just about the estimated total consumption of the world.

The imports into Britain of hemp from Manila were—

1877,	332,304 cwt.	£488,069	1881,	353,770 cwt.	£691,186
1878,	421,160 ,,	551,856	1882,	378,231 ,,	830,033
1879,	337,687 ,,	434,037	1883,	330,132 ,,	747,031
1880,	407,431 ,,	622,776			

In Britain it is used for the finer cordage, yachts' rigging, and clothes-lines.—*Royle, Fib. Pl.*

MANIPUR STATE is the Kasse or Kathe of the Burmese. It is situated between lat. 23° 49′ and 25° 41′ N., and long. 93° 5′ and 94° 32′ E. The population of the valley and surrounding hills is estimated to be about 74,000 hillmen and 65,000 Manipuris. It is bounded to the W. by Cachar and the Naga Hills, to the N. by the Naga Hills Agency and independent Naga tribes, to the E. by the Naga tribes and Burma, and to the S. by Kuki tribes. It has an area of 7600 square miles, of which 7000 square miles are mountainous lands, inhabited by various hill tribes, speaking at least 20 different languages.

The valley part of Manipur is the centre of the chain of valleys which connect India and Burma, having to its east and west those of Kubbo and Cachar. The valley is 2570 feet above the sea. Much of the valley is at all seasons covered with water. It seems indeed at one time to have formed a large lake, and the piece of water in the south, called the Logtak, appears to be the rapidly filling remnant of it. The valley seems originally to have been occupied by several tribes, the principal of which were named Koomul, Looang, Moirang, and Mei-thei, all of whom came from different directions. For a time, the Koomul appear to have been the most powerful, and after its declension, the Moirang tribe. The principal is now the Mei-thei, next the Phoongnai, after whom the Teng-kul, the Ayok-pa, the Kei, the Loee, and Muhammadan. The Mei-thei population is divided into four parts, called Punnah, which are designated in the order of their seniority,—Ka-phum, Lai-phum, Ahull-oop, and Nihar-oop. The Loee pay tribute, and is considered so inferior that the name Mei-thei is not given to it.

The Manipuri native tribes on the south of the valley of Assam are the Manipuri, Songpu, Kapwi, Koreng, Maram, Champhung, and Luhuppu. They are bounded on the east by the Shan of the Kynduayn, and on the N., S., and W. by the Naga and Heuma. Indeed, it may be doubted whether there is any marked transition from the Manipuri tribes and dialects to those of the Southern Naga on the one side, and those of the Yuma range and the Blue Mountain on the other. The Meiung speak a language of Sanskrit derivation. They are now in a servile condition, performing the duties of grass-cutters to their conquerors. The Maibee are priestesses of an order said to have been instituted many hundreds of years ago by one of the royal princesses. The oldest family of Brahmans in Manipur is called Hungoi-bun, from Hungoi, a frog, assigned as a nickname to the first Brahman, because he astonished the Manipuris by the frequency of his ablutions.

The Manipuris are distinguished for their enthusiastic love of horses, and skill in equitation over all the neighbouring tribes. Their breed of small horses is celebrated, but it is said they are fast dying out. The great national game of the Manipuri is hockey on horseback. The principal national festivals are the Hiyang, the Lumchail, and the Hanchong, at which the national game of hockey, with boat racing and foot racing, are the chief attractions.

The inhabitants of the hills around the valley of Manipur in the west are known under the general appellation of Naga and Kuki.

The marshes of the south, in the vicinity of the Logtak, afford a retreat to serpents of a formidable size, and the whole valley of Manipur is much infested by them. Some of them are exceedingly active and bold, as the Tanglei. It is fond of ascending bamboos, along the branches of which it moves with great velocity, and if enraged, throws itself from an extraordinary height upon the object of its anger. Its bite is said to be mortal. This, added to its great activity and fierceness, makes the Tanglei an object of dread.—*Dalton's Ethnology; M'Culloch's Records.*

MANIS AURITA. *Hodgson.*

M. Javanica, *Blyth.* | M. pentadactyla, *Hodgson.*

The Ling-li of the Chinese is the scaly ant-eater. The genus Manis belongs to the order Edentata, in which also are classed the Tardigrada or Sloths and the Effodientia or Burrowers, the family Manididæ being the Pangolins. This manis occurs in Sikkim, and extends thence through the Indo-Chinese countries into China itself; the Chinese name means the jungle carp. It is sold in the markets of Canton, where its flesh is considered excellent and its scales medicinal. Dr. Gray described this species as Pholidotus Dalmanni.—*Jerdon.*

MANIS JAVANICA. *Desmarest.*

M. leucura, *Blyth.*	Chum or scaly hill borer.
Chun-shau-cap, . . CHIN.	Pangolin, ... JAV.
Lingli or hill carp, ,,	

Inhabits Burma, the Malayan Peninsula, several parts of China, and islands of the Archipelago.

MANIS PENTADACTYLA. *Linn.*

Bajar-kit, . HIND., SANSK.	Thirya,

This manis, or Indian scaly ant-eater, the common pangolin, is 26-inches long, tail 18 inches. It is nowhere abundant, but is found throughout the whole of India, and into the Lower Himalayas and Nepal. It walks with its fore feet bent over, and with its back conversely curved. It lives on insects, the white ant, but cannot be kept alive in captivity.

The manis burrows in the ground, in a slanting direction, to a depth of from 8 to 12 feet from the surface, at the end of which is a large chamber about 6 feet in circumference, in which they live in pairs, and where they may be found with one or two young ones about the months of January, February, and March. They close up the entrance of the burrow with earth when in it, so that it would be difficult to find them but for the peculiar track they leave. A female that Mr. Elliot kept alive for some time slept during the day, but was restless all night. It would not eat the termites or white ants put into its box, nor even the large black ant (Myrmica indefessa, *Sykes*), though its excrement at first was full of them. But it would lap the water that was offered to it, and also conjee or rice water, by rapidly darting out its long extensile tongue, which it repeated so quickly as to fill the water with froth. When it first came it made a sort of hissing noise if disturbed, and rolled itself up, with the head between the four legs, and the tail round the whole. The claws of the fore feet are very strong, and in walking are bent under, so that the upper surface is brought in contact with the ground; its gait is slow, and the back is curved upwards. After its death a single young one was found in it (September 15th), perfectly formed, and about 2 inches long. The marks of the future striated scales were distinctly visible, and its long tongue was hanging out. The tongue of the old one was 12 inches in length,

narrow, flat, fleshy to the tip, the muscle along the lower surface very strong. The length of the animal was 40 inches; the weight 21 lbs.—*Jerdon; Elliot.*

MANISURUS GRANULARIS. *Linn.* Peltophorus granularis, *Beauv.* A plant of the south of India used in medicine. Roxburgh notices also M. myurus, *Linn.*, the Nalla punuku of the Teling.

MANJARABAD, a taluk in the Hasan district of Mysore. The hills of Manjarabad afford some of the most beautiful scenery in India. Forests of magnificent timber are broken by green glades, and overhung by precipitous rocks. The soil is fertile, and rice is grown in abundance on the terraced slopes of the valleys. Coffee was introduced about the middle of the 19th century. By the latter quarter there were 155 estates in the taluk owned by Europeans, occupying 21,000 acres, and 9500 native holdings, covering 9000 acres.—*Imp. Gaz.*

MANJERA, an affluent of the Godavery, rises in lat. 18° 44′ N., long. 75° 30′ E., runs S.E., S.W., into Godavery. Length, 330 miles. It receives the Thairnya, 95 miles; Narinja, 75 miles; Munnada, 100 miles. About 11,000 square miles are drained. While flowing through arid granitic plains, it obtains but a scanty addition of water, except during the rainy season.

MANJ'H or Manjha, the circle of village land beyond the bara or goind lands. Manjha also means alluvial land.

MANJHA, or the middle land, is the country and people around Lahore. It is a term applied to the southern part of the Bari Doab, near Lahore and Amritsar, but vaguely includes all the Sikh district and people north of the Sutlej. Ganj-i-bar is a bald tract in the central dorsal plateau in the Manjha or middle part of the Bari Doab. The soil of the Ganj-i-bar is intensely arid, often saline, and produces only sal and some salsolaceous plants, with a few bushes of jhand. The men in the Manjha or Bari Doab, between the Ravi and Beas, are reputed to be the bravest and most warlike of the Panjabis. The Sikhs who inhabit the country between the Sutlej and Jumna are called Malawa Singh, a title conferred upon them for their extraordinary gallantry, under their leader Banda, the successor of Guru Govind, the founder of the Sikh nation. The Malawa Sikhs are almost all converts from the Hindu tribes of Jats and Gujars.—*History of the Panjab.*

MANJHI, a boatman; master of a traffic or cargo boat on the Ganges, the steersman of a boat. Also the title of the headmen of the Santal villages.

MANJOOSER, the patron deity of Wootai in China. At the monastery of Shoo-siang-si, S.W. from Poo-sa-ting, he is represented by a large gilt figure seated on an immense lion.

MANKA. In the 8th century, a Hindu physician who went to Baghdad and practised at the hospitals. Manka and Saleb were the physicians of Harun-ur-Rashid.

MANKAH, pl. Manke. HIND. Beads or cut agates, pebbles for signet rings.

MANKARI, nobles, persons entitled to honour or distinction.

MANKIR, according to Muhammadanism, an angel who, with another named Nakir, questions the dead as to their past life. A Shiah about to die should say in the name of God, the Prophet, and the Imams, 'I confess that God is my Lord, and Islam my religion, and Mahomed my prophet, and the Koran my book, and the Kaba my kibla, and Ali my Imam, and also that the twelve Imams are my guides. O merciful God, this confession I deliver to thee, the Prophet, and the twelve Imams; release me in the grave when Mankir and Nakir come, O most merciful.'

MANKUHA. ARAB. A married woman; amongst Indian Muhammadans, a woman married by the simple marriage Nikkah ritual. They take a lower social place than the wives married by the Shadi ceremony; the one is called a Nikkah wife, the other a Shadi wife.

MANMATHA, a name of Kama, the Indian Cupid. He was burnt to ashes and revived by Iswara. He has various names. Manmatha bana chettu, TEL., Ixora bhandûca, *Ib.*; also Jasminum sambac. Its literal meaning is Cupid's arrow tree.

MANNA.

Mun, Turanjabin,	ARAB.	Tsau-mih,	CHIN.

Tse-mih,	,,	Shir-i-khist,	PERS.

The manna of the south of Europe is the concrete exudation from a species of ash, the Fraxinus ornus, *Linn.*, but sweetish secretions are exuded by some other plants of those regions, and are usually considered to be kinds of manna. F. gargavica and F. rotundifolia, *Lam.*, are also said to yield it. F. florifera, the Ornus florifera or flowering ash tree, grows in the mountains of the south of France, and F. rotundifolia, the Ornus rotundifolia or round-leaved manna ash tree, is a native of Calabria and Sicily. Of the manna obtainable in Central Asia, several kinds are used in native medicine. One of these, in the form of small dark grains, is the turanjabin, said to be derived from the Alhagi maurorum; another, somewhat whiter, is the shirkhist or shaklu, which is believed to be produced in Kabul by a species of Fraxinus, but Bellew says it is from the Siah chob or blackwood tree. The shirkhist is the best kind known in India.

The shakr-ul-ashar or shakar taghar is a round cell resembling in shape a small gall, and is said to be produced by the puncture of an insect on the Calotropis procera, the akh or mudar; it has a sweet taste. A fifth kind is mentioned as being obtained on an umbelliferous plant. Manna of the tamarisk, in China is called Ching-ju, CHIN. Turanjabin, in the Kabul bazars, is in small round tears, while shirkhist is in large grains, irregular masses, or flat cakes.

The manna of ancient Assyria (Exodus xvi. 15, 31, 33, and 35; Numbers xi. 7), in Turkish called Kudrat-ul-halwassi, or the divine sweetmeat, is found on the leaves of the dwarf oak, and also, though less plentifully, and scarcely so good, on those of the tamarisk (the Tarfa of the Arabs), and on several other plants. It is collected in the early part of spring, and again towards the end of autumn; in either case the quantity depends upon the rain that may have fallen, or at least on the abundance of the dews, for in the seasons which happen to be quite dry, little or none is obtained. People go out before

sunrise, and, having placed cloths under the oak, arch, tamarisk, and other shrubs, the manna is shaken down from the branches. The Kurds eat it in its natural state as they do bread or dates, and their women make it into a kind of paste, being in this state like honey, and it is added to other ingredients used in preparing sweetmeats, of which all oriental nations are fond. The manna is partially cleaned, and carried to the market at Mosul in goat-skins, and there sold in lumps, at the rate of 4¾ lbs. for about 2½d. But, before using it, it is thoroughly cleaned from the fragments of leaves and other foreign matter by boiling. In the natural state, it is of a delicate white colour, or, as in the time of the Israelites, like coriander seed (Numbers xi. 7), and of a moderate but agreeable sweetness, and Calmet compares it to condensed honey. Burkhardt, however, says it is of a dirty yellow colour, slightly aromatic, of an agreeable taste, sweet as honey, and, when eaten in any quantity, it is purgative; he adds that the time of collecting it lasts six weeks. Under the Persian names gaz or gazu (Gaz, PERS., tamarisk), a glutinous substance like honey, deposited by a small green insect upon the leaves of the oak tree, is much used for making sweetmeats in Persia. It is a manna of the chemist. Gazanjabin is a manna produced on branches of the Tamarix Indicus by the punctures of the Coccus mannifera. This is often called Arabian manna, to distinguish it from turanjabin, Persian manna, and from the shirkhist or Khorasan manna, and from Sicilian manna.

Manna of Australia is obtained from the Eucalyptus viminalis, *Labill.*, the Yarra yarra of the natives. It exudes from the places bored by the Australian Tettigonia. It differs from the European mannas, and is a kind of sugar. Another saccharine secretion occurs in Australia and Tasmania, principally on the leaves of the Eucalyptus dumosa or mallee tree. It is the Leup of the natives, and forms on the leaves small conical cups of gum covered with white sugary hairs. It is a secretion from an insect of the genus Psylla, and is very nutritive. It assumes a crystalline structure when dried. Dr. T. L. Phipson says (p. 89) a sort of manna is produced in Australia and Tasmania on the Eucalyptus resinifera. A sweet substance exudes from the leaves, and dries in the sun's rays, and a strong wind shakes it down like a snowfall.

A manna from the Pinus cedrus of Lebanon sells for 20 to 30 shillings an ounce.

A manna sugar is obtained from Chamærops humilis, also from Pinus Lambertiana, and from the Quercus mannifera of Kurdistan.—*O'Sh.; Powell; Wellsted; Royle, Ill.; Ferrier, Journal; MacGregor; G. Bennett, Gatherings; Dr. T. L. Phipson.*

MANNA-NIR, in Malabar, from Manna, a seat, and Nir, a waterpot, alluding to the right of carrying the bridegroom through the street on the marriage day.

MANNARGUDI, a small town situated in lat. 10° 40′ 10″ N., and long. 79° 29′ 30″ E., 24 miles south-east of Tanjore. There is a fine pagoda with a popular car festival.

MANNO-DHARA. KARN. Labourers who execute heavy work, such as heaving blocks of stones, constructing earthen walls, etc.

MAN OF WAR BIRD; species of the genus Phæton, Ph. rubicauda, Ph. candidus.

MANOONGAN, Manoongan putih, and Manoongan manga are three plants of Borneo yielding caoutchouc. Their stems are 50 to 100 feet in length, and rarely more than 6 inches in diameter. The fruit is yellow, the size of an orange, and containing seeds as large as beans, each enclosed in a section of apricot-coloured pulp, highly valued by the natives. Other plants of Borneo yielding the gutta of commerce, besides the Isonandra, are species of Ficus and Willughbeia, that of the latter being the gutta soosoo.—*Burbidge.*

MANOTIDAR, in the Bombay Presidency, a money-lender, a money-broker.

MANPAN. MAHR. Honorary and prescriptive rights claimed by the hereditary patel and other village-office-bearers at weddings, and the right of precedence at processions; the rights and privileges enjoyed by the patels of Mahratta villages at the three Hindu festivals of the Pola, the Dasara, and the Holi. The Pola is held on the day of the new moon of the month Srawan or Bhadrapad. The bullocks of the whole village move in procession under the 'toran' or sacred arch dedicated to Maroti, which is made of twisted 'mol' grass, and covered with mango leaves. The gurhi, or sacred pole of the patel, is borne aloft to the front; the patel gives the order to advance, and all the bullocks, his own leading the way, file under the toran, according to the respective rank of their owners. The villagers vie with each other in having the best painted and decorated bullocks, and large sums are often expended in this way.

At the Dasara, a male buffalo (hela) is provided at the village expense for a solemn sacrifice to the goddess Durga. The buffalo is taken up to the flagstaff (jhenda) in front of the village town hall (chouri), where it is slaughtered by the patel's own hand, and then carried away by the Mhars to be eaten.

At the Holi, the patel and astrologer (joshi) meet and invoke the demons (rakshas) in whose honour it is held. The patel then lights the sacred fire. He provides the red powder (gulal) and other accessaries of the festival.

MANSA, a Native State of Mahikanta, in the province of Gujerat, Bombay. It is situated in the Sabarkanta subdivision, and surrounded by the Gaekwar's territory. The chief is descended from the Chaura dynasty, one of whom founded Anhilwara Patan in 746.—*Imp. Gaz.*

MANSAB. ARABO-HINDI. An office or dignity, a military title of rank conferred by the Moghul government. Mansab-dar, the holder of a mansab; at Muhammadan courts, a military or civil officer.—*W.*

MANSAROVARA LAKE or Mansaraur or Manasa-Saras, a lake in Hundes, is in Tibetan called Tsho-ma-phan. It is the same with the Binda Sarovara of Hindu mythology, produced from the heart of Brahma. It is called Anandat. Four rivers are supposed to spring from it, and that it is near Su-meru, the abode of gods, the Vindhyasaras of the Puranas. It is a place of Hindu pilgrimage of peculiar sanctity. There are several Buddhist monasteries on its banks.—*As. Rs.*, 1816, xii.

MAN SINGH, a ruler of Jeypore, who ascended

the throne A.D. 1592. He commenced a palace at Amber, which Siwai Jye Singh finished. He also erected an observatory at Benares, and a temple at Bindraban. He was one of Akbar's generals. His sister was married to Jahangir, and was the mother of prince Khusru.—*Cal. Rev.*, January 1871.

MANSUR of Hallaj, a religious reformer of the Shiah sect, who constantly repeated the Arabic assertion Ana'l Hakk,—I am the Truth. He was executed for his temerity, A.H. 306, A.D. 919.

MANSUR, a khalif who built Baghdad, A.D. 763, out of the ruins of Ctesiphon.

MANSURA. Brahmanabad was the capital of Lower Sind in the time of the dynasties that preceded the Arabs, and is supposed to be the modern Hyderabad; but it seems to have intermediately borne the name of Mansura after the Arab conquest. Mansura, Alor, and Multan are places of note in the valley of the Indus, noticed by early travellers to India.—*Elliot.*

MANSURCOTTAH and Calingapatam, in Telingana or the Northern Circars, are increasing seaports. Aska is a large sugar manufacturing place.

MANTAKHAB-ut-TAWARIKH, a book finished in the end of the fortieth year of Akbar's reign. It was written by Abdul Kadar of Badayun, and is a history of the Muhammadan kings of India.

MANTAPA, the porch in front of a Hindu temple, the part of the building known in architectural nomenclature as the 'pronaos.' The word is also written Mundup, also Mantapam. The mindra or cella, in Hindu temples, contains the statue of the god. The Mindra, dedicated to the linga, is a double-roofed Gothic building, the body square, but the upper part short and tapering to a point. It contains one, two, three, or more rooms, about three cubits by four, with a porch in front for spectators. The centre room contains the lingam. Mindra, says Ward, means any edifice of brick or stone; but custom has appropriated it almost exclusively to the temples of the lingam. Figures of the deities are placed there on being brought from the mindra on days of festivals for worship.—*Ward's Hindoos*, ii. p. 1; *Cole. Myth. Hind.* p. 390.

MANTIS. Several species of this genus of insects occur in India,—M. superstitiosa, M. aridifolia, and M. extensicollis. M. tricolor, *Nietner*, the mantis of the coffee tree, is green, lower wings reddish, with large blackish spot at the posterior margin. The female is 1 inch long, with 1¼ inch of an expanse of wings. The male is considerably smaller. The eggs are deposited upon coffee leaves, in cocoon-like masses of ⅝ of an inch in length, but drawn out further at each end. The Mantis religiosa, amongst the peasants of Languedoc, is held almost sacred; they call it the Prega Deori or Prie Dieu.

The Mantidæ are usually of the colour of the leaves or foliage amongst which they dwell. They are all predatory. See Insects.

MANTRA. Sansk. Counsel; hence Mantri, a counsellor. In Hinduism, a prayer, an invocation, a charm. Mantra is from Matr, to repeat in the mind, and is applied to a formula or litany in use in invocations of the Hindus. There are many of these. The great mantra of the Brahmans is styled the Gayatri, and is deemed the holiest verse of the Vedas; it is an invocation to the sun. Its words are in Sanskrit, and are O'm! Bhūrbhuvā ssuvāhā, O'm! Tatsa vit'hru varênnyâm; B'harg devâsayâ dhimahi dhiyo yonaha pracho dayath,—the translation of this prayer being O'm! Air Earth, Sky. O'm! let us meditate on the suprem splendour of the divine Sun: may he illumina our minds. That of the Srisampradaya or Ramar uja sect of Vaishnava is said to be 'O'm! Ramay namah,' O'm! salutation to Rama. A mantr generally consists of the name of some deity c a short address to him; it differs with variou sects, forms the chief ceremony of initiation c the Hindus of all sects, and is communicated b the teacher to the disciple in a whisper; and man mantra, or formulæ of prayer, are supposed t have a magic power. Six descriptions of charms c mantras are known in Gujerat, which are describe in a series of works forming the scriptures on th subject, or the Mantra Shastra. A charm calle Marun Mantra has the power of taking awa life; Mohun Mantra produces ocular or auricula illusions; Sthambhun Mantra stops what is i motion; Akurshun Mantra calls or makes presen anything; Wusheekurun Mantra has the powe of enthralling; and Oochatun Mantra of causin bodily injury short of death. Mantra drooma i from Manan, to meditate, and Drooma, a tree.—*Rasamala, Hindu Annals*, ii. p. 403. See Gayatri Hindu.

MANU, from the Sanskrit root Manu, to think in Hindu mythology is a titular name applied t fourteen progenitors of mankind, each of whor ruled the earth for a manwantara or period equa to 4,320,000 years. The names of the fourtee were Swayam-bhuva, Swarochisha, Auttami Tamasa, Raivata, Chakshusha, Vaivasvata o Satyavrata, Savarna, Daksha-Savarna, Brahma Savarna, Savarna or Rudra-Savarna, Rauchya and Bhautya. Manu Vaivasvata of the presen period, the seventh Manu, is represented as con ciliating the favour of the Supreme Being b his piety in an age of universal depravity. H is noticed in the Satapatha Brahmana, which con tains an important legend of the deluge, of whic he was warned by a fish, and told to build a ship which the fish guided. Manu alone was saved but Ida was produced from his side, and the tw were the parents of a new race of men. He i the Noah of the Hebrews.—*Warren, Kala Sanhita*

MANU is the name given to the author of th Manava Dharma Sastra, comprising the Hindu system of duties, religious and civil. It is calle the Institutes. Mr. Hunter fixes the date o Manu's Code as B.C. 500; B.C. 900 used to b assigned to this ancient work, and some hav recently brought it down to A.D. 1200. It relate to Hinduism and the laws and customs of th various races following some form of Hinduism and therefore seemed to Chevalier Bunsen to be patchwork. It undoubtedly preceded, or was a least contemporary with, Buddhism. But it i posterior to Kapila, for the philosophy is that o the Sankhya to a certain extent, and it is probabl that the 6th century B.C., the date given by Pro fessor Wilson as that of parts of this compilation is the correct one, and the book as it has com down to us seems merely an abbreviation of a fa larger and more ancient one,—Elphinstone say B.C. 900. It opens with an account of the creation and goes through the category of every difficult in which a man, a state, or a community ca possibly be found. It embraces the whole dut

of man and of men, religious, political, social, domestic, and private. The duties of monarchs are laid down with as little ceremony as those of the humblest panchala. It was verbally translated from the original, with a preface by Sir William Jones, about A.D. 1770, and this, with the subsequent Sanskrit text by Professor Haughton, and the translations of Haughton and Loiseleur Deslongchamps, made this book known in Europe. Professor Wilson is of opinion that the Institutes of Manu, though disfigured by interpolations, and only cast into their present form in about B.C. 200, are still entitled to date many authentic portions of their text from B.C. 800, which was the estimate of Sir William Jones. In fact, the Institutes are a compilation of the laws of very different ages, races, and states of society. Many are word for word the same as the Sutra of some of the oldest rishi; and there are other unquestionable proofs of high antiquity. The people of Bengal, Orissa, and the Dravira race of the south were not Hindus when one passage was written, and Dr. Caldwell places Dravira civilisation through the Brahmans six or seven centuries after Christ. There is no mention of, or allusion to, Siva or Krishna, which places parts of the work before the Mahabharata; there is evident familiarity with the Vedas, persons and legends being alluded to not found anywhere else. All such passages we could consent to consider at least as old as B.C. 800. On the other hand, there are many references to the merit of Ahinsa, 'non-injury of animal life,' and these are probably later than Buddhism; and there is mention of the China race, a name that sinologues say is not older than two centuries B.C. It is therefore believed that the work may have been put together about that time, though very much of it is a great deal older. The present estimation of the laws of Manu is somewhat different from that of Sir William Jones. Many of the laws are doubtless extremely ancient, in the same way that the laws 'Thou shalt not steal' and 'Thou shalt not kill' date back in all probability to the primeval period when man first became a living being. It thoroughly recognises caste. It inculcates the worship of inferior gods and goddesses, of the elements, and of the heavenly bodies, and the caste of Brahmans is to be held in great reverence.

It is not included amongst the Sutra or sacred revelations, but amongst the Smriti or traditions. Indeed, the term Smriti implies recollections, a name which seems to indicate pretty precisely the character of the code of Manu. There is a form and completeness about the work which indicates that it was compiled long after the age which produced the Pentateuch; and, judging from its intensely Brahmanical character, we should place it nearer to the Puranic age than to the period when the elemental worship, as exhibited in the Vedas, was the religion of the people of India. In a word, the laws of Menu are not to be illustrated by the Vedas, but by the Puranas; they belong not to the religion of the patriarchs, but to that of the priests and kings. The Vedas exhibit the oldest form of the Hindu religion with which we are familiar, and that was nothing more than the worship of the elements, of Agni or fire, of Indra or the rain-giving firmament, of Varuna or the waters, of Vayu or the wind, and of some mino deities. Amongst the first items of information we receive on Hindu history is in a passage in Manu which gives us to infer that the residence of the Aryan race was at one time between the rivers Saraswati (Sersoty) and Drishadwati (Kaggar), a tract about 100 miles to the north-west of Delli, and in extent about 65 miles long, and from 20 to 40 broad.—*Prin. Ind. Int.* p. 223; *Elphinstone, History of India*, i. p. 388.

MANUEL FARIA DE SOUZA, author of Asia Portuguesa, etc., Lisbon 1666.

MANUFACTURES of the south and east of Asia are largely articles for personal or domestic use. Compared with the industries of Europe and America, there are no great shipbuilding establishments, or metal foundries, or glass-works. The people of India make excellent glass, but they turn out only prettily-tinted bangles for women's bracelets. Candles, clocks, watches, machinery, and mill-work are all imported from foreign countries, as also are much of their cotton and silk and woollen goods, porcelain, hardware, malt liquor, and paper.

In 1882-83, the British India total imports from and exports to foreign countries were respectively to the value of 65 and 84 kror, as under:—

Imports, Rs. 65,55,20,362, viz.

Merchandise, Rs. 52,09,86,720 | Treasure, Rs. 13,45,33,642

Exports, Rs. 84,52,67,860, viz.

Merchandise—	
Foreign goods,	Rs. 2,80,24,163
Indian produce and manufactures,	80,59,82,631
Government stores,	8,42,578
Treasure,	1,04,18,488

The following are the details of the imports and exports of manufactures:—

British India Imports, 1882-83—

Apparel,	Rs. 76,97,371	Malt liquor, beer, porter,	Rs. 1,33,46,108
Cabinetware furniture,	5,07,736	Machinery, mill-work,	1,34,23,985
Caoutchouc manufactures,	2,11,010	Matches, lucifers,	17,44,301
Candles,	8,80,749	Mats,	1,25,631
Carriages, carts,	5,12,134	Metals, brass, copper, iron, lead, mercury, steel, tin, zinc,	4,61,38,588
Clocks and watches,	9,23,937	Oil-cloth, floor-cloth,	1,68,625
Corks,	2,35,797	Paints, colours, materials,	23,44,502
Cotton goods, twist and yarn,	24,81,00,6	Paper, pasteboard,	33,42,989
Earthenware, porcelain,	17,00,022	Perfumery,	6,33,356
Fireworks,	5,64,183	Printing materials,	3,46,063
Flax manufactures,	14,00,923	Railway plant,	1,11,64,342
Glass,	48,36,845	Silk and manufactures,	97,77,693
Hardware, cutlery,	79,17,912	Soap,	6,04,117
Instruments, apparatus,	15,03,645	Stationery,	14,75,814
Ivory manufactures,	20,59,477	Sugar,	1,08,69,610
Jewellery, plate, precious stones,	30,69,858	Tea,	19,30,515
Jute manufactures,	3,97,938	Tobacco,	8,36,087
Leather and manufactures of,	19,58,873	Toys,	10,68,167
		Umbrellas,	23,28,292
		Wool manufactures,	98,48,285

British India Exports, 1882-83—

Apparel,	Rs. 5,79,148	Hemp manufactures,	Rs. 3,176
Books,	2,12,343	Ivory manufactures,	15
Cabinetware,	2,01,872	Jute manufactures,	1,48,78,304
Coir manufactures,	14,20,884	Oils,	42,52,768
Cordage,	2,84,106	Opium,	11,48,13,764
Cotton goods, twist, yarn,	2,57,20,616	Perfumery,	67,729

Silk manufactures,	Rs. 27,65,754	Wool manufactures, shawls,	Rs. 7,71,718
Sugar,	80,87,751	Wool manufactures, others,	8,11,776
Tea,	3,69,95,085		
Tobacco,	1,66,075		

The people of several of the races in the south and east of Asia are skilled in many of the industrial arts, and they are diligent in their respective callings, but they are not producing the manufactures needed by foreign nations. In field and garden cultivation, in the economy of water, and the utilisation of manures, no nation excels the Chinese, and they are stimulated by the example of the imperial family, the head officials annually ploughing the first field, and the empress and her attendants taking an interest in the silk-worms and their produce. In spinning, in the weaving of shawls and carpets, and dyeing of cotton and silk stuffs, of such kinds as are suitable for the clothing that they wear and to their habits, the weavers and dyers in South-Eastern Asia are not approached by any European race. Nevertheless, as will be seen by the above lists, India has to import Rs. 24,81,00,625 worth of cotton goods; but yet holds its own in the finer artistic work of its mushroo and kimkhab, its satins and brocades of Ahmadabad and Benares, and its delicate muslins of Dacca and North Arcot. The shawls of Kashmir and the Panjab have no rival; the carpets of Persia, Kirman, and Turkestan are readily bought by the wealthy of Europe, and the Rampur chadars from the Himalaya are to be purchased in the fashionable shops of London. It is the highly-finished, machine-made articles of Europe and America that are imported into India. The manufactures of Europe have a mechanical perfection of finish, which is quite out of place in the bold free-hand composition of colour and form characteristic of the best native work. The barbaric splendour of Indian jewellers' work, in jewellery proper and as seen on arms and armour, is due to the lavish use they make in it of diamonds, rubies, emeralds, and other gems. Their work being manual, they need use only flat diamonds, mere scales so light that they will float on water, and rubies and emeralds full of flaws,—stones, in fact, which have no value as gems. But European jewellers' work necessitates the use of gems only of the purest water, and far too costly to be used as mere decoration, or except for their own effect solely.

Cotton-weaving is a very ancient industry of India. Cotton cloth has always been the single material of Indian clothing for both men and women, except in Assam, Burma, and China, where silk is preferred. The author of the Periplus enumerates a great variety of cotton fabrics among Indian exports. Marco Polo, the first Christian traveller, dwells upon the cotton and buckram of Cambay. But the productions of the handlooms of to-day are undersold by the machine-made fabrics of Europe; and without foundries and mill-works the cost of erecting even a spinning mill in India is treble what would be required for one in Great Britain, and the erection of weaving mills has been almost avoided. The people of India are importing twist and yarn, and are weaving these into the fabrics they require. These are chiefly the stout cloths used by the labouring classes. The cotton carpets of India, called shatranji and darri, are usually white, striped with blue, red, or chocolate, and sometimes ornamented with squares and diamonds. Their woollen or pile carpets, known as kalin and kalicha, have attained so much popularity in Great Britain by reason of the low price at which they can be placed on the market.

Europe and America recognise the artistic skill of the goldsmiths and silversmiths of India; also that of ivory carvers of Travancore and China, and that of the lacquer workers among the Shans of Burma, China, and Japan; the enamellers of Jeypore, the koftgari inlayers of the Panjab, and the tutanague inlayers of Beder. The pith models of Madura are much admired, as likewise have been the horn and woodwork armour, horse and elephant trappings of India. These and much of the loom-work hold their own among the people.

In the N.W. of India, in the vicinity of the Himalaya, blanketing, called loee, is made of red and white patterns at Bulrampore, Muzaffarnagar, Rampur, and Gujerat. The Rampur chadar is well known in Britain for the remarkable warmth, lightness, and softness of its texture. It is said to be made of pashm wool.

The namad or namda felts are largely made in all the western parts of India, also in Sind and Baluchistan. Throughout the greater part of India, every agricultural labourer has a cumbli or coarse blanket. The usual mode of wearing them is to bring the two corners together, one overlapping the other, and the end being tucked under, thus forming a hood which is placed over the head, and protects the shoulders and the body in the day, and at night they are converted into bedding, one-half doing duty as a mattress, the other as a blanket or covering. The puttoo, a woollen fabric of Kābul, is made from the under hair of goats, and when old is re-made into nalida, a mixed woollen fabric.

The refined art of India is to be seen in its silver work, filigree or gilt, chased or engraved. Its koftgari work of iron or steel, inlaid or otherwise ornamented with gold, is mostly produced in the Panjab; also the Dekhan, Beder, and other work inlaid with silver.

Mr. Pollen describes the goldsmiths' work as precisely similar, in many forms, to the old Etruscan goldsmiths' work as it has been recovered for us from tombs in Italy and elsewhere. The methods of working gold, now lost in Europe, are still in full use in parts of India; particularly that of fretting gold by soldering fine spines or hairs of gold wire as delicate in fact as thistle-down, yet done by unscientific workmen possessed of certain chemical secrets, which they put into practice by traditional usages. Koftgari work is iron chased with a tool, into which soft gold, very pure, is afterwards hammered, the rough iron taking, by this means, permanent hold on the softer metal, which gets beaten into the fine scratches and hollows. The most imposing use of this material is in the decoration of arms and armour. It is also used to decorate buckles, clasps, work-boxes, caskets, arms, head-pieces, sword-blades, sword-hilts, and various small objects for European use.

Baroda artisans also ornament iron and steel by hammering in gold, not as in the koftgari but in discs or masses, polishing afterwards in the lathe.

Cutch and Ahmadabad is famed for its repoussé work.

The inlaid work of Beder is usually silver, sometimes gold, inlaid on a black amalgam in bold, flat patterns; sometimes seemingly it is of pure tin, which has all the display of silver. The bedri work of Beder is applied largely to the domestic utensils in use by the people, except where Europeans give special orders. It is of black metal (an amalgam), inlaid with silver and gold, in bold, flat patterns. It is made by casting the vases; the core is first formed, then a vase of wax is formed round it, and a mould over that. The wax is melted out through holes made on purpose, and this leaves a mould for the vase. When the vessel is cold, it is chased or roughed out in designs, and the soft silver or gold gently hammered into it.

The goldsmiths' and jewelled productions of India are minute in an extraordinary degree, of elaborate handiwork, obtainable only where labour is cheap. In the enamels of Jeypore, for example, gold itself is completely invested with enamel colours, some of them encrusted with precious stones. For translucent enamels, that is, enamel colours painted on gold (generally), or gold-leaf, which gives light and splendour to the colours, Jeypore is the finest school. A shield of rhinoceros hide, decorated with a border and bosses of this translucent enamel, was sent from Cutch to the Exhibition of 1851.

Brass and gilt basins are covered with a diaper of ornament. Brass work of Moradabad, Jeypore, and Nagpur has the body of the work in brass, and pure tin is hammered over it, leaving spaces of the ground as ornament. The polished surface of the tin is so white and bright as to have the appearance of silver of plain manufacture.

Silver filigree work, gilt, chased, and engraved, is produced in many parts of India and of Burma; the koftgari work of iron and steel, inlaid or otherwise ornamented with gold, is chiefly an art of the Panjab, employed on shields, sword-hilts, necklaces, bracelets. In all these, fineness and elaboration, both in design and workmanship, are held in the highest esteem, and secondary qualities of this kind produce good results in small articles of luxury. It represents the earliest metallic traditions with which we are acquainted.

In the decorative manufactures of Kashmir, designs in outline and colours are prepared for their shawl manufacturers, and in several parts of India blocks are used for printing on calicoes and on the borders of silks.

The chidree is a form of printing in Bombay, which consists in tying up the design previous to dyeing the cloth.

Brass stencil plates are used for the decoration of floors during festivals. The workman produces these stamps without drawing any preliminary outline. In one hand he holds the punch and in the other the hammer, and punches the metal as it rests on a piece of flat board until the design is completed. In use, powdered marble is passed, by a gentle tap, through the perforated plate, and leaves a white dotted outline on the floor, the design being afterwards filled in with powders of various colours. The Dewali is the best time to see these kunna drawings, but they are also much used on other festivals and weddings.

The colours of the cotton and silk sarees in use amongst all the Hindu women of the south of India show great skill in dyeing. The loongis of Sind have also attracted much praise. Bedcovers, called palempores (palang-posh), were at one time very largely exported from the east coast of the Peninsula, and are again making their way in the fashionable shops of London.

In their ivory carvings, lacquer work, and dyeing, China and Japan are in advance of all other races. The Chinese and Japanese excel in ceramic manufacture, which the caste rules prevailing in India utterly debar the Hindus from attaining to anything beyond the cheapest unglazed earthenware, and Muhammadans of India have accepted this position. They are restricted to unglazed earthen pots for holding water, pots for cooking, pans for frying or baking.

The stone vessels of Carwar are made by turning on a lathe their indurated talc or talcose slates, sometimes light grey, sometimes darker; it is an object of great curiosity. Representations of mosques, goblets, etc., are cut from it, but it is also much prized for its intrinsic merits. Pickles, milk, and other substances likely to suffer in contact with copper vessels, or to be absorbed in common pottery, are kept by careful housekeepers in these pots.

Metal workers in gold, silver, copper, brass, tin, zinc, iron, and steel, and for all articles of jewellery and articles used in Hindu work, are very numerous, and weapons of all kinds, daggers, swords, and matchlock barrels, are largely made. The larger articles being the abkhora or drinking-cup, attardan or perfume box, gulab pash, rose-water sprinkler, gulab dan or rose-water holder, the hookah, the kummul or pedestal, the pandan or betel-leaf holder, the pullye or lustral spoon, and the various kinds of lamps. The ruder wares are the gella and chumboo, water-pots, the hookah bowl, and the chillum for the fire; the handi, ghagar, or chatty for carrying water in; the mudka, topee, and towlee, cooking pots; the purrel, baking pot; the tawa, frying pan, and the thali dish.

The embroidery of Asia has been famed through ages, and still takes a high place. The chogha, made of the coarser wool of the goat and camel, is embroidered in Kashmir and the Panjab. The shawls of Kashmir and the Panjab are beautifully embroidered.

Muslin is embroidered with silk and gold thread at Dacca, Patna, Dehli, and Madras. Sind and Cutch (Kachchh) have special embroideries of coloured silk and gold. Leather work is embroidered in Gujerat. At Gulbargah and Aurangabad, velvet (makhmal) is gorgeously embroidered with gold, to make canopies, umbrellas, and housings for elephants and horses, for use on state occasions. A chadar or shawl made by order of a late Gackwar, was composed entirely of inwrought pearls and precious stones, disposed in an arabesque fashion, and was said to have cost a kror of rupees. Although the richest stones were worked in it, the effect was most harmonious. When spread out in the sun, it seemed suffused with an iridescent bloom, as grateful to the eye as were the exquisite forms of its arabesques.—*Sir George Birdwood.*

MANUK-DEVATA or Burung-devata. MAL., JAV. Lit. bird of the gods, or bird of paradise. The high value set upon them awakened the

cupidity and the fraud of the Chinese, who made up from parrots, parrakeets, and others, artificial birds of paradise. Their various names are Mahuk-devata, MAL., lit. God's birds; Burong mati, MAL., dead birds; Passaros de Sol, Portuguese sun birds; and the English name is birds of paradise. They are unknown in Ternate, Banda, or Amboyna. The Paradiseidæ are a group of moderate-sized birds, allied in structure and habits to crows, starlings, and to the Australian honey-suckers, but they are characterized by extraordinary developments of plumage, which are unequalled in any other family of birds. Many naturalists arrange them into two families, Paradiseidæ and Epimachidæ. Paradisea apoda, *Linn.*, the great bird of paradise, has a dense tuft of long and delicate plumage, which comes out from each side of the body, from beneath the wing, sometimes two feet long, very glossy, and of an intense golden-orange colour.—*Wallace*, ii. 267.

MANURE. Zibl, ARAB.

Khad, Khau, Eru, Raus, . . HIND.

The productiveness of any soil depends principally on its natural or artificial capability of retaining or transmitting its moisture, the vehicle, at least, by which the nourishment is conveyed to plants. The soil whose constituent parts are best adapted for retaining a sufficient supply, and transmitting a proper portion in very dry weather to the plants growing in it, without holding it in injurious quantities in the time of very wet weather, is possessed of the principle of vegetation, and will be found to be of the most productive nature. The too tenacious clay soils must be made artificially friable, by drainage and the admixture of marls, sands, etc., and kept so, and be pulverized and mechanically altered, before they can become productive. Until this is done, such soils resist effectually the enriching influence of rains and dews, which merely fall on their surface, and either run off or lie there without penetrating into them. The sun and wind also may beat on them and blow over them, but they can never waken up the dormant energy that lies within; they only by their repeated attacks dry and harden the surface, crack it into irregular portions, and more firmly lock up any languid and dormant principles of vegetable life that may be within the mass. When clay is in excess, it is remedied by the application of sand, chalk, marl, or burned clay, light unfermented manures, and perfect pulverization, to make the soil friable. There are in soil eleven substances necessary for the growth of vegetables, viz. potash, soda, lime, magnesia, alumina, silica, iron, manganese, sulphur, phosphorus, and chlorine; and soil is composed of two classes of ingredients,—one, the inorganic or mineral; the other, the organic, or such as have at some time formed parts of individuals of the animal or vegetable kingdoms. Certain phosphates, though present in soil in the smallest quantity, are its most important mineral constituents, and are derived principally from the animal kingdom; and the following substances, procurable in considerable quantities in India, may be employed as manures:—Animal manure, stable manure, both fresh and old, dung of all animals; guano, pouvre, night-soil, bones of all animals, fresh, calcined, or merely crushed, burnt earth, dead animals' blood, and animals' hair, hoofs, horns, peringa of skins, offal, urine, feathers, fish; and the quickest way to utilize animal substances is to throw them into a stone-lined tank, with water, quicklime, and wood-ashes; the tank should be kept covered, and the liquid parts may be run off from below. Weeds, green, dry, and burnt, branches and leaves of trees both fresh and dry, the leaves of oil-producing plants and those that contain milky juices being the best, as they yield nitrogen, ammonia, and carbonic acid; rotten wood, tan-bark; straw, stubble, roots, etc.; lime, burnt shells, old mortar, gypsum, refuse of soda water, sulphuric and nitric acid, manufactures, broken bricks and tiles, silt and sand from tank and river beds, marls, soda, potash, and magnesian earth, road-dust, house-sweepings, wood-ashes, coal-ashes, burnt cow-dung, muriates, carbonates, sulphates, nitrates and acetates of potash and soda, soot, gas, liquor and sulphate of ammonia, phosphate and superphosphate of lime, tartrates and acetates of iron, refuse from dye-works, leaf-mould; leaves both green and dry, if steeped for a week in water, decay afterwards much more rapidly, and the brown liquor that comes from them is good liquid manure; the leaves should then be laid in alternate layers with earth and half-burnt weeds, and the heap should be covered with matting to prevent the escape of the moisture and gases. If watered and turned once in ten days, the leaf-mould will be fit for use in three months. Keep dung-heaps covered, and dilute liquid manure in them with one or two waters, by which the escape of ammonia will be in a great measure prevented. Liebig says a soil will reach its point of exhaustion sooner the less rich it is in the mineral ingredients necessary as food for plants. But we can restore soil to its original state of fertility by bringing it back to its former composition, *i.e.* by restoring to it the constituents removed by the various crops of plants. A fertile soil must contain in sufficient quantity, and in a form adapted for assimilation, all the inorganic materials indispensable for the growth of plants. It is obvious, he remarks, that we furnish the conditions essential to the formation of starch or of sugar, when we supply to the plants their necessary constituents, *i.e.* such as we find always present in them. The sap of such plants as are rich in sugar or in starch contains much potash and soda, or alkaline earth. As experience proves that a deficiency of alkalies causes a deficient formation of woody fibre, sugar, and starch, and that, on the contrary, a luxuriant growth is the consequence of their abundant supply, it is obvious that the object of culture, viz. a maximum of crops, cannot be obtained unless the alkalies (necessary for the transformation of the carbonic acid into starch or sugar) be supplied in abundant quantity, and in a form fit for assimilation by plants. In fact, the principal object of scientific agriculture is to restore to land, in whatever way the restoration may be most convenient, the substances removed from it, and which the atmosphere cannot yield. Professor Johnston says lime is indispensable to the land; every 1000 lbs. of fertile soil contains 56 lbs. of lime; every 1000 lbs. of less fertile, 18 lbs.; and of the barren soil, only 4 lbs. Vegetable matter, *i.e.* woody fibre, in the state technically called humus, according to Liebig, does not afford nourishment to plants in the form in which we see it in soils, being, in

fact, very nearly insoluble, and therefore incapable of being taken up by the roots, which cannot take up any solid matter, but only as the carbon. A mixture of two or three earths, such as lime, silica, and alumina, is better fitted to absorb moisture and gaseous matter than either of the earths taken singly.

The Chinese are successful gardeners, and use the night-soil largely diluted without decomposing it. In India, cattle manure from the denudation of forests is too often made into fuel. The scanty manure heaps, with the exception of those rare instances where sheep can be hired to fold on the land, form the main resource of the country, and they consist almost entirely of the dung of lean cattle, and of the ashes of that which has been used as fuel; and the soil never can be kept in any other than in a very low and exhausted condition. It is robbed of its vegetable matter, because this is wanted to feed cattle, and, from the absence of trees, there is no means of procuring leaf manure. It is deprived of its phosphate of lime, which is very partially replaced, and of its potash, which can hardly be said to be replaced at all. A Madura native district officer, writing of the subject, says: 'I have not known a case in which, even with the greatest care, a ryot would have been able to secure, by collecting the dung of his own cattle, sweepings, etc., of his house, a quantity of manure sufficient for his field; nor can any be purchased at any reasonable price, since every one is careful to collect as much manure as he can.' In Kurnool, in dry cultivation, manure is never used, as it is all required for the irrigated lands. No village in the Panjab has enough manure for more than its best lands. But in many instances the cultivator has not, in consequence of the scarceness of pasture, even full command of his paltry manurial resources. In parts of the country the cattle are brought home every night to the sheds, but the bulk of the cattle have to be driven off to distant pastures, and do not return till the end of January, or early in February. In Bengal, even with such an exhausting crop as jute, no manure in many instances is used.

The native cultivators at Farrakhabad for ages have used the night-soil for manure. As much as Rs. 15,000 to Rs. 20,000 are paid there by the cultivators to the sweepers, and their lands yield a triple crop of maize, potatoes, and tobacco. At Dinapur, a cultivator who used some poudrette for his field was, for so doing, fined five rupees by his caste men. At Farrakhabad, careful inquiry showed that a household of five persons furnish enough manure to fertilize 12-20ths of a bigha; and a plough with its usual complement of seven head of cattle did the like for one bigha and 12-20ths of land.

In no country in the world is the necessity for manuring the land more appreciated than in India, and in few is the supply more wasted. It is carelessly collected and stored, and for the eight dry months of the year the sweepings of the stable and cow-house are used as fuel. The bones of dead animals are lost.

The practice of sowing the sunn plant for the purpose of a green manure proves that the natives appreciate the effect of manures decomposing in the soil. The use of liquid manure, specially carted for the purpose of distribution, is common in some parts of the country. The high manurial value of indigo water is well known, and largely used wherever available. The sonai or jute water, in which jute has been steeped, is equally valuable. Many of the plants, Janjh, HIND., growing in jhils, tanks, and other standing water, are useful. Water impregnated with the decomposed plants of the genera Ceratophyllum verticillatum, Hydrilla verticillata, Vallisneria, Lemnia, Pistia, Marsillea quadrifolia, Azolla binnata, Salvinia verticillata, and Salvinia cucullata, may be applied with great advantage to the soil. The species of Chara (C. vulgaris) in Europe. 1000 lbs. of green chara were found to consist of 158 lbs. of carbonate of lime, mostly deposited on the plant itself, 8 lbs. of chlorine, 12 lbs. of soda, and 596 lbs. of water. Nitrate of soda and superphosphates (viz. dissolved bones, bone-ash, and rock phosphate), with potash, magnesia, etc., are the fertilizers of the day.

The Calotropis gigantea is valued as a manure, and is ploughed into the ground, as also are the leaves of the cassia. In Afghanistan the dung of camels is carefully avoided, from a belief that it impregnates the soil with saltpetre.

In Rangpur, refuse indigo weed, which is thrown out of the vats, is used either fresh or after rotting like dung. Water from indigo vats is also used on poor lands. Oil-cake from mustard seed is applied both before and after sowing or planting in the cultivation of sugar-cane, wheat, barley, oil-seeds, etc. Oil-cake soaked in water and applied to the sugar-cane tops previous to planting prevents white ants' attacks. Weeds, straw, husks are burnt and strewed on the field. But throughout India, the country is for the most part destitute of wood, and firewood, having to be brought from great distances, is so scarce and dear that dried cattle dung is the usual fuel; the grass is short and scanty; the straw of the various crops is entirely consumed by cattle, which, with the exception of the finer kinds of draught breeds, are necessarily lean; the proportion of cattle, too, to the cultivated area is small, and as the food is extremely deficient, the manure is not only poor in quality, but small in quantity.—*Ben. As. Soc. Journ.*, April 1848; *Hull*, p. 311.

MANWAR PIALA, amongst the Rajput races a favourite expression, and a mode of indicating great friendship; 'to eat off the same platter (thali), and drink of the same cup (piala).' Tod (Rajasthan, i. p. 183) relates how a Rajput pledged another's health and forgiveness in the manwar piala, on which they made merry, and in the cup agreed to extinguish the remembrance of their feud.

MANYAM, KARN., from the Sanskrit Manya, or from the Arabic Inam, respectable. In the south of India, land held free or at a low assessment in consideration of services done to the state or the community. The tenures are of many kinds, as Tarapadi Manyam, Dumbala or Sanad Manyam, Sarva Manyam, and Ardha Manyam. The Manyam, in the Tamil country, is an alienation of state demands.—*W.*

MANYARG, Birar, and Solon are three tribes of Tungus, dwelling on the Nonni, who occupy the vast prairies above the Bureya mountains, and keep large herds of horses. They number 20,000 souls. See Tungus.

MANZAL. ARAB. A halting-place, a stage of

a journey, a dwelling-house, a storey of a dwelling-house; a stage in the spiritual development of the Muhammadans in the tarihat or way of salvation.

MAOUTIA PUYA. *Weddell.* A nettle of India, growing up to 4000 feet. It is taller than Boehmeria nivea, but furnishes a similar fibre.

MAPILLA, in the plural Mapillamar, a Malealam word, commonly written Moplah or Moplay, a native of Malabar, a descendant of the Arabs who first settled in Malabar, lit. the son (pilla) of his mother (ma), or sprung from the intercourse of foreign colonists, who were persons unknown, with Malabar women. The term is also applied to the descendants of the Nestorian Christians, but is in that case usually distinguished by the prefix Nasrani, while Jonakan from Yavana is prefixed to Muhammadan Mapilla, whose usual title is Maraikan or Marakan. The Mapilla of both classes are numerous in Malabar.

MAPLE. Several of this family of trees, the Acer genus, occur in the Archipelago, Himalaya, Kashmir, and Japan. They are trees principally of temperate Europe, Asia, and America, having opposite and mostly lobed leaves, with the veins radiating from the leaf-stalk. The sycamore (Acer pseudoplatanus, *L.*) is extensively planted in Britain. Its white, soft wood was much used for making trenchers, bowls, platters, etc. There might be introduced into India from the United States and Canada the sugar maple (Acer saccharinum, *L.*), the sweet sap of which is collected in spring by tapping the tree to the depth of about half an inch with an auger, and inserting a spout. The juice is boiled down to a syrup, clarified, drained, and crystallized. Good sugar maples yield each about an average of four pounds of sugar in the season. The wood of this species sometimes exhibits beautiful curled and spotted markings (bird's-eye maple); such is much valued for inlaying and cabinet-work. Acer campestre, *Linn.*, is the common maple of Europe. There are about 14 Indian species in the N.W. Himalaya, Assam, Burma, Bhutan, viz. A. Campbelli, cæsia, caudatum, Hookeri, isolobum, lævigatum, niveum, oblongum, pentapomicum, pictum, Sikkimense, stachyophyllum, Thomsoni, villosum.

MAPPIA FŒTIDA. *W. Ic.* Gandapaana, SINGH. A good-sized and very common tree in the moist forests of the western side of the Madras Presidency, and in Ceylon, from no great elevation up to 7000 or 8000 feet. It is very abundant on the Neilgherries.—*Beddome, Fl. Sylv.*

MAR. Amongst the broken tribes in Palamau and Sirguja are a few Mar families, who say that they came from Malwa. They live in good houses, and are careful cultivators. Some in Sirguja are of a yellow or tawny complexion, with handsome features, eyes well protected by prominent brow and nose, with good teeth and well-formed mouths, and of average height. Some have the same light complexions, with very flat features, and some are very dark. Mar or Mala is a name applied to or assumed by several people in different parts of India, but it may be that there is some affinity between all the tribes who bear it. It is the name assumed by the Rajmahal hillmen, who, from their language, are one of the Southern Dravidian nations.—*Dalton, Ethnol. of Bengal.*

MAR or Maar. HIND. A stiff clay or loamy soil, with some sand and vegetable mould. In Bundelkhand the term designates a rich black loam, also called Moti. Maradi in Bombay is an inferior red soil.

MAR. ARAB. A saint; Mar Yuhanna, St. John; Mar Jurjios wa Tannin, St. George and the dragon, the name of a place about seven miles from Beirout, to the east, where St. George destroyed the dragon. A small chapel, now a mosque, was erected to mark the spot near the bridge of the river of Beirout. St. George, Mar Jurjios, is said to have been martyred at the town of Lydda, now a heap of ruins, the most remarkable of which are the remains of a very handsome church built by Richard Cœur de Lion, in honour of St. George. He is held in great veneration by Syrian Christians. In every church is to be seen a representation of his combat with the dragon, with the inscription Mar Jurjios in Arabic, or Ἅγιος Γεωργιος in Greek.—*Catafago.*

MARA or Manh, an evil nat, who subjected Sakya to varied forms of allurements whilst at Buddha Gya. Mara, the tempter, was the name given by the ancient Buddhists to the essence of the evil spirits.

MARA, SANSK., from Mri, to die. From this, words have been derived in many tongues,—moribund, mortal, mortality in English; mort, death, in French; morire, to die, in Italian; mout, marna, marana, in Hindi. Maru, SANSK.; Maru-bhumi, dry, sterile land; Maru-des or Maru-sthala, the sandy deserts between Rajputana and the Indus.—*Wilson.*

MARABOUT is a name applied to feathers of certain birds, and also to the birds themselves. Leptoptilus crumeniferus belongs to a group of storks, distinguished by the head and neck being naked or only covered with small hair-like feathers, the strong cuneate bill, and the large external pouch in front of the throat. It is found dispersed over the tropical portions of Africa, and is said to frequent the negro villages, and to assist the vultures in clearing off garbage of all sorts. Under its wings grow the beautiful plumes known as marabout feathers. Nearly allied to the marabout is the adjutant (L. argala), so well known in British India from its extreme voracity. In Pegu the name is given to the under tail-coverts of a species smaller than the common adjutant, and without a pouch, found all over Pegu, but not so numerous as they were, owing to their being so constantly disturbed and fired at. The beautiful dorsal plumes of the white paddy birds during the breeding season, are objects of commerce, and pass by the name of egret feathers.

MARAE, in the Society Islands, the temples at which human beings were offered to idols.—*Montgomery*, p. 113.

MARAH of Scripture, supposed to be the modern Howara, with its bitter pools. Marah (bitterness). This name, in the form of Amarah, is now borne by the bed of a winter torrent, a little beyond which is a well called Howara, the water of which is bitter. The well rises within an elevated mound, surrounded by sand-hills, and a few date trees grow near it. Camels when thirsty will drink sparingly of this water, but the Arabs never attempt it.—*Wellsted*, ii. p. 43.

MARAKAL, Marakkal, or Mercal, a Madras measure of capacity of 8 padi. A padi contains 100 cubic inches. A marakal of rice or salt

weighs 960 rupees = 24 lbs. 6 oz. avoir., or 12 seers. This standard was fixed, 20th October 1846, at 28 lbs. 12 oz. 13 dr. 22 gr., or $2\frac{9}{10}$ the imperial gallon.—*W.*

MARAKAR, a titular appellation of the Moplah Muhammadans on the S.W. coast of the Peninsula of India.

MARAMMAT, Arab., Hind., from Imarat, a dwelling; at Muhammadan courts, equivalent to the Public Works Department.

MARANTACEÆ, the arrowroot tribe of plants, includes the genera Phrynium, Maranta, Calathea. In the West Indies, arrowroot is obtained from the Maranta arundinacea, M. allongia, and M. nobilis, but also from the Canna glauca and C. coccinea, to both of which the local name of tous les mois is applied. In the E. Indies, arrowroot is prepared from M. arundinacea, also from M. ramosissima, a Sylhet species. Mahabaleswar arrowroot is obtained from Curcuma caulina, *Graham.* Travancore arrowroot is obtained mostly from the Maranta arundinacea, but the fecula of Curcuma angustifolia and of the cassava meal from the manihot is likewise sold under that name. Curcuma angustifolia is also the source of an arrowroot prepared at Benares, Bengal, and Chittagong. A wild arrowroot plant grows in Cuttack, and arrowroot made of it is not distinguishable from that of Maranta arundinacea, except, perhaps, by a slightly earthy taste and smell observable in the wild arrowroot, which is easily accounted for by its imperfect manufacture. Genuine Maranta arrowroot, when pressed, crackles beneath the fingers. Maranta ramosissima, *Wall.*, a plant of Sylhet; its roots yield arrowroot. Maranta virgata, *Wall.* (Phrynium virgatum, *Roxb.*), grows in the mountains between Travancore and Courtailum. The Curcuma or East India arrowroot, as exported to England, principally from Calcutta, has a white and a brown variety. —*Voigt; Roxb.; O'Sh.; Cat. Ex.*, 1862.

MARANTA ARUNDINACEA. *Linn.* Penbwa, Burm. A native of the W. Indies, but now grown in many parts of the E. Indies. This produces the best W. India arrowroot, which is prepared by maceration of the roots in water, and conducting the further processes similarly to the mode of manufacturing starch from wheat, potatoes, or other farinaceous substances. The Maranta arundinacea was introduced in 1840-1841 into Ratnagherry, where it throve extremely well, though it is not grown to any extent. It was also introduced into the Tenasserim Provinces, and the arrowroot made from it was not inferior in quality to any. Maranta arundinacea is largely grown in Travancore, at Chittur near Arcot, in the Tenasserim Provinces, and at the Andaman Islands.

MARANTA DICHOTOMA. *Wall.*

Phrynium dichotomum, *Roxb.*	Donax arundastrum, *Lour.* Thalia cannæformis, *Horsf.*
Mukto-pati, . . . Beng.	Sital-pati, . . . Ben.
Pati-pati, ...	Then, ... Burm.
Madar-pati, ...	

This straight-stemmed Maranta grows in Coromandel, Bengal, Sylhet, Assam, Tenasserim, Siam, Cochin-China, Moluccas, and New Hebrides; the stems are split and woven into smooth and particularly cool and refreshing mats. Tenasserim mats are also made from the split stems of a species of Maranta imported from Rangoon, although the plant from which they are made, or an allied species, is abundant in Tenasserim forests.—*Drs. Roxb., Voigt, O'Sh., Mason.*

MARASCHINO, a liqueur, chiefly manufactured in Venice, Trieste, and Zara, in Dalmatia, from a variety of cherry, named the Griot marasquin. The fruit and seed are crushed together, one part to the hundred of honey added, and the whole mass subjected to fermentation; during this process it is distilled, and the product is rectified. To the rectified spirit, sugar and water are added, in proportions guided by the taste of the manufacturer, and the resulting liqueur is stored for some months before use, to free it of empyreumatic flavour. The fruit tree is the Cerasus caproniana.—*O'Sh.* p. 323.

MARASU-WAKALIGA, a cultivating race of Mysore. Up till the year 1873, the women on marriage made a vow that on the birth of their first child they would offer as a sacrifice the joints of their fingers to the goddess Kali. In some instances where the family was well-to-do, gold or silver finger-joints were substituted for human ones. This barbarous rite, it appears, had existed for years in many parts of the Mysore province, and was not discovered till lately. It is performed on the third or fourth day after accouchement, and in many cases death has ensued. On discovery of the existence of the rite, the district magistrate immediately sent for the leading men of the class, and asked them whether they would like the rite abolished, and why they observed it. They are reported to have said that they simply observed it because all the class observed it, and that it was a very old custom amongst them. They said that if the order extended to the whole class, they would be very glad to give up so barbarous a rite, but that as long as some of them observed it, they could not fly in the face of their ancient traditionary customs. The Chief Commissioner of Mysore and Coorg, by public proclamation in the Mysore Gazette, prohibited the practice.

MARATHALI, the goddess of smallpox.

MARAVA, a race in the extreme south of India, in the Madura, Tinnevelly, Ramnad, and Sivaganga districts, who differ from other neighbouring races in personal appearance, and their language and customs also differ. They worship local deities, to whom they offer liquor, flesh, and fruits, and they practise divination. The men do not wear turbands. They possess lands. They are a robust, hardy, dark-skinned, stalwart race, athletic, with well-developed muscles, active, of moderate height, the cranium rounded, narrow in front, forehead low, eyes large and full. They are employed as village watchmen, and are honest to their employers, but have been largely given to thieving and gang robbery. They use as food the flesh of all animals except that of the cow. They wear their hair long, and arranged like the women of the Dekhan. In their marriages, disparity of age is not considered, nor is the presence or assent of the bridegroom necessary,—a blade of wood, in his absence, serving as proxy. They worship evil spirits, to whom they sacrifice, and, on the occurrence of a smallpox or cholera epidemic, the whole village is excited, and devil dances are common. The Maravar women of Ramnad and Sivaganga wear cloths of 25 or 30 cubits in length, folded in plaits, which they fasten behind. This is unlike other women of S. India, whose cloths do not

exceed 20 cubits, and are fastened on the right side in front. They intermarry, some of the subdivisions not marrying into the father's family; but Hindus in general intermarry with the mother's relations. Maravar means a warrior. In Ramnad and Tinnevelly, the titular surname of all the Maravar is Dever, also Thavan, which means God.

The Ramayana describes the forest of wilderness of Dandaca as covering the whole extreinity of the Southern Peninsula, and the rude inhabitants are designated Rakshasa (monsters) or Vanara (monkeys), the former term meaning races or tribes hostile to the Aryan race. But Vanara is from Vana, a wilderness, and Nara, a man, that is a wild or uncivilised man, and to this sense, as to the wild races in the extreme south, the fable of Hanuman, the chief monkey, and that of his army, Mr. Taylor thinks may be reduced. He says that those who have seen the Colleri and Marava will readily consider them to differ from all family likeness of the Aryan Hindus, and as their visages often resemble baboons more than men, it would require even less than the ardent poetical imagination of a Valmiki to induce the employment of an equivalent word which would so aptly seem to convey the idea imparted by their appearance.

During the wars of the 18th century, the Colleri and Maravar adhered to the British or to the French standards, and evinced fidelity and devotion to the cause of the party they espoused. Orme, the historian, relates that the Maravar chief of the Colleri race in 1752 sent 4000 peons and Colleri to aid Chanda Sahib. Like the Ramusi of Sholapur and Bombay, the Marava are subsidized by being employed as watchmen of houses. The zamindar of Ramnad is a Marava. Maravar marriages are sometimes of an incomplete character, and they have a second and more complete one.

Marawar or Marava is perhaps the Marullo of Cosmas Indicopleustes, which was on the continent adjoining Ceylon, and produced conch-shells. The history of the race is obscure. Two centuries before the Christian era, we find Kirata, its reigning sovereign, making war with Kula Bhushana Pandiyan, and reducing him to sad straits. The invader overran the whole country, but the Marava host and its commander were afterwards destroyed. The invasion of the country by the Muhammadans terminated the Pandiyan dynasty, and the Setupathi threw off his allegiance to the ruler of Madura, and during the administration of the Nayakkans, the Marava sovereigns continued practically independent. Professor Wilson says: 'A few years after the irruption of Mujapid Shah (? Muzaffar), or about 1380, the governor of Ramnad threw off his dependence on Madura, and his successors extended their authority to the neighbouring provinces, since called the Great and Little Maravas.'

The title Setupathi was conferred upon Wodeya Deva, the ruler of Ramnad, by Mutu Krishnapa Nayakkar, as an acknowledgment of the former's services in escorting a holy guru to and from the shrine at Ramisseram.

In the reign of Tirumalei Nayakkar, the Setupathi distinguished himself by repelling a Mysorian invasion with an army of 6000 men, for which he was rewarded with a lion-headed palanquin and other insignia by the sovereign of Madura. From the year 1729, the power of the Maravars began rapidly to decline. The Sivaganga zamindari was then formed out of two-fifths of the Ramnad territory, and made over to one Seshavarna Dever.

Ramnad, on its occupation in 1772 by the British under General Joseph Smith, became an integral portion of the British Indian empire.

There are at present only two Marava zamindaris in Madura, viz. Ramnad and Sivaganga, but Tinnevelly contains more than a dozen, of which Nellitungavale, Chokkampatty, Utumalei, Kadambur, and Tirukananguḍi are the chief. Almost all the other polygars are of the Totia caste, and the descendants of the Telugu chieftains that came with the Nayakkans from Vijayanagar. The Madura Chronicle tells us that Viswanatha, the first of the Nayakkan dynasty, distributed the country amongst his adherents, to the number of seventy-two, for the better defence of the kingdom. The Maravar's names occur in that list. Professor Wilson says: 'Upon the occupation of Madura by the first Nayak, five rajas are said to have combined to revenge the wrongs of the ancient dynasty of Madura. These petty chiefs were the ancestors of some of the polygars of the south, who gave so much trouble to the British forces in the middle of the 18th century.' This was not Cataboma Naick, zamindar of Panchalamuritchy, for he was a Totian, and consequently a Telugu; the chiefs spoken of being no other than Pulee Taleivar and his confederates, who withstood the British forces in 1755. Being all of the Maravar caste, they refused to pay tribute to the nawab. They were literally swept from off the face of the earth; for nothing remains of their old grandeur and state except the debris of their capitals. Pulee Taleivar was hanged, and his zamindari of Nellitungavale now consists of a few wretched villages in the possession of a branch of the Maniatchy family. Chokkampatty has been sold off to meet the claims of a Nattukotei Chetty. Kadambur, Utumalei, Nalanthila, and Sirukananguḍi drag on a miserable existence compared with their wealth of former times; while Maniatchy is split up into three or four parts.—*Yule, Cathay; Rep. Mr. Taylor in Madras Government Records*, 1867, p. 4; *As. Soc. Journ.; Orme's Hindustan.*

MARBAU, Malay. The Metrosideros Amboinensis, *R.*, of Sumatra, grows to a large size, and is used for beams both in ship and house building, as well as for other purposes to which oak is applied in Europe.

MARBLE.

Tau-wha-shih,	Chin.	Pualain, Marmar,	Malay.
Marmer,	Dut.	Sung-i-marmar,	Pers.
Marbre,	Fr.	Marmore,	Port.
Marmo,	It.	Mramor,	Rus.
Marmor,	Lat.	Marmol,	Sp.

Marble is the granular limestone or carbonate of lime of mineralogists. It is hard, compact, of a fine texture, and readily takes a fine polish. In colour, some marbles are quite black, others again are of a snowy white; others are greenish, greyish, reddish, bluish, or yellowish, and some are variegated and spotted. In Europe, the finest solid marbles are those of Italy, Blackenburg, France, and Flanders.

The marbles of Tabreez and Khorasan are transported to the most remote quarters of the Persian empire, and marble is found in many

parts of British India, in Burma, and in China. It is obtained in Ho-nan, Shen-si, Yun-nan, and Canton. The blue-clouded marble slabs of China are about a foot square, and are exported to India, Sydney, South America, etc., for pavement or floors. It is obtained to the north-west of Canton. There is also a red breccia marble brought to Canton, which is employed in tables, stone stools, etc., and is seldom sent abroad. The marbles of the Madras Presidency are of rare colour and fine quality. The specimens sent to the Great Exhibition of 1851 were favourably reported upon as indicative of a valuable material, well adapted to sculptural and ornamental purposes. At present the Indian manufacture of this article is comparatively insignificant, and chiefly confined to small miscellaneous articles for domestic use.

Marble is found in considerable quantities in the Coimbatore district, through a tract of 7 or 8 miles, extending to the Wâlior jungle. Its colours are white, grey, and pink, compact, dense in structure, with veins of other colours. A green marble is found in Tinnevelly.

The pure white marble of Tinnevelly is in large crystals like that of Burma. The marbles of the Cuddapah district are of greenish colours, from pale apple-green to deep leek-green, and beautifully shaded; they attracted attention in the Exhibition of 1851. At Bhera Ghat, on the Nerbadda, 10 miles from Jubbulpur, on the line of the railway to Bombay, a white saccharine marble is plentiful and easily accessible. It has been used in a limited degree at Jubbulpur, sometimes to make lime, and other times for metalling roads. It is made up into images by natives, who do not give it a good polish. A block which was sent to the Paris Exhibition of 1855 was pronounced to be equal to Italian marble for statuary purposes; very large slabs can be easily quarried. The marble rocks at the Bhera Ghat, on the Nerbadda, about 10 miles from Jubbulpur, narrow the stream there to 20 yards, and the shining cliffs of white marble, a dolomite or magnesian limestone, rise there to 80 or 120 feet. The granular white marble of Korhadi, 3 feet by 2, and 9 inches thick, is sold at Rs. 2. This marble and the sandstone and coal of the same locality, with the alabaster, gypsum, and dolomite of Jubbulpur, will probably become articles of export. At Tinnevelly, also, there is an excellent white marble, but considered rather too hard for statuary purposes; and Guntur and the Ceded Districts abound with marbles of great variety of colours, being tints of grey, yellow, and red. Marble occurs at Attock. Both white and grey occur at Nooshky. The marbles and building stones, and the red sandstone so commonly seen in all ancient buildings from Benares up to Lahore, were formerly imported from these parts, and magnificent mosques, tombs, and shrines yet remain to tell us of that trade.

Marble in the Panjab is found in the Delhi district, at Sâhi Bullubghur, Hissar, and Jhelum.

The marble used by the Burmese in the manufacture of their numerous figures of Gautama, for the pagodas, etc., is obtained from the quarries in the small steep ridge of the Tsagyen Hills, near the village of Mowe in the district of Madeya, a little N. of Mandalay. The great mass of the limestone forms the summit and eastern face of the hills, and here are situated all the quarries from which the marble has been extracted. The limestone rests upon hornblendic gneissose rocks, which form the lower portion of the hills, and is for the most part tolerably pure and massive, but occasionally has an imperfect lamination, given by flaky plates of mica arranged in lines of the mass. It is, in the mass, of nearly a pure white, and is largely and finely crystallized. Portions of it have a delicately blue tint, while others are stained by ferruginous spots. A block suitable for a figure 3 feet high can be had at Amarapura for about 50 tikals, or about £6, and a figure of these dimensions may cost about 150 tikals, or about 180 rupees = £18. Large blocks can now rarely be had, the largest obtainable do not now average more than 4 or 5 feet long by 2 or 3 feet thick, but even these are not frequently obtained, and are expensive. For smaller blocks there is a constant demand. The marble workers are settled at Amarapura and Tsagaing. With a hammer and chisel the workman rapidly gives a rough outline to the mass, and by occasionally, with a few lines of charcoal, marking out the drapery and limbs, he rapidly completes the figure. Partly owing to the delicate tinge of blue, and to the generally large crystallization of the mass, there is a peculiar semi-transparent look about the finished sculptures, which has most probably given rise to the general notion that these images are of alabaster. Pallagoix speaks of the beautiful marble he found in the island of Si-Hang, on the coast of Siam, polished as brightly by the waves of the sea as it could have been by the hand of man.—*Balfour on the Marbles of Southern India; Central Provinces Gazetteer; Madras Ex. Jur. Reports; Powell; Oldham in Yule's Embassy*, p. 327; *M'Culloch's Commercial Dictionary*, p. 787; *Bowring's Siam*, i. p. 30.

MARCHANTIACEÆ. *Lindl.* The liverwort tribe of plants, including the genera marchantia, Grimaldia, plagiochasma, fimbriaria, dumortiera, riccia, jungermannia, and blandovia. Dr. Griffiths collected 48 species in Assam; they grow in the earth or on trees, and are unimportant.

MARCHES of soldiers in India, from their prolonged character, require to be performed in a manner as if permanently in the field. Sir John Malcolm mentions (ii. p. 158) that Aga Muhammad Khan reached Isfahan on the third day, travelling 250 miles. Captain Cunningham mentions (History of the Sikhs, p. 225) that Colonel Steinbach with his Sikh regiment marched 200 miles in twelve days, which was equal to 16·6 miles daily. When General Sir Frederick Roberts marched from Kâbul to Kandahar against Ayub Khan, the distance of 318 miles was accomplished in twenty-three days, including two halts. Thus the average distance per marching day was 15 1-7th miles, or, including the days of halt, 13 19-23ds per day. Such a feat, considering the nature of the country, and that the force moved in a single column, has never been exceeded. The great difficulty, as usual, was the transport; but the Afghan war has initiated a reform of a most important nature, by largely cutting down the amount of baggage, without which it has been hitherto thought that an Anglo-Indian army could not take the field.

The march commenced on August 9. Ghazni, a distance of 97½ miles, in which the Zamburak pass (7000 feet) and the Sher-i-Daban pass (9000 feet) were crossed, was reached on August

15. For this part of the march, an average distance of 13 13-14th miles was covered daily. The remaining distance of 13½ miles was covered in eight days, or 16 13-16th miles daily. 10,148 troops, 8143 native followers, and 11,224 animals, including cavalry horses, composed the column; the daily supplies for all these were drawn from the country after arrival in camp. Food was distributed and cooked with fuel (difficultly procurable, and brought in from a distance) during the eight days' march from Ghazni to Kalat-i-Ghilzai. The longest marches on any one day were 20 miles, from Ghazni to Zerghalta, and 21 miles, from Mukur to Panjak.

During the Indian Mutiny, the average number of camels, including those for the mess, was certainly not less than 2½ per officer; for the march from Kābul to Kandahar the allowance was one mule per officer, and one for mess purposes for every eight officers. To each European soldier was allowed 34 lbs. of kit, and to each sepoy 20 lbs., including camp equipage. The tent accommodation was also much restricted; yet to carry baggage and food there were required 1589 yaboos (large Kābul ponies), 1244 Indian ponies, 4510 mules, and 912 donkeys. Moreover, on the road there were purchased 35 yaboos, 1 mule, 208 donkeys, and 171 camels. Of these there perished before the arrival at Kandahar, 410 yaboos, 106 Indian ponies, and 217 mules.

In the Kābul and Kandahar march, in addition to the daily ration, a tin of pea-soup was issued to every two British soldiers daily, from August 18, which was commonly taken before the march commenced; lime-juice was regularly issued. Extra rum was issued three times during the march to all British and native spirit-drinkers, and an extra ration of meat to those who did not drink rum, with a meat ration for all followers whenever sheep could be obtained.

In the beginning of the 19th century, General Doveton left Jauluah with a rissala of cavalry, a wing of a European regiment, 4 companies of rifles, an infantry corps, and in two days and one night reached Bassein, 60 cos distant, having allowed three halts for refreshments.

During the campaign against the Mahrattas in the year 1804, the army, under General Lake, made a tremendous forced march of 51 miles in 30 hours, surprised Holkar and his cavalry at Farrakhabad, and routed them with great slaughter. The British had marched 250 miles in 13 days.

During the Sikh war in 1843, when the Governor-General was pushing on by forced marches with the grand army, with the view of relieving Ferozpur, on the 16th he advanced 30 miles, the train of camels extending in a line almost from the point of departure to that of arrival. On the following day 10 miles more were traversed, the troops suffering from want of water. Betwixt the 11th and 18th, in the course of six days, they had marched over a distance of 160 miles, along roads of heavy sand, the incessant toil scarce leaving them leisure to cook their food.

It may be interesting to refer here to other marches. General Crawford marched with the 43d, 52d, and 95th Regiments of Foot to reinforce Sir A. Wellesley, at the battle of Talavera, in July 1809; the brigade marched 62 miles in 26 hours, carrying arms, ammunition, and pack, in all a weight of between 50 and 60 lbs. per man. In the Franco-German war, Dr. Roth, who served as chief medical officer with the Saxon army, mentions that the 18th division marched, from October 29th to November 17th, 55½ German miles, which is equal to 260 English miles, in nine days, nearly 18 miles a day; while on December 16th and 17th, in the various manœuvres about Orleans, they marched 54 English miles. They were very heavily accoutred, and the roads were bad. A company of a regiment of Chasseurs of MacMahon's army, after being on grand guard, without shelter or fire, during the rainy night of August 5th-6th, started at three in the morning to rejoin its regiment in retreat on Neiderbronn, after the battle of Weissenburg. It arrived at this village at 3.30 in the afternoon, and started again for Phalsbourg at six o'clock. The road was across the hills and along forest tracks, which were very difficult for troops. It arrived at Phalsbourg at 8.30 in the evening of the next day. The men had therefore marched part of the night of August 5th-6th, the day of the 6th, the night of the 6th-7th, and the day of the 7th till 8.30 p.m. The halts were eight minutes every hour, from 3.30 to 6, one hour in the night of the 6th-7th, and 2½ hours on the 7th; altogether, including the halts, the march lasted 41½ hours, and the men must have been actually on their feet about 30 hours, in addition to the guard duty on the night before the march. The exact distance is not known, but, considering the extreme difficulty of that rugged mountain country and the bad weather, this is perhaps the most toilsome march on record.—*Bombay Times.*

MARCO POLO was of a noble Venetian family. Nicolo and Matthew, two brothers, had mercantile establishments at Constantinople and in the Crimea. They quitted Venice for the east in 1254, left Constantinople in 1260, and passed through Bokhara to the court of the Kablai Khan, who sent them back as ambassadors to the Pope, and they reached Acre in 1269, when Nicolo found his wife long dead, but his son Marco grown to 15 years of age. After two years' delay, the two Polo, Nicolo and Maffei, in 1271, taking with them Marco, the young son of the former, set out on their return along with a priest; who, however, soon left them, delivering the Pope's letters into their hands. Starting from Acre, on the coast of Syria, the Polo were three years and a half upon this journey. They moved by Mosul, Baghdad, Hormuz, they traversed Kerman and Khorasan, Balkh and Badakhshan, in which last country they seem to have been long detained by the illness of young Marco. From Badakhshan they ascended the Oxus to the lake of Sirikol, and the plateau of Pamir. They crossed the steppe of Pamir, and descended into Kashgar, whence they proceeded by Yarkand and Khoten, and across the great desert of Gobi to the Tangut province on the extreme N.W. of China, partly within, partly without, the wall. Here they were met by a deputation sent by the Kablai Khan, who was at the time residing at Shang-Tu, about 50 miles north of the wall. Their journey had occupied 3½ years. Upon their arrival at Pekin, which they call by the Tartar name Cambala or Khanbalig, young Marco, then 21 years of age, was taken immediately into favour; he learned the language, and for 26 years

afterwards was a nobleman of the Great Khan's court, employed in several missions, and in other high offices of state. He came away at last, in A.D. 1294, in charge of a princess who was to be married to the Tartar sovereign of Persia. He was sent on a mission through Yun-nan to the frontiers of Ava, and successively to Kara-korum, to Champa or Southern Cochin-China, and to the Indian Seas, and afterwards by sea via Sumatra and India through Cambay to the Mongol tribe of Bayaut, to select a lady for the Kablai's great nephew, Arghun Khan of Persia, which he did, handing over the lady in 1294. He is the first European who speaks of Sumatra. He returned to Venice A.D. 1295. Marco was subsequently taken prisoner at the battle of Curzola (near Lissa), on the 8th September 1298. On his return to his native country, he circulated his travels, in manuscript, amongst his friends. The narrative was in 1298 transcribed by a Genoese named Rustigielo, four years after the death of Kablai Khan. They were first published in Latin in 1320. A copy had been presented by the government of Venice to the Infante Don Henrique in 1428, from which an edition was published at Lisbon in 1502. The earliest edition published in France bears date 1556. His book was entitled Viaggi di Messer Marco Polo Gentilhuomo Venetiano. There are two translations of it into Latin. He treats in his book De Regionibus Orientis. Kablai Khan was the conqueror of Southern China, which the Arabs call Machin, and which Chengiz Khan, his grandfather, had charged his children to conquer, after he himself had gotten the Northern China called Khatai.

Marco Polo sojourned in the hills of Badakhshan for the sake of his health, and he describes the countries of Wakan, Pamir, Bolor, and Kashmir. His book and life have been repeatedly published, and in most of the European languages. It was translated in 1818 by Sir William Marsden, and Colonel Yule has since largely contributed to make the travels known.—*Marsden's Sumatra*, p. 4; *History of Genghiz Can*, p. 443; *Prinsep's Tibet, Tartary, Mongolia*, p. 8; *Yule's Cathay*.

MARD KHOR. PERS. Man-eaters, the Aghora ascetics of the neighbourhood of Mount Abu, said to have resided there from the most ancient times, and formerly to have been cannibals; hence their name, meaning man-eater.

MARDUM SIAH. PERS. Atropa acuminata, also A. mandragora, mandrake; literally black manikin.

MAREB, a dam which formed a celebrated reservoir above the city of Saba in Yemen, between two hills of Balak. It burst about A.D. 120, and deluged the country far and wide. The bursting of Mareb lake is mentioned in chapter 34 of the Koran as the Sail-ul-Arem, or rush of water from the reservoir, and its bursting is there attributed to a punishment sent from God for the impiety, pride, and insolence of the city of Saba. 'The descendants of Saba had heretofore a sign in their dwellings, namely, two gardens, one on the right hand and one on the left; and it was said unto them, Eat ye of the provisions of your Lord, and give thanks unto him; ye have a good country and a gracious Lord. But they turned aside from what he had commanded them, wherefore he sent against them the inundation of El Arem, and he changed their two gardens for them into gardens producing bitter fruit, and tamarisks, and some little fruit of the lote tree.' Reservoirs in which to store rain-water in Arabia are generally found in localities devoid of springs, and dependent on the winter rains for a supply of water during the summer months. The most remarkable instance on record is this great dam of Mareb. All the travellers who have penetrated Yemen describe many tanks in the mountainous districts; and others exist in the islands of Saad-ed-Din, near Zailah, in Kutto, in the Bay of Amphila, and in Dhalak, near Massowah.

MAR ELIAS, a monastery 64 miles E. of Mosul. Near it is a sulphurous spring much resorted to. It is called by the Muhammadans Deir-el-Munkoosh, the ornamented or painted monastery, and is the remains of a Nestorian monastery. Assemanni does not give the date of its foundation, but it is mentioned incidentally by him thus: Joshua Bar-num of Bath Gabar, a village on the Tigris, between Nineveh and Mosul, lived thirty years in the monastery of St. Elias before he was elected primate of the east, which happened A.D. 824. Abu Saed was Archimandrite of Mar Elias in A.D. 1028. — *Rich's Kurdistan*, ii. p. 113; *MacGregor*.

MARGALI. TAM. The 9th month of the Hindu year (November—December), when the moon is in the asterism Mriga-sirsha.—*W.*

MARGARINE. Most fats and fixed oils, vegetable and animal, are mixtures, generally of three distinct compounds, each of which taken singly has all the properties of fat. The first of these substances, called stearine (from στέαρ, tallow or suet), is solid at common temperatures; it constitutes the solid fatty ingredient in mutton-tallow. The second is oleine (from ἔλαιον, oleum, oil); and is liquid at ordinary temperatures, and down to the temperature of freezing water. The third substance is named margarine (from μαργάρον, a pearl), on account of its mother-of-pearl lustre; it is solid at ordinary temperatures. All fats may therefore be regarded as mixtures of the fluid oleine with the solid stearine of margarine. If the solid be in larger proportion than the fluid, as in various kinds of tallow, it requires a greater degree of heat to melt it. If the fluid portion prevails, as in the oils, the melting point is lowered.

MARGARY, AUGUSTUS RAYMOND, born A.D. 1846. He left Shanghai on the 23d August 1873, ascended the Yang-tse to Hankow, and crossed to Bhamo, which he reached on the 17th January 1874. He returned alone in advance of Colonel Brown, and was killed on the 21st or 22d February at Manwyne.

MARGGA KARAN. MALEAL. In Malabar, a designation of Roman Catholics; qu. Marya Karan?

MAR-GHAT. HIND. A place of cremation. The place for the cremation of the Hindu dead.

MARGIANA. The second settlement of the Aryans was in Mouru, Merv, or Margiana. This is Margiana (from the river Margus), now Marghab (Margus-water), Margush in the cuneiform inscriptions; a fruitful province of Khorasan surrounded by deserts. In the Record (iii. verse 6) it is described as 'the third best land, the mighty and pious Mouru (Marw).... Ahriman created there wars and marauding expeditions.'

MARGOSA, the Portuguese name of the

Azadirachta Indica, which grows to 8½ feet in diameter. In appearance the wood is much like mahogany, and is used by the natives for general purposes. Its bark,

Bewa, ...	CAN.	Tel-kohumba, .	SINGH.
Nim-ka-chal, . .	HIND.	Vaypum puttay, .	TAM.
Nimba, . . .	SANSK.	Vaypa putta, . .	TEL.

is bitter, is considered a valuable tonic, and has been tried by European physicians with a success nearly equivalent to what might have been expected from cinchona bark. Oil is obtained from the seeds by either expression or boiling, and is much used medicinally. The fruit is not unlike a small French olive in size and appearance. The oil is of a deep yellow colour, has a strong smell and an unpleasant bitter taste; is much esteemed by native doctors as a warm medicine, as an external application in foul ulcers, and as a liniment in rheumatic and spasmodic affections, etc. It is frequently burnt in lamps, and is sold in the bazar under the name of bitter oil, also black oil. Dr. Maxwell found this oil equally efficacious to cod-liver oil in cases of consumption and scrofula. He began with half-ounce doses, morning and evening, which were gradually reduced. Margosa, as well as illipoo oil, mixed with an equal quantity of cold drawn castor-oil, produces a hard vegetable wax of an agreeable roseate colour.

The leaves of the genera Melia and Azadirachta, dried and kept in books, are much used by the people of India to preserve furs, feathers, books, apers, and clothes that are lodged in trunks, ook-cases, etc., from the attacks of insects. It is useful to place along with them small packets of camphor, or little cups of camphor dissolved in alcohol.—*M. E. J. R.; Simmonds; Edye; Faulkner.*

MAR GREGORIUS ABU-l-FARAJ, also called Gregorius bar Hebræus, also Abul Farag, also Gregorius Abu-l-Faragius, was a Jacobite Christian of the city of Malatia, in Cappadocia, of the Armenian race, born A.D. 1226 at Malatia or Melite, a town near the western bank of the Euphrates in Lesser Asia. His father, the Hakim Harun-ul-Malati, was a physician. Abul Farag studied theology, philosophy, and medicine, and passed the greater part of his life in Syria. He became a Christian, and rose successively to be bishop of Gaba, then of Aleppo, and in A.D. 1266 primate of all the Jacobite Christians in the east. He was the author of a great number of books written in Arabic and Syriac, but the best known is his History of the Dynasties from the Hebrew Patriarchs to the Moghuls, which Dr. Pococke published in 1663, with a Latin translation and a supplement. He died in A.D. 1286 at Meragha, in Azerbijan. He wrote the Book of Dynasties in Arabic, in the reign of Arghun Khan, the last of Chengiz Khan's grandsons. It was arranged in ten chapters,—1. On the Saints since Adam; 2. The Judges of Israel; 3. The Kings of Israel; 4. The Chaldæan Kings; 5. The Kings called the Magi; 6. The Ancient Greek Kings; 7. Latin Roman Kings; 8. Christian Greek Emperors; 9. Muhammadan Arabic Kings; 10. The Moghul Kings.

MARI-AMMUN. Ammun or Amma, literally mother, in the south of India is the honorific suffix of various local deities, as Mari Amma, Yagath Amma. Professor Wilson thinks that Mari Amma comes from the Virgin Mary, and that Yagath Amma is from St. Agatha. But Mari Amma seems to be from Mari, death, an Ammun, mother, mother-death. Amongst th Tamil people, Mari-Ammun is a new goddess wh sends smallpox. She is said to scatter pearls to propitiate her, sacrifices are offered and hook swinging practised. She is a mixture of th village goddess and Kali, the sakti of Siva.

MARICHI, a Hindu author of a law treatis and of one on religious services. The Kapila Purana describes him as an old man in the habit of a mendicant, and states that he lived as an anchorite at Bhadrashwa Yaraha.—*Ward*, iv. 17.

MARIETTE BEY, a distinguished Egyptologist, died 1881. In 1848 he was attached t the Egyptian Museum at the Louvre; in 185 he was sent to Egypt to search for Coptic manuscripts. He discovered the site of the Serapeum, the temple and enclosure dedicated in ancient times to the worship and custody of the sacred bull Apis, as well as the long range of tombs in which the bulls were buried. The tombs, dated and inscribed, furnish a check and a verification of Egyptian chronology derived from independent sources, while the actual remains discovered in situ are invaluable as illustrations of the ritual and worship of ancient Egypt. His explorations at Memphis were continued for four years. During his first visit to Egypt, Mariette had excavated the buried part of the Sphinx, and demonstrated anew the fact that that stupendous monument is hewn from the solid rock.

MARIGNOLLI, JOHN DE, a Minorite friar of the Franciscan monastery of Santa Croce at Florence, was sent by Pope Benedict mission to Cathay in 1338. He sailed from Avignon to Naples, and thence to Constantinople, and on to Caffa (Theodosia) in the Crimea, whence he proceeded to the court of the khan of Kipchak at Sarai, on the Volga, who forwarded him on to Armalec (Almalik), the capital of the Chaghtai khans of the Middle Tartar empire. He arrived at Cambalec (Pekin) in May or June 1342, and, after remaining there three or four years, sailed from Zayton for India, the 26th December 1347, and arrived at Columbum (Quilon the following Easter. In 1349 he made a pilgrimage to the shrine of St. Thomas on the Coromandel coast, and thence proceeded to Saba, which he piously identified with the Sheba of the Bible, but which was probably Java. Sailing back to Malabar, he was driven to Ceylon, whence he sailed to Ormuz, and afterwards travelled by the ruins of Babylon to Baghdad, Mosul, Edessa, Aleppo, and thence to Damascus, Galilee, and Jerusalem, making his way back to Italy by Cyprus. He recognised as the Tower of Babe the ruins called by Rich, Mujalibe, and by Layard Babel. These are about half a mile from the present channel of the river. The excavations a the Mujalibe or Babel show that the structure was much as Marignolli describes, viz. an exterior of burnt bricks laid in bitumen enclosing the unburnt bricks which form the interior mass.—*Yule's Cathay*, ii. p. 386; *Sir George Birdwood.*

MARIGOLD. Kin-tsien-kiuch, CHIN. The Chinese force it successfully in the early spring, when it is a common ornament. Tagetes patula and T. erecta grow well on the plains of India.—*Jaffrey.*

MARIJ. ARAB. Lit. flame without smoke, *i.e.* wind, the genii are formed of it.

MARINO SANUTO, a Venetian nobleman who ravelled in the east about A.D. 1300-1306. His ook, entitled Liber Secretorum fidelium Crucis, uper Terræ Sanctæ recuperatione, presented to ope John XXII. at Avignon, initiates us into all he details of the course of the Venetian commerce vith India at this period. Down to his own ime, it used to take the route by the Persian ulf. The merchandise of Malabar and Cambay vas first conveyed to Ormuz and Kish in the ersian Gulf, and was thence transported to Bus-ora on the Euphrates, whence it passed up the ligris to Baldac (Baghdad), and across the Syrian esert to Antioch and Cilicia, where it was mbarked for Europe on board the ships of Genoa nd Venice. Latterly, however, the merchants f Southern Arabia had gradually recovered their ld commerce, and part of the merchandise of ndia and the east now came into Europe by way f Ahaden (Aden) and Chus (Coptos) on the Nile, nd Alexandria. The rarer commodities, such as loves, nutmegs, mace, gems, and pearls, were till conveyed up the Persian Gulf to Bussora, nd thence to Baghdad, from which they were arried to some port on the Syrian or Arabian oast of the Mediterranean; but all the more ulky goods, such as pepper, ginger, cinnamon, together with a portion of the more valuable rticles, were now conveyed by the ancient route to the Red Sea, and thence across the Libyan desert and down the Nile to Alexandria.—*Sir George Birdwood.*

MARJORANA HORTENSIS. *Mœnch.*

Origanum marjorana, *L.*	O. onites, *Lam.*
O. marjoranoides, *Willd.*	O. acinacifolium, *Wall.*
O. Wallichianum, *Benth.*	Amaracus vulgatior, *Lob.*
Mir-zun-jush, . . ARAB.	Murwa, . . GUJ., HIND.
Marjoram, . ENG., GER.	Marru, ... TAM.
Marjolaine, . . . FR.	Maruvamu, . . . TEL.

Sweet marjoram is a culinary herb cultivated in most parts of Lower India. It is used for flavouring sauces and roast meats. The flowers are considered by Hindu doctors as possessing cephalic qualities, and the plant is known to possess tonic virtues. It is easily reared in beds or pots, either by slips from the roots or seed. Hindus offer it at the shrines of Vishnu and Siva. It is a shrub in its native country, but an annual in gardens of Europe. It is a native of the north of Africa near Mascar, on hills, and of Asia, on the mountains of Kamaon. When in blossom, the plant is cut and dried for winter use as a savoury ingredient in cookery.—*Faulkner; Jaffrey; Voigt.*

MARKAN. HIND. A Panjab grass, eaten in famine; such a famine is recollected in the Panjab by the name Markanwalli sal.

MARKANDA, a valley in the Siwalik branch of the sub-Himalayan mountains, where a fossil ruminant was discovered by Dr. Faulkner, and named by him Sevatherium giganteum.

MARKANDEYA, one of the Purana religious books of the Hindus, an uninterrupted succession of legends. It is supposed of date the 8th to 10th century A.D. Markandeya, in Hindu mythology, a being who lived through several kalpas.—*D.*

MARKHAM, CLEMENTS R., C.B., F.R.S., in early life was a midshipman in the British navy, and served in the Arctic Expedition of 1850-51. He was for twenty years in the India Home Office, serving in the Geographical Department from 1867 to 1877, where he had opportunities for promoting the well-being of the people of the East Indies, devoting himself from 1859 to the introduction there of species of cinchona. He had previously travelled in S. America, and had become acquainted with the people and their languages, the Spanish and Quichua; and in 1860 he proceeded to the cinchona regions, accompanied by Mrs. Markham, who, at Arequipa, directed the work of the other collectors whilst her husband was in the forests of the Andes; and he twice proceeded to India to secure the suitable treatment of the plants and seeds which he had collected. He was ably assisted by Mr. John Weir, Dr. Spruce, Mr. Robert Cross, Mr. Pritchett, and Mr. Ledger, and, in India, by Mr. M'Ivor.

By the year 1880 there were 12,667 acres under cinchona cultivation on the hills of S. India and Ceylon, and in Sikkim; and the bark from British India sold in London in 1879-80 was 1,172,060 lbs., selling at from 9s. 1d. to 15s. 8d. per lb.

The introduction of the cinchona had cost £129,628 up to 1876, and £173,046 had been realized. Considering the value to the people of the febrifuge, and to the planters as an agricultural product, it is one of the largest boons bestowed on India.

In 1875 he selected Mr. Robert Cross to proceed to Central America to collect India rubber plants of the genus Castilloa; and in the following year a supply of those obtained was forwarded to India. Again, in 1876, Mr. Cross was sent to South America, this time to collect plants of the genera Manihot and Hevea, supplies of which also were sent to India, Ceylon, and Burma.

India is also indebted to Mr. Markham for the Cuzco variety of maize, for the quinua, and for the true Peruvian cotton, a perennial species which takes a high place as a cotton-yielding plant.

He published (1862) his Travels in Peru and India, while superintending the collection of chinchona plants and seeds; in 1880, Peruvian Bark, a Popular Account of the Introduction of Chinchona Cultivation into British India. He published a Memoir on the Indian Surveys; a Memoir on the Irrigation Works of Eastern Spain; the Narratives of Bogle's Mission to Tibet, and of Manning's Journey to Lhassa, with an Introduction and Biographical Notices; also a History of the Abyssinian Expedition; a History of Persia; a Life of Lord Fairfax. And among other works, etc., of public importance he was secretary to the Royal Geographical Society and to the Hakluyt Society; he wrote, for 1871-72 and 1872-73, the Moral and Material Reports on India, and edited, for the Hakluyt Society, a translation of the Embassy of Clavijo to the Court of Timur.

MAR-KHOR. HIND.

Rawacheh of LITTLE TIB.	Rass of the . . . OXUS
Tsura or water-goat, ,,	Capra megaceros.

Capra megaceros of Hutton, the wild goat of Hazara and the N.W. Himalaya, etc., is called mar-khor, because fabled by the mountaineers to kill snakes by looking at them; and in Yaghistan and Chilas they say that when its foam falls on certain stones it turns them to zahr-mohra. The ibex and mar-khor often dispute each other's footing. It is found on the mountains of Persia

and Afghanistan, and is plentiful on the ranges around the Khaibar pass. From Torbela and Little Tibet it wanders down the Suliman Range as far as Mitenkote on the Indus, at the junction of the latter and the Sutlej. It is common on the north-western ranges of Kashmir, including Dardu; from thence a few herds are to be met with all along the southern or Futi Pinjal as far as Kishtewar on the Chenab. The northern ranges of Kashmir and Ladakh are apparently without a single individual, perhaps on account of the ibex and wild sheep frequenting these mountains. Mr. Blyth and Dr. J. E. Gray consider this species as most likely a variety of the domestic goat; but from all Dr. Adams could learn of its habits and appearance, there is perhaps more cause to consider it the progenitor of the domestic animal than even the ibex. The mar-khor is usually found in small herds. Like the ibex, it delights to browse on steep and rocky mountains, ascending and descending with the seasons. In winter, in common with other alpine species, the fur becomes dense from the woolly pileage, which gives a lighter colour to the coat than during midsummer and autumn, when it disappears, and the fur is short and brown. Hunters have strange stories of the serpent-eating disposition of the mar-khor. Ajiz Khan assured Dr. Adams that an ammonite he picked up on the mountains had become petrified from having passed through the intestines of a mar-khor.—*Adams; Jerdon.*

MARKING NUT, or Malacca bean.

Beladur, . . .	ARAB.	Shayrang cottay,	TAM.
Gheru, ...	CAN.	Nelajidi, ...	,,
Bellawan, Bhela,	HIND.	Jidighenzalo, . .	TEL.

The Semecarpus anacardium tree is a native of all India. Its nuts are black, smooth, shining, and flattened on both sides. The nut rests upon a thickened stalk (peduncle). The pericarp or shell of the nut is composed of two laminæ; between them are cells which contain the black, corrosive, resinous juice, which is employed to mark cotton cloth. The colour is improved and prevented from running by a little mixture of quicklime and water, whence its name of marking nut. The tribe of plants to which it belongs abounds in plants yielding a blackish, acrid, and resinous juice, used for varnishing and other such purposes. The oil is acrid and vesicating; it is found, as related above, between the two laminæ of the pericarp, and is used as a preventive against the attacks of white ants, and by native practitioners as an escharotic in aches, pains, sprains, and in rheumatic and leprous affections. It is obtained by boiling the whole nut not divested of its pericarp. The preparation or collection either of the oil or acrid juice is liable to cause much irritation and inflammation of the hands and face, etc., of those engaged in the work. The oil obtained from the kernel of the nut is of a different character; seems to resemble the mild oil of cashew-nut kernels.—*M.E.J.R.; Roxb.*

MARLBOROUGH. James Ley, Third Earl of Marlborough, an eminent mathematician and navigator, was slain in the great sea-fight with the Dutch, June 3, 1665. His body lies in Westminster Abbey. He had arrived in Bombay on the 18th of September 1661, with a fleet of five ships, to take possession of the island of Bombay as part of the Infanta Catherina's dower on her marriage with Charles II. The Portuguese in Bombay having refused to give up the island Marlborough landed the 400 soldiers under Si Abraham Shipman on the small island of Anjideva, 12 leagues to the south of Goa, where, having left them, he sailed away to England. The consequence was that Sir Abraham Shipman and 30(of his men miserably perished on this unhealthy spot, of exposure during the rains of 1662. Th survivors formed the cadre of the Hon. Company' 1st European regiment, or Bombay Fusiliers since the 103d Foot. The other regiment raise at the same time became known as Kirke's Lambs since the 2d or Queen's Regiment. Under dat the 15th May 1663, Pepys writes: 'The Portugall have choused us, it seems, in the island of Bomba in the East Indys, for after a great charge of our fleet being sent thither with full commission from th king of Portugall to receive it, the Governour b some pretence or other will not deliver it to Si Abraham Shipman, sent from the king, nor to m Lord of Marlborough.' And under date of Septem ber 5, he speaks of 'the disappointment of the kin by the knavery of the Portugall Viceroy, and th inconsiderableness of the place of Bombaim eve if we had had it.'—*Sir George Birdwood.*

MARLEA BEGONIFOLIA. *Roxb.* ii. p. 261.

Bodara, Mandra of	BEAS.	Prot of . . .	KANGRA.
Sialu of . .	CHENAB.	Padlu of . . .	RAVI.
Til-pattra of .	JHELUM.	Marlea of . .	SYLHET.
Chit, Kurkni of	,,		

A small but handsome timber tree, with maple-like leaves, occurring near the Indus from about 3200 to 6000 feet; wood used for house-building. Its leaves are eaten by sheep.—*Dr. J. L. Stewart, M.D.*

MARMALA WATER, a fragrant perfume distilled in Ceylon from the flowers of the Ægle marmelos, and used in the ceremonial sprinkling of visitors.

MAR-MATTEI, a monastery 30 miles N.E. of Mosul, founded A.D. 334 by Mar Mattei, companion of St. George.

MARMOT, a genus of mammalia of the sub-family Arctomydinæ; one species occurs in Europe and two species in the region around the Paropamisus.

Arctomys hemachalanus, red marmot.

Chipi, ...	BHOT.	Sammiong, . .	LEPCH.
Pheca, ...	HUNNIA.	Drun, ...	TIBET.

Occurs at 8000 to 10,000 feet in Kashmir and the N.W. Himalaya. The total length of an adult is from 2¾ to 3 feet; the colour chestnut, with black splashes on the back and hip. It is seldom met with under 8000 feet above the level of the sea.

Arctomys bobac, *Schreber*, is the Tibet and Russian marmot or white marmot. Dr. Adams, when crossing the Tang Lang pass, came on a colony of white marmot, distinguished at once from the red species by its lighter colour, being a yellowish-white, but also by its call, which more resembles a whistle than a scream. One side of a spur was riddled by their burrows. The white seems to take the place of the red marmot on the more barren and higher ranges above 10,000 and 12,000 feet. The bearded vulture and larger eagles are among their chief enemies. He saw the former bear off a marmot with great ease. The marmots are generally supposed to be the animals alluded to by Herodotus as gigantic ants, which dug up gold. They form a small group of rodents allied to the squirrels, but strictly terres-

rial in their habits. They are found in the orthern portions of both hemispheres, and live enerally in societies in mountainous districts. hey excavate extensive galleries, in which they eside, passing the winter months in a state of orpidity. The alpine marmot is the commonest uropean species.

MARMUT, a lichen abundant in the crevices f the rocks of Baluchistan, used medicinally by lindus in diseases of languor and oppression of ie vis vitæ. The plant, replete with juice, and xtremely bitter and nauseous, is dried, and a uantity of the powder swallowed, after which ater is directed to be drunk. The same, or an nalogous plant, abounds in the Khaibar Hills, and carried to Peshawur, where it is largely used as n article of food by Hindus.—*Masson's Journeys*, p. 116.

MARONITES are the most numerous of the ebanon tribes, numbering about 200,000, of hom 35,000 were reckoned capable of bearing rms. Maronites, along with the Druse, occupy ie most central valleys and the highest ridges, om the neighbourhood of Tripoli to the south f Beyrout. The Keshrouan, in the neighbourhood f D'Jounie Bay, is exclusively occupied by this hristian sect, said to have been founded in the th century by a certain St. Maronius, and which, religious matters, acknowledges the supremacy f Rome, though its clergy maintain the right of lecting their own bishops or patriarchs, of dis-ensing with a state of celibacy, and of entering nto the marriage state. Maronites live in dis-ersed hamlets and homesteads, engaged in culti-ation. The head of their religion has the title f Batrak or Patriarch of Antioch. They do not llow re-marriage of widows. They are governed y a Kaim Makam; their monastery of Kizhaia is 0 miles E. of Tripoli; they exorcise demons.—*Catafago.*

MAROO. HIND. Two antelope horns joined n opposite directions at their bases, carried by akirs.

MAROOST'HALI, the desert of Rajputana; he word means the abode of death, and is a ery emphatic appellation of this sterile region. hough all these regions collectively bear the erm Maroost'hali, or region of death (the em-hatic and figurative phrase for the desert), the estrictive definition applies to a part only, that nder the dominion of the Rahtor race.—*Rajas-han*, i. p. 18.

MARRI or Murree, a sanatorium town, in lat. 3° 54′ 30″ N., and long. 73° 26′ 30″ E., and 32 niles N. of Rawal Pindi. The southern side of he station of Marri is 6963 feet above the sea. Rawal Pindi, to the west of the Jhelum, is 1737 eet above the sea. The range of hills on the right ank of the Jhelum overhang the platform of Rawal Pindi. It is a narrow ridge separating two leep river valleys, whose vegetation is quite ropical.—*H. f. et T.* p. 213; *Schl.*

MARRI or Murree, a race or tribe occupying art of Baluchistan. Kahan town, in Kach Gandava, is in the hill ranges east of the plain of Kach. It belongs to the Doda Marri, a division f the great and widely-dispersed Marri tribe, who ave been located in the neighbourhood for several enturies. The Marri are a brave race, and had ong been distinguished as daring depredators.—*Masson's Journeys.*

MARRIAGE CUSTOMS.

Zijah,	ARAB.	Muta (temporary),	HIND.
Nikah, Shadi,	DEKHAN.	Laggan,	MAHR.
Byah, Akd,	HIND.	Tazawaj,	PERS.
Katkhudai,	,,	Kalyanam,	TAM.

In the E. Indies, amongst its various races, forms of marriage are to be seen from the simplest modes of mutual consent, through all the various known procedures of marriage by capture, community of right, polygamy, polyandry, temporary marriages, permanent lifelong marriages, endogamous marriage within the tribe or race, exogamous marriage out of the tribe or race; and there are sects of men and women who never marry, and men and women who marry only once.

Mr. M'Lennan and Sir John Lubbock have examined, at length, the subject of primitive marriage, and various writers on the tribes and races in the south and east of Asia have furnished notices of the prevailing marriage customs. A popular theory is that marriage sprang from the family, which developed into the clan; but according to Mr. M'Lennan, observation among the savage races still existing in the world always leads back to groups of naked savages living by the capture of wild beasts or upon the more easily caught shell-fish. These groups, he contends, only very slowly developed the idea of kinship, the primary one being that as they held their women in common they were never certain of relationship, except through the mother's side.

Sir John Lubbock points out that in some cases the exclusive common possession of a wife could only be legally acquired by a temporary recognition of the pre-existing communal rights. Thus, in Babylonia, according to Herodotus (Clio, p. 199), every woman was compelled to offer herself once in the temple of Venus, and only after doing so was she considered free to marry; the same, according to Strabo (lib. 2), was the law in Armenia. In some parts of Cyprus, also among the Nasamones (Melponiene, p. 172) and other Æthiopian tribes, he tells us there was a very similar custom; and Dulaure asserts that it existed also at Carthage and in parts of Greece. The account which Herodotus gives of the Lydians, though not so clear, seems to indicate a similar law. The Rev. Joseph Roberts relates (p. 9) that in Madura, Balane, and other places, beautiful virgins used to go to the temple once in their lives to offer themselves in honour of the goddess, the story being that a god had converse with them. That the special marriage was an infringement of these communal rights, for which some compensation was due, seems to Sir John Lubbock the true explanation of the offerings which virgins were compelled to make before being permitted to marry. Among the Santal, one of the aboriginal Indian tribes, marriages take place once a year, mostly in January. For six days, all the candidates for matrimony live in promiscuous concubinage; after which only are the separate couples regarded as having established their right to marry. In the patriarchal history of Scripture, and in the early accounts of the manners of ancient nations, the daughter was always considered the property of the parent, the wife as the purchase of the husband, and the marriage-contract as the deed of transfer. This is still the foundation of the Hindu marriage ceremony, and

the Muhammadan bridegroom by the dower purchases his wife of herself.

Arriaft mentions (Indica, cap. xvii.) an ancient Hindu practice of giving their daughters to the victor in prescribed trials of force and skill; and a memorable instance of this is related in the Mahabharata, of Arjuna, one of the Pandu, by his skill in archery winning Draupadi at her Swayamvara tournament.

Capture.—Among the Khand, the boy's father pays a price for the girl, and usually chooses a strong one, several years older than his son, usually about 14 years old, the boy about 10. A feast is held, and the girl is forcibly carried off. The primeval custom of capture of wives continues to have symbolic representations. The old Norse for marriage is quan-fang or wife-catching; the German is brut loufti or bride-racing.

In Circassia, weddings are accompanied by a feast, in the midst of which the bridegroom has to rush in, and, with the help of a few daring young men, carry off the lady by force, and by this process she becomes his lawful wife. According to Spencer, another important part of the ceremony consists in the bridegroom drawing his dagger and cutting open the bride's corset. Mr. Lecky tells us (i. p. 338) that amongst the Greeks and the Romans, the bride was girt with a girdle, which the bridegroom unloosed in the nuptial bed, and hence zonam solvere became a proverbial expression for pudicitiam mulieris imminuere.

Among the Kalmuk, Dr. Hell tells us that, after the price of the girl has been duly agreed on, when the bridegroom comes with his friends to carry off his bride, a sham resistance is always made by the people of her camp, in spite of which she fails not to be borne away on a richly-caparisoned horse, with loud shouts and feu-de-joie.

Amongst some of the Mongol tribes, the girl mounts on horseback and flees, pursued by the lover, who only detains her as a wife if he overtake her. The girl is first mounted, and rides off at full speed. Her lover pursues; if he overtake her, she becomes his wife; after this she returns with him to his tent. But it sometimes happens that the woman does not wish to marry the person by whom she is pursued; in which case Dr. Clark was assured that no instance occurs of a Kalmuk girl being thus caught, unless she have a partiality to the pursuer. Among the Tungus and Kamtskadale, says Ernan, a matrimonial engagement is not definitely arranged and concluded until the suitor has got the better of his beloved by force, and has torn her clothes. Attacks on women are not allowed to be avenged by blood, unless they take place within the court or house. The man is not regarded as to blame, if the woman have ventured to leave her natural place, the sacred and protecting hearth. Pallas observes that in his time, marriage by capture prevailed also among the Samoyede.

Major Dalton mentions (p. 233) that among the Kol of Central India, when the price of a girl has been arranged, the bridegroom and a large party of his friends of both sexes enter with much singing and dancing, and seeming fighting, in the village of the bride, where they meet the bride's party, and are hospitably entertained. Occasionally, a few of the young man's friends assemble outside the fields where the women are at work, and rush on them to capture the girl he has fixed on, carrying her off from amongst the labourers, though a defeat and rescue are not uncommon. Kurku girls in Central India go through the form of preventing the removal of a bride. When they get near enough to the cavaliers, they pelt them with balls of boiled rice, then coyly retreat, followed, of course, by the young men; but the girls make a stand at the door of the bride's house, and suffer none to enter till they have paid toll in presents to the bridesmaids.

The Gond of Nimar serve for a wife, but practise forcible abduction of the bride, with a mock fight. They are polygamic. Mandla Gond have the Lamjana Shadi, in which the betrothed lad serves an apprenticeship for his future wife. A Gond girl, however, may exercise her own will and run off with a man, but it is quite allowable for her first cousin, or the man whom she has deserted, to abduct her from the man whom she has chosen. Their Shadi Bandhone is a compulsory marriage. In their Shadi Baitho, a woman goes to a man's house. Widows re-marry either to a younger brother of the deceased husband, or to some other man. The men and women of the Gond along the banks of the Wardha river are never associated in their labour, but work at a distance apart. A Gond having ascertained that an adjacent village has a girl whom he would like, goes with some friends to the place where she is working, and rushes to seize her. His companions will not aid him to carry her away by force, unless he, unaided, succeed in touching her hand before she reach the shelter of her village. The women often contest every inch of the ground with their pursuers, inflict very serious hurt, and often shameful defeats. The touching by the bridegroom once effected, the marriage contract is complete, and cannot be broken. But the contest continues even after the bridegroom has touched the bride's hand: and if the fight has drawn to the skirts of the village, the men join the women, and pursue the runners back to their own village.

Writing of the Khand race of Orissa, Major-General (Sir John) Campbell says that on one occasion he heard loud cries proceeding from a village close at hand. Fearing some quarrel, he rode to the spot, and there he saw a man bearing away upon his back something enveloped in an ample covering of scarlet cloth; he was surrounded by 20 or 30 young fellows, and by them protected from the desperate attack made upon him by a party of young women. On seeking an explanation of this novel scene, he was told that the man had just been married, and his precious burden was his blooming bride, whom he was conveying to his own village. Her youthful friends were seeking to regain possession of her, and hurled stones and bamboos at the head of the devoted bridegroom, until he reached the confines of his own village.

Dulha Deo is a favourite deity in Bundelkhand and amongst the Gond of Central India. It is the apotheosis of a bridegroom (dulha), who died in the marriage procession, and whose death so affected the people that they paid him divine honours. The worship of Adonis is similar, and also that of Thammuz, whose annual wound in Lebanon still allures the Syrian damsels to lament his fate.

The custom of capture is also to be traced in

the rite of lifting the bride over the doorstep, which has prevailed in such different and distant races as the Romans, Redskins of Canada, the Chinese, and the Abyssinians. Hence, also, perhaps the honeymoon of England, during which the bridegroom keeps his bride away from her relatives and friends; hence even, perhaps, as Mr. M'Lennan supposes; the slipper is in mock anger thrown after the departing bride and bridegroom. Amongst the people of Tucupoia, the man has to gain the affections of his intended bride, but that step having been accomplished, he sends three or four of his friends to carry her off by force.

The marriages of the Jakun of the Malay Peninsula are ordinarily celebrated about the months of July and August, when fruits are plentiful. The bridegroom frequents for some time the house of his intended, and when he has obtained her consent, he makes a formal demand to the father. On the appointed day an entertainment is prepared, the bridegroom repairs to the house of the bride's father, where the whole tribe is assembled. The dowry given by the man to his intended is delivered, and must consist at least of a silver or copper ring, a few cubits of cloth; perhaps a pair of bracelets or other ornaments and furniture are added. Amongst some Jakun tribes there is a dance, in the midst of which the bride-elect darts off into the forest, followed by the bridegroom; a chase ensues, during which, should the youth fall down, or return unsuccessful, he is met with the jeers and merriment of the whole party, and the match is declared off. Or if the tribe be on the bank of a lake or stream, the damsel is given a canoe and a double-bladed paddle, and allowed a start of some distance; the suitor, similarly equipped, starts off in chase. If he succeed in overtaking her, she becomes his wife; if not, the marriage is broken off. But the chase is generally a short one, for though the maiden's arms are strong, her heart is soft and her nature warm, and she becomes a willing captive. Or if the marriage take place where no stream is near, a round circle of a certain size is formed. The damsel is stripped of all but a waist-band, given half the circle's start in advance, and if she succeed in running three times round before the suitor come up with her, she is entitled to remain a virgin, as in the other case, but few outstrip their lovers.

Among the Aheta of the Philippine Islands, when a man wishes to marry a girl, her parents send her before sunrise into the woods. She has an hour's start, after which the lover goes to seek her. If he find her and bring her back before sunset, the marriage is acknowledged; if not, he must abandon all claim to her.

Exogamy and *Endogamy* both prevail in the Indies. Some races through all ages have been carefully abstaining from marrying in their own tribe, while others take their wives from amongst their own people. The instance may be mentioned of Abraham sending his servant to obtain for his son Isaac a wife of his own people; and about the year 1860, a Kayasth Hindu family in Madras sent the son for a wife to Benares, 1000 miles away. At the present day, amongst the Brahmans and Rajputs of British India, throughout Western and Eastern Africa, in Circassia, Tartary, Siberia, China, and Australia, as well as in North and South America, marriages take place between persons of different tribes. All Brahmans marry with women who have not the same pravara, *i.e.* who do not invoke the same Rishi as their ancestor (Asvalayana, xii. p. 15). Apastamba says, 'Thou shalt not give thy daughter to a man belonging to the same gotra or family.' Yajnawalkya says, 'Let a man marry a woman who is free from disease, who has brothers, and who is not the daughter of a man having the same ancestors, and belonging to the same gotra as himself.'

Burton says that some clans of the Somali will not marry one of the same, or even of a consanguineous family; and the Bakalari have the same rule. In India, the Warali tribes are divided into sections, and no man may marry a woman belonging to his own section. In the Magar tribes the same rule prevails. Col. Dalton tells us that the Ho, Mundah, and Oraon are divided into clans or keeli, and may not take to wife a girl of the same keeli. The Garo are divided into mahari, and a man may not marry a girl of his own mahari. Mr. M'Culloch tells us that the Manipur and other tribes inhabiting the hills round Manipur, the Koupui, Mow, Maram, and Murring, are divided into four families,—Kumrul, Luang, Angom, and Ningthaja. A member of any of these families may marry a member of any other, but the intermarriage of members of the same family is strictly prohibited. General Campbell and Major Macpherson mention that the Khand regard it as degrading to bestow their daughters in marriage on men of their own tribe; consider it more manly to seek their wives in a distant country; and regard marriage between people of the same tribe as wicked, and punishable with death. The Kalmuk, according to Dr. Hell, are divided into hordes, and no man can marry a woman of the same horde; the bride, says Bergman, is always chosen from another stock, among the Dubet, for instance, from the Torgot stock, and among the Torgot from the Dubet stock. The same custom prevails among the Circassian and the Samoyede. The Ostiak regard it as a crime to marry a woman of the same family, or even of the same name. Amongst the Chinese, exogamy is so severely adhered to, that a man must not marry into a family with the same family name.

It had long been known, from the researches of Sir George Grey and Mr. Gideon Scott Lang, that marriage laws like those of the Red Indians, the people of Ashantee, and many other backward races, prevailed among most tribes of the Australian blacks. They were divided into stocks, each of which was named after some animal or plant. No man might marry a woman who bore the same stock name and the same cognisance. A man of the Kangaroo stock might not marry a woman of the Kangaroo stock, but he might marry an Emu woman, or a Wombat woman, and so forth. Children took the stock name and cognisance of the mother. These cognisances are now usually called totems, from their Red Indian name.

Among the ancient Jews, Abraham married his half-sister, Nahor married his brother's daughter, and Amram his father's sister; this was permitted because they were not regarded as relations. Tamar also evidently might have married Amnon, though they were both children

of David. 'Speak unto the king,' she said, 'for he will not withhold me from thee;' for as their mothers were not the same, they were no relations in the eye of the law.

Some of the Bedouin, also another Semite race, unmistakeably follow the rite of marriage by capture; and yet a man can claim to marry his cousin, if only he be willing to give the price demanded for her, and amongst the Muhammadans of Arab origin, in the Peninsula of India, to wed the maternal uncle's daughter is a recognised right.

The Koch'h and the Ho are forbidden to marry excepting within the tribe. But the latter are not thoroughly endogamous, for they are divided into keeli or clans, and may not take to wife a girl of their own keeli. Thus they are in fact exogamous.

The Toda race, according to Metz, are divided into five distinct classes, known by the names Peiky, Pekkan, Kuttan, Kennae, and Tody; of which the first is regarded as the most aristocratic. These classes do not intermarry with each other, and can therefore never lose their distinctive characteristics.

Among the Yerkala of Southern India, the first two daughters of a family may be claimed by the maternal uncle as wives for his sons. With them the value of a wife is fixed at twenty pagodas. The maternal uncle's right to the first two daughters is valued at eight, out of twenty pagodas, and is carried out thus: if he urge his preferential claim, and marry his own sons to his nieces, he pays for each only twelve pagodas; and similarly, if he, from not having sons or any other cause, forego his claim, he receives eight pagodas of the twenty paid to the girls' parents by anybody else who may marry them.

The Doingnak of the Arakan Hill tracts, a branch of the Chuk-ma, appear to have been endogamous. Captain Lewin mentions that during the chiefship of Janbuk Khan, about 1782, the chief passed an order that the Doingnak should intermarry with the tribe in general. This was contrary to ancient custom, and caused discontent and eventually a break in the tribe.

The Kalang of Java, who have some claim to be regarded the aborigines of the island, are endogamous, and when a man asks a girl in marriage he must prove descent from their peculiar stock.

The Manchu Tartar race forbid marriages between those whose family names are different. In Guam, brothers and sisters used to intermarry, and it is even stated that such unions were preferred as being most natural and proper.

With the royal family of Burma, the custom is continued of half-brothers and half-sisters marrying. The king's eldest daughter remains unmarried. The Siamese rulers also marry their half-sisters.

Endogamy would seem to have prevailed in the Sandwich Islands and in New Zealand, where, as Yate mentions, 'great opposition is made to any one taking, except for some political purpose, a wife from another tribe; so that such intermarriages seldom occur.'

Polygamy.—The Hebrew Bible shows a progressive change in Jewish views on women. The elevated conception of marriage presented in the record of the creation, testifies to a most profound sense of the sacredness of monogamy as the most intimate possible union of two persons; and the Canticle of later times is a song of wedded love and fidelity. Yet, at the outset, the right of woman to choose her lot seems to have been wholly disregarded, as Abraham twice permitted Pharaoh to have Sarah, Judah condemned his daughter-in-law to be burned; a thousand years afterwards, God threatened to give David's wives to his neighbours or to his son; Michal was transferred to Phalti from David by Saul; who had quarrelled with David; and at that era kings of David's tribe habitually succeeded to their predecessors' wives. Polygamy was not prohibited amongst the Hebrews, but there is nothing to warrant the terrible seraglio customs depicted in Judges, and instituted by David and Solomon as regal.

In later Jewish history, the idea came to be that it was better for a woman to be a transferable concubine than to die an old maid, and virginity and childlessness were the only lots bewailed under the later Old Testament regime. A writer in the Westminster Review observes that wherever the regime has been theocratic, as in the Jewish and Papal theocracies, there woman has fared the worst; and her position has been most favourable wherever a strong, rough, moral sense of individual right, as in pagan Greece and Rome, has been dominant. In pagan Rome, seclusion was not known, but on its change to Christianity this became prevalent, divorce became impracticable; and while woman, theologically, was pronounced to be queen of heaven and mother of God, she became a mere chattel of her husband.

Polygamy has prevailed in Asia generally from the most ancient times, but as a rule it has been practised only amongst the rich and luxurious, or by those whose first wives gave no children, or amongst tribes whose traditions and customs compelled them to raise up seed to their deceased brethren. The Vedas, however, recognise monogamic marriages, the union of one man and one woman, as the natural state: husbands and wives are described in the Rig Veda (Mand. i. Hymn 131, v. 3; also Hymn 43) as presenting their oblations two and two together, and at another place (Mand. ii. Hymn 39) a husband and a wife are given amongst other illustrations of pairs. On the other hand (Mand. i. Hymn 126), a young rishi named Kakshivat celebrates the generosity of a raja who had given him his ten daughters in marriage. Amongst ancient mountain tribes on the western parts of the Himalaya, known as Gandharva, and supposed to be the modern Kandahar, the practice was at one time prevalent amongst the Kshatriya tribes of forming a union by mutual consent, and associating together without any preliminary ceremonies. The Brahmanical legislator Manu (ch. iii. v. 26-32-41) recognises the legality of such marriages, but declares none but the Kshatriya race may contract them; he denounces them as base unions, the offspring of which will act cruelly, speak untruthfully, and abhor the Vedas. Such pairings, in the present day, are not known to occur.

Manu says there are eight forms of the nuptial ceremony used by the four classes, some good and some bad in this world and in the next. They are termed—

Brahma, the gift of a daughter to a Brahman learned in the Vedas, voluntarily invited.
Deva, the gift of a daughter to the officiating priest at a sacrifice,

Arsha, or that of the Rishis, in which the father receives from the bridegroom the gift of one or two pair of kine.

Prajapatya, the Oppu of the Tamils, that of the Prajapati or patriarchs, in which the father gives away his daughter with due reverence.

Asura, that of the Asura, the Arumponi Vinai of the Tamils, in which the bridegroom makes valuable presents to the father and relatives of the bride.

Gandharva, in which the parties are mutually agreed. This is considered to include the Swayamvara, in which a princess voluntarily chooses a husband.

Rakshasa, the violent abduction of a maiden after defeating or slaying her relations.

Paisacha, the violation of a girl when asleep, or in liquor, or of weak intellect.

Manu says, 'The first six ceremonies in direct order are by some held as valid in the case of a priest,' etc. Manu utterly reprobates the idea of Gandharva marriage. In chap. iii. para. 32, he says that by the Brahma, Deva, Rishi, and Prajapati marriages only are born sons illumined by the Veda, learned men, beloved by the learned, adorned with beauty and with the quality of goodness, wealthy, etc., performing all duties, and living a hundred years; while from the other four marriages are produced sons acting cruelly, speaking falsely, abhorring the Veda and the duties prescribed in it. And further, he declares that the son of a Brahma marriage, or wife by the first ceremony, redeems from sin if he perform virtuous acts, ten ancestors, ten descendants, and himself the twenty-first person. A son born of a wife by the Deva nuptials, redeems seven and seven in higher and lower degrees; of a wife by the Arsha, three and three; of a wife by the Prajapatya, six and six. 'From the blameless nuptial rites of men springs a blameless progeny; from the reprehensible, a reprehensible offspring. Let mankind, therefore, studiously avoid the culpable forms of marriage.' 'By culpable marriage, etc., great families are sunk to a low state.'

Adi Sûr, the founder of the Sen dynasty, brought from Kanouj five Sagnic Brahmans of the tribes or gotra Sanhila, Kashyapa, Vatsa, Saverna, and Bharudwaja. Sudra families, Ghose, Bhose, Dutt, Mittra, and others, accompanied them, and these take the position of Kulin Kayasths. In the reign of Bullal Sen, about 284 years before the Muhammadan invasion, all these Kulin Brahmans and Kulin Sudras had greatly increased, and though degenerated in learning, they arrogated to themselves a position above all the Sapta-sali or aboriginal Brahmans. Bullal Sen ennobled the Brahmans by giving to them the title of Kulin. The Kulin Brahman subsequently consented to marry the daughters of the aboriginal Brahman; these eagerly seek alliances with the Kulin, who have established a scale of fees for condescending to accept a daughter of an inferior. They marry for gold. Of the Kayasths who came from Kanouj, Bhose, Ghose, and Mittra were ennobled by Bullal Sen with the title of Kulin Kayasths. Dass, Day, Dutt, Guha, Kar Paulit, Sen, and Singh hold a second rank.

Kulin Brahman women are married with difficulty, and generally to aged men. In 1868, there were 11 Kulins in Hoogly and 1 in Bardwan, each of whom had contracted 50 to 80 marriages; 24 in Hoogly and 12 in Bardwan, who had contracted from 20 to 50 marriages; and 48 in Hoogly and 20 in Bardwan, who had contracted between 10 and 20 marriages. Kulinism is thus a great polygamic institution, and a few women have become prostitutes. In 1867 the abolition of this polygamy was contemplated, and will doubtless be carried out. Kulin marriages are sought after by the relations of the females, to keep up the honour of their families; and the children of these marriages invariably remain with their mothers, and are maintained by the relations of the females. In some cases a Kulin father does not know his own children.

Women unmarried.—It is not possible to learn from the legends of India all the marriage customs formerly prevailing in it. Several of its numerous races, from the most ancient times, have kept themselves distinct from each other, and the evidence of the Mahabharata, of the Ramayana, the Institutes of Manu, the Puranas, and the Vedas can only be accepted as relating to portions of the inhabitants. When we read that in the famous Indian city of Vesali, 'marriage was forbidden, and high rank attached to the lady who held office as chief of the courtesans,' such must be regarded as an exceptional or local condition, of which, even yet, in British India, there is an instance in a town in North Canara, in the Peninsula. It is stated that when Sakya Muni in his old age visited Vesali, he was lodged in a garden belonging to the chief of the courtesans, who drove out to visit him, attended by her suite in stately carriages. Having approached and bowed down, she took her seat on one side of him, and listened to a discourse on Dharma. . . . On re-entering the town she met the rulers of Vesali, gorgeously apparelled, but their equipages made way for her. They asked her to resign to them the honour of entertaining Sakya Muni, but she refused, and the great man himself, when solicited by the rulers in person, also refused to break his engagements with the lady. This custom, of the temple dancing-girls advancing to meet a great man, is still prevalent, and they show this honour alike to a governor or a bishop. Until recently, the Deva-dasa, or slaves of the idols, were the only educated Hindu women in India. All the great Hindu temples have bands of the Deva-dasa, who follow their trade without public shame; and a woman born of, or adopted by, one of the temple slave women is not held to pursue a shameless vocation, though other women who have fallen from good repute are esteemed disgraceful. The explanation of this is that every Hindu, according to the Institutes of Manu, is pure in his or her own vocation, and the Deva-dasa continue the old custom of the country, under solemn religious sanction. Caste women, on the contrary, who have given way to lawless inclinations, have outraged public feelings, have probably broken their marriage vows, and brought disgrace on their families. At the present day, the Hindu weaver races near Chingleput, 35 miles from Madras, devote the eldest daughter to the temple, and all classes of Hindus, in time of trouble or in hope of offspring, vow their girls to the temples.

Polyandry now prevails in Tibet, is common in the Himalayan and sub-Himalayan regions adjoining Tibet; in the valley of Kashmir, in Spiti, in Ladakh, in Kishtwar, in Sirmor, in the Siwalik range, in Khassya; there are unmistakeable traces of its existence, till recently, in Garhwal, Sylhet, and Cachar; and it is still prevalent among the Toda of the Neilgherry Hills, the

Coorg, the Maleala Sudra, and other castes of Malabar, Canara, and Travancore; also in Ceylon amongst the Kandyan race, and farther east, is an ancient though now almost superseded custom; in New Zealand, in one or two of the Pacific Islands, and in the Aleutian Islands; also to the west and north of the Aleutian, among the Koryak to the north of the Okotsk Sea; and, crossing the Russian empire to the west side, we find polyandry among the Saporogian Kazak. It is also found in several parts of Africa, and, according to Humboldt, it is prevalent in America among the tribes on the Orinoco, and he vouched for its former prevalence in Lancerota, one of the Canary Islands. But the forms in which it has been followed have varied. Cæsar found it in Britain; as it exists in Tibet and in the Western Himalaya, and Coorg and Kandy, it is limited to brothers. The restricted form known to the Jews and early Hindus, as noticed in Ruth and Manu, in which only the childless widow fell to the brother, is now not heard of.

In the Panjab, among Jat families too poor to bear the marriage expenses of all the males, the wife of the eldest son has sometimes to accept her brothers-in-law as joint husbands. The Ghakkar, the brave people of Rawal Pindi district, are now Muhammadans, but their polyandry was one of the characteristics which specially struck the advancing Muhammadans in 1008. The Karakat Vellalar of Madura, at the opposite extremity of the Peninsula, no longer practise polyandry; but they preserve a trace of it in their condonement of cohabitation with the husband's kindred, while adultery outside the husband's family entails expulsion from caste. The Reddi race of agriculturists in the southern Tamil provinces have a similar custom, in order to preserve their family lands; and the Namburi Brahmans of Travancore, to preserve their family property, allow only the eldest son to marry.

In Ceylon there were two kinds of polyandric marriage, the Diga marriage and the Dina. In the former the woman went to her husband's hut, in the latter the man transferred himself to that of the woman. Moreover, according to Davy (p. 286), marriages in Ceylon were provisional for the first fortnight, at the expiration of which they were either annulled or confirmed.

In most countries, man has arrogated to himself a superiority over woman, and has regarded her duty to be to submit to man's decisions. But the ancient Britons, as also some of the Median Cantons, the Pict, and the Gete, were polyandrous, and the custom is traceable among the ancient Germans. The origin of polyandric customs has been referred to the communist practice still in force amongst Hindus with respect to all property and earnings, for where small parcels of land were to be subdivided amongst families, it was of consequence that the members should continue limited. The scarcity of women amongst a military class of foreign immigrants, and the absence of brothers on pasturing or commercial expeditions, whilst others stayed at home, have also been pointed to.

The Mahabharata relates that Pandu, with money and jewels, purchased Madri from her brother Salya, king of Madra. But in former times the princesses of some parts of India appear to have enjoyed the privilege of selecting a husband from amongst a number of suitors assembled for the purpose at a Swayamvara or tournament. In the Institutes of Manu (book iii. ver. 27), eight different forms of marriage are mentioned, but this right of selection is not one of them. In the 9th book, ver. 9, there is an allusion to it, but it is doubtful whether this has reference to any but the commercial and servile classes: 'Three years let a damsel wait though she be marriageable. After that time let her choose for herself a bridegroom of equal rank.' In Kalidasa's celebrated poem, the Raghuvansa, there is a beautiful description of the Swayamvara of Indumati, sister of the king of Vidarbha, in which she chooses Aja, the son of Raghu, out of a large assemblage of royal suitors. In the Mahabharata we have an account of the Swayamvara of Draupadi, the daughter of Drupada, king of Panchala, and afterwards the wife of the five Pandu princes.

From the fact of her marrying the five Pandu brothers, we learn that polyandry must have prevailed amongst some races of that period; and Curao was no doubt not uncommon; indeed, the compiler of the Mahabharata, Vyasa, was himself appointed to raise up offspring to his deceased brother. Herodotus tells us that polyandry prevailed among the nomadic Scythians, as it does at present among the Bhoteah. The practice is adopted also by races in Malabar, between whom and the people of the Himalaya Wilson traces the obscure vestiges of a connection.

It prevails in a household form amongst the people of Coorg, as also amongst the Toda of the Neilgherry, amongst the Kapilli tribe on the Dindigul valley, and amongst the Totti, a Pariah race in Mysore. The Coorg believe themselves to be descendants of the daughters of Chandra Varma, king of Matsa Desha, obtained by the intercession of Parvati. Chandra Varma is said to have come originally to Coorg. They marry at a ripe age, but the wives of brothers are in common. They are a compact body of mountaineers, who have been lords of the soil from time immemorial, and live in farm-houses far apart. The Amma Coorg take among the Coorgs a place similar to that of the Brahmans among Hindus.

The *Kunâwar* people may be found as petty traders between Tibet and Hindustan, in almost every hill state between Nepal and Kashmir. The custom of several brothers having but one wife amongst them is universal. The women of the Himalaya really marry a plurality of husbands, usually brothers.

The *Nair* woman has only one married husband, with whom, however, she never associates, but at will receives any other men of her own race. The most recent writer on the Nair customs, the Rev. Mr. Mateer, tells us that the object in going through a marriage ceremony has never been surmised. These Maleala Sudra or Nair customs admit of no real nuptials.

The females of a wealthy Nair family, especially where there is but one sister, are visited at their own homes by Brahmans, or by persons of their own caste; and their children are reared up in the same house, and inherit from their mothers' brothers. Females of poorer families go to reside with partners of their own caste, so long as they agree together, and the average duration of such unions happily is increasing. There is, indeed, a marriage ceremony performed

in the childhood of every Sudra girl; but it is never consummated as a marriage; conferring no connubial claims or obligations on the nominal bridegroom, who has thenceforth no further communication with the girl, and it rather serves to set the girl at liberty, as soon as she arrives at maturity, to form temporary associations, or to change them as she pleases. At any time subsequently, the girl may 'receive cloth' from any suitable man, and consort with him. The subsequent trivial bond, signified by giving and receiving a cloth, is dissolvable with a word at the will and pleasure of either partner. With the Nair there is no fixed rule that the person who married her must not give cloth.

The ceremony called giving a cloth, or agreement for concubinage, is performed in the presence of relatives and neighbours, usually at night. The girl is placed with the man on a mat on the ground, the emblems called lingam and yoni being marked in front. A valuable cloth being offered by the youth, the girl asks her uncle, 'Shall I receive it?' 'Yes.' The same question is put to the mother, who gives her consent. A cheaper cloth is given to the woman's father, mother, sister, brother, and other near relatives. As the succession to the Travancore throne is continued through sister's sons, the unions of the ruling family are those common to the Nairs, except that an Ammachi, or associate of a raja, if put away or widowed, is not allowed to marry any other man. The Ammachi has no communication with the reigning ranis. She is not a member of the royal household, has neither official nor social position at court, and cannot even be seen in public with the ruler whose associate she is. Her issue occupy the same position as herself, and the law of Malabar excludes them from all claims to public recognition.

Nairs either go to the woman chosen, give the cloth, and take her home, or reside with her at her brother's house. In the case of the royal family, a number of splendid cloths are sent, and she is brought to the palace of her consort. But, unlike other Sudra unions, the Ammachi, having once been taken by a raja, is required to remain apart from all other men all the remainder of her days, and is guarded in her own residence. It is not all parents that are willing to give their daughters on these terms. The Tangachis, or daughters of the raja, who, like sons, have no titles of rank, are first married in childhood by a Tirmulpād. When one attains to maturity, cloth is given by some one who takes her to wife. The nieces, however, the raja's sister's daughters, who, like nephews, have the titles of highness and rani, are married when young to Coil Tamburans, who afterwards live with them so long as both parties are mutually content. It is not necessary that the same person who nominally married the lady in childhood should actually consort with her in maturity. The princess can choose for herself, and if one consort dies, another is called in. The Coil Tamburans, or Lords of the Temple, are usually regarded as Kshatriyas, and from their rank are chosen the consorts of the princesses of the realm. Several families of this caste reside in the northern part of the Travancore dominions. The Coil Tamburan men give cloth to Sudra females, while the women associate with Namburi Brahmans. The reigning family has often died out from lack of direct heirs, and has been recruited by adoptions. There are several families of petty rajas in Travancore allied to the maharajas, the principal of whom is the Mavelikara family, from whom adoption of princesses is usually made, and with whom, therefore, close relations of friendship subsist. The present ranis were selected from this family in 1858. It is said that the Mavelikara line was itself perpetuated in ancient times from Travancore, mutual adoptions thus producing intimate union between the two houses.

The twelve *Antarāla*, intermediate castes between Brahmans and Sudras, generally called Ambalavasi, temple dwellers, officiate as temple servants. They mostly follow the nepōtistic law. Sudras or Kshatriyas have sometimes to pay heavily for engagements with men of higher caste to consort with their families. The nieces of the Cochin rajas, whose male children succeed to the throne, form alliances with the Namburis, who, however, lose to some extent in caste, forfeit all ancestral privileges, and, becoming dependent on their new connections, receive in compensation large marriage portions and separate establishments at the palace. The nieces or sisters of the Travancore royal family intermarry with Kshatriyas only, and this seems to be the sole reason why the Cochin rajas are admitted to be of higher caste to those of Travancore: the former manage to procure Namburi Brahmans as consorts; the latter only Kshatriyas of the Coil Tamburan class. Polyandry is not rare among Sudras, carpenters, Ilavars, and other Marumakkal castes.

Ilavar girls, Mr. Mateer further tells us, are all married in infancy as a mere form, at various ages, from one to nine. The person who marries a girl in infancy does not afterwards live with her. To save expense, several girls are usually married at one time. A pandal is erected. They are taken to the river to bathe, dress, and put on their ornaments. On returning, they are accompanied by the barber-women of their caste, who sing marriage songs, and by men, women, and children of their own people, shouting, blowing snake-horns, and the 'five kinds' of music. At the entrance of the pandal the noisy display is stopped, and the eldest of the brides is prepared for marriage; her face is veiled, and she is carried by one of her cousins and seated on a decorated platform, while the other brides are seated upon the boards, having their heads covered with white and red cloths. On the left side of each girl is laid a plantain leaf, and on this a nari measure, an edungaly measure made of the wood of Alstonia scholaris, and filled with paddy, a brass vessel containing an edungaly of rice, and a clean cloth folded, on which half a cocoanut containing a little oil and a wick is placed. A brass lamp is also lit, and laid close to each leaf, in addition to silver rings (worth one fanam each) tied with thread. After other of their customary marriage ceremonies, on the seventh day the ring tied up by the barber-woman is taken off, the wedding is over, and the bride's party give to the mock bridegroom 23 fanams and a bunch of plantain fruit, with five edungalies of rice and a suit of cloth, and conduct him back to his home.

The *Pariahs* of Travancore are a strongly-built and bold race. They live in separate hamlets, and eat the flesh of dead cattle, tigers, etc. As

with the Sudras, nephews are the heirs. Their girls are married when very young—as a mere form—by their cousins, but when grown up they are selected by others, who give cloth. Instances occur among them both of polygamy and polyandry.

A native writer, G. E. Varmman, says, 'The Muttathu marry females of their own caste; but they only perform a ceremony, while Brahmans cohabit with them, and beget children. Should men of their own caste dare to approach them, it is like incest with a mother,—there is no atonement possible for them,—and such progeny are sacrilegious.'

Among these polyandric races, property is by the women. Colonel Yule says that this remarkable custom of inheritance exists, or has existed, among the aborigines of Hispaniola and tribes of New Granada and Bogota; among Negro tribes of the Niger; among certain sections of the Malays of Sumatra; in the royal family of Tiperah, and among the Kasias of the Sylhet mountains (both east of Bengal); in a district of Ceylon adjoining Bintenne; in Madagascar; in the Fiji Islands; and among the Hurons and Natchez of North America.

In ancient India, the position of the Hindu wife was far more honourable than it is in the India of the present day; and against this degradation of the sex, the Hindu marriage ceremonies, which have descended from bygone ages, make their constant protest, for in them the woman is recognised as the first and greatest blessing the gods granted to man. A Hindu poet has said—

> 'Woman is man's better half;
> Woman is man's bosom friend;
> Woman is redemption's source.'

Hindus of Bengal say that the good fortune of a husband depends on that of the wife, hence a woman is an emblem of Lakshmi or Luckee. Girls are taught to offer prayers to all the gods for the gift of a good husband; but in Bengal, Siva and his wife Durga receive the chief invocations, because of Siva's fidelity to his spouse, Krishna being avoided because of his association with the Gopin milkmaids of Bindraban.

The whole spirit of the Hindu ritual is opposed to polygamy, but inculcates firm and undeviating allegiance to each other on the part of both husband and wife.

Age.—A Brahman girl who grows up without being married, loses her caste. The duty of choosing a husband belongs to the girl's father; but should he be dead, it devolves in succession upon the paternal grandfather, brother, paternal uncle, male paternal cousins, and lastly upon her mother. If these omit to perform their duty till after the girl has reached the age of eight, she may choose for herself. She can only marry with those of her own caste, and the preference should be given to the sons of her mother's brother or of her father's sister. It would be considered a dreadful sin to marry the sons of the father's brother or of the mother's sister.

It is a duty imperatively enjoined by the Shastras upon the parents or other relatives, and even friends, to see that a girl does not remain unmarried. In extreme cases people have to obey the letter of the law, by formally marrying to an Ashvattha tree (Ficus religiosa), a girl who, after all efforts, fails to secure a human husband. The artisan goldsmith race deem it so sacred a command to marry their daughters in infancy, that if permitted to grow up unmarried, the families say that it would be a duty to drown themselves. And all Brahman girls ought to be married and taken to their husbands' homes before they leave girlhood.

In all classes of the community there is a general predilection in favour of early marriages both of sons and daughters. Hindu mothers wish to see their sons married soon. If a son of a well-to-do Hindu grow up unmarried, the fact is considered as a stigma on the family, and rumours begin to be circulated against the health or constitution of the boy. A man of good family is showered with offers of a bride for his son; but the age for lads has been increasing in the Presidency towns since the British introduced the education tests for employment, and fathers of girls strive to obtain educated husbands for their daughters. At the 1881 census of British India, out of a total of 123,949,970 females, there were of married, 2,325,688 under 9, 1,616,460 from 10 to 14 years old; and of these respective periods of life, 78,976 and 207,388 were already widows. The widows between 15 and 24 years of age numbered 1,134,705.

According to Dr. Buhler, Manu, Gautama, and Baudhayana, though they recommend early marriages, allow the father to keep his daughter at home up to the age of thirteen, after which age daughters were permitted to choose husbands for themselves. The Smartta Brahmans admit that this is the more ancient rule, and some of the Grihya Sutra show that marriages with women as well under as of more than full age were permitted by law, and, indeed, that infant marriages were not in force during the Vedic age of the Aryans. It is in the Smriti Shastras that infant marriages are enjoined, and one class of these works, to which the Samvarta, Angirasa, and Parasara belong, limit the marriage age much more than Manu. The Rig Veda seems opposed to infant marriage. Amongst the Riks which are recited at the marriage ceremony, there are some which express the belief that the bride belongs to the three gods of the Vedic times.—Soma, the moon; Gandharva; and Agni, the fire-god,—before she passes into the possession of mortal man. The bridegroom prays to Agni and Gandharva to cede the bride to him, and afterwards proclaims aloud that Agni has freed her,—Agni has given up his right of possession. A Hindu author, Gobhila-putra, asserts this to be an allegory, and that a girl falls into the power of Soma when inguen pube contegitur; into the power of Gandharva when mammæ ejus intumescunt; and into that of Agni on the occurrence of the Καταμηνια το πρῶτον. But Gobhila-putra's suggestion is not reconcilable with the fact of the existing ceremonial at marriage, also that, amongst the present Hindus, married women can always be pointed out, fair and comely, but childless, who are supposed never to have been released from the deity, and others whose offspring are supposed to have been begotten under celestial influence. These are current beliefs. In Vedic times, then, every bride must have been grown up. With the bridegroom, though they too, but not so invariably, are married while still boys,

the existing laws, though now wholly neglected, plainly preclude marriage till maturity; for a Hindu can only enter on his student life when seven or eight years of age, and as this term lasts nine years at the shortest, a Hindu lad cannot by law marry till 17 years of age at least, which is absolute manhood. With the Dravida races, though the bride is almost invariably under age, often a mere child, and may reside from time to time with her husband's parents, there is no association till she have been a second time unwell.

Ritual.—The minute ceremonials of marriage considerably vary. The Brahman and the five artisan classes are not permitted by the social customs to ride on horseback when in procession, Sudra Hindus and the non-Aryans asserting their exclusive right to that honour. The artisan races do not acknowledge Brahmans, do not permit them to perform their marriage ceremonies, but they are not allowed to use the plantain for ornament.

When seated, the girl is formally given to the husband (Kania-danam), literally spinster-giving. A priest blesses some water in a small vessel, and the father of the girl, taking this and his daughter's right hand, places them together in the bridegroom's right hand, saying, I do this that my father, grandfathers, and great-grandfathers may attain Swarga. The bridegroom then rising, and standing before the bride, amidst the deafening din of tom-toms, ties round her neck the mangala sutram, a thread coloured with turmeric, to which a golden jewel, called bottu or talai, is attached. Sandal-wood paste, perfume, and flowers are presented to the guests; betel-nut is offered to all relatives and friends, and money presents are made. The married couple receive Asir-vadam, benedictions and congratulations from the assembly, and as they prostrate themselves at their parents' feet their parents bless them. In Northern India part of the marriage ceremony consists in tying a string or thread round the wrist of the bride; and with many of the races in India, whether of Aryan or Turanian descent, part of the marriage ceremonial consists in tying the corners of the bride and bridegroom's cloths together (Phylu bandhna), and causing them to circumambulate the village deity. There is also the ceremony of Sat-phéri, or seven turns round the sacrificial fire.

A marriage procession in the north-west of India has many elements different from those in Bengal. The Basanti, spring months of April and May, being considered as the most auspicious season, hymeneal processions may then be daily witnessed in any of the great cities. In the north-west, the bridegroom, instead of being carried in a palanquin, and followed quietly by a crowd of guests, proceeds on horseback, with musicians playing right and left, and a band of female songstresses singing songs suited to the occasion.

The married Hinduani of Bengal during their husbands' lifetime wear an iron bracelet or a bit of iron twined round with a piece of gold wire. The wives of the agricultural Od-chasa race in Orissa wear bracelets so long as their husbands live; but the Mahinti and other Uriya tribes throw off their brass kharu or bracelets as soon as they can afford to purchase ornaments of the more precious metals. The pote or bead necklace is tied on the Hindu and Muhammadan bride of

Northern India. Wedding rings of stones are erected by Baluch nomades as a memorial. Sakhisungbad and Biraha are love songs sung by Brahman women on the first occasion of a bridegroom and bride being left together.

Marriage in Hindu law is indissoluble, and it is to be of one wife; except that if a wife be barren for eight years, or for eleven years have no male offspring, or be drunken, or immoral, or extravagant, or bear malice to their husbands, a second wife may be taken; but the first wife is always the head of the house. A wife who quits her husband's house, or neglects him for a twelvemonth, may be deserted altogether.

There are five things considered essential to the Hindu marriage ceremony, viz. the betrothal, the gift of the virgin, the acceptance, the seizure of the hand, and the seven steps or Sapta-padi. In giving away the virgin, the girl's father or guardian must say, in the presence of the Brahmans, to the father of the bridegroom: 'I give you, for your son, my beautiful virgin daughter; accept her therefore.' The father of the youth replies: 'With my mind, with my voice, and with my body I joyfully accept thy daughter for my son, and religiously receive her among my own kindred.' The girl's father then declares his gotram (tribe), and gives grains of rice tinged with red and betel leaves to the bridegroom, declaring again that he gives him his daughter, and promises to defray all the expenses of the marriage. With the girl there should be given one or more cows, some land, and a salagram stone.

The girl's father next makes a solemn declaration in the presence of the assembled Brahmans, thus: 'O Brahmans! to this youth M., learned in the Vedas, the son of N., to him I give my daughter, dressed in gay apparel, and adorned with gems.' The Brahmans answer: 'Tatha astu,' So let it be. The father-in-law having taken the hand of his daughter, now puts it into the hand of the bridegroom, and pours over them water sacred to Vishnu. The pouring of water, according to eastern custom, makes a gift irrevocable, and the marriage should be now complete. The Sapta-padi, and the ceremony of tying on the Tali, have, however, been superadded. The wooden yoke of a bullock used to the plough is brought, and lightly laid upon the head of the bride. A veil is then held up between her and the bridegroom, and the mangala ashtaka or eight auspicious verses are recited. They form a canticle calling upon the gods, the saints, the trees, the hills, and the rivers to witness and to be auspicious to the union. The veil then falls, and the bridegroom binds a golden ornament, called the Tali, around the neck of the bride. This can never be removed except in the unhappy event of her becoming a widow. Then follow the homam or sacrifice to Agni, the god of fire, in which the bride and bridegroom take together the Sapta-padi, or seven steps, amidst the loud chanting of the Vedas. From this observance the term Sapta-padinam has become synonymous with friendship; and it is common for two persons to swear eternal friendship by taking seven steps together. Next comes the ceremony of eating, what is called Madhu parkam, literally mead mixture. Grains of parched rice are now substituted, but the name of the ceremony is still allowed to perpetuate the memory of the fact, that in times past the

Brahmans did not scruple to drink fermented liquors, although they now strictly prohibit their use. On the third day after marriage, the attention of the bride is directed to a small star named Arundhati, near the constellation of the Great Bear, and she is exhorted to follow the chaste example of Arundhati, the wife of the rishi Vasishta, who, on account of her conjugal fidelity, was deified and placed among the stars. On the fourth night a torch-light procession sets out, and the bride and bridegroom are carried round and round the village in a palanquin, with music and dancing. This goes on till sunrise. They are then conducted home, and are received at the threshold by some married women, whose husbands are still living, for the sight of a widow at such a time is considered most inauspicious. They are then seated, and a lamp is waved round their heads to avert the ill effects of the evil eye; and for the same purpose the bride sometimes wears a coral bead with the jewel of her Tali. Somewhat in the same way as the English send round wedding-cake and cards, the Hindus distribute betel leaves with the nut of the areca palm, and grains of rice coloured red. The friends of the bride now come to offer their congratulations, and a common wish at this time is: 'May you live long and bear sixteen.'

Expenses at the marriages of several of the races of India are very heavy. Among Shrimali Vania and Oswal Vania it is difficult to secure a bride unless the bridegroom spend between 2000 and 3000 rupees for her. The number of Shrimali and Oswal Vania among the Jains is no less than 32,280, or more than two-thirds of the entire Jain population of Baroda. Besides this, their commercial and trading tendencies oblige many of them to leave their homes, and thus they are obliged to remain single. Moreover, the daughters of Shrimali Vania are returned as Hindus when they are married to Meshri or Vaishnava Vania. The Shrawaks often give their daughters to the Vaishnava, while the latter but rarely give their daughters to Shrawaks.

The ruling family of Rewah have been dominant in that state for many generations. They are much respected by the people and neighbouring chiefs, taking daughters in marriage from the very highest and proudest houses in Hindustan. About the year 1874 one bride was said to have taken with her a dower of five lakhs of rupees.

The dowry in Tamil marriages is regulated according to a fixed scale, the highest caste being rated lowest. That of a maiden of the Vellalar, the first in rank of the Tamilian agricultural castes, was formerly 11, and is now 21 pon, which in every-day usage are represented by 38½ and 73½ rupees, —a pon being equal to a pagoda. In addition to the dowry, the bridegroom's parents give another pon tied up in a piece of cloth, under the name of Mulei pal mudichi, or Mulei pal kuli, literally breast-milk packet, or breast-milk hire, typifying that the expenses of the bride's rearing are thereby discharged, and that she has become thenceforth the purchased property of her husband.

The passages in Manu as to the purchasing a bride by a dower are contradictory; possibly the practice varied, as now, with the different races. With the agricultural classes of the N. W. Provinces, the bride's father purchases the bridegroom by gifts of money and household utensils. When Prithi-raj carried off the daughter of Jye-chand, her father nevertheless sent to him the richest gems, the fruit of the victory of Biji Pal, inestimable wealth, pearls, elephants, and dyes. And when Prithi-raj married the daughter of Dahima of Biana, her father gave him 8 beauteous damsels, 63 female slaves, 100 Irak horses, 2 elephants, 10 shields, a pallet of silver for the bride, 100 wooden images, 100 chariots, and 1000 pieces of gold. This costly system has its origin in the desire to marry a daughter into a higher family. The dread of these marriage expenses and pride of race led to infanticide. They chiefly went in presents to Bards, Charans, and Brahmans. If the legend can be trusted, when Sita was married to Rama the palace of Janaka was full of Brahmans—

> 'How many thousand Brahmans here,
> From every region far and near,
> Well versed in holy lore appear.'

But Muhammadans of India also have a profuse expenditure. In the year 1850, when the foster-brother of the nawab of the Carnatic was married, about £10,000 were expended in idle ceremonial. More recently, a Gackwar of Baroda, on the demise of his first wife, married a second time. The procession passed on its way, winding through the city till it arrived at the bridal abode, which was very tastefully ornamented and fitted up. The bride was modestly and thickly veiled. The bands played, the guns thundered a royal salute, the soldiers fired a feu-de-joie—

> 'Twas not the air, 'twas not the guns,
> 'Twas not the feu-de-joie that runs
> Fair up and down the double rank,
> But one glad shout that softly sank,
> At once a thousand voices said
> "It is the veiled Marathi maid."'

The bride, as is customary, sat on a basket, her royal lover sat in front of her, and fine cords were then wound round the two contracting parties to betoken the indissoluble nature of the bond between them.

Wealthy Hindu families often marry daughters into poor families in order to keep their son-in-law under their own roofs. These are called Ghar-jamai, or home-bred son-in-law. A son-in-law of the Kulin race is particularly desired, but the position is deemed degrading. In some cases in Baroda the father of a Hindu girl retains a lad in his house, and the girl and the lad live as man and wife without being united in marriage. In such cases the lad is called Ahariyo or Asariyo. In other instances the bridegroom-elect has to serve his father-in-law for five years before he is entitled to take away his bride. He is then called Bandadiyo.

Widows.—With the Koupoi tribe of the Nagas of the N.E. frontier, on the death of a man's wife, her father or next-of-kin demands the price of her bones (Mundoo) from the widower-husband. Their widows are taken by the deceased husband's brother. It was a custom amongst several Scythic races for widows to burn themselves, or be buried alive, or to be destroyed by the sword or dagger, and interred along with their husband's remains. This practice prevailed in the East Indies up to the middle of the 19th century, when it was prohibited by the British, but it is still followed in the island of Bali, in the Eastern Archipelago. In a Government notification in the Foreign

Department, Simla, the 7th April 1847, the Governor-General expressed much satisfaction in republishing a proclamation by the Gwalior darbar, prohibiting the practice of sati within the territories of maharaja Sindia. The Governor-General also, in 1847, republished documents prohibiting female infanticide in Jeypore, and limiting the demands of the religious Bhat, Charan, Dholi, and Merasi sects on occasions of marriages in Rajput families.

Re-marriage of Brahman and Rajput widows is never permitted; and though re-marriage is lawful by the Muhammadan law, the followers in India of that religion have largely adopted the Hindu practice. In some of the other Hindu castes a woman may re-marry more than once.

Much attention is at the present time directed towards this portion of the Hindu code. An influential sect of theists, the Brahmo Somāj, followers of Ram Mohun Roy, use a revised ritual, in which, while idolatrous invocations of the Vedic and Puranic deities are suppressed, and the One without a Second is entreated to sanctify the union, the ceremonies which are not idolatrous, and which have been consecrated by the use of ages, are preserved with a view to the relief of the members of the Brahmo Somāj. Marriages between natives of India not professing Christianity must be solemnized in the presence of a registrar, and of at least three credible witnesses, in whose hearing each of the parties makes the following declaration:—'I, A. B., am a native of British India, I do not profess the Christian religion, and I object to be married in accordance with the rites of the Hindu, Muhammadan, Buddhist, Parsee, or Jewish religion.' The bride and bridegroom are then to repeat words to the following effect:—'I, A. B., declare, in the presence of the Almighty God, that I take thee, C.D., to be my lawful wedded wife (or husband).'

The husband must have completed the age of 18, and the wife must not be under 14. If she be under 14, the consent of her father or guardian is necessary.

The Hindu law does not recognise the second marriage of widows, though seven forms of cohabitation are observed with certain ceremonial rites. The mere act of being betrothed disqualifies from a second marriage. The affianced becomes a widow, though a komari or maid. Latterly, however, re-marriage of females left widows before attaining a really marriageable age, is being less objected to amongst respectable Hindus. Nothing can be crueller or more unwise than to condemn girls to a life of celibacy. The seven forms of cohabitation are,—when the first marriage has not been consummated; when a girl has been unchaste, and is married to another than the gallant; when a widow is allotted to a kinsman to raise issue for her deceased husband. In these three the woman is Punār-bhū, she who is wedded again. In the other four she is termed Swaireni, independent, uncontrolled.

Curao is the Urdu or Hindi term given among the Jat, Gujar, Ahir, and other races and tribes in North-Western Hindustan, to concubinage generally, but more especially to marriages of widows with the brother of a deceased husband. The practice is known to the eastward by the name of Urhuri, in the Dekhan as But'hee, and in other provinces by the name of Dhureecha. It is followed among these classes, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brothers' widows, but among the Jat of Dehli even this is not prohibited. The practice has been common among several nations of the east. The Jews followed this custom, and in Egypt it was permitted for a childless widow to cohabit with a brother of the deceased husband. When the laws in Manu were collected, Curao appears to have been a recoghised institution; but, as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten according to law on the wife of a man deceased, or impotent, or disordered, after the due authority given to her, is called the lawful son of the wife (chap. ix. ver. 176). When the two younger sons of king Santanu Vichitru Virya died childless, the Mahabharata mentions that Vichitru Virya's widow first asked Bhishma, saying, 'Take the raja's widows, I pray you, and raise up sons that shall be to him as his own sons;' and being refused, in consequence of his vow, How can I do this thing? have I not vowed a vow that I would never become the father of children by any woman? she sent for her own kinsman, Vyasa, to whom was born the blind Dhritarashtra, Pandu, and Vidura. This practice is identical with that of the Jews, as described in Ruth. There is perhaps no circumstance which so strongly shows the northern descent of the deified heroes as this marriage. Amongst the Jat, Gujur, and Ahir, children born in Curao are considered legitimate, and are entitled to inheritance accordingly. Children begotten by the woman previous to Curao, except in the case of fraternal Curao, are known by the name of Kudhelura, and do not inherit the property of the father-in-law.

In Berar, most Hindu women are allowed to make a second marriage, but a widow is married there by the 'pat' form, an inferior ceremony. The groom is not married to the woman, but to the swallow-wort plant, or to a ring, or a pitcher. The twigs of five plants are used,—the mango, the shami, jambul, apata, and swallow-wort. The trees are worshipped, a twig is cut from each; in the bride's house they are placed in an earthen pot, around the mouth of which is bound a strip of yellow cloth torn from a woman's bodice. They are subsequently worshipped at the Deokundi ceremony.

Plant Marriage.—In Chutia Nagpur amongst agriculturists, and in Singhbum amongst all classes of Kol, girls have a fixed price, sometimes up to 40 head of cattle; and girls often long remain unmarried, even to be old maids. When such are married, the bride clasps a mahwa tree, the groom a mango tree, and at the close of the ceremonies the bridesmaids pour a jar of water over the heads of each of the couple, who then retire to change their wet clothes. The next morning the bridesmaids burst into the nuptial chamber and bring forth the bride and groom.

The marrying with plants is not restricted to human beings. Banotsarg is the Hindu ceremony

of marrying a newly-planted orchard to its neighbouring well, without which it would be held improper to partake of the fruit. Brikhotsarg is the marriage ceremony performed by Hindus when liberating a bull. Hindus, in sickness, at marriages and other ceremonial occasions, loose a bull, which thenceforward rambles at will without an owner. These haunt the market-places and landing-places, and in large towns such as Benares, the Ranh, Sanrh, and Sirhi or widow's bulls are numerous. The bulls are generally in good condition, are often in the way, but rarely mischievous, though very cunning.

The Matsya Purana and other books denounce marriage to a third wife under the penalty of early death, but incurrence of the penalty is evaded by the man himself being married to a plant. On a day when the sun is in the lunar asterism called Hasta, the resolve to marry is expressed, the manes of the deceased ancestors worshipped, and then the priest has to worship the Rui plant, a kind of swallow-wort which is considered to represent the sun in union with his wife Chhaya (shadow), raw sugar and rice offered, and the sun is thus invoked: 'O thou who dwellest in the three worlds, do thou, along with thy wife Chhaya, obviate the dangers that attend a third marriage, and confer on me felicity.' In the further ceremony, the man, placing his hand on the bush, says, 'Mercifully preserve me now that thou art come to be my wife;' and after other ceremonies, a veil is drawn between the parties, a benediction given, and the veil removed.

Seasonal.—With the Kadava Kunbi of Gujerat, an interval of twelve years elapses between one marriage season and another. After the lapse of nine years from one marriage season, the Kadava patels of Ahmadabad and Unjha, and the priests or Pujari of the goddess Umia Devi, the tutelary goddess of the Kadava Kunbi, whose temple is at Unjha in the Kadi division of Baroda, consult the goddess as to the marriage season. Two bits of paper, one containing the word yes, and another the word no, are thrown before the goddess, and a virgin is asked to take up one of them. If the bit selected by the virgin contains the word yes, it is construed into a permission on the part of the goddess for celebration of marriages that season. If, on the other hand, the bit containing the word no is taken up by the virgin, it is construed as a prohibition, in which case the bits of paper are again thrown before the goddess after a lapse of two years. If at that time also the bit taken up contains no, the experiment is tried again and again until the bit with yes is obtained.

The Kadava Kunbi are also very particular as to their intermarriages. But when a suitable match for a girl cannot be found, she is married to a bunch of flowers, which are afterwards thrown into a well. She is then a widow, and can be married with the natra rites. Or she is married to a married man, on the agreement that he divorce her on completion of the ceremony, and she can then, as a divorced woman, be re-married by the natra ceremony.

With *non-Aryan aborigines*, both parties are over 15 or 16 years old. The Kurumbar, for instance, marry after a girl is grown up, as also do the Betta Kurumba, the Teling Balja Vadu, the Devanga, Jadar, and Kaikalar weavers, also the Palli race of the Tamil-speaking people, also the Hala-Paik and the Bilwara of Canara; also the Kansa Wakkala, the Upara or builders, the Bedar, the Lala Gundara, and the Soligara. A literary race called Kayastha, or Kayat, or Kayasth, who claim origin from a deified mortal called Chatrgoputr, also many of the Pariah tribes, allow their girls to grow up and remain in their father's house without any feeling of impropriety being associated with the practice.

The *Reddi* of the south of India are divided into 24 clans, who marry in their own clans. They profess to be Vaishnava. As a law, the men marry their sister's daughter, but an aunt does not marry her nephew. Sometimes the bride is a mere child of five or six years old; sometimes the bridegroom's age is no more, while the wife to whom he is married is a full-grown young woman, who, by the time her husband has grown up, has a young family of four or five children. Property descends through the issue of a son and granddaughter, uncle and niece. If a man refuse to marry his own sister's daughter, his father's property descends not to him, but to the man who marries the rejected woman. When a young Reddi woman of sixteen or twenty years of age is married to a boy of five or six years, she lives with some other adult male, perhaps a maternal uncle or cousin, but is not allowed to form a connection with the father's relations; occasionally it may be the boy-husband's father himself, that is, the woman's father-in-law! Should there be children, they are fathered on the boy-husband. When the boy grows up, the wife is either old or past child-bearing, and he in his turn takes up with some other boy's wife in a manner precisely similar to his own case, and begets children for the boy-husband.

The *Komati* or Hindu shopkeepers of Madras, before contracting marriage, send an offering of betel to the Chakili or shoemakers, and in Vizagapatam, Brahmans go through the ceremony of asking the Mala's consent to their marriage.

With the *Maravar* of Ramnad and Sivaganga disparity of ages is not considered, nor is the presence or assent of the bridegroom necessary,—a blade of wood in his absence serving as proxy. Some of their subdivisions do not marry into the father's family; but Hindus in general intermarry with the mother's relations.

The monkey-faced *Kallar* in the south of India are a brave and martial people, with much physical power and endurance. Their habits and customs are entirely aboriginal. Nominally of the Saiva sect, they are mostly devil-worshippers. They have a first and second marriage, like the Maravar of Ramnad. The titular surname of all Kallar is Ambalakaren, and they numbered 155,537 in 1881. Divorce and re-marriage of widows are allowed. Marriage of near relatives is usual. The Western Kallar of Madura are polyandrists. It constantly happens that a woman is the wife of either ten, eight, six, or two husbands, who are held to be fathers jointly and severally of any children that may be born of her body. And when the children grow up they style themselves the children not of ten, eight, or six fathers, as the case may be, but of eight and two, or six and two, or four and two fathers.

The *Palli* race of the Cuddapah districts pledge

their wives as security for loans of money, and if not repaid, the woman is re-married to another man. A case of this bigamy was tried in 1876 at the Session of Cuddapah, and all the parties were fined. The husband had borrowed some money from his mother-in-law, and left his wife with her till he could repay. Having failed to pay within the prescribed period, the wife was re-married to another man. The twice-married wife, her mother, and a third party who was present at the second marriage, were held to be equally punishable as principals, all having been present at the re-marriage.

The *Kaṛakatan Vellalar* of the Madura Hills occupied their present locality before the Vellalar of the plains adopted the customs of the Aryan immigrants. And now, amongst them, when an estate is likely to descend to a female in default of male issue, she is forbidden to marry an adult, but goes through the ceremony of marriage with some male child, or, in some cases, with a portion of her father's dwelling-house, on the understanding that she may receive any man of the caste. Her children inherit the property, which is thus retained in the woman's family, the child-husband being the suppositious father.

The *Khond* are faithful and brave, boundlessly hospitable, and a guest's safety and care are paramount duties. Agriculture and war are deemed the sole honourable avocations. A boy is married in his tenth year to a girl four or five years older than himself. In the middle of the marriage feast, at night, while the dancing goes on, the girl's uncle lifts her on his shoulder, while one of the boy's uncles does the same with the bridegroom. Suddenly the uncles exchange burdens, and the boy's uncle makes off with the bride. In a moment the festivities cease, the kinsmen range themselves into two hostile tribes, the girl's friends trying to recapture the bride, the boy's to cover her flight. The two parties carry the fight to great lengths, and the conflict exhibits an ancient custom of marrying by capture.

The *Yerkal*, *Korawa*, or *Kunchi Kori* are wanderers, of whose original country they themselves retain no knowledge. They are darker than the usual tinge of Hindus around them. In their own communities they style themselves Yerkal, and they give the same appellation to the language in which they hold communication with each other. With the exception of the cow, almost all animals are used by them as food. They worship a goddess called Poler Amma. Polygamy is common; and if a man owe money to his neighbour, he pledges his wife or daughter to his creditor, who may either live with them or transfer them to another person. On the release of the debtor, he reclaims his wife and any children that may have been born in the interval. In N. Arcot, Chingleput, and Tanjore, the Korawa mortgage their unmarried daughters, who become the absolute property of the mortgagee until the debt is discharged. In Madras, the Korawa, when in want of money, sell their wives outright for about 50 rupees. In Nellore, they all purchase their wives at from 30 to 70 rupees, making payment in asses or cattle. Their various clans do not intermarry. They bury their dead. In Travancore there are 56,274 Korawa; and there is a race of this name in Cutch of similar habits.

The *Toda* or Todawar (properly Tuda or Tudavara) live in hamlets or 'mund' on the Neilgherry plateau. They never could have exceeded a few thousand, but they have diminished through opium-eating and polyandria, and, at a former period, the prevalence among them of female infanticide. It is said that no girl has been destroyed since 1819, but their present numbers do not support this. Before marriage, young people associate. After marriage, the Toda wife, or if there be more than one, all the wives, in a family of brothers are common to all the brothers.

According to Colonel Dalton (Tran. Ethn. Soc. vi. p. 25), the Khariah of Central India have no word for marriage in their own language, and the pairing appears to be little more than a sort of public recognition of the fact. The Badaga can scarcely be said to have any marriage ceremony. The Kurumbar tribe of the Neilgherry Hills have no marriage ceremonies; but occasionally, when two have been living together for some time, they will enter into an agreement, in the presence of friends, to remain united for life; and in a family where a succession of such unions has taken place, they will, once in two or three generations, perform a ceremony, and hold a festival in celebration of them. This is done by pouring pots of water over one another, the pairs seating themselves together for this purpose; the ablution commencing with the seniors. They then put on new clothes, and end the day in feasting and merriment.

The *Dhor*, leather-workers of the Dekhan, marry in their own tribe, making the marriage procession on a bullock; they are not entitled to proceed on a horse. The Chamar in Aurangabad worship Mariamma and Sitla. They marry when under age, proceeding on foot to the goddess Sitla, whose shrine they circumambulate five times. The expense is about 100 rupees. Kol girls, till they are married, occupy at night the same house as their fathers and mothers. Boys and young men sleep in the Morang or town hall, and when a man marries, he and his bride leave the paternal roof, and form a separate home. The Kharriah bride and bridegroom, as part of the ceremony, are carried through the dances seated on the hips of two of their companions.

Santal are shy and superstitious. To obviate disputes between them and the lowlanders, the Government, in 1832, erected a boundary line of stone pillars; but they fell into debt, and in 1855 a body of 30,000 men, armed with their bows and arrows, started to walk to Calcutta to lay their grievances before the Governor-General. But they began to plunder, and, when checked, they went into open rebellion, and in putting it down many were slain. A simple form of government was then introduced among them; nevertheless, again, in 1881, a few of them took up arms to resist the census-taking. They dwell in villages of their own, apart from other inhabitants, and each hamlet is governed by a headman, assisted by a deputy and a watchman. The Santal bachelors are under a separate head. The young people select their own partners, and at the marriage ceremony the girl's relatives pound burning charcoal with the household pestle, and extinguish it with water, in token of the breaking up of her former family ties. The dead are burned, and they float three portions of the skull down the Damuda river, the sacred stream of their race.

In *Sumatra* there were formerly three perfectly distinct kinds of marriage,—the Jugur, in which the man purchased the woman; the Ambelanak, in which the woman purchased the man; and the Temando, in which they joined on terms of equality. In marriage by Ambelanak, says Marsden, p. 262, 'the father of a virgin makes choice of some young man for her husband, generally from an inferior family, which renounces all further right to, or interest in him, and he is taken into the house of his father-in-law, who kills a buffalo on the occasion, and receives twenty dollars from his son's relations. After this, the buruk baik'nia (the good and bad of him) is invested in the wife's family. If he murder or rob, they pay the bangun, or the fine. If he be murdered, they receive the bangun. They are liable for any debts he may contract in marriage, those prior to it remaining with his parents. He lives in the family in a state between that of a son and a debtor. He partakes as a son of what the house affords, but has no property in himself. His rice plantation, the produce of his pepper garden, with everything that he can gain or earn, belongs to the family. He is liable to be divorced at their pleasure, and though he has children, must leave all and return naked as he came. The Temando is a regular treaty between the parties on the footing of equality. The adat paid to the girl's friends has usually been twelve dollars.

In *Bali Island* girls are stolen away by their lovers, who sometimes surprise them alone, or overpower them by the way, and carry them off with dishevelled hair and tattered garments to the woods. When brought back from thence, reconciliation is effected with enraged friends by a certain compensation price being paid to her relatives.

In the *Korea*, when a man marries, he mounts on horseback, attended by his friends, and, having ridden about the town, stops at the bride's door, where he is received by her relations, who then carry her to his house, and the ceremony is complete.

Amongst the *Australians*, the bride is carried off by force.

Japanese, of all classes, look upon their wives as upon a faithful servant. A Japanese is never known to beat his wife. It is a custom amongst some Japanese to take a woman a few weeks on trial before deciding upon whether to marry her or not. The Japanese marriage ceremony is very simple. The bride and bridegroom drink wine with each other three times, exchanging cups with each other every time, in the presence of a few select friends, after which the young lady gets her teeth blackened, and she is married for better and for worse. Amongst the Muhammadan women of India, also, the custom is followed of blackening the bride's teeth with missee on marriage; women never use it before their wedding-day, and it is by the black mark in the crevices between the teeth, occasioned by the application of the missee, that a Muhammadan woman can be observed to be married or not. With the same object, Malay women have their front teeth filed down.

Amongst the *Siah-Posh Kafir*, the marriage ceremonies consist merely of procuring two twigs or rods of the respective height of the bride and bridegroom, and tying them together. These are presented to the couple, who preserve them so long as they live together. If desirous to separate, the twigs are broken, and the marriage is dissolved.

With the *Buddhist races* of Tibet and Burma, marriage is readily contracted, and the tie as easily broken. In Burma, marriage and concubinage are regarded as civil contracts, and all breaches are punished by fines; seduction is also punishable by a fine. Girl marriages, as in India, are unknown in Burma, and a Burmese girl is courted and won. The period of the day between eight in the evening and midnight is called courting-time, during which the girls receive five or six bachelor admirers, who act as a check to each other. This courting-time is called Loo-byo-lai-thee-kala in Burmese. A lamp placed in their casement intimates that they are at home. An old bachelor (loo-byo-hoing) or old maid (apyo-hoing) is unknown out of the ascetics of the monasteries. Burmese women wear as a lower garment a gay-coloured cloth, which just wraps the lower part of the body, and opens at every step, disclosing the left thigh.

In *China* marriage is universal, and such a being as an old maid or an old bachelor is unknown. With the Hindus, Muhammadans, and Chinese, parents choose wives for their sons, as was customary with the early Hebrews. (Genesis xxi. 21, xxxviii. 6; and Deuteronomy xxii. 16.) A Chinaman cannot take as a wife a woman who bears the same family or clan name as himself. If he do so, the marriage is null; neither can he marry his cousin on his mother's side, nor his step-daughter, nor his mother's sister. No lady can marry until she is fourteen years of age. Play-actors, policemen, boatmen, and slaves must marry into their own respective classes. The Chinese attach great importance to marriage. It is not considered respectable for a widow to marry again. Where a betrothed girl loses her affianced husband, public opinion regards it as meritorious for her to abstain from marriage. Testimonials are often voted by the people to commemorate such instances of fidelity; and when a widowed betrothed girl chooses to die voluntarily, her memory is held in the highest honour. Nevertheless, women, even as first wives, do not take a high place in families, although as mothers their condition is vastly improved. They are in theory monogamists, but polygamy is common amongst the well-to-do, though rather in the form of concubinage. Nunneries of Buddhists are formed in China, but the inmates are not respected; they are admitted after 16 years of age, and their heads are shaven.

In the marriage ceremony, the Chinese bride and bridegroom, after the worship of the tablets, rise to their feet, and remain standing in silence. One of the female attendants takes two goblets from the table, and, having partially filled them with a mixture of wine and honey, she pours part of the contents from one to the other several times; she then holds one to the mouth of the groom, the other to the mouth of the bride, who sip a little of the wedding wine, and, continuing to face each other, she then changes the goblets, and the bride sips out of the one the groom had used, the groom out of that of the bride, and this completes the marriage.

With the Chinese, the closing act of the ceremony is for a female attendant to present to

the bridegroom a small linen sheet, which he spreads on the nuptial couch, and on the following morning it is presented to his parents. This rite is adhered to in a modified form by the Jews throughout the world. It lingers among some races professing Christianity. About the year 1882, a trial took place before the Court of Assize at Naples, terminating with the condemnation of Vincenzo and Carolina Garguillo, son and mother, the former to hard labour for life, the latter to seclusion for three years. The daughter of Carolina, one of the beauties of Sorrento, was married to a sailor called Guiseppe Esposito. The usage of the lower classes of the country, which efforts have been made in vain to suppress, is for the bridegroom to visit his mother-in-law on the morning following the marriage, and Esposito was reminded of it. The visit was not, however, paid, nor was it after waiting a fortnight. The mother-in-law then becoming furious, complained to her son, urging him to avenge the honour of his sister and of the family. Vincenzo Garguillo thereupon went to his sister's house and waited for the husband, who on his arrival welcomed him, and begged him to stay and dine. The answer was that Vincenzo, drawing a knife and throwing himself on his brother-in-law, stabbed him and laid him dead at his feet. In the Samoan group, the Jewish ceremony customary on such occasions is adhered to.

There are difficulties in the way of the Manchu emperor obtaining a bride. He acknowledges no other king or rank of his own kind, hence there is no prince's daughter who can be asked for his wife. There are princes in China, but they are of the imperial family, and cannot intermarry. He must take his wife from the people, and she must belong to one of the eight banners. In a recent case there were two empresses, the one was called the Eastern Empress and the other the Western. When the selection of a bride had to be made, these two ladies issued orders to all the chiefs who had daughters of the desired age to send them to the palace. But families do not like their daughters to become the wife of an emperor, not even to be his empress. A girl is in a sense lost to the family, for she is kept so secluded in the palace that the relatives seldom or never see her, and it brings the parents and family into a position and prominence which is dangerous in a country like China. So parents allege that they are cripple, or deaf, or blind, and in some cases lameness is imitated, and deformities are artificially produced. To such an extent had this been carried, that orders, it is said, were issued that blind, lame, and deaf were all to be sent to the palace. Somewhere about 600 or 700 girls appeared on the day fixed, and about 50 or 60 young ladies were selected as a result of the first inspection. Their names were taken, and the character and position of their families were inquired into; their horoscopes also would be carefully calculated. After this had been done, another inspection was gone through, and 30 were separated from the batch; these were then kept in the palace, so that their merits and demerits could be more accurately ascertained. After a short stay, the number was reduced to 20, then to 10, and at last became a tie of two; and thus an empress was selected. At the same time four other wives were chosen, and these were to form the commencement of the imperial harem.

Silver and golden wedding days are almost as much observed by the Chinese as by the Germans. On these festivals children present parents with magnificently embroidered banners, which are hung up in the ancestral hall, a large room so appropriated in the house of every wealthy man. In this apartment, besides these tokens of filial affection, are kept boards, on which are painted, in gold on a scarlet ground, the names and titles of the families with which the family has intermarried. When a woman marries, all the boards from her father's ancestral hall are carried in procession before her.

Some *peculiar customs* in various races may be noticed. There is occasionally practised amongst Hindus of the Komati caste, the marriage of the living and the dead, the principals being a living woman and a dead man. In one case the living woman and the dead man had lived together for many long years as man and wife, when, after suffering from a febrile attack for only four short days, the man died. Agreeably to the peculiar custom of their caste, it was imperative, ere the corpse could be removed for interment, that the sacred rites of matrimony should be performed. The sad intelligence was soon communicated to the neighbouring residents, and to a host of friends and acquaintances, and a fluctuating stream of passers-by. A guru or priest being summoned, and the necessary preparations for the celebration of the nuptials being hurriedly completed, the ceremony commenced. The inanimate form was placed against the outer wall of the verandah of the house in a sitting posture, attired like a bridegroom, and the face and hands besmeared with turmeric. The woman also was clothed like a bride, and adorned with the usual tinsel ornament over the face, which, as well as the arms and the drapery, was daubed over with yellow. She sat opposite the dead, now addressing it with light and unmeaning words,—as is customarily done upon such occasions,—and then chewing bits of dry cocoanut, and squirting it on the face. And thus the ceremony continued for three or four hours. At length, as the sun was nearing the horizon, the nuptial ceremony was brought to a close, and the preparation for the interment commenced. The head was divested of its bridal attire, then bathed, and finally laid upon a bier, and covered with a cloth of silk. The face was next rubbed over with some red powder, and in the mouth were placed some betel leaves. The widowed bride then looked her last at the shrouded form of him whom never more she would behold, when, amid agonizing shrieks and deafening tom-tomming, the bier was lifted up, and the funeral cortege proceeded in the direction of Sion; one man preceded the corpse, throwing at intervals a handful of pie to the right and left, which were eagerly picked up.

A Hindu mother-in-law is not permitted to appear before her son-in-law; to do so would be deemed scandalous.

In China, Borneo, and the Fiji Islands, a father-in-law after his son's marriage never again visits his daughter-in-law, and if they chance to meet, he hides himself. In Australia, a man must not pronounce the name of his father-in-law, mother-in-law, or son-in-law. The Muhammadans of

Western Asia indicate their wives as the mothers of their sons. No Hindu or Malay woman can be induced to pronounce her husband's name.

The Aleutian islander, says Mr. Farrer, quoting Dall, knows nothing of what civilised nations call modesty, yet he blushes when he is obliged to speak to his wife, or to ask her for anything in the presence of others. Custom compels them to assume the attitude of perfect strangers. The Hottentot woman may never enter her husband's room in the hut, and the husband, as among the Spartans, must never be seen in the neighbourhood of the wife. Among the Yoruba, an African tribe, a woman is forbidden to speak to her husband, and may not even see him if it can possibly be avoided. Apparently a similar custom existed among the early Sanskrit-speaking peoples, for the wife, in the famous story of Urvasi and Pururavas, says to her lord, 'Never let me see thee without thy royal garments, for such is the manner of women.' And when this rule is accidentally broken, Urvasi must softly and suddenly vanish away.

A Circassian bridegroom must not see his wife nor live with her without the greatest mystery; and Fiji islanders display the utmost distress of mind when adventurous missionaries suggest that there is no real harm in a man's living under the same roof with his wife. The young Kaneka bolts with a wild scream into the bush if you even mention the name of his sister; while in Fiji not only brothers and sisters, but first cousins of opposite sexes, may neither eat together nor speak to each other.

Among *Muhammadans* there is only one legal ceremony, the Nikkah, by the kazi or his deputy, but there are several deviations from it. In Persia and India their Nikkah ceremony is with rejoicings or Shadi, if the bride be a spinster and of equal rank with the bridegroom; their Mutai marriage is for a limited time in consideration of a present, and the Nikkah-i-Muwakkat is a temporary marriage. According to the Sunni ruling, the offspring of the Mutai and the Nikkah-i-Muwakkat are illegitimate. The Sunni say a usufructuary marriage, *i.e.* where a man says to a woman, 'I will take the use of you for such a time for so much,' is void; so also is a temporary marriage (*e.g.* a marriage for ten days), whether for a short or for a long time; but it is one of the points on which the Shiahs differ from them. A verse of the Koran has been interpreted by the Shiahs as warranting such a temporary marriage; the Sunnis have come to a different and certainly a more moral interpretation. Kings and great men have occasionally availed themselves of the diverse views of the different schools to obtain legal sanction for irregular practices. A king of Beder in the 15th century is described as complaining to his Sunni lawyers of being limited to four wives, and desired to know how he might marry more. They pointed out that, although he could have only four at a time, he might divorce one wife and marry another as often as he pleased. This was not what he wanted; so he addressed himself to a learned Shiah, who was present at his court. From him he obtained the opinion that a Mutai or temporary marriage was legal, and had been practised in the time of the prophet. Marriage carries with it rights of inheritance, and the dower settled upon the wife may, and often does, interfere with the rights of the ordinary heirs. Dower is held to be the price promised or paid by the husband for possession of the wife's person. If unpaid, it is a debt on the husband's estate. It takes precedence of all claims by inheritance, and descends by inheritance to the wife's heirs. The amount of dower is entirely arbitrary, and varies according to the position in life, and the youth, beauty, and accomplishments of the bride. It is settled by the relatives of the contracting parties; but if a marriage has been agreed upon and the amount of dower is disputed, the magistrate has authority to determine the just amount. Divorce under the Muhammadan law may be effected at the mere will of the husband; but a man cannot repudiate his wife without paying her dower; so it frequently happens that a very ardent lover, or one willing to divest himself of the power of divorce, will agree to an amount of dower which it is quite impossible for him to discharge. From this there is no escape but payment, or remission on the part of the wife. A free man may not have more than four wives at the same time; a slave may not have more than two. There is a long and well-defined table of Prohibited Degrees, and this includes not only relations by blood, but, generally speaking, those also who stand in the same relation by fosterage. Free persons cannot marry their own slaves, because parents have by law an equal right in their offspring, and this right is incompatible with the position of owner and slave.

The marriage of Hindu women by Muhammadan emperors commenced with the father of Firoz Shah, whose mother Naila was the daughter of raja Malla Bhatti. Howell states that when the Hindu rajas submitted to Timur, it was stipulated that the emperor should marry a daughter of Jet Singh's house, and that the head of the house should be governor of Bengal.

About A.D. 1306, Kaula Devi, wife of the raja of Gujerat, had been captured in Baglana during her husband's flight, and was carried to Ala-ud-Din's haram. She had great influence over him, and induced him to make efforts to capture her daughter Dewala Devi. This was accomplished, and her beauty made such an impression on the king's eldest son, Khizr Khan, that he soon after married her. Their loves are the subject of a celebrated Persian poem by Amir Khusru.

Jodh Bai, daughter of Bahāra Mal, raja of Amber (now Jeypore), was the emperor Akbar's wife, and she was the mother of Salim, who became the emperor Jahangir. The marriage of Salim with the daughter of raja Bhagwan Doss, son of Bahāra Mal, was performed according to Hindu form at the raja's house, and in the presence of Akbar. Other Muhammadan emperors had Hindu wives, but no Hindu was permitted to marry a Muhammadan girl. Jahangir said, 'Marrying a Hindwani is not so bad, but to give one's daughter to a Hindu! Lord protect us against the machinations of the evil one!' The practice of the Muhammadan emperors marrying Hindu women was a matter of policy, calculated to preserve a good understanding.

In Egypt, girls are prepared for marriage with a very great deal of ceremony. There are tire-women who make the beautifying of brides their special profession. On the wedding morning the bride is dressed in her bridal robes; her hair is

plaited with the Grecian plait, small pieces of gold-leaf are stuck on her forehead and on her breast; care is taken not to conceal any of the stars or spots tattooed on her face and chest in infancy; a line of blue dots encircling the lips is sometimes seen, and a spot on the chin is very common. A little rouge is added to heighten the colour of the cheeks where necessary.

In British India, the descendants of all the Musalman races—Arab, Iranian, Turanian, Mongol, and Hindu converts—intermarry. Rarely a Christian man and a Muhammadan woman.

The Koran of the Muhammadans enjoins the strictest seclusion of women. They are prohibited from appearing unveiled before any but very near relations, children, or eunuchs. But elderly women of the poorer classes, married or widows, appear abroad, do all the marketing and other out-of-door domestic work, and without veils of any kind. This practice of seclusion is followed also by the Rajputs of rank and the Namburi Brahmans. But with the mass of the Hindu people, the women attend to all ordinary in-door and out-of-door duties, drawing water at the well, obtaining the daily bazar supplies, and the women of the agricultural and gardening and labouring races of the Aryans and non-Aryans share their husband's toils.

Erroneous physiological notions of the races in Central Asia and China lead some husbands to marry more than one wife, or to have haram or slave women in their homes, and it is this which keeps up slavery there. The Muhammadan haram custom is given in the rule for the Jews, Judges v. 28-30; Deuteronomy xxi. 10-13: 'When thou goest forth to war against thine enemies, and the Lord thy God hath delivered them into thine hands, and thou hast taken them captive, and seest among the captives a beautiful woman, and hast a desire unto her, that thou wouldest have her to thy wife; then thou shalt bring her home to thine house; and she shall shave her head, and pare her nails; and she shall put the raiment of her captivity from off her, and shall remain in thine house, and bewail her father and her mother a full month: and after that thou shalt go in unto her, and be her husband, and she shall be thy wife.'

In British India, the rule which Europeans affects the European community is the resolution of the Governor-General in Council, dated the 8th October 1852, which prescribes that certificates of marriage should be transmitted to England in every case when either party to the marriage is what is commonly called a British subject, or the legitimate offspring of such a person; and in other cases, whenever either party to the marriage desires it to be so transmitted. Subjects of foreign European states were provided for in 1854, when returns of births, deaths, and marriages of European Christians, of all denominations, throughout British India, were prescribed by the Governor-General in Council. Every marriage between British people, or in which one of the contracting parties is of legitimate extraction from English parents, has become capable of proof by simply referring to the Registrar-General in London.

In the old Roman forms of marriage, confarreatio was the most sacred, and the bride and bridegroom were joined together by the Pontifex Maximus in a set form of words, in the presence of at least ten witnesses, the contracting parties having to partake of a cake made of salt, water, and flour, called far. Of that panis farreus, the wedding cake of the British is the relic, and their bridesmaids and groomsmen have their origin in the ten witnesses. Amongst the Romans, special honour was given to the children of such marriages, and from amongst them were chosen the flamens of Jupiter and the vestal virgins.

The bride's cake which so invariably accompanies an English wedding, and which should always be cut by the bride, may be traced back to the old Roman form of marriage by confarreatio or eating together. The Fiji islanders have a very similar custom. The act of eating together is, amongst the Burmese, the ceremony of union. Among the Tiperah race of the hill tribes of Chittagong, the bride prepares some drink, sits on her lover's knee, drinks half and gives him the other half; they afterwards crook together their fingers. But marriage amongst the Romans was of three kinds,—the confarreatio, which was accompanied with the most awful religious rites, was practically indissoluble, and was jealously restricted to patricians; the Coemptio, which was purely civil, and which derived its name from a symbolical sale, and which, like the confarreatio, gave the husband complete authority over the person and property of his wife; and the Usus, which was effected by a simple declaration of a determination to cohabit. The Usus became general in the Roman empire, and in it the married woman remained in her father's house and under his guardianship. Her dowry passed into the husband's hands, but, with that exception, she held her property in her own right; she inherited her share of her father's wealth, and she retained it altogether independent of her husband; —and thus a very considerable portion of Roman wealth passed into the uncontrolled possession of women. During the ascetic stage of morals in Europe, many Romans and Christians regarded a second marriage as improper.—*American Expedition; Bowring's Ethnol. of India; Burton's Scinde, Mecca, and City of the Saints; Major Bushby in Berar Gazetteer; Balfour on Tribes, in Jameson's Ed. MARRI AI, literally the death-mother, the goddess worshipped by the Beldar race of Berar.

MARROW, Vegetable. Cucurbita ovifera, one of the most nourishing and wholesome of the gourds.

MARRUBIUM VULGARE. *Linn.*

M. hamatum, *H.B.* | M. Germanicum, *Schr.*

Horehound is a plant of Europe and Mid Asia, near Kashmir, on the Chenab, in the Salt Range and Trans-Indus, at elevations varying from 2000 to 7000 feet.—*Dr. J. L. Stewart, M.D.*

MARSDEN, SIR WILLIAM, a medical officer of the E. I. Company, author of History of Sumatra, its Government, Laws, Customs, and Manners; Numismata Orientalia Illustrata, Lond. 1823-25; Bibliotheca Philologica et Orientalis. A Catalogue was printed of the Books and Manuscripts collected by him on the Chronology of the Hindoos, Lond. 1790.

MARSDENIA ROYLII. *Wight.*

Pathor of . . CHENAB. | Tar of . RAVI and SUTLEJ.
Veri of RAVI and SUTLEJ. |

A climbing plant, growing up to 8000 feet in the Outer Himalaya hills and in the Salt Range. Its fibres are made into fishing-lines, and the powdered unripe fruit is given as a cooling medicine.—*Dr. J. L. Stewart.*

MARSDENIA TENACISSIMA. *W. and A.*

Asclepias tenacissima, *Roxb.* | A. tomentosa, *Herb.* | Gymnema tenac., *Spr.*
Tongus, ... HIND. | Chittee, Jeti, . . TAM.

The Rajmahal bowstring creeper grows in the Peninsula of India, in the Rajmahal Hills, Palemau, Nepal, and Chittagong. It has small greenish-yellow flowers; from wounds in it a milk-like juice issues, which hardens into an elastic substance, with properties like caoutchouc, and from the bark, beautifully fine silky fibres are obtained, of which the Rajmahal mountaineers make their bowstrings. These are said to last for five years, though in constant use and exposed to all sorts of weather. In preparing the fibres of this plant, the hill people do not put the stems in water, but let them stand in the sun for a day till drier; from the ends, when cut, there exudes a milky juice, which thickens into an elastic substance, like, indeed forming one kind of, caoutchouc, acting in the same way in removing black-lead marks. The fibres are beautiful, durable, and strong; some twine made with it bearing 248 and 343 lbs. in the dry and wetted states, when hemp twine bore only 158 and 190 lbs. in the same state. The stems are cut into lengths, and then slit down the middle; then dried, and afterwards steeped in water for about an hour or more, when the fine silky filaments are separated. A 1½-inch rope in Calcutta was found to break with 903 lbs., when Europe rope broke with 1293 lbs., and others with greater weights. It stood ninth in strength, but second in elasticity. Mr. Taylor states it might be easily cultivated. —*Journ. Agri-Hortic. Soc.*, 1844, p. 22; *Royle, Fib. Pl.; Roxb.* ii. p. 51; *Voigt*, p. 537.

MARSDENIA TINCTORIA. *R. Brown.*

Asclepias tinctoria, *Roxb.* | Cynanchum tinjeria, *Herb.*
Pergularia tinctoria, *Spr.* | *Ham.*

This creeper grows in both the Peninsulas of India, in Assam, Sylhet, Pegu, Tenasserim, and Sumatra; and Dr. Roxburgh recommended its extensive cultivation. The Burmese obtain from it quite a good indigo blue, though not equal to the dye from the Ruellia.

MARSHALL, THOMAS, a surgeon of the Bombay or Bengal Army, who was Statistical Reporter in the S. Mahratta country. His reports on the parganas of Padshapur, Belgaum, Kalaniddee, Chandgarh, Khanapur, Bagulcot, Badami, and Hoondgoond were printed in Bombay in 1822. He died between the 29th July and 6th September 1821.

MARSH DATE or Ground Rattan is the Calamus rotang or common cane plant. Its leaves are used at Cuddalore for making ropes and mats. Marsh date palm is the Phœnix paludosa.

MARSH MALLOW, Althæa officinalis. A syrup of this is a mucilaginous demulcent; syrups for the same purposes may be prepared of Bombax Malabaricum root, of dried Abelmoschus esculentus capsules, of Asparagus sarmentosus, of Ægle marmalos.—*Beng. Phar.* p. 407.

MARSHMAN, JOSHUA, colleague of Carey and Ward, born in 1768 at Westbury Leigh, the son of a weaver and Baptist minister. He arrived in India in 1799. John Clark Marshman, his eldest son, was born August 1794, accompanied his father to Serampur in 1800, and from 1812, for nearly 20 years, living like his colleagues on £200 a year, conducted an enormous correspondence, and betook himself to secular work, though never abandoning his projects for the evangelization of Bengal. He started a paper mill, founded the first newspaper in Bengali, the Sumachar Durpun; established the first English weekly, the Friend of India, which in his hands speedily became a power; published series of law books, one of which, the Guide to the Civil Law, was for years the civil code of India; and started a Christian colony on a large tract of land purchased in the Sunderbans. All his undertakings except the last succeeded, and the profits and influence acquired through all were devoted in great measure to his favourite idea; that education must in India precede Christianity. While still a struggling business man, he expended £30,000 on building and maintaining a college for the higher education of natives, a college still worked with the greatest success. Knowing Bengali as only skilled native pandits know it, and law like a trained lawyer, he was asked by Government to become Official Translator. The salary was £1000 a year, and for ten years he paid away the whole salary every month in furthering the cause of education, and this in silence so complete that his own family probably only after his death learned the fact for the first time. He wrote the first, and for years the only, History of Bengal, and published a History of India after his return to England in 1852.

MARSIAH. ARAB. An elegy, a dirge, read during the Maharram on the deaths of Ali, Hasan, and Husain.

MARSILEA QUADRIFOLIA. *Linn.*

Soosni-shak, BENG. Ari kiray, ... TAM.
Chuppati ke baji, DUKH. Ara kura, ... TEL.
Godhi (the bulbs), HIND. Mudugu tamara, .
Chittur dulla, . SANSK. Munugu tamava, .

A plant of Europe, N. Africa, India, and Australia. Its bulbs are eaten either raw or

boiled. M. Ægyptiaca, *Willd.*, is found in Egypt and in the Peninsula of India, and M. Coromandeliana, *N. L. Burm.*, in the southern part of the Peninsula of India.—*Voigt; Powell; Ains.*

MARSUPIALS, an order of mammals found only in Australia and America. They bring forth their young in an incomplete state. After their birth, the young become attached to the teats of their mother placed inside a pouch situated beneath the abdomen, and are there retained until sufficiently adult to be able to shift for themselves, as in the opossums and kangaroos.

MARTA, in Malabar, a Pariah aboriginal race who personate demons.

MARTABAN, a province and small town in British Burma. The town is at the junction of the Gwyne and Salwin rivers opposite Moulmein, in lat. 16° 32′ N., and long. 97° 37½′ E. The rise of the tide is 21 feet, the district is occupied by the Mon or Talaing race. The town was taken by the British 30th October 1824, and again on the 2d April 1851. The district is bounded on the west by the Bay of Bengal, and is traversed from south-east to north-east and then north by a range of hills culminating in the Zeng-gyaik peak, 3500 feet above sea-level. Towards the end of the 16th century, Martaban was taken by the king of Siam, who appointed a governor over it and the surrounding country. In Martaban the amount of silver was found to vary in different portions, from about 70 ounces to the ton of the ore; but in a second assay to 300 ounces in the ton, or a little less than 1 per cent. Martaban jars are jars of glazed earthenware. Dulaurier quotes from Father Azar, a Maronite, that Martaban means a casket or vase for keeping medicines and comfits, etc. But the word is used for the great vessels of glazed pottery, called Pegu or Martaban jars from the places where they were purchased, and which retained a wide renown up to the present century.—*Yule, Cathay*, ii. p. 476; *Imp. Gaz.*

MARTEN. The martens of the genus Martes chiefly belong to the northern parts of the world, but three species occur in the south and east of Asia. The Indian marten, Martes flavigula, is found up to 7000 and 8000 feet throughout the whole of the Himalaya, south and east to China and Malayana, and on the Neilgherry Hills and in Ceylon. M. tufœus, *Hodgson*, is found in the villages of Tibet and Ladakh at 11,000 feet, also in Afghanistan, and its skin is sold in the Peshawur bazars. Dr. Adams seems to recognise this as identical with the M. abietum or pine marten of Europe, and he says that the skins of the pine marten (M. abietum) are imported from Afghanistan and sold in the bazars of the city, where also those of the ermine are occasionally observed. M. zibellina, the sable marten, is obtained in Tibet.—*Adams; Jerdon's Mammalia*, pp. 81, 82.

MARTIN. Sir James Ranald Martin, a medical officer of the Bengal army, author of Brief Topographical and Historical Notice of Calcutta, London 1817; Memoir on the Advantages of the Re-occupation of Negrais Island, in Bl. As. Trans., 1834; Johnston and Martin on Tropical Climates.

MARTIN, MONTGOMERY, wrote on the History, Antiquities, Topography, and Statistics of Eastern India, London 1838, 3 vols.

MARTIN. This name is given to several genera of birds, the genus Cotyle or sand martins, of which C. riparia, C. subsoccata, C. Sinensis, and C. concolor, also Chelidon urbica, C. Cashmiriensis, and C. Nepalensis, occur in India. Dr. Adams thinks that the common house martin of the Neilgherries and Southern India is identical with Chelidon urbica of Europe. On the Lower Himalayas and Kashmir ranges, a bird appears in spring, very closely allied to the above. Gould named it the Chelidon Cashmiriensis. This martin migrates to the Panjab during winter.

MARTINE, MAJOR-GENERAL CLAUDE, was a private soldier from France, who rose to the rank of General in Oudh. He founded the Martinière. The sum he set apart for endowing the noble charity called La Martinière, was 3½ lakhs of Sicca rupees; but by the interest up to October 1832, this had increased to 9,62,825 Sicca rupees, or nearly £100,000 sterling. Sir Edward Ryan, Chief Justice of Calcutta, drew up a decree on the 22d October 1832, regulating its internal economy, and the building was completed on the 31st December 1835, and opened for the reception of the wards on the 1st March 1836. It provides for fifty Christian children, irrespective of sect, on the foundation, and educates boarders, day boarders or day scholars. His house and tomb are at Castalia, about three miles from Lucknow. He died A.D. 1800.

MARTYN, HENRY, a missionary clergyman of the Protestant sect, who laboured in India and then proceeded to Persia, where he died. His zeal was beyond the strength of a naturally delicate constitution, and he expired at Tokat on the 16th October 1812. He had been Senior Wrangler at Cambridge in 1801. From Shiraz to Isfahan, from Isfahan to Teheran, from Teheran to Tokat, he struggled onwards, hoping to reach his home.—*Porter's Travels*, ii. p. 703; *Kaye's Christianity.*

MARTYR, in Arabic shahid; this term is applied by Muhammadans to the professors of Islam who fall in battle in a religious war. Twenty descriptions of persons become so.

MARU, SANSK. from Mri, to kill. Maru is also a contracted form of Marusthala, a dry, sandy, sterile tract, a desert. Maru-des or Marusthala, a desert country, is applied to the sandy tracts between Rajputana and the Indus.—*W.*

MARULA MATANGI, or Tal Noppi, or Marulu Jada Chettu; Xanthium orientale, *L.* The prickly involucre is applied to the ear to cure headache.

MARUMAKKAL. In Travancore the law by which property descends to heirs of the body is called Makkatayam, or 'children's inheritance.' That law by which the nephews of Nairs are their heirs is called Marumakkatayam; the term Marumakkal being used for nephews, or sometimes for sons-in-law, from Maru, to dwell, or fondle,—those who reside with one, and are affectionately treated as one's own children.

MARUMAKKATAYAM. MALEAL. The law of succession by sisters' sons, in the female line, observed in Malabar by the Nair race, by some of the Brahman and Mapilla families, and some of the servile tribes there.—*W.*

MARUT and Harut, according to the Koran, two angels who visited Babylon. When the angels in heaven expressed surprise at the wickedness of the sons of Adam; God let them select two of themselves to be sent down to earth. Marut and Harut were chosen, and they exercised their office with integrity, until Zohrah, the planet Venus,

descended in the shape of a woman, who enticed them to love her, and then flew to heaven. She was followed by Marut and Harut, but Ridwan, the guardian of paradise, refused them admission. As a punishment, they were confined at Babylon until the day of judgment.

MARUT, in the mythology of the Hindus, a personification of the wind. The Marut deities are the forty-nine winds personified. In the Vishnu Purana they are described as the children of Diti by Kasyapa, or rather as the child divided by Indra into forty-nine portions, and afterwards addressed by him in the words 'ma rodih,' weed not, whence the name Marud. The Marut hold the first place amongst the inferior deities. Marut is one of the most prolific roots in Aryan speech. This root is mar or mal, to crush or pound, and hence either to destroy or to soften, and by softening sometimes to sweeten. The Maruts are therefore emphatically the crushing, grinding, or pounding storm-winds, who overturn everything in their path, and set forests on fire by the friction of boughs. The Greeks also had their grinders and pounders in the Moliones and the Aloadai, as they had both Aleuron and Maleuron as words for ground corn; while another crusher, Ares, reappears in the Latin Mars and in the Teutonic Thor Miolnir.—*Williams' Story of Nala*, p. 237; *Vishnu Purana*, p. 151.

MARUTHA, in Travancore, the spirit, shade, or ghost of a woman who has died of fever; they are buried inside the house, mantrams being said over them to hinder their attacking the survivors. The graves of virgins dying young are used as places for worship, some tree, such as pala (Alstonia scholaris), being planted over the grave, and a lamp kept burning. Pregnant women dying are supposed to become demons, and are therefore taken for burial to some distant and lonely jungle, and mantrams repeated over the grave to prevent their spirits from returning to injure people.—*Mateer.*

MARVES, a race in the Neilgherry Hills, known as the Badaga, corruptly Burgher.

MARWAR ranks among the states of Rajputana next in importance to Mewar and Jeypore. Tradition ascribes its foundation to Jodha, a descendant of the Rahtor Rajput kings of Kanouj, who is said to have founded its capital, the city of Jodhpur, about A.D. 1459.

Marwar is bounded on the N.W. and N. by Jeysulmir, Bikanir, and Shekawati; on the E. by Jeypore, Kishengarh, Ajmir, and Mewar; on the S. by Udaipur and Sirohi; and on the W. by the Runn of Cutch and Sind. It lies between lat. 24° 36′ and 27° 42′ N., and long. 70° 6′ and 75° 24′ E., and has an area of 35,672 square miles. Revenue, 17½ lakhs, with a population about 2,850,000. Its capital is Jodhpur, in lat. 26° 19′ N., long. 73° 8′ E., and is a walled city; the buildings within are all of stone, with terraced roofs. The palace is built on an abrupt sandstone ridge, commanding the town.

Marwar is a corruption of Maroo-war, classically Maroost'hali or Mooroost'han, the region of death. It is also called Maroo-desa, whence the Mardes of the early Muhammadan writers. The bards frequently style it Mard'hur, which is synonymous with Maroo-desa, or, when it suits their rhyme, simply Maroo. Though now restricted to the country subject to the Rahtor race, its ancient application comprehended the entire desert, from the Sutlej to the ocean. The sac'-hæ or branches of the Rahtor early spread over the desert. The fabulous genealogy of the Rahtor deduces their origin from the raht or spine of Indra, their nominal father being Yavan-aswa, prince of Pailipur, which they say was somewhere in the north. This indicates their Scythic origin.

The river Looni, rising on the eastern frontier at Poshkur, and pursuing a westerly course, nearly bisects the country, and forms the boundary between the fertile and sterile lands of Maroo.

The districts of Deedwanoh, Nagore, Mairta, Jodhpur, Palli, Sojut, Godwar, Sewanoh, Jhalore, Beenmahal, and Sanchore, are the more fertile and populous, with a population of eighty souls to the square mile. The N.E. portion includes a portion of Nagore, the large towns of Filodi, Pokurn, etc., and may be calculated at thirty; the remaining space to the S.W., as Godadeo-ka-thul or desert of Goga, Sheo, Barmair, Kotra, and Chotun, can scarcely be allowed ten.

The Jat constitute five-eighths, the Rajputs two-eighths of the population, while the remaining classes, Bishnavi, Mena, Bhil, Bhat, Charan, with a few Muhammadans, sacerdotal, commercial, and servile, make up the integral number. The Jat are the industrious class. The Rahtor character stands deservedly high in the scale of the thirty-six royal Rajput tribes, but is debased by the abuse of opium. The Rahtor cavalry was formerly the best in India. At one time there were several horse-fairs, especially those of Bhalotra and Poshkur, where the horses of Cutch and Kattyawar, the jungle, and Multan were brought in great numbers. Valuable horses were also bred on the western frontier, on the Looni, those of Raydurro being in high estimation.

The family gave several daughters in marriage to the imperial family of Dehli, and furnished some distinguished generals to the imperial army.

By the 8th Article of the Treaty of 1818 with Maun Singh, the Jodhpur State was bound to furnish a contingent of 1500 horse. Under this article a demand was made in 1832 for a force to co-operate against freebooters who occupied Nuggur Parkar. The contingent proved perfectly useless, and in 1835 the obligation to furnish the contingent was commuted to an annual payment of Rs. 1,15,000 towards the Jodhpur Legion, which was then raised. This legion mutinied in 1857. Maharaja Takht Singh did good service during the mutinies, received the right of adoption, and is entitled to a salute of seventeen guns. The troops kept up by the state do not exceed 6000 men. The Political Agent is also President of the Marwar Interjurisdictional Court of Vakeels, which decides all border disputes arising between Bikanir, Jeysulmir, Kishengarh, Sirohi, Pahlunpore, and Jodhpur. The court is composed of vakeels from these states and from Udaipur, Jeypore, and Seekur. It meets once a year at Ajmir, Balmir, Nagore, and Mount Abu. At the commencement of 1869 the Political Superintendent of Sirohi discovered that both in that state and in Marwar the practice of Samadh, or burying alive, prevailed to a considerable extent, though confined almost entirely to persons in the last stage of leprosy, by whom it was practised to put an end to their sufferings. As it was thought probable that in some cases priestly influence, and in others the desire of the

other members of the family to rid themselves of the presence of a nuisance, might have induced the self-sacrifice, the Political Agent considered it advisable to bring to the notice of the darbar of His Highness the Rao of Sirohi, that Government regarded the commission of a Samadh in the same light as a sati, and that they would expect His Highness to use his best endeavours to put a stop to it. It was also notified that in case of his not doing so, he would incur the displeasure of Government, and the number of guns with which he was saluted would be reduced. His Highness at once issued a proclamation declaring that Samadh was forbidden, and that any one assisting at any case in future would be liable to imprisonment extending to ten years; that the jaghirdar on whose estate it took place would be liable to the same punishment and the forfeiture of his estate; and any raj official, through whose culpable neglect a case might occur, would also incur the same liability. The maharaja of Marwar was also addressed on the same subject, although the Political Agent of that province could not hear of any cases having occurred.—*Treaties, Engagements, and Sunnuds*, iv. pp. 41-45; *Tod's Rajasthan*, ii. pp. 9, 162-64.

MARWARI, from Marwar, a country in Rajputana. In India, generally applied to a Rajput engaged in banking or trade. There are, however, various financing tribes, Saukar, Sarraff or Shroff, as the Marwari, the Bhatya, the Vaisya Komati, the Modi grain-seller, and the Banya. The Marwari arrange themselves into twelve tribes. The Mestri, the Urwar, Bijabargi, Kandalwal, and Porwal are of the Vaishnava sect of Hindus; the Agarwala are partly Vaishnava and partly Jain; but the Sarogi and the Oswal are wholly Jain, and it is from amongst the Ossi tribes of Oswal that the Jain priests of Abu are chosen. These Jaina never use animal food, their offerings are fruits and sugar; and the Oswal and Sarogi never eat the prasadh or meat offered to the idols. Marwari are less frequently of the Saiva sect. The Marwari mercantile men and bankers hold almost exclusively the entire banking business of India, and regulate the exchange operations of almost all the nations of India. The Oswal is the richest and most numerous of the eighty-four mercantile tribes of India, and is said to amount to 100,000 families. They are called Oswal from their first settlement, the town of Ossi. They are all of pure Rajput birth, of no single tribe, but chiefly Pura, Solanki, and Bhatti. Many profess the Jain tenets, and the pontiffs of that faith must be selected from the youth of Ossi. These wealthy bankers and merchants, scattered throughout India, are all known under the denomination of Marwari, which means belonging to Maru or Marust'han, 'the desert. It is singular, Colonel Tod adds (Rajasthan, ii. p. 234), that the wealth of India should centre in this region of comparative sterility. The Marwari is essentially following similar mercantile pursuits to the Vaisya Komati of Peninsular India, and those of the Wani or Bani or Banya, viz. banker and merchant, to which, however, the Komati add that of retail shopkeeping. If a Marwari be asked as to his caste, he replies that he is a Mahajan, a Banya, a Bais or Vais, meaning that his profession is that of the commercial people. But, on further questioning, he explains that the Marweri is a Rajput, that there are twelve great tribes, of whom are the Oswa, Messar, Agarwala, Bijabargi, Sarogi, Neddatwar, Parwar, and five others. These all subdivide into numerous kap or clans; in the Messar tribe alone are seventy-two, amongst whom are the Rathi and Dhaga. All the Marwari of Rajputana adhere to the principle of reckoning their descent from a founder, and in their marriage ceremonies they abstain from blood relationship, never marrying into their own gotra. Their widows never re-marry. The mercantile tribes of Western India, of Rajput origin, sank the name and profession of arms when they became proselytes to Jainism, in the reign of Raja Bheem Pramar. The Chittur inscription of this prince (he was ancestor of Raja Maun, whose date, S. 770, A.D. 714) allows us to place this grand conversion prior to A.D. 650. The Banya or Komati merchants and bankers are generally of the Vaishnava sect of Hindus, though some of them worship Siva. They are most numerous in Telingana and in Madras. In the north and east of Dekhan proper there is not one of them in twenty villages, their places there being taken by the Marwari race. There are, however, many in Punderpur and Sholapur. Those of the Komati who die unmarried are buried, all others are burned, whether belonging to the Saiva or Vaishnava sects. Their language in their families is Telugu, and it is spoken by them as far as Bombay. But, as the west is approached, Mahrati becomes mixed with it. Komati Banya are essentially shopkeepers, sellers of dry grains, doing a little in mercantile business, and cultivate, but do not hold the plough. They are mostly dark men, of short stature. In their marriages the bridegroom may or may not be before or after puberty, but girls are under age, and the ceremonial is performed at the house by a Brahman. The death srad'ha rituals are conducted by Brahmans. Their Janawi or zonar is put on and the mantra taught when married. The Wani of the western coast will only marry with the Komati Banya. They are in considerable numbers in the northern part of Hyderabad, adjoining Berar.—*Tod's Rajasthan*, ii. pp. 134, 234.

MARWAT and Bannu are on the same plain. The people of Marwat are larger in stature than those of Bannu, and are usually clad in coarse white linen, like the Afghan on the banks of the river Indus.

MARWAT. HIND. A pensionary provision in land for the heirs of one who has been killed in battle.

MARY, the mother of Jesus, the Messiah. The Koran says, 'O thou mother of Jesus and sister of Aaron,' thus confusing the two. The Ansariah hold that the planet Venus or Zuhra, Isis of the Egyptians, Mary the sister of Moses, Mary the mother of Jesus, and Fatima-uz-Zuhra the daughter of Mahomed (their goddess), is the same person; the Minerva of Athens, Cybele of the Phrygians, the Ceres of Eleuses, the Proserpine of Sicily, the Diana of Crete, and Bellona of the Romans, the same and identical deity.—*Catafago*.

MARYUL, or Lowland, from Mar, TIB., low, and Yul, land, the non-Chinese portions of the Bhot territories. These are arranged by Colonel Strachey as—(1) that of Bulti, which is the Muhammadan name, and includes Hasora, Rongdo or Rongyul, Shigar, Skardo or Bulti proper, Parkuta, Tolti, Khartaksho, Kiris, Khaypalu, and Chorbat;

and (2) the Buddhist Ladakh, in which we have Spiti, Zangskar, Purik, Suru, Hembaks (Dras), Ladakh Proper or Leh, Nubra, Janksti, Rong, Rupshu, and Hanle. In this list of Colonel Strachey, Lahul, Hungrung, and Kanawar are omitted as Indian; whilst Hasora is treated as Bhot.—*Latham, Ethnology.*

MASAH. ARAB., HEB. Anointing, a form of installation practised in Europe, but which seems to have been of eastern origin. Masih of the Arabs forms the Hebrew Messiah, meaning the anointed one. In Rajputana, anointing appears to have been in all ages the mode of installation. The unguent on this occasion is of sandal-wood and atar of roses made into a paste or very thick ointment, of which a little is placed upon the forehead with the middle finger of the right hand, and then the jewels, the aigrette, and necklace are tied on. Amongst the earliest notices of this ceremonial is that in Genesis xxviii., when Jacob rose up early in the morning, and took the stone that he had put for his pillow, and set it up for a pillar, and poured oil upon the top of it. The Brahmans and Hindus anoint their stone images with oil before bathing, and some anoint them with sweet-scented oil. This practice probably arises out of the customs of the Hindus, and is not necessarily to be referred to their idolatry. Anointing persons as an act of homage has been transferred to their idols. There are resemblances betwixt the Jewish and Hindu methods of, and times for, anointing. Oil is applied to the crown of the head till it reaches all the limbs; it is called abhyanga, which is noticed in Psalm cxxxiii. 2, 'It is like the precious ointment upon the head, that went down to the skirts of his garment.' Again, we are told in Mark xiv. 3 that there came a woman, having an alabaster box of ointment of spikenard, very precious; and she brake the box, and poured it on his head; and pouring sweet-scented oil on the head is common amongst the Hindus. At the close of the festival in honour of Durga, the Hindu races worship the unmarried daughters of Brahmans, and amongst other ceremonies pour sweet-scented oil on their heads. Amongst the Hindus the ceremonial is attended to after sickness, which in Psalm xlv. 7 is mentioned thus: 'Thy God hath anointed thee with the oil of gladness.' And Hindus, when fasting, or in sickness or sorrow, abstain from the daily anointing of the body with oil, and again anoint on recovery, as in 2 Samuel xii. 20, where 'David arose from the earth, and washed, and anointed himself, and changed his apparel, and came into the house of the Lord, and worshipped.' Bathing, anointing the body with oil, and changing the apparel, are, among the Hindus, the first outward signs of coming out of a state of mourning or sickness.—*Ward, Hindoos; Tod's Rajasthan*, ii. 568.

MASAILMA and El Aswad, in Muhammadan history called the liars, lived in A.D. 632, in the time of Mahomed. The first was of the tribe of Hanifa, of the Yemama province, and a man of consideration. He at first embraced Muhammadanism, and then for a time set up as a prophet on his own account as a rival to Mahomed, and near the close of the latter's career. He afterwards was slain at Akraba, in a battle near Yemama with Khalid-ibn-Walid, whom Abubakr, Mahomed's successor, sent against him. He fell by the hands of a Negro slave named Wahsha, and with the same weapon that had despatched Hamza, the uncle of Mahomed.

MASALA. HIND. Properly spices or compounds of spices, also used to mean any compound or substance used in any manufacture or operation.

MASAN. HIND. A place of cremation, a cemetery. Sanskrit, Samasan; and Uriya, Masanihura.

MASCARENHAS. George Mascarenhas accompanied Fernao Peres de Andrade in 1517 to China ports, and paved the way to commercial intercourse with that nation.

MASHA. HIND. A weight in India varying from 14·687 to 18·5 grains troy, the average being 15½ grains. The rupee of Akbar, which was based upon that of Sher Shah, weighed 11½ mashas. The masha or masa is a goldsmith's weight. It is reckoned as 5, 8, or 10 rati or seeds of the Abrus precatorius, which usually weigh about 2 grains troy. As an elementary weight, it was the basis of the weight of the current silver coin of India. It is the 12th part of a tola.

MAS'HAB. ARAB. Also call Mahgin, a light, crooked stick about two feet and a half long, used in Arabia for guiding camels. The mas'hab is of almond, generally brought from Syria. At the thick end is a kind of crook, formed by cutting off a bit of larger branch from which the stick grows. This crook is afterwards cut into the shape useful to seize a camel's nose-ring, or a horse's bridle. Arabs of all degrees are fond of carrying these sticks.

MASHAD, the capital of Khorasan, is in lat. 36° 17′ 40″ N., and long. 52° 35′ 29″ E., 472 miles from Teheran. It is a place of pilgrimage from possessing the shrine of Imam Raza, from which it is a place of sanctuary (Bast) even for murderers, and some stay there for years. The mosque and its minarets are very fine. The population has been estimated at from 45,000 to 100,000. The Muhammadans bring their dead from great distances to be interred at this holy place. There are 100 families of Jews engaged in petty traffic. The manufactures are shawls, velvets, steel for weapons, silks.—*MacGregor*, iv. p. 311.

MASHAD ALI, a town of Turkish Arabia, 39 miles from the ruins of Babylon. Ali, son-in-law and cousin of Mahomed, is buried here. It was taken by the Saracens in the 7th century. This city, according to Kinneir, was founded by Alexander the Great, and was for a considerable time called Alexandria. It is 30 miles from Hillah, and 4 from Kufa, a town founded by the khalif Umar.

Mashad Husain or Kerbela is situated a short distance from the west bank of the Euphrates, and not very far from Hillah, the supposed site of Babylon. It is 16 farsang westward from Baghdad, is a place of pilgrimage to Shiah Muhammadans, and is surrounded by gardens and groves of palm trees, which are watered by a canal from the river. The chief object of interest is the mosque, built in the reign of Shah Abbas the Great, on the spot where Husain, son of Ali, was murdered. It is a sacred place of pilgrimage and burial to the Persians who are Shiah Muhammadans. Kerbela fell into the power of the Turks when Sultan Murad IV. took Baghdad, A.D. 1636. The Persians frequently send their dead to be buried at Kerbela from the interior of the country. On leaving Kerbela one

traveller met nine mules laden with coffins, and while at Baghdad he often saw others passing to their last resting-place, near the honoured remains of the grandson of the prophet. The revenue arising to the hierarchy of Kerbela from the drains on the purses of its visitors, are enormous, and must more than sufficiently pay for all the expenses of the state. The city is large, and crowded with inhabitants, being respected as a bast or place of refuge. In India, Kerbela is the name given to a plain near a sea, river, or tank, whither the Muhammadans at the close of the Maharram festival annually carry their tabut.—*Herklots; Porter's Travels*, ii. p. 281; *Mignan's Tr.* p. 112; *Catafago.*

MASHAIKH, amongst Muhammadans, elders, holy persons, heads of religion.

MASHAJU, HIND., properly Mushajjar, flowered, applied to silk and satin, also to damask table-linen.

MASHAK. ARAB. A leather bucket; leathern bag for carrying water, used by travellers all over the east.

MASHAL. ARAB., HIND. A lamp, a torch. Mashal-chi, a torch-bearer, a lamp-lighter.

MASHALI. ARAB. At Mecca, in most Arab families, male children, when 40 days old, are taken to the Kaba, prayed over, and taken back to their homes, where the barber draws with a razor three parallel gashes down the fleshy portion of each cheek, from the exterior angles of the eyes almost to the corners of the mouth. The cicatrices are called mashali.

MASHOBRA, near Simla. An annual fair is held here, at which women are sold.

MASHRABIYAH. ARAB. A projecting latticed window, made of wood richly carved. Cairo was once famous for these, but they are growing out of fashion with young Egypt, disappearing before glass and green blinds. Lane says Moshan, or more commonly Mashrabiyah, are windows of the upper apartments, generally projecting a foot and a half or more, and are mostly formed of turned wooden lattice-work, which shut out the light and sun, while they admit the air.—*Burton's Mecca*, i. p. 51.

MASHRU, a mixed fabric of silk and cotton; striped satin, partly made of silk and partly cotton. Mashru badshahi and Mashru solchi are kinds of satin.

MASJID. ARAB. A mosque, the sanctuary of the Muhammadans for public prayer. From masjid is derived the word mesque, changed by the Egyptian Arabs, who pronounce the letter j as a hard g, so that jab'l, a mountain, jam'l, a camel, and masjid, a mosque, become gab'l, gam'l, masgid. Outside Egypt, as for instance at Aleppo, jam'l becomes softened into jimmael; and masjid into misjeide.—*Burton's Mecca*, i. p. 141.

MASKARAT or Masakkarat. ARAB. A collective name for intoxicating drugs on which excise is laid,—opium, bhang, charras.

MASKAT, the capital of Oman, in lat. 23° 38' N., and long. 58° 35' 50" E. Including the adjacent villages, it has about 60,000 inhabitants. Until the demise of Syud Said, the Oman territories and African districts of Zanzibar were under one dominion. On that event one son took the Oman principality, the other son took Zanzibar. Maskat is built on a slope, rising with a gradual ascent from the sea, where the water nearly washes the bases of the houses. The inhabitants are descendants of Arabs, Persians, Indians, Syrians, by the way of Baghdad and Basarah, Kurds, Afghans, Baluchis, etc. The Persians at Maskat are mostly merchants, who deal in Indian piece-goods, coffee, hookahs or kaleans, and rose-water. Others, from Bandar-Abbas, Lar, and Menon, manufacture swords and matchlocks, for which there is a great demand in the interior. Banyas constitute a body of the principal merchants. There are a few Jews, who mostly arrived there in 1828, being driven from Baghdad by the cruelties and extortions of Daoud Pacha, when nearly the whole of this race were compelled to fly. Some took refuge in Persia, while others, in their passage towards India, remained here. The same toleration exercised towards all other persuasions is extended to the Beni Israel, no badge or mark, as in Egypt or Syria, being insisted on. When Wellsted wrote, early in the 19th century, about 4000 slaves, of both sexes and all ages, were disposed of annually. The Towayli, from the Zanzibar coast, formed one class. They were known by having their teeth filed, sometimes to a point, and sometimes in notches like those of a saw, also with some perpendicular incisions on either cheek, made with a penknife when the children are five or six years of age, and the scars which remain denote the tribe to which they belong. The price of a Towayli was from 40 to 60 dollars. The Nabi, another race from the interior of Africa, were said to be vindictive and treacherous. The Bedowi here, as in the Hejaz, were the only purchasers. The Galla brought from Abyssinia were highly valued. They fetched from 100 to 150 dollars, the price of the women being about the same as that of the males; and strength, health, and good temper in the latter were considered as a set-off against the comeliness of the former. They brought eunuchs occasionally from Darfur, who fetched from 200 to 300 dollars, and were mostly purchased by the Persians.—*Findlay; Wellsted*, i. pp. 13–388.

MASNAD. ARAB., PERS. The throne of Muhammadan rulers; the embroidered carpet on which dignitaries sit.

MASNAVI. ARAB. A form of poetry where the second line of every distich rhymes with the same letter.

MASNAVI-i-SHARIF, or sacred Masnavi, a book of moral doctrine by Maulana, Jalal-ud-Din Muhammad, Rumi, the founder of the sect to which Europeans give the name of dancing or whirling darveshes, the most important of all the orders of oriental illuminati, and known as the Maulaviah, from the founder. Jalal-ud-Din was descended from Abubakr, father-in-law of the reformer Mahomed, and was himself a grandson of the actual Kharezmian ruler of Balkh. He settled at Iconium, where he founded a college, and enjoyed a wide reputation as a saint, a worker of miracles, and an inspired poet. The peculiar philosophical and religious tenets which he professed are better known under the name of Sufiism, and consist chiefly in the assumption that God is the only actual and real existence, everything else being merely hypothetical; and that man's highest and ultimate aim is reabsorption into the divine principle from which he has sprung. This Masnavi is a complete exposition of Sufi doctrines, illus-

trated with numberless tales, apologues, and scraps of history, and is the work of Jalal-ud-Din himself. Next to the Koran, it is more highly esteemed by the Shiah sect than perhaps any other work. The complete work consists of six books, containing 26,660 couplets, to which some authorities add a seventh book, to make up the number of the seven planets, the seven zones, and the seven heavens. It has been partly translated by Mr. James W. Redhouse. Jalal-ud-Din speaks in the highest terms of his teacher and spiritual guide, Shams-i-Tabriz, whose arrogance and violence led to a tumult, his arrest, and disappearance. The anecdotes in the Masnavi are remarkable, and embody such legends as the following: Solomon, who was king, not only of men, but of the angels, genii, elements, beasts, and birds, was one day holding a court, when a poor fellow who was present suddenly exhibited signs of the most extreme terror, and declaring that it was the Angel of Death who had frightened him, begged Solomon to command the wind to convey him far away to Hindustán, which was accordingly done. Another day, when the Angel of Death attended the monarch's levee, the latter asked him how it was that he had driven the poor fellow forth from his home to wander like a waif throughout the world. The angel answered that God had commanded him to

> 'Go this very day
> And take his soul in Hindustan, his debt to pay.
> In wonder then I said within myself: "Had he
> A hundred wings, in Hindustan he could not be."
> But going still to Hindustan, by God's command,
> There I found him, and took his soul with my own hand.'

Jalal-ud-Din revived the use of music and dancing as aids to devotional ecstasy, and his great poem commences with a few stanzas in which the reed-flute is made to complain of its separation from its native reed-bed by the river side, and to declare the harmony of its own musical lament with the varying moods of man, whose soul is likewise ever sighing at its separation from the divine source from which it sprang. This is the key-note of the mystic philosophy, and forms an appropriate introduction both to the poem and the religious exercises of the sect, the members of which always preface their evolutions by chanting these very verses. The plaintive and traditional melody to which they are sung is given in Carl Engel's work on the music of all nations. Starting from this point, the poet presently leads on to the next great doctrine of Sufiism, and, indeed, of every other form of mysticism, particularly the Christian, namely, that God is everywhere and everything is God; that God is the only legitimate object of man's love and aspiration, but that the veil of matter and of sense prevents the union of the two. As the Masnavi puts it—

> 'Nature's great secret let me now rehearse:
> Long have I pondered o'er the wondrous tale
> How Love immortal fills the universe,
> Tarrying till mortals shall his presence hail;
> But man, alas! hath interposed a veil,
> And Love behind the lover's self doth hide.
> Shall Love's great kindness prove of none avail?
> When will ye cast the veil of sense aside,
> Content in finding Love to lose all else beside?'

To arrive at this state of emancipation from the trammels of sense, and lose themselves in the contemplation of the Infinite, is the object of the darvéshes' dance and of other ecstatic performances. The incidental stories scattered through the poem are all interesting. But it is the quaint wisdom, the cheerful, though transcendental, philosophy, and the really elevated thoughts, which form the chief charm of the Masnavi.

MASON, REV. S., wrote on the Fauna, Flora, and Minerals of Tenasserim, of British Burmah, and Pegu, Lond. 1852; also author of Burma.

MASON WASP, of Ceylon, is the Pelopœus spinola, *St. Fargeau*, one of the Sphegidæ. The Ampulex compressa, which drags about the larvæ of cockroaches into which it has implanted its eggs, belongs to the same family. The male of the mason wasp of India is about 1½ inch long, of a bright brown-yellow. The female is about ¼ of an inch long, of a bright bottle-green. The male makes a round house of mud, in compartments, into each of which the female drops a few eggs, and the male thrusts in large green caterpillars for the subsistence of the young.—*Tennent.*

MASSAGETÆ. According to Strabo (lib. xi.), all the tribes east of the Caspian were called Scythic. The Dahæ were next the sea; the Massagetæ and Sacæ more eastward, but every tribe had a particular name. All were nomadic, but the best known are the Asi, the Pasiani, Tachari, Saccarandi, who took Bactria from the Greeks. The Sacæ made irruptions into Asia similar to those of the Cimmerians, and possessed themselves of Bactria and the best district of Armenia, called after them Saca-senæ. Of the first migrations into India of the Indo-Scythic Gete, Takshak, and Asi, that of Sehesnag from Sehesnagdes (Takshak from Tacharist'han), six centuries before Christ, is the first noticed by the Puranas. About the same period a grand irruption of the same races conquered Asia Minor, and eventually Scandinavia, and not long after the Asi and Tachari overturned the Greek kingdom of Bactria. The Romans felt the power of the Asi, the Catti, and Cimbri from the Baltic shore. Colonel Tod (i. p. 49) supposes the Asi and Tachari to be the Aswa and Takshák or Turshka races of the Purans of Sakadwipa; the Dahæ to be the Dahya, now extinct, one of the 36 royal Rajput tribes, and he supposes them to be the descendants of Baldeva and Yudishthra, returned under different appellations. The country on the east is still occupied by the Turkoman race. Herodotus (Clio, i. c. 216) mentions that they were said to eat their aged relatives. When any one was far advanced in years, they called together their immediate friends and neighbours, and, having sacrificed him, made a common feast upon his dead body.—*Chatfield, Hindustan*, p. 181; *Herod.* lib. i. sect. 216. See Gete.

MASSEH ISLANDS, in the Bay of Tajura, near Arabia, were purchased by the British in 1840, but never occupied.—*Horsburgh.*

MASSICOT.

Yuen-tan, . . .	CHIN.	Yellow monoxide of lead, ...	ENG.
Hwang-tan, . . .	,,		

It is an oxide of lead obtained by heating lead, or by adding sulphur, nitre, and vinegar to melted lead. It is often prepared from the dross of the melted metal. It is of a pale yellow colour, and is used as a pigment.—*Waterstone, quoted by Faulkner.*

MASSOBA, a celebrated idol. In the Chanki

pass, in the Lakenwara range, which forms the watershed between the Godavery and the Tapti, about 10 miles north of Aurangabad, there is a shrine of this deity to which, from a circle of a hundred miles, people of all castes resort,—Brahman, Sudra, and Dher, but chiefly the Mahratta Kunbi. The Jatra is held in the month Cheita, and lasts for four days, during which many sheep are offered in sacrifice. It is in the northern side of the pass, a mere block of stone, with smaller stones at its foot all smeared with red lead. The objects of their pilgrimage are wholly personal, beseeching the deity to give them, or preserve their children, their flocks, and their food.

MASSON, CHARLES, a traveller and numismatologist, author of Journeys in Baluchistan, Afghanistan, and the Panjab, Lond. 1842, 3 vols.; Notice of the Countries West of the Indus, in Bom. Geo. Trans., 1836–1838; Narrative of a Journey to Kalat, including an Account of the Insurrection in that Place in 1840, and a Memoir on Eastern Baluchistan, London 1843.

MASSOWAH ISLAND, in the Bay of Arkeeko, on the west coast of the Red Sea, about half a mile long, is about 4 miles N. of Arkeeko, at the N. extremity of Abyssinia. Half of the island is occupied by tanks and a burial-ground, and on the inner half is the town, which is crowded with habitations to the water's edge. Eight or ten large ships, with double the number of smaller ones, could be securely moored in the harbour. There is also a good harbour called Daha-leah, larger than Massowah, about a mile to the north. Fresh water is not abundant either here or in any other part of the Red Sea, but the supply at Massowah could probably be increased by digging wells on the mainland. The rainy season is from November to March. There is no other spot but Massowah and its immediate neighbourhood where ships could lie safely for any time, and where troops and munitions of war could be disembarked with celerity and safety.—*Findlay; Lieut.-Col. H. James, R.E., in Par. Paper.*

MASSURI, a sanatorium on the Himalaya. The following heights of mountains and points in the environs of Massuri were determined by the great Trigonometrical Survey of India, under General Sir Andrew Waugh:—

Hatipam,	7109 feet.	Himalaya Club,	6849 feet
Edge Hill,	7070 ,,	Camel's Back,	7143 ,,
Green Mount,	7002 ,,	Massuri Bazar,	6719 ,,
Laltipa,	7602 ,,	,, Church,	7369 ,,
Eagle's Nest,	7041 ,,	Landour ,,	7369 ,,
Bellevue,	7125 ,,	,, Bazar,	6808 ,,
Waverley,	7057 ,,		

MAST. Pers. Coagulated milk or clotted cream, slightly sour, which, when diluted with water, forms ab-i-dugh, a beverage in warm weather equally grateful and salubrious.—*Ouseley's Tr.* i. p. 268.

MASTAKA, also Chinna Mastaka, in Hindu idolatry, is a form of Parvati as Kali, and possibly is the sakti of Siva, in the form of Kapali. She is described as a naked woman, with a necklace of skulls. Her head is almost severed from her body, and her blood is spouting into her mouth. In two of her hands she holds a sword and a skull. In a note in Ward's work on the Hindus, it is stated that this goddess was so insatiate of blood that, not being able at one time to obtain enough of that of giants, she cut her own throat to supply herself therewith. Ward derives the name from Chinna, cut off, and Mastaka, a head.—*Cole. Myth. Hind.* p. 94; *Ward's Hindoos.*

MASTAKANAGRAHA or Mastan. Uriya. A Brahman race of Orissa following agriculture.

MASTAKAVAGRAHNA. Mahr. A ceremony in the rite of adoption of smelling the head of the adopted child.—*W.*

MASTIC, Mastik.

Mastaka,	Arab.	Kinnoli, Kinneh,	Pers.
Mastix,	Dan., Gfr., Sw.	Mastique,	Port.
Rumi mustaki,	Hind.	Sakes,	Turk.
Mastico,	It.		

Mastic resin is produced in Scio, from an incision in the bark of the Pistacia lentiscus, the mastic or lentish tree. That which collects on the branches of the trees is called mastic in the tear, and fetches the highest price, while that which falls to the ground constitutes the common mastic. Mastic varnish is well known from its transparency and peculiar toughness and tenacity, even when spread in the thinnest coat on wood or on canvas. This is due to the presence of a peculiar resin, which does not possess any acid properties, and which has a composition C. 40 H. 31 O. 2. Dissolved in spirits of wine or oil of turpentine, it makes a very pale varnish; it is brilliant, works easily, and flows better on the surface than most other varnishes. It can also be removed by friction with the hand; hence its use as a picture varnish and for other delicate works. It is imported into India from the Persian Gulf, also from Kābul, and is used by the natives as an astringent in diarrhœa, which property it owes to the volatile oil contained in it; also in all diseases depending on an undue accumulation of phlegm. Price, one shilling per pound.—*M'C. Diet.* p. 796.

MASTISA, from the Portuguese Mestico, person of mixed Indian and European descent.

MASTIXIA ARBOREA. *Wight.*

Bursinopetalum arboreum, B. tetrandrum, *Wight. W. Ic.*

A large tree of Ceylon, very abundant in the dense moist forests of the Western Ghats, from Canara southwards to Cape Comorin, at elevations from 2000 to 7000 feet. It is abundant in the Bolamputty forests at 2500 feet elevation, and is common on the Neilgherries at 6000 to 7000 feet. At the higher elevation it is not nearly such a large tree, but its leaves are much larger and more coriaceous, and its flowers are larger.—*Beddome, Fl. Sylv.*

MASTODON, a genus of extinct mammals of great size, of several species, of which remains have been found in the Siwalik Hills, in Perim Island, in Burma, viz. M. angustidens, M. arvernensis, M. latidens, M. longirostris, M. Perimensis, M. Sivalensis. Mastodon latidens and M. Sivalense have been found fossil both in Ava and the Siwalik Hills. They are found in the upper miocene strata. Dr. Faulkner considered the Siwalik deposit to be synchronous with that from which Mr. Crawfurd obtained the remains near Prome, on the banks of the Irawadi. Captain Cautley found jaws in which the front teeth are not to be distinguished from the teeth of M. latidens, and those in the rear from the teeth of M. elephantoides; he conceived that the distinction which was established on detached teeth will be found to be erroneous.—*Eng. Cyc.*

MASUDI, the literary title of Abu-l-Hasan, Abi, A.D. 890–956, author of Meadows of Gold and Mines of Gems. He met Abu Zaid at Basra, A.D. 916 (A.H. 303). Masudi mentions that, at the time of the Muhammadan conquest, the country about Basra was called Arzul-Hind, the Land of India. The Meadows of Gold, Kitab Mirooj-u-Dhhab, treats of all things in nature and history, and of China. He travelled far and wide, and from a very early age, visiting Sind in A.D. 912, and afterwards, according to his own account, Zanzibar and the island of Kanbalu, Champa, China, and the country of Zabaj, besides travelling a long way into Turkestan. He mentions that in his time, A.H. 332, offices in India were hereditary. His is a historical and commercial cyclopædia. He mentions nutmegs, cloves, cubebs, camphor, areca nuts, sandal-wood, and aloes-wood as productions of the Indian Archipelago. It was translated by Dr. Aloys Sprenger.—*Ind. in 15th Century; Prairies d'Or*, iv. p. 225, *in Yule, Cathay*, i. pp. 110, 248. See Literature.

MASULA BOAT, a boat built without knees, used on the Madras coast for crossing the surf. The planks are sewed together over withes of straw, and the boat has no thwarts. They are used in landing and discharging cargoes, and carrying passengers to and from ships in the roads. They are sometimes broken to pieces from the heavy surf, which at times runs as high as from 6 to 10 feet. A catamaran can be kept in attendance as a life-preserver, in the event of any accident to the masula boat by upsetting, or in case of any of the occupants being washed out by the surf. The masula boats receive their cargoes and passengers from the ships outside the surf. They are rowed by twelve men, with bamboo or casuarina paddles, that is, a board about 10 inches broad and 14 inches long, fixed at the end of a bamboo or young casuarina tree. They are steered by one or two tindals (coxwains), and two men are constantly kept to bale out the water; from which employment they are promoted to the paddle or bow oar; after which they fall aft in rotation, to be a tindal or steersman. The steersman gives time by a song, which is sung by all the boatmen; and according as its modulations are slow or quick, the oars are plied. These modulations are regulated by the waves, as they may be slow or rapid, in succession. On one occasion, when a passenger of rank showed impatience at this noisy song, the boatmen were desired to cease, but the steersman refused compliance with the order, saying that without his song he would not be answerable for the safety of the passenger. The dimensions of the masula boat are from 30 to 35 feet in length, 10 to 11 feet in breadth, and 7 to 8 feet in depth.—*Note by Sir J. Malcolm; Edye; Orme.*

MASULIPATAM, in lat. 16° 9′ N., and long. 81° 13′ E., a large town on the Coromandel coast. Masulipatam is supposed to be the ancient Mesolia. Every village has a tutelary goddess, whom the aboriginal races worship. The Kistna, the chief river, is a sacred stream. The harbour of Masulipatam is an open roadstead, and large ships lie two or three miles off. It was the earliest British settlement on the continent of India, a factory having been opened there in 1522. It was acquired by a treaty with the Nizam, 6th April 1759. During the cyclone of 1864, a storm-wave swept over the land. The whole country in the vicinity of Masulipatam was submerged, and 60,000 men and animals destroyed. There are two large mountains in the district, one at Bezoara, on the bank of the Kistna, and the other at Condapilly; the former is called Indrakaladry, and the latter Condapilly Durgum.

MASUM ALI SHAH, a Syud of the 12th century, who went about calling Ana'l-Haq, I am the true God! He was put to death.

MAT, Burm., in the weights of Burma, is the one-fourth part of a kyat or tikal.

MATA, or mother, is a term applied to the sakti of the god Siva. It is said that Mylitta of the Babylonians, a name of Succoth-Benoth, also meant mother. The sakti of Siva is also called Vali or Bali, under which appellation she assumed the form of a girl twelve years of age. In Madura, at Balane, and other places, virgins used to go to the temple once in their lives to offer themselves in honour of the goddess. The story was that a god had intercourse with them. In all the temples of Siva and his consort, women are kept to dance and sing before the idols.

Mata is the Hindu goddess who presides over smallpox, also styled Sitla.

Mata Janavi, the mother of births, is the analogue of the Juno Lucina of the Rajputs. Mata-ji is the universal mother, worshipped in India from the most ancient times. In a temple to Mata-ji, the universal mother, in Rajputana, is an inscription to the purport that Komarpal Solanki and his son Sohunpal, in the month of Pos (the precise day illegible), (S. 1207, winter of A.D. 1151), came to worship the universal mother in her shrine at Palode.

About the beginning of August 1882, a terrible tragedy occurred in the village of Khera, close to Wudhwan. The corpses of five Koli—father, mother, and three grown-up sons—were discovered, in each case the head being nearly severed from the body by a sword-cut at the back of the neck. The fourth and eldest son was missing. On search being made, his dead body was found in a neighbouring well. The whole family was thus accounted for. The bodies of the parents and one son were found in their own house, those of two other sons laid out on either side of the entrance of the temple of Khodiar Mata close by. It is supposed that the whole family devoted themselves as willing victims in sacrifice to the Khodiar Mata, an incarnation of the bloodthirsty Kali, and that the eldest son, after slaying his parents and brothers with the sword, threw himself into the well where his corpse was found.—*Tod's Rajasthan*, i. p. 357, ii. p. 618; *Roberts, Or. Ill.* p. ix.

MATABHANGA, or Hauli, one of the three great rivers of Nadiya, the other two being the Bhagirathi and Jalangi. All three rivers are offshoots of the Padma, the main channel of the Ganges.—*Imp. Gaz.*

MATADAR, the headman of a village in the Kaira and Ahmadabad collectorates, from Matu, a signature.

MATA-GLAP. Malay. The diseased or distempered condition of a Malay, when he runs demented or amok.

MATA KOOUR, a colossal alto-relievo, situated

near Kussia Tanna, in pargana Sidowa, eastern division of the Gorakhpur district.

MA TAMPI, Karta, and Kaymal are titles added to the names of remote descendants of zamindars and petty princes of Travancore.

MATAWLAH. ARAB. A Shiah sect of Muhammadans in Syria. Their principal possessions are in the Anti-Libanus, and in Bilad Bishara in Palestine, Balbec being their chief station.

MATCHLOCKS or toradar-banduq of a peculiar make were manufactured in the Shorapur district, as also jumbea, knives, daggers, etc., etc. The price of a good matchlock without ornament is from Rs. 10 to 12. A superior matchlock is made at Koteli; the barrel is filed smooth on the outer surface, and, being carefully cleansed from grease by scouring with wood-ashes, is set upright in a hollow cylinder of brass, which is filled with a solution of white vitriol in water. The cylinder is placed upon a slow fire, and in two days the veins of the damask are developed in high relief. Nothing can be imagined more elegant than the twisted damask of Koteli. It surpasses that of Herat. The straight damask being less tenacious than the twisted variety, should be made of greater solidity. Matchlocks are usually constructed with an oviform chamber, which is harmless enough with the weak gunpowder of the bazars, but dangerous when English gunpowder is employed. It no doubt economizes the charge. The barrel is made to swell abruptly at the breech, to accord with the shape of the chamber. The matchlock of Herat is generally rifled, a process unknown at Koteli, where, however, flint and detonator locks are made superior to those of most Indian fabrics. The rifling process is very rudely contrived at Herat. In a cylinder of hard wood corresponding in length with a gun-barrel, two parallel and spiral grooves are rudely chiselled; a collar of wood is formed in an upright post, opposite to another post, into which the barrel is to be jammed, and within this collar are two short iron pegs, fitting into the grooves of the cylinder. A boring-rod is then firmly attached to the cylinder, the cylinder forming both handle and guide. The boring-bit is a cylindric rod rather thicker towards the extremity than elsewhere. Its thickest portion exactly fits the muzzle of the piece. It has a groove at the extremity, into which fits a small sharp wedge of hardened steel. When first inserted into the barrel, this wedge scarcely projects above the surface of the boring-rod. It is now introduced into the muzzle, and the wooden cylinder is pushed forward by the workman, who leans his weight against it. Of course, as it enters the barrel, the spiral grooves of the wooden cylinder, being guided by the fixed pegs in the collar, give the rod and bit a corresponding spiral motion, by which a spiral scratch is made in the interior of the barrel. The wedge is then slightly heightened and the scratch is thus deepened, until the workman considers it sufficient. This process is repeated until six or seven grooves have been formed. The Herat rifle, being carefully loaded with balls wrapped in leather or cloth, is tolerably true.

MAT'H, Ast'hol, or Akora, also Matham in the Tamil language, are the residences of the monastic communities of the Hindus, and are scattered over the whole of India. They generally comprehend a set of huts or chambers for the mahant or superior and his permanent pupils; a temple sacred to the deity whom they worship, or the samadh or shrine of the founder of the sect, or some eminent teacher; and a dharmsala, one or more sheds or buildings for the accommodation of the medicants or travellers, who are constantly visiting the mat'h. Most mat'hs have endowments of land, generally of small extent, but as the mat'hs are numerous, the quantity of land in a district pertaining to a mat'h is extensive. But besides lands, they receive presents from lay votaries, ask alms daily in their neighbourhoods, and sometimes traffic. The mat'h is under the entire control of a mahant or superior, with a certain number of resident chela or disciples, with a large number of vagrant or out-members. The mat'hs of the various districts look up to some of their own order as chief, and, under the presidence of this chief mahant, on the demise of any of their brethren, they elect a successor from amongst the chela or disciples, the new mahant being regularly installed at the hands of the president of the assembly, by investment with the cap, the rosary, the frontal mark or tika or other monastic insignia. In these matters the British Government never interfere. Amongst the Hindus, there is a lay and a priesthood class, the latter being sometimes monastic and sometimes secular, and the Vaishnava sect leave this a matter of choice. The Vallabhacharya sect, indeed, give the preference to married teachers, and all their gosains are men of business and family; the preference, however, is usually assigned to teachers of an ascetic or cœnobitic life. The cœnobitic members of the different communities, at one period or other of their lives, have pursued an erratic mendicant life, travelling over India singly or in bodies, subsisting by alms or merchandise, or some of them, as must be the case amongst such large bodies of men, by less unexceptionable means, like the Sarabaites of the east, or the mendicant friars of the Latin Church. The doctrine that introduced similar unsocial institutions into the Christian church in the 4th century, is still most triumphantly prevalent amongst Hindus and Buddhists in the east, the land of its nativity. Monastic establishments and solitary mortification originated in the specious appearance and pompous sound of that maxim of the ancient philosophy, that in order to the attainment of true felicity and communion with God, it was necessary that the soul should be separated from the body here below, and that the body was to be macerated and mortified for that purpose.—*Wilson in As. Soc. Proceedings.* See Monastery.

MAT'HA. HIND. The forehead, the brow of the head. Matha Din, a name applied by the Sikhs to the Hindus, because of the sectarial marks which the latter place on their foreheads.

MATHANI. ARAB. A term employed by Mahomed to designate certain reiterated passages in the Koran.

MATHERAN, a hill in the neighbourhood of Bombay, with lovely scenery, wooded lanes, and the air fragrant with wild flowers. The best views are from Garbut Point in the morning, and from Panorama Point in the evening, from the latter looking down on Bombay with its broken coast and harbour, on Malabar Hill, by Mazagon and Mahim, a scene rarely equalled. It is in lat. 18° 58′ 50″ N., and long. 73° 18′ 20″ E., 2460

feet above sea-level, and is within four hours of Bombay by rail.

MATHURA, in lat. 27° 30′ 2″ N.; and long. 77° 40′ 3″ E., in Hindustan, on the right side of the Jumna, 35 miles N.W. of Agra. Mean height of the cantonment, 655 feet. It was founded by Satrughna, the younger brother of Rama. It has been a place of note from remote antiquity, and in Buddhist times it was one of the centres of that religion. At Fa Hian's visit it had 20 Buddhist monasteries, and about 3000 monks. Its western half is now the home of Vaishnava Hinduism. The river Jumna runs through the district. On the right bank are the Kosi and Ch'hata parganas, and on the left those of Noh-jhi, Mat, and half of Mahaban as far east as the town of Baldeva. This extent is almost identical with Brijmandal of Hindu topography, the circuit of 84 cos in the neighbourhood of Gokal and Brindaban, where the brothers Krishna and Bala Rama grazed their herds. On the Baibhar Hill are sacred temples and wells, the wells at the foot being clustered around the large Brahma-kund. The Ganga-Jumna-kund has warm water. The tract of country around Agra, and principally the plains of Mathura, is that famed in Hindu legend where Krishna and the nine Gopia usually spent the night in dancing.

Mathura is one of the five districts,—Agra, Mathura, Eta, Aligarh, and Manipuri,—which together make up the Agra division of the N.W. Provinces. Its area is 1435 square miles, with a population of nearly a million of Hindus, of Jat, Brahman, Thakur, and Banya races.—*Growse.*

MATHURA NATH, a librarian of the Hindu college, author of History of the various Hindu Sects.

MATI of Tahiti, Ficus prolixa. Mati fruit is used for dyeing cloth of a red colour. The bark of the tree is made into cordage.

MATICO (Artanthe elongata), the leaves used as a styptic in Peru, a powerful vegetable astringent, first made known to the medical profession by Dr. Jeffreys of Liverpool. The leaves are covered with a fine hair.—*Lancet*, January 1839.

MATIYA cultivators of Jeypore say their ancestor sprang from the soil, and they point to an opening from which he came.

MATRI. SANSK. A mother; in Hinduism, a class of female divinities of a mystical character, the mothers of the gods, also their personified sakti or energies.—*Wilson.*

MATRICARIACEÆ, an order of plants spread all over the globe, including about 900 genera. About 132 genera and 700 species occur in the E. Indies. The medicinal, economic, or food plants are of the genera—

Vernonia.	Eclipta.	Myriogyne.
Elephantopus.	Blainvillea.	Sphæromorphæa.
Ageratum.	Xanthium.	Machlis.
Adenostemma.	Moonia.	Helichrysum.
Eupatorium.	Wedelia.	Gnaphalium.
Tussilago.	Wollastonia.	Antennaria.
Aster.	Guizotia.	Leontopodium.
Sphæranthus.	Sclerocarpus.	Carpesium.
Grangea.	Helianthus.	Ligularia.
Berthelotia.	Verbesina.	Cacalia.
Conyza.	Spilanthes.	Senecio.
Blumea.	Matricaria.	Saussurea.
Ephaltes.	Pyrethrum.	Aplotaxis.
Inula.	Chrysanthemum.	Dolomiæa.
Vicoa.	Artemisia.	Amberboa.
Pulicaria.	Tanacetum.	Centaurea.
Carthamus.	Cichorium.	Lactuca.
Carduus.	Tragopogon.	Taraxicum.
Serratula.	Scorzonera.	Sonchus.
Oreoseris.	Picris.	

Species of Aster, Calliopsis, Bellis, Zinnia, Helianthus, Tagetes, Chrysanthemum, Artemisia, Centaurea, are ornamental or fragrant flowering plants. Vernonia anthelmintica, the Som-raj of Bengal, is used medicinally. The leaves of Eupatorium triplinerve, *Vahl*, were formerly employed in India and America in snake-bites, and are still used in the Mauritius as a substitute for tea. Sphæranthus mollis and species of Blumea are fragrant plants. Guizotia Abyssinica is a valuable oil plant, Cynara scolymus is the edible artichoke, Cichorium intybus, the chicory or succery, etc. Endivia, the endive, and Taraxicum dens leonis is employed in old-standing ailments.

MATRICARIA CHAMOMILA. *Linn.*

M. sirsciformis, *D.C.* | M. prehox, *D.C.*
Ye-kiuh-hwa, . CHIN. | Babuna, Sutei-gul; HIND.

This occurs wild in China and in the plains of the Eastern Panjab, but is also cultivated. Might be used as a substitute for Anthemis, chamomile flowers, in dyspepsia, flatulency, and intermittents, as an aromatic tonic and carminative. It was formerly used for chinchona.—*Dr. J. L. Stewart.*

MATRICARIA SUAVEOLENS. *Linn.* M. chamomila, *Wall.* This chamomile plant grows in Persia, Kashmir, and India.—*Roxb.* iii. p. 437; *Voigt.*

MATS.

Matten,	DUT., GER	Galeran, Klasa,	MALAY.
Nattes,	FR.	Burya, ...	PERS.
Chattai,	GUJ., HIND.	Esteiras, . .	PORT., SP.
Stuoje, Stoje,	IT.	Progoshki, . . .	RUS.
Tikar, Bogor,	MALAY.	Hassir, ...	TURK.

Mats are formed of rushes, of the bark of trees, or of the leaves of different species of palm trees, interwoven, and are made in all countries. In Russia, bast mats are manufactured from the inner bark of the lime tree, and China mats are in general use in India for covering floors and lining staircases. In India, in places where bamboos or canes grow readily, mats are made of these materials, but also of—

Andropogon muricatus.	Pandanus odoratissimus.
Arundinaria falcata.	P. furcatus.
Arundo donax.	Papyrus pangorei.
A. tibialis.	Phœnix dactylifera.
Borassus flabelliformis.	P. sylvestris.
Calamus rotang.	Phrynium dichotomum.
Chamærops Ritchiana.	Saccharum sara.
Cocos nucifera.	S. fusçum.
Cyperus inundatus.	S. spontaneum.
Hedychium spicatum.	Thalia dichotoma.
Malococheete pectinata.	Typha angustifolia.
Maranta dichotoma.	T. elephantina.

Saccharum fusçum, the Khari of Bengal, is made into the mat called Chanch. Cyperus inundatus, the Meliya of Bengal, is made into the Jhentala mat. Palghat mats, made of the split stems of a species of Cyperus, are very strong and durable, pleasant and cool to lie on, and remarkable for their quiet colours and peculiar patterns. The Darmas mat of Bengal, used to sleep on, is made from the Arundo tibialis. The Moula mat, the Kachkachya, the Valandiya, the Kati from the Pati grass, and the Hogala, are other mats. Table mats in use by the people of India are often gold-embroidered.

The leaves of the Pandanus odoratissimus make a very fine matting, largely employed by cabinet-

makers as a packing material. The leaves of the palmyra are largely used for the palm-leaf books in use by Hindu and Buddhist sects. The stalks of Andropogon muricatus are used as a thatch grass, and its roots are woven into screens, called tatti, which are wetted to cool the atmosphere.

In Arakan there are six kinds of bast, called Sifa, which might be successfully fabricated into mats. The Sital Pati mats of Bengal are made from the Phrynium dichotomum. Several species of Typha, Juncus, and Saccharum, in the Madras Presidency, are applied to useful purposes. Many of the mats exported from Calcutta are made from the Papyrus pangorei. Some of the Burmese mats are made from the split stems of the Maranta dichotoma, called Then, which grows abundantly in the forests of Burma and the Tenasserim Provinces, but the large coarse mats in general use in Burma are made from the leaf of the Pandanus furcatus? Tha-ban, BURM., known as the lowland screw pine, in distinction to the highland species of Pandanus, which grows on the high lands above tide waters, from which the smaller and finer mats are fabricated. Chinese table mats are exported to all parts of the world. Floor mats of China are made of a rush cultivated for the purpose; the best are the Lien-tan mats, plain white or plain red and white. The manufacture of matting for sails of Chinese boats and junks, for floors, for bedding, and envelopes of boxes and cases, employs thousands of workmen. The exportation is to the United States, India, South America, Sydney, etc. Besides mats made of rattan for table-furniture, grass mats for floors are largely exported from China. The latter is manufactured of different widths and patterns, and though the amount annually sent abroad is large, it forms a very small proportion to the home consumption. A sail containing nearly 400 square feet can be obtained for ten dollars. The rolls are largely exported and still more extensively used in the country for covering packages for shipment A stouter kind made of bamboo splints serves as a material for huts, and many other purposes that are elsewhere attained by boards or canvas.

The manufacture of mattings from coloured grass has long been carried on successfully in the Madras Presidency, and those from Cochin, Palghat, Tinnevelly, and Wandiwash are in considerable demand, on account of their brilliance of colours, fine quality, and extreme cheapness. Several grasses appear to be employed, some being broad, flat, and soft, while others are round, fine, and wiry; the mats of Cochin, Palghat, and the western coast are of the latter description, and are the more durable.

The plain coir mattings of Malabar, and the coloured red and black matting of Canara, are well known. The local names of the Palghat mats are—Manha Poo Paya, Cooroo Nare Virallee, Anjee Pooketty Mookeya Velle, Shooyakunden Virallee, Kella Mooka Virallee, and Ketta Mookya Virella. Excellent mats are made in the Laccadive Islands, from the cocoanut leaf cut out of the heart of the tree just before it unfolds. These are employed in the islands as [illegible], they are of fine quality, and much esteemed when exported. In the Peninsula of India, however, the most common and most generally useful mats are formed of the bamboo, those made with the shining outside strips are used for matting of rooms where the rattan is not procurable. Common bamboo mats are used for lining vessels previous to receiving cargo, and for covering bullock carts. Rattan mats are generally preferred for rooms; Tonga mats, similar to those of Bengal, are prepared in many parts of Southern India; date-leaf and palmyra-leaf mats are generally used by natives for sleeping on, and are very useful. Palghat mats and those from Cochin are considered the finest in Southern India. Mats of Travancore are made from the grass Cyperus textilis, and another grass called Cooray.

The mats of Sylhet are famed. Hindus sit on mats, and have large pillows at their backs, upon which they rest their arms. Europeans use only the better kind of mats, and almost exclusively for the covering of floors in their houses, but natives employ them to sit and sleep upon. Every Muhammadan, however poor, after having performed the prescribed ablutions, spreads a small mat before him while saying his prayers. The Hindu uses it as a sort of table-cloth; in many a poor hut it constitutes the only piece of furniture perceptible. The finest kinds of the Bengal matting are manufactured at Midnapur, near Calcutta. The price varies according to the size of the border, which is coloured either red or black; and one large mat, 25 feet square, cost at Midnapur £30. But besides these extremely fine mats, a cheaper description is manufactured, of which considerable numbers are exported to Madras, Bombay, Mauritius, and Australia. These are much cheaper; and a good strong mat, about 20 feet square, may be had for £4, if plain, and £5, 10s., with a black or red border. The mats next in point of fineness are those from Jessore, also in the vicinity of Calcutta, and called Sital Pati; these, however, are never made, for India, of the size of an entire room floor, but only in the shape of rugs, and have invariably a red border, sometimes also a red-flowered centre. They are generally made about 4 to 5 feet long and 2 broad. At Hoogly, near Calcutta, an inferior kind of small mat is made, of which very large quantities are exported to Mauritius, Demerara, and New South Wales. The small mats made in the Madras Presidency, North Arcot, and the whole of the Malabar coast, are celebrated.—*Williams' Middle Kingdom; Rohde, MSS.; M'Culloch, Cat. Ex.* 1862.

MATSA KANDA. TEL. Pterospermum acerifolium, *Willde.* The petals bruised in honey are reckoned a cure for stomach-ache.

MA-TSO-BOO. BURM. A shout of the Burmese maidens at their water festival. On the first day of the New Year, this festival begins, and lasts for four days. At daybreak, they sprinkle the pagodas with water, and present jars of water to the priests, and ask forgiveness for any wicked thought, word, or deed of the bygone year. The carnival then begins. The fronts of the houses are decorated with green leaves and flowers; and all, but particularly the young men and maidens, send showers of water on all they meet, loudly shouting Ma-tso-boo! Ma-tso-boo! not wet. It is a joyous time, in which the young rush about, their light dresses all wet, clinging to their lithe figures.—*Briggs.*

MATSYA, the fish avatara of the Hindu god Vishnu, has been demonstrated to have immediate reference to the general deluge, and to be the

same history, disguised in oriental fiction, of that event, as is related in the Hebrew Scriptures. Sir W. Jones assents to the opinion of Bochart, that the fable of Saturn was raised on the true history of Noah. He shows that the seventh Ménu, Satyavrata, corresponds in station and character. In his reign, the Hindus believe the whole earth to have been destroyed by a flood, including all mankind, who had become corrupt, except the pious prince himself, the seven rishi, and their several wives, who, by command of Vishnu, entered a bahitra, or spacious vessel, accompanied by pairs of all animals. Vishnu, assuming the form of a fish, commanded the ark to be fastened by a cable, formed of a vast serpent, to his stupendous horn, secured thereby until the flood subsided; when he and Brahma slew a monster named Hyagriva, who, while Brahma was reposing at the end of a kalpa, stole the Vedas, and mankind had consequently fallen into the depths of ignorance and impiety. This mighty demon is called the prince of Danava, a name which means horse-necked. The Vedas having been recovered, the world was progressively repeopled with pious inhabitants, descendants of the devout Satyavrata and his favoured companions. The history of this avatara is the subject of the first Purana or sacred poem, consisting of 14,000 stanzas, and is concisely told in the eighth book of the Sri Bhagavata, or life of Krishna.—*Sir W. Jones' Asiatic Researches.*

MATSYA, a country which produced fish, sometimes said to be Bengal, sometimes Gujerat. The Hindu races who worship, in addition to the works of their own hands, so many varied products, and so large a number of mammals and reptiles, do not, seemingly, worship fish. A tank or pond with all its contents may, however, with the Hindus be devoted to a deity; and Colonel Tod mentions that, when one day he had thrown his net into a lake which abounded with a variety of fish, his pastime was interrupted by a message from the regent, Zalim Singh, to tell Captain Tod that Kotah and all around it were at his disposal, but these fish belong to Kaniya. On which Colonel Tod immediately desisted, and the fish were returned to the safeguard of the deity. In such a sacred tank, fish will feed from the hand; and in the Mahanadi, where it is three miles broad, he tells us fish will follow for miles for a little burnt rice.—*Tod's Travels*, p. 9.

MATSYA PURANA, a religious book of the Hindus, narrated to Menu by Vishnu in the form of a fish. Many of its chapters are the same as parts of the Vishnu Purana, Padma Purana.—*D.*

MATTAN. HIND. The ground, field, or plain-coloured centre of a shawl.

MATURA, on the east coast of Ceylon, in lat. 5° 58′ N., and long. 80° 37′ E., is a considerable town with a fort. Many gems have been from ancient times exported from Ceylon, where the ruby, amethyst, topaz, sapphire, spinel, chrysoberyl, corundum, and cinnamon stone are found in great abundance, but not emeralds. The sapphires, which are red, purple, yellow, blue, white, and star-stone, are met with at Matura and Saffragam, and rubies and sapphires at Badulla and Saffragam. The white tourmaline or Maturese diamond, called in Singhalese Suda Turemali, is a topaz of a pale-yellow colour. The zircon family is richer in Ceylon than in any other part of the world. It is found in the districts of Matura and Saffragam, and is most abundant in the former. Matura-diamond is the name applied to its finest varieties by the dealers in gems. Besides the two well-established species, common zircon and hyacinth, there is a third, massive, opaque, and uncrystallized, and of a dark-brown colour. Specimens of it from Saffragam weigh two or three ounces. The yellow varieties are sold by the natives as a peculiar kind of topaz, the green as tourmalines, the hyacinth red as inferior rubies, and the very light grey as imperfect diamonds. All the varieties are found in the beds of rivers, or in alluvial ground, which, both in Saffragam and Matura, is of the same kind.—*Horsburgh; Thunberg's Travels*, iv. p. 219.

MAT-WAN-LIN, a Chinese editor of a Chinese cyclopædia. It gives an account of India, translated from the Wan-heen-t-hung-Kaow, or deep researches into ancient documents.

MATY, in the Madras Presidency, a house servant who cleans up, supposed to be from the English mate, or from the Malealam Metti, an inferior servant, an under-servant who cleans dishes, shoes, etc.

MAULA. ARAB. A Muhammadah judge, a learned or venerable person. Maulana, a person of learning or respectability, a doctor, a teacher. In the Mahratta countries, a Muhammadan schoolmaster. Maulavi, Maulvi, or Mulla, pronounced Mulvi, is a learned man of the Muhammadans; a teacher of, or learned in, Arabic; an expounder of Muhammadan law, a doctor of divinity, a teacher of the Muhammadan religion. Maulavi, Alim (pl. Ulama), and Mujtahid (pl. Mujtahidin) are the three grades of doctors of divinity.

MAULMAIN or Moulmein, town and headquarters of Amherst district, and of the Tenasserim division, British Burma, situated on the left bank of the Salwin, at its junction with the Gwyne and Attaran rivers, in lat. 16° 30′ N., and long. 97° 38′ E. The town is built around the base of a hill, and the houses of Europeans are on the slopes and summits of the hill. From the top of the hill, on which are several Buddhist pagodas, the eye ranges over a grand prospect,—the Gwyne, the Salwin, and the Maulmain river lie below. The Maulmain river has a ridge of rock running across its mouth, endangering navigation.

MAULOOD. ARAB. Poetry chanted before the bier of a deceased person when carried out.

MAULUDI, ARAB., HIND., applied to a foreign race born in India.

MAUND or Mán, a measure of weight of India, which varies from 25 to 82⅔ lbs., according to the substance weighed. The Bengal bazar maund is 82 lbs. 2 oz. avoirdupois. Goods weighed or passed by viss are converted at the rate of 365 lbs. avoirdupois per 100 viss. Grain shippers declare their own weight. At Isfahan, the Shahi or royal man is always used, instead of the Tabreez man employed at Shiraz. One Shahi man is equal to two Tabreez man. A khurwar or ass's load is estimated at 100 Tabreez man, or about 725 lbs. English.

In the Persian Gulf at Muscat, the maund is 25 lbs.; at Abu Shahr, 7½ lbs.; and a Hashim maund, 116 lbs. Every town has a different maund.—*Fraser's Khorasan*, p. 869.

MAUNDRELL, HENRY, travelled in Syria

and the country of the Euphrates. In A.D. 1699 he visited Kala Jerablus, the ancient Carchemish.

MAUNI, the last day of the month of Phalgun, when bathing in silence is to be practised by Hindus.

Mauni, a Hindu ascetic who has taken a vow of perpetual silence, like Paul the silentary. They are also called Mauni-dasi. They are devotees under a vow of silence, generally for a term of years, and there are said to be many in Benares. They are regarded as possessing extreme sanctity, and are even worshipped by other Hindus.—*Sherring's Tribes; Wilson.*

MAURICE, THOMAS, author of Ancient History of Hindustan, its Arts and Sciences, London 1795-98; Modern History of Hindustan, London 1802; on the Ruins of Babylon, 1826; Ancient Egyptian Grandeur, 1818.

MAURI CONWAI, a great reservoir in Mysore.

MAURITIA CARANA, the Carana palm. The leaves are used as house-thatch. Mauritia flexuosa is the most largely distributed palm throughout the basins of the Amazon and Orinoco, or from the Andes of Peru and New Grenada to the shores of the Atlantic. The earliest American voyagers and missionaries noted its abundance in the delta of the Orinoco, and how, in the season of inundations, the natives dwelt on stages supported by the growing trunks of the Mauritia. The edible part of the fruit is the rather thin orange pulp, which easily separates from the endocarp when ripe, but is clad with cartilaginous scales that it requires practice to get rid of. It might be introduced into India.—*Dr. Spruce; Seeman.*

MAURITIUS, or Isle of France, a mountainous island about 300 miles west of Rodrigues. Its S.W. point is in lat. 20° 28′ S., and long. 57° 17′ 30″ E., and the N.E. point in lat. 19° 53′ S., and long. 57° 36′ E. It was discovered by the Portuguese Mascarrhenas in the early part of the 16th century, and has been in their possession, in that of Spain, and of Belgium, France, 1721, and Britain in 1810. Coral reefs nearly encircle the island. The lighthouse on Canonier Point is in lat. 20° 0′ 35″ S., and long. 57° 35′ 24″ E. Pouce, the highest mountain, is 2847 feet, and Pieter Botte, 2530 feet.—*Findlay.*

MAURYA, a dynasty of Magadha, founded by Chandragupta, the Sandracottus of the Greeks. Chandragupta was the illegitimate son of the last Nanda by the beautiful but low caste Mura, from whom he obtained the designation of Maurya. In the Mudra Rakshasa, a Sanskrit drama detailing his elevation, Chandragupta is frequently named Vrishala, a term said to be equivalent to Sudra; and as Nanda himself was the son of a Sudra woman, there can be little doubt that the celebrated Maurya family were of Sudra extraction. They ruled from Palibothra (Patali-putra), the modern Patna. Chandragupta's grandson, the great Asoka, raised this dynasty to the highest fame by his conversion to the Buddhist faith, and his eager promulgation of it. It was the first dynasty in historical times who seem to have united all India into one great kingdom.

The Mudra Rakshasa, a Hindu drama, gives the history of the causes of the revolution which placed the Maurya dynasty on the throne. The Maurya dynasty lasted 130 years.

Chandragupta,	B.C. 325	Sangata,	B.C. 220?
Bimbasara or Bindu Sara,	,, 301	Indra Palita,	,, 212
Asoka,	,, 276	Somasarman,	,, 210
Suyasas,	,, 240	Sasadharman,	,, 203
Dasaratha,	,, 230?	Vrihadratha,	,, 195

The names of the sovereigns vary in the several Puranas. In the Vishnu Purana they are given as Chandragupta, Bindu Sara, Asoka, Vardhana, Su-yasas, Dasaratha, Sangata, Salisuka, Somasarman, Sasadharman, and Brihadratha.

MAUSOLEUM. Most of the Muhammadan rulers of India bury their great men under a mausoleum. The mausoleum tomb of Humayun, with its white marble dome, is a conspicuous object for miles around. It cost 15 lakhs of rupees, and was erected by his widow Hamida Banu Begum, who is also interred near. There are magnificent structures over members of the Kutub Shahi dynasty at Golconda, and over the Adal Shahi at Gogi and Bijapur; and large tombs at Ahmadnaggur over the Nizam Shahi, and over the Bahmani at Beder and Kulburga. That over Ibrahim Adal Shah is very grand, and those at Gogi are in excellent preservation.

MAUZA. ARAB., HIND., PERS. A village, a parcel or parcels of land, a cluster or clusters of habitations, a settlement, an estate.

MAWA. HIND. A glutinous preparation of wheat, used in glazing pottery.

MAWAL. MAHR. Fertile valleys of Maharashtra, the mountain valleys of the Syhadri range.—*Wils. Gloss.*

MAWALI, a Bedouin tribe between Aleppo and Damascus.

MAWAR-u-NAHR is the geographical term in use by Arab geographers to designate the vast plains extending westward from the Pamir steppe, watered by the Oxus and Jaxartes (the Amu Darya and Syr Darya). It is the Scythia intra-Imaum of ancient classical geography, and the Transoxiana of modern geographers. Beyond this region Asia (Scythia extra-Imaum) was occupied by the races known as Turks and Tartars. Mawar-u-Nahr is bounded on the north by the Jaxartes (Syr Darya), on the west by the Caspian Sea, and on the east by Mount Imaus. Large portions of it are desert, but others are susceptible of high cultivation. Most of the fixed inhabitants are Persians, and all the moving shepherds Uzbak.

MAYA, an ancient author on Hindu architecture. He was a Danava, and built the palace of Yudishthra.

MAYA. The Vedantist school of Hindu philosophy affirm that matter exists not independent of perception, and that substances are indebted for their seeming reality to the ideas of the mind. All that we see is Maya, deception and illusion. There are no two things in existence, there is but one in all. There is no second, no matter, there is spirit alone. The world is not God, but there is nothing but God in the world. In this view, Maya morally means nothing more than the nothingness of this world; poetically, the inability of man to appreciate the world in which he lives, and, philosophically, it is identical with the idealism of Bentley. Brahma says, in this life, man, as in a dream, finds delight in eating, drinking, and other enjoyments, but as soon as he awakes, they yield no longer pleasure, for the joys and pleasures of his life are as unreal

as dreams. By devout abstraction (that is, by meditating on God) man awakes to a knowledge of divine truths, and finds his former enjoyments nothing but illusion. Thus, a supreme eternal Spirit, the Creator of all, pervades all, and will finally destroy all; in fine, all things are Maya which do not proceed from the light of divine knowledge. By the Vaishnava, Lakshmi is called Maya or Ada Maya, by the Saiva it is Durga.

MAYA AH. BURM. A tree said to grow in the celestial regions, and to be a favourite food of the nat.

May-byoung, a hard, tough, knotty wood, which the Tavoyers select for anchors to their large boats, wooden anchors loaded with stones constituting the greater part in use.

May-gyee, tamarind tree.

May-klin, a timber used for rudders and anchors.

May-maka, a timber used in ship-building

May-rang, a timber said to be very durable.

May-to-bek, in Tavoy, a wood used for the bottoms of ships; preferred to teak.

May-yam, a Tavoy timber; an indestructible, strong, heavy, dark-red wood.

Maza-neng, in Amherst; a close-grained wood, nearly allied to teak. It is used for house-posts, carts, boats, paddles, oars, etc.

MAYA SHUTR ARABI. ARAB.? Rennet from stomach of camels. The genuine article is brought from Arabia, and sells at about 4 oz. for 8 rupees.

MAYFLOWER, a ship sent from Gombroon to Masulipatam by the English East India Company about 6th May 1659. It has been supposed to be the same ship which landed with the Pilgrim Fathers from Plymouth, in America, 22d December 1620.

MAY-KUANG, a deep, broad river of Cambodia. It takes its rise in Tibet, and flows through Laos, Cambodia, and Cochin-China, forming a delta at its entering the China Sea by numerous channels.

MAYO, EARL OF, K.P., was Viceroy and Governor-General of India from the 12th January 1869 till his death at Port Blair, where he was assassinated, on the 8th February 1872, by a Pathan convict. The two great administrative measures of his rule were the institution of a Department of Agriculture, Revenue, and Commerce, and a Statistical Survey of India. A Memorial Hall was erected to his memory at Allahabad,—'Dedicated to the memory of Richard Southwell Bourke, Earl of Mayo, K.P., M.A., P.C., LL.D., some time Viceroy and Governor-General of British India, who, after three years of beneficent rule, during which he inaugurated many wise measures, and won the regard of all classes, fell beneath the hand of an assassin at Port Blair, Andaman Islands, on the 8th of February 1872.' This tablet is set in the centre of a frame, of which the late Earl's coat of arms, with the motto, 'A cruce salus,' artistically done in marble, in relief, forms a conspicuous feature. He did much to develop the extensive salt mines in Jhelum district, Panjab; lat. 32° 39′ 30″ N., long. 73° 3′ E. The mineral occurs in the chain of hills known as the Salt Range, the beds cropping out from the red marls and sandstones of the Devonian group, on the southern escarpment of the hills. They run throughout the whole length of the system in layers of considerable thickness, sometimes standing out in the form of solid salt cliffs, as at Kalabagh on the Indus.—*Imp. Gaz.*

MA YO. CHIN. Local anæsthetics. The flowers of a species of Cannabis, called Ho-ma, and those of the Datura (Man-tou-lo) were formerly in China infused in wine and drunk, as a stupefying medicine preparatory to acupuncture, the opening of abscesses, or the application of the actual cautery. A solanaccous plant called Yah-puh-lu, probably identical with the Atropa mandragora, is said to be capable of causing a trance of three days' duration. Aconite root, the tubers of Pinellia tuberifera, long pepper, the root of Heterotropa asaroides, the flowers of Hyoscamus, Azalea, Andromeda, and Rhododendron, the tubers of Arisæma and of Arum pentaphyllum, a gum-resin called Mwan-hiäng, are all reputed anæsthetics. Robbers use the last substance to lull their victims to sleep.—*Smith.*

MAY-POLE. These are erected at the entrance of every Hindu village in the happy vassant or spring time, whose concluding festival is the Holi Saturnalia. Every pole has a bundle of hay or straw tied at the top, and some have a cross stick like arms and a flag flying; but in many parts of the Pat'har, the more symbolic plough is substituted, dedicated to the goddess of fruition, and serving the double purpose of a spring-pole, and frightening the deer from nibbling the young corn.—*Tod's Rajasthan*, ii. p. 662.

MAYT. ARAB. Dead, a dead body. Bahr-ul-Mayt, the Dead Sea, or Lake Asphaltites.—*Catafago.*

MAYURU-PINCH'HA. SANSK. The peacock fan, which formed one of the insignia of royalty of the Chalukya dynasty when ruling at Kalian.

MAYWAY-ka-TABAK. HIND. The fairy fruit tray.

MAZAFFAR JUNG, the title of the favourite grandson of Nizam-ul-Mulk, his name being Hadayat Mohi-ud-Din. After the death of Nizam-ul-Mulk, he strove to attain the sovereignty of the Dekhan against his uncle Nasir Jung, and entered into agreements with Chanda Sahib and the French. He was present with Chanda Sahib at the battle of Ambur, where Anwar-ud-Din fell. He gave Masulipatam to Dupleix, but was seized and imprisoned by Nasir Jung. His uncle Nasir Jung was assassinated by a conspiracy, and ultimately, after a varying contest, Mazaffar Jung fell at Cuddapah, during the revolt of the Pathan chiefs, by the arm of the nawab of Kurnool.—*Orme.*

MAZAGON, northern suburb of Bombay city, noteworthy as containing the docks and workshops of the Peninsular and Oriental Steam Navigation Company. Lat. 18° 56′ N., long. 72° 53′ E.—*Imp. Gaz.* vi.

MAZANDERAN, a province of Persia, in lat. 35° 45′ to 57° N., and long. 50° 15′ to 54° E., lying between the S. coast of the Caspian and the Elburz mountains. The inhabitants are partly Lek and partly Turk, in a number of separate tribes and clans. The khalif Harun-u-Rashid was interred here. It was for some years the residence of the court of Nadir Shah. It is very mountainous and rich, and the mountains are, with the exception of those in Georgia, the only ones in Persia covered with forests, principally composed of the Azad-darakht, admirably adapted for ship-building. This fact made Peter

the Great and Catherine II. so anxious to obtain possession of Mazanderan and the neighbouring province of Ghilan; and indeed they were ceded to Peter by treaty at one moment, although he was afterwards obliged to relinquish them. Down to the middle of the 19th century, the Russians never ceased their efforts to gain even a small footing in this neighbourhood; and in 1881 Mazanderan was ceded to them, and they succeeded in obtaining and fortifying the small island of Ashounada, close to the shore, in the neighbourhood of Asterabad. Mazanderan is said to have been conquered in pre-historic times by Rustum, who is said to have killed there a number of elephants, an animal now unknown in Persia. Mazanderan and Ghilan may be divided into two distinct climates, the mountainous region, and the flat country along the shore of the Caspian Sea. The small province of Asterabad is sometimes included in Mazanderan, which it resembles in appearance, climate, and productions. This is the ancient Hyrcania, and the paternal estate of the king of Persia, as chief of the Kajar tribe, who have entire possession of the province. It extends to the east as far as long. 58° E., and is divided from Dahestan by the river Ashor. Asterabad is situated near the mouth of the river Easter, on a bay of the Caspian Sea. From Asterabad it is eighteen days' journey to Herat, and from thence, passing through the hilly country of the Hazara people, you arrive at Kābul on the eleventh.—*Malcolm's Persia*, ii. p. 126; *Mohun Lal's Travels*, p. 320; *Kinneir's Memoir*, p. 166; *Ferrier's Journey*, p. 70; *MacGregor*, iv. pp. 318, 327.

MAZARI, a tribe still to a great extent predatory. They continually plundered the river boats, and made frequent incursions into the Bahawulpur territory on the left bank of the Indus. They were often at war with the Bugti and Mari, and did not hesitate to attack the Dumbki and Jakrani at Pulaji, Chatar, etc., from whom they occasionally succeeded in driving off much cattle. The Mazari were the most expert cattle-stealers in the border country, and have the reputation of being brave warriors.

MAZAR-i-SHARIF, a town said to be the burial-place of Ali, and pilgrims visit the tomb. The legend the Uzbaks tell is that when Ali fell his body was placed upon a milk-white she-camel, which was then let loose to go wherever she liked. They had decided to bury the body wherever she first stopped. Far and wide she wandered, all over the world; at last, coming to Mazar-i-Sharif, she stopped and died, and on that same spot Ali was buried by his followers. The Persians dispute the legend, and firmly believe that Ali is buried at Kerbala.

MAZDAC, a religious enthusiast of Istakhr who flourished in the reign of the Sassanian king Kobad, in the 6th century of the Christian era. He set up the doctrine of the community of women.

MAZHAB. Arab. Religion. See Din.

MAZHABI. The Rungret'ha Sikhs are sometimes styled Mazhabi, or of the religion. The name may also be applied from the circumstance that the converts from Islam are so called, and that many sweepers throughout India have become Muhammadans. Churas, a man of the sweeper caste, brought away the remains of Tegh Bahadur from Dehli. Many of that despised, though not oppressed, race have adopted the Sikh faith in the Panjab, and they are commonly known as Rungret'ha Sikhs. Shiah Muhammadans are also called Mazhabi.

MAZINAH, a site on a minar of a mosque, from which the Muazzan gives forth the Azan or summons to prayers.

MAZRA or Majra. Hind. A tilled field ready for sowing; also a hamlet.

MEAD or Metheglin.

Meede, Meedrank,	Dut.	Idromele, ...	It.
Hydromel,	Fr.	Lipez, ...	Rus.
Meht, Meth,	Ger.		

An intoxicating drink made of honey. See Madhu.

MEADOW FOXTAIL GRASS, Alopecurus pratensis, *W.*, grows in Sind. It is much relished by cattle. Meadow grass, in Tenasserim, has one or two representatives among the species of Poa. —*J. A. Murray; Mason.*

MEADOW SAFFRON, Colchicum autumnale. Sorinjan, Arab. A bulbous plant, the roots and seeds of which are employed in medicine.—*Hogg*, p. 737.

MEAL, Farina.

Mil,	Dut.	Tapung, Pulur, .	Mal.
Farine, .	Fr., It.	Lumat, ...	,,
Mehl, .	Ger.	Muka, ...	Rus.

The edible parts of wheat, oats, rye, barley, and pulse of different kinds, ground into a coarse flour. —*Faulkner; M'Culloch.*

MEALY BUG or White Bug of Ceylon coffee planters is the Pseudococcus adonidum. The male insect is of a dirty brownish colour, and slightly hairy. It is very minute (very much smaller than the females; only about half a line long), and resembles certain small Ephemeridæ or May flies. The female is oval, brownish-purple, covered with a white mealy powder, which forms a stiff fringe at the margin and at the extremity of the abdomen two setæ. The larvæ and pupæ are active and move about. The insects in all stages of development are found in Ceylon all the year round, chiefly in dry and hot localities, on the branches of trees, and on the roots to one foot under ground. Mr. Nietner says it is identical with the species naturalized in the conservatories of Europe. It is preyed upon by the Scymnus rotundatus, a minute beetle of the lady-bird tribe, of the size of a pin's head, black and pubescent; also the yellow-coloured and common Encyrtus Nietneri and the black-coloured scarce Chartococcus musciformis, two minute Hymenoptera (wasps), only $\frac{1}{4}$" long, and the minute whitish mite Acarus translucens. Of the members of this family of insects, the Coccidæ, some, as the cochineal and lac insects, are of great economical importance; but others, as the sugar-cane blight of the Mauritius, the aspidiotus, and the coffee bug, are excessively baneful to the gardener and agriculturist.—*Nietner.*

MEANGIS or Menangus, a group of islands on the S. coast of Mindanao, in about lat. 5° N., and long. 127° 45′ E. There are three islands of moderate size, with some smaller ones adjoining; they lie about 36 or 42 miles N.E. of the Talour Islands. Sangir and the numerous islands of this group, in the Celebes, occupy a superficies of 13 square leagues; the Tolaut and the Meangis Islands united are 18 square leagues. These

archipelagoes, formerly subject to the authority of the sultans of Ternate, now make part of the larger Dutch Residency of Menado. Several extinct volcanoes, and some still in full action, are found in the Sangir group; the devastations which they commit from time to time have often been fatal to the inhabitants. The eruption of Duwana, in 1808, completely annihilated the village of Tagalando, destroyed all the surrounding forests, and suddenly deprived the inhabitants of all means of livelihood by the destruction of their fields. The Gunong Api causes numerous ravages in the island of Siau; its peak, 6000 feet above the level of the sea, forms the culminating point of this group. Gunong Api covers with its base all the northern part of Sangir-besar. In 1812 torrents of lava from it destroyed the extensive forests of cocoanut trees with which this part of the island was covered, and caused the death of many of the inhabitants. These islands furnish more than 25 kinds of wood suited for building and furniture. Two harbours, sheltered from all winds, exist in the larger Sangir, one in the Bay of Taruna, the other, called Midelu, on the eastern side.—*Journ. Ind. Arch.*, 1850, p. 764; *Horsburgh*.

MEAOU. CHIN. A funereal temple.

MEASLES, in pork, is a tainted form caused by the introduction of the eggs of the Tænia solium into the intestines. See Cysticercus.

MEASURES. See Weights and Measures.

MECCA, Medina, Aden, Sana the capital of Yemen, and Daraieh, are the chief towns of Arabia. Mecca is a holy city of the Muhammadans. It is situated in an arid and barren tract of country, a full day's journey from the seaport town of Jedda. In the summer months the heat is excessive. There are several structures in it of historical interest, one of them, the Ka'ba, so called from its form being nearly a cube (kaab). It is a massive structure of grey Mecca stone, nearly 44 feet long by 35 feet wide, and from 35 to 40 feet high, with a flat roof, supported by two columns, between which are hundreds of lamps hung in festoons. The Ka'ba is encircled by an immense curtain (kessoua) of rich black stuff, on which appears in large Arabic characters the essence of the Muhammadan creed, 'There is no other deity but God, and Mahomed is the prophet of God,' also some prayers worked in gold thread. Beyond these are the mambar (pulpit), Al Bab-us-Salam, and the buildings enclosing the well of Zamzam. Serving as an upper chamber to this structure is the Makam-us-Shafiah, and opposite to the remaining three sides of the Ka'ba are the makam of the other orthodox sects, viz. the Hanefi, the Hanbali, and Maleki. There are arcades around the square in which the Ka'ba stands. Built into the Ka'ba wall is the black stone, Hajar-us-Siah, said to have been brought by the angel Gabriel in order to the construction of that edifice. The stone, according to the legend, was at first of a bright white colour, but is absolutely black or deep reddish-brown. This stone every Muhammadan pilgrim must kiss, or at least touch, every time he goes round the Ka'ba. Neither the stone of Abraham nor that of Ishmael receives the same honours; pilgrims are not obliged either to visit or to kiss them. The Arabs venerate the Ka'ba as having been built by Abraham, and having been his house of prayer. Within the same enclosure is the well of Zamzam. Hagar, when banished by her master, set little Ishmael down here while she should find some water to quench his thirst. Another ornament of the Ka'ba is a row of metal pillars surrounding it. The black stone has suffered from the iconoclastic principle of Muhammadanism, having once narrowly escaped destruction by order of the ruler of Egypt. In these days the metal rim serves as a protection as well as an ornament. Its height from the ground is 4 feet 9 inches; Ali Bey places it 42 inches above the pavement.

Mecca territory is reputed sacred to a certain distance round, which is indicated by marks set for this purpose. Every person, it is assumed, should perform the pilgrimage to Mecca who has a beast to ride upon, and who can supply himself with provisions for the journey. Ul-Shaffei says, 'Those who have money, if they cannot go, should perform this journey by deputy. Malik thinks all who have strength sufficient should go to Mecca; but Ul-Hanifa deems both money and health of body requisite before this duty can be deemed obligatory. During the pilgrimage, the city becomes an immense fair, in which products of Arabia are exchanged for the richest and most valuable commodities of Persia, India, and Europe, to the amount of several millions of dollars. There are few khans, baths, serais, or even mosques, and there are few cisterns for collecting rain; the well-water is brackish, and during the pilgrimage sweet water becomes an absolute scarcity. At other times the city is chiefly supplied by a conduit coming from the vicinity of Arafat, a distance of six hours' journey. This extensive work was constructed by Zobeida, wife of Harun-ur-Rashid. Year after year thousands of unfortunate and improvident pilgrims crowd these places, and are left to look after themselves as they please, without the slightest regard being had to sanitation. In 1881 cholera broke out with great severity at Mecca. On the day of pilgrimage the preacher sits on a camel, because the prophet, during his last pilgrimage, being sick, made the tour of the Ka'ba on his camel, and remained on it while he preached. Mount Arafat (recognition) is so called because Abraham the patriarch, after the vision in which he was commanded to sacrifice his son Ishmael, wandered about for a day in perplexity as to whether the order came from God. On the second day, being at Arafat, he had a second vision, and he then recognised, *i.e.* arafa, its truth. In Mecca immorality is conspicuous, and the pilgrim may often apply to himself the words of Umr-ibn-Ali Rabiah on his return from Mecca—'I set out in hope of lightening the burden of my sins, and returned bringing with me a fresh load of transgressions.'

The city is chiefly situated in the wadi of the same name, which is also called Mekka, a narrow sandy valley which runs north and south, but inclines towards the N.W. at the latter extremity of the town. The city, with the exception of three castellated buildings and a few watch-towers, is defenceless. Around are several sandy wadi, which are separated from the desert by a low barren chain of hills from 200 to 500 feet in height, the most elevated part of which is on the eastern side. Mecca houses are built of stone, usually three storeys high, with terraced roofs

surrounded by open parapet walls, and having the unusual addition of numerous windows, shaded by lightly-formed reed blinds; the aspect is more European than oriental, especially as the streets are very wide, in order to afford the necessary space for an addition of about 50,000 to 100,000 to the permanent inhabitants, who are between 18,000 and 30,000 souls. Ali Bey (A.D. 1807) calculates 83,000 pilgrims; Burckhardt (1814), 70,000. Burton reduced it, in 1853, to 50,000. In A.D. 1854, owing to political causes, it fell to about 25,000. Of these at least 10,000 are Meccans, as every one that can leave the city does so at pilgrimage time. A visit to the Masjid-un-Nabawi, and the holy spots within it, is technically called Ziyarat or Visitation. The visitor, who approaches the sanctuary as a matter of religious ceremony, is called Zair, his conductor Muzawwir, whereas the pilgrim at Mecca becomes a Haji. The Masjid-un-Nabawi, or the Prophet's Mosque, is one of the Haramain, or the Two Sanctuaries of El Islam, and is the second of their three most venerable places of worship in the world, the other two being the Masjid-ul-Haram in the centre of the town of Mecca (Mecca connected with Abraham) and the Masjid-ul-Aksa of Jerusalem (the peculiar place of Solomon). Muhammadans have the largest cathedral in the world, St. Sophia's at Constantinople. Next to this ranks St. Peter's at Rome; thirdly the Jamma Masjid, or Cathedral of the old Muhammadan city of Bijapur in India; the fourth is St. Paul's, London. It is to Walid the First (A.H. 88) that the Saracenic mosque-architecture mainly owes its present form. He had every advantage of borrowing from Christian, Persian, and even Indian art. From the first he took the dome, from the second the cloister,—it may have been naturalized in Arábia before his time,—and possibly from the third the minaret and the prayer-niche. The last appears to be a peculiarly Hindu feature in sacred buildings, intended to contain the idol, and to support the lamps, flowers, and other offerings placed before it. Mecca has as many as 29 designations, such as Om-el-Kora (Mother of Towns), Balad-el-Amin (Region of the Faithful).

Six Christians of Europe are known to have visited Mecca: Lodovica Bartema, a gentleman of Rome, visited Mecca A.D. 1503; Joseph Pitts, of Exeter, A.D. 1678; John Lewis Burckhardt, A.D. 1814; Lieutenant Richard Burton, of the Bombay Army, A.D. 1853; Herman Bicknell, the translator of Hafiz; and T. F. Keane, who resided there six months, and afterwards went on to Medina, and published his pilgrimages. It reads like one of those stories which are to be found in the pages of juvenile magazines. During the pilgrim season 1877–1878, the author, apparently a light-hearted young sailor, found himself at Jedda, and conceived the audacious idea of making a pilgrimage to the holy shrine. Unlike his great predecessors, Burckhardt and Richard Burton, he did not prepare himself for the task by long study and experience of eastern tongues and manners; still less did he take the preliminary precautions adopted by Herman Bicknell, who qualified as a Muslim at Cairo before setting out for Mecca. On the contrary, so slight was his acquaintance with oriental languages, that he seems at first to have adopted the name of Abdur Muhammad; a title that is not only impossible, grammatically and philologically, but offensive to Muslim ears. A kind hint from a travelling companion, a young Indian nobleman to whose suite he attached himself, induced him to exchange his preposterous appellation for the more reasonable one of Muhammad Amin.

MECH and Kachari, according to Colonel Dalton, are considered to be the same people, or at least of common origin. Buchanan calls them a tribe of Kamrup, who appeared to have undergone great changes. The large tract of country called Mechpara, in the Gowalpara district, no doubt took its name from them; and its proprietor, Colonel Dalton says, is a Mech; but he and most of his people repudiate this origin, and call themselves Rajbansi. The Mech are to be found in the Bhutan Dwars, and they extend from thence in a westerly direction into the Nepal Terai, as far as the Konki river, subject respectively to the Nepalese, Sikkim, Bhutan, and British Governments. Their habits and customs are found much modified by the people with whom they come in contact, viz. the Pani Kocchi, Rajbansi, Dhimal, Thawa, and Garo on one side, and the Limbu, Kerauti, Lepcha, Murmi, and Bhutia on the other. They are fairer than the Kocchi, and have more markedly the Mongolian characteristics, but accompanied by a softness of outline which distinguishes them readily from the Mongoloid Lepcha, Limbu, and Bhutia. They are said also to resemble the Mug and Burmese, and to be, like them and like the Khasiya, greatly addicted to drinking spirits, smoking, and eating the betel leaf. It is said that when living beyond the pale of Hindu influence they are as omnivorous a race as any in the world, but they will not eat the flesh of the elephant. They are very migratory, continually shifting their cultivation and abodes that they may have the full benefit of the virgin forests to which they cling. It is their love for such forests that retains them under Nepalese or Bhutan rule. The Mechs are possessed of a physical constitution that enables them to live and flourish all the year through in a malarious tract which is absolutely fatal to strangers, and their rude methods of agriculture are gradually rendering the country habitable for successors of a superior race.

The Rajbansi tribe is identical with the Kocch of Assam and of Koch-Behar.

The Mech language is not written, and is apparently of Bengali origin. They never live at elevations higher than from 800 to 1000 feet above the sea, and prefer cultivation in the clearances of the Terai. The Bhutan Mech are a quiet, inoffensive, weak race; they are precisely the same class as the men inhabiting the British Terai; like them they appear to enjoy perfect immunity from the ill effects of malaria. They are, however, a finer and less sickly and sallow-looking set than the Mech of the Darjiling Terai, probably because the Bhutan Terai is more healthy and drier than the British Terai. They worship the Sij (Euphorbia) as the emblem of the supreme deity, like the Kachari, and they call themselves Bodo or Boro, which means a great people, and Rangta, a heavenly, and other designations in which the Kachari rejoice.

In the census report of 1881 the Rajbansi are returned as 106,376; the Kachari, 281,611; and the Kocch, 1,878,804. The numbers of Bodo or Boro, Bhutia, Khasiya, Lepcha, Limbu, Mech, Mug, and Pani Kocch, and Rangta are not

given.—*Mr. (Sir) George Campbell*, p. 58; *Dalton Ethnol. of Bengal*; *Imperial Gazetteer*; *Census Report.*

MECONOPSIS ACULEATA, Prickly poppy.
Guddikum, Gudia, HIND. | Kanta, . . . PANJAB.

Meconopsis is from μηκων, a poppy, and οψις, a resemblance, a genus of plants belonging to the natural order Papaveraceæ, and formerly referred to Papaver. This species is found at Kaghan, in the Sutlej valley, between Rampur and Sungnam, at an elevation of 10,000 to 12,000 feet; also in Nepal, Chur, Kedarkanta, and Pir Panjal. Flowers blue-purple, showy. The roots are reputed to be exceedingly narcotic, but an alcoholic extract of one drachm of the root given to a small dog produced no perceptible effect. Meconopsis Nepalensis is a Nepal plant, and is described as being extremely poisonous, especially its roots. Meconopsis Wallichii, *Hooker*, is the blue poppy of Mount Tonglo, on the Sikkim Himalaya at 12,000 feet.—*Eng. Cyc.*; *O'Sh.*; *Cleghorn*; *Royle's Him.*

MED or Medi, a Scythic tribe that colonized the Panjab. General Cunningham says the Med or Mand are almost certainly the representatives of the Mandrieni, who lived near the Mandrus river, to the south of the Oxus; and as their name is found in the Panjab from the beginning of the Christian era downwards, he concludes that they must have accompanied their neighbours the Jatii or Jat on their forced migrations to Ariana and India. In the classical writings the name is found as Medi and Manduevi, and in the Muhammadan writers as Med and Mand. The tribe may have been transplanted to the banks of the Indus, when the Medo-Persian empire extended that far east; or they may have been pressed south-easterly by intruding Scythians, or have left during the persecution of the Magi, who constituted one of the six tribes of Medes. Admitting that the Jartaka of the Mahabharata and the Puranas represent the Jat, the Madra also mentioned there must be regarded as representing the Med, confirming thereby the antiquity and synchronisms of these two races on the banks of the Indus. The Med devoted themselves to a pastoral life, repeatedly invaded the territories of the Jat, putting them to great distress, and compelling them to cross the river; but subsequently the Jat, being accustomed to the use of boats, recrossed and defeated the Med, whose country they plundered. They made up their differences, and asked Daryōdhana, king of Hastinapur, to send them a king, and he sent his sister Dassal (Dahsalu), wife of Jayadratha, who made Askalandha her capital, perhaps the Uch of later times. After a reign of more than 20 years, Jayadratha was killed on the fatal field of Thanesar, and his widow burned herself on his funeral pile. On the same field the Bharata dynasty was extinguished. The earliest historical notice of the Med race is by Virgil, who calls the Jhelum, Medus Hydaspes. This epithet is explained by a statement of Vibius Sequester, which makes the Hydaspes flow past the city of Media. This is the same place as Ptolemy's Euthymedia, which was either on or near the same river, and above Bukephala. Also in the Peutingerian tables, which are not later than A.D. 250, the country on the Hydaspes is called Media. From this evidence, the Medi or Med were in the Panjab as early at least as the time of Virgil, or B.C. 40–30. Shortly thereafter, about B.C. 30–20, the Med seem to have been forced southwards into Sind, where the Jat long resented their intrusion. The Erythræan Periplus mentions that about A.D. 100, the rulers of Minnegara were rival Parthians, who were mutually expelling each other. When the Muhammadans arrived in Sind, they found the Med or Mand firmly established there along with their former rivals the Jat. Ibn Haukal describes the Mand of his time, about A.D. 977, as occupying the banks of the Indus from Multan to the sea, and to the desert between Makran and Famhal. Masudi, who visited India A.D. 915–16, calls them residing in Sind. During the period of the Arab occupation of Sind, Muhammad Kasim is represented as making peace with the Med of Saurashtra, seafarers and pirates, with whom the men of Basra were then at war. In the Muhammadan period, Amran, the Barmekide governor of Sind, directed an expedition against the Med, advancing from several directions, and reduced them to great extremities. Nevertheless, in the time of Masudi, the inhabitants of Mansura were obliged continually to protect themselves against Med aggressions. They have remained in this locality ever since, for there can be no doubt but that they are now represented by the Mer of the Aravalli range to the east of the Indus, of Kattyawar to the south, and of Baluchistan to the west. The name of Mer or Mand is still found in many parts of the Panjab, as in Meror of the Bari and Rechna Doabs, in Mera, Mandra, and Mandanpur of the Sind-Sagar Doab, and in Mandali of Multan, offering strong evidence that the Med or Mer were the first Indo-Scythic conquerors of, and once the dominant race in, the Panjab. Meris or Mœris was the king of Pattala who, on the approach of Alexander, abandoned his capital and fled to the mountains; he was possibly a Mer. The Mer of the Aravalli are but little advanced beyond the tract where the Med, a thousand years ago, were a numerous and thriving population. Their brethren the Mena can be traced in their original seats to the bank of the Indus, and Mer still reside in Kattyawar, the Saurashtrian peninsula, which was the nursery of the piratical expeditions; and the Mer, Mena, and Med seem identical. Med still exist both to the E. and W. of the Indus, and those on the coast, unable to practise piracy, after the manner of their ancestors, follow the occupation of fishermen. To the east they are found roving on the borders of Sind and Jodhpur, the seats of their occupation during the Arab period; and to the west they are found in the little ports of Mekran, from Sanmiani to Charbar, divided into the clans of Gazbur, Hormari, Jellarzai, and Chelmarzai. When the Muhammadans first appeared in Sind, towards the end of the 7th century, Zath (Jat) and Med were the chief population of the country. But the original seat of the Med or Medi was in the Panjab proper, from which Mr. Thomas concludes that the original seat of the Jatii or Jat colony was in Sind.—*Elliot's History of India.*

MEDA. TEL. Tetranthera Roxburghii, T. monopetala, *Nees*, T. apetala, *R.* Meda lakri is one of the ashta varga or eight medicinal roots of the Hindus; Meda-chob is the wood, and Meda-saq the bark.—*As. Res.* xiii. p. 410.

MEDA. KARN. Médaravan, TAM.; Medara, TEL. A helot race occupied in cutting and selling bamboos, or making and vending bamboo baskets. In Coorg they are umbrella and basket makers and drummers; they dress like Coorgs, but eat beef. Medara, a worker in bamboo.

MEDE. The ancient territory of Medea is now included in modern Persia. The rise of the Median nation is wrapped in profound obscurity. They first appear about B.C. 850. The word Madai occurs in Genesis x. 2, along with Gomer, Javan, Magog, Meshech, and Tubal. Berosus mentions the Medes as having conquered Babylon prior to B.C. 2000, and held it for 224 years. History first notices the Medes in the latter half of the 9th century B.C. Shalmaneser II. led an expedition into Medea. Cyaxares, B.C. 632, led an invading host of Medes against Nineveh, but was met and defeated by Assur-Bani-pal at Adiabene, and the father of Cyaxares was among the slain. Cyaxares again led an army, and this time was victorious, but was prevented following up his victory by a Scythian inroad on his own dominions.

The Mede were a dominant race dwelling in part of modern Persia, and were classed as Arii. The Mede had many colonies. Herodotus mentions the Sigynnæ, a colony settled beyond the Danube. Medians are also said by Sallust to have accompanied the expedition of Hercules when he crossed over from Spain into Africa. The Sauromatæ were Median colonists beyond the Tanais or Don, and the Matienoi, Matienes, Kharimatai, and possibly the Mares, were Caucasian colonists from Medea, preserving in their names the national appellation of Mada or Madia.

The Mede occupied the western part of the table-land of Iran and the bordering mountains of Kurdistan, from the frontier of Persis to the mountains of Armenia and the range of Elburz, which skirts the southern shores of the Caspian. The monarchy, as conquered by Cyrus and recovered by Darius, extended over the eastern part of the table-land as far as the Suliman mountains, which divide it from the Indus valley, and also the strip of coast between Mount Elburz and the Caspian and the other northern slopes which descend to the valley of the Oxus. These may be called the natural limits of the Medo-Persian empire, and they correspond to the extent of modern Persia, except that the eastern part of the table-land has been lost to Persia by the incursions of the Turkomans, and the Afghans, and the Baluch. But beyond Iran, the great Achæmid kings extended their power westward over the former dominions of Assyria, Babylon, and Syria, over Egypt and the region of Cyrene, and to the N.W. over Asia Minor and its adjacent islands, and beyond the Hellespont over Thrace. This wide empire was the Persia known to the Greeks from the reign of Darius to the conquest of Alexander, by whom the monarchy was overthrown in B.C. 330. This was the empire ruled over by Ahasuerus or Xerxes, noticed in Esther i. 1, an hundred and seven and twenty provinces. In Africa the furthest western boundary was at the bottom of the Great Syrtis. Modern Persia has only eleven of those provinces. The nations of Iran proper, or the Aryan stock of languages, comprise those of Medea and Persia. It includes the Zend of the cuneiform inscriptions and the Zendavesta; the younger Pehlavi of the Sassanians and the Pazend, the mother of the present or modern Persian tongue. The Pushtu or language of the Afghans belongs to the same branch. The Iranian languages of British India are represented by the Sanskrit and her daughters. —*Rawl.* ii. 385; *Elliot*, p. 525; *Bunsen; Cal. Rev.*

MEDHA. SANSK. Apprehension or conception, from Medh, to be apt to learn.

MEDHI, in Assam, a member of a monastery; Medhi raj is the chief Medhi.

MEDHURST, a British consul in China, author of the Chinese and their Rebellion; also of Ancient China, the Shu King, or the Historical Classic, and A Glance at the Interior of China, London 1850.

MEDIA-BHUMI. Most nations have indulged in the desire of fixing the source whence they issued, and few spots possess more interest than the elevated Media-Bhumi or central region of Asia, where the Amu, Oxus or Jihun, and other rivers have their rise, and in which both the Surya and Indu races (Saca) claim the hill of Sumeru as sacred to a great patriarchal ancestor, whence they migrated eastward. The Hindus do not make India within the Indus the cradle of their race; but west, amidst the hills of Caucasus, whence the sons of Vaivaswata, or the sun-born, migrated eastward to the Indus and Ganges, and founded their first establishment in Kosulya, the capital of Ayodhya or Oudh.—*Tod's Rajasthan*, i. p. 24.

MEDICAGO ARBOREA, *Linn.*, is the shrubby yellow lucerne of S. Europe.

Medicago lupulina, the black medich of Europe, Asia, and North America, useful as pasture grass.

Medicago radiata, *Smith.*

Muh-suh, ... CHIN. | Herdsman's root, . ENG.

This leguminous forage plant was introduced from Ferghana into China by Chang-k'ien of the Han dynasty. Chinese farmers use the legumes as food and as forage for cattle, and get three mowings in a year.—*Smith.*

Medicago sativa, *L.*, purple lucerne.

Al-falfa, ... ARAB? | Valaiti gawuth, . MAHR.
Hol, Afeh, . . LADAKH. | Rishka, Dureshta, PUSHT.

Lucerne grows wild in Kashmir, in Ladakh, in the Pir Panjal range, and in the N.W. Himalaya, from 5000 to 12,000 feet. It is cultivated extensively in Afghanistan, where it is used as fodder for horses, etc., and Moorcroft says also in Ladakh, and that fields of it continue to be regularly cut for 50 or 60 years. This is the Μηδική of Theophrastus (Plant. de Caus. lib. 2, cap. 20) and the Medica of Pliny (lib. 2, cap. 20; also 18, cap. 20). It is cultivated in the Dekhan for feeding horses; also in Gujerat, where it is coming into use among the natives as green food for cattle. It is propagated by seed, and may be sown at any season, in bed or rows. It requires much water, and each plant should have five or six inches of space allowed to it. Cultivators generally cut it as it begins to blossom, when fresh shoots spring up, and by manuring it occasionally a succession of crops is continued in this way for several months.—*Stewart; Riddell.*

MEDICINE. The medical art, amongst the natives of the south and east of Asia, has had the knowledge of western Europe added to it during the 16th and up to the 19th centuries, and from Europe to the Pacific Ocean. In Egypt, in Africa, in Turkey, and Persia, and in the British, French,

Sanskrit medical shastras of Charaka and Susruta. Thus, in teaching medicine to the Hindus and Muhammadans, Europeans are literally merely repaying what, for at least seventeen centuries, they owed to India. The first establishment which British enterprise obtained in India, was won by the science and the noble disinterested patriotism of two British surgeons,—Gabriel Broughton, who cured Shah Jahan's daughter of a frightful burn, and William Hamilton, who cured an ailment of Feroz Shah. Several of the medical officers of the E. I. Company's Service have been distinguished as authors, as botanists, as zoologists, as philologists, as statisticians, as historians, and as physicians. Amongst them may be named Sir Whitelaw Ainslie, James Anderson, Sir James Annesley, Sir George Birdwood, Buchanan Hamilton, Cantor, Crawfurd, Francis Day, Sir Joseph Fayrer, John Borthwick Gilchrist, William Griffiths, William Hamilton, Jerdon, Sir William Marsden, M'Clelland, Sir William O'Shaughnessy, Richardson, Roxburgh, John Forbes Royle, Thomson, Nathanael Wallich, Edward Waring, Robert Wight, Horace Hayman Wilson. On the 10th January 1836, pandit Mudusudun Gupta, a medical teacher of the Baid or physician caste, began to teach the Hindus the study of practical anatomy by dissecting a human body with his own hand. And by 1872, about 1200 native students in the medical colleges of India were following his example. Also Hindu gentlemen, who, having passed through a course of study as complete as any school in Europe can afford, have lately received in the Calcutta University that high degree of doctor, which in Salamanca of old gave the humblest scholar right of place among the superb Hidalgos of Spain, which in England ranks the physician and his brother doctor graduates only a few degrees below nobility. Doctor Chuckerbutty, a native of Bengal, and the first of his nation who achieved the honour of becoming a medical officer in Her Majesty's Indian army, first projected the Bengal Medical Association. About the year 1840, the plan of a Medical-Mission was first recommended for China,—that is, of a Christian mission,—one main object of which was the conversion of the natives, the missionaries being medical men, securing an introduction through the practice of their profession. The arrangement seemed to be, for China, one of the best that could be conceived. And a similar plan has been adopted in India, in which Christian missionaries practise medicine, whilst instructing in their own doctrines. The Rev. Drs. Scudder, Strachan, Carslaw, Elder, Elmslie, Valentine, Parker, Green, Williams, Chester, Palmer, and Paterson have taught a pure faith to, and cured the bodily ailments of, the people, and their names will long be remembered.

S.E. Asia.—The books in use in Asia amongst the Buddhist religionists, the Hindus, the Chinese, and the Muhammadans, are all of ancient date. The Burmese obtained from India their theory of medical science, and most of the medical writings in the hands of their practitioners are translations from the Sanskrit into the Pali, Burmese, or Shan languages. The principal of them are the Ayur Veda by king Dhanwantari of Benares, of which an epitome has been framed called after that sovereign, who seems to have lived upwards of a thousand years before the Christian era. They have also Sasruta's book, called after its author, whose era was seemingly between the 9th and 5th centuries before Christ. The Drebyaguna Pudartha, a translation from the Sanskrit, purports to give a philosophical account of the physical, natural, medicinal, and dietetic uses of the different objects in nature. Nidana, still in Sanskrit, is the title of their works on nosology; and the Psara Korimudi and Lekshyana (Deepa) are their standard works on the theory and practice of medicine.

Burma.—There are no medical schools in Native Burma. The majority of the students are trained as private pupils or disciples by the older and more experienced physicians, who teach, feed, and clothe them, receiving in return only respect and obedience. A few of the future physicians are taught the elements of their art in the ky-oung or monasteries of the H'poongyees. There are three classes of physicians,—the Bein-dau-Saya (Bein-dau, medicine, and Saya, teacher), the Dat-Saya (Dat, element), and the Payoga-Saya or Seh-Gzan (Seh, a form of medicine, and Gzan, harsh or rough). The Bein-dau are the most numerous class, and in their practice rely entirely on the exhibition of drugs obtained from the vegetable or mineral kingdoms. They have adopted the theory of the five elements,—earth, water, fire, air, and ether. Amongst the Burmese, the surgeon, even in the oldest and lowest acceptation of the title, does not exist, and there is not the faintest knowledge of anatomy amongst those who in any way practise the healing art. They use no knife or instrument of any kind; all congenital and acquired deformities are left to nature, and even abscesses are never opened. They enforce a rigid abstention from all animal food during sickness and convalescence; and the foreign Chinese, Moghuls, and Armenians living amongst them have all adopted this injurious practice. The after-treatment of their parturient women is barbarous in the extreme. As if the hot, humid climate of that region is not more than enough to depress the woman, immediately after delivery, for the space of nine days, the room she occupies is fumigated with heated bricks placed in water, charcoal fires are kept constantly burning, she is made to sit on warm bricks, and her body is smeared with turmeric and saffron water. The Siamese also follow this exhausting practice.

The Dat-Saya are less numerous than the Bein-dau-Saya, and, like the latter, hold to the elemental theory; they are more frequently called in to prescribe in the advanced stages of disease, when the patients are too weak to bear the effects of drugs, or when the Bein-dau-Saya give up all hopes of the patient's recovery.

The Payoga-Saya are sorcerers or witch doctors, who resort to charms and incantations.

In *Chinese* philosophy, also, the five elements or factors enter into the composition of all things, and this theory guides their medical men. The old medical writers of China were the naturalists of their times, and that country had a long line of imperial, princely, and magisterial observers, who directed their attention to medical matters,—the ancient Shin-nung, Hwang-ti, Chi-peh, Lu-pien, Li-tang-chi, Hwa-to, Wang-shuh, and Li-shi-chin. The good sense of Li-shi-chin to a great extent purged the pages of his cyclopædia, the Pen-

tsau, of nonsensical or disgusting things; but in the present day, as a rule, Chinese doctors employ few mineral or metallic substances in the treatment of internal diseases; and to instruct all of them in the rational uses of mercurial and ferruginous preparations, would be to confer on their country a great boon. The first edition of the Pen-ts'-au-kang-muh was published by the emperor Wan-leh about A.D. 1597, and the last regular reprint appeared in A.D. 1826, the sixth year of the reign of the emperor Tau-fang. In 1884, Surgeon-General C. A. Gordon added largely to our knowledge of Chinese medicine.

Ceylon. — The medical books of the native practitioners of Ceylon are mostly in Sanskrit or in Pali, but written in the Singhalese character, and some of them have been translated into Singhalese. They are in verses and stanzas, and may be arranged in five classes, according to their subjects, viz. :—

On medicinal plants—

Wasudeva Negundo, 938 v.	Namawali Negundo, 290 v.
Saswati ,, 336 ,,	Sara ,, 112 st.

On the nature and symptoms of diseases, and on the anatomy of the human body—

Arishta Sataka, . . 100 st.	Sariru-shana, ? Sutras-thana, ? Rupa Lakshana, ?
Madhaiva Nidana, 1375 v.	

On the qualities and properties of medicinal plants, drugs, etc.—

Guna-patha, 700 stanzas.	Siddhanshudda Negundo, 331 verses.

On the nature and cure of diseases—

Manjusa, . 4770 stanzas.	Sara sangsepa, ?
Yogar-nawa, ?	Chintamani, ?
Wara-sura Sangraha, ?	Vydia-lankara, 278 stanzas.

Commentaries on the Manjusa—

Yogo-pitake.	Kola-wid'hu, 400 sentences
Bhaisajja-kalpa.	Wara-yoga-sara, 5000 ,,
Lakshana Jaya-deva.	Ratna-kana, 4000 ,,

The *Hindu* physicians in British India are designated Baid or Vydian, and there are also many learned pandits practising medicine. The Muhammadan physician is styled Hakim or Tabib; and both of these religious sects have surgical practitioners, who occupy a humble position, as also oculists, cuppers, bleeders, bone-setters. The elemental philosophy is adopted alike by Muhammadans and Hindus; but the former recognise only the four elements of Hippocrates, fire, air, earth, and water, whilst the Hindus have the fifth element in akasa or ether, as adopted by Pythagoras. In the central parts of British India, as in the Central Provinces and at Benares, the medical books in the possession of the Vydians are either in Sanskrit or in translations from that tongue. Their names are—

Koshmabati and Nidan Gudmogdur in Sanskrit.
Sarangdhar-Amrit-Sagar in Sanskrit and Nagari.
Vydia Chintamani, by Dhanwantari? on fevers, nervous affections, and derangements of the urinary system.
Roga Nidhanam, by Dhanwantari? on constitutions, temperaments, and their peculiar diseases.
Vydia Sastram, by Dhanwantari? materia medica.
Dhanwantari Negundo, author unknown, a work on medicine, of great antiquity; very scarce.

Benares, built on the bank of the sacred Ganges, is a holy city of the Hindus, to which many pilgrims resort, and with many wealthy residents. It is a great seat of Hindu learning; but neither there nor in any other part of what is now British India, has there been, for unknown centuries, any Hindu or Muhammadan public school for teaching the theory and practice of medicine. The establishment of such institutions at Calcutta, Madras, Bombay, Nagpur, Lahore, Agra, Dacca, and other places, has been the act of the British, imitated at Hyderabad in the Dekhan by the Nizam, and at Trevandrum by the maharaja of Travancore.

At Benares, as elsewhere in India, those who wish to follow the healing art, whether according to the doctrines of the Hindus or Muhammadans, place themselves under some well-known Vydian or hakim, as pupils or disciples; and throughout that extensive country, the learned men willingly impart instruction gratuitously. The Vydian practitioners of Benares are well supplied with books, some of them in Sanskrit, some in Bengali, some in Hindi, translations from the Sanskrit, but a mention of the names here will suffice—

Anjan Nidhan.	Hriday-dipak Negundo.	Sarangdhar.
Madho Nidhan.	Gandak-rasayan.	Salihotra.
Ajorna.	Lolimbraj.	Shata-sloki.
Ang-prakasham.	Manjari.	Siddha-mantra.
Bhava-prakash.	Madanpal.	Susruta.
Bal-chikitsa.	Nari Pariksha.	Todaraksh.
Gaj-chikitsa.	Nighant.	Taila-lep.
Bangsen.	Pathya-Pathya.	Vishna-nidhi.
Charaka.	Ras-Ratna-Samuch-Chaya.	Vivish-chaya.
Chikitsarjun.	Ras-Kriya.	Vaidya-Rahasya.
Chakratta.	Ras-Manjari.	Vaed-jivan.
Chikitsa Kalika.	Ratna-Mala.	,, mohotsar.
Dhatrimanjari.		,, darpan.
Dhanwantari Negundo.		Yog-chandrika.

In the *Travancore* country three schools of medicine are known. The most generally accepted theory, however, is that taught in the Ashtanga-hirudayam, and its disciples call themselves Ashtanga-hirudaya Vydians. Their therapeutic agents are chiefly vegetable substances, but with a few drugs of mineral origin, of a mild nature. This school prevails throughout North Travancore, Cochin, and Malabar, and seems peculiar to those districts. In South Travancore, where Tamil is largely spoken, the medical practitioners style themselves Chintamani Vydians. They follow the writings of Agastya. In the capital, Trevandrum, also, there was, in 1876, one Muhammadan hakim or physician practising according to the Yunani or Grecian school. He was resorted to by persons wishing aphrodisiac drugs; and the books in his possession are such as are known to other Yunani hakims. The bulk of the Muhammadans in that part of India, however, avail themselves of a physician of one or other of the Hindu schools, which explains why there are so few of the Muhammadan religionists engaged in medical practice. In the capital, where there are many Tamil immigrants from British territory, both of the Hindu systems are in operation. The Ashtanga-hirudaya Vydians are of all classes of the community, from the highest Namburi Brahman to the humblest Chova and Thiea. Among Chintamani Vydians, also, there are some high-caste people, but, generally speaking, the barber caste form the bulk of these practitioners. The Chintamani Vydians use chiefly the writings of Agastya. A large number of his books, printed in Madras in the Tamil language, are sold in Travancore; but his books are also obtainable in manuscript on palm leaves. There are also on palm leaves the books in Sanskrit of Charaka and Susruta, and one called Belam; but they are very scarce, and few practitioners are acquainted with them.

The Ashtanga-hirudayam is said to have been written by Bagada-Chariar, a Brahman convert to Buddhism; and the Travancore people suppose that he obtained his knowledge of medicine from the Buddhists. The book is in Sanskrit, in the Malealam character, written on palm leaves; but few of the practitioners possess a full copy of it. Thirteen of its chapters, with a Malealam explanation, were printed at the Government Press, Calicut, by Mr. Oopoti Cumnen, deputy-collector, Malabar. The complete book, however, has 120 chapters, and treats on hygiene, gives the outlines of anatomy and physiology, practice of medicine, surgery, ophthalmic medicine and surgery, obstetric medicine and surgery, and the manufacture and use of various obstetric and surgical medicines.

Kairava-gramam is an epitome of the Ashtanga-hirudayam. It is on palm leaves, in the Malealam language and character.

Satha-yogam, or the Hundred Modes of Administration, and Sahasra-yogam, or the Thousand Modes of Administration, are partly Sanskrit and partly in Sanskrit mixed with Malealam, a dialect known as the Mani-prasalam. They are palm-leaf books, in the Malealam character, and treat on the preparation of medicines, such as electuaries, decoctions, etc., the modes of administering them, and their uses.

Prayoga-saram describes diseases and their treatment. It is a palm-leaf book, in the Malealam language.

Yoga ratna-samchayam is a palm-leaf book, in the Malealam language. It is descriptive of diseases and their treatment; but also indicates needed incantations and 'danam,' or charitable gifts distributed for the relief of the patients' ailments.

Yoga Mirtham is in print, also on palm leaves, in the Malealam language. It describes the treatment of disease.

Manhali, a palm-leaf book, in the Malealam language, on the treatment of disease.

A few other medical books are still on palm leaves, but have also been printed in Malealam; they are said to be selections from larger works.

Karnatica.—The race who speak the Canarese tongue have been partitioned by several states, part of them under the Mysore kingdom, part of them under the British Presidencies of Madras and Bombay, and a part in the Hyderabad Government dominions. Their medical practitioners are usually known as Vyda and as Chekichika. The Vyda claim to be learned men who have derived their knowledge from the study of books. The latter believe that experience is the great teacher; but on the western side of the Canarese country, pandits also engage in the practice of medicine. Though acknowledging that surgery and midwifery were formerly regarded as branches of the medical art, and in the possession of books on those two subjects, they are all now-a-days physician purists. They possess printed and written and also palm-leaf books. Those of Charaka, Susruta, the Agni Desa, Bhillu Tantra, Parasara Sanhita, Jatukerna Tantra, Atrya Sanhita, Vagbhata, Neghutra Naker, Chekechasura-sungraha, Vidyamruta, Lolumburaja, Sahrungdhara, Madhava Nidana are in Sanskrit, printed in the Nagari character, with a Mahrati commentary. But they are costly, and the people are poor, and parts only of most of them are purchased by the physicians, relating chiefly to internal diseases, or what may be termed medical ailments. Others, Vidyarnava,* Bhasaja Culpa,* Rasaratnakerra,* Shadrasa Negundo,* Dhanwantari Negundo,* Kasava Nidana,* Raja Negundo,* Sata-sloki, Bhoom-Amruta, Jagachoondari, Sarvangasoondari, are also in Sanskrit, in metre, but are all on palm leaves, and the seven marked with an asterisk are incomplete.

The last two of this series, the Jaga and Sarvangasoondari, are on the treatment of venereal complaints. Their remaining works are on surgery and midwifery, and are Salaya, Salakaya, Aupadhanaha, Aurbhara.

In the *Madras Presidency*, where the spoken cultivated Hindu languages are Tamil, Telugu, Canarese, Uriya, Malealam, and Tulu (the people numbering in all about 30,000,000), we find amongst Hindu practitioners medical books in all the languages, but, with the exception of many of the Tamil works, the writers in which seem to have been original authors, most of the treatises appear to have been translations or compilations from the Sanskrit. The first of these to be mentioned are the medical books by *unknown Authors* in Sanskrit:—

Silpey Sastrum, on the arts and manufactures of the Hindus, in Sanskrit, Tamil, and Telugu.

Bhashujah Sarwaswam, on the medicines applicable to a number of diseases.

Vydia Saravali, Sidayoga Ratnavali, Sarasungraham, Shatashuloki, on the medicines applicable to a number of diseases.

Bashajah Sungraham, sometimes called Shatasuloky, a medical work by an ancient doctor. The Bavardah Danyekah and the Chendra Caleh are commentaries on it.

Chunnypatarn Avum, on thirteen kinds of delirium.

Dhanwantari Negundo, a very ancient work on medicine.

Abhidana Ratnamala, also called Shadrasa Negundo, on several medicines not in common use, also on various minerals and metals.

Siddayoga Ratnavali, a desultory work on various diseases, by an ancient author.

Kalpastamum, partly translated by Dr. Heyne.

Agni Purana, an epitome of Hindu learning, one treatise being on the healing art, applicable to man and beast.

Sanskrit Books by known Authors.

Dhanwantari—

- Vydia Chintamani, on the pulse, fevers, spasmodic and nervous affections, derangements of the urinary organs, etc.
- Vydia Shattasloki, on materia medica.
- Gonda Padum, on natural history and the nature of different ailments.
- Kurma Kandum, on the causes of disease.
- Roga Nidanum, on peculiar constitutions and temperaments, and diseases arising therefrom.
- Vydia Sastrum, on materia medica.

Susrutum, by Susruta, on terms and definitions, on the different parts of the body, the nature of diseases, remedies, diet, and general management.

Ashtanga Hirudayam, by Vagabutti Vydia, on general principles, or theory of medicine, on the human frame; the nature of fever and other diseases, remedies for them, pharmacy, diseases of children.

Hirudaya Dipika Negundo, by Bosha-deva, is a dictionary or book of reference to the last.

Rasaratna Samuchayam, by Vagabutti, on pharmaceutical preparations, in which mercury, arsenic, and nine other metals are combined, sulphur and gems, also formulæ for diseases.

Padardha Chandrakah, also called Ayur Veda Rasayanum, by Hamadri, is a part of the Ayur Veda.

Servangascendary Tika, by Aruna Datta, is a commentary on the Ashtanga Hirudayam and the Padardha Chandrakah.

Sekitcha Sara Sungraham, by Vungasha, on fever and other diseases, with their remedies.

Sekitcha Meruta Sagarum, by Devi-Dasi, on diseases resulting from vicious habits.

Rasa-Ratnacaram, by Nityananda Siddah, on pharmaceutical preparations, in which metals enter.

Rasa Saram, by Govind Achari, on metals, gems, pharmacy, and mysteries.

Vydia Chintamani, by Valla-bendra, on diseases and their remedies.

Puga Muni, Chintamani, 700 verses, on chemistry and the science of medicine.
Poraker Vypu, 100 verses, similar to last.
Siddutta Muniar Ganam, 200 verses, partly theological, the partly medical.
Siddutta Muniar Kalpam, 100 verses, on the art of preparing strengthening medicines from various plants.
Ramadever, 500 verses, and Ramadaver, 280 verses, both books treat on corrosive and soluble drugs, also of chemistry and general medicine.
Kamalamuni Sutrum, 77 verses, on chemistry and physics.
Eda-kattu Sidder-pandel, 35 verses, similar to last.
Pali-kani, author of several medical works.

Muhammadan medical practitioners are known by the designations Hakim and Tabib. The former means a scientific or learned man, the latter a physician purist. The Jarah is a surgeon. Muhammadanism, known to its followers as Islam or Din-i-Islam, has been adopted by many nations, but the Arabic and the Persian are the languages chiefly employed by learned men when writing on any scientific subject. Most of the medical books of the old physicians of Turkish Arabia, Syria, Spain, and Northern Persia were in Arabic, some of which have been translated, and a notice of the books in these two languages may now be given.

Arabic Medical Books.

Qanun-fi't-Tibb, the canons of Avicenna, Abu Ali Husain-bin-Abid Allah-bin-Sina, born at Bokhara A.D. 980, died at Hamadan in Persia A.D. 1036. It contains five books
- On the theory and practice of physic.
- On simple or uncompounded medicines, with a description of their qualities and virtues.
- On anatomy and complaints affecting particular parts of the body.
- On diseases in general.
- On compound medicines.

An Arabic edition was printed at Rome A.D. 1595, and a Latin edition at Venice A.D. 1608.

Hal-o-Mujiz-ul-Qanun, annotations by Nafiz-bin-Iwaz on the Mujiz-ul-Qanun-fi't-Tibb, an epitome or commentary, by Ala-ud-Din-Ali-ul-Koreshi-ibn-Nafiz, of the Qanun of Avicenna. Nafiz-bin-Iwaz resided at the court of Ulugh Beg about A.D. 1450.

Sharah-un-Nafisi, same author, a commentary on the above work.

Al-Mughani-fi-Sharh-il-Mujiz, by Sadid-ud-Din Gazaruni, a commentary on the Mujiz of Ala-ud-Din-Ali-bin-Abu-l-Hazim-ul-Koreshi, being a compendium of the science of physic, compiled from the works of Hippocrates, Galen, Avicenna, Honain-ur-Razi, and others. It is arranged into four chapters—
- On the laws of nature, also on the human constitution, and the means of preserving health.
- On the strength of different kinds of food, and of simple and compound medicines.
- On complaints which affect particular parts of the body.
- On diseases in general and their proper remedies.

Sharh-ul-Asbab-wa'l Ilamat, by Nafiz-bin-Iwaz, dedicated to Sultan Ulugh Beg Gurjani, a commentary on the Asbab-wu-Ilamat of Najab-ud-Din Muhammad Umar-us-Samarkandi, a very celebrated treatise on the causes, signs, and remedies of diseases.

Tazkarah Taswidi, by Muhammad Ishaq, a general treatise on medicine.

Hawi-us-Saghir, by Hafiz-Muhammad, a general treatise on medicine.

Bahr-ul-Juahar, an ocean of gems, by Muhammad-bin-Yusuf, a diffuse treatise on general medicine.

Salwa-ul-Mustaham, same author, and similar subject.

Dur-ul-Mantakhab, the pearl of epitome, an abridgment of the Bahr and Salwa; author not known.

Rasalah-i-Tib, do. do.

Taqwim-ul-Adwiah, by Abul Fazal-bin-Ibrahim of Tabreez, the physician, and apothecaries' tables descriptive of the disorders to which each part of the human frame is particularly subject, and the proper medicines detailed.

Makhtasar-u-Jalinus, an abridgment of the work of Galen; same author.

Zabdat-ul-Hikm, by Ahmad-bin-Muhammad, dedicated to Sikander Pasha, rules for the preservation of health, by attention to food, dress, cleanliness, etc.; also a treatise on farriery.

Khoas-ul-Fuakah, same author, an essay on fruits, describing their good and bad properties, particularly those species which are wholesome to be eaten at meals for promoting digestion.

Persian Books.

Zakhirah-i-Kharazam Shahi, by Ismail-bin-Husain-bin-Muhammad Jurjani, a topographical account of Kharazam, its climate, diseases, in ten chapters, A.D. 1110.

Khif-i-Alai, by same author, a treatise on the preservation of health.

Tibb-i-Yadgar, by same author, on medicine, an extensive pharmacopœia, in fourteen chapters.

Aghraz-ul-Tibb, by same author, the whole science of physic, uniting the theory of the ancients with the practice of the moderns.

Kafayat-i-Mujahidin, by Munsur Muhammad, dedicated to Sikandar Shah II. of Dehli, A.D. 1300, on the diseases of women and children, and their treatment.

Dastur-ul-Ilaj, by Sultan Ali of Khorasan A.D. 1334, dedicated to Abu Said Bahadur Khan, emperor of the Moghuls; a diffuse work on the whole practice of physic.

Madan-i-Shifa, by Ali-bin-Husain of Bokhara, A.D. 1368, the Mine of Health, an alphabetical list of all diseases, with the proper method of cure.

Rahat-ul-Insan, by Abd-ul-Qawi-bin-Shehad, A.D. 1376, a general treatise on medicine, with prayers and charms for averting sickness.

Tuhfa-i-Khani, by Mahmud-bin-Muhammad, a physician of Shiraz, A.D. 1496; the whole science of medicine, in five chapters.

Madan-us-Shifa-i-Sikandar Shahi, the Mine of Remedies, by Beva-bin-Khas Khan, A.D. 1512, dedicated to Sikandar Shah II., king of Dehli.

Tuhfat-ul-Muminin, by Muhammad Momin, son of Muhammad Dilimi, a compilation from various Arabic and Sanskrit authorities, on the whole science of medicine; Persian; written A.D. ?

Mantakhab-i-Tuhfat-ul-Muminin, by Hasan Nasir Allah, A.D. 1587, an abridgment of the Tuhfat-ul-Muminin; much esteemed.

Takwim-ul-Adwiah, author unknown, an extensive list of medicines, with a description of their various qualities and uses, arranged in regular tables.

Qarabidin Masumi, by Masum-bin-Ibrahim Shirazi, A.D. 1649, a complete dispensatory, with the qualities of medicines and modes of compounding.

Ikhitiarat-i-Badi, by Ali-bin-Husain of Baghdad, a list of medicines, simple and compound, with their uses; written A.D. ?

Tashrih, by Mansur-bin-Muhammad, A.D. 1396, dedicated to Pir Muhammad Jahangir, grandson of Timur, who commanded the advanced guard of the Tartar army when it invaded Hindustan. It is a general treatise on the anatomy of the human body, with plates of the veins, arteries, bones, intestines, etc. Considering its age, it is of considerable merit, and is in great estimation amongst Muhammadans.

Taqwim-ul-Abdan, by Yahia-bin-Isa Ali Jazar, A.D. 1677, a tabular analysis of the human frame, with a description of the various complaints to which each member is separately liable, and an explanation of the proper remedies for every disease.

Tibb-i-Akbari, by Muhammad Akbar Arzani, physician to the emperor Aurangzeb, A.D. 1678. It is a translation of the Arabic Sharh-ul-Asbab.

Tajribat-i-Akbari, by same author, is a general treatise on physic, explained on the author's own experiences.

Qarabidin-i-Kadari, by same author, an extensive pharmacopœia of medicines used in Hindustan.

Riaz-i-Alamgiri, by Muhammad Raza, a treatise on medicine, food, clothing, etc., dedicated to the emperor Aurangzeb.

Sih'at-ul-Amraz, by Pir Muhammad Gujerati, A.D. 1726, prescriptions for the cure of all diseases.

Qarabidin-i-Shifai, by Mazaffar Shafa, a complete dispensatory, alphabetically arranged.

Qanun-i-Sikandari, by Sikandar-bin-Ismail of Constantinople, physician to Nawab Walaja Muhammad Ali Khan of Arcot, to whom this is dedicated, A.D. 1747; a very diffuse treatise on all the disorders to which mankind is subject.

Moalijah-i-Sikandari, same author, an appendix to the Qanuh.

Qarabidin-i-Sikandari, same author, A.D. 1751, a complete pharmacopœia of the medicines used in the Carnatic.

Madan-i-Tajribat, a mine of experience, by Muhammad Mahdi, A.D. 1756, an esteemed treatise of medicine, alphabetically arranged, in which the virtues or qualities of each drug are particularly explained.

Farhangi Tabiban, European Physicians, a medical dictionary, an alphabetical list of medicines, with a description of their qualities. Author unknown.

Mizan-ut-Tibb, several well-written treatises on heat, cold, drought, moisture, and pregnancy. Author unknown.

Mizan-ut-Tibb, by Muhammad Akbar, styled Muhammad Arzani; MSS.

Mufarrih-ul-Kulub, do. do.

Nuskhah-i-Adwiah, a collection of medical prescriptions. Author unknown.

Tajriba-i-Hakim Ali Akbar, by Ali Akbar, a diffuse treatise on medicine, based on the author's practice.

Rasalah-i-Tibb, by Muhammad Masum, a treatise on medicine, and containing injunctions for care in compounding prescriptions.

Fan-i-duam-dar-Tibb, by Ali Yar Khan, is a general treatise on disorders to which mankind are liable.

Majmu-i-Rasail, by Abul Fazl Husain, an essay on medicine, one on astrology, and one on interpretation of dreams.

Jami-ul-Fuaid, by Yusuf-bin-Muhammad, a collection from the most esteemed books on physic.

Faidat-ul-Akbar, same author, similar subject.

Khulassat-ut-Tajribat, by Muhammad-bin-Musaud, a short treatise on medicine, one on the art of dyeing, and a third on making paper.

Rasalah-i-Chob-Chini, same author, on the virtues of China root.

Asrar-i-Atibba (Secrets of Physicians), by Shahab-ud-Din, essays on the virtues of amulets, medicines, and charms for averting and removing diseases.

Shifa-ur-Rajal, the cure of mankind, same author, a poetical treatise on medicine.

Tajriba-i-Jamasp Hakim, by Jamasp, a general treatise on medicine.

Bahr-ul-Manafia, an Ocean of Benefit, by Maulud Muhammad, A.D. 1794, dedicated to Tipu Sultan, a diffuse treatise on midwifery, diseases of children, enchantments, exorcising devils, etc.

Tuhfa-i-Muhammadi, by Muhammad Nasir Afshar Turk, a general treatise on medicine, dedicated to Tipu Sultan.

Qanun dar Ilm-i-Tibb, a translation, by order of Tipu Sultan, of the complete London pharmacopœia.

Tarjumah-i-Kitab-i-Angriz, a translation of an English treatise on electrical and medical experiments.

Tarjumah-i-Kitab-i-Farang, a translation of Dr. Cockburne's treatise on the twist of the intestines.

Tuhfa Kan-i-Ilaj, translated from the Hindi by Muhammad Kasim-bin-Sharif Khan, the whole system of farriery.

Rasalah-i-Tibb-i-Aspan, translated from the Sanskrit by Zain-ul-Amin, A.D. 1519, and dedicated to Shams-ud-Din Muzaffar Shah, on farriery.

Mufradat-i-Sikandri, originally written in Syrian by Yahia Kurb, and translated into Persian by Sikandar, a work on materia medica of the Arabian physicians, also of the later views of the medical men of Europe.

Mufradat-i-Mumina, on the materia medica, originally in Arabic, but translated by Mumina into Persian.

Kitab-ul-Adwiah-wa'l-i-Aghziat, by Abu Yakub Ishaq-ibn-Suliman-ul-Israili, a work on medicine as regimen.

Kitab-ul-Adwiah, by Bin Baitar, an Arabic book on simple medicines.

Kitab-ul-Judri-wa-Hasbah, by Abu Jafar Ahmad-ibn-Muhammad, an Arabic work on smallpox and measles.

Kitab-i-Sirsam-wa-Barsam, same author, in Arabic, on phrensy and madness.

Kitab-us-Sumum, originally written by Shanak (Qu. Sharaka) of India, translated into Persian by Abu Hatim, and afterwards into Arabic by Abbas Saed-ul-Jauhari.

Kitab-i-Shashard-ul-Hindi, originally written by Shashar of India, but translated into Arabic. It is a work on the materia medica, with rules for identifying the articles.

Kitab-ul-Ghiza-wa'l-Mughtazi, by Abu Jafar, the Tabib, in Arabic, on diets and on the sick who require them.

Kitab-un-Nabz-il-Aristu, a work by Aristotle on the pulse, first rendered into the Syrian language, then into Arabic.

Mufradat-i-Ghani Muhammad, an Arabic work on the materia medica.

Alfaz-ul-Adwiah, the materia medica in Hindi, Persian, and Arabic, by Nur-ud-Din Muhammad Abdullah, Shirazi, physician to the emperor Shah Jahan.

Mufradat-dar-Ilm-i-Tibb, on botany and natural history, translated into Persian by order of Tipu Sultan, from French and English.

Riaz-i-Alamgiri, by Muhammad Raz, an esteemed treatise on medicines, food, and clothing, in Persian, dedicated to the emperor Aurangzeb.

Sharh-i-Hadaet-ul-Hikmat, an Arabic commentary on the Hadayet-ul-Hikmat. It is by Muhammad-bin-Ibrahim, chief judge of Shiraz, and contains the whole course of the sciences read in schools. It is much esteemed amongst the Muhammadans of India.

Kitab-us-Shifa, by Abu Ali-bin-Sina (Avicenna), a celebrated system of natural philosophy, in Arabic (24 chapters), on theology, metaphysics, logic, rhetoric, arithmetic, mathematics, geometry, astrology, anatomy, poetry, and music.

Kifaya Mansuri, by Mansur-bin-Ahmad; Persian; printed.

Khulasat-ul-Hikmat, by Hakim Muhammad Husain Khan; Persian; printed.

Nafisi, by Mulla Nafis, Kashafi; Arabic; written.

Risala-i-Nabz-o-Karora-o-Byhran, by Hakim Ahmadullah-Khan; Persian; written.

Makhzan-ul-Adwiah, by Hakim Muhammad Husain Khan; Persian; printed.

Alfaz-ul-Adwiah, by Muhammad Yakub; Persian.

Tazkirah-ul-Hind, by Raza Ali Khan, a hakim, is a materia medicæ in Persian, written in the early part of the 19th century, and lithographed in 1866 at Hyderabad. It is an interesting volume.

MEDINA, a small city 215 miles from Mecca, where Mahomed died and was buried, A.D. 622, and the succeeding khalifs, Abubakr and Umar, are interred at his side. The building which encloses the tombs is hung with silk. It has 500 houses, with about 8000 population.

Medina is about a day's journey distant from the port of Jambo, in lat. 24° N., and long. 40° 10' E., with indifferent walls, and situate in a sandy plain. Before the days of Mahomed it was called Yathreb, but it was re-named Medinat-un-Nabi, the City of the Prophet. The tomb of Mahomed is in the corner of a large mosque, and is held in respect by the Muhammadans, but they are not obliged to visit it in order to the performance of any devotional exercises. Muhammadans attach much importance to, and consider sanctity derivable from, burial in particular spots, though the notion appears so entirely contrary to the spirit of their religion. Great numbers of dead are sent continually from all parts of Persia

for interment, at the sepulchre of Ali on the frontier of the Arabian desert. The prevailing idea is that, by being buried near a holy saint, they will be raised along with him at the resurrection, and receive his protection and countenance; but the opinion is certainly heterodox. A similar idea seems to have been received in Israel of yore; the old prophet of Bethel desired to be buried beside the man of God that came from Judah, whom he had deceived into his destruction, and Acts vii. 15, 16 is to the same effect. One traveller relates that he met a caravan of dead. Each mule bore two dead bodies slung like port manteaus on either side. As the mules would could reach some of the deceased were accompanying a long mournful caravan, but by far the greater number of the corpses had been consigned to the muleteers without any one else to look after them. Mr. John F. Keene, of whose visit to Mecca mention was made under that name, shortly afterwards visited Medina, and his account of his journey was supposed to be authentic.—*Niebuhr's Travels*, ii. pp. 39, 40.

MEDITERRANEAN SEA, an inland sea that extends between Asia, Africa, and Europe, communicating with the Atlantic by the Strait of Gibraltar, and with the Black Sea by the Strait of Galipoli, the Sea of Marmora, and the Strait of Constantinople. It is above 2200 miles in length, but has little or no tide, and a constant upper current sets in from the Atlantic, through the Strait of Gibraltar. By way of eminence, it is called the great sea in Numbers xxxiv. 6 and elsewhere. In Exodus xxiii. 31 it was called the Sea of the Philistines, because their country, Palestine, bordered on its shores.

MEDLAR. Mespilus Germanica, *Linn.*

Talia of . DIOSCORIDES. | Keel, ... PERS.
το μεσπιλον, . . . GR. | Setania, Mespilus of Pliny.

Common in many parts of Europe, and grows in the hedgerows of England.

MEDUSÆ, a group of the Acalephæ. Aurelia, Pelagra, Chrysaora, and Chrysopora are the more common genera. The Medusæ and the Actiniæ are known as sea-nettles, because of their stinging powers. Cyanea caliparea of Pondicherry (Medusa caliparea, *Reyn.*) secretes an extremely acrid and irritating fluid. The Portuguese man-of-war, Physalia, also causes a considerable amount of irritation.—*Figuier; Mouvin Tandon.*

MEDY A... The Megapodius Nicobarensis hitherto hea...

MEWAR or Mewar, the central region, a territory of India, bounded to the north by the Aravalli, to the south by the country of the Pramara race of Dhar.—*Rajasthan*, ii. p. 8.

MEEANEE, a Sind village, six miles on the north of the town of Hyderabad. Meeanee is the general name for the little villages in Sind, populated chiefly by fishermen.—*Burton's Scinde.*

MEEAN MEER or Mian Mir, a British military cantonment in the Lahore district of the Panjab. Lies in lat. 31° 31′ 15″ N., and long. 74° 25′ 15″ E.

MEENA, a term commonly used in the Panjab, expressive of contempt or opprobrium.—*Cunningham's Sikhs*, p. 57.

MEENA, an active, energetic race, whose history illustrates several points. They constitute a portion of the population of Rájputana, especially in the Jeypore country between Ajmir and Dehli. In Northern Rajputana the country to the east of Shekhawatti is the chief home of the Meena, and it is a region politically as well as naturally favourable to the dacoit and the thief. Wild hills and ravines abound in parts of it. Within a radius of 25 miles is comprised a territory subject to no less than nine governments, namely, a part of Shekhawatti and Jourawatten in the dominions of the maharaja of Jeypore, Kol-Puti belonging to the raja of Khetri, but held direct from the British Government, Dadree to Jheedon of Ulwar, Pattiala, Kante to Nabbu...abjahanpur, where lie Loharoo, Bikan...ments of the district of Gurgaon. These tracts are superintended by several officers.

The Purihar branch of the Meena occupy the Kherar, to the south of Deolee in Haraoti. They are said to be descended from the Purihar Rajput of Mundore, claiming from the celebrated Nahar Rao, king of Mundore, in Marwar, whose son Shoma married a Meena woman. The Meena were the prior occupants of Mewar and Jeypore, till driven out by the Rajputs. The most powerful clans of the Marwar Meena found shelter in the strip of country at the junction of Boonda, Mewar, Jeypore, and Ajmir, called the Kherar. They are a very brave, bold race. The Jeypore Meena in like manner have their stronghold at the junction of the Ulwar, Jeypore, and British districts. In Scrohi, the Meena are still the aborigines.

The Cheeta Meena is a branch of the Meena race, from whom sprang the Mair or Mera race, whose country is styled Mairwara, or region of hills.

The Mair branch of the Cheeta Meena is also called Mairote and Mairawut. Mera is a mountain in Sanskrit; Mairawut and Mairote, of or belonging to the mountains; the name of the Albanian mountaineer Mairote has the same signification. Mairwara is that portion of the Aravalli chain between Komulmir and Ajmir, a space of about 90 miles in length, and varying in breadth from 6 to 20. The Cheeta Meena claim descent from a grandson of the last Chauhan emperor of Dehli. Unail and Anoop were the sons of Lakha, the nephew of the Chauhan king. The cocoanut was sent from Jeysulmir, offering princesses of that house in marriage, but an investigation into their maternal ancestry disclosed that they were the issue of a Meena kept woman and ... being thus reveal... insignificant. ... their birt... Ajmir... the only... they became exiles from Their, and associates with their maternal relatives. Unail espoused the daughter of a Meena chieftain, by whom he had Cheeta, whose descendants enjoy almost a monopoly of power in Mairwara. The sons of Cheeta, who occupied the northern frontier near Ajmir, became Muhammadans about fifteen generations ago, when Dôodha, the sixteenth from the founder of the race, was created Dawad Khan by the hâkim of Ajmir; and as Athoon was his residence, the Khan of Athoon signified the chief of the Mairote. Athoon is still the chief town of the Mair race. Chang, Jhak, and Rajosi are the principal towns adjoining Athoon. Anoop also took a Meena wife, by whom he had Burrar, whose descendants have continued true to their original tenets. Their chief places are Burrar, Bairawara, Mundilla, etc. The Meena were always notorious for their lawless habits, and importance has been attached to them so far back as the period of Beesildeo, the celebrated prince of Ajmir, whom the bard Chand states to

have reduced them to submission, making them carry water in the streets of Ajmir. Like all mountaineers, they broke out whenever the hands of power were feeble. A thousand years ago, Meena chiefs ruled much of the territory now held by the maharaja of Jeypore. A clan of them are still the hereditary guards of the city gates, and of the fort which holds the treasures of the state. The Mair country is situated but a very few miles west of [illegible]ir, and is composed of successive ranges the valleys run hills, the only level country being sturdy valour of this between them. From the never made any impression on [illegible] rulers of India standing their vicinity to the occasional [illegible] for a long period, of the emperors of Hindustan. In later times the Mair were the terror of their lowland neighbours; and even the Rajputs, perhaps with the sole exception of the Rohilla, the bravest men in India, dreaded their approach. The Mair of the Mairwara Hills occupy the Aravalli range running towards Ajmir. The Koli assert their relationship to them, and they admit having intermarried with the Bhil and Meena; and Colonel Dixon says that for hundreds of years they have been recruited by refugees and all sorts of rascals from Hindustan, and they are probably a very mixed race.

Sir W. Sleeman pronounced the Meena irreclaimable; but Colonel Younghusband, about 1864, took the Kherar police in hand, and began operations which resulted in complete success. The Meena from the north were the most formidable class with whom he had to deal. The Thuggee and Dacoity Department had been bringing the Meena to justice ever since its operations began, but special efforts and systematic proceedings against them in their homes had never been pursued so persistently and vigorously as the matter required. An officer was then appointed to conduct, under Colonel Harvey's direction, operations for the suppression of dacoity throughout Northern Rajputana, amongst the Meena, who, in consequence of a famine, had been doubly active in robbing the Government mail, and committing other depredations. They made free use of the railway, and had, it is said, resolved in council assembled to continue their mode of life and resist all measures of repression and reform. The mode of proceeding in Native States, [illegible] when the chiefs act at all against robber tribes, is to drive them away if possible, and this was formerly the system in Jeypore. But the true way of dealing with them is to control their movements at their homes, where they rarely commit depredations. The successful plan pursued against the Purihar, was to hold the headmen responsible for the presence of the Meena in their villages. None could absent themselves from their respective villages without a leave-certificate, or if any did so, they were liable to be seized and punished. The Meena are not of low caste, like the Sansee, the Bhowree, and other thieving tribes.

Colonel Tod, writing in the early part of the 19th century, says the Meena afford an excellent practical illustration of Menu's axiom, that the right in the soil belongs to him who first cleared and tilled the land. The Rajput conqueror claims and receives the tribute of the soil, but were he to attempt to enforce more, he would be brought to his senses by one of their various modes of self-defence, incendiarism, self-immolation, or abandonment of the lands in a body. Throughout India, he adds, where traces of originality yet exist, it will invariably appear that the right in the soil is in the cultivator, who maintains, even in exile, the huk bapota-ca-bhom in as decided a manner as any freeholder in England.—*Campbell*, p. 45; *Colonel Brooke in literis; Tod's Rajasthan*, i. 681, ii. 612, 672; *Cole. Myth. Hind.* p. 299.

MEERSCHAUM, a mineral belonging to the series of silicates of magnesia. The richest beds are near Eski-shahr, in Asia Minor, but it is also found in Moravia, Spain, Greece, and the Crimea. It is dull-white, opaque, and earthy, nearly like

Silica,	. .	60
Magnesia,	. .	30
Lime,		[illegible]

. Its hardness is 2·0, and sp. gr. 2·6 to 3·4. When heated, it gives out water and a [illegible] smell, and becomes hard and perfectly white. When first dug up it has a greasy feel, like soap, and on this account is used by the Tartars in washing their linen. In Europe it is made into bowls of tobacco pipes, which are hence called meerschaum. The magnesite of the Peninsula of India might be utilized as meerschaum.—*Dana.*

MEERUT, a town and military cantonment, which gives its name to a revenue district of the N.W. Provinces of India, lying between lat. 28° 18′ 15″ and 29° 18′ N., and between long. 77° 10′ 30″ and 78° 14′ E. Meerut town is almost in the centre of Meerut district, nearly midway between the Ganges on the east and Jumna on the west, about 3 miles west of the Kali Nuddi. It is in lat. 29° 0′ 41″ N., and long. 77° 45′ 3″ E., 850 feet above the sea. The Suraj Kund, constructed in 1714, is surrounded by numerous small temples, sanctuaries, and sati pillars; the Dargah of Shah Pir, of red sandstone, was erected about 1620 by Nur Jahan, wife of the emperor Jahangir; the Jama Masjid, built in 1019 by Hasan Mahdi, wazir of Mahmud of Ghazni, was repaired by Humayun: near are the remains of a Buddhist temple. It has also mausoleums of Abu Muhammad Kamboh (1658), Salar Masaud Ghazi (1194), and Abu Yar Khan (1577).—*Imp. Gaz.*

MEGACEPHALON RUBRIPES, the Malco bird. It deposits its eggs in the loose sand of the sea-beach, in holes just above high-water mark; the female lays one large egg, which she covers over, and returns to the forest; but many birds lay in the same hole. A dozen eggs are often found to[illegible] One egg fills an ordinary tea-cup, fro[illegible] gether. [illegible] Mahomed died and was buried, wide. The 4 to 4½ inches long, and 2¼ to 2½ [illegible] Abubakr and Umar, are very good to eat, and much sought after. The hen-bird takes no further care of the eggs, which the young bird breaks through about the 13th day, and runs at once to the forest. Each hen lays six or eight eggs in the season of two or three months.—*Bikmore's. Travels*, pp. 101-378; *Wallace's Archipelago*, i. p. 175.

MEGACHILE, the leaf-cutter bee. Their nests are to be found in thousands in the cliffs of the hills of the Sone valley, with May-flies, caddis-worms, spiders, and many predaceous beetles.—*Hooker, Him. Jour.* i. p. 52.

MEGADERMOTINÆ, a sub-family of mammals of the family Vampyridæ. Its genera in India are the Megaderma Horsfieldii, of Tenasserim; M. lyra, of all India; M. spasma, of Ceylon and Malayana; and M. spectrum, of Kashmir. Megaderma lyra bat is the M. Carnatica of

Mr. (Sir Walter) Elliot, and seems to be very generally diffused throughout India, being replaced in the Malay countries by M. spasma, and further east by M. Philippinensis, *Waterhouse*, P. Z. S., 1843, p. 69, while in Africa it is represented by the M. frons.—*Blyth.*

MEGALAIMA INDICA. *Latham.* M. Philippensis, *var.*, *Latham.* The incessant call of the greater red-headed barbet resembles the blows of a smith hammering a caldron, hence its name of coppersmith. There are several species of this genus, viz. M. flavifrons, M. rubricapilla, and M. Zeylanica. The Megalamidæ family of birds comprise the genera Megalaima and Megalorhynchus.

MEGAPODIDÆ, a family of gallinaceous birds, found in Australia and its surrounding islands, as far west as the Nicobars, also the Philippines and the N.W. of Borneo. They bury their eggs in sand, earth, or rubbish, and leave them to be hatched by the sun or by fermentation. They have large feet and long curved claws, and most of them rake together rubbish, dead leaves, sticks and stones, earth and rotten wood, until they form a mound often 6 feet high and 12 feet across, in the middle of which they bury their eggs. The eggs are as large as those of a swan, and of a brick-red colour, and are considered a great delicacy. The natives are able to say whether eggs lie in the mounds, and they rob them eagerly. It is said that a number of these birds unite to make a mound, and lay their eggs in it, and 40 or 50 are found in one heap. The mounds are found in dense thickets. The species of the Megapodidæ in Lombok is as large as a hen, and entirely of a dark hue with brown tints. It eats fallen fruits, earth-worms, snails, and centipedes, but the flesh is white, and, when properly cooked, well flavoured. The young birds when they come out of the egg are sufficiently developed to do without a mother's care, and provide for their own wants. Talegalla is the Australian name. The Megapodius or Leipoa is called by the natives of Borneo Menambun (from Tambun, to pile, to heap up). One nest or heap was found close to the edge of the sea-sand, and was formed over a fallen Aru or Casuarina tree, and covered, but not densely, with shrubs. The pile was 60 feet in circumference. These birds lay most disproportionately large and thin-shelled eggs, and the young comes forth from them well plumed, and sufficiently advanced to make their way in the world. The Megapodius Nicobarensis has not hitherto been met with excepting in the Nicobars, but would appear to be common on all the islands of that group, according to the personal observation of the Rev. J. Barbe, p. 351. M. Cumingii occurs in Labuan.—*Keppel's Ind. Arch.* ii. p. 120.

MEGAPTERA KUZIRA, a finner whale of the Japanese seas. Other finners are—

Physalis iwasi, the Japan finner. It is very rare. In 1760, one 25 feet long was cast ashore at Kii.

P. antarcticus, *Gray*, inhabits the New Zealand seas.

P. Braziliensis, the Bahia finner.

P. Australis, the southern finner, inhabits the seas of the Falkland Islands. See Mammalia; Whales.

MEGASTHENES, B.C. 306-298, was sent by Seleucus Nicator on an embassy to Sandracottus or Chandragupta, ruler of the Prasii or Prachya, whose capital was Palibothra, identified with the Sanskrit Pataliputra and the modern Patna. Megasthenes tells us that the Indians of his time did not communicate their metaphysical doctrines to women, thinking, as he says, that if their wives understood their doctrines and learned to be indifferent to pleasure and pain, and to consider life and death as the same, they would no longer continue to be the slaves of others. We find from the later ceremonial Sutras (Srauta and Grihya Sutra) that women were not allowed to learn the sacred songs of the Vedas, the knowledge of which constituted one of the principal acquirements of a Brahman before he was admitted to the performance of the sacrifices. Menu ix. 18 says, Women have no business with the text of the Vedas, thus is the law fully settled; having therefore no evidence of law, and no knowledge of expiatory texts, sinful women must be as foul as falsehood itself, and this is a fixed rule. Megasthenes was perhaps the first European who had ever beheld the Ganges. He dwelt for several years in Palibothra, and wrote an account of the country, which, though now lost, has probably been transmitted to us pretty closely in the narratives of Diodorus Siculus, Strabo, Ælian, and Arrian. His Indika, written about B.C. 300, has been translated by Mr. M'Crindle in the Indian Antiquary. Describing the races, he says: 'Next follow the Narcæ, enclosed by the loftiest of Indian mountains, Capitalia. The inhabitants on the other side of this mountain work extensive mines of gold and silver. Next are the Oraturæ, whose king has only ten elephants, though he has a very strong force of infantry. Next again are the Varetatæ, subject to a king who keeps no elephants, but trusts entirely to his horse and foot. Then the Odombœræ, the Salabastræ, the Horatæ, who have a fine city defended by marshes, which serve as a ditch, wherein crocodiles are kept, which, having a great avidity for human flesh, prevent all access to the city except by a bridge; and another city of theirs is much admired, Automela, which, being seated on the coast at the confluence of five rivers, is a noble emporium of trade. The king is master of 1600 elephants, 150,000 foot, and 500 cavalry. The poorer king of the Charmæ has but 60 elephants, and his force is otherwise insignificant. Next comes the Pandæ, the only race in India ruled by women. They say that Hercules having but one daughter, who was on that account all the more beloved, endowed her with a noble kingdom. Her descendants rule over 300 cities, and command an army of 150,000 foot, and 500 elephants.'

It is to Onesicritus, one of the companions of Megasthenes, that we are indebted for the earliest account of Ceylon or Taprobane. From him we first hear of its trained elephants, its pearls, and its gold. Megasthenes maintained friendly relations at the court of Palibothra between Syria and India, and effected a matrimonial alliance. His journal names as rivers Cainos, the Cane; Cossoanus, Cosa or Coss; Sonus, the Sone; Condochates, Gunduk; Sambus, Sumbul or Chambal; Agoramis, Gogra; Commenæs, Caramnassa, etc.

Megasthenes went on his embassy at a very interesting period. The old line of the Nandas had been overthrown, and Chandragupta had won the crown. Brahmanism was the prevailing religion,

but Megasthenes refers distinctly to Βούτα, or Buddha. The caste system was in full vogue, so Brahmanism must have been in the ascendant; but the fact that Chandragupta married a daughter of Seleucus Nicator, shows that the monarch favoured the rising faith of Buddha. Megasthenes makes the number of castes seven, and his divisions seem to be of a professional character. His description of the life and manners of the Hindus applies in many respects to the people of the present day; in their simple food they continue unchanged. Chandragupta is represented as living in a large palace, with a body-guard of women fully accoutred, who accompanied him in his hunting expeditions. His camp, when he took the field for war, contained 400,000 men. The capital, Palibothra, stretched 10 miles along the bank of the Ganges, and was 2 miles wide. Diamachus was the next Greek ambassador after Megasthenes. —*Cal. Rev.*, 1868; *Rennell's Memoir*, p. 30; *Strabo's India*, p. 39.

MEGHADUTA, an ancient Sanskrit drama, an excellent example of purely descriptive poetry. A yaksha or spirit banished from heaven charges a cloud with a message to his celestial mate, and describes the countries over which it will have to pass.

MEGNA, a river running through the eastern part of the province of Bengal. It is formed by the junction of the Surma and the Barak, which have their sources in the mountains running along the N. and E. frontiers of the Sylhet district. The united stream, after a course of about 30 miles, joins the Brahmaputra, in lat. 24° 9′ N., and the Brahmaputra thence takes the name of the latter. Thus augmented, the Megna swells into an expanse resembling an inland sea, studded with islands. About 10 miles further down it receives another branch of the Ganges, and in the remainder of its course is separated from the latter river only by a narrow strip of land. In lat. 23° N. it takes a S. direction, and, after a general southerly course of 120 miles, discharges itself by a wide embouchure into the Bay of Bengal, and closely adjacent to the delta of the Ganges, with which it forms numerous interlacements. The muddy waters of these great rivers form numerous banks and islands, the principal of which are Dekhan Shahbazpur, Hattia, and Sandwip, and between these the tides run with great rapidity.

The regular rise of the tide is from 10 to 18 feet, and at every full and new moon the sea rushes up in a single wave, known as the 'bore.' The bore is heavier at the time of the biennial equinoxes, when navigation is sometimes impeded for days together, especially when the wind blows from the south. Before anything can be seen, a noise like thunder is heard in the far distance seawards. Then the tidal wave is suddenly beheld, advancing like a wall topped with foam, of the height of nearly 20 feet, and moving at the rate of 15 miles an hour. In a few minutes the wall rushes by, and the brimming river has at once changed from ebb to flood tide. A greater danger than the bore are the cyclone storm-waves, which occasionally sweep up the Megna. These are most liable to recur at the break of the monsoons in May and October. In the cyclone of May 1867, the island of Hattia was entirely submerged by a wave, which is estimated to have reached a height of 40 feet. Again, towards evening of 31st October 1876, the wind had gradually risen till it blew a gale. Suddenly at about midnight in some places, and nearer dawn in others, the roar of the wave was heard, drowning the noises of the storm. Two or three waves came on in succession, flooding in one moment the entire country, and sweeping before them every living thing. The destruction of human life on that night is estimated at 100,000 souls in the mainland portion of Noakhali district, and the two islands of Sandwip and Hattia, or about 19 per cent. of the total population. The mortality subsequently caused by cholera, and a train of dependent diseases, equalled that due directly to drowning.

Over all these islands, flat as a table, and without any shelter, the hurricane blew; while the wretched people cowered behind their crashing huts and falling groves; but the first blast was only the eastern periphery of the circular storm, which thus swept up the Megna, meeting the current, and partly conquered by it. The boatmen of the Sunderbans do not so much fear the cyclone upon the water when it thus fights the tide. But on this occasion the islands of the Megna and its broad channel seem to have been the very centre of the circular storm, which accordingly, after thus with its upward sweep scourging the land and piling up the water, turned almost like a wheel over Lakhipur, and, whirling downward again, drove with its western segment the heaped-up waters of the two great rivers in a wall of death thrice as high as the 'bore,' washing clean over the rich and populous islands. They stand some 20 feet above mid-tide, yet this wave of the cyclone ran at least another 20 feet high over the dry land, submerging every hamlet and cattle-shed, drowning men, women, and children in their sleep, bursting over tank, garden, and temple. From the moment when the first howl of the cyclone was heard tearing upward from the ocean, to the awful return-stroke of the tempest, herding before it the dark waves of water, hardly thirty minutes had elapsed. Tens of thousands of human beings were by that time caught up and washed like drift-wood into the boiling bay; tens of thousands more were choked in their beds by whelming waves and ruined buildings; and all the works of their hands, all their possessions, all their cattle, were similarly seized in the black flood and destroyed. A few escaped, for these poor natives are the most dexterous climbers. Thanks to this habitude, some, on being dashed against the trunks of the palms and areca trees, managed to climb out of the flood, and cling upon the bending stems until the waters subsided; others, clambering on the chupper-roofs of their huts, were washed out to sea, and driven upon the opposite bank of the Megna. By noon next day these miserable survivors saw the dry land again, and were saved; but 100,000 had perished out of an island and shore population of about a million, and some villages lost as many as 70 per cent. of their inhabitants. Sir Richard Temple visited the submerged district, and reported 3000 square miles desolated, and the whole area of islands and shores lying like the corpse of a province,—drowned, bare, and ghastly. One of the certain effects of this cyclone-wave was that the animals of the jungle were all drowned; the carrion-eating

creatures, the snakes, the insects, the rats, all had shared the common fate. Even the birds were surprised by the deluge, and died in vast numbers. There had been nothing so awful since the similar catastrophe in 1822 in the same district, when 100,000 people are said to have perished. On that occasion no fewer than 40 children were brought to birth by the frightened mothers while taking refuge in the tree-tops, a circumstance which sufficiently depicts the terror and helplessness of such a visitation. It may be possible in future to protect the Megna villages against such calamities, by the old Assyrian device of erecting nigh at hand a spacious and lofty mound of clay. Such artificial eminences would have saved 100,000 lives on that frightful last night of October, when the pent-up tide of two enormous rivers rolled over every home and every refuge.

The tract between the Megna and the Hoogly is often devastated. It is hardly accurate to call it land. Some name should be found for the marshes, chars, khals, dones, and islands of Bakarganj and the Sunderbans. Every acre in this vast watery wilderness has been brought down from countries hundreds of miles away, and piled up in the sea until the restless rivers have conquered league after league from the deep water, and built a district there. Two of the mightiest streams of earth, the Ganges and the Brahmaputra, are for ever at this silent work, and their discoloured waves roll perpetually down from the mountains of Tibet and the plains of the North-West that red and yellow mud which has formed a province. The larger part of their labours is still hidden under the Bengal Sea, and silt which the leadsman brings up off Saugor Island has come as likely as not some 2000 miles, from Gangotri or the Jumna. The two great rivers unite in the Megna estuary, sending out a labyrinth of arms and branches which interlace the alluvial soil with a thousand channels, and turn into an archipelago the province which the Brahmaputra and its Indian sister have created. The intervening islands and islets are like nothing in the world beside themselves. Flat as the Essex and Kentish marshes, monotonous in feature as Lower Egypt, they are yet the most fertile and the greenest country to be seen. The soil, level and clean as a lawn, is richer than even the alluvium of the Nile; not a square inch of it is bare; if man does not plant it, the slimy mangroves fringe every bank, canes and reeds cover every shoal; and the drier parts, or kholas, are dressed in waving jungle full of kerua, goma, and gab trees. But the population of Bengal has pushed into this moist and steaming corner of the earth, and nowhere are there such vast rice gardens, such feathery palm groves, and such verdurous orchards of plantain and jack, mango and tamarind, betel, cocoa, and sugar-cane. The Mugh, Muhammadans, and Hindus who people this countless host of marshy islets, dispute possession with crocodiles, tigers, and snakes. The Sunderbans and the Megna flats team with these; and the wood-cutters never return from their yearly expeditions without having paid a tribute of life to the savage animals. Everything and everybody in this watery world know how to fish and to swim. Almost at every mile of travel you come upon a broad waterway, so that boats are the universal vehicle; and fish of a thousand kinds, some parti-coloured, some monstrous in size, some poisonous, some delicious,—the hilsa, the silon, the koral, and the pangas,—feed beast and man alike in the aquatic desert. The very leopards devour finny food, and even swim the khals, while huge crocodiles crawl forth into the orchards, and watch for the children fetching water and the herdsmen at the ferries. It is a land of strange swooning sounds, of sweeping tempests, and sudden dislocations of earth undermined and carried off by the rushing rivers. There is an occasional thundering noise heard here called the Barisal guns, and to this day nobody knows its origin. A well-to-do landowner will wake up to find his property wafted away by the Megna or the Madhumati to the other side of the creek; and others, who have painfully constructed valuable tanks for fresh water, see a single wave of the dreaded 'bore' sweep into the hollow and spoil it for ever. Such victims of nature in the Sunderbans are styled nádi-bhanga lóg, or 'river-broken people;' but for the most part the enormous population of these Indian swamps fares prosperously, growing betel-nuts for half Asia, catching fish for Calcutta, weaving reed-mats and covers for the boatmen of the Ganges, and producing vast crops of paddy and sugar-cane. They are, on the whole, a gentle and simple people, largely Muhammadan in creed. At new and full moon the 'bore' comes up the Megna in a wall of white water 15 feet high, crushing every boat not drawn up,—a terrible rolling bank of foam, which on account of its speed the people call the shar or arrow.

In this great estuary of the Megna, Shahabazpur, Hattia, and Sandwip are the greatest and the most fertile islands, full of rice grounds and cocoa groves, with a population of nearly 500,000 souls. These are not unfamiliar with the dangers of their marshy home, for there have been at least seven cyclones since 1822; but the islands stand fairly high above the water, and hitherto it is the storm-wind which has wrought most damage, though it generally gives notice of its approach long beforehand by the unnatural hush in the air and the livid colour of the sky. But occasionally there is no warning.

MEHIDPUR, a town in one of the outlying portions of the territories of the Maharaja Holkar, in lat. 23° 9′ 30″ N., and long. 75° 46′ 80″ E., on the right bank of the Seepra river, in an angle formed by the confluence of a small feeder. The opposite bank of the river was the scene of a decisive victory gained on 21st December 1817 by the British under Sir Thomas Hislop over the Mahrattas under Holkar. The British, crossing the river by a ford just above the town, routed the enemy at the point of the bayonet, taking their camp, with 63 guns and a large quantity of ammunition. The British loss was 174 killed and 604 wounded; that of the Mahrattas was estimated at 3000 men.—*Imp. Gaz.*

MEHINTELAI, 'the mountain without fear,' is a precipitous rock in Ceylon, about 7 or 8 miles to the north-east of Anarajapura, but connected with the ancient city in the time of the kings by one continuous street, along which were conducted the solemn processions of the Buddhist priests. The ascent to the summit is effected by a series of stone steps, about 2000 in number, winding

past the ruins of former buildings, temples, dagobas, and shrines; and on the loftiest peak, which commands a view over the forest country beneath to the very verge of the horizon, there exists one of those prodigious structures of brick-work, under which is deposited a sainted relic of Buddha,—a hair which grew on a mole between his eyebrows. With such veneration have the Singhalese been accustomed to regard this sacred mountain, that every crag has some tradition, and every rock has been scarped into sites for religious buildings, amidst the ruins of which are to be traced the fragments of broken statues and inscriptions in the Nagari character, the most ancient in which the dialect of Pali has been written. The ruins of Anarajapura form one of the most conspicuous objects in the grand panorama which is beheld from Mehintelai. They cover an extent of ground equal to 16 square miles, once surrounded by a wall 64 miles in circumference. The city is to be found on the map of Ptolemy in its proper site and ancient name, Anurogrammum.—*Tennent's Christianity in Ceylon*, p. 336.

MEHKAR, a small town of the Buldana district of Berar, in lat. 20° 9′ 30″ N., and long. 76° 37′ E. It gives its name to a revenue district. It is said to take its name from Meghan Kara, a demon who, after a combat, was put to death by Sharangdhar, an incarnation of Vishnu.—*Imp. Gaz.*

MEHMAN, a Muhammadan sect, numerous about Hyderabad, Sehwan, and Kurachee, in Sind. They are a quiet race, largely engaged in trade. Their name is a corruption of the Arabic word Momin, a true believer, and was given to the people when they were converted from Hinduism to be Muhammadans. The word, in its fullest signification, is applied to two distinct races of people,—to the Khwaja tribe, and to the Mehman Sayyat (*i.e.* green, from the Sindi sawo) or Achhra (white), who are followers of Abu Hanifeh. Numbers of them are found in Cutch. In Sind they are employed chiefly in agriculture and breeding camels. Their dress is that of the common Sindi, except that they frequently shave the head, especially when old, and wear the turband; sometimes, though rarely, they adopt the peculiar Sind hat. They have produced many very learned men, and have done much to introduce the religious sciences into Sind. The tribe merits some notice, as it has either abandoned or never adopted the practice common among their brethren in Bombay, viz. that of depriving the females of their pecuniary rights in wills and inheritances. Among the Mehman, the widow and daughter are provided for according to the Koran. Their Pir, or holy men, are the family called Rashid Shahi (descended from one Muhammad Rashid Shah), or the Rohri-wara Sayyids, remarkable for nothing but excessive polygamy. Rashid, the founder of the house, took unto himself thirty-two wives (instead of four), and justified the practice by the usual sophistical arguments of the Safi order to which he belonged. The Sindi divines pronounced his tenets to be heretical, and his conduct damnable. The Mehman, however, did not object to it, and still reverence his descendants. The Mehman in Sind has his own handwriting character; in Cutch he uses the Gujerati. Altogether the Mehman are a respectable race, though they have acquired a bad name by their rapacity in dealing with strangers; and Wadho Mehman (a great Mehman) in Sindi means a miserly usurer.

In the Kurachee district they take their tribal names as given below, principally from their original places of abode. The Khwaja are of the Shiah sect, and call themselves followers of Khwaja Suliman, Farisi. Their tribal names are

Akhoond.	Hudokut.	Khebrana.
Bandroo.	Katiyar.	Khwaja.
Kussabi.	Patoli.	Surha.
Loosi.	Puggir.	
Mirzapori.	Qazi.	

—*Burton's Scinde*, p. 247.

MEHMANDAR, from the Persian word Mehman, a guest, means a host, but is the term applied to a person appointed on the part of a government to attend upon, and supply the wants of strangers while travelling through the country. This custom is most particularly observed towards all ambassadors from foreign powers. The provision thus furnished is called Soorsat; and in Persia it forms one of the most grievous parts of the saderat, or irregular taxes; for it is claimed not only by strangers, but by all great men, or messengers travelling on the part of the king, and is levied with extreme severity. Usually on his arrival at a town or village, the mehmandar sends for the mayor, the Ket-Khuda, to whom he briefly gives his orders to furnish the articles required, and, by way of commencement, installs himself in the best house in the place.—*Ferrier, Journ.* p. 47; *Fraser's Khorasan*, p. 88.

MEHMASANI, a Baluch tribe who have branches in Seistan and the hills of Luristan.

MEHNDI. HIND. Lawsonia alba, the henna of the Persians, an important dye-stuff, and the distilled water of its flowers is used as a perfume. The Muhammadan women in Asia use the shoots for dyeing their nails red, and the manes and tails of horses are also stained red in the same manner. The soles of the feet also are stained with the red juice of the Mehndi. Mehndi is also a term applied to Elsholtzia polystachya. Jangli mehndi is Ammannia auriculata, Vilayati mehndi is Myrtus communis.

MEHNDI, or Jahez. HIND. A Muhammadan bride's trousseau.

MEHRA, a forest in Hazara which has as its timber trees juglans, cedrela, Pinus longifolia, fraxinus, quercus, yew, cerasus, olive, buroongi, umloke, mulberry, pyrus, Cedrus deodara.

MEHRAWAN, a brother of Ravan, who, in the war of Lanka, by a surprise, took Rama and his brother Lakshmana prisoners, and carried them to Patala (or hell), from whence they were released by Hanuman as they were about to be sacrificed.

MEHR GYA, a product imported from China into India through Tibet, and sold in Lucknow, Nagpur, and Hyderabad at from Rs. 130 to 150 per tola. It is supposed to be the Ginseng drug, called by the Chinese Jin-sân, Liau-san, Hwang-san, Shin-tsan, Kwan-tung-jin-san, and Kwan-si-jin-san.

MEHTAR. HIND. A hereditary village officer; a man who follows the lowest menial offices, a sweeper, a scavenger. The term originally means a prince, and is used ironically. In Cuttack, the mehtar is sometimes a slave.

MEI-JIN. CHIN. A matchmaker, a go-between, a middleman.

MEI-KONG, a river, flows through the eastern

side of Laos and Cambodia. It is called by the Chinese Lan-tsang or Lan-chiang. It rises about lat. 33° or 34° N., in the Kouen Lun range, near Koko Nor. Its two branches have their confluence about lat. 30° N., north of Cha-mon-to or Kiam-do, and it then traverses the provinces of Chra-ya and Riang-ka before entering Yun-nan. It is the longest of all the Indo-Chinese rivers. Its course has been traced from its source in Eastern Tibet, where but a single narrow ridge separates it from that of the Kinsha-kiang or Yang-tze-kiang, the two streams flowing for a long distance in parallel meridional valleys along the eastern range of the Tibetan plateau. In this peculiar feature of long parallel trenches and mountain ranges is to be sought the key to the little understood geography of the great Siamese Peninsula system. It is said to be more than 2200 miles long. The Lusiad says—

'See thro' Cambodia Meikon's river goes,
Well named the Captain of the waters, while
So many a summer tributary flows
To spread its floods upon the sands, as Nile
Inundates its green banks.'

In the Irawadi and Mei-kong basins there are remnants of tribes strongly distinguished from the dominant races, and, tending, with the evidence of language, to show that the ethnic history of Ultra-India is very ancient, and has undergone repeated revolutions. One of the most remarkable is the Ka-Kyen. They are described as being in their appearance not Mongolian, and totally different from the surrounding Shan, Burmese, and Chinese races. The Moi or Ka-moi, on the opposite side of the Mei-kong, are said to be black savages, with Negro features; they occupy the broad expansion of the Annam chain towards Kamboja, and appear to extend northwards along these mountains, marching with the Lau on the westward. The Kambojans style them Kha-men. They are the Ko-men of Leyden and the Kha-men of Gutzlaff. On the same side of the Mei-kong basin, but towards the sea, between lat. 11° and 12° N., a hill tribe, called Chong, preserve more of the ancient Australo-Tamilian character than the surrounding tribes. In the Chong, the hair, instead of being stiff or harsh as in the Mongolian, Tibetan, and prevalent Ultra-Indian and Malaya-Polynesian races, is comparatively soft, the features are much more prominent, and the beard is fuller.—*Bowring's Siam*, ii. p. 28; *Logan, Journ. Ind. Arch.*

MEI-THEI-LEI, the valley of Munipur; Burmese call it Ka-the, the Bengalis Moglai, and Assamese Mei-thei-lei.

MEKHITAR, born at Sebaste in Cappadocia A.D. 1676, was the founder of the order of the Mechitarists, and reviver of Armenian literature. In 1691 he entered an Armenian convent at Sebaste, and subsequently became secretary to Archbishop Michael. He secretly became a proselyte to the Romish Church, and in 1700 openly preached submission to the Pope. To escape the anger of the people, he fled to Smyrna, and to the Morea, then under the dominion of Venice. On the conquest of the Morea by the Turks, he went to Venice, where he founded a convent, set up a printing press, and published numerous Armenian translations of the best European works, an Armenian grammar and dictionary, and in 1733 an Armenian Bible. He died 1749.

MEKRAN, sometimes called also Kej Mekran, a province of Baluchistan which extends from near Cape Jashk, in lat. 25° 38′ 3″ N., long. 57° 46′ 13″ E., to the Hingol river, and the river of Las, reaching to Cape Maize, in lat. 24° 51′ N., and long. 66° 35′ E., a distance of 480 miles.

Mekran has Persia on the west, the provinces of Las and Jhalawan on the east, Persia, Afghanistan, and the Kharan district on the north, and the Arabian Sea on its south. Its western portion is under Persian rule, and its eastern under the Khan of Kalat; the boundary being at long. 62° E. Its name is supposed to be the combination of two Persian words, Mahi-khoran, Ichthyophagi. It was also known to the ancients as Karmania altera. From Cape Jashk on the Purali river, a distance of 500 miles, the shores of the coast of Mekran are washed by the Arabian Sea. The country is one vast arid and sterile waste, with high mountains rising at the back wholly destitute of both trees and vegetation.

It is a district of hills and valleys, in parallel ranges running east and west, but almost rainless. On many of the hills are beds of clay, 50 to 100 feet thick, containing fossil shells of the miocene formation. Between Gwadur and Ras Kuch are many of the mud volcanoes called Chandr-kup, and near Ras Jashk is a hot spring with temperature of 128°. One group of the Chandr-kup, consisting of three cones, is a mile to the W. of Huki and about 60 miles from Sammiani. The other group, consisting of two cones, is about 10 miles N. of Ormara.

Alexander the Great, after his conquests in N.W. India, returned through this province; and the sufferings of his army from want of water and provisions were intense. There are, in Mekran, cyclopean structures raised by some unknown prior race. They are called Ghorbasta or Ghorband, and bear a resemblance to the cyclopean remains of Europe. They are built across ravines to form tanks, and on the declivities of mountains to distribute the water. They have been constructed by an agricultural race, who on entering it had foreseen that the country would not otherwise support them. The race is supposed by Dr. Cook to have been a people with kindred habits to the Pelasgi. Arrian says that the fishermen on the coast of Gedrosia lived in small huts, whose walls were composed of sea-shells piled upon each other; and their roofs of fish bones, the backbones serving instead of rafters. But the present population of Mekran is formed of many different tribes, and independent chiefs, of whom the Baluch are the most numerous: a middle-sized race of men, spare, muscular, and active, and armed with a matchlock, sword, shield, and dagger. The common language of the country is a corrupt Persian, mixed with Sindi, and the generality of the Baluch are Muhammadans of the Sunni persuasion. Those of the centre countries reside mostly in towns; those of the lower countries are scattered over the plains, in hamlets of eight or ten huts, built of the branches of the palm, and covered with mats; but the Narhui race of Bunpur live in tents of black hair, and remove from place to place as their flocks or agriculture require their attention. The women of Mekran appear freely in public.

The Gitchki is the most numerous tribe. About half the population is of a sect of Muhammadans called Ziggar. The maritime and fishing

population of the little ports on the coast of Mekran, from Sanmiani to Charbai, are denominated Med, and comprise four divisions,—the Guzbur, Hormari, Jellarzai, and Chelmarzai.

Its natives on the sea-coast are of larger proportions and blacker complexions than the northern ones, probably owing to their frequent intermarriages with the Negroes of Muscat and Arabia. The Mekrani are a puny and delicate race when compared to the Baluchi or Brahui, owing perhaps to the climate, and their sensual lives, for which both sexes are notorious; they likewise drink great quantities of an intoxicating beverage made from fermented dates. The women of Mekran are usually very ugly, and proverbially unfaithful; they set no bounds to the gratification of their passions; at an early period of their lives they are tottering under decrepitude and premature old age.

The Biruvi tribe dwell near Bela; they sell their children when in want. They are better looking than the Sidi, and, as they speak Sindi, Hindus prefer them as domestic servants. — *Kinneir's Geog. Memoir*, p. 202; *Pottinger's Travels.*

MELA. HIND. A fair; gathering of the Hindus partly for business, partly for religious purposes. At some places the visitors number hundreds of thousands. A great religious gathering known as Magh Mela is held at the junction of the Ganges and the Jumna at Allahabad. It is particularly crowded in the Khumb or twelfth year. The number of visitors is estimated at from 1,000,000 to 2,000,000.

MELALEUCA (from *μέλας*, black, and *λευκός*, white), a genus of plants belonging to the natural order Myrtaceæ. M. ericifolia, *Smith*, is a tall shrub of S.E. Australia, yields a comparatively large quantity of cajaput oil, and is of importance for consolidating muddy shores. M. genistifolia and M. linarifolia can be grown in swamps; M. parviflora, *Lindley*, is valuable for fixing coast sands; M. styphelioides, *Smith*, yields a hard, close-grained timber; M. squarrosa and M. trichostachya, *Lindley*, are valued for growth in swamps. M. styphelioides, *Smith*, a tree 60 feet high, and 2½ feet in diameter, of E. Australia. Its timber hard, close-grained, and stands well in damp situations. It is adapted for swamps, and timber never known to decay. All these might be introduced into India. The tea tree of the Australian colonists is a species of Melaleuca; and M. leucadendron, *Linn.*, is the paper bark tree of N. S. Wales.—*Von Mueller.*

MELALEUCA CAJAUPUTI. *Roxb.*

M. minor, *Smith, D.C.*

Thit-tha hpu tshi, BURM. Kayu-puteh, MALAY. Cajaput tree, ENG.

The Oil.

Kayu-puteh-ka-tel, HIND. Kayu-puteh-tailam, TAM. Kayu-puteh-miniak, MAL.

The Malays give the name of Kayu-puteh both to M. cajaputi and M. leucadendron. It is a small tree with an erect but crooked stem, covered with thick, rather soft, light-coloured bark; branches scattered, with slender twigs, which droop like those of the weeping willow. It is a native of the Molucca Islands, especially of Boeroe, Manipe, and of the S. of Borneo. According to Dr. Mason, is indigenous in the Karen forests of the southern provinces of Tenasserim, but Dr. Mason has not observed it north of the valley of the Palouk river, about lat. 13° N. The leaves are collected on a warm, dry day in autumn, and placed in dry sacks, in which they become heated and moist. They are then cut in pieces, macerated in water for a night, and then distilled. Two sackfuls of the leaves yield only about 3 drachms of the oil. This is clear and limpid, of a light green colour, very volatile, diffusing a powerful odour, having a warm aromatic taste, something resembling that of camphor, followed by a sense of coolness. Sp. gr. 0·914 to 0·927; soluble in alcohol. When the leaves are distilled with water, a light and colourless oil first comes over, and then a green-coloured and denser oil, which, with less odour, is more acrid. It is sometimes adulterated with the oils of rosemary and of camphor; it is diffusible, stimulant, antispasmodic; and is used externally in rheumatism.—*Royle; Crawfurd; Morrison; Com. Desc.* p. 9; *O'Sh.; Roxb.; Mason; Voigt.*

MELALEUCA LEUCADENDRON. *Linn., D.C., Roxb.* A tree of the Moluccas, of Malacca, and of the N. and E. of Australia, as far as lat. 34° S., where it attains a height of 80 feet, with a stem up to 4 feet in diameter on tidal ground. It can be utilized for such areas with great advantage, for subduing malarian vapours in salt swamps where no Eucalyptus will live. Its bark protects it against conflagrations. The wood is fissile, hard, and close-grained; is well suited for posts, ship-building, various artisans' work, resists the attacks of termites, and is almost imperishable under ground.—*Von Mueller.*

MELANESIAN, a race with frizzled hair; the Malaysians have straight hair. The Melanesian languages resemble Hebrew, Arabic, etc., in their power to form a causal verb. In Maori, the prefix 'whaka' gives to any word this causative sense, viz. ako, learn, whaka ako, teach. In Nengone, 'a' is the prefix, as puja, rise; apujani, elevate or raise. In Bauro, ha, hai, hau are prefixes, as surutai, rise; hasurutai, raise. In the New Hebrides there are several languages,—the Mai, the Api with two dialects, the Ambrym, Pama, Vun-Marama. The Mota is spoken in Banks Islands; in the Solomon Islands are the Bauro, Ulana, Mara-masiki, Mahaga, and Anudha; and in New Caledonia, the Yehen.—*Bikmore; Bishop Patteson.*

MELANORRHŒA USITATISSIMA. *Wall.*

Theet-see, . . . BURM. | Kheu of . . . MANIPUR.
Theet-see-yaing, . . „ | Lignum vitæ of . PEGU.

This black varnish tree or Burmese varnish tree grows from Manipur southward to Tavoy, thus extending from lat. 14° to 25° N. At Kubbu, an extensive valley elevated about 500 feet above the plains of Bengal, and 200 miles from the nearest seashore, it attains its greatest size, some of the trees having clear stems of 42 feet to the first branch, with a circumference near the ground of 13 feet. It forms extensive forests, and is associated with teak and sal, and also with the gigantic wood-oil tree, a species of Dipterocarpus. It is in full foliage during the rainy season, which lasts from the middle of May until the end of October. It is rare in the Irawadi valley, but common in the forests east of the Sitang river, particularly south-east of Sitang town. It is very common above the parallel of Tounghoo, and grows there to a girth of six feet, and it is plentiful in the Tounghoo and Prome forests. Its wood is the lignum vitæ of Pegu,

and is of a dark red colour, or a dark brown, of dense structure, and of particularly fine close grain. It is very strong, durable, hard, and tough, and is used by the Burmese for tool-helves and the stocks of their wooden anchors, etc., for the anchors of the Burmese boats are always of wood to which stones are lashed, the flakes being of Pyeng Khado, and the stocks of Theet-see or of some other heavy wood. Its great hardness and weight prevent its being employed in house-building, but it would answer for sheaves or block-pulleys, for railway sleepers, gun-stocks, rammer heads, and helves. It exudes a black oil, which is used by the Burmese as a varnish. The collecting season lasts from January to April. The oil is obtained by cutting a hole in the tree, about 3 feet from the ground, the cut being about 4 or 5 inches deep into the trunk of the tree. The base is hollowed out to retain the oil. The whole of the hollow is cleared with fire, after which the oil exudes, and is collected in the hollow at the base, and removed at intervals. The oil is thus extracted year after year, and sometimes there are two or three holes in the same tree. The oil is allowed to settle, on which the clear part separates from a thick portion, which is called the 'gand.' If a growing tree is cut down, and cut to pieces, the oil exudes and concretes on the stem and end of the pieces, very much resembling camphor, with an aromatic smell also. It is said that a tree yields from 3 to 5 maunds yearly, *i.e.* 240 to 400 lbs., value Rs. 10 per maund, and the same tree will yield oil for several years. It is a good balsamic medicine, and very generally used as a substitute for copaiba. As a varnish it is a preservative to wood, to which it gives, with little trouble of application, a fine surface polish; it becomes, however, white and milky if exposed to wet. In Manipur it is used for paying river craft and for varnishing vessels designed to contain liquids. In Burma, almost every article of household furniture intended to contain either solid or liquid food is lacquered by means of it. The process consists in first coating the article with a layer of pounded calcined bones, after which the varnish is laid on thinly, either in its pure state or variously coloured. The most difficult part consists in the drying. It is also much employed in the process of gilding; the surface, being first besmeared with this varnish, has then the gold leaf immediately applied to it. Finally, the beautiful Pali writing of the Burmese on ivory, palm leaves, or metal, is entirely done with this varnish in its pure state. — *Artillery Records; Voigt; Drs. Wallich, Pl. As. Rar., M'Clelland, Mason, Royle, Brandis; Cal. Cat. Ex.*, 1862.

MELANTHESA RHAMNOIDES. *Retz.*

Phyllanthus vitis Idæa, *R.* | Ph. rhamnoides, *Retz.*
Surasaruni, . . . HIND. | Pavala pula, . . TAM.

A shrub of the Coromandel coast. It has an attractive appearance from its bright red fruits, which are used medicinally.— *Wight.*

MELANTHESA TURBINATA. *R. W.*

Ph. turbinatus, *Roxb.* | Ph. simsianus, *Wall.*

A shrub of the Peninsula of India, where it is employed in medicine.— *Wight.*

MELANTHIUM COCHIN-CHINENSE. *Smith.* Tien-men-tung, CHIN. A trailing plant of Cochin-China and China. The tubers have the properties of squills.—*Smith, M. M. C.*

MELASTOMA MALABATHRICUM. *L.*

Buro-phutika, . . . BENG. | Kadali, ... MAL.
Myeet-pyai, . . BURM. |

The Melastomads are an extensive natural order of polypetalous exogenous plants nearly related to Myrtaceæ. This shrub grows in the Moluccas, Sumatra, Cochin-China, Malay Islands, in both Peninsulas of India, in Orissa, Jellasore, Khassya mountains, and Nepal. Its flowers are large and red, and it fruits the whole year. Its fruit is edible, and is also employed for a purple dye to cotton cloths. It is one of the black-dye plants of S.E. Asia. Its calyx opens like a lid, and bears a fruit which in taste and flavour strongly resembles the blackberry of temperate regions. The blossoms of the shoe-flower plant are used by the Chinese to dye leather black; the juice of the cashew tree gives a black to linen, and the fruit of this melastoma affords a black dye. In the Tenasserim Provinces, this species is a common weed. In Bengal the same plant is cultivated as a garden flower, but it does not compare with the wild plant of Tenasserim. Other species —amœnum, decemfidum, and glaucum—grow in Tenasserim, Penang, and Singapore. — *Roxb.; Mason; Voigt; W. Ill.*

MELEAGRINA MARGARITIFERA. *Lam.* The pearl oyster, which furnishes the finest pearls and finest nacre. When secreted in the globular form, it is the pearl; when on the inner walls of the shell, the nacre. The pearl oyster is met with in the Persian Gulf, Arabian coast, in the Japanese and American seas, on the shores of California, and near the islands of the South Seas, Bay of Bengal, Gulf of Manaar, Ceylon, and near the mouth of the Indus. Pearls are artificially produced by the Chinese, introducing beneath the mantle a grain of sand, around which the nacrous substance is thrown. Pearl mussel spat or spawn is thrown out in some years in great quantities, perhaps similar to the edible oyster of Britain, which threw much spat in 1849, and not again until 1860. The spat floats in and on the water, and attaches itself to anything with which it comes in contact, attaining, it is said, the size of a shilling in six months. In its seventh year the pearl mollusc attains its maturity as a pearl producer, pearls obtained from a seven-year oyster being of double the value of those from one of six years of age. In oysters under four years the pearls are not of any mercantile value, and after seven years the pearls deteriorate. Those from mussels of about four years old have a yellow tinge, and the older kinds a pinky hue, but pearls of a red and even black, as also with other colours, are also met with. Baghdad dealers prefer the round white pearl; those of Bombay esteem pearls of a yellow hue and perfect sphericity; while other nations choose the gems with a rich pink colour. There seem reasons to believe that pearl mussel spat is migratory, forming colonies at places remote from the parent bed. Between the years 1732 and 1746, there was little pearl fishing at Ceylon, and there were long suspensions between 1768 and 1796, between 1820 and 1828, and between 1837 and 1854, and during the last period the expenses were covered. The late Dr. Kelaart is stated to have been of opinion that the molluscs are capable of leaving their shells. In the Persian Gulf the pearl banks extend 300 miles in a straight line, and the best beds are level and

of white sand, overlying the coral in clear water, and any mixture of mud or earthy substance with the sand is considered to be detrimental to the pearl mollusc. In the Persian Gulf there is both a spring and a summer fishery, and as many as 5000 boats will assemble from Bahrein and the islands, and continue fishing from April to September. The net revenue from that of Ceylon, from 1828 to 1837, was £227,131. Each boat is manned with a crew of twenty-three persons, ten of whom are divers, two divers to each stone, of which there are five in the boat. When fishing for Government or for a speculator, those receive three-fourths of all the produce. Pearls are obtained also from the Avicula margaritifera, the Unio margaritiferus, the common oyster, Anodonta cygnea, Pinna nobilis, Mytelus edulis, and Spondylus gæderopus. Pearls found in Arca noæ are violet, and in Anomia cepæ purple. —*Cornhill Magazine*, August 1866.

MELEAGRIS MEXICANA is the wild turkey of Mexico. It had been domesticated by the people of America before the discovery of that continent; and from it the domestic breeds have been derived. But the other wild species of America crosses with it. English turkeys are smaller than either wild species. The better known breeds are the Norfolks, Suffolks, white and copper-coloured, or Cambridge. In India the breed of turkeys has greatly degenerated in size, is wholly incapable of rising on the wing, is of a black colour, and its long pendulous appendages on the beak are enormously developed.—*Darwin, Species.* See Pavo.

MELEGUETA PEPPER, Guinea grains, grains of paradise. This pepper is the seed of Amomum grana-paradisi, a native of the coast of Guinea, but cultivated in the West Indies.

MELETTA VENENOSA. *Cuv. et Val.* Some specimens of Clupeonia perforata, procured by W. T. Lewis, Esq., Assist. Resid. Councillor, Penang, were accompanied by the following account of a phenomenon witnessed by that gentleman during his official residence at Bencoolen:—In 1822, great numbers of what was supposed to be an edible species presented the unusual appearance of having red eyes. Many natives, after having eaten these fishes, were suddenly attacked with violent vomiting, which, in cases where remedies were not immediately applied, was known within an hour to terminate fatally. At the same time, such of these fishes with the ordinary silvery eyes were, as formerly, eaten with impunity. This phenomenon recurred at Bencoolen during the seasons of 1823 and 1825, but not of 1824. It was surmised that the poisonous fishes had fed on a gelatinous substance which at that season exudes from the beautifully-coloured coral reefs on that part of the coast of Sumatra. It is, however, more probable that the poisonous fishes were shoals of Meletta venenosa, an inhabitant of the Seychelles and the neighbouring seas, which happened in those seasons to visit Sumatra. M. Valenciennes describes this fish as being poisonous, and producing effects as noted above. In the Straits of Malacca, Clupeonia perforata has never been known to produce bad effects.

MELGHAT, a hill tract in the Ellichpur district of Berar. It is a section of the Satpura range, extremely rugged, and broken into a succession of hills and valleys; the main ridge rising to 3987 feet above sea-level at Bairat. The tea plant thrives in Melghat. In this tract are situated the forts of Gawilgarh and Narnala, and the hill station of Chikalda, 3777 feet above the sea-level.

MELIACEÆ. *Juss.* The bead tree tribe of plants, with the genera munronia, melia, azadirachta, mallea, amoora, milnea, walsura, monocyclis, sphærosacme, dysoxylum, epicharis, sandoricum, lansium, heynea, xylocarpus, and aglaia, in the E. Indies, Java, the Moluccas, Assam, the Khassya, Nepal, the two Peninsulas, Ceylon, Sumatra, and Bengal. Species of the order have bitter, tonic, and astringent qualities, and in some non-Indian species so strongly developed as to be dangerous. Azadirachta Indica bark is used in fever, and the bitter oil of its seeds externally; the pulpy fruit of the Lanseh is esteemed in the Indian Archipelago, and that of Milnea edulis is eaten in Sylhet, where it seems to resemble the leechee and longan of China.—*Voigt; Crawfurd.*

MELIA AZADIRACHTA. *Linn., Roxb.*

Lien-tsze, . . . CHIN.	Nim, ... HIND.
Ku-lien-tsze, . . . ,,	Veypam, ... TAM.
Kin-ling-tsze, . . . ,,	Yepa, ... TEL.

An ornamental tree, very much planted in avenues and groves, common throughout India, Burma, in Hu-peh in China, and in Ceylon, generally in a planted state, though occasionally in the forests; it grows well in almost any soil in the plains, and occasionally attains very large girth. The wood is very like mahogany, beautifully mottled, hard, and heavy; it is much used for cart-wheels and ordinary building purposes, and old trees yield a first-rate furniture wood, and which is much used in Bengal in the manufacture of idols, as it is so bitter that no insect will attack it. The bark is very bitter; the leaves beaten into a pulp are externally applied with great efficacy in cases of pustular eruptions, in rheumatism, and for bruises and sprains; and the leaves are useful in keeping away the boring-worm from books. The dried leaves are often added to common poultices by the natives, and are said to act in preventing glandular tumours from coming to maturity. The fruit yields an acrid bitter oil, which is exported from the Madras Presidency; it is said to have valuable antispasmodic properties, and is anthelmintic and stimulant. It is used by the natives as a remedy in leprosy, and as a liniment for rheumatic affections; it is obtained by boiling or expression, is of a deep yellow colour, and is used for burning in lamps. The bark yields a gum which is said to be a stimulant. A toddy called veypam khalloo is obtained from young trees.—*Beddome, Fl. Sylv.*

MELIA AZEDARACH. *Linn., D.C., Roxb.*

Kachen? or Jck of BEAS.	Luna-midella,	SINGH.
Bavena or Bayvena, CAN.	Male vembu, . .	TAM.
Zonzalacht, . . . EGYPT.	Vepa manu, . . .	TEL.
Lilac or bead tree, ENG.	Turka vepa, . .	
Nim, ... HIND.	Soed—Hab-al-ban,	

This species grows in Syria, the north of India, and in China. It is a handsome ornamental tree, attaining a height of about 40 feet, and a quick grower; it produces its sweet-scented, lilac-like flowers in the hot season. It is found sparingly as a planted tree throughout the Madras Presidency, Bengal, Mysore, Bombay, Africa, and has

been naturalized in the south of Europe; the wood of older trees is handsomely marked, rather durable, and in use for furniture, but is apt to split. The seeds are often strung as beads, and a valuable oil is produced from them. The root is nauseous and bitter, and in use as an anthelmintic. —*Beddome, Fl. Sylv.; Thunb.* iii. p. 228; *Roxb.*

MELIA BUKAYUN. *Royle.*
M. sempervirens, *Roxb.*

Ban, ... ARAB.	Persian lilac, ... ENG.
Ka-ma-kha, ... BURM.	Maha-nimba, . . . HIND.
Evergreen bead tree, ENG.	Bakayun, ... PERS.
Pride of China, India, .,	Darakht-i-azad, . . ,,

A tree of Nepal, Kamaon, and Persia, with small, fragrant, lilac-coloured flowers. It fruits all the year, being very ornamental when in blossom, and odoriferous. It is common in the Panjab and in the less elevated villages of Afghanistan, and up to 5000 and 6000 feet on the Himalaya. Below Chamba, up to 2800 feet, trees with 12 or 14 feet of girth may be obtained. The wood is yellowish, soft, brittle, and weak, but is bitter and not subject to the attacks of insects. It is a smaller tree than the M. azedarach.—*Drs. Stewart, O'Sh., Roxb., Voigt; Gen. Med. Top.*

MELIA COMPOSITA. *Willd., W. and A.*

M. robusta, *Roxb.*	M. superba, *Roxb.*
Nimbaca, . . . MAHR.	Mallay vembou, . TAM.
Lunu midella, . . SINGH.	

A very large, quick-growing, ornamental tree, with smooth dark-brown bark. Common in Ceylon, in Malabar, Wynad, Coorg, Mysore, South Canara, and other parts of the Madras Presidency. Its timber is very light and cedar-like, and in Ceylon is in use for outriggers of boats and for ceilings; and it is said white ants will not attack it.—*Dr. Gibson; Beddome, Fl. Sylv.*

MELIANTHUS MAJOR, frequent at the Cape of Good Hope. The genus derives its name from the copious secretion of nectar in the little depression at the base of the flower. To the natives this juice is a well-known dainty. It should be introduced into India.

MELICA. Roxburgh (i. p. 327) describes four species of this genus of plants,—diandra, digitata, latifolia, and refracta. M. nutans, *L.*, is the pearl grass of North and Mid Asia.

MELICOCCA BIJUGA, *Linn.*, has been introduced into India. It grows on the mountains of Central America, and in Jamaica; the pulp of the fruit is of grape taste; the seeds can be used like sweet chestnuts.—*Voigt; Von Muller.*

MELICYTUS RAMIFLORUS, the Myhoe tree of New Zealand. Grows to the elevation of 25 to 30 feet, but is of small circumference. Its wood is heavy, and is only used for obtaining fire by friction.—*Bennett's Gatherings.*

MELIDIDÆ, a family of badger-like animals. The following occur in N.E. Asia, viz.:—

Arctonyx collaris, *Cuv., Blyth.*

Mydaus, *Gray, Hardw.*	A. isonyx, *Hodgson.*
Hog, Hog-badger, . ENG.	Bhalu-sur, . . . HIND.

Nepal, Sikkim, E. Bengal, Assam, Sylhet, Arakan.

Arctonyx taxoides of Sylhet, Assam.

Mellivora Indica, *Jerdon.*

Ursitaxus inauritus, *Hodg.* Ratelus Indicus, *Schin.*	Mellivora ratel, *Blyth.*
Bhajrubhal, . . . BENG.	Tavakaradi, . . . TAM.
Biju, ... HIND.	Biyu-khawar, . . TEL.

Indian badger, all India.

Meles albo-gularis, *Blyth*, Taxidea leucura, *Blyth*, or Tum-pha, and Meles albo-gularis, are three mammals of Tibet.

Helictis Nepalensis, *Jerdon* (Gulo, *Hodg., Blyth*). Oker, NEPAL. Nepal wolverine, Nepal. Helictis orientalis is of Malayana.

MELILOTUS, the Trifolium of Linnæus, a genus of the Fabaceæ, plants of Europe and Asia. M. Italica is cultivated in the north of India, M. leucantha in Bengal, Assam, and the Peninsula. Cows fed on it are said to yield an abundance of milk. M. officinalis of Europe is used for flavouring Gruyere cheese. It is the Pai of the Burmese, the Asperuck of Hindustan, and the Zireer of Persia. M. parviflora is of Europe and Asia, and M. sulcata of N. Africa.

Melilotus alba, *Desrousseaux*, Kabul clover or Bokhara clover. A fragrant biennial herb of S. Europe, N. Africa, and Central Asia. This plant attracted notice in Ireland. It is nearly allied to M. leucantha, and therefore not a true clover. It grows so freely as to yield in the season five or six cuttings of green herbage, from which, it is said, a considerable proportion of strong fibre may be obtained; but the committee of the Irish Flax Society stated that the trials made in the steeping this plant were unsuccessful with them. Griffith saw large fields of melilot in the neighbourhood of Ava. Several native and foreign species are grown in India,—M. arvensis, Italica, leucanthus, officinalis, parviflora, and sulcata.—*Griffith; Mason; Royle, Fib. Pl.* p. 298; *Murray.*

MELIOSMA ARNOTTIANA. *Wight.*

Millingtonia Arnottiana, *W.*	Sapindus microcarpus, *W.*

A very common large tree in S. India and Ceylon at 4000 feet and upwards; very abundant at Coonoor on the Neilgherries, where it is known as the Huli-makay (tiger-like); grows in the sholas of the Animallays, and is a most beautiful sight in June when in full blossom, its whitish panicles forming a perfect sheet of flowers over the top of the tree. The heart-wood of very old trees is striped reddish and white, tiger-like; the timber is spongy and light, but is occasionally used for rafters and as firewood. M. dilleniæfolia, *Wallich*, grows in Simla, and M. Wallichii, *Planch.*, in the Darjiling Hills.—*Beddome, Fl. Sylv.; Brandis; Par. Ex.*, 1878.

The Indian badger is found throughout the whole of India, from the extreme south to the foot of the Himalaya.—*Jerdon.*

MELLOON, Burmese defeated here by the British Indian army, 19th January 1826.

MELOCANNA BAMBUSOIDES. *Trinius.* The berry-bearing thornless bamboo of Chittagong and the E. Archipelago. It is the Beesha Travancorica, *Beddome.* It grows beautifully erect on dry slopes of hills, height up to 70 feet, circumference towards the base one foot. The fruit is very large, fleshy like an apple, and contains an edible seed. M. humilis, *Roeper*, is a more slender and smaller species; M. Travancorica, *Von Mueller*, is the Beesha Travancorica of Beddome. — *Von Mueller.*

MELOCHIA CORCHORIFOLIA. *Linn.*

Poonnacoo keera, . TAM. | Tsjerou, ... URIYA.
Ganuka peindi koora, TEL. |

The whole of this plant, with the exception of the root, boiled in oil, is supposed on the Malabar coast to be an efficacious remedy for preventing bad consequences from the bite of a water-snake. —*Hortus Malabaricus, in Ains. Mat. Med.*

MELODINUS MONOGYNUS. *Roxb.* Shan-ch'ang, CHIN. A plant of India and China, one of the Apocynaceæ, said to yield an edible fruit.—*Smith, M.M.C.; Roxb.* ii. p. 56.

MELOE, a genus of the order of Coleoptera, class Insecta. The species are beetles with large and swollen bodies, and short oval elytra, lapping over each other at the base of the suture. They are sluggish creatures, and feed on various plants, especially the species of ranunculus. When alarmed, they emit from the articulations of their legs an oily, yellow or reddish liquid. Latreille maintained that one insect was the Buprestis of the ancients, to which noxious qualities were attributed. The females lay their eggs near the ranunculus and other plants whose flowers are regularly visited by bees. After these are hatched, the larvæ ascend into the flowers, and, attaching themselves to the back of a bee, are carried into the hive. Dr. C. V. Riley mentions that the young of all vesicants belonging to the Meloidæ develop in the cells of honey-making bees, first devouring the egg of the bee, and then the honey and bee-bread. They are all remarkable for passing through several larval stages. The young Meloidæ are at first simple larvæ, called triungulins, running actively about, climbing to flowers visited by bees, to which they attach themselves. They have stout thighs and claws, but feeble jaws. Only a few get attached to the proper bees, the others perish. Once in the cell, the creature eats the bees' egg, and then moults and assumes the second larval condition. In this state it is clumsy and little locomotive, and feeds on the honey store. It then becomes a pseudo-pupa, and later a third larva within the partially rent skin, the true pupa stage being still later.

MELOLONTHIDÆ, the chafer group of beetles; they are large; their larvæ feed on grass, the beetles on the leaves of trees, round which they fly in the evening. Under the name of *white grub*, one of the insects injurious to coffee plants, are included the larvæ of various Melolonthidæ, the cockchafers of Ceylon, which do much harm to coffee plantations, young and old, by eating the roots of the trees. Mr. J. L. Gordon of Rambodde considered the white grub to be by far the greatest enemy of the coffee trees which the planter has to contend with, as he never knew a single tree recover after their attack; and they destroyed at Rambodde, in two years, between 8000 and 10,000 trees of fine old coffee. Mr. Gordon used to dig up the soil at the foot of the trees, and take out such grubs as he could find.

The larvæ of the moth called Agrostis segetum is the very destructive *black grub* of the Ceylon coffee-planters. This pest is about an inch long, and is most abundant from August to October. The caterpillar lives in the ground, but comes out at night to feed, and is very common and injurious. They attack not only coffee trees, but all sorts of vegetables and flowers, and are very destructive to gardens and in the field, as they eat everything that is artificially raised, despising grass and weeds. They generally appear only on certain fields, and will not go over an estate. The insect is not confined to Ceylon; its ravages are well known in India, at the Cape of Good Hope, and Europe, where it injures the grain and beet-root crops. In Ceylon it attacks young coffee trees, gnawing off the bark round the stem just above the ground. Where the trees are very small, they are bitten right off, and the tops sometimes partially dragged under the ground, where the grubs may easily be discovered and dislodged. The damage which they inflict on plantations may be estimated, when it is mentioned that Mr. Nietner lost through them in one season, in certain fields, as many as 25 per cent. of the young trees he had put down.

MELON. Under this name several vegetables are known, viz. Citrullus cucurbita, *Linn.*, water-melon; Si-kwa, Han-kwa, CHIN., Turbuza, HIND. The water-melon is to be had at the same time as, and grown in a similar manner to, the Cucumis melo. The seed should always be preserved from the finest and richest-flavoured fruit, and is better for being three or four years old. The green melon is the finest flavoured, although many of the others are very good. The cause of melons growing finer in the sandy beds of rivers is attributed to the temperature being more equal about the roots than it is in beds in the garden, especially during the night. Cucumis dudaim, Queen Anne's pocket melon, is a native of Persia, and produces a fruit variegated with green and orange, and oblong, unequal green spots; when full ripe, it becomes yellow and then whitish. It has a very fragrant, vinous, musky smell, and a whitish, flaccid, insipid pulp. Cucumis melo, *Linn.*, musk melon, melon; Kharbuj, Kharbuza, HIND., Sarda, Paliz, HIND. Native of Jamaica, Persia? and Kabul? but cultivated throughout India. The rock, green, and musk melons are all sown in the Dekhan at the same time,—generally in beds of rivers, where the soil is light and sandy. They are very seldom sown in gardens. The seed is put down in November, three or four seeds together, with as rich manure as can be procured. The plants must not be close together,—a distance of from six to eight feet is generally allowed. They come in about March, and continue until the rains. In Bombay they are in season at the same time, and a second crop is grown during the rains; this is not the case in the Dekhan. In China, liquid night-soilis largely used in the cultivation of melons.

Melon seed oil, Pitcha pusjhum yennai, TAM., is obtained from the Cucumis melo.—*Hogg; Voigt, O'Sh.; Roxb.; Riddell; Jaffrey.*

MEMBU, the capital of the Abor people, on the borders of Assam.

MEMECYLON, a genus of plants, shrubs, or small trees of the E. Indies. M. cuneatum is of the Central Province of Ceylon, at an elevation of 3000 feet; M. ellipticum, in the forest between Galle and Ratnapura; at no great elevation; M. Gardneri and M. leucanthum grow at a height of 2000 to 5000 feet in the Central Province; M. ovoideum, in Ambagamowa; M. obiculare at Hinidun Corle; M. parviflorum, in the Central Province, at 7000 feet; M. rhinophyllum and M. rostratum at 3000, and M. sylvaticum is common in forests at an elevation of 4000 feet. M. angustifolium, *W. Ic.*, is common on the banks of Ceylon rivers, up to an elevation of 2000 feet; M. fuscescens, *Thw.*, occurs in Ceylon at Kokool Corle, at no great elevation; M. macrocarpum, *Thw.*, occurs in Ceylon at Ambagamowa, at an elevation of about 3000 feet; M. revolutum, *Thw.*, foliis-coriaceis, has leathery leaves, and occupies Rambodde, 5000 feet; M. umbellatum, *Burm.*, called Coracaha by the Singhalese, is very abundant, up to an elevation of 2000 feet. M. varians, *Thw.*, of the Ceylon Central Province, at an elevation of 2000 to 5000 feet. There are two varieties,—M. Wightii, *Thw.*, M. amplexicaule, also a small tree of the Central Province, at an elevation of 3000 to 4000 feet.—*Thw.*; *Wight, Ic.*

MEMECYLON AMPLEXICAULE. *R.*

M. cordatum, *Wall.* | M. depressum, *Benth., Rheede.*

A flowering shrub in the forests of the W. coast of India, used in medicine. It is the Nidam shetti of the Maleali.—*Roxb.* ii. p. 260.

MEMECYLON CAPITELLATUM. *Linn.*

Welli-kaha, . . SINGH. | Alli-chettu, . . . TEL.

A plant of Ceylon and Coromandel, with small blue flowers. Its ripe berries, Aali pundu, TEL., are eaten by the natives. It is a small bush, common in most jungles on the Coromandel coast; it has much pulp of a bluish colour and of an astringent quality. It is M. edule, *Roxb.*—*Ainslie; Thw.*; *Voigt.*

MEMECYLON RAMIFLORUM. *Lam.*

M. tinctorium, *Kœn.*, Iron-wood tree.

Myen-khæ-tanyet,	BURM.	Dœdi-gaha, . .	SINGH.
Anjuna, Kurpa, .	MAHR.	Kasha maram, . .	TAM.
Surpa, ...	,,	Kayam puvu cheddi,	,,
Kana-yavu, .	MALEAL.	Alaika, Alli-chettu,	TEL.

This occurs in Sylhet, the Malay Peninsula, Tenasserim, Coromandel, Mahabaleswar, Kandalla, along the Western Ghats, in the woods about Cochin, common in jungles in the Carnatic. The flowers are small, blue; its leaves are used in dyeing yellow. The wood is brought into Madras for firewood, and a large quantity of the leaves are imported daily for dyeing purposes. Cold infusion of the leaves imparts a yellow dye. A crimson dye is also said to be obtained from them. It is a highly ornamental tree, with deep-green shining leaves; flowers in February and March, of a purple colour, with the calyx beautifully streaked on the inside. It bears its flowers in compound corymbs, which contrast favourably with its shining green leaves. Wood is very strong and tough. Does not yield readily to wet. Is much employed, when procurable of sufficient size, for agricultural implements, cart, furnishing, etc.—*M. C. C.*; *M. E. J. R.*; *Drs. Mason, Gibson.*

MEMECYLON UMBELLATUM. *Burm.*

M. amplexicaule, *W. & A.*	M. sessile, *Benth., W. & A.*
M. cordatum, *Lam.*	M. tinctorium, *Wight, Ill.*
M. ramiflorum, *Lam.*	Kora-kaha, . . SINGH.

Under these names Colonel Beddome unites several of the above species. He says the middling-sized tree occurs in all parts of the Madras Presidency and Ceylon, and on the mountains is often a tree of considerable size. Grows in the Kodin Karnal shola, on the Pulneys, at 7000 feet elevation, and the same form occurs on the Neilgherries. The wood is very hard and close grained, and might answer as a substitute for box. In Ceylon the leaves are used in conjunction with the wood of Morinda citrifolia and Cæsalpinia sappan for producing a permanent red dye.—*Beddome, Fl. Sylv.*

MEMNON, according to Hesiod and Pindar, was king of Ethiopia. Æschylus said he was son of a Cissian woman, and Herodotus and others say he founded Susa, and led a combined army of Susanians and Ethiopians to the assistance of Priam, his father's brother, and perished in one of the battles before Troy. The Egyptians claim him to be their king Amunoph III., whose statue became known as the vocal Memnon. Memnonia was the name of several towns in Egypt and at Susa, supposed to have been built by Memnon, and there was a tribe of Memnones near Meroe. Memnon has a statue of a highly crystallized sandstone or granular quartz.—*Jameson, Ed. Journ.*, 1819.

MEMPHIS, a city of the Pharaohs. Misr, the town of old Cairo, near Cairo, was built out of the ruins of Memphis.

MEM-SAHIBA. ANGLO-HINDI. An English woman, a mistress of a house.

MEN. BURM. A Burmese title bearing an ambiguous meaning, applied equally to a king of England, the Governor-General of India, to the king of Burma, and to all the high dignitaries of his provinces.

MEN. CHIN. Literally gate, is often used in Chinese to designate a religion. Thus King-Men, the Luminous Gate, is the synonym of Luminous Religion, and in the monument of Si-ngan-fou is used for Christianity.—*Huc's Christianity*, i. p. 52.

MENADO. The tongue of land in the north of Celebes, known administratively under the name of the Dutch Residency of Menado, comprehends all the northern extent of the island, from the bay of Palos in the west to the Cape of Taliabo in the east, and comprises the great bay or arm of the sea of Gunong-tello, which stretches in a westerly direction between the two peninsulas. The Residency includes under its jurisdiction the whole federative states of Minahasa, the small kingdoms of the northern coast, the very extensive districts in the west part of the Peninsula, where Government exercises sway, besides the islands of Sangir and Talaut to the north, as well as the lesser islands of the west coast and the large gulf of Tomini. In 1882, Menado, Minahasa, and Gorontalo had an area of 1267·2 Dutch geographical square miles, with 776 Europeans, 231,357 Indigenes, 2356 Chinese, and 52 others. The Alfoura population are in the elevated and woody parts of Kayeli, Toradja, and Tomeiku. Near Menado is a race called Bintek, strong but intractable, who have hitherto resisted all efforts to improve them. Some of the less civilised tribes.

have semi-Papuan features and hair, while in some villages the true Celebes or Bugi physiognomy prevails. The plateau of Tondano is chiefly inhabited by people nearly as white as the Chinese, and with very pleasing semi-European features. The people of Siao and Sangir much resemble these, and Mr. Wallace believes them probably to be immigrants from some of the islands of North Polynesia. The Papuan type will represent the remnant of the aborigines. The languages contain a Celebes-Malay element and a Papuan element, along with some radical peculiarities derived from the Siao and Sangir Islands farther north, and therefore probably derived from the Philippine Islands.—*J. I. Arch.; Wallace; Horsb.*

ME-NAM, a river of Cochin-China, has its source in the mountains of Yun-nan in China. It receives many tributaries in its course, divides itself after receiving the waters of the Phitsalok branch, and again unites above Bankok, where, with a depth of from 6 to 8 fathoms, it rolls its magnificent tide into the Gulf of Siam. Me-nam in Siamese means mother of waters. The old name is Me-nam Chan Phya. It is only navigable to a distance of about 30 leagues. It rises and falls like the Nile, the Indus, the Ganges, the Brahmaputra, and the Irawadi. There are 20 waterfalls between Zimmay and Bankok. It has a course of 453 miles, or 800 miles including its windings. The town of Bankok is 27 miles from its mouth, on an islet, in lat. 13° 58′ N., and long. 100° 34′ E.—*Bowring's Siam.*

MENANDER. About the 1st century B.C., a Scythian race swept southwards from the frontier of China, and submerged Bactria. The Macedonians were driven from Kabul into the Panjab. The Greek captain Menander, and afterwards Apollodotus, passing through the Khaibar, overran the valley of the Indus, and reduced Gujerat and Kashmir. The Greeks were afterwards crushed between the advancing Scythians and the great Indian empire of Magadha. Of all the kings who followed Eukratides, Menander and Apollodotus alone are mentioned by classical authorities.

MENANGKABAU, a state in Sumatra, the original country of the Malay race.

MENAVAN, MALEAL., pronounced also Menon, corruptly Menewar. The village or district accountant in Malabar; according to some, the appropriate designation of a Maleala Sudra, Nair writer or accountant; same as the Karnam of the Tamil race.—*Wilson's Glossary.*

MENCIUS, known in Europe, is the Chinese philosopher Meng-tsze, who died about B.C. 317. See Meng-tsze.

MEND. HIND. A dam, a dyke, the boundary of the village lands or of the lands of a village.

MENDHI or Henna. HIND. Lawsonia inermis. Its leaves are used as a dye for the beard and hair, and for fingers and for horses' tails; they are also given to goats and sheep, etc., when attacked by itch.—*Powell*, i. p. 452.

MENDHI. HIND. A Muhammadan bride's paraphernalia.

MENDICANTS. Mendicancy in India, Burma, and Tibet, amongst Muhammadans and Hindus and Buddhists, is largely associated with their religious views, and begging is supposed in a great measure to be honourable, a of religion, and the honoured occupation of old age. Some of these religionists are professed ascetics; those of the Hindu faith wander about in the scantiest of garbs, with profusion of ashes on their forehead, beads round their necks, and devotional phrases and verses in their mouths. They visit the most pious of their respective castes and sects, and extort money. The fact that so large a number are professed mendicants is an important one, both from a social and political point of view. Poverty is an evil in any land; but when a large portion of the populace of any country try to remedy the evil by systematic begging, then the evil to the whole land is rendered tenfold worse. Hand in hand with vagrancy go half the crimes that sully human nature.

Amongst Hindu mendicants are the Vaishnava Byragi, Saiva Sanyasi, Ramanaya or worshippers of Rama; Nanik Panthi, followers of Nanik; Kabir Panthi, Sukhee Bhava, Khelanta Jogi, Kanuphata Jogi, Shurevuri, Aghora Panthi, Brahmachari, etc. They have their various forms of austerities. Mr. Ward was informed that in his day scarcely less than an eighth part of the whole population abandoned their proper employments, and lived as religious mendicants by begging. Many of the more enlightened Hindus and Brahmans hold these mendicants in the utmost contempt, and would consider their being compelled to work as a great blessing conferred upon the country.

The Abdhut is a Hindu mendicant of the Vaishnava or Saiva sect. The term is from the Sanskrit Avadhuta, and this class are supposed to have shaken off the trammels of humanity.

The Akas-mukhi, from Akas, the sky, and Mukha, the face, are religious ascetic mendicants among the Hindus, who hold up their faces to the sky till the muscles of the back of the neck become contracted and retain position.

The Atit religious mendicant is usually a Vaishnava.

Gosain mendicants worship Siva in the form of the lingam, Sanyasi worship Vishnu; Sanyasi mendicants and the ancient ascetic Viragi are followers of Ramanuj. Mendicants carry water from the Ganges to a great distance. The four orders of Hindu life are not now given effect to. The Bhikshuna, the mendicant of the fourth order, may now have a wife and family.

Jogi, ascetic religious mendicants, are followers of the Saiva doctrines taught by Gorakhnath. They have several sections. But, in popular acceptance, Jogi is a term of almost as general application as those of Sanyasi and Bairagi, and the vagrant mendicants who so style themselves usually follow the dictates of their own caprice as to worship and belief, often assuming the character as a mere cloak for obtaining a lazy livelihood. Indeed, the Jogi, more than other religious mendicants, add to their religious personification more of the mountebank character. Most of the religious mendicants deal in fortune-telling, interpretation of dreams, and palmistry; they are also often empirics, profess to cure diseases with specific drugs or with charms and spells; but besides these, the Jogi is usually musical, and plays and sings. He often travels with a small bullock, a goat, or a monkey, whom he has taught to exhibit tricks. The dress of the Jogi is generally a cap and coat or frock of many colours. They profess to worship Siva, and often carry the lingam, like the Jangama, in their cap. All classes and sects assume the character, and even

in wet ditches in most parts of Europe, also in the Caucasus, Chili, and Teneriffe.

MENTHA ROYLEANA. *Benth.*

Kushma, ...	BEAS.	Koshu, ...	SUTLEJ.
Yura, Pudna, .	CHENAB.	Velanne, .	TRANS-INDUS.
Vien, . . .	KANGRA.	Mushk tara, .	,,
Baburi, . . .	JHELUM.		

Grows common in the plains, Trans-Indus, and either M. incana or M. Royleana grow in the Himalaya and Tibet to 11,000 or 12,000 feet. M. incana is also occasionally cultivated in gardens, and its leaves are officinal as an astringent. M. Royleana is much used by the hill people of the Himalaya.—*Ainslie; Royle; O'Sh.; Stewart.*

MENTHA SATIVA. *Roxb.*

M. arvensis, *Linn.* | Marsh whorled mint.

Nana, Hubbuk, .	ARAB.	Pudina,	HIND.
Bu-dina, . . .	BURM.	Widda,	TAM.

This is found wild in Kashmir at elevations of 5000 to 9000 feet, and it is grown in gardens throughout India. It is officinal at Lahore, and is prescribed by the Muhammadans in dyspeptic complaints, and to stop vomiting.—*Drs. O'Sh., Honig., Stewart.*

MENTHA VIRIDIS. *Linn.* Spear-mint.

Pahari podina, . HIND. | Podina kohi, HIND., PERS.

Found in the milder parts of Europe, the Canaries, Cape of Good Hope, and America, both North and South. It is a native of Kashmir, and is cultivated throughout the E. Indies for its essential oil and its distilled water; greatly resembles M. piperita. The colour, however, is of a deep green. It is given as a stimulant in cholera.—*Dr. Stewart.*

MENTIKO, a gay festival of the Kanawari.

MENU. The Menu of the Hindus are seven,—Swayambhuva (who by some is termed an incarnation of Brahma), Swarochesa, Uttoma, Tamasa, Raivata, Chaishusha, and Satyavrata. Sir William Jones has considered Swayambhuva to have been Adam, and Satyavrata, Noah.

Menu, the name of the author of a book called the Institutes of Menu, composed at least 800 but probably 1200 years before Christ. Menu's Institutes are later than the Vedas, and show the legal, social, and political rather than the poetical and religious aspects of Brahmanism. But it is a compilation of the customs current among the various races in India, and therefore contains many contradictory passages. Many of his dicta by no means tend to elevate the condition of women. In his lengthened catalogue of things pure and impure, he, however, says the mouth of a woman is constantly pure, and he ranks it with the running waters and the sunbeam; he suggests that their names should be agreeable, soft, clear, captivating the fancy, auspicious, ending in long vowels, resembling words of benediction. Where females are honoured, he says, there the deities are pleased; but where dishonoured, there all religious rites become useless; and he declares, that in whatever house a woman not duly honoured pronounces an imprecation, that house, with all that belongs to it, shall utterly perish. Strike not, even with a blossom, a wife guilty of a hundred faults, says another sage,—a sentiment so delicate, that Reginald de Born, the prince of troubadours, never uttered any more refined. Menu lays down some plain and wholesome rules for the domestic conduct of the wife; above all, he recommends her to preserve a cheerful temper, and frugality in domestic expenses. Some of his texts savour, however, more of the anchorite than of a person conversant with mankind; and when he commands the husband to be reverenced as a god by the virtuous wife, even though enamoured of another woman, it may be justly doubted if ever he found obedience thereto; or the scarcely less difficult ordinance, for a whole year let a husband bear with his wife who treats him with aversion, after which probation he is permitted to separate.

Menu has imposed obligations towards the Brahman little short of adoration, but these are limited to the learned in the Vedas; and he classes the unlearned Brahman with an elephant made of wood, or an antelope of leather, nullities save in name. And he adds further, that as liberality to a fool is useless, so is a Brahman useless if he read not the holy texts, comparing the person who gives to such an one to a husbandman who, sowing seed in a barren soil, reaps no gain; so the Brahman obtains no reward in heaven. These sentiments are repeated in numerous texts, holding out the most powerful inducements to the Brahmanical class to cultivate their minds, since their power consists solely in their wisdom. For such there are no privileges too extensive, no homage too great. A king, even though dying with want, must not receive any tax from a Brahman learned in the Vedas. His person is sacred. Never shall the king slay a Brahman, though convicted of all possible crimes. Banishment, with person and property untouched, is the declared punishment for even the most heinous crimes. A Brahman may seize without hesitation, if he be distressed for subsistence, the goods of his Sudra slave. What prince could gain wealth by oppressing these (Brahmans), who, if angry, could frame other worlds and regents of worlds, and could give birth to new gods and mortals?

The code of Menu is still the basis of the Hindu civil jurisprudence, but is received according to the interpretations and modifications of approved commentators. Since his time the Sudra races of Hindus have ceased to be slaves, but until the early part of the 19th century widows continued to immolate themselves on the funeral pyre of their husbands; intermarriages between castes have become prohibited; Brahmans have taken to soldiering, and to live apart in separate villages, or in a secluded part of the village; caste distinctions have become more rigid, except in the interested relaxation of the Brahmans; animal food has become prohibited to large classes of Hindus, the avowed imposts on the land doubled, and the laws less liberal towards women. —*Tod's Rajasthan.; Elph.; Cole. Myth. Hind.; Menu by Haughton.* See Manu.

MEO, a tribe of cultivators in the Dehli province, inhabiting the low hills about Gurgaon.

MER signifies a hill in Sanskrit, hence Komulmer, or properly Kumbhomer, is the hill or mountain of Kumbho; Ajmir is the hill of Ajya, the invincible hill. Mèr is pronounced with the long è like mère in French.—*Tod's Rajasthan.*

MER, a race of the Aravalli, possibly noticed in the code of Menu as the Meda who must live without the town, and maintain themselves by slaying the beasts of the forest; the Med or Mair

race are possibly meant. General Cunningham thinks the Mer of the Aravalli are the same race.

MERCAL, Marakal, or Markal; Tamil Marakkal, a grain measure in use at Madras, containing 8 padi or measures, and being 1-12th of a kalam. It formerly contained 750 cubic inches, but is now fixed at 800 cubic inches; 400 markal = 1 garce or garisa.

MERCANDEYA, one of the Puranas; a Hindu sacred book. See Lakshmi.

MERCHANT. A great part of the Hindus of British India follow mercantile pursuits. Many Muhammadans, of Arab and Hindu descent, as the Moplah, the Labbai, the Bora, the Mehman, are active merchants. The Parsee race are extensively engaged in commerce. The Baboo of Calcutta, chiefly of Sudra origin, are also great merchants. The Chettyar of Madras, all of them Vaisya Hindus, are also largely engaged; and there are 80 clans of Rajputs engaged in commercial transactions. These Rajput tribes are known as the Marwari. Many of the Hindus of Cutch and Gujerat are largely engaged in foreign trade with the west coast of Africa, and have been great slave-dealers, occupying the coast from Zanzibar to Mozambique. The Parsees have spread from Gujerat and Bombay into Madras, Calcutta, Rangoon, Singapore, China, and London, and the chief towns on the coasts of the south and east of Asia have traders from most parts of Western Asia, from Europe, and from America.

MERCURY.

Abuk, Zibakh, . .	ARAB.	Hydrargyrum, . .	LAT.
Shwuyyiu, Hung, .	CHIN.	Sim-ab, ...	PERS.
Mercure, Vif-argent,	FR.	Parada, Rasa, . .	SANSK.
Quicksilber, . . .	GER.	Rasam, . .	TAM., TEL.
Para, ...	HIND.		

Mercury or quicksilver was known to the ancients. The Romans and Arabs seem to have employed it as a medicine externally, and the Hindus prescribed it internally. It is found in China, at Almaden in Spain, at Idria in Carniola, and likewise in S. America. Mercury was found by Dr. J. P. Malcolmson in the lava of Aden and in the laterite on the western coast of the Peninsula of India. It occurs usually as the native bisulphuret or cinnabar, combined with silver, forming a native amalgam; or with chlorine, as in horn mercury. It is chiefly obtained from the sulphuret by distillation with lime or with iron, which, combining with the sulphur, the metal distils over and is condensed. Quicksilver is said to be brought to Ava from China.

Bichloride of Mercury, corrosive sublimate.

Hydrargyri bichloridum. | Rus-capoor, GUJ., HIND., TAM.

This is white, with an acrid, metallic, and persistent taste, without smell. It is met with in small crystals, or in semi-transparent masses. It is made in many parts of British India, and seems to have been long known to and prepared by the natives of India. It is much used as a preservative of timber, canvas, etc., from the ravages of mildew, the dry rot, and of white ants. A solution is made in the proportion of one pound to four gallons of water, and in this the article to be protected is steeped a variable time, according to its nature.

Chloride of Mercury.

Hydrargyri chloridum. | Calomel, ... ENG.

Several preparations of mercury are described by the Sanskrit and Tamil writers. Dr. O'Shaughnessy examined the processes, and found that they generally led to the production of a mixture of calomel and corrosive sublimate. The ras-karpur is usually calomel. Once, however, he met a specimen which was corrosive sublimate of the finest kind.

Russapuspum, in great repute amongst the Tamil people, appears to be administered by them in larger doses than any other preparations of this metal. But it generally happens that through defective manipulation a mixture of calomel and bichloride is formed.

Shavirum is a strange compound, administered by the Tamils in very small quantities; is a harsh, uncertain, and dangerous preparation. In the mode of preparing it, the vapours of calomel simultaneously rising and meeting the chlorine are converted into the bichloride of mercury.

Nitrate of Mercury, Hwang shing-yoh, CHIN. Made in China by heating and subliming a mixture of red led, mercury, sulphate of iron, and nitre.

Nitric Oxide of Mercury.

Hung-shing-yoh, . CHIN. | Hung-shing-tan, . CHIN.

This is a mixture of peroxide of mercury and a little nitrate of mercury, made by fusing cinnabar, nitre, alum, realgar, and sulphate of iron.

Red Oxide of Mercury.

Hung-fen, . . . CHIN. | San-sien-tan, . . CHIN.

It is prepared in Hankow: nitre is melted in a small boiler, alum is added, and mercury is put into the middle of the mass. The red oxide is obtained as sublimated scales of a brick-red colour.—*Smith; O'Sh. Beng. Phar.; Mason; Royle.*

MERDIN, a city in Diarbekir, Asiatic Turkey, lat. 37° 26′ N., and long. 39° 59′ E. It is situated on the slope of the Karajadagh or ancient Mount Masius; population about 11,000, of whom 1500 are Armenians and 200 Jews. Merdin Rocks are at the Baghdad frontier towards Constantinople. The pashalik of Baghdad extends from the Merdin Rocks to the mouth of the Shatt-ul-Arab.

MERDUI, a Brahui tribe of shepherds living near Khozdar, who obtain antimony and lead from the hills of Kapper. Writing of Jhalawan, Dr. Cook says the mountain range of Baluchistan is the great natural boundary of Western India, and may be described, figuratively, as composed of a vast under structure, surmounted by parallel rows of walls (represented by mountain ranges) cut through here and there by long and meandering passages. Amongst these mountains the Merdui tribe of the Brahui obtain lead ore, and reduce it. A place called Séman is situated amongst low sandstone hills, black externally, with fragments and boulders of dark blue limestone, and arenaceous nummulitic rock scattered around. Beneath the sandstone is a red sandy clay, and in this is found red-ore, carbonate of lead in thin, flat, tabular masses, looking like a broken-up vein, which are covered externally with a layer of calcareous earth that prevents them from being easily detected. The shepherds poke about with a stick, pick up any promising pieces, roughly estimate the specific gravity by the hand, and if they have not the proper weight, reject them. At Khozdar the implements for reducing the lead ore are very rude: a rough furnace, with four upright square stones and a hole below to insert the nozzle of a pair of bellows.

MEREI. TAM. A cess paid by mirasidars for the communal expenses.

MERGELLUS ALBELLUS, also Mergus albellus, the smew, has the circuit of northern regions, W. Asia, Sind, Panjab, Oudh, and is not rare along the Panjab rivers.

MERGUI, Myo of the Burmese, is in lat. 12° 27′ N., and long. 98° 38′ E., on an island at the entrance of the principal branch of the Tenasserim river. High water at the springs occurs about 11½ or 12 hours, when the rise is from 18 to 22 feet. The harbour admits ships of 18 feet draught of water. Population about 12,000. Mergui possesses coal. The beds are extensive, from 9 to 18 feet thick, and about 16 feet from the surface. The principal mine is about 90 miles up the great Tenasserim river. Mergui was taken 15th September 1824. The Tenasserim, the Legnya, the Pak-chan, and the Pa-look are the rivers, and the passes into Siam are the Tsa-raw, the Mawdoung, and the Khow Maun.

MERGUI ARCHIPELAGO is called by the people Myut Myo. The innumerable islands fronting the coast of the Malay Peninsula extend to the distance of 70 miles from it, and form the Mergui Archipelago. They exhibit a great variety of picturesque and wild scenery, the larger islands rising in successive ranges of hills thickly wooded at their tops with trees of a rich and varied foliage. The small rocky islands with their rugged sides rise in contrast. There are few settled inhabitants on the archipelago, but roving seafaring tribes pass from island to island, living partly in their boats and partly in temporary huts, collecting shell-fish, turtle, trepang, beche-de-mer, and edible birds' nests, which they barter for rice and cloth. Seyer Islands and King Island are the principal islands. Maingy (Maingay) Island, in lat. 12° 32′ N., and long. 98° 7′ E., can be seen for 11 miles, and the S. peak of St. Matthew's, in lat. 10° 52′ N., and long. 98° E., for 13 miles.

An almost uninterrupted belt of islands extends along all the western side of the isthmus, and is continued as far as Penang, although an interval between it and the Lankawi group contains only a few. The rest of the western coast, and the greater part of the eastern, are more thinly sprinkled with islands. But there are several extensive groups of islands, some of them remarkably bold and imposing, along the latter coasts, such as the Eastern Johore Archipelago and the Redang Islands. The concave southern coast half embraces the island of Singapore, and an archipelago of several hundreds of islets stretching to the S.E. by S. from the termination of the continent to Banca and Billiton, marks that the peninsular zone has not yet wholly sunk beneath the sea, and, expanding as it does to the west, and blocking the extremity of the straits, attests how nearly a junction with Sumatra has been accomplished. The chain of high islands fronting the coast of Tenasserim extend from Tavoy Island, in lat. 13° 13′ N., to the Seyer Islands, in lat. 8° 30′ N. The number of the Selong or wandering fishermen of the Malay Archipelago amounts to about 1000 souls.—*Journ. Ind. Arch.*

MERGUS MERGANSER, the Goosander (M. orientalis of Gould), has the circuit of northern regions; not rare in the Himalaya; rare in Central India.

MERIAH, the name given to the victims of sacrifice in the Khond tracts near Orissa, where young persons were sacrificed to propitiate the divinity supposed to preside over the soil. The Meriah sacrifices to the earth goddess were made amongst the Khond until the close of the Gumsur war in 1836. In Boad and Gumsur, the form under which the goddess was worshipped is as a bird, but in Chinna Kimmedy that of an elephant. In one place there was a pit dug, over which a hog is killed, and the Meriah's face then forced into the bloody mire until suffocated. Pieces of the flesh were then cut off and buried beneath the village idol and in the fields of the villagers. In Boad, great value was attached to the saliva of the Meriah. A Meriah Agency was instituted for the purpose of suppressing the human sacrifices, and it has nearly attained that object. The Meriah victims were natives of the low countries bordering on the Khond mountains. They were procured for the purpose by the Khond from the Pano by a regular system of crimping and kidnapping. All were acceptable, from the Brahman or Muhammadan to the Pariah, without distinction of age or sex. The greater number were very young children, who were purchased or stolen, carried to the hills, and allowed to live till some occasion called for a sacrifice. The rescued Meriah were placed in villages of their own, on land granted them by Government, and they made considerable progress in acquiring settled and industrious habits. The Khond inhabit an immense tract of mountainous country, covered with dense jungle. They are a hardy and independent race, who looked on human sacrifice as the only means of averting the anger of heaven. Meriah sacrifices in the hill tracts of Orissa have much decreased, and the Khond have been sacrificing buffaloes instead. The establishment has not succeeded in entirely preventing Meriah sacrifices even on shore, and on board the country ships plying in the neighbourhood of the districts where the practice prevails, they were rather the rule than the exception.

The Digalo is found in Khond communities occupying the position of servant and counsellor to the Khond headman or Moliko; he is of the Pano caste, a race possessing more cunning than the Khond, and exercising much indirect influence in consequence. They are thieves and kidnappers, and officiate as priests at Meriah rites. Their influence is exercised usually for evil.

MERIANDRA BENGALENSIS. *Benth.*

Kafur ka patta, . HIND. | Sima karpuram, . . TEL.

A plant of the family of Labiatæ, with a camphor-like smell and taste, in use amongst the people of India as a medicine. Its leaves are stomachic, equal to Salvia officinalis. M. strobilifera, Amurtoo, HIND., has a strong camphor-like fragrance.—*O'Sh.* p. 492.

MERISTA LÆVIGATA, the Tipau tree of New Zealand, grows straight, 16 to 20 feet high. Its wood is hard, heavy, and durable, and is used for poles.—*G. Bennett.*

MERKARA or Madhukeri or Mahadevapet, the chief town of Coorg, is in lat. 12° 26′ 50″ N., and long. 75° 46′ 55″ E., on a table-land 3809 feet above the sea, 130 miles south-west from Bangalore. The fort is situated on an eminence

of considerable natural strength, but commanded by neighbouring hills. Merkara is said to have been founded in 1681 by Muddu Raja; the original seat of the family had been at Habri.

Merkara was captured by the Madras army on the 6th April 1834. The raja's palace, a spacious building, is supposed to have been built by an Italian, who is said to have been bricked up in a wall as soon as the building was finished. Verajenderpet is 20 miles on the road leading to Cannanore from Merkara.

Fraserpet is 20 miles from Merkara. The river Cauvery runs past it, and forms the boundary between Coorg and Mysore. The S.W. monsoon, which always rages throughout Coorg from June to November, is scarcely felt at Fraserpet. Coorg became one vast coffee plantation, and estates were vigorously cleared wherever they abutted on the road, by which produce could alone be carried off.

MERODACH was a favourite Babylonian god. From the earliest times the Babylonian monarchs placed him in the highest rank of deities, worshipping him in conjunction with Anu, Bel, and Hea, the three gods of the first triad.—*Rawlinson's Religions*, p. 68.

MEROE, in Ethiopia, a country mentioned in the Scriptures, corresponding to the present kingdoms of Nubia and Abyssinia. It was also called Seba, as also Meroe. It is named in Milton's Paradise Lost, when describing the inhabitants of the world,—

> . . . 'some from farthest south,
> Syene, and where the shadow both way falls,
> Meroe, Nilotic isle.'

It was at one time occupied by Arabs under a settled form of government, who conquered Nubia and harassed the Thebans. During the earlier centuries, all these Arabs were easily conquered by the Egyptians.—*Sharpe's Egypt*, i. p. 104.

MEROOT, also called Idaan, a race in Borneo who inhabit the more hilly districts towards the north, in the vicinity of Kina-Balou. They are said to sacrifice human victims like the Kyan. The Idaan, of different places, go under different denominations, and have different languages, but in their manners and customs they seem to be nearly alike. The name Idaan is, in some measure, peculiar to those of the north part of Borneo; the inland people of Passir are called Darat; those of Benjar, Biajoos; the Subano of Magindanao appear to be the same people. The Idaan are reckoned fairer than the inhabitants of the coast. The custom obtains of arranging human skulls about the houses of the Idaan as a mark of affluence.—*J. Ind. Arch.*, 1849, p. 557.

MERU, a mythological mountain of the Hindu religionists, also called Sumeru and Hemadri. It is the Mien-mo of the Burmese, and the Simeru of the Siamese. It is termed by the Hindus in their theogony, the navel of the world, and is the fabled residence of their deities. Hindus, Siamese, and Burmese describe this mountain differently. On one of its three peaks is Kailasa, the heaven of Siva; and on another is Swarga, or paradise of Indra. In the Ramayana (book i. p. 236), Mera is the mountain nymph, the daughter of Meru and spouse of Himavat, from whom sprang two daughters, the river goddess Ganga, and the mountain nymph Parvati. She is, in the Mahabharata, also termed Syeela, the daughter of Syeel, another designation of the snowy chain; and hence mountain streams are called in Sanskrit sillotee. Syeela bears the same attributes with the Phrygian Cybele, who was also the daughter of a mountain of the same name; the one is carried, the other drawn, by lions.

Meru mountain is famed in the traditions of the ancient Hindus. Pamir is the country about Meru (upa-meru). Meru seems to mean strictly the terrestrial orb. The Greeks also metamorphosed Parvat Pamir, or 'the mountain Pamir,' into Paropamisan, applied to the Hindu Koh west of Bamian; but the Parvat put Pamir, or 'Pamir chief of hills,' is mentioned by the bard Chand as being far east of that tract, and under it resided Kamira, one of the great feudatories of Prithivi raja of Dehli.

Until the middle of the 19th century, the Hindus at Bikanir, Rajputana, taught that the mountain Meru is in the centre, surrounded by concentric circles of land and sea. The Brahmans supposed that, as there is sea at the coasts, there must be alternate circles of land and sea. Some Hindus regard Mount Meru as the North Pole. The astronomical views in the Puranas make the heavenly bodies turn around it.—*Cole. Myth. Hind.* p. 253; *Moor*, p. 270; *Hindu Theatre*, i. p. 241; *Bunsen*, i. p. 431; *Tod's Rajasthan*, i. p. 24; *Ramayana*, lib. i. p. 236.

MERUTUNGA, a learned man of the Jaina sect, who flourished in the 15th century, and wrote several historical books.

MERV is situated in an oasis of the same name. It was the capital of the ancient Margiana, is said to have been founded by Alexander the Great, and became the residence of one of his successors, Antiochus Nicator, who called it Antiocha Margiana. In more modern days it was one of the four imperial cities of Khorasan, and was long a seat of many of the sultans of Persia, but in particular of those of the Seljuk dynasty. Alp Arslan, the most powerful prince of his time, reigned here for a number of years in all the pomp and splendour of oriental magnificence.

The Merv of to-day is a cluster of Turkoman encampments. The old city of Merv (the Margiana Antiocha of the ancients) is 12 miles away, and consists of merely a number of ruins imbedded in the sands. The river Murghab, which runs through Merv, is deep and rapid, and affords a plentiful supply of water for the numerous canals that branch off and irrigate the oasis. The number of Tekke Turkomans living in the oasis itself may be roughly reckoned at 100,000. The country is famed throughout Central Asia for its fertility; and if peace and security prevailed in the region, the surplus of the crops would be sufficient for 50,000 troops. Caravans from Khiva, Bokhara, and other provinces of Central Asia pass through it on their way to Persia, Afghanistan, and India. Most of the people possess large flocks of sheep, and herds of camels and horses. Their bravery had passed into a proverb; and it was said that the clans, if united, could put forth a fighting strength of 100,000 sabres. But Russia overcame them in 1883, after a few years of fighting.

In 1786 it was sacked by the Uzbak Amir of Bokhara, and it dwindled to an assemblage of about a hundred mud huts, surrounded by a small mud wall. It is on the right bank of the Murghab, 200 miles from Bokhara, 215 from Meshed, and

432 miles S.E. of Khiva. The area of the plain of Merv is about 2400 square miles. Four cities of Merv have been in existence, and their ruins are still visible. One was built by Shah Abbas, another was destroyed by Murad Beg of Bokhara. The Russian Government have occupied the Merv oasis. The occupation is extremely important, not only from a strategical, but from a commercial point of view. The city of Herat is only some 200 miles to the south of it. Merv was regarded by the Persians as the spot where Adam received from the angel the first lesson in agriculture.—*Malcolm's Persia*, ii. p. 232; *M. Veniukof; Collett's Khiva; Kinneir's Geog. Memoir.*

MESAKHEE, a shrubby plant of Assam, very abundant. Its young branches, which are tender and red-coloured, as well as its leaves, are edible. Its fibre is well adapted for cordage. Large quantities grow wild in Upper Muttuk, and elsewhere in the district.

MESEMBRYANTHEMACEÆ or Mesembryaceæ, *Lindl.*, a natural order of plants, comprising the genera Mesembryanthemum, Glinus. M. crystallinum is the ice plant. The principal species seem admirably adapted for fixing loose, shifting sand. Its thick bark enables it to bear without shrinking a long privation of moisture, at the same time that it gives shelter to the nascent shoots of other plants. The mucilaginous capsules of M. edule or Hottentot fig are the chief material of an agreeable preserve. Mesembryanthemum nodiflorum, at the Cape, is used in making morocco leather. They are mostly Cape plants.

MESHA'AB. ARAB. There are three kinds of sticks used for driving camels. The mesha'ab, which is a branch of almond wood cut out of the bough so as to leave an obliquely-inclined head. This is chiefly but not exclusively used by the sherif, and in the prince of Mecca's hand is the symbol of sovereignty; the bark is left on it entire. The 'matrak' is a longer and perfectly straight peeled wand; and the 'bakur,' shorter and heavier than the last, is bent round at the end; both the bakur and mesha'ab are held by the straight part. The mesha'ab is of immemorial use in Arabia, and is historically interesting. A mesha'ab is mentioned as forming part of the scanty succession of Mahomed.—*Hamilton, Sinai.*

MESHED is in lat. 36° 15′ 41″ N., and long. 57° E. It is the ancient Tus. It is in Khorasan, and is famed for the tomb or mausoleum of Imam Raza, in which the remains of Harun-ur-Rashid are placed.

Nadir Shah entered Dehli on the 9th March 1739, and, in returning from India, retained all west of the Indus at Attock. He was assassinated in his tent at Meshed in Khorasan, by three of his officers, on 8th June A.D. 1747. The fate of Nadir Shah has been thus recorded, doubtless by some mullah: 'Nadir badtzakh raft,' Nadir is gone to the abyss of hell. These letters give 1161, the year of the Hijira which corresponds with A.D. 1747.—*Fraser's Journey.*

MESHED ALI, a town of Turkish Arabia, 30 miles from the ruins of Babylon. It contains the tomb and mosque of Ali. It was the capital of the Arab and Christian dynasties till taken by the Saracens in the 7th century.

—MESMERISM is largely practised by the Chinese, especially in the Toong Koon district of Kwang-tung.—*Gray*, i. p. 265.

MESONA WALLICHIANA, a labiate plant that grows on the ascent of the Jaintia Hills, whose bruised leaves smell as strongly of patchouli, as do those of the plant producing that perfume, to which it is closely allied. Pogostemon patchouli has been said to occur in the Khassya Hills. It is a native of the Malay Peninsula, whence the leaves are imported into Bengal, and so to Europe. —*Hooker, Him. Journ.* ii. p. 314.

MESOPOTAMIA is the name by which Babylonia was designated after the Macedonian conquest. Strictly, it comprises all the country between the Euphrates and the Tigris, but the name is usually restricted to the part of it S. and E. of Orfa and Mardin. The most of it is within the province of Baghdad. The upper part of it is called al-Jazirah, and the lower part Irak-Arabi.

Its limits were somewhat differently defined by ancient writers.

Strabo says that the Tigris washes the eastern side of Mesopotamia, and the river Euphrates its southern and western; whilst the Taurus separates it from Armenia on the north. Pliny, who is still more distinct, says that Mesopotamia has the Tigris to the east, the Euphrates west, the Persian Gulf south, and the Taurus north, with a length of 800 miles and a breadth of 360 miles; the city of Charax being at the extremity of the gulf (lib. vi. c. xxvii.). Mesopotamia extends above 10° in longitude, from Balis, in long. 38° 7′ 10″ E., to the estuary of the old Karun, in lat. 7° 31′ 5″ N., and long. 48° 45′ 16″ E.; from the shores of the Persian Gulf, in lat. 30°, to Sumeisat, in lat. 37° 31′ 5″ N.; its greatest width being about 170 miles, from Jaber Castle to Hisn Keifa on the Tigris, and its extreme length nearly 735 miles. The irregular triangle thus formed has a superficies of nearly 76,117 square miles, including the shores of the gulf from the Pallacopas to the old Karun. Truffles and wild capers, peas, spinach, and the carob, Ceratonia siliqua, are found in Mesopotamia. A pea called Arab addis is particularly good. The principal towns of Mesopotamia are Diyar Bekr, Hisn Keifa, Jezireh, Mosul, Tekrit, Sammara, and Kut-el-Amarah along the Tigris; Erzingan, Kemakh, Egin, Kebban Maden, Malatiyah, Ram, Kal'ah, Bir, Rakkah, Deir, Rawd, Anah, Hadisah, El' Uzz, Jibbah, Diwaniyah, Lamlun, Sheikh-el-Shuyukh, and Kurnah along the Euphrates; in addition to Suvérek, O'fah, Haran, Seroug, Ras-el-ain, Mardin, Nisibis, Sinjar, El Hadhr, Kerbelah, Meshed Ali, Samawah, Zobeida, and many other villages, both in the mountains and along the streams, between the two great rivers. Grane or Quade, Mohammarah, and Basrah are the ports; and the last, being the principal, is next in importance to Baghdad, the capital. The inhabitants consist of Arabs, Osmanli Turks, Kurd, Turkoman, Syrians, Jews, and Christians. Arabic is the general language, Turkish, Kurdish, Chaldee, Syriac, and Syro-Chaldæan dialects being the exceptions. The Sunni Muhammadan religion is prevalent; but in Upper Mesopotamia there are many Christians of the creed of Nestorius (some of whom have become Roman Catholics), and Jacobite as well as Roman Catholic Syrians.

The races that have ruled here have been many, and from the most remote times, and remnants are still to be traced of former dominant peoples in the varied languages still spoken. The present rulers are the Turks of Constantinople.

MESPILUS GERMANICA. *L.*

Ukuj, Shajarat-ul-dub, Ar. | Larôos, Keel, . . Hind.

Common edible medlar; common in many parts of Europe, and occurring in English hedgerows.

MESSIAH, a title of Jesus, born of Mary. It is from the Masah of the Arabs, and is the Christos of the Greeks. Anointed is an epithet. St. Peter (Acts x. 38) tells us that God had anointed Jesus of Nazareth to be the Christ. This is held to mean specially set apart for God's service—whether persons or things, required anointing; and the anointing of Jesus was the work of the Holy Ghost (Acts x. 38), first, at his conception (Luke i. 35), second, at his baptism (Matthew iii. 13). Thus the term, as applied to Jesus, is not a name, but the expression of his office, a title, whether expressed by a Greek, Hebrew, or English word, Christ, Messiah, Anointed.

MESTRI or Mistri, a carpenter, mechanic, mason, artificer, a chief builder, a master mason.

MESUA, a genus of plants of the order Garciniaceæ or Clusiaceæ. All the species have a very hard, heavy, reddish-coloured timber, known as iron-wood, and perhaps the hardest and heaviest timber in India. Axemen dislike very much to fell them, as they turn the edge of their axes. Their wood is most valuable for engineering purposes, and is largely used in Ceylon.

Amongst the described species are M. Coromandelina, *W. Ic.*, M. ferrea, *W. Ic.*, M. pedunculata, *W. Ic.*, M. pulchella, *Planch*, of Ceylon, M. Roxburghii, *W.*, and M. speciosa, *Choisy*. It is relating to one of them that the Burmese say that their next Buddha, Ariee-ma-taya, will enter the divine life while musing beneath its hallowed shades, hence it is a favourite tree with the Buddhist priests of Burma, who plant it around their monasteries. In Sanskrit it is called nagakesara.

MESUA COROMANDELINA. *W.*

M. ferrea, *W. and A. Prod.* | M. pulchella, *Planch.?*

Nag'ha, Naga-champa, Hd. | Nangal, ... Tam.
Mallay nangal, . . Tam. | Nir-nang, . . . „

This is a very handsome tree, common in most of the mountain forests on the western side of the Madras Presidency, growing with its congener M. speciosa, from which it is readily known by its much smaller leaves and flowers. On the Tinnevelly ghats it is very abundant, and its timber much in use; it is there called Nir-Nang, to distinguish it from Mesua speciosa, which is called Nang. This species is much in use with the natives in Tinnevelly, and is looked upon as one of the best timbers; but in the Wynad and other parts, where it is also abundant, it is not utilized, and seems hardly to be known.—*Thw. En. Pl. Zeylan.; Beddome, Fl. Sylv.*

MESUA ROXBURGHII. *W. Ill.* Iron-wood.

M. ferrea, *R.* ii. p. 605.

Ken-gau, Gungau, Burm. | Naga-kesara, . Sansk.
Nagkesar, ... Hind. | Irul maram, . . Tam.
Nag-champa, . . Mahr. | Chikati manu, . Tel.
Beluta-champagam, Mal. | Naga-kesara chettu,
Kesaramu nagasara, Sans. | Suvarnam, .

The blossoms are remarkable for their fragrance, and are sold in the bazars of India under the name of Nagkesar. Sir William Jones says that the delicious odour of its blossoms justly gives them a place in the quiver of Kama Deva, the Hindu god of love.

> . . . 'with foot as light
> As the young musk roe's, out she flew,
> To cull each shining leaf that grew
> Beneath the moonlight's hallowing beams,
> For this enchanted wreath of dreams;
> Anemones, and seas of gold,
> And new-blown lilies of the river,
> And those sweet flowerets that unfold
> Their buds on Cama-deva's quiver.'

It flowers in the beginning of the warm season. The wood is very strong and tough. The seeds are contained in a strong brown skin,—one, two, or three in each. When ripe, the skin bursts, and the seeds drop out. The oil is an excellent remedy for cutaneous diseases; dried buds, considered a temperate remedy, used in coughs, especially while attended with much expectoration.—*R. b.*

MESUA SPECIOSA. *Choisy.*

Mesua ferrea, *Linn.* | Deya-na-gass, . . Singh.

A tree of Nepal, and growing on the banks of streams in the Ratnapura district of Ceylon.—*Thw.*

MESUE. Two of this name, both of them Nestorian Christians, were in medical practice at Baghdad,—John, the elder, in the 8th and 9th, and the younger in the 10th century. John of Damascus was president of the college at Baghdad founded by the khalif Mamoon, A.D. 813. He wrote several works, which have disappeared, but he was the first who made correct translations into Arabic from the works of the Greek physicians, especially of Hippocrates and Galen.

The younger Mesue wrote a treatise on Materia Medica and Pharmacy, which for a long time was held in great estimation, and was republished and commented upon so late as the 16th century. He mentioned several new remedies, and was doubtless in advance of the knowledge of the day.

MET. Sind. A clay quarried near Hyderabad and other places. The Persian name is Gil-i-sar shui, 'the head-washing clay.' When mixed up with rose leaves, it makes anything but a bad wash-ball.—*Burton's Scinde*, i. p. 31.

METALS imported into India consist of wrought brass, copper unwrought and wrought, cast or pig iron and wrought iron, lead ore, pig lead, wrought lead in sheets, pipes, and tubes, quicksilver and steel, tin unwrought and wrought, zinc. These will be found noticed under their individual names, but the total quantities and value imported were as under:—

1874-75, ...	94,375 tons.	Rs. 2,60,71,224
1876-77, ...	140,937 „	3,56,20,494
1882-83, ...	203,938 „	4,61,38,588

The metallic products of the East Indies comprise antimony, arsenic, chromium, cobalt, copper, gold, iron, lead, manganese, mercury, nickel, platinum, silver, tin, titanium, and zinc.

Metal casting in India is very largely practised, and the processes are of great simplicity. The natives generally prepare a model in wax, and imbed it in moist clays, which, after being dried in the sun, is heated in the fire, the wax run out, and the metal run in. A better plan, where accuracy is required, is to cut the model in lead, and, having bedded it in clay, it may, when the mould is dry, be melted and run out, and the metal run in. In Manbhum, a core is made of plastic clay, all carefully shaped to the internal form of the fish or other object to be imitated. This core is then baked and indurated. On this,

the pattern designed to be represented is formed with clean beeswax. This done, and the wax having cooled, it becomes tolerably hard. Soft clay is moulded over all. The whole is then baked, the heat indurating the outer coating of clay, but softening the wax, which all runs out of the mould, leaving empty the space occupied by it. The mould being sufficiently dried, the molten brass is poured into the empty space, and, when cool, the clay is broken away, when the figured casting is seen. These are untouched after the casting, excepting on the smooth and flat surfaces, which are roughly filed. The Chinese excel in all working in metals, in ordinary blacksmith work, metal smelting, alloys, particularly their white metal of copper, zinc, iron, silver, and nickel, their sonorous gongs and bells, one at Pekin being 14½ feet by 13 feet, and their ingenious metallic mirrors, some with engravings. The Burmese, also, are skilled.

Indian metal ware is of several descriptions, some of it being much admired by Europeans. The black engraved work of Moradabad, N.W. Provinces, is well known, and so is the Tanjore brass ware. Madura men also manufacture brass vessels, to sell to the pilgrims.—*Messrs. Morrison, Rohde, Cal. Cat. Ex.* 1862.

METARI. TEL. A headman among the lower castes, as palanquin-bearers, washermen, cowherds, etc. Qu. Mehtari.

METAWALI, a Shiah Muhammadan sect in Palestine, supposed to be ancient Syrians.

METCALFE, CHARLES THEOPHILUS, a Baronet of Great Britain, afterwards created a Baron of the Empire, a civil servant of the E.I. Company in Bengal. Before he was twenty years of age, he served at the court of Sindia, under the Resident, Colonel Collins. When only twenty-three years old, he was sent by Lord Minto on a mission to Ranjit Singh at Lahore. He met the maharaja at Kussoor on the 11th September 1808. On the 25th April 1809 he concluded a treaty stipulating that the maharaja should retain possession of the territories to the north of the Sutlej, but refrain from all encroachments on the possessions of the chiefs on the left bank of the river, who were now taken under British protection. He rose to be Governor-General of India, was afterwards Governor of Jamaica, and subsequently Governor-General of Canada. He was Governor-General of India from the 20th March 1835 to the 4th March 1836, and during his administration a free press was given to that country.

METEMPSYCHOSIS, or transmigration of the soul, is believed in by the Hindus and Buddhists of Asia, and by all the pre-Aryan aboriginal races in British India. The metempsychosis doctrine seems to have been held coeval amongst the Brahmans and Egyptians. The Pythagorean sect of Magna Grecia seem to have derived it from Egypt. In the Institutes of Menu, at least thirty different creatures are named into whose bodies malefactors are imprisoned, according to their crimes, the scale descending down to such particulars as that he who stole perfumes should be changed into a musk-rat. Metempsychosis is the idea that a human being guilty of sensual sins should be changed into an animal that is only conscious of the senses. But metempsychosis, according to Bunsen, is the recognition that there is a solution of the enigma of existence, which is not to be found in the term of a single life on earth, and yet which we are impelled to seek after, in order to explain this life. All guilt must be expiated; but the final issue, though reached only after the lapse of unnumbered ages, will be the triumph of the good, the general reconciliation, and a life in God will be the eternal heritage of the soul. Thousands of years before Christianity announced the certainty of immortality, the three civilisations of the Egyptians, the Brahmans, and the Druids believed that the human soul died not after death. Abu Zaid, the historian, writing in A.D. 916, mentions that in Balhara and other parts of India, men burned themselves on a pile, influenced by their belief in a metempsychosis; and he adds that when a man or woman became old, he or she begged that they might be thrown into the fire or into water. The Tibetan Buddhists count six classes of existence, viz. four bad, those in hell, the brute, asur, and yidag; and two good, those as man and God.—*Fraser's Journ.*, 1868; *Bunsen; Elliot's History*, pp. 1-9; *Haughton's Menu*, p. 406.

METEORIC FIRES. The shahaba or wandering meteoric fires, on fields of battle and in the places of great sacrifice, produce a pleasing yet melancholy effect, and are the source of superstitious dread and reverence to the Hindu, having their origin in the same natural cause as the wandering fires of Odin, the phosphorescence produced from animal decomposition.—*Tod's Rajasthan.*

METEORIC IRON. A mass, 15 inches long and 12⅝ inches broad, was found imbedded in the soil on the top of the forest-clad Kurruckpur Hills, near Monghir. The hillmen exhumed it, and for many years worshipped it. It was sent to the museum of the Beng. As. Soc.

METEORITES. Till the beginning of the 19th century, the fall of stones from the sky, aerosiderites, aerosiderolites, and aerolites, seemed an event so strange, that neither scientific men nor the mass of the people could be brought to credit its possibility. Such falls are, indeed, recorded by the early writers of many nations, Hebrew, Chinese, Greek, and Roman; but the witnesses of these events had been in general laughed at for their delusions. The oldest undoubted sky-stone at present known is that which, though after the Revolution in France removed for a time to the library at Colmar, is once more suspended by a chain from the vault of the choir of the parish church of Ensisheim in Elsass.

The famous mass known as the Pallas-iron, weighing 1500 lbs., of which the greater part is now in the museum at St. Petersburg, was met with at Krasnojarsk by the traveller Pallas in the year 1772, and had been found on the surface of Mount Kemirs, between Krasnojarsk and Abekansk in Siberia, in the midst of schistose mountains: it was regarded by the Tartars as a holy thing fallen from heaven. The interior is composed of a ductile iron, which, though brittle at high temperature, can be forged either cold or at a moderate heat.

At 8 o'clock on the evening of December 19, 1798, many stones fell at Krakhut, 14 miles from Benares, in India (S. 150); the sky was perfectly serene, not a cloud having been seen since December 11, and none being seen for many days after. According to the observations of several Europeans, as well as natives, in different parts of the country, the fall of the stones was preceded by the appearance of a ball of fire, lasting for only a few instants,

and accompanied by an explosion resembling thunder. After an explosion are generally heard sounds which have been variously likened to the flapping of the wings of wild geese, to the bellowing of oxen, to the roaring of a fire in a chimney, to the noise of a carriage on the pavement, and to the tearing of calico; these sounds are probably due to the rush of the fragments through the air in the neighbourhood of the observers. Sometimes the fragments reach the ground before the sound of explosion is heard, proving that the break-up has taken place while the velocity of the meteorite was considerably higher than that of the sound vibrations (1100 feet a second).
